28758. But that would be rather a matter for carrying out the law that exists than a question of altering the law, would it not?—Quite so.

28759. Now you have something to say upon separators?—Yes.

28760. What are they for—separating the water from the steam?—No, separating all foreign matter so as to prevent it going inside into the engine: that is, supposing for instance some waste, or a wooden wedge, or an iron wedge, or a rubber has been left in the pipes after the surface craftsman has been doing a joint the previous day, or on any day so far as that goes, when they do that it is possible, through forgetfulness, that those things are left inside the pipe. Then, when the steam is turned on that matter is carried into the throttle valve, first of all: then it catches under the throttle valve and cannot pass through.

28761. What is the separator—a kind of sieve or gauze thing?—Yes.

28762. Might there not be a danger that the separator would get choked itself?—It is possible, but to meet that difficulty I say that they should be examined and cleaned.

28763. Are separators used on a number of engines at present?—Yes, they are used in some of them, I know: I could not say as to every one.

28764. Your Association represents that it would be better to have them on all?—Certainly.

28765. Now as to stop-valves: would you tell us what a stop valve is, and what you wish to be done with regard to it?—A stop valve is a valve which you can put down to prevent steam going into the engine through the steam pipes.

28766. But there must be a stop valve then to every engine, must there not?—On the steam pipes: we require that stop valves should be in the near reach of the engineman on duty.

28767. You mean that the stop valve should be within the reach of the engineman on duty: that is your point?—Yes.

28768. And in some cases that is not so?—Just so.

28769. (*Mr. Wm. Abraham.*) That is so in many cases, is it not—in the majority of cases?—Yes, in the majority.

28770. (*Mr. Cunynghame.*) It is not now, but it ought to be, in your view, in every case within reach of the engineman on duty?—Yes.

28771. What have you to say about indicators? First I will read to you Rule 30, which says: "A proper indicator (in addition to any mark on the rope) showing to the person who works the machine the position of the cage or tub in the shaft"?—Yes.

28772. I gather that you think that is not quite enough; you want something more than that?—Yes. We, as practical enginemen, cannot say exactly which is a proper one. Of course so many enginemen have grown up with their particular indicators, and from our point of view we cannot say which is the best. But wherever a dial indicator is upon any one engine, we should insist that the pin or hands should not over-lap.

28773. That is the particular point which you wish to emphasize with regard to indicators?—Yes.

28774. Then you say that speaking tubes should be aid from the banksman to the engine-house?—Yes.

28775. Do you mean from the banksman outside on the top?—At the pit-head.

28776. There should be a speaking-tube?—Yes.

28777. But in many cases he can speak and be heard without a tube, can he not?—Yes, in many cases, but not in all.

28778. Then you would mean, I suppose, that where he could not be heard—where the distance was too great—a speaking tube should be provided?—Quite so.

28779. Have you known of any accidents or inconveniences happening from the want of a speaking-tube, or has your Association known of any?—Not exactly of an accident to life and limb—you could not say that—but from our point of view there are many things going on at the pit-head which of course the enginemen know nothing of, and to make an engineman satisfied and to know what is going on down the shaft, naturally the banksman would tell him through the pipe; for instance, with regard to myself personally, the banksman would tell me perhaps "There is such and such a pipe with a long pull, and so and so, going down; now be careful in going through the collar-board," and so forth—I mean that by the speaking tube he could explain that to the engineman on duty.

28780. You mean that when any special weight, or anything of that kind, was being put on the cage, that he would have to guide his engine specially for, it would be convenient that he should have a speaking-tube?—Quite so.

28781. (*Mr. Wm. Abraham.*) What is the number of men in your Association who are working eight hours a day?—I have not gone into those figures.

28782. But approximately—is it the great majority of them?—Yes; I may say there are only about 50 of our men who are working 12 hours.

28783. Are you of opinion that so many of the employers already conceding the eight hours is a great argument in favour of their all being compelled to do it?—Yes.

28784. If I understand you rightly, you think it would be necessary to have some standard indicator—one indicator instead of the numbers of indicators that there are at present?—Yes, that is my point.

28785. You think it would be safer?—Yes; and every engineman would know then exactly what he had to contend with.

28786. That, in order to enable the engineman to know distinctly and exactly what he has to do, one standard indicator would be a great help?—Quite so.

28787. With regard to the speaking-tube I think, as you said, there are a great many things going on at the top of the colliery, there is a great deal of shouting going on, and consequently there is a danger of one man shouting something which you may take it is a communication with you, and that would lead to some danger?—That is so.

28788. Do you think the speaking-tube would be an improvement upon present conditions?—Yes, it would.

28789. And that improvement would increase the amount of safety?—Yes.

28790. Not so much because you can trace any direct accident happening, but it is more as a means of preventing the possibility of such a thing?—That is so.

Digitized by Google

28791. (*Mr. Ratcliffe Ellis.*) With reference to the sanitary conditions of the engine-house, what is the filth which you say should be removed?—Take for instance, the oil and dust coming from the rope; that would be left sometimes to heap up under the drum. That, with water and steam possibly running against it, would cause it to smell sometimes.

28792. But whose duty is it now to remove that?—Of course that is an arrangement between the surface manager who gets some of his labourers, I suppose, to take it out.

28793. Yes, but who does it now as a matter of fact? Is it the engineman's duty to do it?—No.

28794. But who does it?—When you were working as an engineman who did it in your engine-house?—A labourer at the pit-head, or those who were working outside with the labourers.

28795. They are sent to clear this away?—Yes.

28796. And the engine-house is cleaned from time to time, is it not?—Yes—whitewashed.

28797. Is there any serious complaint about this matter?—No, not much, but I understand the Commission is to prevent accidents, and I thought it was well to mention it.

28798. You want to put all in?—Yes.

28799. There is no very serious complaint about it?—No.

28800. With regard to the exits which you have mentioned, do you advocate two exits or two doors, or what is it you want exactly in the engine-house?—Yes, I do advocate that.

28801. But why?—Mr. Hopkins did not go so far as I would go on that point. I would refer to the case of Clydach Vale; that occurred in 1900, and this pipe which he has just told you of burst opposite and prevented them going out through the door that was going into the engine-house.

28802. That is one case that you know of in which a man was prevented from getting in, or somebody was prevented getting out, because a pipe burst just opposite the door?—Yes.

28803. That is the only one, is it not?—Well, I thought if it was prevented there it would not happen again, and it would meet that danger.

28804. Do you think that is really a sufficiently clear source of danger to require that two doors should be put into an engine-house, one to go in by and one to come out by?—It would meet that which I have just stated to you.

28805. Yes, it would meet that particular case. Was this particular engine-house, which you are speaking of, on the ground floor?—Yes, on a level.

28806. Was there a window in the place?—Yes.

28807. Did the man get out of the window?—No.

28808. Why not?—He could not, unless he broke the window, of course, and that would be an iron frame. In that case the mechanical engineer was killed: he was scalded, and it caused his death.

28809. That is one case in which a man could not get out. Was he scalded because he could not get out?—Yes.

28810. The pipe burst opposite the door, did it not?—Yes.

28811. Why did he want to go out? Was he not safe in any part of the engine-house?—No.

28812. It was filled with steam?—Yes, and that is where the mechanical engineer was scalded to death.

28813. Have you any complaints to make about the construction of engines other than those you have already made?—No.

28814. Subject to the few suggestions which you have made, you have no complaint to make about the engines?—No.

28815. You have said you approve of the answers given by the last witness to the questions with reference to the eight hours?—Yes.

28816. And you approve of the answers that he gave to me? Is there anything you wish to add to that? I do not wish to go through all the story with you.—Quite so; then I agree with that.

28817. You agree with what he said in answer to me?—Yes.

28818. (*Mr. Smillie.*) With regard to the brakes, that is a very important question. The Act provides for what are called "adequate brakes"?—Yes.

28819. You are aware that practically the first General Rule of the Act provides for what is called adequate ventilation under ground?—Yes.

28820. And that there is a difference of opinion at the present time as to the meaning of "adequate" so far as ventilation is concerned?—Yes.

28821. It does not come before you as an engine-winder in the same way, perhaps, as it does to the miners, but you are aware that that exists?—Quite so.

28822. I think the same difference of opinion exists at the present time between the engine-winders and the management probably as to what "adequate" really means?—That is so.

28823. At many collieries, as has been pointed out by Mr. Rowarth, there is "hanging on" at mid shaft, it may be, at two or three different landings in the shaft?—Yes.

28824. Where there is or there may be in some cases double deck cages in which four tubs may be hung on at mid-shaft, that is a very considerable weight?—Yes.

28825. And it would require a very strong brake to hold the cage there unless the engine-winder himself was using the steam to hold it?—That is so.

28826. Is it your opinion that the brake power should be sufficiently strong, if applied, to hold the cage at any part of the shaft?—Yes.

28827. Is it possible to define that in clearer terms than by the word "adequate"?—Of course if one knew exactly what "adequate" was, it would meet that requirement, but our question in looking at it is whether that is clear. Of course we cannot make out what is the definition of the word "adequate."

28828. The Chairman to-day mentioned the fact that in Germany the Commission had seen certain engines and methods of working. I may mention that we have seen their brake power applied by steam which held the engine absolutely at any point that the engine-winder wished it to be held. Would that be called "adequate" brake power?"—Yes, if it held it.

28829. Speaking now as an engine-winder yourself, do you think there would be any real difficulty in applying to existing engines in this country adequate brake power that would hold the cages at any part where the engine-winder wished them to be held?—No, I do not see any difficulty: they could do that to make it hold. Of course the construction possibly might have to be altered in some cases.

28830 But it is not an insuperable difficulty?—No.

28831. It is a matter of a little expense?—Quite so,

28832. I suppose your opinion is that the expense of a few pounds, or even £100, should not stand between us and safety?—Quite so.

28833. Can you conceive of accidents arising through no fault of the engine-winder, but because of the want of adequate brake power where tubs are hung on at mid-shaft and the cage gives way?—No. I could not speak of any case now of an accident that would occur through inadequacy of the brake power.

28834. Is it not the case that at the present time, sometimes when tubs are hung at mid-shaft, the cage does really give way?—Yes.

28835. That must be for want of adequate brake power at the present time?—Well, I will just give you a case at Llwynypia, the Glamorgan Coal Company, where steam was cut off from the engine, and there were two men in the shaft; they were about the centre of the shaft, and steam was shut off from the boilers, and then, of course, that brake power was not enough, because steam was shut off, and down went the cage and an accident occurred. Now our suggestion is that a Whitmore brake would meet all that difficulty.

28836. Mr. Rowarth's position is that the brake should be strong enough to hold the cage at any part?—Yes.

28837. And that in addition to that, the steam power in the hands of the engine-winder should be an additional precaution to hold it?—Yes.

Digitized by Google

Mr. T. Jones.
6 Nov., 1907.

28838. In the case which you have mentioned just now, had the steam not been cut off the engine-winder would have had his steam to hold the cage in position, but when his steam was cut off his brake power was not sufficient to hold it in position?—Quite so.

28839. And therefore an accident took place?—Yes.

28840. But I do not think you have quite caught my other point. It is this: in hanging on in mid-shaft—is that the Welsh term?—No—holding the cage, you may say, mid-way or in the middle of the shaft.

28841. I want to get to your terms: there are so many different terms for hanging on at pit-bottom, and so on; I mean hanging on at mid-shaft; two or four tubs, if it is a double-deck cage, may be hung on there. The existing brakes may not be strong enough, even when fully applied, to hold the cage there?—Quite so.

28842. The engine-winder, in addition to that, has to provide steam to hold his cage there?—Yes.

28843. If his steam were cut off at the boiler, as you mentioned just now, then his existing brake—his foot brake—could not hold it?—Quite so.

28844. What you really want is that by an adequate brake he should have the power to apply a brake to hold the cage in the shaft with any weight that is on the cage?—Yes.

28845. You cannot conceive accidents arising from want of that power, you say?—No, not at present.

28846. Can you not conceive that accidents could arise from that want of brake power?—It is possible that they could.

28847. It is possible that they could, but you do not know of any accident occurring through it?—I do not know of any accident occurring through that which you have just referred to.

28848. And generally you agree with the other witnesses as to the necessity for all safety appliances being provided?—That is my sole object—the safety of the men that go under my hands.

FORTY-SECOND DAY.

Thursday, 7th November, 1907.

PRESENT:

Lord MONKSWELL (*Chairman*).

WM. ABRAHAM, Esq., M.P. (Rhondda).	JOHN SCOTT HALDANE, Esq., F.R.S.
H. H. S. CUNYNGHAME, Esq., C.B.	ROBERT SMILLIE, Esq.
THOMAS RATCLIFFE ELLIS, Esq.	S. W. HARRIS, Esq. (*Secretary*).

Ironstone

Mr. JOSEPH TOYN, called and examined.

Mr. J. Toyn
7 Nov., 1907

28857. (*Chairman.*) I understand you are the Agent and President of the Cleveland Miners' and Quarrymen's Association?—Yes.

28858. You wish to-day to give us your views, not with regard to the coal mines in your district, but as to the ironstone mines, which are under the Coal Mines Regulation Act?—Yes. There are Special Rules for each district, of which I have a copy here.

28859. I understand that in the first place you desire to call attention to Rule 33?—Yes, that is as to deputies.

28860. Are your Special Rules the Cleveland code of Special Rules?—Yes.

28861. Special Rule No. 33 is headed: "Deputies:" "In the absence of the Overman and the Back-Overman, each deputy shall have the charge of the portion of the mine assigned to him. He shall, at the end of each day's work, ascertain that all men and boys are out of the district under his charge; but should it be necessary for any of them to remain he shall ascertain that they are left in charge of a responsible person: also that all unnecessary lights are extinguished, the main and tramway doors closed, and that the ventilation is going its proper course." That is the rule which you desire to call attention to?—Yes, more especially as to the appointment of deputies.

28862. What have you to say with regard to the appointment of deputies?—We say that there should be a practical examination in order to see that a man is competent to be a deputy.

28863. What sort of examination do you suggest?—That he should be examined as to his knowledge of the nature of roof, as to sounding, and as to whether there is any presence of gas.

28864. Who should conduct this examination?—That is the question. We would suggest that at each mine there should be two practical miners appointed by the men along with the manager and his under-manager.

28865. You would have four people to form a sort of committee to examine a man before he is permitted to act as deputy?—Yes—either four or any other number. We are not particular about that, only that there should be someone on each side, and that they should be able to test the man to see that he was fit to take the position.

28866. The principal expert knowledge that he would have to possess would be knowledge of ventilation: his particular duty is to look after the ventilation?—There is more knowledge required in regard to the nature of the roofs and timbering: so many accidents happen through roofs coming down.

28867. Exactly. But this Special Rule 33 apparently does not deal with timbering and the roofs and sides. You see this rule merely deals, apparently, with the supervision of ventilation by the deputy, and says nothing about timbering. Is there any rule to show how far the deputy is at present responsible for the timbering?—That rule points out also that in the absence of the overman the deputy is responsible for the district.

28868. He is in charge of the portion of the mine assigned to him?—Yes; and we think that before a deputy is taken to be competent to do that, he ought to show his fitness. Our point is that men are doing that kind of work and are appointed now who are not competent.

28869. Whom do you call the "back-overman"? Is he the deputy overman?—The back-overman, as he is called, is an official of the mine.

Digitized by Google

28870. He is the next official to the overman ?—Yes.

28871. You have the manager, the under-manager or the overman, and perhaps sometimes the under-manager is called the "overman" ?—They are not included in that rule. They are very often called "deputies," and really they practically are, because in the absence of the overman they have charge of the district. But these men whom we want to deal with are really the working deputies who have the charge of the timbering.

28872. The back-overman is a mines' official, who probably has an under-manager's certificate ?—Yes.

28873. Do you know whether he must have an under-manager's certificate ?—Yes, I believe so.

28874. So that you say that a deputy should have qualifications of somewhat the same nature as the overman has at present ?—Of that nature—to show that he is a practical man.

28875. Have you anything to say with regard to the deputy's inspection of ventilation ? There is nothing in your statement about ventilation, but do you wish to say anything with regard to that ?—Only that he should have knowledge when gas is present. Of course it is the under-manager's business to get rid of the gas, but the deputy should be able to prove when gas is there.

28876. The number of accidents in the ironstone mines compares very unfavourably with the number of accidents in the coal mines in your own district, the Durham district ?—Yes.

28877. But the statistics of accidents appears to be even more unfavourable in the ironstone mines above ground than they are below ground. That, I suppose, you have nothing to do with ?—We do not complain about that here.

28878. In fact it is not your business, I suppose. You do not represent above-ground workers, do you ?—Yes, we represent the above-ground workers as well, but we are not speaking about them to-day.

28879. It is rather a remarkable thing that in the coal mines the above-ground accidents are just about a half a person in 1,000, and in the ironstone mines the above-ground accidents are very nearly two in 1,000 ?—Yes. It is a different character of work—heavier work.

28880. It is 0·66 in coal mines, and 1·940 in ironstone mines ?—Yes.

28881. How do you account for that ?—I think we have more inclines, and it is rather harder and more difficult work than the work is about the coal mines on the surface.

28882. At all events, you have no suggestion to make as regards work on the surface ?—No, it is more particularly with regard to the deputies that we wish to speak, and the underground work.

28883. You only propose to tell us about the underground accidents; but it is a very serious thing that there should be such an enormous difference—almost four times as many accidents among the persons employed above ground in the ironstone mines as there are among the persons employed in coal mines above ground in the same district ? Surely there must be somebody who can give us some suggestion as to how accidents above ground can be lessened ?—We have not taken that into consideration.

28884. (*Mr. Wm. Abraham.*) Will you kindly take it into consideration, and send someone to give evidence here who can speak about it. It seems so very strange that you should be here representing a body of men who have a less number of accidents than the men who are outside happen to have, and you are representing both in your union ?—You do not mean that we have a less number of accidents underground than we have outside, do you ?

28885. Yes ?—Oh dear, no.

28886. (*Chairman.*) As compared to coal mines ?—That may be.

28887. As compared to coal mines, the accidents below ground are more per cent. than the accidents above ground, but the accidents in ironstone mines above ground compare more unfavourably with the coal mines than the underground accidents do ?—And so do our underground accidents, do they not ?

28888. No, not to the same extent. There is about 50 per cent. difference in the ironstone mines compared with the coal mines below ground; and above ground there is something like 300 per cent. difference—one is three times or nearly four times as much as the other in the case of accidents above ground ?—I know I am not here to ask questions, but may I ask whether you include the quarries in that ?

28889. No, only the mines under the Coal Mines Regulation Act. It is a marvellous state of things ?—I can only say this, that the work is heavy work, and we have a number of inclines where they run the stone down in large sets at once, and at the coal pits I take it in a great many of them they just pull the kerb up and tip it, and there is no incline or anything. Now we have lots of inclines, and it is far heavier work than the work is about the coal pit.

28890. Do you mean above ground ?—Yes, above ground.

28891. That is the explanation which you give. But you are not commissioned to say anything to us on behalf of the men with respect to these above-ground accidents ?—That is so.

28892. (*Mr. Wm. Abraham.*) We had better ask you to send someone ?—I do not think we could give you this information. At a mine like Eston, where there are three inclines and one very steep one, they will very likely employ men who are what we call "greenhorns" to work about those inclines, and we think that that is to a great extent how these accidents happen.

28893. (*Chairman.*) Well, that is a reason; someone can speak to us about these "greenhorns," as you call them ?—I should not like to say anything definite about it, because we have not prepared ourselves with regard to what goes on outside.

28894. But still, that is a very important matter. You see there are two kinds of mines in the same district, namely, coal mines and ironstone mines, both of which are under the Coal Mines Regulation Act, and in one class the accidents on the surface, in proportion to the men employed, are nearly four times as much as in the other ?—I have been in the Cleveland district for many years, more than 50 years, and I could not suggest to you any safer means outside.

28895. (*Mr. Wm. Abraham.*) If you will allow me to say so, I think we had better drop this subject now and ask the Chairman to be kind enough to allow you to come again to give evidence on this special question ?—If it is necessary we can do so; we can make inquiry, if you put it in that way.

28896. You see it is a question upon which we want men to speak specifically and definitely, or else it is of no use ?—If you wish it we will appoint someone to give evidence before you.

28897. (*Chairman.*) By all means. You have made one suggestion, that it is owing to the employment of persons who are not very well skilled ?—That is a sort of haphazard statement. I have an idea that a good deal of that is done.

28898. (*Mr. Wm. Abraham.*) Yes, we have an idea about it, but we want someone to come here to speak to it specifically ?—If you wish it, it shall be done.

28899. (*Chairman.*) We should like to hear the evidence of someone who knows all about it. You see with regard to falls of roof and sides the accidents are very heavy ?—Yes.

28900. The figures as to fatal accidents in the Cleveland mines are these: out of 15 fatal accidents underground, 11 were due to falls of roof and sides ?—Yes.

28901. It is a very large proportion—a larger proportion than in the case of the coal mines. So that it is very clear that it is a matter which requires a great deal of consideration. Then you say that the treacherous nature of the roofs and the heavy timber required to secure them, make it imperative that for the safety of the deputies themselves and of the miners under their charge, two skilled deputies should be allowed to go together ?—Yes.

28902. You say that a deputy should never go by himself, but that they should be allowed to go together. Do you mean that if a deputy thinks it is desirable that he should have another deputy to go with him, he should be always permitted to take another deputy ?—Scarcely that. They have to go two together. In one mine they have to go three together, where it is very high and there is very heavy timber; but in all the mines it requires two to put baulks in.

28903. That is so now ?—That is so now.

28904. Then you are not making a new suggestion when you say that two deputies should be allowed to go together ?—Two skilled men. May I say that in some

Digitized by Google

Mr. J. Toyn.

7 Nov., 1907.

of the mines that is the practice now—that two skilled men go together. They generally take the best miners for the deputies, and two skilled men go together. Then we have a number of mines where there is a skilled man, and they put an unskilled man with him.

28905. That is what you object to?—That is what we object to.

28906. I suppose you would say that if it was necessary to teach men their duty as to timbering, the third man, who is a learner, should go with the other two skilled men. How would you propose to teach a man to timber?—There is never much difficulty in the other mines where the old practice is carried out: they take the best miner, and he goes away with the deputy at once, and he only has to learn the cutting of the timber, because he knows about the nature of the roof, and all that sort of thing. He is very soon trained.

28907. Then your proposal is that there should be some Special Rule applying to ironstone mines, to the effect that two skilled men should always go together?—Yes.

28908. At present that is the case in a great many mines?—At present that is the case in a number of mines, and in a number of others, perhaps five or six, there is a system which has crept in during these recent years of putting an unskilled man with a skilled man.

28909. Of late years?—Yes, it has crept up these late years.

28910. Would you say that that ought to apply to every ironstone mine in your district?—Yes. We do not want to single out any particular mine, if you will allow me to say so, but we speak in a general sense—I mean we do not want to "spot" anybody.

28911. No, but possibly there may be some mines where the roofs are not of such a treacherous nature as they are in others?—That is so.

28912. Where it may not be necessary always to have two skilled men going about together?—Then if the men have to put timber in—to put baulks in—they should be allowed to go two skilled men together. If there are two skilled deputies together, the one assists the other, and there are two pairs of eyes to see the danger in the place and to look after the men, and to look after each other. Now if you take one of the skilled men away and put a man with him who is not responsible and who is unskilled, then there is one pair of eyes in the place, and he not only has to look after the miners but he has also to look after his mate, and he has only one pair of eyes and one brain to do what two pairs of eyes and two brains should do.

28913. What you say would apply to all coal mines as well as ironstone mines?—I think perhaps two ought to go together in those cases, but I may say that our district is an exceptional one in the whole of the United Kingdom; I have not known one like it.

28914. You go on to say that no men should be permitted to set or put in timber who have no practical knowledge of timbering. How far would you carry that; do you suggest that in every case the ironstone getter should be a distinct man from the man who puts up the timber? An ironstone getter, I suppose, might know enough of timbering to put up his own timber, to a certain extent?—Some of them are competent to do it.

28915. How would you arrange that?—It is the incompetent men that we complain about.

28916. How would you decide as to who is competent and who is incompetent?—I think you will see that further on in the statement we suggest that no man should be allowed to be a deputy unless he has had three years' experience in getting stone.

28917. I am not speaking about deputies, but about the ironstone getter who is not a deputy?—Yes.

28918. Supposing he is there and sees that a certain amount of timber is required, and required very quickly, so that perhaps it would be difficult for him to get a deputy to set the timber in time, might he not be allowed to set, it himself?—No. If he knocks a prop out with a shot or anything of that sort, he can set it up, but he ought not to put any baulks of timber in.

28919. However skilled the man is? He might be just as skilled as the deputy who generally puts in the timber?—Yes, but it is not in his calling, and he has not the tools there to do it with, and he does not do that.

28920. That is not the practice?—No. If the timber has been set and he accidentally knocks it out with his shot, he must either set it or go for the deputy; but with regard to putting in new timber, he has nothing to do with that at all.

28921. Is it contrary to the Special Rule that he should be allowed to set up new timber, or is it the practice that he should not do that?—I do not think there is a Special Rule about it. In some districts of the coal mines I think some of the men do their own timbering, but in the ironstone mines there are special deputies told off to do that kind of work.

28922. So that it would be a perfectly wrong thing for an ironstone getter, however competent he might be, to set up his own timber?—It would be, except in putting punch props in, if he is cutting out a piece of stone, or if a piece of stone is overhanging. In such cases as that a deputy would provide him with suitable lengths to put that timber in, but it is not his business to do the timbering, and he is not allowed to do it.

28923. You go on to say that none but practical men should be allowed to examine places that miners have to work in before they commence their shift's work. I imagine that that would always be so. Did you ever know an unpractical man who was allowed to examine these places?—I do not know that we could point out any particular case; but we think it ought to be provided so as to make it imperative that no man should do it.

28924. Would you have some sort of Special Rule to provide for that? It is the duty of the deputy to examine these places, and I suppose the deputy, whether he has passed an examination or not, is generally a practical man; you say that as a general rule the best miners are made deputies?—Yes, under the old system, but not under this new one.

28925. It is not the case under this new system?—No; that is what we are complaining about.

28926. You complain that inferior men are being made deputies?—We complain that men who have not had a practical knowledge of getting stone on the face are put on under the new scheme. One practical man has sometimes four or five others under his charge; I can give you a case where a man had four or five under his charge, and he went round to examine in the morning, and he told off two of the men to go into one district to timber, and two in another, and then he took the remaining man with him; during the day two fillers found the top was not very good, and they went to one of the deputies to get him to come and examine the top, and that assistant-deputy said that the top was all right; then before the day was out both men were injured.

28927. You complain that although matters were fairly satisfactory some time ago, recently a practice has crept in of making deputies of men who have not had sufficient experience?—That is so, with the exception of about one or two mines. I believe this practice has prevailed in one mine, or two mines, with a low seam where the tops are not very bad, for a number of years. But in recent years other mines, where the tops are not very good, have adopted the same principle, and we complain about it. Then there is another thing: there should be a deputy in charge of the men as long as the men are in. That Rule which you have read out says that they must see all the men out, the lights out, and that sort of thing. Now only last Saturday I attended an inquest where the deputy left at 20 minutes past 12; he left his assistant in charge from 20 minutes past 12 till the men went out; that assistant was not competent to examine in the morning, and he had not done so, but it seems that he was competent to take charge of the men after the other man had left. We say that there ought to have been a competent man left there in charge of that mine until the men went out, and that is why we want to keep there all practical deputies that are setting timber.

28928. The Special Rule says "Should it be necessary for any of them to remain he shall ascertain that they are left in charge of a responsible person?"—Yes.

28929. That is to say, that there must be some responsible person, according to your Special Rule 33, while the men are in the mine, to look after them?—Yes. We say an assistant-deputy is not a responsible person.

28930. Well, he may or may not be, I suppose?—That is what is done.

28931. I suppose there are some assistant-deputies who know their duties perfectly well, and as well as the deputies themselves?

28932. (*Mr. Wm. Abraham.*) What was the object of the coroner's inquiry in that case?—The coroners do not understand it.

Digitized by Google

28933. (*Chairman.*) What was the verdict?—The verdict was "accidental death." It was not the fault of the deputies with regard to the accident at all. I am not speaking about that, but out of the enquiry there appeared the fact that when the deputy was put in he examined in the morning himself. I asked him the question myself: "Is your assistant competent to examine?" He said, "No"; and I said, "Then it appears he is competent to take charge of the men after you leave, but he is not competent to examine."

28934. (*Mr. Wm. Abraham.*) Was there a Mines Inspector at this enquiry?—Yes.

28935. Did he point out that there had been any breach of any rule?—No, I do not think he did.

28936. (*Chairman.*) But surely it was the fault of the deputy, if he did not leave a responsible person in charge when he went away himself. The rule says that he is to leave a responsible person in charge. I suppose he might say that the man he left was a responsible person, even although he was not capable of examining, because the examination had already taken place. I suppose that what you mean by a responsible person is that you ought to have a man who is capable of examining?—Yes, he ought to be capable of examining at any moment during the shift, because in our mines sometimes it will be all right at one moment, but an hour afterwards the top becomes bad; we say that every moment during the shift when the men are in there should be a competent man there.

28937. But it certainly appears to me that "a responsible person" ought to be held to mean a person who is equal to the duties which he is called upon to perform?—Yes.

28938. And in that case it was clear, from what you said, if you are correct in your statement, that the deputy did not appoint a responsible person to look after the men after he went away?—I expect it would be the manager who would arrange the business, and he had this assistant, and I asked the assistant myself "What happens: do you put timber up?" He said, "Sometimes I put up a prop," but if there was a baulk wanted he had to go away into another district to seek a deputy. There was not one in his district, and he had to go away to another.

28939. Then you think it was not the fault of the deputy, but that it was the fault of the management for giving the deputy an assistant who was not a responsible person?—Yes, it is the management that is at fault for allowing such a system to go on.

28940. It does not seem to me that Rule 33 fails to meet that, because it does appear to meet the case; but in my opinion, if what you say is correct, the rule was not properly enforced—the management broke the rule themselves by not giving the deputy a responsible assistant?—There is no doubt that is so.

28941. Is there anything else you would like to say about Rule 33?—I would only like to say this, that you have it stated in your report that a large number of accidents happen from falls of roof. The Cleveland district is to a very large extent pillar working, that is to say, it has been worked once through, and they are now working out what you might call the supports or the pillars. Of course it causes sometimes what we call a creep. I do not know whether you understand that: it puts weight on, and it will burst pieces off the side, and it makes the top give way. We think that there is now more need for practical men putting in timber than ever there was.

28942. You also say that the management, according to your account, are getting more lax in regard to the men they employ?—Yes, they are. Of course it is a question which I could not introduce here properly, but, if you will allow me to say so, it is simply in order to work on the cheap—to tell you straight.

28943. What is the state of things with regard to the accidents during the last few years?—They are rather less than they used to be.

28944. How do you acount for that, if the management is more lax?—I do not think the management is more lax, only they are trying to do it cheaper. There are some mine owners in Cleveland who have asked me myself about it, and they have said that if I can suggest any means they would adopt it, but that is where they have an equal responsibility with the deputies.

28945. I do not quite follow you, because you began by saying that the management was getting more and more lax, and that they were less particular as to the men they employed in responsible situations, and at the same time the mines were getting more dangerous to work; but you now tell me that the number of accidents has grown less in the last few years?—The mine owners are not lax except in this particular point, so far as I know. I do not think they would do anything to cause an accident to a man; but in later years the men have become more accustomed to deal with the matter. We adopt the principle laid down by the Act, which we have a right to do, of sending two men round every month to examine, and those men do go round to examine.

28946. It is only lately that you have done that?—We have been doing it for some time, but there is more of it done now. I may tell you that we advise the men to do all they can, and they do all they can to prevent accidents. I think both the management and the men themselves have helped, perhaps, to minimise accidents.

28947. You say that the diminution in the number of accidents is to some extent, at all events, caused by the periodical examination by the men which takes place now more often than it used to?—I think so; and the mines are better ventilated than they used to be in earlier times. I have known when there have been 26 fatal accidents in our district in a year: that was in the old times when there was not such good ventilation, and men were less capable, probably, than they are now.

28948. But then the ventilation would not affect the falls of the roof and sides?—It would prevent the men from seeing the danger. The better the ventilation is, the more they have a chance to see whether the top is giving away, because there is a large amount of powder used in our district—probably 1,100 or 1,200 tons in a year. It takes about half a pound of powder to a ton of stone, I should think.

28949. Sometimes there would be clouds of dust, and so on, from the explosion of the powder, which would obscure the view and tend to make it more difficult to prop up the roof and sides?—Yes. I have seen the ventilation so bad when I was getting stone myself, that, after we fired the first shot in the morning, we could never see one another during the day. But it is nothing like so bad now.

28950. You go on to deal with Rule 65 with regard to drilling machines, and you say that young and inexperienced men should not be permitted to take charge of a machine or be entrusted to fire shots unless they have had at least three years' experience in getting stone in the face?—Yes.

28951. Have you anything to complain of with regard to that?—There have been men appointed to these machines who never did any mining, and a man who does the charging after the machines, has to examine a place after the shots are fired, before the fillers are allowed to go in, and if he is not a competent man he would not know whether the top was safe or not.

28952. I see that there is nothing about incompetency in Rule 65. It says, "Where drilling machines are used each chargeman shall before commencing work in any place, and each shot-firer after firing a shot, shall examine the face, sides, and top," and so on. I suppose it is understood that a chargeman should be a man who is competent to discharge his duties?—Yes.

28953. (*Mr. Ratcliffe Ellis.*) Who is the chargeman?—He charges the shots after these power machines.

28954. (*Chairman.*) He is trusted to fire the shots—Yes. If I might explain to you, a power machine will go into a place and perhaps drill 8 or 10 holes before it comes out, and then a man to charge the shots follows in, and he fires them all. After he has done that he has got to examine the roof and sides to see that it is safe before the unskilled men, the fillers, come in, and therefore we think he should be a thoroughly competent man.

28955. Would the deputy do that, as a rule?—No, the chargeman would do that. The deputy examines the place in the morning.

28956. The chargeman has not necessarily had the experience of a deputy?—No. Of course he has to have some practice before he is allowed to fire his shots.

28957. You say that there ought to be some stringent rules and regulations applying to chargemen, and that nobody ought to be allowed to exercise the duties of chargeman unless he has had a certain amount of experience?—Yes.

28958. That is not so now. Inexperienced men are employed, you say?—Well, it is only now and again that one hears of men who are not competent.

28959. Have you ever complained to a Mines Inspector that inexperienced men are employed as chargemen?—We do not like to do so very much.

Digitized by Google

Mr. J. Toyn.

7 Nov., 1907.

28960. What are you afraid of?—Well, when we have complained to them they never make much out of it.

28961. (*Dr. Haldane.*) The danger you refer to is from falls of roof after the shot?—Yes—to see that the place is all right before the fillers go in. The reason why we have put this down in the statement is that we have known cases where young men have come in and taken charge of a machine. Of course the chargeman drills the holes, but he has never had any practical work in mining at all, but he has to have a youth or a young man with him to change the drills, and of course he has charge of the drill, and the place, and that young man's life while he is doing that work. Therefore, we think he should be someone who understands the nature of the roof before he is allowed to go and drill—for his own sake and for the sake of the young man who is with him.

28962. (*Chairman.*) But do not the managers of these mines consider that that is a reasonable proposition on your part?—They do not pay any regard to us—they set on all they like.

28963. But you say it is only in exceptional cases that you have known such things happen?—I grant you it is exceptional, but we want to make it so that they cannot do it.

28964. You would like to have a Rule to the effect that a man should have a certain amount of experience before he is made a chargeman?—Yes, especially the chargeman, more than the driller, because the chargeman has to fire the shots, and he must know that the place is safe and pass it as safe before the unskilled filler comes in.

28965. A filler need not be skilled in general mining?—No: he knows nothing about it: he just goes and breaks up the stone and fills it.

28966. There is no reason why he should be skilled in general mining, is there: an inexperienced man who knew nothing about mining might be a very proper person as filler if he had a proper person appointed as chargeman over him?—Well, the more skilled they are the better, but unfortunately this class of men who come in as fillers are quite inexperienced. Sometimes I have known them to be men who come in off the road, and they have been given money to get candles with, and then they come the next day, and perhaps such a man would not know how to see to that.

28967. No, it is the duty of the chargeman to see to it?—Yes.

28968. Then you deal with the question of the inspection of mines, and you complain that Mines Inspectors have too extensive an area to cover, and cannot possibly visit and inspect the mines in their respective districts as they ought to do. I should like to hear your views as to that?—I should say in the first place that we do not complain about the work the inspectors are doing, but we are absolutely certain that they cannot possibly inspect the mines as they ought to be inspected: they have too much work to do. Of course our own district is connected with South Durham for inspection. In our own district, with the exception of one mine up in Weardale, which is under the Metalliferous Mines Act, there are 20 mines and 16 quarries that we cover, and that is only a portion. Now when the Mines Inspectors go to a mine, it is not enough that they should go just into two or three places and see them. We say that all the air-courses and every working place ought to be thoroughly inspected by an inspector once at least in six months. As a rule now, the inspectors cannot do it. I believe they work very hard, but we find that most of the inspectors will go, after an accident, to see the place.

28969. How would you propose to deal with that?—would you propose more inspectors and more assistant inspectors than there are at present?—Yes.

28970. Or would you have a third class of inspector, who perhaps had been a working miner, and who would be very much in the position of a deputy?—That would be the best policy.

28971. Do you suggest that somebody like a deputy should be appointed?—Yes—a thoroughly practical man.

28972. That a thoroughly practical man should be appointed mine inspector?—Yes, because the inspectors now, with all due deference to them, only have the theoretical part of it, most of them. Of course they have been mine managers, I daresay, but they have not the practical knowledge.

28973. How many of this class of inspectors do you think it would be desirable to have? I suppose they would not be men who would expect to become in the course of time assistant inspectors or inspectors; they would probably be a class by themselves who would always remain in a third division of inspectors?—I have not thought about that point, but if they could work themselves up and pass so as to get up higher, I would allow them to do so.

28974. What would you consider should be the remuneration of those people: should it be something like £150 a year, £3 a week?—Yes, there could be good men got to do it for that.

28975. How many would you suggest?—I think there is plenty of work for one in our own district.

28976. Then I suppose you have two assistant inspectors in your district?—There is a chief inspector and there are two assistant inspectors, and they have to cover Cleveland, South Durham and a part of Westmoreland, I believe—all the mines and quarries.

28977. That is to say, you have three?—Yes. They cannot possibly do it.

28978. You think that one working-man inspector would be sufficient help?—In our district: I think he ought to be set down in Cleveland, and there is abundance of work for him there.

28979. Do you mean for iron-stone mines alone?—Yes.

28980. You would have a working-man whose duty it would be solely to inspect the iron stone mines, not the coal mines at all?—Yes.

28981. You suggest that his duties should be confined to Cleveland, Whitby and the Rosedale Abbey districts. Does that comprise all the ironstone mines of the district?—I think I have very nearly covered them.

28982. You think that one working-man inspector would be enough to cover all the ironstone mines in your district?—It would be as much as he could ever possibly do; I am not quite sure that he could do it, but I thought I had better not put it too little.

28983. At all events, you think a beginning might be made by appointing one man?—Yes.

28984. (*Mr. Wm. Abraham.*) The great danger in your district is because it is an ironstone district, which is quite different to a coal-mining district? Altogether different.

28985. The danger arises from the fact that you have to use so much powder, about ½ lb. to every ton of stone, I think you said?—I should think it is nearly that amount.

28986. And that is in itself a great source of danger?—There is no doubt about that. You see with such heavy shots being fired with, say, 2 lbs. of powder in, it is bound to shake the roof.

28987. So that your danger is not a danger arising from gas at all?—Not so much.

28988. But it arises from the fact that so much powder is used that it shakes the roof and sides, and that they are frequently giving way; that is the great source of accidents in your district?—Yes. We have gas, and men have lost their lives from inflammable gas; but that is not our most dangerous point; we are not complaining much about that.

28989. In the first instance, in the opening-out of these mines, it is dangerous work?—Yes.

28990. But you say that in your district now you are chiefly working pillars which were left behind in mines that had been worked before?—Yes.

28991. As a practical man, does that in your opinion vastly increase the danger?—We think so.

28992. We want to understand now the chief reason of the dangerous conditions of working; that being so, if I understood you rightly, your great complaint is that there are managers who allow incompetent men to be appointed to the most responsible position in that dangerous district; that is the burthen of your complaint?—What we say is that they are not all responsible deputies. They have assistants; some of the assistants may be practical men; some of them may be old men, but some of them are young men, and they are not practical men.

28993. But you are not charging the whole body of employers in the district with what I should call this disgraceful state of things?—No.

28994. Still, you know within your own knowledge that there are a number who allow incompetent men to be appointed to these responsible positions, and you wish to make that impossible?—They do not call them responsible, but they are put there, and they are put under another man.

Digitized by Google

28995. (*Chairman.*) I understood you to say that sometimes the deputies themselves were not competent?—Well, they are not.

28996. And still less the assistant deputies?—Yes.

28997. (*Mr. Wm. Abraham.*) Is General Rule 39 of the Mines Act put in force in your district at all?—We have not much fault to find with respect to that. We are only told that one man is not allowed to get stone in the face; but then they can put two unskilled men, and two can do so.

28998. Let us deal with that; is that so really?—We have no fault to find about that.

28999. It is not a question of your finding fault; you are here now. The point which you have made is a point which may appeal to some of us who have practical knowledge like yourself?—I think as a rule our managers are careful not to commit a breach of that rule. As a rule the managers in Cleveland do not commit a breach of that rule.

29000. But why did you say just now that they consider they are not committing a breach of the rule if they put in two unpractical men?—That has been a decision which has been given; that is all I mean. You know it yourselves, I think.

29001. But we are speaking now about what is the practice in your district?—The practice in our district is, I think, to keep the rule, so far as I know.

29002. Then you have no complaint to make?—Not on that point.

29003. (*Chairman.*) I am told there is no such decision, as you suggest, that the rule allows two unskilled men to work together?—I believe that has been decided, but we have no trouble with that, and I do not think our managers commit a breach of that rule at all by putting a man in by himself. I have never heard of it. As a rule, the rule is carried out.

29004. (*Mr. Wm. Abraham.*) Then what is the nature of your complaint in regard to their allowing unpractical miners to become fillers?—We cannot prevent them.

29005. It is not a question of preventing it; you want to remedy this condition of things?—They are not working in the face; they are only breaking up the stone that has been got.

29006. (*Chairman.*) I understand you do not object to inexperienced men being brought in as fillers so long as they understand the drill?—We do not object to them at all. It is not a question of drilling; all they have to do is to break up the stone and fill it; they do not work in the face.

29007. (*Mr. Wm. Abraham.*) Will you try and understand the question which I put to you; these men are allowed to fill in places where the stone has been brought down by the force of powder?—Yes.

29008. Is that always safe?—It is within the scope of the Mines Act; it is perfectly in order.

29009. Then you do not want to amend that at all?—We do not want to complain about that at all. We have no complaint upon that.

29010. But I thought you said just now that these men, being strangers to the mine, are placed to fill stone where, by their own knowledge, they could not so examine the place as to be able to inform themselves whether it was safe or not?—No, they could not.

29011. That is so?—That is so. But the chargeman has to look after them; it is in the Special Rule; the chargeman has to see that the place is safe for them. There is no fault on that head at all. I do not think we have had more than two fillers killed in the whole history of our Cleveland mines. We have no fault to find upon that point at all.

29012. I am glad to hear that. I thought you had a complaint to make?—No, we have not.

29013. Then your complaint chiefly is against incompetent men being placed in responsible positions as deputies and so forth?—Yes.

29014. Then let us deal with that. To what extent has that been done?—I should think at the present time there would be probably about six or seven mines in the Cleveland district where that has been carried out—seven, perhaps.

29015. (*Mr. Smillie.*) Out of 20?—Out of 20.

29016. (*Mr. Wm. Abraham.*) That is to say one-third?—Yes.

29017. Now what is the present means of examining these men for the appointments?—The under-manager, if he wants a deputy, just goes to a certain man and says: "I want you to start deputy work," and the man goes and starts. There is no examination at all.

29018. Naturally the manager would select the most competent man that he had, would he not?—He probably might.

29019. Your complaint is that he does not—we may as well have it, you know?—No, it is not so much that as the system. To try and make you understand, I will put it in this way: I will suppose that you are a practical deputy, and that you have another practical deputy with you.

(*Chairman.*) I understood the Witness to say that the best men were not appointed as deputies, certainly.

29020. (*Mr. Wm. Abraham.*) That is what I understood you to say when you answered my question: the burthen of your complaint is that unpractical men are being appointed in some places to the most responsible positions in the practical working of a mine?—As assistants.

29021. (*Chairman.*) No, I understood you to say as deputies as well as assistants?—I am not complaining so much about the deputy who is responsible, as his having an irresponsible man put with him when there ought to be two responsible men together.

29022. You, yourself, say it is necessary to have this examination for deputies because you consider that the deputies are not up to the mark?—Some of them are not.

29023. (*Mr. Wm. Abraham.*) That is the point. We do not believe that you charge the whole district, but there is occasionally a case of the kind, and you have said that it is so for one-third of the district?—I think I can put it to you clearly in this way: there are certain mines in the district where the principle is to select the best miners for the deputies, and they put two of those selected men together, and they are both responsible—one is as good as the other: they are both competent to go and inspect in the morning, and they are competent to do any part of the work. Now in six or eight of the other mines, instead of having those two competent men together, they have one competent man and another assistant with him who ought to be a man equal to himself. I cannot put it any clearer.

29024. (*Chairman.*) Then it seems to me that I misunderstood your evidence to some extent, because I certainly understood you to say that it was necessary to have this examination for deputies, inasmuch as some mine managers did not appoint the best men they could get as deputies, and that some deputies were certainly not up to the mark: and that was the reason why you insisted upon having an examination of deputies?—That is so to a certain extent: there are some men who have been appointed deputies who have never been miners.

29025. (*Mr. Wm. Abraham.*) That is what we want to get from you if you had only stuck to one story. We do not think for a moment that you are charging the whole district with this practice, but that you have known of some cases where they allow incompetent men to be appointed to a most responsible and practical position in the mine?—We have some that have not had the knowledge which we think they ought to have had before they were appointed.

29026. Very well, you have some. I do not believe that every district would allow that state of things to exist, but as you know, all that legislation can do is to bring up the unpractical and indifferent employers to the level of what the best practical employer does without the legislation?—Yes.

29027. That is the burthen of your complaint now, that there are men in the mines who are guilty of making appointments, as you have reason to believe, of men who are not practical?—Yes. May I give you an illustration?

29028. I think if you will leave it there it will be sufficient?—I would rather give you an illustration: here is a mine with 50 deputies in it: who are all practical men: now it suits the manager's purpose to take 20 of those practical men away and to put 20 men as assistants there who are not practical men. I want to ask you, if you will allow me to do so, is the efficiency of those deputies the same as it was when they had 50 competent men? That is the real kernel of the thing.

29029. (*Chairman.*) Still, what you say is rather a puzzle to me, because you distinctly said to begin with, as I understood you, that there were certain men in the

Digitized by Google

Mr. J. Toyn.

7 Nov., 1907.

position of deputies who were not the best men that could be got and who had not got the practical experience. Now you say that a certain number of the deputies are withdrawn and that assistant-deputies are put in their places, and you have no complaint whatever to make, as I understand, with regard to the men who are nominally the deputies, but the complaint you have to make is that certain assistant-deputies are put in the place of the deputies to perform their duties?—That is the chief complaint. There is a little complaint about men being appointed who are not competent, but not so much that as with regard to assistants to the deputies being appointed who are not competent.

29030. Then you would insist, I suppose, upon anyone who exercised a function of deputy at all, whether as assistant-deputy or as deputy, passing this examination?—Yes, that is it.

29031. (*Mr. Wm. Abraham.*) Have you known cases where deputies have been appointed who have had less experience than three years?—Yes, certainly: some have never had any experience at all in getting ironstone.

29032. Then we will come back to that: there is a case against the deputies as well as against the assistant-deputies?—We do not want to bring that up.

29033. But I want to know the truth: we are sitting here to investigate the truth, and we expect to have it from a man in your position?—We have known men who have never got any ironstone being appointed deputies.

29034. Very well, there you are, if you can prove that?—We can.

29035. Do you know of cases where unpractical men have been allowed to put up timber in dangerous places?—I could not say that I have known such cases. Of course, these assistants have gone to put it up.

29036. Well, the assistant is a man after all?—He is a man, but he is not a competent man.

29037. That is the point; I am trying to help you all I can. So that these incompetent men are allowed to go to dangerous places to do things which nobody but competent men ought to do?—They are supposed to be under the superintendence of the one man.

29038. But they are allowed to go by themselves?—They are. Might I correct that: two of them go—not single-handed. Where they have to put baulks in it takes two of them, and two assistants have gone to timber a district.

29039. Are the two who go together incompetent?—Yes.

29040. (*Chairman.*) Both of them are incompetent?—Well, they are assistants.

(*Mr. Wm. Abraham.*) But they are incompetent men, whatever their position is.

29041. (*Chairman.*) One of them is an incompetent man and the other is a competent man, perhaps?—I would not like to say that with regard to all of them. I must say that there are some old miners who have been put on to that kind of work, and I could not say that they are incompetent.

29042. We do not suggest that you should say that everyone is incompetent?—I could not say that that class of man is incompetent, but I mean to say a greenhorn who has been taken on to fill and then does the other kind of work, would be incompetent.

29043. (*Mr. Wm. Abraham.*) You say in your statement that two skilled deputies should be allowed to go together?—Yes.

29044. And that no men should be permitted to set or put in timber who have no practical knowledge of timbering?—Yes.

29045. I ask you whether that is so—no matter how infrequently it happens, but does it happen?—It does.

29046. Very well, that is all that we want. Now you want to have some Rule made, either Special or General, to prevent that being allowed?—Yes, we want some Rule to say that they shall be all competent and thoroughly practical men.

29047. Therefore, the burthen of your complaint is that unpractical and incompetent men are being placed in responsible positions at some places?—Well, I had better put it "irresponsible men."

29048. (*Mr. Cunynghame.*) With regard to one question which you have been asked, would you give us the name of the mine where the incompetent men are being put on?

We do not wish to single out any particular mine.

29049. Then, of course, it leaves it open to this. I sympathise with you entirely in regard to your not wishing to give the name, and I do not want to press you to give it, only, of course, if you say that somewhere there is somebody who is incompetent, but you will not say where, it cuts away all chance from the man of coming and saying, "I am competent," and of proving it. You do not give him a chance, as it were?—No.

29050. Therefore, of course, as you are aware, it must very much weaken the value of what you say, must it not?—Yes.

(*Mr. Cunynghame.*) I am not at all wishing to put it against you; I respect your motives. I will say no more—indeed, I do not think I can say any more upon that.

29051. (*Mr. Wm. Abraham.*) But let me ask you, as I did a witness yesterday, whether you will give that information privately to the Chairman?—Will you allow me to say this: take a man who is not competent to examine in the morning, and then suppose he is put to set timber up, do you consider he is a competent man?

29052. We do not want to go back to that. I understand that you have cases in your mind; all we ask now is whether you will give that information privately?—I can tell you that there are about seven or eight mines in the Cleveland district where there are assistants put under a deputy who are not responsible.

29053. I should like you to give the names to the Chairman—not to go down in print—because that would be of great assistance?—Well, if you do not see clearly the point that we put I do not think I can make it clear.

29054. We see the point that you are putting?—We will give you privately the names of six or seven mines where this business is carried on. I must draw a comparison again: there are four of you gentlemen sitting on that side of the table; now suppose that you are all practical and responsible men, then take three of you away and put three irresponsible men who are not competent to examine in the morning with you, and suppose that the other gentleman has charge of you three; he sends you to put up timber and he is supposed to inspect it, and he may get there probably some time in the day, but sometimes he may never go there at all, but may leave you to put it in. I put that gentleman as being responsible and that you are his three assistants, and he says to two of you, "Go and timber a district," and then you go to timber that district, and he takes the other assistant with him to go and timber another district, and he is not with you while you are putting that timber in. That is the case which I put.

29055. (*Mr. Ratcliffe Ellis.*) You represent the Cleveland Miners and Quarrymen's Association?—Yes.

29056. Does that Association pretty well include all the workers in the mines?—In Cleveland it does.

29057. What proportion are outside?—Not many now.

29058. You speak generally for the whole of the men who are engaged in the mines?—Yes.

29059. It is ironstone mines you are speaking of?—Yes.

29060. The statistics with reference to falls of roof look very bad in these reports: ironstone mines, 1·940 per 1,000 persons employed. But how many persons are there employed?—I have not the exact number now before me, they are in the Blue Book; I think it would probably be nearly 9,000.

29061. So that you see when you take the number of accidents, which are really very few in number, it would appear to be a very large percentage of the persons employed?—Yes.

29062. Therefore, it really makes it look worse than it is. How many accidents were there last year?—Do you mean fatal accidents.

29063. Take fatal accidents to begin with, if you can tell me the number?—I am not sure whether it was 15.

29064. It was hardly 15, I think. In ironstone mines the fatal accidents from falls of roof and sides were 11, and the non-fatal accidents from falls of roof and sides were 30. So that you see there are not a great many, although the figures look very large?—Oh, that is not a tithe of them.

(*Chairman.*) These are only deaths.

29065. (*Mr. Ratcliffe Ellis.*) The total number of fatal accidents from falls of roof and sides in 1905 was 11 in the whole of the Cleveland Ironstone Mines. I do not suggest for a moment that we should not try to make the number less if we can, but it is not nearly as bad as

Digitized by Google

it looks when you say 1·940 per 1,000 persons employed ?—No.

29066. You suggest that in order to secure safety there should be a better qualified deputy to do the timbering ?—Yes. We require that there should be two responsible and practical men who should go together.

29067. I will ask you to refer for a moment to see what rules there are at present which apply to timbering, and see whether I have got them all: there is, first of all, General Rule 21 in the Act ?—Yes.

29068. That applies to ironstone: "The roof and sides of every travelling road and working place shall be made secure, and a person shall not, unless appointed for the purpose of exploring or repairing, travel or work in any such travelling road or working place which is not so made secure." That is a General Rule which applies to ironstone mines ?—Yes.

29069. And it is the duty of the certificated manager who is in charge of the mine to see that that regulation is carried out ?—Yes.

29070. That is the first General Rule. Now coming to your Special Rules, there is Rule 42, which provides: "The deputies are responsible for having ready, and putting into every working place a sufficient quantity of timber, brattice, and other materials; and for setting sufficient timber to afford the greatest possible safety to the workmen employed, and to report any deficiency of timber, brattice, or other material to the overman or back-overman, and they are to brattice all working places where necessary" ?—Yes.

29071. Then your Special Rule 38: "The deputy shall frequently examine the edges of the goaves and working juds"—what is a "working jud"; is that where the men work ?—It is where they are taking out pillars and preparing for a fall.

29072. "The deputy shall frequently examine the edges of the goaves and working juds, and where danger is apprehended no juds are to be drawn until the mine is done working." That is another timbering rule ?—Yes.

29073. Then your Special Rule 41, which says that it is the deputy's duty "immediately to withdraw every workman from any place rendered dangerous by noxious gases or absence of timber," and so on. His duty is to withdraw the men in case of danger ?—Yes.

29074. Special Rule 42 I have read to you. Then Special Rule 43: "To keep all tramways properly secured and in a working state, from the working faces to the in-bye end of the station, or to the rolleyway." That is again a question of timbering ?—Yes.

29075. Special Rule 52: "Each workman in addition to the examination by the deputy, or other officer, must satisfy himself of the safety of his own working place before commencing, also whilst at work, and should the working place of any workman become unsafe from any cause, he is to discontinue working in it, and immediately go or send for the deputy. But if unsafe from want of timber being set, then, in the absence of the deputy, there being sufficient timber of proper lengths in the place, such workman to set it in order to keep himself safe, or cease to work and report the same to the overman or deputy," and so on ?—Yes.

29076. Then Special Rule 56 provides that "No one, unless authorised so to do, shall interfere with, or alter any timber set to support the roof or sides or any ventilating door, brattice, switches, or other appliances." Are all those rules, either General or Special, the rules relating to timbering ?—I think they pretty well cover it.

29077. Do you think that if those rules were carried out there is sufficient protection ?—I should say there was.

29078. So that what we have got to is the question whether or not proper means are taken to see that these rules are carried out ?—Yes.

29079. What sort of timbering is it that has to be done ?—In pillar working it is props.

29080. What height are they as a rule ?—It varies from 7 ft. upwards; we have one mine working at 16 or 18 ft., but I think the bulk of it would be about from 8 ft. to 9 ft. or 10 ft.

29081. Do you find that these accidents happen in the roads or in the working places more generally ?—In the working places.

29082. Have you anything to say against the way in which the roads are timbered ?—No, I do not think we have.

29083. You think that is satisfactorily done by the men, whether they are competent or incompetent, in the roads ?—Yes.

29084. What is the sort of timbering in the working places ? You spoke about baulks ?—Where they are working in whole workings it is generally baulks let into the sides.

29085. What sizes of baulks ?—They drive in places from 12 to 13 and 14 ft.

29086. Are those baulks of such a size that they take two or three men to lift them ?—Yes, it takes two to lift them; it is very heavy timber and the roofs are as a rule not good.

29087. Then those are supported by props underneath ?—No, they generally cut a hole into the stone; it is strong in most places, but if it is necessary they put a prop under it.

29088. One man could not do that work ?—No, he could not do it.

29089. It requires two or three men ?—Yes.

29090. Is there always one man, the deputy, who is a competent man ?—Yes.

29091. What you want is that in addition to the deputy, who is now a competent man, there should be some other person as competent as the deputy to go with him ?—Yes.

29092. Where it takes three men to do it, you want all three men to be equally competent with the deputy ?—We have one competent man sometimes go where there are three going together.

29093. Is that your request—that although now the deputy is a competent man, yet in addition to the deputy the men who have to do the labour with him should be equally well qualified ?—The other man has to cut the baulk hole and to do his part of the business.

29094. Is it your request that the men who go to assist him—two or three, as the case may be—must be equally well qualified as the deputy ?—Yes, if they have to put in timber. If it is cutting away timber or anything of that kind, others can do it, but if it is timbering the place as we have stated in our Statement, where they put the timber in, they should be competent men.

29095. I want to see what this competent man has to do, because if he is nothing more than a labourer there is no need for him to pass an examination. Now what someone has to do is to cut a hole in the stone on each side ?—Yes.

29096. Then the baulk has to be lifted and put upon those supports ?—Yes.

29097. Part of what is required for that is strength ?—Yes.

29098. What is the skilful part of it ?—The skilful part of it is to cut the holes, and to know the nature of the top where they have to put the baulk, and one man is required to assist and look after the other in looking at the roof.

29099. But if you have one man there who is a skilled man to look at the roof and to himself give directions as to how to do the work, does it require the men who have to lift up the baulk and put it in its place to be equally skilled ?—If the man only had to lift it up, no, but he has to take a part in it.

29100. What part has he to take ?—He has to cut the hole and be there to assist the other man.

29101. But if there is a man there who looks after it and who understands the roof, the cutting of the hole is not a great matter of skill ?—No, but the majority of the mines have two skilled men together.

29102. But I want to see the necessity of it ?—There is a necessity. It requires all the eyesight and all the brain-power for them to look after it.

29103. You think one is not enough ?—Yes.

29104. Do you think there should be two skilled men ?—I think there should be two skilled men.

29105. And then the third man should be the labourer ?—There is no third man wanted in most of the mines.

29106. But if there is one wanted, would a labourer be enough ?—Yes.

29107. You think that if you have two skilled men, and it is necessary to have any other labourer there, he need not be skilled ?—He need not be.

29108. You suggest that you would secure this skilled man, this deputy, by an examination ?—Yes.

Mr. J. Toyn.

7 Nov., 1907.

29109. I understand you agree that the present deputies are, in the main, skilled men?—In the main, I suppose they are.

29110. Well, you believe them to be so?—I think a good many of them are.

29111. Have they passed examinations?—No.

29112. Then what advantage would they get by passing examinations?—I should let them go on as they are.

29113. How is it that they have become skilled without having passed examinations?—Practice will make them skilled, some of them.

29114. Without passing examinations?—Practice makes some of them skilled, no doubt.

29115. Will examination without practice make a man skilled?—Not exactly; but you want to test him to know whether or not he is skilled enough to go into that responsible position.

29116. Do you know the examination for a second-class certificate?—I do not.

29117. So that you are not able to say whether that examination would be sufficient?—Oh, he would not want that. I would have an examination of a different kind; I would examine him in sounding. For instance, one man might go and sound, and perhaps there would be a thin layer and it would be very tight, and it might sound what is called "drummy," and he might sound a big lump and he would want to know whether that was good or bad. If he understands sounding, it would have a leaden and dead sound if it was bad, but if it was good it would ring off it.

29118. I suppose that is common knowledge to anybody who has done ironstone mining?—Well, it is knowledge to them who have had some experience of it, but outside it is not.

29119. These men who are appointed as deputies are appointed by the managers, are they not?—Yes.

29120. Therefore they must have satisfied the manager that they are competent?—I am not sure about that. He thinks they are competent.

29121. And they are competent as a rule?—As a rule, I should say they are.

29122. Is it not sufficient for a manager to in that way select men that he considers are competent in the same way as he has done in the past?—Not as he is selecting some of them now.

29123. One cannot legislate for exceptions, but generally speaking, however, these men have come to be deputies, they are competent men, and they have been selected by the managers. Is not that examination sufficient for you?—No. The men that we complain about now have been selected by the manager.

29124. How many deputies do you suppose there are in the Cleveland district?—I suppose there would be 300 or 400.

29125. How many are there that you think are incompetent?—We have not taken the numbers of them.

29126. Are there five?—Oh, yes.

29127. Are there a dozen?—There are more than 50.

29128. Have you any statistics to shew that the number of accidents from falls of roof and sides are greater where these incompetent men are appointed?—No, we have not.

29129. Do you know anything about those statistics?—We do not.

29130. When you supply the names you will be able to find out that, will you not, and you will be able to see whether their want of skill makes itself self-evident by the larger number of accidents at the faces?—It may to a certain extent, but it does not follow that that is the whole of it.

29131. What else is there?—We have a lot of agencies at work now that did not use to be at work years ago.

29132. What else is there that you look at in order to see whether these men are skilled or not?—The way in which they do their work. I do not know whether you heard me mention a case in which I was at an inquest where a man was not allowed to examine in the morning, but he was competent enough to stop there; the deputy left at 20 minutes past 12, and then his assistant took charge when he went away, and yet his assistant was not competent to examine in the morning to sound the top, but he was competent to take charge after the deputy had gone.

29133. I heard that you said all that at the inquest?—Yes.

29134. And the Coroner did not agree with you?—The Coroner did not understand it, he was not a miner.

29135. Whether he understood it or not, he did not agree with your view?—Well he said he did not.

29136. The Jury brought in a verdict of accidental death?—The Jury brought in a verdict of accidental death, but there was no fault on the part of the deputy; that came out in the examination.

29137. Will you tell me what examination you suggest there should be? You say you will not leave it to the manager; you say you cannot trust him to select competent people to do this work. What is the sort of examination which you would suggest?—I would suggest an examination by the manager, the under-manager and two miners appointed by the men.

29138. But why? The men are not responsible in any way. The manager is responsible under the Act of Parliament if he does not select competent people?—Yes.

29139. There is no responsibility on the men?—No.

29140. But still you think the men ought to be invited to consider whether a deputy should be qualified or not?—Whether they consider him qualified.

29141. Supposing you have got a Board of that sort, would you propose to have equal numbers, or in what way are you going to decide the question?—I would not be particular—two or three on each side.

29142. Supposing the manager and his side of the Board were of opinion that the man was qualified, and the men's side of the Board were of opinion that the man was not qualified, how would you decide it then?—There would have to be, perhaps, a third party called in.

29143. An arbitrator to decide whether a deputy was qualified or not?—The difficulty might be got over in that way.

29144. Why should you object, if there is to be an examination, to have it decided by some altogether outside authority, as in the case of second-class certificates?—I should not have it as stiff as that, because the miners and men in that position would not be competent to go through a sort of theoretical examination.

29145. But if there is to be an examination, would it not be more satisfactory that it should be conducted by somebody outside both the employer and the workmen?—I think the manager and the workmen at the place could do it the best.

29146. You do not think the manager is competent to do it?—I think the manager is competent if he would only appoint the men, but if the men had a voice in the matter as well, they know the man and know what is required.

29147. Do you think the manager is competent to do it?—He is competent.

29148. Then why not let him do it?—Because we do not agree with the way in which he is doing it now.

29149. In some cases you do agree?—In some cases we do.

29150. There is a very large proportion of the cases in which you do agree?—Yes; in some mines we have not a fault to find with it.

29151. In other cases you do not think the manager is competent to select them. If you will be good enough to send to the Secretary of the Commission a note of the places where these incompetent men are, then it will be possible to ascertain whether there are more accidents under their management than in the other cases?—I should not like to say that there are more accidents. We try to prevent them.

29152. Yes, I suppose everybody would do that. At any rate, you will furnish that information?—Yes.

29153. I think I understood you rightly to say that no person should be appointed a deputy who had not worked as a stone-getter?—Yes.

29154. Would that be a qualification in addition to the examination?—It would qualify him to pass the examination.

29155. But supposing he had not that experience, you would not allow him to sit to be examined?—I do not think I should allow him to be examined.

29156. Is the work of getting stone necessary to qualify a man for examining the roof?—It makes him become acquainted with the nature of the roof.

Digitized by Google

29157. You think that experience is of advantage to him ?—Yes, I think that is the best experience he can have.

29158. You would make that a condition of his sitting for examination ?—Yes.

29159. Then no man could be a deputy, however well qualified, who had not worked at stone-getting ?—In my estimation, he would not.

29160. So that you would exclude from the chance of being appointed as deputy any person who had not been an actual workman in getting stone ?—I would.

29161. Now as to the chargeman and driller. The chargeman, I understand, is the man who charges the shot ?—Yes.

29162. And I suppose the examination has to be made by somebody before the men are allowed to go to work ?—Yes, before the fillers are allowed to go to work.

29163. Who does make the examination ?—The chargeman.

29164. Is he a competent man as a rule ?—As a rule, I think they are competent.

29165. Do you want to make any alteration in his qualification ?—I have known men appointed that were not competent to drill. Of course, in the morning the deputy examines the place, and then the man goes in with the drill and he has charge of another young man, who is what they call the "drill changer," and I have known men come in there, and I have had it pointed out by a manager that those men have had no experience, and they have told me that they were going on and how much they were making in a day.

29166. Are you speaking now from your experience or from information given to you ?—Information given to me.

29167. Are you speaking of anything like the universal practice or of a very few exceptions ?—Of a very few exceptions. We have not much fault to find.

29168. As a rule, you think the chargemen are qualified to do the work they have to do ?—As a rule I believe they are.

29169. With reference to the inspection, you think there ought to be an inspection at least every six months ?—Yes.

29170. And that it should be more complete than the inspector makes now ?—Yes.

29171. The Chairman has suggested to you whether you would be in favour of the appointment of a lower grade of inspectors to do this work ?—Yes.

29172. Do you propose that such inspectors should be appointed by the Home Office ?—Yes.

29173. Should they be required to qualify themselves ?—To a certain extent, to see that they are competent for the place.

29174. Do you consider that their duties should be merely examining the roof and sides ?—Principally that.

29175. Would they have to examine for gas ?—Occasionally they would.

29176. Would they have to understand the measurement of the air, the ventilation and other matters ?—Well, that would be a question. I do not know whether they would be capable of doing that.

29177. Why should they not be ?—Of course they could soon measure the air.

29178. Do you not think it is desirable that if a man is appointed as inspector he should be fully qualified to do all the duties of an inspector ?—I would suggest a thoroughly practical man, and that he should be competent to see that all was safe in every respect.

29179. Then he would of course have to be trained pretty much as an inspector is trained ?—Not exactly as far as they are trained now—the theoretical part.

29180. What is the advantage of having a less qualified inspector than you have at the present time ?—Well, the inspectors we have now have not been practical miners.

29181. But if they understand the working of mines is it not sufficient ?—But no man does unless he has been a practical miner.

29182. Then is your view that no person should be appointed as an inspector of mines who has not actually worked as an ironstone getter ?—Yes, for this class that we are speaking about.

29183. Then for the other class you would not make that requirement ?—No, I could hardly do that.

29184. Why not ?—I think that a chief inspector wants to be in such a position that he could put a first-class manager right.

29185. Still he must understand it himself, must he not ?—Yes. He will only know it the same as the manager does ; there are not many of them that have ever been practical men.

29186. Then your view is, at any rate, that although the chief inspector and his assistant need not have been practical working men, yet with regard to these sub-inspectors, if they were appointed, although they must qualify themselves by passing an examination, they must also have been practical working miners ?—Yes ; and if they could pass the other examination I would allow them to do so.

29187. Certainly, there is no reason why a man's class should prevent him getting to the highest post if he is equal to the job. That is your view : you think that would be an improvement ?—Yes, and I think that if you had good thorough practical working men, they would do some real good practical inspection.

29188. They would of course be surrounded with all the restrictions that an inspector of mines is surrounded by as to the use which he can make of any information he gets—they would have to be entirely independent ?—Certainly—independent of all parties.

29189. (*Dr. Haldane.*) Have you many accidents from blasting ?—We have had accidents from blasting, but they are, comparatively speaking, very few.

29190. So that the method used is, on the whole, safe, considering the enormous amount of blasting done ?—Yes. It is pellet-powder—compressed powder—that is used : it is in 2-ounce cartridges, and it is much safer than the loose powder used to be. There are not many accidents in blasting—scarcely any.

29191. How is it fired ?—It is fired with patent squibs : we never fire with fuses. They use a wood rammer to put the powder up with, and a copper or composition needle pricker and stemmer : they have to put the powder in with a wood rammer, and they are very careful indeed.

29192. Have you ever heard of any men being affected by the smoke, I mean being made ill by the powder smoke ?—Yes, often ; but not suddenly ill.

29193. Have you known them to get headaches, and so on ?—Yes.

29194. Does that happen often nowadays ?—Yes, it still occurs to a certain extent : it is not so bad as it used to be.

29195. In what sort of places would that happen—in the stalls ?—As a rule the places are worked about 12 or 13 ft. wide, and the strata varies from 7 ft. to 10 ft. or 10 ft. 6 in. generally. I think the Cleveland main seam is about 8 ft. thick, but at Eston they are working it from about 16 to 21 ft.

29196. Yes, they are very high there.—That is a very high mine, but that is an exception.

29197. On the whole you think the ventilation is good ?—Yes : it is better than it used to be. Of course they have a difficulty now when they are working out pillars : they cannot keep their air-courses up and their stoppings up, and everything, so well as they can in whole workings. We have some mines that are "whole" working : they are not all "brokens," but most of them are.

29198. I think on the whole the life of an ironstone miner is a very healthy one, is it not ? It has that reputation ?—Well it probably is not so unhealthy as some others.

29199. You have some accidents, of course ; but I mean apart from accidents you have nothing much to complain of, have you ?—No, I do not think we have.

29200. You have no special troubles there, have you ? Have you any cases of what they call miners' nystagmus —trouble with the eyes ?—The coal miners sometimes have it.—No, I do not think we have any difficulty about that.

29201. And you have no trouble with the dust ?—No.

29202. It does not do any harm to anyone, apparently ?—No. There is sometimes a little trouble with too much water.

29203. (*Mr. Smillie.*) You have had a long experience as a practical miner ?—Yes, I have had 20 years' experience in the mines as a miner.

Digitized by Google

Mr. J. Toyn.

7 Nov., 1907

29204. You represent the limestone quarrymen?—Yes, those who are getting stone for flux for the furnaces: it is all in our iron trade.

29205. Have you had any practical experience as a quarryman?—No, I have not as a limestone quarryman.

29206. Has your long experience as a trade union leader amongst them given you experience of it?—Yes: I have visited all the quarries many times.

29207. It would not be correct to say that you did not understand the position of quarrymen?—No, I fairly well understand the quarries.

29208. Would it be correct to say that a practical coal-miner can understand the practical part of ironstone mining?—It would take him a good bit to do it.

29209. There are many coal miners who have worked in ironstone mines, and there are many ironstone miners who have worked in coal mines?—Yes.

29210. So that in that case they have had experience of both?—Yes.

29211. So far as the nature of the roof is concerned, a coal-miner would have a better opportunity of recognising the danger in an ironstone mine than a stranger who had no experience in a coal mine?—Yes.

29212. I think so far as the sounding of stone is concerned, the same thing applies in an ironstone mine as in a coal mine?—To a certain extent it would apply—to a greater extent, I might say.

29213. I mean that the nature of the roof in coal mines varies from place to place almost as much as it would in different places in ironstone mines?—Yes.

29214. I think your strong point is that deputies, in addition to having the necessary qualifications, should have three years' experience at the face?—Yes.

29215. Is it your opinion that the most valuable experience is that which is gained at the working face?—That is so.

29216. So far as the nature of the roof and also the dangers arising from shot-firing and other things are concerned, that experience is gained at the face more than at any other employment?—There is no doubt about that. Might I explain to you that the tops vary so, and the backs, that is the seams in the roof; there are some what we call saddle-backs, and they are very dangerous indeed: there is a great difficulty in understanding the nature of those backs.

29217. Sometimes it is nearly impossible to find out a saddle-back even by sounding. It may sound all right on the top, but it may fall out without giving any previous warning?—That is so.

29218. But a skilled miner very often knows when he comes in amongst those from the nature of the roof, and he can see from the nature of the roof that he is amongst dangerous saddle-backs?—Yes.

29219. You think that every deputy before being appointed should, as I have said, have three years' experience, and should prove also by examination his qualification for becoming a deputy?—Yes.

29220. That is to say, in the interest of his own safety and for the safety of the workmen under his charge?—Yes, quite as much for himself as for the others under his charge.

29221. Is it your opinion that the deputies are more responsible, as a matter of fact, for the safety of the working miners than even the manager himself?—That is so, a considerable deal more.

29222. And that if it is necessary for a colliery manager to hold a certificate of competency, it is still more necessary that a deputy should hold one?—It is, because the management of a mine begins with the deputy in the morning and finishes with him, and some of the managers do not go in more than once a week.

29223. I suppose there is no longwall working there?—No. It is all pillar and stall—board and pillar.

29224. (*Dr. Haldane.*) It would be quite impossible to work longwall in the thick seams, would it not?—Yes, I think it would.

29225. They are tremendously thick seams?—Yes.

29226. (*Mr. Smillie.*) I suppose the working of the pillars is the most dangerous part of the mining in your district—the taking out of the pillars?—We think it is.

29227. What depth are the mines generally?—Some of them work in on the inclined plane, and I think the deepest mine in our district is about 124 fathoms.

29228. There would be a considerable weight on in taking out the pillars at that depth?—Yes, but they are probably worse where there is the less covering on—for taking out the pillars.

29229. The roof is not so good or so strong?—It is not so good or so strong. It is stronger in-bye.

29230. In taking out your pillars, the men put up the props to keep up the roof as they take out the pillars?—Yes.

29231. And then remove those props afterwards?—Yes, they draw their juds and let the roof in.

29232. That is also very dangerous?—Drawing the juds is very dangerous.

29233. That is also done under the charge of a skilled deputy, I suppose, or a deputy who is supposed to be skilled?—Yes. Mr. Stephens could tell you more about that because he is a deputy, and he has to draw juds frequently.

29234. If a third grade of inspectors were established by law, you would have no objection, I suppose, to their holding a first-class certificate of competency? Provided that they had the practical experience, as one part of their qualification, would there be any objection to their holding a first-class certificate?—Not the slightest.

29235. You are aware that a large number of ironstone and coal miners do hold first-class certificates at the present time?—Yes.

29236. And there would be no difficulty in getting thoroughly skilled and practical men who did hold such certificates, if there was a grade established of that kind?—Not the slightest. We have two or three men who hold second-class certificates now working in the face.

29237. Do any of your miners hold first-class certificates?—I believe we have one.

29238. Do you carry out General Rule 38 as far as regards appointing Inspectors yourself to make examinations?—Yes, we do so in a number of mines, and we are trying to encourage the men to do it all over, and we pay them out of the funds of our Association.

29239. You are aware that that rule lays it down that they must be practical working miners?—Yes.

29240. Do you think that that was a wise provision for the Government to make, that they must be practical working miners?—I do.

29241. It ensured, at least, that they had the skill which you think comes from practice?—Yes.

29242. Are you aware that that rule is interpreted in your district to mean that they must be working at the time of their appointment? Could you appoint men who had been practical working miners who were not then employed?—Well, we never do.

29243. Consequently, you do not know what position your managers would take up if that were done?—No, we do not. They generally appoint men who are working in the mine which they have to inspect. I believe the rule gives power to appoint miners from other mines to come and inspect, but they never do so; they always appoint men out of their own mine.

29244. So far as your own knowledge goes, has the appointment of those men from time to time led to greater safety—I mean to a better observance of the Mines Act?—Yes, we think so. Of course, we cannot tell; we see their reports, and we print them. They make very close inspection, and in some mines it takes them three days to do it.

29245. Of course, if they find anything wrong or any danger, a copy of their report has to be forwarded to the mines inspector?—Yes; the mine manager has a report book, and things are put in the report, and if there is anything wrong they point it out to him and ask him to rectify it.

29246. As a matter of fact, really, an extension of the present system is what you propose, but that it should be set up by the Government?—Yes.

29247. May we take it that, the inspectors having a practical knowledge, as you suggest, they would not interfere in any way with the management of the mine, but that they would report to the chief inspector?—Yes.

29248. You would not give them the powers which are at present conferred upon chief inspectors, but you would make them assistant-inspectors, who would report the results of their examinations to the chief inspector?—Yes.

29249. And then he should take any action which he thought necessary?—Yes. We think it would fill up a

Digitized by Google

gap: that the inspectors as they are now deal more with the theoretical part of it, and we would put a practical man in so as to connect the whole thing together.

29250. You think that a thorough examination of your mines, made at least once in six months, and of course oftener if required, would lead to greater safety?—Yes, I think so.

29251. You have no objection, if it would be good for the district, to an extension of it to all mines, I suppose?—Not the slightest.

29252. You say you have 20 mines?—I think there are about 20.

29253. I daresay they vary in extent?—They do.

29254. What is the average number of men employed in them—200?—I daresay in Eston there would be nearly 1,000 men. Some mines have about 300, and some 700: they vary.

29255. From 300 to 1,000? Yes, and there are less than 300 in some of them.

29256. You have given this matter some thought, and you believe that one inspector devoting the whole of his time to Cleveland, Whitby and Rosedale Abbey Districts, could thoroughly inspect those 20 mines?—I think he could do it fairly well.

29257. You say that at the present time, in the case of some of your inspectors who are practical men and who work in the mine and have considerable knowledge of the mine, two men took three days to make an examination?—Yes, it takes three days.

29258. That would be in the case of a large mine?—Yes, it is a mine belonging to Messrs. Pease & Partners. We have had reports sent in just recently, showing that it took them three days to inspect all the working places and air-courses, and we think there should be an inspector appointed to cover the ground which they have covered.

29259. Your chief complaint is not that the present inspectors do not do their work well?—No, I believe they do it very well.

29260. But that it is impossible that they can do it—that they have far too much to do?—Yes, they cannot do it. I am not complaining about their not working hard: I think they do.

29261. You think that perhaps £200 a year would cover the necessary expense so far as your own particular district is concerned?—I should think it would.

29262. And that that money would be well spent?—I do think so.

29263. You believe it would lead to greater safety and probably to the saving of life?—Yes.

29264. (*Mr. Cunynghame.*) You have told us that these mines are inspected by the men under Rule 38?—Yes.

29265. Have they ever in their reports pointed out the incompetency of some of the deputies?—No: they have nothing to do with that.

29266. That matter would not come under their consideration?—No.

29267. You have not stated how often the inspection was made. I suppose it was made at irregular times?—They could make it once a month if they chose.

29268. How often do they make it?—Well, it just varies. If some men come to the lodge meeting and say "Our district is getting a bit smoky," or something like that, they appoint two men to go round. I do not think there is any particular time when they do it, but they do it frequently at some of the mines, and we are asking them to do it at all of them, because we think the money is well spent.

29269. (*Mr. Ratcliffe Ellis.*) You say that you print the reports of those inspections?—Yes.

29270. Could they be supplied to the Commission?—Yes, I daresay we could send you a copy or two of them, at any rate. Our secretary generally prints them at the bottom of other business, but we could supply you with some, I know.

29271. (*Mr. Smillie.*) Might I ask whether those men are paid by the miners who appoint them, or whether they are paid by the Association?—They are paid by the Association.

29272. And you are willing to pay the expenses wherever there are men appointed by any of your miners?—Yes.

29273. Proving that you have given every encouragement for the carrying out of the system of inspection by the men?—Yes; I may say I frequently advocate in my quarterly circular that the men should appoint them, because I think money that is spent to prolong life and to protect it is well spent.

29274. (*Chairman.*) May I ask whether those men are always taken from the mine which they are sent down to inspect, or do you take men from other mines?—I think they are always taken from the mine which they inspect. I have not known a case yet in which the men were brought from other mines.

29275. You do not suppose the manager would make any objection supposing you thought one particular man was an especially good man for the purpose? Would the miners object to your sending him down another mine than the mine which he himself was working in?—I do not know that the mine managers would object. Some of them might possibly say "Have not we men competent enough in our own mine," but I do not think they would object.

29276. You have never done that as a matter of fact: you have always sent men down to inspect the particular mine that they are working in?—Yes.

29277. (*Mr. Wm. Abraham.*) Do you know of any instances where the reports made by these men have been called for at inquests as proof of the condition of a mine at certain times?—No.

29278. My point is this: as a rule those reports made by the men are considered to be as reliable as possible?—Yes.

29279. So that the quality or the grade of men does not prevent the reports being of importance?—They are generally considered satisfactory: in fact I have not heard a complaint against them. I have never heard a complaint that reports were not satisfactory.

Mr. William Stephens, called and examined.

29280. (*Chairman.*) I understand you are a mines deputy. You have heard the evidence given by Mr. Toyn with regard to the qualifications of a deputy. Do you agree with him that there should be some sort of examination?—Yes, I think there should.

29281. And that there should be certificates of competency given?—Yes, I think there should be some kind of examination to test a deputy's qualifications.

29282. Do you think that he should not be allowed to sit for this examination until he has had that three years' experience?—That is so.

29283. With regard to who should conduct the examination, do you agree that it should be conducted by two persons on behalf of the management, and two persons on behalf of the miners?—I may say that is a matter we, perhaps, have not so carefully considered, probably, as we might have done; although we have partially agreed that that would be perhaps a reasonable way for the selection of a deputy.

29284. Have you any fault to find in general with the selection of deputies made by managers? Do you think as a rule that the best men are chosen for deputies by the managers?—Yes, generally speaking, they are.

29285. As a rule the managers, you think, are careful to choose the best men?—Yes.

29286. Generally they do so in their own interest?—Generally speaking.

29287. Do you find that you have incompetent men placed under you sometimes and pressed upon you as assistants?—Personally, no; but there are cases as presented by Mr. Toyn this morning where pressure is brought to bear upon deputies to accept assistants.

29288. People whom you do not consider quite competent to perform the duties?—That is so; who are not competent for that position.

29289. I suppose you would say not only persons who are nominally deputies, but also persons who are assistants,

Digitized by Google

Mr. W. Stephens

7 Nov., 1907.

and consequently have to perform, on occasions, deputies' duties, ought to have deputies' certificates?—The assistants?

29290. Yes. Do you suggest that?—If they have gone through the proper probation and necessary examination, then, of course, it would be all right. The fact that they are assistant-deputies would not make them qualified unless they had had experience.

29291. But an assistant-deputy may be called on to perform all the duties of a deputy. He may have charge of a mine, and while in charge may have to see to the safety of a roof?—I do not think that the management would allow an assistant-deputy not considered by them properly qualified to perform those duties.

29292. Mr. Toyn has said on occasions he knows the assistant deputy has been left in charge by a deputy for some hours. If a man is left in charge by a deputy, ought not he to be a man who has passed a deputy's examination himself?—He should be.

29293. There might be a great many more people who had passed the deputy's examination than there is room for as deputies, and anybody who passed the examination might be qualified to act as an assistant-deputy?—That is so.

29294. You agree with Mr. Toyn, and you think as regards timbering at all events two skilled deputies should always go together?—From experience I find that is so. It is necessary that two skilled deputies should go together.

29295. You would be content if one man was nominally a deputy and the other an assistant-deputy, providing the assistant-deputy had passed the examination. He would be then a qualified man?—I do not see how he could be an assistant-deputy if he had passed the examination.

29296. There might be a large number of persons qualified as deputies, but yet there would be no room for them as deputies. You would say then that two people who were to look after the roof should always be two deputies, and not only two people who passed the deputies' examination, but two people who occupied the responsible position of deputies themselves?—Properly appointed for that purpose.

29297. It would not be sufficient for a deputy to go about with an assistant-deputy who had passed the examination and in course of time hoped to be a deputy himself?—I do not say as a temporary arrangement. It perhaps would not be wise to draw a hard and fast line and say possibly for a short period that it would not be all right; but to appoint a man and an assistant permanently is a thing we find a great deal of fault with. I do not say for a day or two that it would not be all right in case of a vacancy or anything like that.

29298. You must not have too many persons as assistant-deputies, because that would interfere with the flow of promotion?—Perhaps it would be as well to explain more fully what is meant by an assistant-deputy. Those are not men appointed as assistant-deputies, but they are labourers who are working about the mine, and when there is a vacancy in the face one of those is taken and put in to fill a vacancy, not appointed actually assistant-deputy. He simply goes with this deputy as a labourer in the face, but not understood as an assistant-deputy, although of course he assists the deputy in his work.

29299. Sometimes I understand a deputy will leave the working face before the end of a shift, and leave somebody in charge. The person he leaves in charge, according to your view, ought to be a person who is sufficiently qualified to be a deputy himself?—That is so, and if he is not a deputy he should not be in charge of a district for any time.

29300. You would not allow anybody but a person duly appointed a deputy as well as having a certificate?—A deputy would be wrong in leaving a district without somebody in charge—some qualified person, I mean.

29301. A qualified person need not be a person who has been absolutely appointed as deputy?—If a man was working with me in the day, and was not qualified to take charge of the district, I should not go home until the miners had cleared out.

29302. You might have men with first-class certificates to be managers of the mine, but yet they are not managers of the mine, they are working in the mine; and in the same way you might have a man at the working face, and the deputy might say "You have passed your deputy's certificate; take charge of this place while I am away"?—If he was properly qualified that might be so. He is a qualified deputy in a sense, and there would be no question about leaving him in charge of the district.

29303. No man should be allowed to set or put in timber who had no practical knowledge of timbering. You have all signed this statement?—Yes.

29304. How do you propose to find out whether a man has practical knowledge of timbering? What would be the qualification?—It could only be found out by actual practice.

29305. Have you anything to complain of in regard to that matter—I mean men with no practical knowledge being employed to put up the timber?—Only where complaint has been made this morning, where two men should be doing the work there is only one.

29306. Your complaint is not that two unskilled men are employed, but very often a skilled and an unskilled man?—That is so.

29307. You say it ought to be two skilled men?—Yes.

29308. You say that none but practical men should be allowed to examine places that miners have to work in before they commence their shift's work. Surely that is a matter that the managers see to, that none but practical men examine before a shift?—I think that is carried out. I do not think any shift of miners would commence to work without the place being examined.

29309-11. You have nothing to complain of in that respect?—No, the places are inspected by a practical man before the miners commence their work. Before you leave the deputy question, I should like to give some reason why we think that two experienced men should work together. It is very often the case that deputies, in the course of their shift, are called to examine a place where the roof is very bad, and it is necessary sometimes for one man to watch while the other man works. There is just as much skill required to be a watcher as a worker, and where a place is very bad one, it is often the case that there is great danger. If two experienced men are together, one to watch while the other worked, I think it is better. Often the top is so bad that you are both afraid to work at once. One would sound it, and the other would see, if necessary, to getting the timber in. In the case of an inexperienced man it would be dangerous for the deputy to engage in doing that kind of work.

29312. I should have thought that greater experience was required by the person watching than the person doing the actual work?—You want experience in both cases, working and watching. With regard to the sounding of the roofs, I think a question was asked by Mr. Smillie. In a good many cases in the ironstone mines the roof is so high that you can only judge of the top by sounding it with a sounder. In the coal mines you refer to it is quite easy to sound with one hand, and feel the motion with the other. In the case of the roof being 10 or 15 feet from the bottom, you have to judge of the nature of the top by the sensation caused by the sounding. It requires considerable experience for a man to be able to tell when the roof does really require timber—not so much putting in the timber, as to understand the nature of the top, just when and where timber should be put in to keep the top safe. I confirm what Mr. Toyn has said, that without considerable experience of working in the face, it would be impossible to form an opinion as to the nature of the top.

29313. Do you think that experience could not be got very well under three years?—I do not say three years. There is a great deal of difference in men. Some get more experience in 12 months than others do in five years.

29314. You think that a good average would be three years?—That is so.

29315. Have you anything more you wish to say about timbering?—No, I think that covers it.

29316. Then with regard to the power machine miners. Do you agree with Mr. Toyn's view that there is no objection to employing, as I understand, inexperienced fillers, whose work is of a character that anybody almost can do, but that no inexperienced person should be permitted to take charge of a machine, or be entrusted to fire shots, except they have had at least three years' experience in getting stone in the face to prove their fitness?—The same amount of experience would be necessary to understand the nature of the tops for the machine men with the fillers, as well as for the deputies who have to go in to examine the first thing in the morning. A number of fillers are inexperienced men, and unless an experienced man is in charge, it would expose them to serious danger.

Digitized by Google

29317. Do you think it would require three years' experience in getting stone at the face to enable a man to take proper charge of the machine?—I do not think Mr. Toyn has given anything unreasonable. It requires a man of considerable experience.

29318. They must know not only how to drill, but have knowledge of the roof?—That is so.

29319. Just the same as the deputies would have?—Yes.

29320. The qualifications for a man in charge of a machine would be the same qualifications as for a deputy as regards a knowledge of the roof and sides?—Yes, because he is responsible for the men following in filling. When the machine goes out and the shots are fired, that man has to certify that the place is fit for the fillers to follow in. It is necessary to have fair experience for that.

29321. At the same time he has nothing to do with the timbering?—No.

29322. He need not be an expert timberer?—That is so.

29323. He ought to be able to tell when anything is the matter with the roof?—Quite so.

29324. Have you anything more to say about persons in charge of the machine?—No.

29325-29. (*Mr. Smillie.*) Will you clear up the point with regard to the Special Rule 65 which refers to the chargeman. He has to examine the place after the shots are fired?—There is a man with the machine and a man who fires the shot.

29330-1. (*Chairman.*) You have two men: the same man that charges does not fire the shot?—The man that drills the hole with the machine does not fire the shots. There is a man specially appointed for firing the shots, but they work as mates, and share the money earned.

29332. Do you consider at present that any considerable number of shot-firers are incompetent?—I should not say really that a considerable number are incompetent.

29333. Do you think most of them have had the three years' experience which you consider desirable?—They have by this time. When the machines were first introduced they had not. Now I do not suppose there are any working a machine who have not had three years' experience with the machine.

29334. You have nothing to complain of?—Personally, I do not know of a single case.

29335. Do you know a single case where an inexperienced man has had charge of shot-firing?—No.

29336. (*Dr. Haldane.*) Are these electrical or compressed air?—Both, we have both electrical machines and compressed air.

29337. They have taken the place of hand machines?—Yes.

29338. They are all rotary machines?—Yes.

29339. (*Chairman.*) Do you wish to say any more about Rule 65 with regard to the charge-men and shot-firers?—I think Mr. Toyn fairly well covered that question, I do not want to repeat what he said.

29340. As regards inspection, you heard what Mr. Toyn said about that. He thought that there was not enough inspection, and that one working-man inspector should be appointed to look after these Cleveland iron mines?—Certainly. I think it would be a great advantage.

29341. Do you consider that the inspection is insufficient now?—I do.

29342. The best plan would be not to appoint an assistant for the whole district, coal mines and all, but you think you ought to have a working-man whose duties should be simply to look after the iron mines?—We think that would be a great advantage to the Cleveland district. If the inspector comes he cannot go through the whole of the mine when he visits the district.

29343. Perhaps you agree with Mr. Toyn that it is a great advantage that you should have inspection under General Rule 38?—What is that rule?

29344. The rule with regard to workmen's inspection?—Yes.

29345. How often is that done?—Perhaps the advantage of a separate inspector would be that the man would be really an independent inspector. You understand the position of a workman as a rule. He examines, but sometimes those inspectors do not give the actual report that they would on account of their position as working men. That might be jeopardised.

29346. Do you think that is so?—I do not say that is so, but there is that fear naturally with the men. Sometimes, perhaps, they feel afraid to take the course they probably would with respect to inspection.

29347. Has anybody ever complained to you to that effect?—No.

29348. Has anybody ever complained that he has been afraid to make a truthful report?—No.

29349. Do they often make reports calling attention to defects. I mean these workmen when they inspect under Rule 38?—They make their report of course.

29350. Do those reports often contain notices of defects?—Not often.

29351. You think probably not so often as they might?—Probably so. We almost think that is the case.

29352. Still they do occasionally call attention to them?—They call attention to certain defects.

29353. You are not aware in your experience of any man having suffered from having drawn attention to defects in the working of a mine?—No.

29354. Do you agree with Mr. Toyn that the managers are getting more lax than they used to be in the selection of deputies and other men in authority? Mr. Toyn appeared to think that some years ago the management was more careful in the men they appointed as deputies. Do you agree with that view?—As Mr. Toyn pointed out in the illustration he gave this morning, in allowing certain districts to work with one practical man and an assistant.

29355. That is a new thing?—Yes, that is new. It has come into operation the last few years. I quite think the managers are anxious to secure the safety of the workmen in every way, but as far as we are concerned we feel that it is decreasing the efficiency of the management, as the deputies have a very great deal of responsibility with respect to the management of the mine. We think it does not keep the management up to the standard it would with two practical men.

29356. Do you agree with Mr. Toyn that these mines ought to be inspected totally every six months, and that all the working places, air courses and tram roads should be inspected?—I think that is quite long enough, six months. In a mine working in Cleveland great alteration would take place in six months.

29357. Now that you have come to the point of having to take out pillars, you consider that mining is more dangerous than before?—They certainly have the appearance of more danger; unless there is greater care exercised there will be a great many more accidents. I would like to mention one point with regard to the decrease of accidents referred to this morning. Some years ago a lot of strangers were being introduced into the Cleveland mines, and the probabilities were that there were accidents then that would not have occurred if they were practical men as they are to-day. The men working in the Cleveland mines have been working there from boys, and they have been acquainted with the mines up to becoming miners. If strangers were introduced, as they were 20 years ago, there is no doubt that the accidents would considerably increase.

29358. With regard to the statistics I drew attention to at the beginning of the day about the surface accidents, those statistics are compiled from very few men, only about 1,500 men, and it so happens that there were three accidents last year which brought the percentage up enormously. I find on comparing the percentage for this year with the percentage in former years that the surface accidents in ironstone mines do not compare unfavourably with the number in coal mines?—I am glad to hear that. We were surprised at the statement you made, but it has proved to be an exceptional year in the Cleveland district.

29359. There are so few men that the percentage of accidents appears very high?—We were rather concerned about that matter.

29360. The under-ground accidents are rather more than in coal mines, and that is a matter of great importance?—Yes.

29361. (*Mr. Cunynghame.*) Are there any rules in force in your district about the spaces apart at which the timber should be placed?—No, we had an exemption from that rule. An Act was passed with respect to timbering in mines, and we asked for exemption from that Act.

Digitized by Google

Mr. W. Stephens.
7 Nov., 1907.

29362. Why did you ask for that exemption?—In many parts of our district you might work without any timber at all being put in; but in other parts of the district you want three times as much timber as the law would provide for.

29363. The law permitted in certain places that there should be a rule that timbering was to be quite close together, and in other places that timbering should not be put at all. The law did not compel you to have a uniform space right through, and yet you applied for exemption?—Yes, we did.

29364. Do not you think it would be wiser to alter that and have what is called "systematic timbering"?—I do not think systematic timbering necessary in the Cleveland mines.

29365. Why not?—There is no necessity for so much timber as is required by the law in some places, and in other places three times as much is necessary.

29366. In places where it was necessary to have a lot of timber, would it not be better to have systematic timbering for such a place?—We put in as much timber as is required. I do not think that there are complaints as to the amount of timbering put in. We timber the ground according to the requirements of the nature of the ground.

29367. I thought some accidents were due, seven at all events, to the fact that timbering was not sufficiently done in certain places.

29368. (*Dr. Haldane.*) How do the accidents usually occur—from falls of roofs and sides? Is it after the blast or before?—Sometimes. Supposing this is the width, you baulk it as close as you can to the face where the stone is got, and so much stone must be got out before you get the timber in. It is often the case before you get more timber ready the roof comes down. If you get 100 yards square you timber as much as you can, but it often happens that the timber breaks down. The top is of such a brittle nature, and there is only a very small place, and if a small piece falls it kills a man. We have known cases where pieces of 9 or 10 lbs. weight have killed a man.

29369. (*Mr. Cunynghame.*) If it is not due to the want of setting proper timber that the accidents occur, what is it due to?—It is due mainly to the brittle nature at the top. There is no doubt about that.

29370. Is it unpreventible?—I do not think any accidents are unpreventible; but you can see after an accident has occurred in many cases that it might have been prevented.

29371. What can be done? You say the timber that is put up is sufficient?—Yes.

29372. What else can be done to prevent these accidents? The roof is treacherous and pieces fall off in spite of the most careful timbering. What can be done to prevent that happening?—I say exercise all the care we possibly can by employing the most competent men that can be employed for the purpose of examination and timbering.

29373. I gather from you that the men are competent at the present time?—They are. Do you say they were not or they were?

29374. I understand it is your opinion that the men are competent?—Yes, as a rule.

29375. There does not seem very much more that can be done?—Perhaps there is not in that respect.

29376. I am only anxious to know?—I understand; that is right.

29377. With regard to the examination of deputies, as a general rule, all over England the plan of examining workmen has not been generally adopted. It would be rather an unusual thing, would it not?—In what respect.

29378. It would be rather unusual examining people in their duties. For instance, take the men engaged in making steel in the crucible process. I do not know whether you know it. They do not pass an examination?—No, I suppose not.

29379. This suggestion of an examination is rather unusual?—For deputies.

29380. You are of opinion with steel that it is unusual?—There has been no examination previously.

29381. Your proposal is that there should be an examination for deputies?—A practical examination.

29382. Who should conduct that examination?—I should say the manager of a mine ought to know before he selects a deputy that he is competent.

29383. I agree with you, but I want to come to the examination and what is your view. I doubt whether an inspector would be the best person. For instance, take the present Government Inspector of Mines, would he be the best person to examine him?—No, I should say not.

29384. Who would you have to examine them?—A suggestion was made this morning, but we have not perhaps sufficiently considered that question. On the face of it, it appears to me that the management or the manager of a mine should be the person who should be capable of selecting the very best man he has for that position.

29385. This kind of rule should be adopted, that no man should be employed as a deputy until the manager of the mine had certified in his opinion, in writing if you like, that he was capable and proper to be a deputy. Is that the sort of thing you are aiming at?—Yes; I would add also the three years' experience Mr. Toyn mentioned this morning.

29386. You would make that an absolute rule—three years' experience?—I do not think much less than three years would be sufficient to gain the amount of experience.

29387. Would you make it a hard-and-fast rule?—You would have to say a person of experience.

29388. I have known people with five years' experience who never seemed to be able to do anything, sweep a room for that matter?—As I said before, there are some men who will gain as much experience in twelve months as others will in five years.

29389. We know there are accidents, and that you are impressed with the necessity of choosing proper deputies, and you want the greatest possible care to be taken that proper deputies are chosen?—That is so.

29390. You would favour any rule that can be brought about to secure that?—Yes.

29391. You are not prepared to give in exact detail how the thing should be precisely done?—Not with respect to the examination. I do not think we have a mature idea, because we feel the necessity of a district like ours taking every precaution for safety.

29392. You must remember you asked for the exemption yourself. Why did you propose it?—In respect to timbering?

29393. Yes?—I do not think we have any complaint in that direction. There is plenty of timber, and plenty of men to put it in. I do not know any complaints in that direction.

29394. (*Mr. Wm. Abraham.*) Where do the majority of your accidents take place, in the face or on the road?—On the face.

29395. Have you occasionally accidents back on your roads?—We have some accidents caused by sets of wagons running to the shaft bottom and the wagons being drawn out by the drivers.

29396. With regard to the stones falling from the roof and sides, have you any accidents of that kind on the roads?—Yes, we have a few.

29397. Would the systematic timbering of a certain distance not tend to prevent that kind of accident?—If you visited our mines you would see most of the roads are full of timber. There is scarcely room for any more timber at all. Accidents occuring back do not come as a rule as the result of a fall. It might be that a wagon ran off and nipped somebody between the wagon and the side.

29398. Is there any possibility of having improved timbering in the face by using iron logs between the last pair of timbers and the face?—I do not think so. We have some iron baulks used back over the district, but they would not be workable in the face.

29399. They would not be practicable?—No.

29400. Why?—Many of the pillars are split into small portions. You drive a few yards, and come again to cut timber out to make room for the men to get to the stone. If you had iron baulks it would be very difficult. If you put an iron baulk in, in four or five days that place would be finished, and you could not get it out again. It would be too expensive.

29401. You are a practical miner. Is it not possible to use those and place them at certain distances? It may mean a little extra cost, but they can be regained each time to prevent the falling of the roof and the crushing of the sides between the first part of the timber on the face?—It would be possible, but I do not think practicable.

Digitized by Google

29402. Why?—I cannot see how it would work. You might as well put a baulk of wood in as a baulk of iron.

29403. A thin layer of iron could be placed where you could not place a baulk of timber?—You would want the width for it.

29404. You would not want the same width for a bar of iron as for a baulk of timber?—Where a whole baulk will not do we have split baulks. We have every kind of timber necessary for keeping up the top. There is no deficiency of timber. Sometimes timber breaks down suddenly. The tops are extremely heavy.

29405. We are now dealing with the working in the face?—In the face sometimes.

29406. When we visited a colliery in Nottingham the other day, we saw that kind of thing being done. It saves accidents from a very treacherous roof?—I wish you could visit Cleveland.

29407. We are only asking, Is it practicable?—I think not.

29408. Is there any more difficulty there than to make a little hole in the solid to put the first end of the bar on?—Where it was convenient to put an iron baulk in we could put in a wood baulk.

29409. It would not require the same space to put a thin iron bar?—There is plenty of height as a rule.

29410. You put them across?—We put timber in every imaginable position. Where we feel that it is necessary to put in timber to keep the place safe, we put it in, and you could not work Cleveland mines unless you put in the necessary timber in every position to keep the place safe.

29411. It is not a question of when you agreed with the management to ask for an exemption of that rule. It is not a question of cost, but a question of impracticability?—Yes.

29412. You are certain upon that point?—It was not a question of cost. We had an interview with the employers before we made application for the exemption, and if the mines could have been worked under that rule it would have saved the employers hundreds of pounds. If we put timber in on those lines and worked the mine on those lines it would have been a great saving to the employers, because more timber is put in than is provided for by the Act. It is not a matter of economy at all.

29413. Mr. Cunynghame put it to you that putting up systematic timbering would not prevent you putting extra timber at all?—No.

29414. You are distinctly of opinion that it is not a question of cost, but a question of impracticability?—I think so.

29415. We are to sit here and believe then that there is no possible way of reducing the accidents in your mines?—There will always be accidents in those mines, so far as my experience goes. The only thing we can do is to take every precaution.

29416. You are taking that now? Is there any extra precaution possible?—We think the efficiency of the management is reduced by the introduction of incompetent men.

29417. Your desire for competent men and examinations is based upon the fact that there are a few here and there employed that are not competent?—That is quite right.

29418. With regard to the Inspectors, can you tell us how the Government inspection that is done at present is being carried out?—There are considerable intervals between the visits of the Inspectors to the various mines.

29419. When the visit is made, how much of the mine is inspected?—Just a district or so, I should think. When the Inspector comes he meets the manager at the bottom of the pit and they agree on a district; they do not go over all the pits, I know quite well.

29420. That district is taken as a sample of what the condition of the whole mine is?—Probably the next time the Inspector comes he will go in another district.

29421-3. His inspection in one district is taken as a sample of the condition of the whole mine?—The Inspector could not spend three days in a mine.

29424. The one district that he inspects at the time is taken as a sample of the condition of the whole mine?—I suppose that is the opinion the inspector arrives at.

29425. In getting another class of men as practical inspectors they would be able to make a thorough inspection of the whole mine?—That is so.

29426. That is the reason you want them?—Yes.

29427. (*Mr. Ratcliffe Ellis.*) You do not suggest that two deputies should always be there when timber is being set?—What we do suggest is where it is necessary for deputies to have charge of miners, that two deputies should work together. We do not say where timber is, because there are places where timber can be set by men not considered to be deputies at all. They may be considered to be labourers who set timber in certain places where miners are not working. Where miners are really working, two competent deputies should set the timber and look after them.

29428. A deputy has a good deal to do besides looking after the timber?—Yes.

29429. An examination by one deputy would do?—That is done now.

29430. You do not suggest two deputies to do any other duties?—No.

29431. Except the timber setting?—Yes.

29432. Part of your time is occupied in setting timber as a deputy?—I will give the day's work of a deputy: we commence at 5 in most places and examine for one hour, and see every place is safe before the miners commence to work. They set to work about half-past six. The deputies follow the miners in their places till 10 o'clock, and then they have time for their refreshments, and then examine those places again, which perhaps takes them half-an-hour. Then they work till about half-past one and then see the men out of the districts again. In actually setting timber it will perhaps be 6 hours.

29433. During this time when are you setting timber? We are setting timber from half-past six till 10 o'clock.

29434. After you have made your inspection?—And signed your report and sent the miners to work.

29435. Would it be practicable to have one of the deputies who had been examining another district to join a deputy who had been examining another district to go and set this timber?—You would have to have somebody in place of the one you have taken out of the district.

29436. I want to see what the deputy is going to do after setting timber. If you had a deputy and he had a competent man with him, I should think it was immaterial whether deputies or not, if competent men?—There are two deputies working together in charge of a district where there are 12 to 18 men. One goes in at 5 o'clock in the morning and examines the whole of the places the men go in. The other goes in at 6 o'clock and after the man has come in at 5, he signs the report and sends the men away. They set timber and keep the men safe during the remainder of the shift.

29437. It would not require another two men to be engaged as deputies in setting the timber after the inspection is made?—The one that comes in at 5 goes home and leaves the man who comes in at 6 to take charge of the district.

29438. That is the practice in many cases?—I believe so.

29439. You wish to make that general?—That is so.

29440. It has been suggested sometimes that a deputy leaves the men in charge of a person who is not a competent man, but is that possible under the Rules as they now stand? I see that the duties of a deputy in Rule 33 are that "He shall, at the end of each day's work, ascertain that all men and boys are out of the district under his charge: but should it be necessary for any of them to remain he shall ascertain that they are left in charge of a responsible person." Then again, with regard to the back overman, "He must ascertain that all workmen and boys under his charge, in his shift, are safely out of the mine, it being his special duty to remain until they have quitted it, but should it be necessary for any of them to remain, he shall ascertain that they are left in charge of a responsible person." There would be the same obligation on the overman?—Yes.

29441. There are three people, the overman, the back overman, during his shift, and the deputy. They are each responsible for stopping in the mine until everybody has left, or putting it in charge of responsible persons?—The deputy reports to the back overman that these men are out when he leaves the district clear and that he has charge over.

29442. What is the difficulty that Mr. Toyn mentioned?—He mentioned a case where a deputy left a district without anybody being responsible—nobody in charge.

29443. That was contrary to the rule?—It was wrong of the deputy. I suppose he was carrying out the

Digitized by Google

Mr. W. Stephens. 7 Nov., 1907

instructions of the management. It would be wrong to leave the district without someone in charge.

29444. It does not want any alteration of the law: it only wants the law carried out?—Yes.

29445. The law is very clear?—Yes.

29446. (*Mr. Smillie.*) In giving reasons why you claim exemption from the timbering rules, you said that in the Cleveland mines they are sometimes a considerable distance and it does not require any timber because the roof is so good?—Yes.

29447. Would you be surprised to know that most accidents from falls take place where the roof is good?—No; I do not know that I would be surprised.

29448. I think that perhaps might be your own experience where the roof is exceptional and there is less care taken very often?—Where the roof is exceptionally bad there is more care taken.

29449. That is putting the other side of it?—But for that in some of our mines there would be a great number of accidents.

29450. Have you any considerable part of the roof in Cleveland which we as miners understand as solid rock roof which does not require timbering. It is strong enough of itself; it might be for a long distance without a prop at all?—We have some of that kind.

29451. Is there at any time what is known as slipping types coming in from which stones fall without giving much warning?—That is the top?

29452. Yes?—We have not a great number like you have in coal mines.

29453. Are you aware in many coal mines that rules for systematic timbering have been adopted where the roof is exceptionally good?—Perhaps that is so, I could not say.

29454. Systematic timbering really goes on every yard or two yards where there is no apparent reason for timbering at all. Do you think that is wrong?—No, I would not say it was wrong at all.

29455. That is one of the reasons why you claim exemption?—That was one of my reasons, but whether that was one of the reasons given at the time the exemption was claimed I could not say.

29456. I thought that was one of the reasons. Are you aware the proposals made by the Government did not make it compulsory that timbering should really take place. Are you aware that it was not laid down by law that timbering must take place if it was unnecessary it should?—If it was unnecessary?

29457. Are you aware each locality or district was to adopt its own Special Rules with regard to systematic timbering, that is Cleveland could have adopted rules for Cleveland alone, fixing the distance between the props or crowns?—Yes, but they simply asked for exemption without introducing any other system.

29458. I think Mr. Abraham put it to you, and I want to make it clear. Supposing you had systematic timbering in Cleveland, that would not by any means bind you to only put up props where it was laid down by the rules. You would be expected in addition to that to put up all necessary timber, and six or three times as much timber as laid down by the rule?—In cases where it was not necessary we should be supposed to carry out the Act.

29459. To carry out your own Special Rules if you adopted them?—Yes, I see.

29460. I do not think you agree altogether with Mr. Toyn on the question of unskilled workmen being employed as fillers. I take it that where men are filling ironstone after it is blown down there is a danger there too of falls?—Of course there is a danger, but they are protected by the examination by the parties responsible for their safety.

29461. The chargeman, when one or two, or 10 shots, it may be, have been fired, has to make an examination to find out whether, as the result of the shots, the place is safe before the fillers go in?—Yes.

29462. Does he remain in that place afterwards?—No.

29463. He has to ascertain at the present time at least that the place is safe?—Yes.

29464. Or if it is not safe, it is his duty to see that it is made safe?—He gets the deputy to make it safe.

29465. How long might he be away before other shots are necessary—a period of some hours, I suppose?—It would take some time. There may be a good deal, and it would be part of a shift to clear that stone out of the place

29466. While it might be perfectly safe when the chargeman examined it and left it, it might not be safe three hours afterwards?—That is so. He could not avoid what happened if the place was safe when he admitted the fillers. He would have done his duty.

29467. You mentioned the creep coming on?—Yes.

29468. In taking out pillars the creep will be continuously on?—Yes.

29469. The moment you take out pillars there is always a creep on?—I want to make plain that the chargeman is not absolutely in charge of that place. There are deputies in charge of that district at the same time, who are round the district to see the places are safe.

29470. I am really wanting to find out now whether it is more dangerous for unskilled persons who have never been down a mine as fillers, because Mr. Toyn said he had really no objection to unskilled persons coming down from the surface who had not been down before and acting as fillers. I want to find out whether there is any real danger from the roof?—There is a certain amount of danger from their occupation, but when the machineman examines the place and the filler goes in the deputies are commonly in the place. It would not be unusual to go in two or three times during the shift.

29471. They are expected to do that?—They are expected to make a second examination.

29472. As a matter of fact, in your district the deputies do all the necessary timbering, unless occasion arises to put up a prop when the deputy is not there?—Yes.

29473. The man at the working face is not expected to do the ordinary timbering at your work?—No.

29474. The deputy is supposed to do that?—Yes.

29475. Would it be as safe for an unskilled person, who had no practical experience as a miner, even to fill at the face as it would be for a skilled person who knew the nature of the roof?—I do not suppose it would; but still the place is thoroughly examined by the parties in charge of those men when commencing to work. If the men have to work at all they must be exposed to a certain amount of danger.

29476. Any person unskilled or skilled?—If we said that was not safe it would mean the exclusion of all who were not skilled persons in the mine. Taking our experience with reference to accidents, the fillers we think have got on fairly well for that matter. They have not had a big number of accidents.

29477. What is meant by a creep? It is understood thoroughly by miners and deputies and all experienced people that where there is a creep on the roof, the roof might be safe at this moment, and an hour afterwards be very dangerous and require timbering?—That is so.

29478. Would it not be more safe in a case of that kind that practical men with experience should be in that working place than unskilled persons without experience?—There is no doubt of that. You could not work it in that way. If you had to have all experienced men in the mine there would be no room for the inexperienced men at all.

29479. At least you could have one experienced man in each place?—Yes.

29480. As a general rule, you have at least one experienced man in each place filling?—Not fillers, you put fillers in to fill stone. They might be men who have no real experience in the mine, who have been in a week or two.

29481. Is that a breach of any general rule?—We think not, as far as the filling is concerned.

29482. Is it not at the working face?—No, filling the stone down at the face.

29483. They are engaged there as ironstone getters?—They do not get any stone at all, they fill it after it is got.

29484. It is at the working face?—As near the face as they can get to fill.

29485. As a matter of fact, it is absolutely close to the working face. It is blown out and lying at the working face?—Yes.

29486. They are employed at the working face. Do you allow one or two or three or four unskilled persons to fill ironstone at the working place?—Yes.

29487. You allow that without a skilled person in charge?—Yes, the fillers follow in and fill the stone in the places.

Digitized by Google

29488. Is that understood to be carrying out the rule with regard to unskilled persons—Rule 39?—Yes, I think so.

29489. Is that the general feeling among the mine managers and deputies of your county?—There has not been any complaint raised on that point at all.

29490. Have you had any experience in a coal mine?—Not as a worker.

29491. You know a coal mine?—Yes.

29492. And the Coal Mines Regulation Act?—Yes.

29493. Would you say that where coal has been cut by machinery underground, and falls to the floor, that persons filling that coal would not be coal-getters?—I should not say that they were coal-getters if somebody got it for them.

29494. Would you say two or three unskilled persons might be employed filling coal which was cut by a coal-cutting machine at the face without a breach of the Special Rule?—Is that not done now?

29495. No, it is not allowed at the present time, but evidently in Cleveland it is allowed?—That is so.

29496. I was particularly anxious to know that?—Yes, that is so.

29497. I did not take it from Mr. Toyn's evidence that that was so, but you are perfectly clear upon that?—Yes, they are not considered to be in any way qualified to take charge or anything of that kind, but they are considered to be capable of looking after themselves and filling the stone after it has fallen.

29498. As a deputy, you gave very frankly your opinion about General Rule 38, as to the examination by the workmen. It is your opinion it does some good in keeping the management up to the mark?—Yes.

29499. While you could not give any cases in which workmen had been unfairly treated for giving adverse reports, you, as a workman yourself and a deputy, say that there is always the fear that there might be?—That is the natural feeling amongst the workmen.

29500. Whether there is any cause is not for you to say?—No, that is so.

29501. You do know that the feeling always exists that they may be injured in their employment?—Yes.

29502. Consequently you, as an official of the mine, say that it would be an improvement if there were Government inspectors who were clear altogether from any influence of that kind?—I think so.

29503. Even where the mines are well managed, and everything is done for the safety of the workmen, it would still be well to have inspectors making a periodical examination?—Yes, I would not suggest doing away with local inspectors.

29504. Still leaving it in their power to do it?—Yes.

29505. I suppose the ordinary examinations by the Inspector of Mines are usually made when an accident takes place?—There are occasionally visits where there are no accidents.

29506. Surprise visits?—I do not know about that. I have not heard of inspectors coming, but I notice that they turn up on certain days.

29507. When a fatal accident takes place there is invariably an examination?—Yes.

29508. Do the inspectors in making an examination after a fatal accident, examine usually only the place where the accident has taken place?—I think that is all. They visit the mine for that purpose.

29509. They do not on that occasion make a general examination of the mine?—Not as far as I know; I think they do not.

29510. They would make a general examination of the mine, or any part of the mine, if their attention was called to anything being wrong there?—Yes, the inspector asks us to notify him if there is anything, in a quiet way.

29511. Do you consider it is a physical impossibility for the present number of mine's inspectors in your district in South Durham to thoroughly examine the mines?—Absolutely impossible.

29512. And that while mines inspection, as it at present exists, has done a great deal of good it would do more good if there were sufficient to make a thorough examination of the mine?—That is so. As Mr. Toyn pointed out, it takes three days to go over some, and it is a physical impossibility to do that.

29513. If they work all their time it is an impossibility?—Yes: we have no fault to find with them.

29514. You do not complain of the inspectors, but you say that they could not do the work you would like to see them do?—Yes.

29515. (*Mr. Ratcliffe Ellis.*) With reference to Rule 39, how is the ironstone got down—by machinery?—By machinery.

29516. Then the men who go in are fillers?—Not always: in a good many cases there are some hundreds of men working back with a rotary drill, which is a small drill they get the stone down with between them, and they fill between them. They are what we term "miners."

29517. Have those men had the two years' experience at the face?—Yes, many of them have been working a lifetime in the place.

29518. Rule 39 is "No person not now employed as a coal or ironstone getter." You consider the persons who are going to fill are fillers and not getters?—Yes. I may say that in a case where a stranger wants to get in the place as a miner, he works in the place as a practical miner.

29519. This only applies to fillers and not to miners?—Yes.

29520. (*Mr. Smillie.*) Are the men who work boring machines getters?—Rotary machines?

29521. Yes.—Yes.

29522. Is the man who stems the hole and charges it a getter?—The two work together on the general mining principle, but where the machines are electric or compressed air machines those men blow the stone down and leave it for somebody to fill: but two working together get their own stone and fill it.

29523. They bore their own holes, charge their own holes and fire their own shots, and that may bring down some stones. They are ironstone getters during the time they are doing that, and they are not ironstone getters during the time they fill?—The Cleveland miners get their own stone and fill. They work one place the whole of the time. They drill a single hole and fire it and fill it up.

29524. An ordinary miner getting his own stuff, filling and sending it out?—Yes.

29525. Under this new system, one man prepares the hole, another man fires the shot, and then the fillers come in and fill?—That is so.

29526. The reason for this rule was because it was considered dangerous for unskilled persons to work at the face?—Yes.

29527. Do you know why it was dangerous?—Was it from falls at the face?—With regard to the blasting, and that kind of thing.

29528. Supposing there is no blasting, are persons prevented from working at the face if they have not had three years' experience?—According to that, you say our fillers are not working under the Act, really.

29529. My point is, is there not a danger which was anticipated by this Act here when men are filling stones which have previously been gotten at the face?—If they have to work underground at all they could not work under more favourable conditions, because their working places are, as a rule, thoroughly examined and looked after.

29530. There is supervision to look after their safety?—Yes.

29531. They may be six hours at the face filling this material without a person being in charge there?—I would not like to define whether they were working under the Act or not.

29532. (*Chairman.*) They might be six hours alone without anybody looking after them?—The deputies are in charge of those men. He goes in at various times during the shift to see that they are all right. He does not continue with them.

29533. (*Mr. Smillie.*) I want to be clear. The chargeman after shots are fired makes a thorough examination of the place in order to make sure whether the roof is safe and other things. Then the fillers who may be unskilled persons go in to fill, but it may be three hours before the deputy comes round to make his examination. He may come in 10 minutes, or half-an-hour, but it may be three hours. If the witness is correct in this, we have sometimes coal-cutting machines which cut 70 or 80 or 90 yards of coal face, and the material falls down on to the bottom. Then you would be correct in saying 60 or 70 unskilled persons may go in and fill this coal and they are not coal-getters. That is not the Act of Parliament.

Digitized by Google

Mr. W. Stephens. 7 Nov., 1907.

(*Mr. Ratcliffe Ellis.*) He has given evidence fairly. The witness says, in his opinion if a man has to work underground he could not work under more favourable conditions than these people work.

(*The Witness.*) They are looked after by the parties in the mine appointed for that purpose.

29534. (*Chairman.*) Do you know about coal mines?—No.

29535. (*Mr. Smillie.*) The same clause applies to both. It says coal or iron-stone getters?—Those are not iron-stone getters.

29536. A coal miner who fills the coal at the face after it is blown down is a coal getter?—If he does nothing but fill?

29537. Yes.

(*Mr. Ratcliffe Ellis.*) I do not think so. You may suggest that this clause should be extended to cover these men, but at present it only extends to the man who gets the coal. It is not the drawer.

(*Mr. Smillie.*) The drawer is not a getter.

(*Mr. Ratcliffe Ellis.*) Neither is the filler a getter; that is the point.

(*Witness.*) He is not a getter at all; he does not get any stone.

29538. (*Chairman.*) If you have nothing more to say we will now have Mr. Braithwaite?—No.

Mr. JAMES BRAITHWAITE, called and examined.

Mr. J. Braithwaite.

29539. (*Chairman.*) I understand you are a working miner?—Yes.

29540. How long have you been working underground?—40 years.

29541. Iron-stone only?—Yes.

29542. Do you agree with what you have heard said here to-day about the qualifications of the deputy, that he should have at least three years' experience in getting iron-stone, and pass an examination?—Yes, I do.

29543. You have worked under a good many deputies yourself?—Yes, and I have been a deputy myself for a good many years.

29544. Why did you not remain as a deputy? Is it too hard work?—No, the last time I was deputy, I was deputy at a place we are now making complaint about, and which we wish to have altered. It is where one deputy takes charge of a big district and has four or six men under him, and this is the method that I understand we have come up here to try and get remedied. We do not agree with that method.

29545. You gave up being a deputy because you were asked to take charge of too big a district?—I had charge of it for four years, and I felt that the responsibility was too great, and that I would rather work in the stone as a miner than bear the responsibility.

29546. You thought too great responsibility was put on you, and a responsibility you did not care to face?—Yes. I was in a district where there was a tremendous lot of timbering to be done; sometimes I had four, sometimes six under me, and I have had eight. I have had to send men away in the morning to put timber in, and I have not been in a position to examine it for the day, and I did not care to have the responsibility on my shoulders.

29547. You had such a big district that you could not get round in the course of the shift to see what was going on?—No.

29548. The consequence was that sometimes working faces would be left unexamined by you during the whole shift?—Yes, till the next morning.

29549. Therefore, you complain not only that in some cases the deputies are not properly qualified, but that there are too few deputies to perform the duties?—There were more day-men than deputies. I was the only recognised deputy in the district; the other men were classed as day-men.

29550. They were not sufficiently qualified to do deputy's work?—I should not like to say about qualifications. They had to put the timber in; although they put the timber in, I had to bear the responsibility of it being put in.

29551. You often could not be there to see it put in?—I could not be there.

29552. You come here to make quite a different complaint to what we have heard already. Your principal complaint is that there are not enough deputies to do the work, and that the districts of the deputies are too large?—Too big for one deputy to have the responsibility of.

29553. There ought to be more deputies appointed, you think?—I contend that there ought to be two men appointed to work practically as mates and have a district they can manage.

29554. Supposing you had a mate, would you consider your district would be too large for the two of you?—Yes, that district would.

29555. That district was too large for two?—Yes.

29556. Do you think that still goes on; did anybody succeed you in that district?—Yes.

29557. Is he still continuing to do that district by himself?—I could not say; it is some years ago, and I have not worked at the same mine since.

29558. Would you like to give the name of the mine, or would you rather not?—I do not know that I have any occasion for not doing so. I am speaking the truth. I will tell you—it is Stanghow.

29559. Would you like that put in the evidence or not?—Just as you like. It is the truth, and I am not ashamed of it.

29560. You do not know whether that state of things still continue?—I could not say, I have not been there since I left.

29561. With regard to the qualifications of a deputy, do you consider as a rule that the management choose the best men to act as deputies they can get?—Yes, I believe that they do.

29562. On the whole, the deputies are equal to discharging their duties. They are equal as regards qualifications, but they have too big districts to attend to?—Yes.

29563. Do you consider it necessary that a deputy should pass an examination?—A practical examination.

29564. Not necessarily a written examination?—If a man passes an examination for his certificate it would be no worse for him if he is a young man. I think they ought to be examined as regards the practical part of the work, because the roofs vary very much. In some places they may seem very solid and sound for a considerable time, but through shots being fired and cuttings into the top, it lets air in, and, as is commonly known among miners, the place blows, and it is on the floor in a very few minutes. It may be sound in the morning and two hours after that place may be stopped for want of timber, or on the floor.

29565 (*Dr. Haldane*). What do you mean by "the place blows"?—The working of the place, by the explosion of the powder it cuts into the top, and the air gets into this up the fissures, and there is so much gas and shale at the top that the gas and air work together, and the place blows.

29566. You feel it?—Yes, it causes the place to crack along.

29567. (*Chairman*). Have you anything to complain of with regard to the examination of places the miners work in before they begin their shift? Do you think unpractical men and men of insufficient experience are ever told off for that duty?—No, I have never known unpractical men sent to make an examination. At the time I was speaking of, I had to go in at half-hast four in the morning, an hour and a half before the miners, to make my examination.

29568. In general I may take it you agree with the evidence as regards the appointment of deputies which has been given by Mr. Toyn and Mr. Stephens, but you add a complaint of your own, namely, that the deputies' districts are far too large?—Yes.

Digitized by Google

29569. At least, they are in a particular mine ?—Yes.

29570. This particular mine you worked in ?—Yes.

29571. Are they too large in the mine you work in now ?—I am thankful to say in my mine two practical men work together, and they have a district between them.

29572. It is not too large ?—No.

29573. You have nothing to complain of where you are working now ?—No.

29574. With regard to these power machine miners, do you agree with the evidence given, that the safety of the mines suffers from young and inexperienced men being sometimes made chargemen ?—I know it would not be right to put a young inexperienced man as a shot-firer, because it is a very responsible position.

29575. Or in charge of a machine ?—The driller is not so responsible as the shot-firer. He has no explosive, and very often the shot-firer has the place to chalk where he has to drill the holes. He has not so much responsibility as the shot-firer.

29576. With regard to the man in charge of a machine, it might not be necessary to insist that he should have three years' experience in getting stone. That might not be necessary in his case ?—For the driller or shot-firer ?

29577. The driller ?—He wants experience to know how to lay his holes on. No man can do the work without practical experience.

29578. He would not get much experience of drilling by stone getting. He might or might not ?—He wants experience to know how to lay his holes on

29579. In some cases it would not be necessary to work with a drill at all in getting the ironstone ?—No, I do not know. Well, in some pits there are what they call the "pick-work" districts.

29580. Getting stone where no drilling was necessary would not make a man competent, if he worked ten years, to take charge of a machine. A man could probably in less that three years learn how to take charge of a machine ?—Yes, he could in less than three years.

29581. He must have fair experience. Do you think inexperienced persons are often put in charge of a machine and shot-firing ?—I could not say about that.

29582. Are they experienced or not experienced, do you think, to be in charge of a machine and shot-firing ?—They must be experienced.

29583. Are they, as a matter of fact, experienced ?—They must be experienced.

29584. You have no complaint to make as to what occurs in your mine ?—They must be experienced men.

29585. You have no complaint as to what occurs ?—We have no power machines in our mine: it is all hand drillers, hand miners.

29586. With regard to shot-firers, do you think that shot-firers are generally men of sufficient experience to perform their duties properly ?—I could not say. I know that a shot-firer's is a very responsible post for anyone to fill.

29587. You do not complain as to inexperienced persons being put to fire shots in your mine ?—I could not, because I never knew of an inexperienced person being set to be a shot-firer.

29588. With regard to the inspection of mines, do you agree that it is necessary or desirable, at all events, to have more inspection in your mines ?—I think it would be beneficial if we had more inspections.

29589. Do you agree that the best way to get that inspection would be to appoint a working man as an additional inspector ?—I think it would be very beneficial

29590. Better than having another inspector of the present class ?—Yes, I think it would. With regard to working men inspections, they are continually carried out at the pit I am at, and I have been appointed by the men on several occasions to make the examination.

29591. I am glad to have somebody who has done that sort of work. Do you feel you are in the least hampered by what you say ?—Not at all. When we have finished the examination we go into the office and the report-book is placed before us, and to the best of my judgment I write a fair honest report. Some part of the mine I had to make complaint about and ask for things to be remedied, and I may say they were done within a very short time.

29592. You find the management have not the least objection to your finding fault where fault ought to be found ?—No, I do not think they do.

29593. Wherever you have had to make a bad report on a mine, what you have reported has been remedied at once ?—Yes.

29594. Do you know anybody who has suffered through making true reports of his mine ?—No, I do not: I have never heard at all of anyone suffering through it.

29595. (*Mr. Wm. Abraham.*) Have you been appointed by the district to come here or by the mine that you work in ?—I have been appointed by the district, by our own Association.

29596. You are able to speak for the district as well as for the mine ?—Yes.

29597. What is the size of the district that you had charge of when you were a deputy ?—I had two big power machines to follow, and 26 or 28 fillers.

29598. What would be the size of the district ?—About 28 places, 14 places to each machine.

29599. What examination had you to do in the morning ?—I had to thoroughly examine every place and make a report of it.

29600. Who examined the road leading thereto ?—I had to.

29601. What distance had you to travel ?—I am sure I could not say, but a long distance: I should say two or three miles.

29602. To start with, you began at half-past four in the morning ?—That is going round the district from one place to the other and examining the wagon-ways and air-courses.

29603. That is what we wanted to know. You started your work going down at half-past four in the morning ?—Yes.

29604. You had a distance of two or three miles to travel before you came to the working ways ?—Not before I came into my district. My district was close to the pit-bottom.

29605. What was the distance of road you had to examine leading to the working place ? That was my question before ?—I could not exactly say the distance.

29606. Was it a mile ?—I should say it would be to go round by the bank which the stuff came from, from the landings, to go round to the working face, it would be a mile—rather more.

29607. Rather over than under ?—Yes.

29608. When you got to your district the roads and faces you had to examine there added to that would be between two and three miles which you would have to walk ?—I could not say accurately, but I should suppose they would be.

29609. We do not expect you to have measured it to a yard. You had to examine all these places before the men went on ?—Yes.

29610. You had also to follow these two machines. Who examined the place after the shots were put in ?—The shot fireman.

29611. You did not examine them ?—No.

29612. Who examined the timber ?—It was my work to examine the timber.

29613. Who put it up ?—The men working under me.

29614. You told us that the district was too large to enable you to do your work properly as you thought it ought to be done ?—Yes, it was.

29615. Is that a complaint in other places in the district now, that the districts allotted to the deputies are rather larger than they can do ?—I believe there are complaints to that effect.

29616. In your opinion it would be well and necessary that more men should be appointed than that the districts should be made smaller ?—Yes.

29617. That is from the point of view of safety to the men and the mine as well ?—Yes.

29618. That is your opinion, having had 40 years' experience ?—Yes, that is my opinion.

29619. With regard to the examination made by workmen, do you agree with the last witness that what is necessary is that a more minute examination of all the places is necessary than what the Government Inspectors are able to make ?—Yes, I do.

Digitized by Google

Mr. J. Braithwaite.

7 Nov., 1907.

29620. Do you think working men like yourself, having passed a practical examination, would be the proper men to do that?—Yes, I think they would.

29621. (*Mr. Ratcliffe Ellis.*) Could you define in any way what the size of these districts ought to be? Is there any rule?—No, there is not; it depends chiefly upon the nature of the ground in which you work. Some districts might have very rotten tops. Two deputies might be kept busy, and have more work than they can get through to follow 12 or 14 men. In other districts where the tops are more solid, and there is not so much timbering required, two deputies might follow 20 or 22 men far easier than the other two would follow 12 or 14 men.

29622. You would have to leave it to the management to decide the size of these districts?—Yes.

29623. But there should be some sort of rule that districts should not be larger than they can be conveniently worked by one or two men?—Two deputies.

29624. Whatever be the general rule, the manager would have to decide as to the size of these districts?—Yes.

29625. With reference to the examination you make under General Rule 38, if you make a thorough examination, we hear it takes three days?—Three days we were examining.

29626. You have yourself to continue working in this mine and undertake any risk that there might be in the mine?—Yes.

29627. So that you would naturally take great care that your examination was a fit one, because any defects there might be you would suffer from if any mischief came from them?—Yes.

29628. In your view are the persons who can most satisfactorily make examinations, the persons who are working in the mine?—Yes.

29629. You think so?—Yes.

29630. (*Mr. Smillie.*) On that point, have you been very many years in the mine you are in at present?—More or less I have worked in it close on 20 years.

29631. Because of having worked there a considerable time you will be well acquainted with the mine?—I am.

29632. And practically all the workings of it?—All the districts. Every district there is in the mine I am fully acquainted with.

29633. Under the Coal Mines Regulation Act are you aware a person is not entitled to leave his own working place? He is supposed to remain in his own working place from the time he comes in in the morning till the time he goes out at night?—Yes.

29634. A person might be in a mine some years without knowing much more about the mine except the district he is employed in?—That is true.

29635. Under circumstances of that kind you might be quite as well qualified to make an examination under this Act in a neighbouring mine as you would in a mine at which you were employed?—Yes.

29636. That is, if you did not know any more about your mine than your own working place?—Yes.

29637. What is really required is the practical knowledge? Yes.

29638. In order to make a thorough examination on behalf of the workmen?—Yes.

29639. To some extent the danger of intimidation is removed where two men might be appointed from one mine to examine another mine, not the one they are working in. To some extent there would be less danger of intimidation?—Yes.

29640. I am not saying that there is any intimidation?—I have not seen any so far as I am concerned.

29641. There would be more freedom to give an opinion of the mine you are really employed in yourself?—I would rather, if I was chosen, make an examination of my own mine than a neighbour's mine, because I think the men at the neighbour's pit might say "We think we have someone in our pit able to make the examination quite well."

29642. I mean if you were appointed by the men at the neighbouring pit to make this examination?—If I was appointed to do it, I would willingly do it.

29643. The men in your pit could not appoint you?—No.

29644. If you were appointed by men in a neighbouring pit, it would be of course, because they believed you to be best fitted for the examination. There are many ways of making a miner feel he has done wrong in addition to dismissing him?—Yes.

29645. A manager can make it hot for a man without dismissing him?—Yes.

29646. Sometimes examiners might feel themselves that they were not being altogether fairly treated, although they could not prove it?—I cannot say that in my own case. It could be done. A manager or an overman, if he had anything against a miner in the place, could, as you say, make it very warm for him.

29647. Without being able to prove that he was being unfairly treated?—Yes.

29648. I do not suggest that is done to any extent, because clearly it is not in your own county. No such thing is done; but I only wanted to bring out the point made by Mr. Ellis that what is really required in an examination of this kind is the practical knowledge and intelligence necessary to give an honest report of what you find?—Yes.

29649. You believe those examinations have done, and would still do, a considerable amount of good from the point of view of proper ventilation and safety?—I am certain they have done good.

29650. You have no desire to give up the right to do this, although you claim an extension of the Government inspection?—No; I think we ought to have the right to do so.

29651. You want to have them side by side?—Especially when a fatal accident takes place, I contend that we should have the right to send two examiners to examine the place where the fatality occurred, so that we are in a position to give evidence if required at the Coroner's Inquest.

29652. That is in addition to the examination under this rule?—Yes.

29653. Where a fatal accident takes place, or a serious non-fatal accident, it is not a bad thing for the examiners who examine to find out whether there is any blame attaching to the officials?—Yes.

29654. You do take advantage of that sometimes?—Yes.

29655. You are examiners?—Yes.

29656. (*Chairman.*) Supposing anything should occur short of an accident that would make you like to make another examination, although the month had not elapsed since the last examination, would the management make any objection to your going down more than once a month if you gave good reasons for asking for another examination?—I do not think they would. I think there is an agreement between the mine-owners and our association that when a fatality occurs they are wishful that two men should be appointed.

29657. Supposing anything had happened, a great fall of roof, which had not hurt anybody, when all the miners were away, would the management object to your going down more than once a month?—I do not know; I have never known that. I do not think they would have any objection.

FORTY-THIRD DAY.

Wednesday, 20th November, 1907.

PRESENT:

LORD MONKSWELL (*Chairman*).

Sir LINDSAY WOOD, Bart.
H. H. S. CUNYNGHAME, Esq., C.B.
WM. ABRAHAM, Esq., M.P. (Rhondda).
F. L. DAVIS, Esq.
ENOCH EDWARDS, Esq., M.P.
THOMAS RATCLIFFE ELLIS, Esq.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. HENRY TWIST called and examined.

Mr. H. Twist. 20 Nov. 1907

29658. (*Chairman.*) I understand you have been deputed on behalf of the Lancashire and Cheshire Miners' Federation to give evidence before this Commission?—That is so.

29659. Have you had any consultations with your Federation before coming here with regard to the nature of the evidence they wished you to give?—Yes. The officials have had a small conference and have talked the matter over.

29660. Then you have reason to believe that you represent the opinions of the great majority, at all events, of the Federation?—I am quite sure that is so.

29661. You begin your statement by saying that the present staff of Government inspectors is inadequate to efficiently inspect all the working mines over which they have charge. Will you give the Commission your views on that matter?—We believe that the number of persons employed in the mines and about the mines is such that the number of inspectors now covering that area and having charge over those mines is insufficient. They work out at about one inspector to every 22,000 persons employed. We believe that in order to get efficient inspection there should be one inspector to not more than every 9,000 or 10,000 persons employed.

29662. Then if you have one inspector for every 9,000 or 10,000 persons, how often do you suppose the mines would be inspected during the course of the year?—So far as that inspector was concerned, without assistance he then would not be able to make a competent inspection more than perhaps once every six months.

29663. At present the inspection is about once a year, though some mines are inspected oftener than that?—It just depends upon what you mean when you say "mine"; perhaps a portion of a mine may be sampled, but I venture to think that seldom, if ever at all, is the inspection of a mine completely covered during any period of the year.

29664. Do you think that an inspection should cover every part of the mine?—I do.

29665. And do you think that the appointment of an inspector for every 9,000 or 10,000 men would enable those inspectors to inspect every portion of the mine at least twice a year?—No, I suppose they would hardly be able to cover the whole ground twice per year then.

29666. Therefore even then you think they ought to have some additional assistance?—Yes, I think they would require further assistance.

29667. What further assistance would you suggest?—We should suggest the appointment of, say, a third-grade inspector.

29668. Do you mean a third-grade inspector for every inspector—that an inspector should have an assistant or two, as he has now, and that in addition he should have a third-grade man, so that there would be twice as many inspectors as there are now?—Yes. I should say that it would probably require more than one third-grade inspector to one chief inspector.

29669. Then would you double the number of chief inspectors, or would you leave the districts pretty much as they are at present, and merely have more assistant inspectors, and some third-grade inspectors?—I think there ought to be more chief inspectors, and that the districts should be reduced in area and in number of persons employed.

29670. Would you suggest that the districts should be about double the number?—I think that ought to be so.

29671. And that each district should have a chief inspector at the head, as is the case now, and one assistant, if not two assistants, to help him, and also some third-grade men?—That is so.

29672. How much would you pay the third-grade man?—I should say a man competent to do the work ought to be paid not less than £3 or £4 per week.

29673. I suppose as a rule you would not suggest that he should be a man who would be likely to rise to be an assistant inspector or an inspector, but generally speaking such men would remain at the third grade?—Probably so. He would be a practical man, also giving evidence of his theoretical knowledge by the possession of, say, a third-grade certificate.

29674. Then you would have a third-grade certificate: these men should all have to pass some sort of examination?—Yes, I think they ought to give evidence of their theoretical knowledge of mining, and the probability is that the sitting through an examination and the obtaining of a certificate would be necessary to be quite sure that they possessed competence in that knowledge.

29675. In addition to that would you make it obligatory that they should work for so many years underground?—Yes, certainly.

29676. Five or six years, or something like that?—Yes, probably more than that.

29677. And with these additional inspectors you think it would be possible to inspect every mine in the district thoroughly at least twice a year?—Yes, I think it would.

29678. At all events that is what you are aiming at—a sufficient number of inspectors to do that?—Yes.

29679. If that was done you would consider that that was all that was necessary in the way of inspection—by Government, at all events?—Yes.

29680. Now we will deal with the question of inspection by workmen under Rule 38. I understand you would have Rule 38 altered so that it should read that the inspection might be made "by two of their number, or any two persons who are or have been practical miners": that is to say, you would not confine the persons who are eligible to inspect under Rule 38 to those persons who are at

Mr. H. Twist.

20 Nov. 1907

present working in a mine, so long as they had worked in a mine and were competent miners ?—So long as they possessed the practical experience and the theoretical knowledge I do not think that the line ought to be drawn to persons actually working in a mine at the time that the situation is required to be filled.

29681. Then would you suggest that mines should be inspected only by persons who are working or have been working in that particular mine, or would you leave it to the men to appoint anybody they pleased to go down to any particular mine they pleased ?—We believe in popular election : that is to say, that the men should appoint these men after they have given proof of their theoretical knowledge. We believe that there should be two of their number then working in the mine, or two who have worked in a mine, and that they should be appointed by the men working in that area over which they have to travel.

29682. Which do you mean—that particular mine, or any mine in the district ? Would you give the men power to appoint any miner working in the district, or would you say a man is only eligible for appointment under this rule who had worked in the particular mine or was then working in the particular mine which had to be inspected ?—You see many firms employ a large number of men and have a large number of pits, and we do not think it would be fair to exclude a man from travelling in another pit other than that in which he had worked : we might find the most competent men in that pit which employed the least number of people.

29683. If you found an especially competent miner for this purpose who was working in any pit whatever in your district, you think the men ought to have power to take him out of that pit and let him examine any pit in the district ?—Yes.

29684. Then you say that these men should be paid by the Government. Have you thought over that carefully : is it desirable that the men should be paid by the Government : would it not be more satisfactory from the men's point of view if they were paid by your Federation or by the men themselves in some way ?—I do not think so. We have the case of a colliery where we have under this rule for years appointed these workmen inspectors, and they have done their work, so far as we are able to judge, fairly well, and it has cost the local miners on each occasion that an inspection has been made about £16 to pay them. We think that the expense incurred has a deterrent effect upon some miners lodges in appointing the men under this rule.

29685. So that on the whole you would be in favour of their being paid by the Government rather than by the men. Do you think that now under the present state of things a miner would get into any trouble for reporting adversely to the system in vogue in a mine ?—We are quite sure that there is a feeling of fear in the men that they would be harshly dealt with if they did make an adverse report.

29686. That is the feeling on the part of the men ?—Yes.

29687. Do you say it is justified or not ?—I cannot give you specific cases, but still among the men themselves who have acted for us I could name two now who are out of this country at the present time and have gone to Canada who performed this work for us, we believe, more faithfully than any other two : they are out of the country now and they themselves left the country feeling that —I cannot say whether it was justified or not—in more ways than one they had given offence, and that they did not have the same chance as they had formerly.

29688. How would you propose to get over that difficulty : would you propose that there should be a certain number of working men appointed, say by Government and paid by the Government, on the recommendation of the workmen, and that those persons should be a kind of workmen's inspectors and do nothing else but inspect mines, so that they should be independent ?—That, in my opinion, is the solution of that problem.

29689. So that you would have two further classes of inspectors : first of all you would have the paid Government inspectors who would be paid £3 or £4 per week, and who would inspect on behalf of the Government, and then you would have a further class of inspectors who should also be paid by the Government, but should be appointed by the men ?—Yes.

29690. And who should do nothing else but inspect ?—Nothing else.

29691. Now as to inspection by officials under General Rule 4, in the paper which is before me you bring a very serious charge against the management of mines : you say inspection under Rule 4 is not at present as efficient as is essential to safety, and that the men appointed are often in some of the most important respects incompetent, and when competent are almost always given too much to do to admit of satisfactory inspection. You say that in some of the most important respects they are incompetent, so that you accuse the management of deliberately appointing incompetent men to inspect the mines under General Rule 4. What have you to go upon in making that statement ?—I have to go upon my own practical experience —my knowledge of men who have been appointed, some of whom have lost their lives immediately after they have been appointed.

29692. Men themselves who have been appointed have lost their lives, having gone into dangerous places, not being sufficiently skilled to know that those places were dangerous, and they have lost their lives in some way, either by falls of roof and sides, perhaps, or by explosions ? —I have a case in my mind now of a man who was a bricksetter's labourer : he went down the coal mine : he was 28 years of age : he became a fireman in a little over six months after being down the mine, and a few weeks after his appointment he was suffocated : there were 20 yards of gas on the intake side of his dead body.

29693. You think that was due to his not being sufficiently cognisant of what goes on in the inside of a mine ?—We could not see how a man who had only been in a mine that length of time could be competent to discharge the duties of a fireman.

29694. You think that is not infrequently the case—that inexperienced men are appointed to the very important position of fireman ?—That is my experience.

29695. Can you give any statistics as to the length of time a man has been working underground when he has been appointed fireman, in the mines which you know of ?—There is the case I have just given you.

29696. Yes, you know of one case of a young man aged 28 who was appointed after six months : but do you think it is a common thing that a man is appointed as fireman after he has been six months in a mine ?—I will not say it is a common thing.

29697. Is it a common thing that men should be appointed after they had served say a year in a mine ?—No, I do not think it is a common thing even after a year's experience. Such appointments are made.

29698. Not often, but sometimes ?—Sometimes such appointments as I have mentioned are made, and made from a class of men who from their experience cannot be competent to discharge those duties.

29699. How long should you say that a man of ordinary intelligence must work in a mine in order to be competent to perform the duties of a fireman ?—It depends upon what age he enters the mine : if he enters the mine as a boy he should have gone through the whole grades of occupation right from a boy's work to the work at the coal face, and he should have some years experience at the coal face.

29700. That is to say, even when he works his way to the coal face, although he has had considerable experience of mining before he gets to the coal face, at all events of the inside of a mine, he must work—what would you say, two years at the coal face before he can become a fireman ?—I should say he should work two or three years at least at the coal face.

29701. Do you think that this is ordinarily the case that men have worked at least two years at the coal face before they have become firemen ?—I should say 25 per cent. of the firemen are men who have not actually worked at the coal face—not actually got coal as colliers.

29702. That is to say that they have never worked as hewers ?—They have been in the haulage roads.

29703. And you do not think that is sufficient experience ?—I do not.

29704. You say that it is the common practice in your part of the world where you are working, that a man should be appointed as fireman who has not worked at the place at all—that is your statement ?—Well, a large number of the appointments are made, so far as my experience extends—I can only speak as wide as my experience—from men who have not actually got coal as colliers.

29705. Men who have not got coal at all ?—Not at all. They have come from the haulage roads, have performed the duties, say, of a day wageman or bratticeman, and then ultimately got to be firemen.

Digitized by Google

29706. Without any experience at the face at all?—Yes.

29707. About what sort of percentage of men would you say are appointed in that way? Would you say a quarter of the men are appointed without having worked at the face at all?—Without committing myself to any percentage, I should say that 25 per cent. of them, if not more, are appointed who have not worked at the face.

29708. You think from your experience that about a quarter of the men are appointed as firemen who have never worked at the face at all?—Yes.

29709. (*Mr. Wm. Abraham.*) That they have never worked as coal hewers?—They have never worked as coal hewers.

29710. (*Mr. Ratcliffe Ellis.*) In your view they are incompetent, I suppose, at the present time?

29711. (*Chairman.*) I suppose those men are not necessarily incompetent. I suppose if a man works as fireman for a year or two, at the end of that year or two probably he would be competent, although he might not have been competent at first. He learns his competency by experience as fireman?—Yes; I think a man who has to direct another as to his timbering and spragging the coal face should have had practical experience himself of getting coal, or else how can he advise a man who has actually got it?

29712. Mr. Ellis suggests to me that you go further and say that these firemen who have not worked at the face must necessarily be incompetent. They must necessarily, as I gather from you, be incompetent when they first begin their duties as firemen?—Quite so.

29713. But I suppose an intelligent man who is always giving advice as to timbering, spragging, and that sort of thing, will in the course of time learn his duty?—Yes, of course.

29714. So that although you would say this 25 per cent. of firemen who have never worked at the face must be according to you, more or less incompetent for their duties when they first begin them, still, at the same time, they learn competency by experience as firemen?—I do not see how they can avoid learning.

29715. So that you would modify what Mr. Ellis suggests by saying that these men who have not worked at the face, although they are incompetent at first, are not necessarily all incompetent now?—Certainly not.

29716. Some of them may now be quite competent?—Yes.

29717. (*Mr. Ratcliffe Ellis.*) That a man who was not competent at the beginning may have become competent?

(*Chairman.*) Yes, certainly, by exercising other duties. My suggestion is simply that these men, although they are not competent at first, may become competent by performing the duties of firemen.

(*The Witness.*) I should say that if a man who is appointed to the position of a fireman has not had at his appointment practical knowledge as a coal hewer, he is, from that standpoint, an incompetent man on the day of his appointment.

29718. Just so, but if he is an intelligent man, and carries out his duties faithfully, he will in course of time learn to be a competent fireman, even although he did not begin by being competent?—He will, if he is attentive to his duties.

29719. (*Mr. Smillie.*) But would you say that he never would be as competent as he would have been, other things being equal, if he had had two years' experience at the face?—A man who has not had the actual experience of the getting of coal, can, in my opinion, never be as competent as a man who has had the actual experience.

29720. (*Chairman.*) He may attain greater competency by the exercise of his calling, but he can never be a really first-rate man like the man may be who has been working at the face?—It seems to me to be impossible.

29721. You say that the firemen's districts are too large?—Yes.

29722. Is that so throughout all the mines with which you are acquainted, or is it the case in certain mines?—The work given to firemen varies under different managers, but I think in most cases managers seek to get as much out of their firemen as they can, and call upon them to cover as big an area and take charge of as many men as they can. I think it would conduce very largely to safety if the size of the districts was reduced, and the number of men whom the firemen have charge of were reduced.

29723. Do you say that the districts are too large all through the mines which you know of, or do you think that the districts in some of the mines are of a proper size?—I should say they are for the most part too large.

29724. But there are some that are not too large?—Yes.

29725. So that you level up, so to speak, the worst mines to the standard of the best mines?—Yes, I should attempt to fix a limit upon the number of men over whom a fireman should have charge.

29726. There are some mines where the limit is at present fixed at a reasonable number?—Yes.

29727. You say that certificated managers should be limited to a certain number of underground work-people over whom they should have charge. Do you mean that a man who has a first-class certificate as a manager of a mine should not have complete charge over a whole mine, but that there should be some other manager appointed: is that your idea?—No: our idea is that the tendency at the present time is to give a man supreme charge over too many collieries.

29728. Too many pits?—Yes: and our idea may be perhaps tersely expressed in saying that we believe in one pit one manager.

29729. However many men may be working in a pit, you think you could not very well divide authority in one pit, but that you ought to have one head manager over the men in one pit?—Yes.

29730. You would not have divided authority on one pit however many men were working?—No: I think there ought to be one man as chief manager over one pit.

29731. With regard to discipline, you say that it would be best secured by more efficient supervision and visitation, and that if workmen break any rule you prefer prosecution to fining as a means of its enforcement. I suppose the men sometimes greatly prefer fining to prosecution, do they not?—Occasionally the men may prefer to suffer a small fine rather than be hauled off before the magistrates and have publicity given to the case.

29732. But on the whole it is the opinion of your Federation that discipline should be generally and usually enforced by prosecution and not by fine?—We think that prosecution conduces much more to safety and to discipline generally than fining.

29733. But surely there might be small minor offences which could be easily dealt with by fining—small offences not endangering life?—Whatever the offence be, I should prefer, if there is a law to deal with it, that prosecution should proceed rather than that a fine should be imposed.

29734. Then you say that in every case a man should be prosecuted rather than fined?—Yes.

29735. Even for the first offence, do you say?—Yes.

29736. Well, that is your view: and you think that is the view of the Federation?—Yes: our Federation is totally opposed to fining as a means of effecting discipline.

29737. Now I will come to the question of accidents. You think that many accidents arising from falls of roof and sides would be prevented by systematic timbering, chocking and packing, and with better attention to wastes being drawn off as coal is removed. What do you understand by "systematic timbering"?—We mean that having ascertained the nature of the mine, stipulated distances should be fixed according to the Mines Regulation Act, and that they should be strictly adhered to, that is to say, distances between props. In addition to that, we believe that in long-wall work there ought to be systematic chocking. Much long-wall work is done now without any chocks at all.

29738. (*Mr. Cunynghame.*) What is a "chock"? I suppose it is the same thing as a sprag?—No, not exactly.

29739. (*Chairman.*) It is a cross-piece, I am told?—Yes: a chock is a stack of timber laid crosswise, which when built would cover anywhere from a square yard to almost two square yards of roof.

29740. But now there are rules laid down that the supports must not be more than so many feet apart, are there not?—Those are the mere props—like *this* pencil, comparatively speaking, as compared with a chock.

29741. Then you would say that systematic timbering as I understand it is not duly carried out in the mines with which you are acquainted?—The systematic timbering that we should desire to be made compulsory is not carried out.

Digitized by Google

Mr. H. Twist.

29 Nov. 1907

29742. You want it to be made compulsory?—Yes.

29743. Then you say also that if suitable timber were constantly provided and taken to the coal face or actual working place by the management, many accidents would be prevented. Your complaint is, I understand, that the timber is sometimes some little distance from the face, and that the man has to go and fetch it?—It is sometimes hundreds of yards from the face and has to be conveyed along roads where you cannot put your timber on the top of the tub, and the timber has to be dragged the whole distance: that conduces to negligence and to scarcity of timber at the working face, the difficulty being so great in getting it to a man's working place.

29744. So that the man prefers sometimes to run a certain amount of risk rather than lose time in going for this timber and hauling it along?—Well, their wages depending upon the coal they send out, it leads to that.

29745. And you say that that is a matter of complaint in your mines—that it is a common thing for the timber to be a considerable distance off the working face, and that it requires a good deal of time and labour to get it?—That is so. If you would permit me I should like to say this with regard to suitable timber: one thing of which we have to complain very largely is the almost total absence in many collieries of what we call caps or lids. Nothing is more valuable to a miner working under a broken roof than a cap or a lid—in order to cover more roof space. Invariably the men themselves experience very very great difficulty in getting a sufficient supply of suitable caps for setting on props: it gives to the prop a longer life and a greater supporting power, and adds very largely to the safety.

29746. Is the cap a thing in the nature of a mushroom, which you put on the top of the prop and which spreads out?—No, it is in the nature of, say, a short plank, two or three inches thick, which is put on the top of the prop in that manner (*Illustrating*).

29747. A cowl, it might be called?—A cap or top.

29748. (*Mr. Enoch Edwards.*) It is called a lid?—Yes. We think it should be a stipulation that a plentiful supply of lids should be provided.

29749. (*Chairman*). And that is not the case?—That is not the case.

29750. With regard to better lighting and attention to lamps, what have you to complain of?—I do not profess to have any expert knowledge about lamps, but still our men complain largely of the light.

29751. That the light is bad?—Yes. Oftentimes it is the quality of the oil, and sometimes the lamp. The choice of the lamp I suppose being with the management themselves, the lamps are not what they might be: the light is not so good as one would desire oftentimes at the coal face.

29752. You think that more attention might reasonably be paid by the management to seeing that the lamps are in thorough repair and that they give as much light as in the nature of things they can be made to give?—Yes. One is almost constantly approaching the management with a view to obtaining better attention to the lamps, as the result of complaints from men that their lamps will not burn.

29753. Now as regards accidents in shafts: you believe that in all shafts where men are wound the use of detaching hooks, catches, rod-grips and gates to cages should be made compulsory. There are other means of preventing overwinding besides detaching hooks: it has been suggested that there are contrivances by which steam is automatically shut off, so that you would get better winding in that way. I suppose you would not be particular as to how overwinding is prevented, so long as there is some means adopted of preventing it?—Yes: there is Bertram's Visor, which is used as a mechanical appliance for shutting off steam and stopping the cage.

29754. Is that satisfactory?—I do not think it is absolutely reliable: I do not think it would be wise to trust to that only.

29755. You think there ought to be detaching hooks under all circumstances?—Yes.

29756. And that gates to cages should be made compulsory?—Yes.

29757. We had it stated in evidence, I think, that on one occasion an accident had been caused by a gate to a cage—that something happened to the cage and a man wanted to get out in a hurry, but he was kept in by the gate and was consequently very seriously injured: but I suppose that would very seldom happen. On the whole you consider it would be desirable to have gates?—I should consider that far more lives would be lost by gates not being used than by gates being supplied. As a matter of fact there has been an accident in Yorkshire, into which a Coroner and his Jury are now inquiring, in which seven men were thrown out of the cage, and had there been a gate to the cage those men's lives would have been saved.

29758. Then you say further that when men are being wound the cage should be free from full or empty boxes or other material. Is it a common practice to load the cage that is carrying men up and down with material?—Where they have two and three deck cages.

29759. You mean one deck would be loaded with men and another with materials?—One deck would be loaded with materials and two with men, or one with men and two with materials.

29760. You object to that?—Yes.

29761. Why? What danger do you apprehend from that?—We consider that the cage should not contain any greater weight than the men themselves when the men are being wound, and we do not see what good purpose it serves.

29762. What would you do: would you have the particular platform of the cage empty?—Which cage are you speaking of?

29763. Supposing you have only a certain number of men wanting to go down, perhaps only sufficient to fill one of the three decks: what would you do with the other two?—Do you mean of the corresponding cage—the ascending cage?

29764. Yes?—I should have that empty.

29765. But supposing they wanted to be wound?—I should wind men against men.

29766. Supposing one cage, the ascending cage, was quite full of men, all three decks crowded up with men, and supposing the other cage, the descending cage, was only a third full of men, how would you propose to balance the cages except by putting something in the other cage?—I do not think that that would be essential.

29767. (*Mr. F. L. Davis.*) That is not essential?—I do not think that is essential at all.

29768. (*Mr. Ratcliffe Ellis.*) You would wind men against men, but not men in one cage and material in the other?—I should say it would be quite safe to wind men opposite men, that is to say, to have men in both ascending and descending cage, but not minerals in either cage.

29769. (*Mr. Cunynghame.*) When the men are sent down at the beginning of the shift would you have coal then raised—because I do not see how you could get it up?—No.

29770. What are you to put in as a counter-weight to the men going down?—There is no occasion for it; you would not wind coal against men.

29771. There would be nobody to send the coal up at the end of an eight-hours' day; there would be nobody down there. I do not want to argue it, but I do not understand what you mean, do you mean that there is to be nothing wound against the men?—Nothing.

29772. (*Chairman.*) Then you say that men should be wound at a reduced speed. They are not wound at the extreme speed that coal is sometimes wound, are they?—The rule applying to that is that on reaching 20 yards from the landing place, they shall not wind at more than three miles an hour. We believe that in addition to that there ought to be a reduced speed at the meetings.

29773. That is when the two cages meet?—Yes, when the two cages pass the speed ought to be reduced.

29774. But otherwise, subject to that, you would not have any maximum speed for winding men different from winding coal? I believe in Germany there is a difference—that you may wind coal up to 20 miles an hour, or more, and that with regard to men you may only wind them at a less pace. You do not suggest that?—I think that the speed at which men are wound ought to be generally reduced, but particular attention ought to be paid to reducing the speed at the meetings, and the speed ought to be reduced at a further distance from the landing place when men are in the cage, than applies at the present time.

Digitized by Google

29775. Then you say as to accidents in haulage roads, that travelling roads should be provided apart from main haulage roads. Is that not rather a large order, that travelling roads should be provided apart from main haulage roads? How would you do that in some collieries?—Many collieries do provide separate travelling roads.

29776. Yes, I quite understand a good many do, but supposing they are old collieries which have been built on a different principle, would it not very often be an enormous expense to provide separate travelling roads?—Where travelling roads have not been provided in the opening out of the mine and they are not existing at present, then it certainly would be a great expense; but we find that accidents in the haulage roads to men travelling often occur in those mines where there is no special travelling road.

29777. Then would you make it compulsory to have in every mine special travelling roads?—Yes.

29778. However expensive it might be?—Yes, we think that alongside main haulage roads there ought to be a travelling road.

29779. And you say that the main roads themselves should be made and kept of sufficient width to allow a space on one side for travelling purposes. That has been very often suggested. You do not think it would be enough if the main roads themselves had this space on one side sufficient for travelling purposes, but even where that is done you say it ought to be made compulsory that there should be separate travelling roads?—I should prefer a special travelling road to, say, a footpath on the side of a main haulage road.

29780. But then it would be extremely difficult and very expensive to make a separate travelling road. Would it not be sufficient to widen the main road so as to have a gangway at the side for the men to go along?—Yes, I think the provision of a sufficiently wide footpath with a more plentiful supply of manholes on that side of the main road would be sufficient.

29781. You say that there should be a more plentiful supply of manholes on the travelling side. At what intervals do you suggest there should be a manhole space?—At every seven or eight yards.

29782. What is the distance now—20 yards?—10 yards: and more in some places.

29783. Is there any General Rule about the distance between manholes?—Yes.

29784. But you do not think that General Rule is sufficient?—No. We think that the manholes should be more plentifully supplied on the travelling side, and not thrown across from one side to the other. If two manholes have the required distance between them, although one is on one side of the road and the other on the other perhaps, that seems to satisfy the law.

29785. The General Rules applying to this are Rules 14, 15 and 16: Rule 14 says that "Every underground plane on which persons travel, which is self-acting or worked by an engine, windlass or gin, shall be provided . . . with sufficient manholes for places of refuge, at intervals of not more than 20 yards," and under certain conditions, 10 yards. You suggest that there should compulsorily be a manhole at every eight yards?—Every eight or 10 yards in main haulage roads where the whole of the men have to travel in and out of the mine: that is what I mean.

29786. And where horses are used what would you say?—I should say one at every 20 yards would be sufficient there.

29787-91. Then you go on to say that more appliances should be used to prevent runaway tubs, and haulage or drawing with scotches should not be allowed where mechanical appliances may be used. What are "scotches"?—Those are scotches put in the wheels, sometimes wood and sometimes iron.

29792. I do not understand what you mean by "scotches"?—If I may explain, there is a good deal of the drawing done by colliers' drawers in Lancashire that is done down inclined planes, ranging in gradients say from 1 in 10 to 1 in 4, and this is done by the drawer himself getting behind the tub with two scotches which are put in the wheels and the scotches skid the wheels the whole distance; that is very often done and it is an exceedingly dangerous practice. We find oftentimes that the supply of what we call a balance wheel at a cost of a few shillings in labour and material would enable the man to travel up and down the brow with his tub much more easily and much more safely.

29793. You think it is a common practice for the men to go in front of the tubs and stop them in that way?—They do not go in front; they are prohibited from going in front, but they get behind.

29794. (*Mr. Cunynghame.*) What is the balance wheel which you refer to? I should like to understand it?—I will explain it to you: suppose this is a brow—an incline (*illustrating*): a man is bringing the tub down, and he would bring the full tub from *that* point to *this* point, assuming that this pencil represents 50 yards or 100 yards. (*Illustrating.*)

29795. He would brake it down the slope?—Yes, he would brake it down the slope with a scotch in each wheel. Now we suggest an appliance of the putting up of two props at the top and a simple horizontal wheel around it with a rope attached to his full tub and a balance tub, that is to say, a small tub filled with dirt to balance it, and then his full tub will pull his empty tub up from the bottom.

29796. (*Mr. Enoch Edwards.*) Is that not the practice in mines?—It is the practice to some extent, but the other method is practised much more in Lancashire.

29797. (*Mr. Cunynghame.*) It is a kind of balance there—a wheel on to the tub. The wheel is a fixture?—The wheel is a fixture behind two tubs.

29798. Then there is a rope from the wheel, I suppose, to the tail of the tub as it is going down?—Yes, and at the other end of the rope there is a small tub of dirt to balance it, so that the full tub is taken down without scotches in it, and the other is drawn up.

29799. Then that would require another line of rails, because there must be a line of rails for the empty thing to come up?—Yes, only that the length of rails for the balance side need only be half the distance of the full tub side.

29800. Yes, one understands that; and the road must be widened accordingly?—Yes, but usually now the roads are sufficiently wide; places are driven nine or 10 feet wide, and the tub itself is not more than a yard wide. So that if the roads are kept open there is ample room to pull up any balances.

29801. And the weight of the balance is equal to that of an empty tub, I suppose?—It is a little more, so that it pulls it up nicely.

29802. (*Mr. F. L. Davis.*) What is the size of the tub you are speaking about?—Ten cwt. capacity.

29803. In other parts of the country perhaps they are 20 cwt. to 25 cwt., so that it is not so easy in all cases. You say there is plenty of room to do that; there may be with small tubs but not with big ones.—Speaking of our County, the highest capacity of any box we use is 11 cwt. and the lowest is 3 cwt.

29804. (*Chairman.*) Then you say these scotches should be used where the mechanical appliance is capable of their being used. Sometimes perhaps the mechanical appliances which you are speaking of are incapable of their being used, and if they are incapable of their being used then they cannot be used.—Just so.

29805. Then you must have recourse to the ordinary methods of stopping the wagon?—Yes: as, for instance, in the case of a man just entering on a coal face up-brow where he had only say five or six yards of rails down, we should not expect that a mechanical appliance should be put there; but in all drawing-brows which are permanent and which range say from 25 yards up to 150 yards, as they do in many cases, there should be.

29806. With regard to the use of safety lamps, you say that their use should be made compulsory in all mines. That is rather a large order, is it not. Is it not perfectly safe to work some mines without safety lamps?—It may be considered safe by the people who are working them, but we believe that we should all be quite sure that they are safe if they used safety lamps.

29807. That is the opinion of your Federation, is it?—Yes.

29808. You go on to say, with regard to investigation into accidents, that you advise that Coroners' Juries should be composed of men who are or have been practical working miners, and power should be conferred upon them to visit the scene of the accident if they so desire. Surely that power is put in practice in England now, is it not: surely no manager would object to a Coroner's Jury going to visit the scene of an accident?—I have seldom if ever known the request to be made, and I do not suppose the Juries themselves believe they have the power.

Digitized by Google

Mr. H. Twist.

20 Nov. 1907

29809. (*Mr Smillie.*) The Coroner has no such power?—The Coroner has no power.

(*Chairman.*) The Coroner would have no power to ask the manager, but surely no manager would refuse, would he?

(*Mr. Smillie.*) I think managers would refuse to allow Juries to go down to visit the place.

(*Mr. Cunynghame.*) I should have thought they had the power. You do not mean to say that any person can refuse the right of a Coroner's Jury to enter a place to inspect the scene of an accident in respect of which their inquiry is being held.

29810. (*Chairman.*) You have never heard of a case in which, where a Coroner's Jury has applied to go down a mine to view a place where an accident has taken place, they have not been allowed to do so?—I do not know of any case in which a Coroner's Jury has been refused, but, so far as Lancashire is concerned, I am quite sure Coroners' Juries feel that they have not even the power to make such a request.

29811. I think the sooner they get rid of that feeling the better; I should have though everybody knew they had a right to ask and that they could not be refused. Now we come to the question of drafting Special Rules: you say that workmen's representatives should be given an opportunity of taking part in the drafting and adoption of Special Rules. What further have you to say on that subject?—When Special Rules are being drafted and are about to be adopted, I say that representatives of the workmen should be present with the managers of the mines, and the Inspector of the district to offer suggestions and to confer with them in the drafting of the Rules.

29812. Before the rules have been promulgated by the owners or managers of mines, you would have the miners consulted?—Yes.

29813. So that it comes to this: that the mine owners might have committed themselves to a certain set of Special Rules as being desirable without consulting the men, that then they have these Rules printed and that then the men, as I understand it, may raise any objection they like?—Yes.

29814. But you would say that they ought to have the power of raising the objection at a previous stage?—I think it is much better to take part in the drafting of a thing rather than to sit upon it and offer objections after it has been drafted. I think when a man has drafted a Special Rule it is rather unlikely that he would like to go back upon his own ideas at the suggestion say of miners or of workmen.

29815. He might feel that it was a matter of pride, we will say, to stick to his own opinion?—Well, I rather think he would defend his own opinion anyhow.

29816. Whereas, perhaps if there was a friendly conference before he had put forward his views in public, you think there would be more chance of his changing them—he would be more amenable to reason, as one might put it?—I think he would be more amenable to reason then than afterwards.

29817. (*Mr. Cunynghame.*) You have told us that men would prefer prosecution to fining. A large number of the accidents which occur in mines occur through falls of roof, do they not. You are aware of that?—Yes.

29818. What proportion is due to falls of roof and sides?—In Mr. Hall's district, 48 per cent.

29819. What is your suggestion as to remedying that state of things? That is a large loss of life, is it not?—Very large.

29820. What is your suggestion as to the mode of remedying that?—I think a distinct improvement would be made by the firemen being given less areas to cover, and that instead of being compelled by law, as they are now, only to make one visitation during the shift, they could make two or more visits during the shift, and so have the workmen who were under their charge more constantly before their eyes.

29821. Then you mean it is really due to workmen doing careless things in the absence of sufficient direction and inspection?—No, not exactly that; only I do think that if there was an official there to suggest to the workmen there would be less danger of accident.

29822. That is the same thing—that in the absence of an official there to suggest or direct (whichever you like) the men do careless things which would not take place if there was an official there?—I believe better supervision and more frequent visitation would have the effect of reducing the accidents in that regard.

29823. That is by preventing carelessness?—Yes.

(*Chairman.*) And also ignorance, I suppose.

29824. (*Mr. Cunynghame.*) Carelessness or ignorance?—Yes.

29825. I suppose that would lead to a considerable amount of prosecution if we are to reduce the number of accidents?—Yes. I should say in regard to neglect of any timbering rule, discipline would be better enforced by prosecution than by fining the men.

29826. How many prosecutions do you think it would be necessary to have in a year in your mine? First of all, how many men are employed in the mine where you are working?—I am not actually engaged in the mine now, but the firm at whose colliery I did work have, say, 2,000 men employed below ground.

29827. Supposing there were this increased number of firemen, and that the management were much more strict in regard to timbering, and that they enforced their strictness not by fines at all but by prosecutions, how many prosecutions do you think there would be in a year among those 2,000 men?—I could not give you a very correct idea of that.

29828. Not a very correct one, but will you give it to us as nearly as you can? Have you thought about it?—No, I could not offer you a suggestion.

29829. I tell you frankly that when you come here and suggest things (I am not saying that you do it in bad faith), the value of your evidence would be much greater if you had thought the question out. You ask us to embark in a number of prosecutions, and therefore I put to you how many prosecutions do you think would be approximately necessary in a mine employing 2,000 men?—It would depend upon the offences.

29830. I agree. How many offences do you think there would be? Have you thought of it?—I cannot project my mind into the future, and say how many offences would be committed.

29831. No, but you see you are asking us to project our action into the future?—Quite so.

29832. (*Mr Wm. Abraham.*) Would not the protection you are asking for reduce the offences considerably?—Yes.

29833. (*Mr. Cunynghame.*) I do not say it would not reduce them, but I want you to give us an idea of how many prosecutions you think there would be. It is a perfectly fair question, which I have a right to ask, and if you are able to answer it, it would encourage me to think that you have been considering the question fully. First of all, I will ask you how many fines are there, or how many used there to be, in the pit?—A number of fines are made of which we have no knowledge, but we have records in our Federation of 100 fines being made last year—I mean to say 100 cases where men were fined, and were discharged because they would not be fined. But with regard to the number of fines that have been inflicted, we have no knowledge.

29834. I am not at all necessarily justifying fining; but taking that pit where 2,000 men are working, how many fines were inflicted on those men in the course of a year? If you have not any knowledge on the subject, tell us so?—I have no knowledge; that knowledge is the exclusive property of the manager.

29835. You do not know?—No.

29836. Then you cannot give us any help with regard to the question of what number of prosecutions we should have to contemplate if your scheme is brought into play?—No; but I think the tendency would be such that the prosecutions would be few.

29837. You are in favour of detaching hooks and catches?—Yes.

29838. Have you had experience of the use of those appliances? Do you know places where they are used and places where they are not?—Yes, I have had experience.

29839. It is said by some people that they would fail occasionally and be more detriment than advantage. What have you to say upon that point? Have you by chance read the Report of the Transvaal Commission which sat on this subject?—I have not.

Digitized by Google

29840. Can you give us any opinion as to how far it is right to say that these appliances would fail now and then and would be a source of danger?—I think, taking Ormerod's patent as the one I have most knowledge of, if properly attended to it will invariably act, and that the chances of failing are infinitesimal.

29841. What do you mean by "if properly attended to"? What attention does it want?—I should say that once every 24 hours the engineer's man or the engineer himself should overhaul it, and occasionally it should be taken down, cleaned and oiled.

29842. That would be between shifts at some time, I suppose?—Yes.

29843. Can it be detached without detaching the rope from the cage?—Yes.

29844. It can be taken away?—Yes, taken away.

29845. Without detaching the rope?—You have to detach the rope, but you suspend the cage while you draw it on to the landing place. At some collieries they have it done once a week: the detaching hook is taken to pieces by the engineer and put together again and oiled, and kept in perfect trim.

29846. If that is done you have confidence in this particular invention, and perhaps in some others?—Yes, absolute confidence.

29847. I will now come to the question of winding men at reduced speed. Is that done at all in the collieries which you are now representing in Lancashire and Cheshire?—Are you speaking now of the meetings?

29848. No, of the men being wound at reduced speed. Is it done anywhere?—Yes.

29849. In what collieries is it done?—The Bamfurlong Collieries. There the engineer instructs the winders to reduce speed at the meetings as well as when approaching the surface.

29850. That is for men?—Yes.

29851. And not in the case of coal?—No.

29852. Are there any other collieries at which that is done?—Not to my knowledge.

29853. That is the only one?—That one.

29854. How far has that been conducive to safety in that colliery?—Well, they have not had any shaft accident, and therefore one could not say whether the greater precaution is the reason, because in some pits where they have not taken that precaution they may have had no shaft accidents.

29855. Can you call my attention to any case of an accident that has occurred through too quick speed in the winding of the men?—An accident happened a few weeks ago at Fogg's Colliery, where the cages came together in the meetings and nine men were lost. It is the opinion of some engineers that in that case it was due to vibration in consequence of the speed at which the cage was being wound.

29856. Who are the engineers who think that? What is the name of the man who is of that opinion?—I have it given to me second-hand from one engineer at this particular firm where they reduced the speed at the meetings.

29857. I will ask you to mention now the name of that man, but it will not be put upon the notes. What is the name of that man?—Mr. ———. May I say that this opinion has been given to me. I am going now to be perfectly candid, and while perhaps I did feel diffident at stating the name of the person, yet, being pressed, I have given it to you. Now I want to make a straight statement, that this opinion is not given to me by Mr. ——— himself, but it is given to me by a person as from him; and that he, of course, held the opinion, his instructions being that speed should be reduced at the meetings, that that was an extra safeguard in the winding of men, and would prevent accidents such as occurred at Fogg's Colliery.

29858. It is Mr. ——— who held that opinion?—Yes, quite so.

29859. (*Chairman.*) Then, after all, that opinion does not come to so very much, because he has been of opinion that fast winding where the cages met might lead to an accident, and therefore it would be natural to suppose that where an accident did occur when cages met it was caused by vibration, or something of that sort. I mean he does not say in this particular case that he is satisfied that vibration caused the accident, but he merely says he has always been of the opinion that excessive winding might cause vibration and might cause accidents in a general way?—That is so.

29860. (*Mr. F. L. Davis.*) Could you tell us what kind of guides there were at that particular pit at which that accident occurred?—Wooden guides.

29861. (*Mr. Cunynghame.*) Is there any reason in your own knowledge as a practical miner which makes you think it is desirable that men should not be wound so fast as coal?—There is, ample.

29862. What is the reason?—That when the men are being wound the oscillation, whether the rods be wood or wire, is so great that in my belief when cages are passing there is a danger unless there is a good deal of room provided: and in some shafts it is impossible.

29863. To what colliery are you alluding when you say that?—I am alluding to a number of collieries. I have worked in a great many collieries.

29864. I will ask you to give us the name of any one colliery (we will not have the name put on the shorthand notes) where that oscillation occurred to an extent that alarmed you?—Am I to tell you the name of the colliery?

29865. Yes: the shorthand-writer will not take it down, and it will not be put on the Notes. (*The Witness stated the name of a colliery.*) Is that the state of things in existence there or not?—I cannot tell you: it is some years since I was down the mine.

29866. In what year was the case you are alluding to?—That would be in 1889.

29867. Can you not give us a more recent one?—Not from that colliery.

29868. No, but from anywhere?—Yes. (*Witness then mentioned another colliery.*)

29869. When was that in that condition?—That was, say, 12 years ago.

29870. Can you not give us a more recent one?—No. It is ten years since I was in the mine.

29871. Have you heard of any specific mine where the winding is so rapid that vibration occurs and the men are alarmed?—I cannot tell you of a mine.

29872. Is there anything that you would like to add as a reason why the men ought to be wound at a reduced speed besides what you have said? I do not want to miss anything: that is all.—No, only I think it is very essential to take greater precautions.

29873. Yes, I know, but have you any further reasons to give: is there anything else you would like to add?—I do not think there is.

29874. Now as to light. The badness of the light is not due, I suppose, to the lamps being out of repair, is it?—I cannot say exactly being out of repair, but it is due to a bad quality of oil, and in some instances not being sufficiently well cleaned.

29875. Do you say this from observations which you have made yourself, or from reports which you have heard from others, or both?—It is from both.

29876. I will take your own observation first. That would be some years ago, I suppose?—Yes, some years ago.

29877. What was the fault which you observed in the light? Was the wick insufficient, or of bad quality?—The wick, instead of giving off a clear light, was burning itself.

29878. Indicating what?—Indicating that there was bad oil, and in some instances bad ventilation.

29879. Never mind the question of ventilation for the moment, but let us deal with the oil first: we will come to the ventilation in a moment. What was the character of the oil?—I could not tell you.

29880. Was it paraffin or colza?—It certainly was not paraffin: there might have been a drop of paraffin in it to enable it to burn more keenly, but certainly it was not all paraffin.

29881. Did you screw the wick up and yet still would not the lamp burn properly?—Yes. In the lamp I am now referring to we had what we call a pricker—a wire for lifting up the wick—and I have come out of the pit on more than one occasion with as much as an inch and a half of wick sticking up through the tube.

29882. And yet it would not burn?—Yes—it did not give a clear light.

Digitized by Google

Mr. H. Twist. 20 Nov. 1907

29883. Did you make complaint of that to anybody?—Yes, oftentimes I made complaints.

29884. Did the men who made inspection of the mine ever make a complaint of it?—Yes, complaints are pretty general with regard to oil.

29885. Did you complain to the Inspector?—Do you mean the Chief Inspector?

29886. The Inspector of Mines of the District, or any of them?—No, I have never personally made a complaint about that.

29887. Do you know whether a complaint was made by anybody?—No, I have no knowledge of any complaint having been made to the Inspector by anybody about the quality of the oil.

29888. With regard to the absence of a balance-wheel and manholes, I do not think any complaints have been made to the Inspectors of the district of the absence of those things, have they?—No. It is taken almost for granted in Lancashire that if a man has a brow he uses scotches if he can hold the tub down.

29889. And in regard to manholes in the same way there has been no complaint?—I cannot give you any specific instance of complaints.

29890. (*Sir Lindsay Wood*). With regard to the rate at which men are wound in the shafts, is it the practice or the custom in your district that in nearly all cases there is a reduced speed for winding men?—Yes, generally the practice is to reduce the speed.

29891. Is not that almost invariable?—Yes: I might go so far as to say almost invariably the speed is reduced as between winding men and winding coal.

29892. In the case you refer to of an accident by some men being thrown out of the cage, which was attributed to vibration of the cage in wooden guides, has there been any inquest?—To which of the cases do you refer?

29893. The case in which there were nine men killed by the vibration of the cage where there were wooden guides?—No: in that case, by some means or other, which even the Coroner's Jury had not been able to fathom, the cage broke away and went down the shaft.

29894. (*Mr. Ratcliffe Ellis.*) No, the case Sir Lindsay Wood is asking you about is the accident at Fogg's Colliery: has there been an inquest there?—Yes, there has been. But Sir Lindsay speaks of the accident being due to vibration, and I want to correct that view. In this case the men were not pitched down the shaft as the result of vibration: the cage itself with the men in it went down.

29895. (*Sir Lindsay Wood.*) I understood what you said just now was that in the accident at Fogg's Colliery the men were thrown out of the cage owing to the vibration?—No: I am speaking of the Yorkshire accident, upon which the Coroner's inquest is now being held.

29896. You stated that a certain engineer told you that it was due to vibration, which was caused by the two cages meeting?—I did not say that an engineer did tell me that: I said information was conveyed to me that a certain engineer's opinion was so-and-so.

29897. Very well: that is what I mean: then I was going to ask you if there were wood guides do you know what distance the slides of the cages were apart. The wood guides could not vibrate?—If the horsetrees—the side supports—are a considerable distance apart there can be vibration in a wood rod that is only, say, 4 ins. square.

29898. You think there would be vibration?—Yes.

29899. To what extent?—Not to the same extent as with a wire rod.

29900. No, but to what extent would a wood guide vibrate with the cage coming up?—I should think it would be possible for a wood guide to be forced out an inch, if the oscillation was great, with a heavy cage.

29901. What are the distances in such case of the cross-stanchions used in support of the guide?—I could not give you the distances in that shaft, but I have known them 6 and 7 yards apart, and so on.

29902. Do you mean 6 or 7 yards, or 6 or 7 ft.?—Well, 5 and more yards apart.

29903. Do you really mean 21 ft. apart? You say that those supports of the guides are 6 yards apart—18 ft?—Well, I cannot say that I have known them 6 yards: I should say 4 or 5 yards apart I have seen them, so far as I have been able to judge of the distance: I have not taken measurements, and I cannot speak as to measurements, my knowledge being from observation that they would be that distance apart.

29904. Were any of the accidents which you told us of just now when men were thrown out of the cage, accidents with guide ropes?—Yes. In the accident in Yorkshire, when seven men were thrown down the shaft there were wire guides, so far as I can speak now: I am not quite positive as to that: I have not seen any information as to whether they were wire guides or not, but I believe they were wire guides.

29905. You cannot tell us?—No.

29906. (*Mr. Enoch Edwards.*) The inquest in that case is not to be held until the 4th December?—That is so, but they sat on Monday last as a preliminary meeting.

29907. (*Sir Lindsay Wood.*) You told us that you considered that the persons who inspected the mines should be two persons from anywhere in the district, and that the men at the colliery should have the power of appointing those persons?—Yes.

29908. And that they should be paid by the Government?—Yes.

29909. Do you consider that those men ought to be men of any employment?—I think it would be much better if their whole time was given up to inspecting.

29910. Yes, but should they be practical men?—Yes, certainly.

29911. That is to say, practical miners?—Yes.

29912. Miners who are engaged in mining as their employment?—Yes.

29913. How does that differ from the present rule, Rule 38?—It differs in this respect, that now they must be chosen from the men who are actually working in the mine at the time, and they must be paid by the men.

(*Mr. Ratcliffe Ellis.*) That is not so, as you will see if you look at the rule: they are not bound to be chosen by the men working in the mine, but they must be practical miners.

(*Chairman.*) They must be practical miners at the moment.

29914. (*Sir Lindsay Wood.*) Your opinion is that they should be practical miners?—Yes: they should have had practical experience at the coal-face and in the mine.

29915. Irrespective of whether that practice is now being carried on by them or not—irrespective of whether they continue to be practical miners?—Yes.

29916. You would not call a practical miner a man who has not been in a mine for 10 or 15 years?—Yes, I should say there are men who have been out of the mine for 10 years who are in every respect practical men.

29917. (*Chairman.*) Your suggestion must be that perhaps for 25 years afterwards they would continue to be practical men because they are always going down the mine and inspecting the mine, and that inspection would keep up their knowledge of mining matters?—I am thinking now more of candidates applying for a position: I do not think it would be right to exclude a man who has been out of the mine a few years, but who has previous to that been in the mine a large number of years.

29918. Then also those men you say would have nothing to do with mining after their appointment: so, in the course of time, as they went on with their work it might be 25 or 30 years since they had had practical experience in the working of mines?—25 or 30 years since they had actually got coal, yes.

29919. But still that would be no objection, from your point of view?—No, I do not think so.

29920. They had been practical miners, and they had since been in the habit of going down the mine, and you do not think that the mere fact of their not having worked as miners for perhaps 30 years would be any objection to their acting in the way you propose?—I do not see that it would interfere with them any more than it would with the chief inspector.

29921. (*Sir Lindsay Wood.*) I think you said that the firemen ought to be appointed from the hewer class: that it was essential that a man should have been working at the face in the mine for a certain period of time more than one year as a hewer before he should be competent to be a fireman?—Yes: I think a man ought to have had some practical experience at the coal-face if he is to be appointed to the position of fireman?

29922. How does he gain the experience by being a hewer?—Well, he gets practical knowledge of the presence of slips and of the dangers that arise in taking coal away,

Digitized by Google

where most of the accidents due to falls of roof and sides do occur in actually winning the coal: he gains knowledge here which he cannot gain elsewhere.

29923. Do you go so far as to say that the inspector of mines would be an incompetent man to make a fireman?—No, I am not going so far as that.

29924. That is exactly what you say?—I do not think so.

29925. Because he does not hew coal, and never did hew coal. Then you say that the districts which the firemen have to overlook are too large. What system of working is adopted in your district?—Principally longwall.

29926. Then how many men have the firemen as a rule in your district in longwall workings, that is to say at one time in a district?—The districts vary: they have a couple of hundred men, perhaps.

29927. One fireman for 200 men working all at once?—Yes. Not 200 colliers: probably 100 colliers, including their drawers, and then the haulage hands in the district as well, of course, he has to cover. Oftentimes he is responsible for the haulage in the district as well as looking after the men at the coal-faces.

29928. There would be 100 coal-face men in the district looked after by one fireman?—Yes.

29929. What distance of face would that cover?—The distance of the coal-face would amount to probably 500 or 600 yards in many cases. He cannot visit them successively along one coal-face: he has to travel in and out, and through drawing roads, and get through the cross roads.

29930. But the actual hewing-face would only be 500 or 600 yards?—Yes, 500 or 600 yards of coal-face.

29931. And that would occupy 100 men?—Yes. A collier in long-wall places is usually given say six or seven yards to work in—or five yards.

29932. And that amount of face you think would be too much for one fireman to attend to?—I certainly think it is too much coal-face for one man to examine, and too many roadways for one man to travel and be responsible for.

29933. To what extent would you reduce that?—I should say there ought to be a fireman to not more than say from 40 to 50 colliers.

29934. You stated that you considered there should be one manager for each pit. What do you mean by "pit" in that case?—Each winding shaft.

29935. Therefore there might be several different levels from which coals were drawn, and all those would have to be under one man?—Yes, coal might be sent through different shafts and different tunnels to one pit mouthing and to one shaft, and yet that might be one pit.

29936. In your district does the appointment of managers cover more than one shaft?—Yes, we have chief managers over five or six shafts.

29937. Situate at some distance from each other?—Yes, some of them; others are in close proximity.

29938. You say that you consider there ought to be manholes every 10 yards apart on the engine roads?—On engine roads where men have to travel.

29939. That is very much the same as what is provided for by the present Rule?—I think the rule is 20 yards, is it not?

29940. It is twenty yards where there is sufficient room for the men to travel alongside the engine-way?—It is 20 yards apart in engine brows, is it not, and 50 yards apart where horses draw the trams?

29941. There must be sufficient room for the men to travel alongside the railway where the manholes are 20 yards apart. If there is not room, then the present Rule specifies that they should be 10 yards apart?—I think independently of there being a sufficiently wide foot-path for men to travel, apart from coming into contact with the trams, there ought to be manholes at more frequent intervals.

29942. That is to say, more frequent intervals than 20 yards?—Yes. If a tub runs away and you are midway between two manholes 10 yards is a long way to go—when a tub is running away down an incline of one in four.

29943. (*Mr. Wm. Abraham.*) What is the practice within your experience as to having lids provided for propping?—The practice is that the supply of such timber is very scant indeed, but the desire for it is very great.

29944. When you have such a supply of that timber, is the timber supplied suitable for lid making?—No; it is oftentimes old broken timber sent down from the surface, taken out of broken boxes and bits of prop-ends that have been sawn off and chopped in two, and that kind of thing. It is merely scrap timber; it is not provided as suitable as it ought to be. A lid to be really serviceable should be from an inch to three inches thick, and should be say from six inches to nine inches long and four or five inches wide, and then it forms a good solid substantial cap. But if it is a piece of an old broken tub or a piece of a prop-end, it is not very serviceable.

29945. A lid, generally speaking, has two services to render: to make the prop fast, and to lengthen the space of top that it is under?—Yes. You may say that it has three services: it covers more roof space, it receives the weight, and prevents the prop from capping. Oftentimes it also saves the life of the prop itself, because it is first of all the lid that gets damaged and squeezed, and not the foot or head of the prop. In the third place, you can make your timber more secure and fast when setting it if you have lids to set it with.

29946. In fact, if a squeeze comes on it prevents the prop running into the top or breaking it?—Yes.

29947. So that in your opinion, as a practical collier, it is essentially necessary that suitable timber should be provided for lids?—Yes, it is very essential.

29948. Do men sometimes use sleepers, and things like that, because of the unsuitability of the timber?—Do you mean road sleepers?

29949. Yes.—Yes, I have seen them used.

29950. Is that because they consider them more suitable or because there is a greater supply of them?—For two reasons: one, because there has been no supply of lids, and the other because the prop would be of little utility unless they had something on it.

29951. And if they do use a sleeper what happens?—I know of places where men are subject to fines, or to very serious threats if they use road sleepers for that purpose.

29952. Do you remember since when the practice has existed of managers being able to fine men at all for offences against discipline? Is it a recent practice or an old practice?—It is both an old practice and a recent practice.

29953. Since when has it been legal for colliery managers to do that?—I should say the passage of the Truck Act gave them power to agree with the workman.

29954. When did the Truck Act give them that power do you remember?—My memory does not serve me as to the exact date.

29955. Is it further back than 1896?—Yes, I think you will find it is much further back than that.

29956. Your opinion is that the fear of appearing in a public Court is often a greater deterrent against breach of rules than a man being fined at the colliery?—I am quite sure of that.

29957. Do you think it is a good practice to give the colliery manager the power of deciding for what offence a man should be fined, and what degree of fine a man should incur?—I do not. I think often enough those fines are inflicted when the manager is not in the best frame of mind to do justice to the case.

29958. With regard to the practice of reporting things to the Mines Inspectors, have workmen been in the habit of doing that frequently?—One does know of occasions where it is done, but it is often done anonymously.

29959. On very few occasions?—Yes, I should say, comparatively speaking, very few.

29960. I do not want to put words into your mouth, but I will ask you this: until recently what was the opinion of working men with regard to Mines Inspectors when they saw them coming? Were they coming to inspect in the interests of working men?—Well, the general opinion is that inspection by chief inspectors is far from being adequate and far from being efficient, because a great many men have been down the pit and been at the coal-face practically all their lives, and yet they may never have seen an inspector, the number of inspectors being insufficient to allow for complete inspection.

29961. I am putting this to you simply because it appears that we should be neglecting our duties if we did not inquire what the practice has been. Until recently, was it not the opinion of working men that the

Mr. H. Twist. 20 Nov. 1907

Government inspectors favoured the employer more than the workmen?—The general opinion of the workmen has been that the inspector has not been as favourable to the workmen as say to the management, that is to say, that he has been lenient towards the management. The general opinion is that the inspector has been lenient towards the management.

29962. I put it to you as a practical man. It is your opinion that the man should be well trained in every grade of colliery work to be a thorough practical man?—I think he must have served his apprenticeship completely by working in a mine from his youth upwards, having performed as nearly as possible every grade of employment in the mine.

29963. And you want us to understand distinctly that there is a danger against which a man must work in the face before he can guard against it?—I am quite sure of that.

29964. And it may be that no practical work whatever in the roads can give him that knowledge?—I think there is something to be learnt from the actual hewing of coal that cannot be learnt from books.

29965. Let us try and explain it together. You speak about slips?—Yes.

29966. Slips in the coal sometimes run up into the soft roof?—Yes.

29967. It is impossible to see such a slip in the top until a piece of coal is broken?—Yes.

29968. Then that being so, a man could not gain that experience in any other part of the work?—There is a large amount of knowledge that can only be obtained by actually hewing the coal itself.

29969. So that it is there at that spot that a man requires practical experience where to put and how to put his props in order to temporarily support the roof?—Yes.

29970. And for the want of that propping even a practical man, if he did not put it up, often receives an injury?—There is danger of injury being done.

29971. Are there not a great number of accidents happening in the face from, not exactly falls of roof, but the clod above the coal falling down with the coal?—Yes. The majority of accidents from roof and sides are at the actual coal-face.

29972. So that at that place the man can and should gain an experience which it is impossible for him to obtain anywhere else?—That is my opinion.

29973. Hence it is essential for a man who has to direct another man where and how to put the prop, to have that experience?—Yes, it is essential. I do not see how he can intelligently direct him unless he has had the experience.

29974. That is what I thought you had in your mind. With regard to travelling roads, I think you admitted that it would be very expensive indeed to make the necessary roads in the old mines?—It would.

29975. But you think that a good broad pathway should be maintained so that men should safely travel in and out by it when machinery is at work?—I think that is a substitute to a travelling road which ought to be insisted upon.

29976. In laid-out mines and mines which are already opened, do you think the return airways could be driven in such a manner, and maintained in such order, that they could be made good travelling roads?—I am quite sure they could if attention was paid to them.

29977. And if that attention were paid to them, and they were made of sufficient size and kept of sufficient size, that would be a means of improving the ventilation as well?—Certainly.

29978. So that you would kill two birds with one stone?—Yes. You would improve the ventilation as well as provide a safe travelling road.

29979. So that at least in future that can be provided without any extra cost?—Yes. I do not see that it would be much additional cost, in opening out a new colliery, to provide a proper travelling road and to maintain it.

29980. (*Mr. Ratcliffe Ellis.*) With regard to the question of inspection, you said that there should be an inspector for every 10,000 persons employed?—Yes.

29981. How many inspectors would that mean?—It would mean 82 to 84.

29982. Yes, there are about 800,000 people engaged and 80 to 90 inspectors would have to be employed?—Yes.

29983. You propose to do that by not necessarily increasing the number of inspectors at present engaged in the district, but by increasing the number of the districts?—Well, perhaps, by both.

29984. Then you propose three grades, I understand: the chief inspector, an assistant inspector and a sub-inspector?—Yes.

29985. All those are to be Government inspectors?—That is so.

29986. Inspectors appointed by the Government?—Paid by the Government; with regard to the sub-inspectors, appointed by the men.

(*Chairman.*) I thought there was a fourth class.

29987. (*Mr. Ratcliffe Ellis.*) Yes; then I thought again there was to be another class of inspectors appointed by the men, according to your suggestion. As I understand, the sub-inspectors, the third grade of inspectors, would be appointed by the men but paid by the Government? There seems to be some doubt about this point; do you say that there are to be three classes who are all to be appointed and paid by the Government, or that the sub-inspectors should be appointed by the men?—We think that the sub-inspectors should be appointed by the men.

29988. What would be the qualification of such a sub-inspector?—That he should give proof of his competency by possessing, say, a certificate.

29989. To whom should he prove his competency?—I suppose there would be boards of examiners.

29990. Appointed by whom?—Appointed by the State.

29991. But what has the State to do with it? These sub-inspectors are to be appointed by the men?—But I am speaking of them now obtaining their certificate; that a board of examiners should examine these men as they now examine men for first-class or second-class certificates, but that the men should have the opportunity of sitting to possess a certificate, the examination for which would not be so severe, but where practical knowledge would be considered a great qualification.

29992. I have no doubt you have carefully thought this over. Would you require that they should have a first-class certificate to begin with?—No, I should not.

29993. A second-class certificate?—Yes; I should say that a man ought to possess the qualifications sufficient to enable him to secure a second-class certificate.

29994. Then is he to pass an examination beyond that?—No, I should think that would be sufficient, with practical experience, to enable him to perform the duties of a sub-inspector.

29995. You know that the men who get the second-class certificates are not men quite of the "first water"?—Many of them or some of them may be good men who do not go in for the first-class.

29996. But the men who get the second-class certificates are not men who can get first-class certificates, I should say?—Well, all men do not try for the first-class certificates.

29997. They are in the nature of under-lookers?—That is so.

29998. Then it must be from that class that the examiners would have to appoint the sub-inspectors?—There are many colliers now possessing second-class certificates.

29999. I only want to know what your scheme is; it would be from that class that you would appoint these sub-inspectors?—Yes—men possessing that theoretical knowledge.

30000. No—men possessing those certificates?—Well, yes, men possessing those certificates.

30001. Would they be under any restraint as to the use they would make of the information which they got in inspecting the pits?—Under any restraint?

30002. Yes; you see a mine inspector now is under certain restrictions; would these sub-inspectors be at liberty to make what use they thought fit of any information they obtained in the course of their inspection?—The information would be used, I should take it, with a view to securing safety.

30003. But what I want to know is, would they be at liberty to make what use they might think fit of any information for any purpose; would they be responsible to anybody, and if so, to whom?—They would be responsible, in the first place, to the chief inspector.

Digitized by Google

30004. What has he got to do with it? These sub-inspectors are to be appointed, as I understand, by the Miners' Federation?—Yes; there is to be popular election. We believe in popular election.

30005. By ballot?—By the men of the colliery.

30006. Then what men are to appoint them?—The colliers.

30007. Of any particular pit—or in what way?—Working in the area over which the man has to travel.

30008. As I say, I have no doubt you have carefully thought this over; I want to know what your scheme is?—I should say there ought to be one sub-inspector to every 2,000 work-people, so that he could periodically inspect the working places.

30009. Now we have got to that; then he must be a man who has got a second-class certificate?—Yes.

30010. That is the only qualification. Then how is he going to be appointed?—He is going to be appointed by the votes of the men.

30011. What men?—The colliers, the people working in the mine.

30012. But what colliers? Supposing you say you want a man or you want two or three men for Lancashire, would it be the Lancashire colliers who would vote for him?—Yes.

30013. I want to know what your scheme is for appointing these people?—We should appoint them by the votes of the men.

30014. And they would be responsible only to the men who appointed them?—And their reports would be subject to the criticism of the chief inspector.

30015. Yes, but in regard to their conduct, they could not be removed by anybody except the persons who appointed them?—No.

30016. They would not be responsible to anyone except the persons appointing them?—They would be responsible to the persons appointing them.

30017. That is your scheme. Now do you say that that is a scheme which has the sanction of the Lancashire Federation which you come here to represent?—Yes, so far as I have been able to ascertain.

30018. What steps have you taken to ascertain it?—Only conferring with my colleagues, and from resolutions which have been carried at a conference.

30019. Then in your opinion you have expressed the view of the Lancashire Miners' Federation on this subject?—Yes.

30020. Now as to the inspection under Rule 38; the alteration which you wish to make is that the inspection may be made under that rule by any persons who have been practical miners?—Yes.

30021. The persons to appoint the inspector would, I suppose, be the people working in a particular colliery where the inspection had to take place?—Yes, or in the particular collieries which they were to examine.

30022. The inspection is to be made in the particular colliery?—Yes, or collieries.

30023. No, the inspection is to be made under Rule 38 in this way: "The persons employed in a mine may from time to time appoint two of their number"?—Yes.

30024. Are the persons employed in the mine to appoint the person who is to inspect?—I think the men working in the area over which these men have to travel, whether in one mine or more———

30025. What is it to do with other people? It is the men in the particular mine who have the right to appoint, and you want to extend that too, do you?—Yes.

30026. Then you say that the miners in Lancashire should appoint these people?—No; the miners at Bamfurlong should appoint all the men to examine the Bamfurlong collieries.

30027. That is done at the colliery now?—Yes, that is now done.

30028. How long in your view does it take a man to work at the face in order to become a practical miner?—He ought to have five or six years' experience as a collier.

30029. Do you mean five or six years' experience in working and getting coal?—Getting coal.

30030. Then if he has had five or six years' experience and he is 25 years keeping a shop, in your view he would be still competent for one of these posts?—If he is how long in a shop?

30031. 25 years, we will say?—He is not so competent as a man who has worked at the coal face during that time.

30032. Is this not your scheme, that a man having once qualified himself in the pit by five years at the face, at any time during the rest of his life—it does not matter what he has been doing in the interval—is competent to fill one of these posts?—He is a practical man.

30033. And he is a man whom you say would be suitable for the purpose of making an inspection?—Yes, a man who has had that number of years' experience at the coal face is a man who has acquired the necessary knowledge to fit him for that purpose.

30034. And 25 years afterwards he is still qualified if he has been keeping a shop in the interval?—I think there would be very little likelihood of a man who had been keeping a grocer's shop being appointed.

30035. But he is still qualified in your view?—Yes; if he has had five or six years' experience at the working face I say he is a practical man.

30036. With regard to inspection under General Rule 4, do you think there are 25 per cent. of the firemen in the Lancashire collieries who are incompetent men for their duties?—I think there are 25 per cent. of the firemen who have not actually got coal.

30037. But I understand your view is that no man who has not actually got coal is competent to perform the duties of a fireman?—Is not as competent as a man who has got coal.

30038. But I understand you to say that he is not competent to perform the duties of a fireman?—I am not going so far as to say that he is absolutely incompetent; he is not as competent.

30039. But although he has not got coal, may he be competent to perform the duties of a fireman?—In a measure, but not as competent as a man who has.

30040. But is he sufficiently competent?—In some instances he may be.

30041. I want you to consider this: think what a serious thing it is that you should condemn in this off-hand way 25 per cent. of these men who are officials at collieries in Lancashire.—I do not know that I have condemned them. What do we say about them?

30042. It was 50 per cent. you took to begin with, but then you came down to 25 per cent.?—I say they are not at present as efficient.

30043. Are they inefficient—because that is the point?—In a measure; in degree.

30044. Will you go so far as to say this, that in your judgment, speaking with responsibility, there are 25 per cent. of the men who occupy the position of officials in mines in Lancashire who are inefficient?—No, I will not say that; but I will say that they have not had experience at the coal face as miners, and therefore they cannot be as efficient as men who have had that experience.

30045. Then does it merely come to this, that in your view no man can be efficient unless he has had four or five years' work at the face?—He cannot be so efficient as if he has had that experience.

30046. But are these men sufficiently efficient to provide for safety?

(*Chairman*). What I understood the witness to say in answer to that was that they were not originally perhaps efficient, but that if they performed their duties faithfully they learnt by experience, in performing their duties, how to perform them.

(*Mr. Ratcliffe Ellis.*) My view is that this is a most unjust aspersion upon the qualities of the firemen in the county of Lancashire, and I think it will be regarded very seriously by the men engaged there.

(*Chairman.*) I understood the witness to mean that 25 per cent. were persons who were made firemen before they were competent, but that in course of time they may have become competent; I did not understand him to say that in his opinion 25 per cent. of the firemen engaged in Lancashire are now incompetent.

(*Witness.*) I do not say that.

(*Mr. Ratcliffe Ellis.*) I say it is an equally objectionable statement to make that the persons who are responsible for the management of the mines in Lancashire did at any time appoint men to the number of 25 per cent. who were incompetent men as firemen.

(*Witness.*) In my view incompetent.

Digitized by Google

Mr. H. Twist.

20 Nov. 1907

30047. Is that the view also of the Lancashire and Cheshire Miners' Federation?—So far as I am able to express it.

30048. Do you seriously think you are justified in saying that the managers who were responsible for the safety of the miners and for the management of the mines in Lancashire, have appointed as efficient to discharge their duties 25 per cent. of incompetent men, and men who have had to learn their duties since they were appointed?—To learn some portion of their duties; I am not going to be drawn into saying that I believe these men are now or were at any time absolutely incompetent; that is not what I mean. What I do mean is this, and what we feel is this: that at the time of appointment a man who has not had actual experience of getting coal is not as competent as a man who has.

30049. In your judgment has that resulted in more accidents than there would have been if they had selected colliers?—I cannot speak as to that.

30050. You do not think so, I daresay?—I have nothing to go upon.

30051. Now will you tell me your experience. How long did you work at the face?—About 11 years.

30052. What did you do before that?—I did everything, from door tenting to getting coal.

30053. From door tenting you worked up, and then you worked 11 years at the face?—Yes.

30054. Do you find there are many men working at the face who want to become officials of the mine?—There are many young men studying regularly now.

30055. But will you answer my question? You understand it perfectly and I shall come back to it, so that you may as well answer it at once. Do you think there are many men working at the face who are anxious to become officials of the mine?—Yes, there are a large number who would gladly accept a position as an official.

30056. Is it a better place, or is it easier, or what is the inducement?—It is an opening, I suppose, for what they consider to be a higher position in the mine than that of coal getting.

30057. Is a man who has worked five or six years at the face in getting coal, from your experience the sort of man who wants to be an official of the mine?—In the majority of cases he may not be, but there is a percentage who would willingly occupy the position.

30058. Should I be justified in saying that in the majority of cases men who have worked five or six years at the face do not wish to be officials?—Yes, I think you would be right in saying that the majority would not.

30059. You have given your view as to the number of men who should be under the charge of one fireman. Would the size of the district make any difference—the distance he had to travel?—Yes, some difference.

30060. Could there be any rule made defining the area which one man should superintend?—I agree that it would be difficult to define the area.

30061. It would have to be left to the management in some way to decide that?—Because the length of roadway to be travelled may be great, and the area of coal face small; the length of coal face may be large, and the roadways to be travelled not so great.

30062. That is so; so that it is very difficult to fix an area?—It is very difficult to fix an area.

30063. It would have to be left more or less to the discretion of the manager that the area should not be too large?—Yes.

30064. With reference to timbering, you have made, if I may be allowed to say so, some very extraordinary statements with reference to the timbering in Lancashire—that all sorts of rubbish from broken tubs are sent down. Do you present that to the Commission as a fair statement of the condition of things in Lancashire?—I present this to the Commission as my experience, that in the whole of my 11 years' experience at the coal face—and it is conveyed to me as being the present condition of things—it was extremely difficult to get timber suitable as caps or lids, and that it is customary to send the old timber down from the surface for covering timber.

30065. I will not ask you to give me the name now, but will you give to the Secretary the name of any colliery where that state of things exists at the present time. If you give that name to the Secretary afterwards it shall be enquired into. You do not like to give the information publicly, I daresay, but will you tell the Secretary where this state of things exists which you complain about. You are aware of General Rule 22, no doubt, which provides "Where the timbering of the working places is done by the men employed therein, suitable timber shall be provided at the working place, gate-end, pass-bye, siding, or other similar place in the mine convenient to the workmen, and the distance between the sprags or holing props where they are required shall not exceed six feet or such less distance as may be ordered by the owner, agent or manager."—Yes.

30066. In Lancashire the general custom is that the timbering is done by the workmen?—That is so.

30067. So that there is an obligation in Lancashire that suitable timber shall be provided at the working-place, gate-end, and pass-bye by the management. Now in the Special Rules in force in Lancashire there are also certain provisions with reference to the timbering. I think you will find those provisions at Special Rule 47 in the Lancashire Rules: "Where the timbering of the working places is done by the workmen employed therein, every miner shall by himself or his drawer take his own timber and other materials from the far end siding or the place whence he or his drawer takes away his empty tub, except where the timber cannot be taken thence in or on the tub. He shall secure the roof and sides of his own working place, and should he be unable to do so, or to procure suitable material for these purposes, he shall cease working, leave the place, and at once report to the Underlooker or Fireman. In pillar and other working, before commencing to move pillars, the roof and face shall be made secure": and so on. Do you say that these rules, both so far as they have to be observed by the management and have to be observed by the men, are deliberately set at naught in Lancashire—that neither does the manager find satisfactory and sufficient timber, nor does the workman see that his place is secure, or, if it is not, leave his work?—I say that owing to the long drawing and the difficulty of taking timbering in, in the first place, a sufficient supply of suitable timber is not constantly provided.

30068. Then I will ask you to be good enough to give to the Secretary the names of the places where you say this state of things exists?—I say that it is pretty general.

30069. Very well; we will make no mistake about it; that is to say, that the law obliging the management to find suitable timber is disregarded in Lancashire—not carried out?—As regards some timber, particularly lids and caps.

30070. We must have this matter clear, because when these views of yours are read in Lancashire, I am sure they will cause consternation amongst the managers there, and amongst the inspectors too, I should think. I want to know whether your view is that these rules as to timbering, the rule obliging the management to find sufficient and proper timber, and the rule obliging the man to leave his work if he has not got sufficient timber to put up, are disregarded in Lancashire?—I do not say they are disregarded.

30071. Then what do you say about it?—What I do say is that as regards lids and caps there is a difficulty in getting suitable timber provided of that kind.

30072. Now will you give the names of the collieries and let us inquire into it as to what difficulty there is?—I will give you the firms.

30073. I do not want you to give the names now; you can give to the Secretary the names of the firms where this difficulty exists. Is it only in providing lids and caps, or is it generally in regard to the supply of timber?—I cannot give you cases where there is a scarcity of props and bars and that kind of thing. My evidence is largely concerning lids and caps.

30074. Then what was that story which you were telling us about hundreds of yards that timber had to be dragged, and that the place was not big enough to get it through, and that sort of thing?—It is not an uncommon thing for colliery roads to be so low that the timber cannot be taken.

30075. In what colliery is it the case that the roads are so low that the timber cannot be taken up to the face?—You cannot take it on the tub.

30076. That is from the gate-end or pass-bye?—Yes—from the shunt.

30077. Then what do they do there where they cannot get it on the tub?—The drawers drag it in.

30078. Are there many cases of that sort?—Yes, I can tell you of places where that has obtained.

Digitized by Google

30079. Are there many cases of it?—Well, I cannot speak for the whole of the county: I can only speak for the area in which I move.

30080. Take the area in which you work: are there many cases of that sort?—The complaints to me are fairly plentiful.

30081. I will ask you to give to the Secretary the names of the particular collieries where you say this state of things exists, and it shall be inquired into. You consider that the way to get a man thoroughly competent is for him to work at the face?—To be fully competent, yes.

30082. And therefore the man who works at the face knows better how to set timber than anybody else, I suppose?—Yes, I think he knows better than anybody else.

30083. Then it follows that the man who can best look after his safety is the collier at the face?—Yes: I think the man actually working at the coal face knows best how to timber his place.

30084. And therefore he is the best man to do the timbering at the face?—Yes, I believe that to be so.

30085. So that what you want is that he should be better looked after to see that he does this timbering?—Yes: I think there ought to be closer visitation and supervision.

30086. That is all—that he ought to be better looked after. He is the man who can do it best, and what you want is that there should be more firemen to look after him to see that he does his duty. That is your suggestion?—Yes, in a measure that is.

30087. What else is there: you say "in a measure"?—I think that some portions of the timbering might be done by persons provided by the employer, say as to barring the road.

30088. But I thought we had got it that the man who can do it best for his safety is the collier himself?—So far as spragging the coal face and timbering in the immediate vicinity of the coal face is concerned.

30089. Is there any danger to the collier from the immediate vicinity?—There is oftentimes danger in the drawing road approaching the coal face, and along the coal face.

30090. Then why should you put that in less competent hands?—I do not say they would be less competent hands altogether.

30091. You and I have agreed that the collier, the man who is working at the face, is the man who can best secure his own safety. Why should it be deputed to someone else?—The setting of bars along the coal face and the setting of stacks, and putting of packs, may be given out to other people.

30092. Why, if he is the man who can do it best?—He should only be responsible for the immediate coal face he is working at.

30093. Why should he not be responsible for the other?—For the simple reason that he would not earn any wages at all oftentimes if he was responsible for the whole safety.

30094. It is not a question of safety: it is a question of wages, is it?—If he has to pack his place and to timber his place, he will have no time for anything else.

30095. Does he get any wages now?—Yes.

30096. How does he manage that?—He manages it by getting the coal.

30097. And he manages to keep the place safe, does he not?—Yes, the immediate coal face: but there is always sinkage coming on after him, and if he has to turn back and to repair the broken timber and to check the sinkage, then of course he is going to have a lot of his time taken up which is now spent in getting coal.

30098. (*Chairman.*) What I understood you to suggest is that a hewer at the coal face knows best how to protect himself from falls of roof and sides at the coal face, but that there are other people who are equally competent to timber a place which is not at the face?—Yes, to follow him up.

(*Mr. Ratcliffe Ellis.*) The roads are maintained by the management now.

30099. (*Chairman.*) I understand you to say that the superior competency of the hewer in putting up the timber is confined to the putting up of the timber at the working face, and not to preventing creeps, and so on, further off?—Yes.

30100. (*Mr. Ratcliffe Ellis.*) I will ask you about that. Who are these persons to whom the work is to be transferred from the collier?—Timbermen employed by the company.

30101. Men who have worked at the face?—Yes, so far as possible.

30102. You do not mean to say that all the timbermen have worked at the face?—The majority of the timbermen have worked at the coal face.

30103. There are scores of expert timberers working on the roads who have never worked at the coal face at all?—And there are a large number who have, but who have become, say, over 50 years of age, and have gone to what we call day waging.

30104. But there are a great many men working on the roads who have not worked at the face at all?—Yes.

30105. And who are expert timberers?—Yes.

30106. I will leave the question of the timbering for the moment. With reference to the lamps, do you again think that the complaint which you made is general in Lancashire, that either from defective oil or by reason of not being properly attended to, the men cannot make light out of the lamps?—I cannot speak of it as being general: I can only say that at some of the collieries in the area in which I move, complaints have been made, and I have repeatedly been on deputations to try and get it made better.

30107. Perhaps you will at the same time give the Secretary the names of those collieries where complaints have been made as to the lamps?—Yes.

30108. With regard to shaft accidents, you have mentioned the Fogg's Colliery accident, where unfortunately a number of men were killed?—Yes.

30109. Do you know that there are safety catches there?—Yes.

30110. Why did they not stop that cage going down the pit?—I think that has not been completely brought out by the inquiry. I cannot say.

30111. I am not suggesting this because I know anything particular about it: perhaps I do not know as much as you do: but might it not be because these safety catches came into action when they were not required?—I can hardly say that.

30112. You know that is a danger?—There is a danger of the catches gripping if the chains become slack.

30113. There is a danger of their coming into action when they are not required?—There is a danger.

30114. However, in that case where that accident occurred, there were safety catches?—Yes.

30115. I think you have already said with reference to the speed, that it is the invariable custom in the County that men are not wound at the same speed that coal is wound at?—That is so: speed is reduced generally.

30116. Have you anything to suggest now so far as Lancashire is concerned—we will confine it to the County of Lancashire—with reference to the winding?—No: I think the winding is well done in Lancashire.

30117. With reference to the haulage roads, you have suggested that men should travel by the return air-way?—Yes, so far as possible.

30118. Is that a desirable thing? That is where all the foul air and the gas, if there is any, is to be found, is it not?—Yes, but while travelling in and out I think it is preferable to travelling on a main haulage road.

30119. You think you would advise in the interests of safety that they should travel on the return air-way?—The men have to live in that atmosphere during much of the whole day.

30120. I am only putting it to you that you think that would be so?—Yes, I think it would be much safer to travel on the return air-way.

30121. (*Mr. Smillie.*) If it was at the same time the haulage road?—Yes.

30122. (*Mr. Ratcliffe Ellis.*) You must remember they are not living in it all the day: there is fresh air coming to them in the face. They are not living in the return air-way all the day, or in any air like it?—No, I do not say they are living in it exactly.

30123. However, I take it from you that in your view that would be desirable. With regard to runaway tubs we have rules in Lancashire: there is Rule 18 of the New Rules that were established, which provides: "Where

Digitized by Google

Mr. H. Twist.

20 Nov. 1907

the manager directs the 'trailer' or 'devil' must be attached when the full load is drawn against the incline by means of a single rope, or single chain, other than a lashing chain" ?—Yes.

30124. Do you want anything better than that except perhaps you might have it instead of "Where the manager directs" that there should always be this "trailer" or "devil." Would that meet your view ?—Yes: I think where tubs are drawn up in that way there ought to be either a "devil" or "trailer" on in any case.

30125. And that would be sufficient ?—I think in motion roads there ought to be axle catches as well on the full road side.

30126. Well, whatever might be desirable, everyone wishes to stop these runaway tubs if they can stop them, and whatever contrivance you suggest as being advisable that ought to be used ?—Yes, that is the idea which is to be conveyed.

30127. With regard to a Coroner's Jury, did you ever hear of a Coroner's Jury wanting to go down a pit ?—No, I have not.

30128.—And you do not think it is a great grievance to them at present ?—Not so far as they are concerned.

30129. So that you would not advise any alteration in the law so far as that is concerned ?—I think it is essential that a Coroner's Jury should see the scene of the accident in order to assist them.

30130. Would you make it obligatory that they should go down whether they liked it or not ?—No: I think they should be left to express the desire to do so, or that they should be ordered to do it say by the inspector if he thought it was necessary, or by the Coroner himself.

30131. Now we will go to the Special Rules. Is it your view that before a Special Rule is made, or is proposed, both the employers and the workmen should meet and discuss it ?—Yes, I think that is advisable.

30132. If they do not agree, is it not to be proposed ?—Well, I do not know, if they do not agree.

30133. That is what I want to put to you. What is to be done then ?—I should say the inspector for the district would be the best person to decide, if they do not agree.

30134. At the present time the Home Office have a right to propose a rule ?—Yes.

30135. Would you say that they should not have a right to propose a rule until it had been discussed by the workmen, and the workmen had agreed to it ?—I think the workmen ought to have an opportunity of expressing their view about it.

30136. I want to know what is the scheme, and I should like to have your answer to that question. The Home Office now have a right to propose a rule. Would you say that they should not have a right to propose a rule until they have invited the men to discuss it, and there had been an agreement that it should be proposed ?—Well, it might have to lead up to the Home Office having to insist upon a rule being put in force, although the body of the men to whom it applied did not see quite the same way with regard to it.

30137. Will you answer my question ? You say the employer should not propose a rule unless he invites the men to discuss it with him in the first instance. Do you say the same with regard to the Home Office—that they should not propose a rule until they have invited the men to discuss it, and there had been an agreement that that rule should be proposed ?—No. There must be finality somewhere.

30138. Can you give us an idea of what should be done if a meeting is called and the employer says, "I wish to propose a rule." Supposing we wanted to propose a rule, say, in Lancashire, and I said to you, "Now, Mr. Twist, I want you to discuss this with me," and then we could not agree, is not the rule to be proposed ?—I have not gone into that point.

30139. Do you not think it is important before you make these suggestions, that you should go into it and think the matter out ?—It requires consideration.

30140. (*Chairman.*) There is one question about Special Rules which I should like to ask. Do you suggest on the part of your Federation that the men should be allowed to propose Special Rules to the Home Office ? Supposing the men have come to the conclusion that a Special Rule is desirable, would you allow them to send in to the Home Office an application that that Special Rule should be proposed ?—Yes, I think they ought to have an opportunity, as well as the employer, to propose Special Rules, as well as to take part in *discussing* those proposed by the employer.

30141. (*Mr. Enoch Edwards.*) I think you stated in answer to his Lordship that you were appointed by the Lancashire Miners' Federation ?—Yes.

30142. And that the expression of opinion you give us here with regard to the Government inspectors would apply to the Miners' Federation generally ?—The Miners' Federation, as a whole, of Great Britain.

30143. As to the inadequacy of the number of inspectors ?—Yes.

30144. You perhaps have seen the Bill that was drafted some time ago by the Federation—the Amended Mines Bill for Inspectors ?—Yes.

30145. And the conferences have repeatedly suggested that there should be one inspector to 10,000 work-people ?—That is the number the Bill prescribes.

30146. Have you given much consideration to the size of the districts that they have now as inspectors ?—Only to the Liverpool and North Wales.

30147. To Lancashire ?—Yes.

30148. It necessitates a considerable amount of travelling for the inspector to get round with his work ?—Yes, it is a long distance, of course.

30149. If there were more districts created and more inspectors, you would get more service and less travelling ?—Yes.

30150. I mean as to the assistant inspectors, or the special inspectors to which you direct attention, what is termed rather "working men inspectors" ?—Yes.

30151. Mr. Ellis asked you with reference to a certificate of competency, and you suggested a second-class certificate ?—Yes, for some inspectors.

30152. Still they would be inspectors ?—Yes.

30153. They need not possess the same technical knowledge as the chief inspectors ?—No.

30154. The trend of your evidence is that you want inspectors more in the mines who practically understand the mine ?—Yes.

30155. And the dangers of a mine ?—The men who have a technical knowledge sufficient to secure a second-class certificate, and who, in addition, have had a large experience to make them good men for that purpose.

30156. That is what you mean ?—Yes.

30157. That is what you mean when you suggest one of that class for 10,000 men. That is the type of man you mean ?—Yes.

30158. I am trying to see whether you put the same interpretation upon it. This type of new inspector that we are desirous of creating must be a man of practical knowledge, but not necessarily a high technical training as a first-class inspector ?—That is what we believe.

30159. That his time should be spent in a pit ?—Yes.

30160. Largely now his time is taken up with clerical work and travelling ?—Yes, attending scenes of accidents and coroners' inquests.

30161. (*Chairman.*) Would you have another class, in addition to the class of sub-inspectors and in addition to the working men inspectors, attached to particular mines to go round under Rule 38 ?—Yes. I think it should be left optional to the men in addition to the sub-inspectors to appoint a man to go round.

30162. (*Mr. Enoch Edwards.*) We have the chief inspector and assistants. We are rather directing attention to another class of men who would be below the assistants ?—Yes.

30163. The assistant inspectors now appointed are men who hold first-class certificates, and many of them possess high qualifications ?—I should say they are practically as qualified as the chief inspectors.

30164. You suggest that these men should be drawn largely from the practical type of men who understand mining through and through ?—Yes, that is the idea of the Federation.

30165. When you express an opinion about winding and the speed of travelling, it has been made clear since that all pits wind men at a less pace than they do coals ?—There is a reduced speed.

30166. Did I understand you to say in Lancashire that they would have coal in the cage in the lower decks while drawing men from the opposite cage ?—At a few collieries. That is not general.

Digitized by Google

30167. Are you aware an opinion as to the wisdom of it was expressed by a Government inspector many years ago?—Yes, I believe as far as I recollect the opinion has been expressed that it helps to steady the cage, and there has been the other opinion expressed that it ought not to be so.

30168. Generally colliery companies do not do it?—Generally colliery managers see that the cage is free from tubs.

30169. Mr. Cunynghame was not here when I tried to get at what you meant by the scotches in wagons. Do we understand there that that would be on a level where the gradients are up-brow?—Up-brow.

30170. Men are simply called on to push the empty tub up, but they must locker it down with a locker?—Yes, that is so.

30171. What is the objection to putting in a jig?—I see no objection other than that of having to keep a wider road open if they do put a jig up.

30172. If you were working mines such as I have had experience of in North Stafford, you would have to put a jig up because the gradients are so sharp. They do not do it while men will locker the wagons and take them down?—Wherever men can hold a tub down with two lockers in they are generally expected to do it, and it is only in the rarer instances that a wheel or a balance or a jig is provided.

30173. It seems rather a clumsy method of getting coal, to expect a man to push up a heavy gradient much of a distance where they could put a jig in. Is that the practice generally?—Yes, and it involves a tremendous amount of labour.

30174. It must, and the objection to it is very strong. Apart from the risk, is it pushing empty wagons?—Nearly every price-list gives extra payment because the brows are counted double distance for long drawing. It is so general because full tubs are pushed up and come down lockered.

30175. Have you had many accidents in these cases?—There are a few happening each year. I have known accidents.

30176. The man starts away and does not get his lockers in?—Yes, sometimes he may get a tub with the wheel turning loose on the axle, and the locker does not act, and then it goes away.

30177. You stated that the feeling of your men in Lancashire, or your Federation, rather, is against fines in the colliery office?—It is distinctly against fines.

30178. And that they would prefer that men should be prosecuted in court?—That is the opinion of the Federation.

30179. I suppose many of those fines are fines inflicted under the Coal Mines Regulation Act for matters not affecting the safety of men, but for such matters as filling dirty coal, and things of that kind?—The majority of the fines are for filling dirty coal.

30180. They hardly touch the business of this Commission, which is inquiring into accidents in mines?—Very few, as far as I know, of the fines are inflicted for the workmen's neglect to timber, sprag or prop. Usually if that is done the management give the man no option: they take him before the magistrate.

30181. To what extent are the men parties to these fines in the colliery office? Have you any idea of the general feeling of the men? Do they prefer to pay a fine quietly in the office to being prosecuted?—I should say that the majority of the men would be against fines. That is declared through our lodges and by the resolution of our Federation. There may be a few instances, and no doubt there are, where men prefer to be fined rather than to be exposed.

30182. If it is a question of discipline in the pit and the interests of safety, your men agree it is important that they should be prosecuted where they can defend their case, as stated, rather than be fined in the office?—Yes. The opinion of the Federation is this: if a man is guilty, then it is much better in the interest of safety to prosecute him, besides its having a deterrent effect, and being a warning to others.

30183. The fines you suggest are not fines that apply to the safety of the mine, but simply a matter of carrying out contracts, largely?—Yes, largely.

30184. There is a matter Mr. Ellis was putting to you and I should like it to be clear on the notes. With reference to the clause relating to workmen's inspection, he suggested if a man worked five years in a mine and was out of it for 20 years, that he would be a practical man. Is that a practical man?—I do not think he can be described as not being a practical man, yet he is not so efficient and up-to-date as a man who has so recently come from the coal-face.

30185. You would not think yourself, in the interests of safety in mines, that it would be a proper thing to take a workman out of a pit for 25 years, who has never seen the change that has taken place, and say that he was a practical miner?—I should advise against such a man's election if he were a candidate.

30186. You would rather suggest that any law should not leave it open for a man to be appointed who for 25 years had not seen the inside of a pit?—I think in the interests of all concerned it would be wiser to stipulate a time limit as to his absence from the mine.

30187. When you suggest that the firemen in Lancashire are not fully competent, you mean by that that they have not had this working face experience?—That is what I mean.

30188. You do not mean more than that?—I do not mean more than that.

30189. You and your colleagues believe that a man should have some knowledge of a working face before he is appointed a fireman?—As the fireman's work is largely to control and direct the collier, we believe it is essential that he should have coal-face experience.

30190. And to be in a position to advise he must have had experience of what is meant by the ever-changing scene of a face?—Yes.

30191. With all its technique and difficulties?—We fail to see how he can intelligently direct a man of experience at the face unless he has had that experience himself.

30192. The question, of course, of area Mr. Ellis asked about to get your view as to it. In taking the number of men over which a fireman is appointed, due regard should be had to the area he has to travel?—Yes.

30193. A fireman might effectively have supervision over 100 men in some circumstances, and more effectively than he could supervise 50 men under other circumstances?—That is so.

30194. That, as a matter of management, would have to be defined. As yet we have no practical suggestion. You were asked what would be your suggestion. Would it not be one of the duties of these sub-inspectors to direct the management that there are not sufficient firemen in a particular area, and that more should be appointed?—I think a complaint from the inspector to the management that a particular district was not being properly supervised on account of the area being too large or the number of firemen being too small, ought to receive attention.

30195. The area may be too large, and the work may be too highly technical. It would be easier in some pits for the men to get about themselves. Where you have sharp grades you want more inspectors?—Yes.

30196. You could not state the number of persons who should be employed in a particular area. Some authority ought to decide whether it should be left absolutely to the management to say whether sufficient were employed or not?—I think the inspector should have the power to exercise, say some advisory power——

30197. At any rate to be able to suggest that in his judgment there were not sufficient firemen?—Yes, that there were not sufficient firemen.

30198. With reference to new Special Rules. Mr. Ellis put it to you as to whether coal-owners should be in a position to propose a new rule and send it on to the Home Office without consulting the men, and I understand you object to that?—Yes; we think that the men ought to be consulted before it is sent on.

30199. He said ought not the Home Office to have the power themselves to suggest rules, and I understood you object to that?—No, I do not object to the Home Office suggesting rules, providing they have the consideration of the men at the same time as the employers have the opportunity of considering them. If they are suggestions I do not mind, but if they are mandatory I am opposed to them.

30200. In your judgment neither employers nor the Home Office, either separately or both of them, should proceed with these rules, without first consulting the men?—That is what we believe. We think they ought to be consulted, no matter from what source the suggested rule originates.

Digitized by Google

Mr. H. Twist.
20 Nov. 1907

30201. The Home Office often has a suggestion of the Government inspector, and usually of course the company. You say if they are agreed, first of all before anything is done at all, the workmen should be consulted about it?—Yes, and any objections the workmen see fit to make, or any suggested alteration, they should have an opportunity of making before the thing is posted up and left for them to object to as at present.

30202. (*Mr. F. L. Davis.*) In answer to Mr. Edwards just now you said that there ought to be a time limit, some time fixed after which you would not appoint a man as a working mine inspector under Rule 38. What would you suggest as the time?—I think a man may have been out 10 years and yet be an up-to-date man, be a sound practical man and have in no way lost any knowledge that he had, or failed to keep pace with mining developments.

30203. Would you be in favour of suggesting 10 years?—Yes, I should.

30204. Up to 10 years he would be eligible as a practical man?—Yes.

30205. But not after 10 years?—No; I do not think it would be wise to go too far, having regard to getting efficient and up-to-date men.

30206. You told us in answer to somebody earlier in the day how long you had been working at the face. How long is it since you gave up working underground?—It is between eight and nine years.

30207. Mr. Ellis had a number of questions to ask you about the firemen, but I have only one or two. You say in your proof that the men in some of the most important respects are incompetent, that is firemen. Has that come under your own experience?—Yes, I know men who have been appointed to this position that both from the standpoint of knowledge of gases, ventilation, timbering and coal-getting, have not the necessary experience, according to my view, to make them competent men to discharge duties of that kind.

30208. Did that happen when you were working in the mine, or since?—When I was working, and since.

30209. You must have been very uncomfortable, I should think, when you came to the conclusion that these men were not competent, especially when you were working in the mine?—I can assure you often experienced colliers do not feel that some of the firemen are competent to advise them.

30210. If that were the case, and these men were not competent, you and all the other men in the pit must have been in a very unsafe position, or feeling uncomfortable, and possibly in danger?—You rather trust to your own desire to keep yourself safe in that case, and you satisfy your own conscience and mind you are safe apart from any advice the fireman may give.

30211. I do not know whether you are limiting his incompetency to looking after timbering, but if you have an incompetent fireman you may be allowed to go to work when it is not safe, so that you cannot help yourselves then.—I think a fireman ought to pass a lower grade examination, giving evidence of some knowledge of the properties of gases and what they are calculated to do, and some knowledge of ventilation as well as timbering.

30212. Did you at any time draw the attention of the inspectors to what you believed to be the fact, that these firemen were incompetent men, and that you and your fellows were in danger?—I have not personally called the attention of the inspector to the fact of any incompetent person having been engaged.

30213. If, as you suggest, it is such a serious thing, do you not think that you should have done so, not only for your own safety but for the safety of others?—I cannot say that the firemen complained of did actually move in the district which I worked in, but they worked in the same mine or in some pit of which I had knowledge.

30214. I put it to you, if it were as serious as you make out in your proof it was, it would have been your duty to draw the attention of the inspector to it?—Many things might be reported which men do not report because there is a fear which hangs about the men that if it should be known they have reported anything to the inspector it would go badly with them.

30215. From what we have heard from the inspectors I do not think we can pay any attention to that at all?—Not from the inspector, from the particular fireman objected to, or the employer under whom he is engaged.

30216. I say from the evidence we have had from the inspectors themselves here that does not apply at all, because they say they get no end of anonymous complaints or information?—That may be so, anonymously, but still at the same time there is the fear that the anonymous letters will develop ultimately into having to face the thing.

30217. I put it to you, if I were in your place and I felt, as you say, that these men were incompetent men, and that you and your fellows were in danger, I should have sent an anonymous communication to the inspector. As you did not do so I should suggest that the position was not as serious as you try to make it out to be?—I can only say that the fact that anonymous letters go, to me is evidence that the men fear to append their own names to them.

30218. I am not on that point as to whether the men fear it or not. They need not append their names. The inspectors tell us they get anonymous information from the men?—Yes.

30219. You tell us there are very many incompetent men, and that you and your fellows have been in danger, and yet you have never informed an inspector of the conditions under which you were working?—Personally, I have not.

30220. Very well, I will leave it at that. You made use of the expression that you would be in favour of one manager one pit?—Yes.

30221. You consider that there may be two or three or more pits close together employing a very few men as compared with many pits, say a couple of hundred men each. Would you then think it necessary that each of those pits should have one manager appointed?—I think you will notice in the *précis* I sent in we state we are further of opinion that certificated managers should be limited to a certain number of underground work-people. Having in view the fact there may be very small collieries with very few men in, as an individual pit, it may be under such circumstances permissible for a man to take more than one shaft, but in large collieries employing 500 or more people underground, we certainly believe that there ought to be put over that one pit one manager to have proper supervision.

30222. My complaint rather is you have laid down very wide regulations in certain directions: you have said this. You said you would have one manager one pit. We now see that it might be advisable to have one manager over two or three pits?—If there is only one pit and say 100 or 50 men employed, then I think the law requires even there that there shall be a certificated manager, if there be only one pit.

30223. I agree, but the manager may be appointed manager over two or three pits together with a small number of men?—Yes. To us the danger is at present the tendency of putting one manager over more and more pits. That seems to be the tendency at present.

30224. Against that you said one manager one pit. Now you rather limit it to the number of men than to the pit?—Yes, I should prefer to limit it to the number of people underground than to one individual shaft.

30225. I think I understand that now. With regard to your proposal that there should be separate travelling roads, what experience have you had outside Lancashire and Cheshire. Where have you worked?—I have had no experience outside Lancashire and Cheshire.

30226. You say that, not knowing how it would affect say, Wales or any other district?—I cannot say as to how it would affect any other district.

30227. Have you had any experience in mines that use naked lights?—No, I have had no experience of them.

30228. Without having had any experience you still say that safety lamps should be used in every colliery?—Yes, that is the belief and feeling of our Federation in the matter, that there ought to be safety lamps used.

30229. Do you think you have mentioned everything you think might be an improvement in the new Coal Mines Act?—Perhaps not, only that the statement sent on to us was dealing with the matters here referred to.

30230. I mean from your own experience and from your own knowledge of your own district?—I do not know anything else that at the moment I can call attention to.

30231. I think you have mentioned quite enough. I did not suggest that there were lots of things left out.

Digitized by Google

30232. (*Mr. Smillie.*) You are aware that Section 21 deals with the position of the certificated manager: "In every mine required by this Act to be under the control of a certificated manager, daily personal supervision shall be exercised either by the manager or by an under-manager nominated in writing by the owner, or agent of the mine." Could you let us know what daily personal supervision really means in Lancashire? Does it mean that the manager must be every day on the ground and that the workmen underground must be daily under his personal supervision?—Whatever it may mean, that is not the fact.

30233. I am not dealing with what the law means. How is that part carried out in Lancashire? Is each pit of a mine under the daily personal supervision of a certificated manager who is responsible under this section?—No, as far as my experience goes it is not.

30234. Your point really is that where the mine is under the control of the manager he should give daily personal supervision to that mine, and that that is impossible if he has six or seven mines under his control?—I think it is essential that a manager should be able to get over the area of his collieries and workings over which he has charge at least once a week, and that cannot be done with one manager to five or six collieries.

30235. Is this rule sometimes interpreted to mean that if the manager is at the top of the mine once per day that is daily personal supervision?—If he is at the surface of the mine or goes down to the pit bottom and comes up again I rather think that is felt to satisfy the requirements of the law.

30236. You want something more than that?—Yes, we want direct supervision and direct touch with the workings over which he has charge.

30237. In answer to Mr. Davis you said that there should be a certificate for firemen to prove that they are competent. It would be a partial proof at least of their ability if they held a certificate for which they had to pass an examination?—I think there ought to be a lower grade certificate.

30238. A certificate of some kind?—A certificate at least to give evidence of competency as regards gases, ventilation, and timbering.

30239. The law at present lays down that the manager shall appoint a competent person?—Yes.

30240. There is nothing to guide him as to whether or not a person is competent but his own knowledge of the person, or his statement from him that he has held a position of that kind before?—Yes. As it stands the manager exercises his discretion and judgment in the appointment of the man.

30241. You suggest not always, I think, very wisely?—In some instances not wisely to my mind, and according to my view.

30242. You are anxious to limit the area which you would have under the control of a fireman. You are not sure whether it should be area or number of men, but whether it is the one or the other, they should have sufficient time to have personal control of the workmen under their charge, and visit them more than once per day in addition to the morning?—Yes. I think the fireman ought to be able to visit every workman and spend sufficient time with him to give him any advice necessary, and properly examine his working place at least twice per shift.

30243. Do the regular firemen in Lancashire who have charge of the districts do anything else than make their morning examination and their second examination, and attend to the ventilation? Have they other duties sometimes outside of that, such as looking after the material being sent out to the bottom, or is their time wholly devoted to looking after ventilation, timbering and other things?—I cannot speak positively, but in some instances firemen may be called upon to take charge of, say, the haulage, or in some respects be responsible for the output of coal out of their district. They are held in some respects responsible for there being a satisfactory output from their district, according to the mind of the manager.

30244. You cannot say definitely from your own knowledge that applies to some of the collieries in Lancashire?—I could not cite a case.

30245. There would be little use limiting the area if the fireman put on were to be in charge of getting the material out of a certain section in addition to doing their work?—I think his duty should be confined to the ventilation, to the timbering, and to the safety of the men at the coal face and in the roadways, apart from the main haulage road.

30246. That should be his whole duty?—Yes.

30247. Do you think that would tend to greater safety underground if that were so?—I believe so.

30248. You are aware that a colliery manager cannot take full charge of a mine as a manager unless he has a certificate of competency which he has gained by examination?—That is so.

30249. Supposing he has gained that 20 years ago and has not practised as a manager, he would still be entitled under his certificate to take a place as a colliery manager to-day?—Yes, I think he would: I do not see what would prevent him. His certificate would be his passport.

30250. You would not expect any employer or mine owner would be likely to employ a person who had not been employed for 25 years on any shaft, although he held a certificate?—I should not think he would.

30251. Do you think employers are less intelligent than miners in that respect? Do you think the miners would be likely to employ a person to examine a mine who had five years' experience in a mine 25 years ago?—I am certain they would not appoint such a man.

30252. Is there any use making a provision that a person should not be appointed who had not been more than 10 years out of a mine? Could you not leave that to the good sense of the men?—I should personally be willing to leave it with them, but a stipulation to prevent anyone being appointed would seem to me to be an essential barrier.

30253. You would not lay down the same stipulation with regard to certificated managers?—I should apply the same sauce to the goose as to the gander.

30254. It does not apply at the present time?—No.

30255. It was felt there would be no need for it, as the employers would not be so foolish as to do a thing of that kind?—I should expect they would not.

30256. With regard to timber, I think your point is that the owner should be responsible for placing the timber at the working face?—Yes, we do believe that.

30257. Is that the opinion generally in your county?—Yes.

30258. That the owners should be responsible for placing the timber at the working face?—Yes.

30259. At the present time it is customary in many parts of your county for the workmen to convey their material a considerable distance from the coal face to the lie or pass-bye?—It is almost universal.

30260. In those cases they are responsible for bringing the material from the lie into the working face?—That is so.

30261. Is the opinion of your men that the employers should be held responsible for having the timber at the working face or the nearest possible place to the working face where the timber can be kept without danger?—The opinion is that the timber should be conveyed by the manager as near to the coal face as can with safety permit of the timber being stored.

30262. With regard to winding workmen, you have stated once or twice that the rate at which workmen are wound is considerably less than coal. Is there any complaint in your county, in addition to the rapidity of the winding at the pass-byes, that sometimes workmen are lowered immediately from the surface for the first 20 or 25 yards more rapidly than is good for them?—Yes, there are individual cases where men are dropped down too suddenly and brought up too rapidly, but speaking generally the speed is reduced, but not so much as we should like.

30263. You have no complaint as to engine winders because of the greater hurry now in getting men up and down, and lowering the first part of the distance at such a rate as injures their nerves, and probably their health?—One has heard at times of pressure being brought to bear, and officials timing as to how long it took to wind a wind of men.

30264. Dealing with drawing roads, you stated here that sometimes the gradient was from 1 to 10, to 1 to 4?—Sometimes 1 in 3—3½.

30265. Drawers have to bring out the full tubs down those roads. Is it possible they can hold them with even two sprags in down those roads with safety to themselves

Digitized by Google

Mr. H. Twist.

20 Nov. 1907

or anyone coming up the road? Can they hold them from running away very often?—Very often in those brows once the man has started with the box he could not stop it till he got to the bottom.

30266. Persons might be coming up at the time, and the road is so narrow that they could not get to the side?—I have been caught more than once.

30267. It is impossible in many cases for a man to stop his tub?—If a man hears another man coming, he will throw his empty tub off in order to stop the progress of the full one.

30268. That is a special danger of itself?—A very particular danger in Lancashire.

30269. You know the Special Rule which prevents a person going in front of a tub?—Yes.

30270. On some of your roads you would require almost two persons to hold a tub down at your brows?—There are many gradients where it requires two.

30271. Are you dealing now with longwall workings?—Yes; and straight workings, too.

30272. In every case the road is sufficiently wide to have a double road if it was kept at that width?—In every case.

30273. It is only a question of keeping to that width to provide for safety as far as that is concerned?—No roads I know are driven less than 7 ft. wide.

30274. That would be sufficient for the double road which you refer to?—Yes.

30275. We have different names for the method of hauling. You stated that the road on which was the big balance, or the small tub containing dirt or metal, would only require to be half the length?—Yes.

30276. Did you mean half the width?—No, half the length.

30277. Does not the rope merely go round the wheel at the top?—It runs double on the dobbing side.

30278. You have two ropes, as it were?—No, one rope. *This* is the box, *there* is a revolving wheel on the dirt box; *here* are two props, and the wheel round.

30279. There is a revolving wheel on the front. The end of the rope is not attached to that box?—No, it is past there (*indicating*). It revolves round that wheel and round *this*, and *this* runs at only half the speed of *this*.

30280. I see the point. You complain of some of your workmen requiring in some cases to go home from bad light caused by bad oil or deficient lamps?—It is usually the bad quality of oil we have to complain of.

30281. Do your workmen in some cases pay for the use of the lamps and the oil?—In all cases that I know of.

30282. In all cases they pay a certain daily or fortnightly allowance for oil?—1d. a day, or 6d. a week.

30283. And for the use of lamps?—Yes.

30284. Have they any voice as to how those lamps should be kept, or the choice of the oil?—No.

30285. The money which they pay is sufficient to keep up the lamps and pay for the oil?—It is very often more.

30286. You have the right to audit the accounts to find out whether they pay more or not?—Yes.

30287. You have no voice as to choosing the kind of oil or the class of lamp?—Neither the lamp nor the man that cleans it.

30288. You have to depend on the employer to do that although your people pay for the up-keep, and all that?—Yes.

30289. Is it likely that the workmen in a case of that kind would complain to a mines inspector, and call attention to bad oil—I mean an individual workman concerned?—He would prefer to make his complaint first of all to the officials.

30290. Officials of the colliery, or officials of the organisation?—Both of the colliery and of the organisation.

30291. You could conceive a case where complaints were made to the agents of the organisation and the attention of the mines inspector being called after having referred to the manager of the colliery?—We should prefer to see the management, and if we could not get it remedied, we should feel it was advisable to acquaint the inspector.

30292. I am very much concerned as to the question of the inspectors, and I have not yet grasped exactly your position. With regard to what is called the third grade, there is the chief inspector and the assistant inspector. Would the third grade be a lower grade than the assistant inspector?—Yes.

30293. Have you any objection to that class of inspector holding a first-class certificate?—Not in the least.

30294. He would require to make the ordinary inspection of the mine, and he might require to make suggestions to the colliery managers if he found anything wrong?—That is so.

30295. Would it not be better that he should hold a first-class certificate which would place him on an equal footing, in theory, at any rate, with the manager?—There is no doubt that it would be better, but still I should think him competent with a second-class certificate to discharge those duties.

30296. If it were laid down that he must be a practical working miner who had worked at the coal face, and that he must hold a first-class certificate, would you have any objection to that?—No.

30297. There are sufficient intelligent miners who work at the coal face holding first-class certificates to supply this want?—I know that there are some.

30298. Would not a person who holds a first-class certificate be more likely to have courtesy from the manager than a person whom he felt was below him in knowledge and theory?—If we could get a man whose theoretical knowledge placed him on the same level as the manager himself, and he had in addition to that the practical knowledge, I see no reason for objecting to him.

30299. His chief duty would not be so much to tell the manager what was wrong and put it right, as to report to the district inspector as to how he had found matters there?—That is what I take it would be his principal duty.

30300. There would be some difference between himself and the chief. The district inspector at once calls the attention of the manager to something wrong, and orders him to put it right, but the third-grade inspector might talk the matter over with the manager. His final duty would be to report to the district inspector?—That is so.

30301. The fourth-class of inspectors are under Rule 38?—Yes, that is so.

30302. You are of opinion it should not be confined to persons who are now working as miners, but opened up to persons who were or had been within a reasonable time, say ten years, working miners?—I do not see the good of excluding a man who had had practical experience, although at the moment of appointment not working at the coal face. I think it would add to the efficiency of the inspectors if men were appointed who were not engaged under some particular manager, and who depended on him for their livelihood and employment.

30303. You do not want to lay down that they must hold certificates of competency: it is sufficient to know that they must be practical men?—No.

30304. You think the Government should pay them?—Yes.

30305. Failing that, a third grade paid by the Government. If the Government refused to pay those men appointed by the workmen do you think the workmen should have a right to appoint any person they thought fit who had been a practical working miner?—Yes: I think the privilege and the opportunity ought still to be maintained and given to the work-people to appoint those persons.

30306. Have you any unskilled workmen in the mines in Lancashire, persons who have not previously been employed until 25, 30 or 40 years of age?—One has known of single instances of men being taken in the mine never having been in up to 20 or 30 years of age or more, but it is difficult to decide that, because men are migrating from one colliery to another, and you never know whether a man has had experience when he says he has. There is no means for the manager or anyone else to know.

30307. Do you mean at the coal face?—Into the mine at all, or the coal face.

30308. Is there any cause of complaint amongst the Lancashire miners as to unskilled persons working underground being a danger to themselves and the other persons employed?—The complaint is not very general, but still there is a feeling against men who have not been in the mine up to reaching mature years. There is a feeling against them going into the mine.

30309. Have you had cases in which unskilled persons went to the coal face to work, had been taken by skilled

Digitized by Google

persons to the working face to work under their supervision ?—I could not at the moment give you names, but I have a knowledge of men having been brought into the mine after having reached mature years, but not a specific case where a man has been taken down to the coal face.

30310. If it is not a real grievance we need not follow it up.

30311. (*Chairman.*) I want to clear up one point about the inspectors. In answer to me you did not seem to object to the third-class sub-inspectors being appointed by the Government, but in answer to Mr. Ellis you seem to think they ought to be appointed by the men. What do you think ?—I think they ought to obtain their certificate of proficiency by sitting at an examination fixed by the Government, but popular election in the sense that the men appoint them.

30312. Is that the opinion of your Federation ? Have you discussed whether these sub-inspectors should be appointed by the Government or the men themselves ? Is that a matter you have thought out, or do you only give your own opinion ?—I cannot say that there has been any definite resolution passed upon it.

30313. You are hardly in a position then to tell this Commission that your Federation are in favour of their being appointed by the men ?—I would not commit the Federation to that view.

30314. It is said that the hewers do not often wish to be firemen. Do you think better men would be appointed as firemen if paid more than they are now ? Do you think that an increase in pay would increase their efficiency ?—I am sure if the money paid to the firemen was any inducement to men working at the coal face many would prefer to be firemen, but it is not sufficient. The wages are not enough, and they can get more at getting coal, so that they do not aspire to it.

30315. There are a certain number of people who do not like the responsibility, whatever the wages might be ?—Yes, that is so.

Mr. Richard Waring, called and examined.

30316. (*Chairman.*) You and Mr. Twist are equally responsible for the paper which has been put into my hands of the evidence you propose to give ?—Yes.

30317. You have heard what Mr. Twist has said ?—Yes.

30318. Is there any point of disagreement you would like to mention to this Commission ?—Not that I see. I think Mr. Twist has expressed sufficiently my views and the views of the Federation.

30319. Is there any statement you would like to make on your own account to the Commission ?—It already has been done pretty well, but as a working miner working at the coal face I would specially like to emphasise one or two points with regard to the roof and side accidents. That practically accounts for 50 per cent. of all the accidents. My opinion is that if these lids which we have been speaking about were plentifully supplied and were proper lids of the proper quality and size, and also if provision was made for duplicate timbers similar to that which prevailed in the French mine at Courrières, it would save many accidents.

30320. Do you mean by duplicate timber two props where there is only one, side by side ?—Not exactly; it would give more space for working. We would have a longer lid to put against the roof, and if *that* was the bar (*Witness here held his pencil up*) there would be a prop under either end, which would grip a long length between it, cross breaks and slips, and give more room to work in, and would be more safe. That, in my opinion, is an important point.

30321. You think that the present system does not provide a sufficient number of props ?—No, not exactly that so much as efficient material for lids and the quality of lids.

30322. (*Mr. Enoch Edwards.*) You mean rather a bar than a lid ?—Yes, I should prefer them of suitable size. I should like also to add, with regard to this lid question, that I know of mines where it is not a question of bad material being sent, but for long periods no material is sent for lids.

30323. You can mention mines ?—I have personally set props without lids when a lid would have made it more safe and kept the roof better in every respect.

30324. Have you complained that there were no lids sent down ?—To the immediate official.

30325. Did you next time get a sufficient quantity of lids ?—No; I do not say this is always the case, but it is the case periodically at every pit.

30326. You think that periodically there is a shortage in lids ?—Yes.

30327. If you know mines where that occurs, perhaps you will give the names in to the Secretary ?—Yes, but I am afraid I shall have to mention all the pits I have worked in.

30328. Will you mention some pits where they are worse, at all events, and we will make enquiries. I mean through the Secretary; I do not want you to give them to us now ?—Of course I prefer, personally, in everything in this respect that names should not be given.

30329. (*Mr. Enoch Edwards.*) Because you are working at a pit now ?—Yes.

30330. (*Chairman.*) Is there anything more you would like to say to the Commission ?—I do not think I could add anything to what Mr. Twist has said, or place it before you in a better way, but I thought that I would like to emphasise that point, because I am of a strong opinion that this lid question is at the root of many accidents.

30331. (*Mr. Wm. Abraham.*) Would you suggest a change in the system of timbering in the face of some of your workings ?—I should suggest that we should get a better stamp of lids, not exactly a change of system, but better timber, different sized lids and a good provision of them.

30332. Do we understand you to say that you would want two props and what we call a collar, a prop covering; you call it a bar. Do you suggest that you would have a right to put up two props and a bar of timber where you now put up a single prop ?—Exactly, according to the option of the man. I do not suggest that this is always absolutely necessary, but there are cases where at present it is not allowed, and in fact where we should be fined. They might warn you, but eventually you would be fined if you persisted in putting bars up under circumstances where there is a very dangerous roof, because of the cost of the timber. The management will tell you frankly that it is too expensive, that they cannot afford it, and if you do not desist after that you would probably be fined, and afterwards sacked.

30333. Where there are soft brittle tops do you have any accidents in the immediate face ?—I think the accidents are in places where there are more slips than soft roof, in my observation, slips or big breaks over long lengths of roof.

30334. You suggest where these slips are dangerous you should be allowed to put up cross timber ?—Yes, exactly.

30335. Instead of a prop and a lid, two props and a bar. Do you think that would be the safest thing to do ?—I am positive of it.

30336. That is what I thought was in your mind. Then you could put a bar across reaching from one collar to another, to help keep up this roof. That is what you mean ?—Yes.

30337. You know of certain falls of stone in these places which would not have happened had that kind of timbering been adopted ?—Yes, certainly—many.

30338. From that bar you could send an iron bar before you to the face of the coal where the top is brittle or breaking ?—That could be done. Personally I have not had any experience of that kind, but that was the system at the French collieries referred to. I have had no personal experience of that system, but I should imagine from what I have read and from my practical experience that it would be a good thing.

30339. It is not a question of complaining against anything, but in your opinion that would be an improvement ?—Yes.

30340. In your opinion that would reduce the number of accidents ?—Yes, it would, in my opinion.

Digitized by Google

Mr. R. Waring. 20 Nov. 1907

30341. What about timbering the roads leading to the faces? Have you a system of timbering those roads?—No, it is absolutely left to the judgment of the officials with regard to where they require bars in the roadways.

30342. There is no stipulation or regulation that these bars should be put at a certain space?—No: it does not prove so in practice in my experience, and not otherwise that I know of.

30343. You are a working collier?—Yes.

30344. In your opinion a system of putting up bars, props, or chocks, at a certain distance would strengthen the roof and reduce the number of accidents from falls?—Yes, that is my strong opinion.

30345. Is there any reason given for the absence of lids?—No, except in some respects. I think at many places they have an idea that the men make shift and make some lids for themselves. I may say from my own personal experience, it being absolutely necessary to use lids, it has occupied me and it has occupied my fellow men a long time in making some sort of lid from broken props, or hunting about the place. I think the management perhaps have in mind that the men will manage somehow, and that it will reduce the cost of timber. I cannot give any other reason.

30346. You have to hunt about for these pieces of timber to make your lids of them?—Exactly.

30347. It would meet your view largely if lids or timber proper for lids should be specified among the suitable timber to be used in working places?—Yes, that is so.

30348. (*Mr. Ratcliffe Ellis.*) With reference to timbering you have had a considerable experience at the face, I believe?—Yes. Out of 22 years in the mine I have had 16 or 17 years experience at the coal face.

30349. Then you thoroughly understand timbering?—Well, I think I do.

30350. Do you think that there is anybody who can keep you as safe as you can yourself at your working face?—I think this, that with both myself and my fellow men, the pressure, which comes naturally from competition and trying to produce as much coal as possible, sometimes leads us to risk things even against our better judgment, whereas if there were more strict supervision we should be kept more generally up to the mark. We are led against our better judgment to sometimes take risks.

30351. I daresay that is so. If you exercise your better judgment do you think you can keep yourselves as safe as anybody can keep you? With your knowledge of timbering and watching the state of things round about, do you think you can keep yourselves as safe as anybody can keep you?—Probably personally I think that.

30351A. If you had less time down the pit there would be a greater disposition to take these risks?—I think, generally speaking, if these lids of suitable timber were provided there would not be so many accidents from men taking those deliberate risks.

30352. You take them now because you want in the time allowed you to get as much coal as you can, being paid by the quantity of coal gotten?—Yes, and because of lack of timber.

30353. If you have less time allowed down the pit, the greater will be the disposition to take these risks?—No, I do not think that would be so. I believe if we worked less hours there would be such provision for a regular supply of boxes to do our work in that we should do our work more regularly and more comfortably, and better. At the present time miners often have to do their work in rushes simply because there is on the part of the management not proper provision for the supply of boxes. They come in rushes, and we have to make rushes. That would be attended to if we had less hours. Furthermore men could not work at a higher pitch than they do during these rushes.

30354. You think if there were a better supply of boxes and a supply of suitable timber, even with less hours than now, you would get as much coal and keep yourselves as safe?—Yes.

30355. You mention at the end of your paper—I am not asking you about the matters I asked Mr. Twist about—investigation into accidents: "Where accidents end fatally we advice the coroner's jury should be composed of men who are or have been practical working miners, and power should be conferred upon them to visit the scene of the accident if they so desire." Would you have a special jury to investigate fatalities in collieries?—Yes.

30356. You would have *nobody* on the jury except men who have been practical working miners?—Men who have worked in the pit.

30357. What advantage do you suppose that would be?—I think the advantages are apparent. They would have a practical knowledge, and would be able to understand the conditions which were named, and under which the accident occurred.

30358. Do you think there is anybody in a colliery district who would not understand what is said to him?—I do not think it is possible for any man to understand the conditions of mining if he has not been in a mine.

30359. You would have a special jury to enquire into these accidents?—That is so.

30360. Is this the way you would provide for it? You would have to have a special list prepared. When a coroner has to investigate these accidents his man goes out to get a jury. You would have to have a special list prepared for him. It would mean having a list prepared, and all that sort of thing?—It would carry that with it, I suppose.

30361. I want you to see what it means. There would be a special list prepared periodically with a number of selected names—the names of men who had been working in the pit—and it would be from this list that the jury would have to be summoned?—It is my firm opinion that it would assist arriving at the truth at inquests if we had men who had been practical miners—if the jury on the whole were composed of them.

30362. A special list would have to be made by somebody of men working in mines who were qualified to serve as jurors. Are you aware that there is a power in the Home Office, if they think the facts have not come out, to have another enquiry of their own?—Yes.

30363. Do you not think that is sufficient?—No. I do not think that the further enquiry, unless they had actually men visiting the place, would result in any different conclusion.

30364. When they have an enquiry, a man goes to the place and hears all that is to be said about it?—My opinion is that it would be better, in the first instance, to have these practical men on the jury.

30365. What is your objection to the present arrangement? If the Home Office should be of opinion that the whole of the facts had not come out before the coroner and the jury, the Home Secretary can order an enquiry of his own, send his representative down, and hear all the people have to say, look at the place, and get the fullest information, and make a report. What is the objection to that arrangement? Will you look at Section 45 of the Act? "Where it appears to a Secretary of State that a formal investigation of any explosion or accident and of its cause and circumstances is expedient, the Secretary of State may direct such investigation to be held, and with respect to any such investigation the following provisions shall have effect." Then it goes on to make provisions, and it does not matter whether there is a death or not: "Where it appears to a Secretary of State that a formal investigation of any explosion or accident and of its cause and circumstances is expedient, the Secretary of State may direct such investigation to be held."—I should object to that, because it would be too cumbrous to get into motion. We should probably have a difficulty in getting an opinion expressed in that direction. As I said before, investigation at the moment the accident occurred, especially if the man could visit the scene of the accident, would be the best enquiry.

30366. Very well; that is your view. You are aware that in 1902 some new rules for timbering were established in Lancashire?—I am.

30367. And when that was done first of all the Home Secretary suggested these rules, and then there were conferences of employers and workmen to discuss them?—Yes.

30368. There were a number of meetings?—Yes.

30369. These rules were formulated as late as 1902?—Yes.

30370. There is nothing in these rules suggesting what you suggest now?—No. I cannot account for that.

30371. I only want to ask you this. Do you know that was never brought forward at any of these discussions on behalf of the men?—I was not aware of that. This has been my opinion, my strong opinion, on the question of accidents long before that period.

Digitized by Google

30372. I have nothing to say against it, but I am pointing out that in 1902, when the timbering rules were discussed, this view of yours was not brought forward ?—I was not aware of that fact.

30373. (*Mr. Enoch Edwards.*) In answer to the Chairman you agreed with Mr. Twist in the answers he had given to the questions ?—Yes, I did.

30374. The only point you have brought before us is this question of timbering ?—Yes.

30375. Does that apply to Lancashire generally, or to the colliery where you work ?—To all the collieries I have worked in.

30376. Did you find a difficulty in getting lids at all places you worked in ?—Some worse than others; but at all the places I have worked in, periodically there has been this dearth of suitable lids, and I may add timber and props.

30377. Generally at the face you set a prop and a lid ?—Yes.

30378. Have you had much experience of bar timber at the face ?—Yes, I have had to set bars all along during my experience in the face.

30379. I understood you to say the reason they were not put was because of the cost of the timber ?—That is what I have had said in reply to me when I have been charged for setting these bars at the distance permitted for safety.

30380. Is it in your contract to set bars ?—In the roadway.

30381. We are talking about the working face ?—No; we simply set them for our own safety, if we are allowed.

30382. Is it part of your contract to set bars ?—No. Really it is the timbering of the coal face which is in the contract.

30383. Setting bars in the face would be in all cases for safety ?—Yes.

30384. Is it in your contract that you shall set such timber, whether they are bars or props ?—No, there is nothing specified in the contract.

30385. Would it be the case if you set bars you would expect to be paid so much a bar ?—No.

30386. They do not refuse on those grounds ?—No; the mere value of the timber.

30387. You suggest to the Commission in your experience such is the nature of the roof with its slips and faults, if bars were set many roads that are now lost would be saved in consequence ?—That is so; 50 per cent. of all accidents, practically speaking, happen through falls of roof and side, and I daresay 30 per cent. of them, probably more, happen at the coal face, and the biggest portion are from roof at the coal face. My opinion is that there should be a thorough and regular provision of lids varying from 18 inches or 1 foot of a suitable thickness, say 5 or 6 feet long, and that there should be a variety of sizes of lids. Of course long lids would have two props under to stop the pressure pulling them down at the end.

30388. As to the number of accidents from falls of roof and sides, there are no two opinions about that. It is a matter of statistics, and it demonstrates itself. You suggest as most of the accidents happen at the face it becomes a serious question. It is the business of this Commission to remedy that. In your judgment you say that if there was a plentiful supply of lids, and you were permitted to set these bars with longer lids, or two props, many of these accidents would be avoided ?—I believe they would be reduced.

30389. You have arrived at that opinion as a practical workman from what you have seen ?—I have arrived at that opinion from my own experience.

30390. Have you in your experience ever had an accident with any of your men working with you or for you ?—Not immediately or exactly at my side, but in the same district. I refer to a certain place where a man was killed. There was no proper provision of lids. It was a bad place for slips, and was noted for large slips, and in the absence of leaving proper lids they set round props, and sometimes one or two props underneath. I could not say that it was definitely through a prop that a man was killed, but he was killed among bad slips, and I knew that was the regular way we timbered, because we could not get a sufficient supply of lids.

30391. The timber was insufficient to sustain the roof ?—Yes.

30392. It was not so secure because of the difficulty of getting good lids ?—Exactly.

30393. (*Mr. Smillie.*) Have you had much experience in longwall workings in Lancashire ?—That is what I almost entirely work in.

30394. Most of your experience has been in longwall workings ?—Yes.

30395. Do your workmen pack their own goaf themselves ?—It is arranged by a contractor, as a rule.

30396. The ripping is done by contractors; they put on the packing and take down the ripping ?—Yes.

30397. Do the workmen at the face put any waste into the packing ?—The miner, you mean ?

30398. Yes ?—Yes, often.

30399. In spite of the present packing the roof comes down gradually as you get away from where the roof is ripped on to the packing ?—Yes.

30400. When the ripping is done in the road-head, what is the system of timbering there: is there any timbering put in at all, unless it is obvious that there is bad stone ?—Not unless it is bad. In most places there are no regular defined orders that they shall put bars up. In some places there are; in other places there are not. In cases where it is obvious that it is dangerous the bars are put up.

30401. If the rippers, when they have finished with the ripping, find a bad stone, they may put a bar to it to keep it up for the time being ?—Yes.

30402. If the fireman finds a portion of the road was bad he may himself, or on his instructions there might be bars or props put up to a bad part of it ?—Yes.

30403. A good many accidents occur on the drawing roads between the face and where the drawers land their stuff ?—Yes, that is so.

30404. From falls of roof or sides ?—Yes.

30405. Would it not be a great deal safer in longwall workings if there were systematic timbering in which there were props and crowns put up systematically every 2, 3 or 4 feet, as the case might be, whether or not there was any apparent danger for the time being. Would not that keep the road safer ?—Yes, I am sure it would.

30406. Both from side crush, if put wide enough to catch the side, and from top crush ?—That is so.

30407. You think that might prevent some of the accidents from roof and sides in the roadways which take place at the present time ?—Yes, and I may give you a personal experience in regard to this matter. I have also worked in the roof as a ripper, and I have known places where a contractor had the contract for packing the roof down and he had not the contract for putting bars, and the consequence was that we actually had to put the bars up to save our own lives, otherwise we simply left the thing as it was. We had so much work to do in such a length of time, and if we put these bars up—it has occurred both with myself and other workmen—we have put bars up because we could not tolerate the danger, and we have been two or three hours later, for the same money, than our time appointed to go home. Unfortunately, on many occasions dangerous places were left continually through the contractor not having the contract for timbering along with the roof.

30408. A contractor for ripping takes the contract by the yard or fathom, and in some cases only takes the ripping and stowing or building of the places; in other cases he is responsible for the timbering of that place ?—Yes.

30409. Sometimes they are not responsible and are not paid for the timbering ?—No.

30410. The rippers employed by them on day's wages have a certain amount of ripping to do; but in this case you refer to, in order to keep yourselves safe you put up bars which kept you considerably beyond the time you could have done your usual work ?—That was so in the place I refer to.

30411. As a general system would it not be well to have roadways, headings, levels and other places properly systematically timbered when the ripping is done, to prevent accident from falls of side and roof ?—I am strongly of opinion that that should be done.

30412. That is not provided for at the present time ?—No.

Mr. DAVID WATTS MORGAN, called and examined.

STATEMENT OF WITNESS.

Mr. D. W. Morgan. 20 Nov. 1907.

30413. (1) For the due carrying out of the provisions, already in force, of the Mines Regulation Act, it is absolutely necessary that a greater staff of Government inspectors should be appointed. The present staff is far from being adequate and able to cope with the work. The present number, highly qualified and competent as they are, are unable, through want of time, to make periodical inspections of every mine in the South Wales coalfield. The inspection of mines should be efficiently augmented by the appointment of what I call working-men inspectors, so that the inspections could be made within a stated period as laid down by the General Rule 38.

(2) At present the workmen do not generally take advantage of the provisions contained in General Rule 38 and, to a very large extent, it remains dormant. We, as a Federation, try to encourage the workmen to, at all times, take advantage of this provision, but notwithstanding that the Federation is prepared and does pay the expenses, we find some opposition amongst the men to carry out our advice in this matter.

(3) Inspection under General Rule 4. I should like to see some provision being made so that the inspection can be more efficiently carried out. The number of places should be more limited than at present. The area to be covered by the fireman has a tendency to be overmuch, and cannot be efficiently covered within the time stipulated by the Act of Parliament. The actual working places that the men are employed at are generally the only places thoroughly inspected; the travelling roads, to some extent, are not given sufficient attention to unless the danger is such that it forces itself upon the sight, or knowledge, of the fireman in passing.

(4) The discipline and the due observance of the mining rules would be much better insured were the officials, who have, more or less, to directly deal with the workmen who are sending out the coal, to have only the duty of seeing these provisions duly carried out, rather than to, in many cases, have the responsibility of looking after the output of coal from the various districts.

(5) I prefer, where men are found guilty of breaches of the rules, that they should be prosecuted rather than fined in the colliery office. In my opinion it would have a most salutory effect upon the enforcement of these rules, because attention is thus directed to these unfortunate lapses on the part of men, connected with the mines, in the carrying out of their duties.

(6) There is room for a great deal of improvement in the method of establishing Special Rules, in the direction of allowing the workmen's representatives the opportunity of putting forward their views and the views of the practical workmen employed in the coal mines with regard to the composition or form in which such Special Rules should be drafted. Special Rules when once established should be published and copies placed in the hands of everyone employed in and about the mines.

I have advocated the opinion that it would be a great advantage if boys were taught the Special Rules in the last year before leaving school, so that where it was known boys would be going into the pits they would have some knowledge of the dangers and precautions which they have to observe in order to prevent accidents.

(7) A systematic method of timbering should be rigidly enforced. The system to be agreed upon after a consultation with the parties affected, so that a system most adaptable, or suitable, to the seam worked should be adopted at each colliery.

Timbering of all descriptions, which is very important and necessary for the protection of life, should be largely at the discretion of the workman to put them up after he has complied with the amount of timber required by the regulations laid down by systematic timbering. When a workman considers that it is necessary for the safety of life and limb to put up any timber, of any description above the agreed-upon number laid down by the method I have spoken of, no official should have the right to say that this timber cannot be put up without he gives consent to the same.

(8) Haulage accidents would be greatly diminished if there was a system of keeping one side of the road clear and wider from the rails in order to enable workmen to escape from accidents that are now taking place in consequence of the narrowness of the roads at some of the stages. In my opinion, during the course of the working shift no one should be allowed to travel, unless absolutely necessary, over these various engine-planes, and I think some arrangement could be made also that where it is necessary for dark lamps to be sent back to the pit bottom to be relighted, this should be done by a competent light-carrier, whose duty it would be to carry these lamps from the engine parting back to the pit bottom and then give them to the young collier boys and others who would be waiting for the return of their lamps.

(9) I certainly agree with mine inspectors that safety lamps should be introduced into all mines where there is the slightest danger of an explosion, and I think that Government inspectors should have full power to order the adoption of the same. It would be well that safety lamps, if possible, should be standardised, and as far as possible the same kind of lamp adopted throughout the whole of the coalfield. The screw-locked lamps should be entirely done away with.

(10) In all fiery mines I am of opinion that it might be made compulsory for the holes to be charged by a competent person appointed to do this work, instead of leaving this to be done by the men as it is permitted at present. It might also be made compulsory that the explosives should be supplied by the colliery company so that they should be certain, at all times, that the proper kind of explosives was being used and that, if it were necessary for shot-firing at all, every possible precaution was being taken so as to prevent the possibility of an explosion.

(11) In my opinion preparation should be made at each colliery and the latest appliances provided in order to enable men to descend a mine as quickly as possible after serious accidents in the shape of explosions and so forth. There is not, to my knowledge, any fixed method of dealing with this grave and important phase of colliery life such as we see in fire-brigades and the rescue of seamen.

(12) I would also suggest that at each mine a separate plan or diagram should be hung up at some place adjacent to the colliery, on the surface, showing the method of ventilation and the roads, also the doors, immediately under the pit bottom, up to such point as the ventilation was being separated for the various districts in the colliery.

30413A. (*Chairman.*) Are you a miners' agent at Porth?—Yes.

30414. First of all you say that the present staff of inspectors is far from being adequate, and you want working-men inspectors to be appointed. Is that all you want, or do you want more chief inspectors and more assistant inspectors of the same class as are now appointed?—Yes. If you would allow me to supplement what I say there with regard to that I should like to do so?

30415. Yes.—In my opinion the inspection could be made much more efficient if the districts were smaller and a chief inspector appointed.

30416. How many districts would you have? Would you divide the present districts into two, roughly? If you had two inspectors where there is now one, would that be enough, and, say, two assistant inspectors? Would you double the number of chief inspectors and the number of assistant inspectors?—Yes, and a little more.

30417. You would rather more than double the number of chief inspectors and assistant inspectors, and also have in addition to that a third class of working-men inspectors?—Yes; of course the geographical position of the districts would have a great deal to do with regard to that. Where the district would adapt itself, as our district would, I would suggest this. If we take the two valleys which comprise what we call the Rhondda Valley that in itself forms itself into a district which, in my opinion, should be under a chief inspector.

30418. You would have a chief inspector for that?—Yes.

30419. Roughly speaking, you would say that you ought to have more than double the present number of inspectors and assistant inspectors, and also a third class of inspectors?—That is so.

30420. How would you appoint the third class of inspectors? Would you leave the Government to appoint them?—Yes, I think that would be the best way.

30421. You do not suggest the men themselves should appoint the third class and that the Government should pay them?—The men should certainly have some voice in the appointment of them.

Digitized by Google

30422. They might have power to suggest names?—Yes; make representations to that end.

30423. How much pay would you give to those third class inspectors?—Supposing we say £4 or £5 a week.

30424. You would give as much as £4 or £5 a week to them?—Yes.

30425. How many of that class would you have to each inspector's district?—Speaking for our own district, I think we should at least have three.

30426. You say then, perhaps, on an average throughout the kingdom you would want three of this class of inspectors to one chief inspector. You think that every chief inspector ought to have three of these men under him?—Yes.

30427. That is about the proportion you suggest?—Perhaps I am not making my meaning clear. I am taking our own district for forming my opinion with regard to this matter, and if our own district were formed into a separate inspectorship with a chief, I think we ought to have at least three working-men inspectors there.

30428. With regard to the inspections by the workmen under General Rule 38, you find some opposition among the men to carry out your advice in this matter. You find a disinclination on the part of the men to avail themselves of that power?—Yes.

30429. How do you propose to remedy that? You think it important that they should have this power and exercise it?—For the reason that that is the only way by which the colliery can be inspected as a whole under the present provisions. If working-men were appointed as inspectors, who could examine thoroughly every corner and nook in the mine, the provision so far as Rule 38 is concerned could be done away with.

30430. If you had your way with regard to the inspectors, you are not sure whether anything more would be necessary. You think Rule 38 might be repealed?—Yes, that is so.

30431. You would have instead some inspectors who had all the duties of a Government inspector, and also all the duties that now devolve on the men, or which might devolve on them if they carried them out under Rule 38?—There is so very little done now under Rule 38, as I point out in the evidence that I give. It is dormant in our district almost at the present moment.

30432. You think that the inspection of mines before the commencement of each shift under General Rule 4 is not sufficiently carried out, and that it is partly not sufficiently carried out because the districts are too large?—That is so.

30433. Do you say it is too large in all the mines with which you have any acquaintance, or only in certain mines?—I can only speak for the Rhondda Valley, the district that I come from. The tendency is that the districts are getting much too large for the firemen to be able to examine.

30434. That is no doubt according to your opinion the case in a good many districts. Do you think that is universal, or do you think there are places where the districts are not too large?—I have no knowledge outside our own district.

30435. In your district you say they are too large—all the firemen's districts in the mines with which you are acquainted?—Generally speaking, that is so.

30436. Not always?—Not always.

30437. Then you also say that the discipline and the due observance of the mining Rules would be much better ensured were the officials, who have more or less to directly deal with the workmen who are sending out the coal, to have only the duty of seeing these provisions duly carried out, rather than to in many cases have the responsibility of looking after the output of coal from various districts: your complaint is a complaint we have several times heard before, that these firemen have to do duty that they ought not to perform, and that as they are called upon to perform these other duties with regard to some extent the management of the mine, and which have nothing to do with safety, that their usefulness as a means of preventing accidents is somewhat impaired?—Yes, it is very much impaired.

30438. You require two things: first of all that the district should be smaller, and secondly that the firemen in each district should only have to attend to the safety of the mines?—Yes, that is so.

30439. As regards breaches of rules, you desire that the men should be prosecuted rather than be fined?—Yes.

30440–1. You find that is the general feeling among the men themselves?—I could not say—especially the men who are guilty of committing the breaches—I daresay if we selected them they would prefer to go to the colliery office, but generally speaking I think the men prefer to be dealt with by the magistrates rather than by the colliery officials.

30442. You would not have a fine for any breach of any rule whatever?—None. I think the mere fact of the men being taken before the Court in respect of breaches of discipline which affect the safety of the mine, would be a great advantage, and there would be the fear always before the men of being brought before the Court, and I think that would prevent these breaches taking place.

30443. Then with regard to setting up Special Rules, you say that the workmen's representatives should have the opportunity of putting forward their views, and the views of the practical workmen employed in the coal mines, with regard to the composition or form in which such Special Rules should be drafted. Your complaint is that you are not called in to consultation at a sufficiently early period; that the mine-owners have already put forward certain Special Rules that they desire should be observed before they ask your advice at all?—Yes, that is so.

30444. You suggest your advice should be asked at a much earlier period in the matter?—Yes.

30445. While these Rules are being thought about by the mine-owners, and before they are promulgated?—That is so.

30446. For the purpose of putting your views before them, I suppose now if the workmen were very much interested in setting up any Special Rule they would have no difficulty in putting their views before the Home Office. You could either do it through a mine inspector or write direct to the Home Office, and no doubt it would receive attention there?—That is so, but we still believe that we ought to have the opportunity which you have referred to in the first instance of stating the views of the workmen in the course of the Rules being drafted, or in the process of their being formed.

30447. It is not sufficient that the rules when once drafted and agreed to by the mine owners should be put before you. You think you ought to have an opportunity of expressing your opinion before the mine owners have pledged themselves to certain rules?—That is so. May I point out we find in some cases that the rules are very difficult to carry out because of not being framed properly.

30448. You can always object to them when they have been framed, and your objections are listened to, I believe. Can you not do that?—Yes, that is so, but after a good deal of trouble. It is a long way to go about it; in our opinion it could be best done at the very commencement.

30449. You think that could be done at an earlier stage?—Yes.

30450. But perhaps the mine owners, not having absolutely promulgated the Special Rules might be more willing to listen to argument. When promulgated they might not be so willing to listen to any suggestions of yours?—Yes.

30451. You think that would be so. Then you suggest and advocate the opinion that it would be a great advantage if boys were taught the Special Rules in the last year before leaving school. That has been suggested to us before. Then with regard to accidents and falls of roof and sides, you think a systematic method of timbering should be rigidly enforced, and the system to be agreed upon after a consultation with the parties affected. Do you wish to give any views that you hold, or your friends on behalf of whom you speak, with regard to timbering?—If I may be allowed to supplement what I mean by saying that a systematic method of timbering should be adopted, I should like to do so. Not only is it necessary in the coal face where work is being carried on, but the roadways should be more effectively timbered than they are at the present time, because a large number of these accidents take place on the roadways and not at the coal face.

30452. More than half of the accidents take place at the coal face?—That is so.

30453. No doubt some take place in other parts. You say that no official should have the right to say that the timber which had been agreed upon might not be put up unless he gives consent to the same. Where you have a system of rules of timbering, or where you have in mines some rules of timbering, is it in the power of an official

Digitized by Google

Mr. D. W. Morgan

20 Nov. 1907

to prevent those rules being put into effect?—This would apply to timber that would be required to supplement the number which is already laid down by the regulation.

30454. Your complaint is that very often a mining official will say "Here are the regulations: I give you enough timber to carry out those regulations, and I will not give you any more; I will not allow you to put up any more"?—It is very often the case that what we call the face props and sprags are put up, and then when it comes to protecting the roadway which has to stand the longest amount of time before there is any protection there, at some of the collieries the men are not allowed to put up that timber on the roadway until they obtain the consent of the official.

30455. You think the workmen ought to be considered to be the best judges, and if they think timber is necessary they ought to be allowed to have the timber put up?—Yes, I think the workman ought to have full power to put up any he thinks is necessary for the safety of his life and limb, whether it is provided for by regulation or no.

30456–9. Then you say that there ought to be a system of keeping one side of the road clear and wider from the rails, in order to enable workmen to escape from accidents. That has been very often suggested to us. Then you say that during the course of the working shift no one should be allowed to travel unless absolutely necessary over these various engine-planes, and you think that some arrangement could be made to prevent the necessity of travelling. You think there is more travelling than is necessary along the engine-planes on the part of the men?—Yes, I think some provision could be made to prevent the amount of travelling going on at the present time, especially by young lads required to carry lights, and so forth, travelling on these engine-planes, often when the journeys are travelling at a very rapid rate.

30460. Then with regard to safety lamps, you say that they should be introduced into all mines where there is the slightest danger of an explosion, and that the Government Inspectors should have full power to order their adoption. You recommend that instead of the present cumbrous method by which you have to go to arbitration?—Yes.

30461. Then you think it would be well that safety lamps if possible should be standardised, and, so far as possible, the same kind of lamp adopted throughout the whole of the coal field, and also that the screw-locked lamps should be entirely done away with. You have very few screw-locked lamps?—There are a good few, I am sorry to say, in our district.

30462. Then you think as regards firing explosives that it should be made compulsory for the holes to be charged by a competent person appointed to do this work instead of leaving this to be done by the men, as it is permitted at present. That is the practice?—That is the practice at present. In some collieries they take over the whole of the work in our district at the present time.

30463. That is the general rule, that the ordinary workmen down below, without any special knowledge of explosives, are allowed to charge the shot?—At some collieries that is so, but at other collieries it is not so.

30464. You say at some collieries that is so?—Yes; I think it would be about half and half.

30465. You think it might be made compulsory that the explosives should be supplied by the Colliery Company. That has often been suggested. Certainly every possible precaution should be taken to avoid the possibility of an explosion. You say that you think every possible precaution is not now adopted, and particularly that unskilled men are allowed to charge the shots?—Unfortunately we have had many accidents from shot-firing in our district.

30466. Owing to that?—Yes.

30467. Owing to inexperienced persons being allowed to charge a shot?—Yes.

30468. You think with regard to rescue apparatuses, that the latest appliances should be provided in order to enable men to descend a mine as quickly as possible after serious accidents in the shape of explosions, and so forth; and then you say that there is not, according to your knowledge, any fixed method of dealing with this great and important phase of colliery life such as we see in fire brigades, and the rescue of seamen. Surely now at a great many collieries they have drills with these new apparatuses and scientific dresses. They have appliance of this kind now?—Not in our district.

30469. Is there no such thing as pneumatophors in your district?—Quite a few, if there are any, but there is very little knowledge in connection with them.

30470. I hope before long that will be altered, and that you will find these rescue appliances are used, and also that a great many men will be able to use them?—I am glad to find that the coal-owners in the South Wales district are taking the matter up. They have already appointed a Committee.

30471. You think a separate plan or diagram should be hung up at some place adjacent to the colliery, on the surface, shewing the method of ventilation, and the roads, also the doors, immediately under the pit bottom, up to such point as the ventilation was being separated for the various districts in the colliery. All those maps and plans are in the office, but you think that they might be more widely available than at present?—Yes, and I find from experience there is a good deal of difficulty in getting up those things at the moment when an explosion may take place, when all the officials may be underground.

30472. Perhaps you suggest copies should be made of all these plans and hung about in various places in the mine?—Not in the mine, not underground.

30473. Well, on the surface?—Yes, on the surface.

30474. (*Sir Lindsay Wood.*) What are the sizes of the districts which you think should be made smaller for the firemen?—That would generally depend on the condition of the working face. In some cases you might allot a district of, say 30, 35 or 40 working places to the firemen. If that working face was open and he was able to travel from one end to the other, I do not think that would be too large an area for one fireman to be in charge of.

30475. I understood you to say that you thought he ought to devote all his time———.—Yes, to the ventilation and the general safety of those men immediately working in that district.

30476. Not to have any other work to do?—None whatever.

30477. Not setting timber, or anything of that sort?—No.

30478. Only to see that the men did set the timber?—Yes, properly fulfil his instructions in the setting of the timber.

30479. A sort of overlooker?—Yes.

30480. That is your idea?—Yes.

30481. In the timbering of the roads you say that the men are not allowed to put timber in the roads without the sanction of the Manager?—Yes, that is the case.

30482. Do you mean the main roads or the other roads?—It would apply to both headings and what we call "stalls."

30483. That is, the roads nearest to the face?—Yes.

30484. Not the main roads?—No, they would have generally nothing to do with the main roads in our district. That would be done by another distinct class of men who are called repairers.

30485. Only the short roads to the face and gateways. Is the timbering done by the hewer in those cases?—Generally it is done by the hewers.

30486. How far back from the face does that come?—It would depend. In some cases it would be roughly from 40 to 60 yards.

(*Mr. Wm. Abraham.*) The system of timbering is different. We have not the system of timbering by deputies.

(*Sir Lindsay Wood.*) It seems to me peculiar that the men are prevented from setting up timber in these roads except by the sanction of the firemen.

(*Chairman.*) Extra timbering, I think it is.

(*Sir Lindsay Wood.*) Yes, timbering they consider necessary.

(*Witness.*) There can be no doubt about it, because not many months ago we were called upon to deal with a dispute arising from a fall which took place, a man having to wait half-an-hour before the official came round to put up the timber, and meantime a heavy fall took place because of the timber not being put up.

30487. Did not the man put up the timber himself?—No; not until he gets permission to do so.

30488. Although it is for his own safety?—That is so.

30489. (*Chairman.*) He dare not put it up?—He had to wait until the official came round and gave him permission to do so.

Digitized by Google

30490. Where he had the timbering and he might have put it up ?—Yes, the timber was there.

30491. (*Sir Lindsay Wood.*) Is that the system in that district ?—In that colliery it is very rigidly enforced.

30492. It is not general throughout the district ?—No, but there is a tendency at all the collieries to enforce something of the same kind. There is a greater stringency being acted upon by the officials with regard to the roadways, and so forth.

30493. It would be the fault of the timberman if he did not have that place properly timbered ?—I did not catch that.

30494. It would be the duty of some man to have the place properly timbered ?—It would be the duty of the man in the place.

30495. And you say he is prohibited from doing it ?—Until the official gives him permission to put it up. Then the same man still puts the timber up, but he must wait until he gets permission from the official to do so.

(*Mr. Wm. Abraham.*) Perhaps the witness would clear it up. In these instances timbering in roads and extra timbering have to be paid for.

(*Sir Lindsay Wood.*) They are paid for setting this extra timber, but the management say "Your must not set this extra timber for which I pay until you get sanction."

(*Chairman.*) If the man chose to risk not being paid by the management, it would not be a breach of the rules, but he wants to be sure of getting paid for it.

(*Witness.*) It leads to a lot of unpleasantness—any refusal of payment.

(*Mr. Wm. Abraham.*) I want to clear this matter up. We have had this matter in another district where there has been the same question. An official struck out timbering after the man put it up, and a case went to Court.

(*Sir Lindsay Wood.*) As to whether he should be paid for it or not ?

(*Mr. Wm. Abraham.*) The question was a question of payment, and to save the timber the official struck it out and the place fell in.

30496. (*Sir Lindsay Wood.*) You say there is too much travelling on the engine-road in your district. Do the men all come out together ?—At the end of the shift, yes; but there is a great deal of travelling which I think can be avoided, especially by young lads who are not quite competent to take care of themselves when the machinery is working.

30497. Do they travel on the main roads during the time the ropes are running ?—Yes.

30498. What do they do ?—They walk out to the bottom of the pit for the purpose of light and other things, which older men, men more competent to take care of themselves, could very well do.

30499. They come out to get their lamps lit ?—Yes; lamps are brought back to the pit bottom to be relighted when they go out in the dark.

30500. Is there much traffic of that sort ?—There will be a good deal in every colliery. Our men work together a man and boy together, and boys are employed on the coal, and of course the boy cannot be very well left in the face by himself to carry on the work, so he is sent back by the collier for the purpose of fetching the light to have the lamps re-lighted.

30501. In your district do they keep spare lamps in the stations near the face ?—It would be at the pit bottom generally.

30502. That may be two or three miles away from the working face—it may be a mile or two ?—Yes, a mile would be, perhaps, nearer the mark.

30503. In some it is two, in some perhaps three. You think that would be obviated if they had lighting stations much nearer to the face ?—Yes, or got elder men to do the work.

30504. Men travelling on the engine-roads would be men coming out and going in ?—That is so.

30505. The ropes will not be running at that time ?—Not in the morning or the evening, or the beginning and end of the shift.

30506. It is only, as it were, the occasional travelling which you are complaining of ?—During the shift.

30507. You recommend that the screw-locked lamps should be entirely done away with. Have you many accidents from lamps being opened in your district ?—I could not say exactly that there are many accidents, but we find that lamps are opened; and, indeed, during the course of working the lamp is shaken very much backwards and forwards, and sometimes the screw lock becomes loose in that way.

30508. I only want to know whether you have had many cases of men opening the lamps, or whether they are more easily opened with screw locks than any other ?—I could not say that we have had very many cases, but we know that it is a very easy matter to open a lamp.

30509. In spite of the screw lock ?—Yes.

30510. (*Mr. Wm. Abraham.*) We will go back to the question of timbering. The system of timbering in South Wales generally is that the collier puts up his own timber in the working place and in the road leading to the working place ?—That is so.

30511. Some classes of timber he is paid for, and other classes he is not paid for ?—That is so. All the timber put in the working place is not paid for, but included in the tonnage rate; the timber at the side of the roadway for the protection of the roadway is generally paid for separately by themselves, that is to say, so much for a pair of timber and so much for what we call a road post.

30512. All of which is necessary to keep the roads in repair ?—Yes.

30513. The rule is that the man has no right to put up a pair of timber or road post when it is necessary without consent ?—That is so.

30514. You know of a case that was taken into Court because of a man putting up a pair of timber and the overman striking it out, and a certain portion of the place falling in ?—That is what took place.

30515. Hence the opinion you hold, that it is necessary that the man should be allowed to put timber up where he thinks necessary, even if he is not to be paid for it ?—Yes, and I think he should have full power to put up any timber which he thinks is necessary above the regulation, whether it is paid for or unpaid.

30516. Who is that determines the distance that these timbers are to be put ?—Generally the manager.

30517. Even the distance of props in the face ?—Yes.

30518. The distance of sprags is determined by Special Rules ?—Yes.

30519. There is no interference with the right of men to put these timbers up, even if they put them up oftener than stipulated ?—No, not up to the present. We have had no case where they have interfered with the men in the coal face.

30520. There are cases happening in all of the districts on the roadways ?—Undoubtedly.

30521. What did you mean when you recommended systematic timbering in one of the paragraphs of your statement ? Will you explain what you mean by that ?—My experience is this, if I may put it in this way: in general cases we find that accidents and loss of life take place where the top is considered to be safe and timber is not required. Where the roof is brittle and soft we find that the men are very careful, and the result is that no accidents take place; but immediately they get into a district where it is supposed timbering can be dispensed with, the tendency is to be a bit neglectful and careless, and the result is that a stone or something breaks down quite unexpectedly, because there is no timber there. If systematic timbering was adopted, and timbering put up in all places, I think that would go at any rate some way towards the prevention of accidents.

(*Mr. Wm. Abraham.*) I think that is sufficiently clear.

(*Mr. Ratcliffe Ellis.*) I should like to know this, whether the difficulty is that he is not allowed to put up timber, or that he may not be paid for it ? What he wants instructions for is not to put it up, but that he is going to be paid for it.

(*Mr. Wm. Abraham.*) That may be a portion of the case, but if he puts it up he may be found fault with.

(*Mr. Ratcliffe Ellis.*) Supposing he puts it up, is not the penalty, if he has done wrong, in not getting paid for it ? It was put in the first instance that he was not allowed to put the timber up even if it was wanted there for the purpose of safety. I think the point is that he is in danger of not being paid for it.

(*Mr. Wm. Abraham.*) He is found fault with if he puts it up, whatever the necessity is in his opinion.

(*Mr. Ratcliffe Ellis.*) Is that so ?

Digitized by Google

Mr. D. W. Morgan

20 Nov. 1907

(*Witness.*) We have cases where men have asserted their right to put up the timber.

30522. And to be paid for it?—Yes, and the official has come round and knocked the timber out.

(*Chairman.*) The official would knock the timber out by way of saying that it was not required, and therefore that he need not pay for it.

(*Mr. Ratcliffe Ellis.*) It is not whether he may put it up. He may put it up and not get paid for it.

(*Chairman.*) It is in fact done to shew that it is unnecessary.

(*Witness.*) Yes, that is so.

(*Mr. Wm. Abraham.*) To try and shew that it is unnecessary.

(*Chairman.*) In this particular case it was not necessary to shew that it was required.

(*Mr. Wm. Abraham.*) Take it either way: there it is.

(*Chairman*). Naturally that prevents a man putting up timber. He says "I am not going to proceed with my work and put up timber if I am not going to be paid. Here is a dangerous place: I am not going to put up this timber, because I am not sure what view the Manager will take. I will wait till the Manager comes round."

(*Mr. Ratcliffe Ellis.*) He would not stop there.

(*Chairman.*) Do you want the matter cleared up any more?

(*Mr. Ratcliffe Ellis.*) No, I quite understand that.

(*Witness.*) I should like to add, if you will allow me, that we have a case that we have been investigating even where the timber has been put up on these travelling roads, where there is a very acute dispute in respect of being drawn out by instructions of the officials afterwards, where men complain that they are in danger of their lives in dealing with their trams and walking backwards and forwards over this roadway, which has been so treated.

30523. (*Chairman.*) These men took upon themselves to put up timber because they thought it was wanted, and the officials pulled it down to shew that it was not wanted, and now the men declare that they are in danger of their lives because of this pulling down?—Yes, that is so.

30524. (*Mr. Wm. Abraham.*) Is this not the case: that before the Manager had the sole power of saying timber should be put up without payment there was a complaint against the men?—Yes.

30525. Then since the Rule has been changed, and he has the sole power, the complaint is that the distances he allows them are too great?—Yes, that is so.

30526. And where the man needs to put up for his own protection in his own road a road post or a pair of timber, he is not allowed to put it up without the consent of the Manager?—Yes, that is the case.

30527. Again, it is sometimes the practice in several places in a long road with a good piece of top apparently that timber is not used?—Yes.

30528. In those places during the last two years several accidents have taken place from falls of stone from roof or sides?—Yes, I know of several accidents in my own knowledge that have taken place on these travelling roads when men are going in in the morning and coming out at night.

30529. We will come to that. That is one of the reasons I think that in that district we need smaller districts for the firemen to examine and to travel over, or more men to do it?—Yes, that is one of the reasons: I say so.

30530. I am taking our Rhondda Valleys. What, generally, is the district allotted to firemen? Is it easy for them to accomplish the work to be done, or is there a general complaint that they have too large a district, and much too large a district?—The general complaint is that they are too large, and it is very very difficult to work, especially so having regard to the other duties that are thrown upon the men during the day.

30531. Have we had occasion to call the attention of the Mines Inspector to that more than once?—Yes.

30532. And by his kind interference I think in one or two cases matters have been improved?—Yes.

30533. Generally speaking, they remain the same?—Yes.

30534. What are the duties of the firemen?—Of course, if we commence with the first work which they do in the morning, they are supposed to examine all the working places where men are employed during the day, and also any places where the air is travelling into any district, and they examine all the working places in all the roadways.

30535. Generally speaking, our collieries would be about the largest collieries in any district in the country. You understand they are large collieries as a rule. What would be the size of the district? What would be the length of road a man would travel from the bottom of the pit to the entrance of the district?—Generally speaking, it would be anything from half a mile to three-quarters of a mile, taking the average, before he commenced to come into his district.

30536. What portion of the roadway would he have to examine?—By the Coal Mines Regulation Act he is supposed to examine every roadway. But supposing he starts with his district, he has 40, 50, or it may be 60 working places in the coal face. He is supposed to examine all those working places, to examine every road that leads into that working face, and it is a matter of impossibility for any man to be able to do it within the allotted time.

30537. I think you said you can cite instances where accidents have happened to men going in in the morning and coming out before the shift really commences?—That is so. These places would be passed by the fireman. The men would be coming to their work ready by seven o'clock, have their lamps examined and see the fireman. He would report on the state of their places, and they would then walk towards their working places, and in the course of walking towards those places they would meet with these accidents.

30538. There is no doubt at all; if it is necessary you can cite instances?—I have half-a-dozen now.

30539. (*Chairman.*) Accidents from falls of roof and sides?—Yes, taking place during the time the men are walking to their working places in the morning.

30540. (*Mr. Wm. Abraham.*) You suggest that the firemen have so much to do that they have no time to make an examination of these roads?—Unless the danger is such that it will force itself upon the sight and hearing of the fireman during the time he is rapidly going through the district, he cannot possibly find it out. I grant you that they are very careful with regard to the actual working faces to see that there is no danger to be apprehended from that source, but in walking the roadways they have such a distance to travel, because they commence with the working face here, No. 1 place, they come in over that roadway, examine the "face," go to No. 2, examine that working place, back again through No. 2 road, up through No. 3, and the distance they travel in doing that examination precludes them from being able to devote the time they should to the roadways.

30541. There is a way of passing through the faces without going backwards and forwards through the roads?—That is so.

30542. And the opinion is that a good deal of examination is limited to the faces only, at the expense of not examining the roadways?—That opinion does prevail, and to some extent it must be so having regard to the distance the men have to travel.

30543. That points to the necessity for having the districts smaller?—Yes.

30544. Or to having more men?—Yes: I do not like the idea of more men, if I may be allowed to explain what I mean. We do not want to have the firemen's duties done by deputy.

30545. I will come to that, because that has been given as a reason not to appoint more efficient men, but a greater number of firemen who can be aided in the first instance in the morning by another class of men, master hauliers or something like that?—That is so.

30546. Have we in the district some collieries where the examination in the morning is done by that class of men, and not by the fireman himself?—Yes: we find that there is a good deal of complaint arising amongst the men in consequence of that.

30547. That is to say, done in order to assist the fireman?—Yes, because the district is too large and he cannot do it himself.

30548. So that he, during the day, takes charge of a district in which there are a number of places he did not see in the first instance?—That is so.

Digitized by Google

30549. Come on: let us have it out?—I was just going to say there was one case brought to our knowledge some time ago, very lately, where three men were examining the district in the morning, one fireman and two deputies. Then the fireman would take charge of the whole of that district after he had seen the men to their work in the morning.

30550. In the next examination he himself would have to examine the whole district?—That is so.

30551. In addition to that he has to supervise the putting up of timber?—Yes.

30552. Has he something else to do?—Taking the time of the men generally, and in some cases he has to look after ventilation in the shape of putting up brattice doors, and so forth, look after the full coal, look after the output of coal generally in his district, which takes up a very great amount of his time.

30553. In a number of places during certain hours of the day the fireman becomes a kind of traffic manager?—Yes, that is so. *Mr. D. W. Morgan* 20 Nov. 1907

30554. He looks after the supply of trams, and so forth?—Yes.

30555. In your opinion that kind of work ought to be taken from him: he ought not to be obliged to do that?—I think it would be a great improvement if the fireman's duty was entirely confined to ventilation, and to looking after the safety of the men under his charge, travelling the roadways for the purpose of seeing that everything was being done properly as it should be done, in order to safeguard the lives and limbs of the workmen.

30556. What number of hours do these men work as a rule. We are in the Rhondda Valley now?—I am sorry to say that in a large number of cases they are very excessive hours, 13 and 14 hours are very general. They start at half-past three to four o'clock in the morning, and they are not free from the pit till five or half-past at night. Perhaps I should say there has been some change.

FORTY-FOURTH DAY.

Thursday, 21st November, 1907.

PRESENT:

Lord MONKSWELL (*Chairman*).

Sir LINDSAY WOOD, Bart.
H. H. S. CUNYNGHAME, Esq., C.B.
WM. ABRAHAM, Esq., M.P. (Rhondda).
ENOCH EDWARDS, Esq., M.P.
THOMAS RATCLIFFE ELLIS, Esq.
JOHN SCOTT HALDANE, Esq., F.R.S.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. DAVID WATTS MORGAN, recalled and further examined.

30557. (*Mr. Wm. Abraham.*) With regard to the long hours worked by firemen, their numerous duties, and so forth, is there a change of policy gradually taking place now?—Yes. At some of our largest collieries they have initiated a new method altogether, and I am very pleased to say that at the Lewis Merthyr Collieries and the Cambrian Collieries, as we call them, they have fully adopted the system now of an all round eight-hours shift for the firemen.

30558. It has been in existence for some time at Lewis Merthyr Collieries, has it not?—Yes.

30559. With what results?—Very beneficial results so far as the safety of the men is concerned. It has had a material effect upon the number of accidents taking place.

30560. (*Chairman.*) Have you statistics to show that?—No, I have not statistics to show it.

30561. It would be more satisfactory if we could have statistics to show that the eight-hours shift had been instrumental in reducing the death rate from accidents—That information could be supplied.

30562. (*Mr. Wm. Abraham.*) You remember that one of the firemen said that only one fatal accident has occurred since that system has been in force?—That is so.

30563. In your opinion, a general adoption of that system would immensely reduce accidents in mines?—There is no doubt about that at all.

30564. Are you able to give any reason for it, in your opinion?—The men are now fully employed at the actual working places in the coal face, and they do not go from their district at all.

30565. (*Chairman.*) Then there is another reason besides the eight-hours shift that the safety of the miners is increased, in your opinion; the other reason being that the firemen only attend to duties in connection with safety, and not to other duties?—That is so.

30566. (*Mr. Wm. Abraham.*) So that they are enabled to make, if I am correctly informed, an inspection in addition to the inspection ordinarily made in other collieries?—Yes. *Mr. D. W. Morgan* 21 Nov. 1907

30567. And they are making that inspection when they are going down fresh from the surface?—That is so.

30568. So that in that case there has not been any place which has been left for a long period without being thoroughly inspected by the fireman?—It would be inspected within the course of a couple of hours or so each time.

30569. And that, in your opinion, has created beneficial results?—That is so.

30570. I think you have expressed dissatisfaction with Government inspection?—Yes.

30571. In what direction?—The area to be covered by the inspectors at the present time is so large that they cannot possibly give the time to it, so that it becomes, as I will call it, a kind of inspection by sample: there is only a part of the mine, and a very small one at that, being examined at the time.

30572. In your opinion, that is inadequate and very unsatisfactory?—Very unsatisfactory. I should like to say this to the credit of the present inspectorate that they are doing their work exceedingly well, but they have not got the time to devote to the inspection which they should devote to it. We have a number of cases where we have had to call the attention of the inspectors to matters, the men not being quite satisfied with the condition of the mine; we have called attention to the number of accidents taking place, and we have called upon them from time to time, until they have all their work cut out to deal with the work in the way in which they are doing at the present time, which does not deal fairly with the mine.

30573. That is to say, briefly, there is too much work for them to be able to do?—It is out of any reason.

Digitized by Google

Mr. D. W. Morgan
21 Nov. 1907

30574. You spoke about another class of inspectors in addition to the two classes we have now. What qualification would you give them?—I should like to see the practical side, so far as is possible, being adopted in the election of working-men inspectors.

30575. I think you state that the workmen now are not carrying out General Rule 38 with regard to the men's inspection?—Yes, I do.

30576. Do you think that as a rule those inspections are satisfactory?—Far from it.

30577. Are they more extensive than those made by the inspectors?—Yes. When they are made, of course, the whole of the mine is examined from end to end.

30578. In what respect do you say they are far from being satisfactory?—The men are not in an independent position so as to be able to make a true report of what is in the mine; I mean, they are to a very large extent, of course, dependent upon the goodwill of the officials of the colliery, and because of their not being independent, they are in most cases not able to give a correct and true report of what is contained in the mine.

30579. That is a serious statement. Do you think that is truly so?—I can cite an instance in my own case where I was taken back the second time to see the condition of a mine which we had condemned upon our first inspection, and I know of other instances where workmen have been dealt with; and although we cannot exactly prove that it is the result of their having made reports, it is very peculiar that the men are shifted away from the colliery—dismissed for some other offence.

30580. (*Chairman.*) I should like to quite understand what your complaint is with regard to your own report. You say that you were told to look at the mine again with a view of modifying your report?—Yes.

30581. Did you modify your report?—No.

30582. Then what happened?—The report stood as it was; nothing happened in my case. Perhaps it would be best for me to relate the incident to you.

30583. Yes?—I was one of two who were going round the mine, and we made a report, and the fireman called in question the report; and I daresay when he got it that afternoon, or sometime during the day, the manager called the fireman's attention to the report.

30584. It was the fireman who complained of the report?—Yes.

30585. And then the manager said that you had better look at the mine again, and say whether your report was correct or not?—No. This happened on the following day. The following morning when I went to my work I was asked to go and see this place the second time by the fireman.

30586. (*Mr. Cunynghame.*) What did your report say was wrong?—The return airway of the district was blocked and had not been attended to, and we made a note in the report that the airway was not in a proper condition.

30587. (*Chairman.*) I suppose that was reflecting on the fireman, whose duty it was to see that the airways were all right?—That is so.

30588. And the fireman who was implicated then objected to the report, and said it was an unfair report?—He asked me to go the following morning to see this place, and to make another report upon the condition of the return airway.

30589. You did so, and you stuck to your former report, and nothing happened?—We did not make a second report. We went to the place to see that it had been done, and we found that people had been engaged that night.

30590. You mean engaged in putting it right?—Engaged in putting it right.

30591. But you still stuck to your report that it was wrong at the time you made the report?—We allowed the report to stand.

30592. You did not modify your report in any way, and that report still stood?—Yes.

30593. What was the nature of the obstruction?—The place had been allowed to gradually close, and a fall had taken place there, with the result that there was a stoppage of air.

30594. That fall was removed, and then the air went round as usual?—Yes; that was, of course, remedied by the rubbish being removed from the road.

30595. (*Mr. Wm. Abraham.*) Was it a recent fall?—No, it had been of some standing.

(*Mr. Ratcliffe Ellis.*) Of course the return airway could not have been long blocked?

30596. (*Mr. Wm. Abraham.*) I think we are bound to get into this, although it is unpleasant to do so. Is it not within your knowledge that in many instances men are asked to go the second time to inspect places before making their reports on the books?—Yes.

30597. (*Chairman.*) That is to say, that if the management see the report and have reason to suppose, or imagine they have reason to suppose, that the report is unduly unfavourable to the condition of the mine, they ask you to go again and verify what you have said?—Yes, that is the case.

30598. Do you know of any instance in which a man has been dismissed, or in which anything has happened to him because he has stuck to his former report and refused to modify it?

30599. (*Mr. Wm. Abraham.*) That is not exactly clear, if I may say so. Has not your attention been called to cases where men, having gone round the first day, made a verbal report, and were asked to go down the second day before they put a report on the books?—Yes, we have had such cases.

30600. But the question is this: is the report on the second day what it was on the first?—No, because in that case it had been modified on the second inspection.

30601. (*Chairman.*) The point is that, although there was something wrong with the mine and the report said there was something wrong one day, before the next day what was wrong had been put right again, and the consequence was that the first report, which said that something was wrong with the mine, never saw the light at all?—That is the case. It is quite a common matter, if I may be allowed to put it in my own way, that when the inspection by workmen is taking place there is a good deal of carrying of brattice cloth, and all that kind of thing—everybody in the mine knows for hours before they see the inspector that there is an inspection to be made under General Rule 38.

30602. That is one thing, and I understand that. Then the next thing is this: besides that you say that if a man makes an unfavourable report of the mine it is apt to go against him. That is your experience?—That is my experience.

30603. Or, whether it is apt to go against him or not, he is afraid of it doing so?—That is so. I should like to say this, in fairness to the manager and perhaps the owner of the mine, that they would not be parties to this kind of thing, and they do not know of it, but it is the under officials who are the men upon whom the report will reflect, and it is the under officials, the firemen and the overmen, who continually deal with the workmen in their working places, and it is such an easy matter to find something objectionable in the conduct of the workman, and to find an excuse to dismiss him.

30604. You say you do not find fault with the management so much as with the under officials?—That is so, my Lord.

30605. Do you think it is the fact that the under officials are apt to afterwards bear a grudge against the man who has reported unfavourably as to their conduct, and that it is rather a dangerous thing for a man to do?—A very large number of our best men have been dismissed for some trivial offence or the other, and it is the best men whom we often try to find to do this kind of work. The result is that those best men now refuse to do the work at all, and the inspection is simply a sham.

30606. (*Mr. Wm. Abraham.*) I will put it straight to you: you in that district have no charge to make against head officials?—None whatever.

30607. As a rule they court these examinations?—Yes.

30608. And notwithstanding that the report of the first day is not the report written on the books, when an inquest occurs, these books of the second day's report are brought up as evidence on the condition of the mine?—That has been the case in the past in several instances. It is put as evidence of the good condition of the mine from time to time as inspected by the workmen.

30609. Let us be fair again now. How long have you been a Miners' Agent?—Nine years.

30610. During that time things have been improving?—That is so.

30611. And yet still we in our district fail to get our best men to conduct these examinations?—We have

Digitized by Google

raised the matter, as you know, continually at our monthly meetings, and we have been trying to induce the workmen by all manner of means to carry out these inspections.

30612. We offer to pay for them?—We offer to pay for them from our own funds, but still there is a great reluctance on the part of the men to have anything at all to do with it: indeed, we cannot get our best men to do it at all, because they are not in that independent position of being able to say what they think they ought to say.

30613. With regard to travelling roads, you have recommended widening of the travelling roads?—Yes, for the people who have to use the roads in the transit of coal—in bringing out of coal to the pit bottom.

30614. Would it not be practicable to get the return airway done in such a way that it could be made into a travelling road?—Yes, we have been agitating for years in our district that every return airway at least should be kept so that a tram and horses could at all times travel through it from end to end, and it was with a view of its being kept as a travelling road for the people, especially during the day and at the end of the shift if the machinery is working, so that by keeping the returns in that condition they would be serving two very useful purposes: first of all it would be a way of return for the men from the work and to go in, and in the second place it would be a material advantage in the ventilation of the mine: it would secure better ventilation at all times by that road being kept in a travelling condition.

30615. These return airways as a rule are running parallel with the intakes?—The return airways run parallel with the intakes.

30616. So that it is simply a question of cost to do that, and to keep it in repair?—Yes.

30617. You said something yesterday about boys being allowed to carry lamps back to the bottom of the shaft to be re-lit?—Yes.

30618. Does that occur frequently: has a good deal of it been done?—Yes. During the whole of the shift, according to the number in the colliery, there would be a lot of work of this kind to be done; I mean, if the colliery was employing 400 or 500 men, there would be at least four or five of those boys continually travelling back from the face to the pit bottom in order to get their lamps re-lighted.

30619. What we call a "collier boy"?—A collier boy.

30620. Supposing there is a man and a boy working together, have they an extra lamp?—No.

30621. Then how does the boy take the lamp back at once to be re-lit?—He borrows a lamp from someone else who will be working close by, or perhaps, if there is nothing for his partner to do, he takes his partner's lamp, and that partner has to be in the dark until he comes back.

30622. Could this kind of thing be put an end to: could the distance be shortened by any appliance?—Yes.

30623. Do you think that could be done with safety: that is the point?—Yes, I think it could be done with safety, and even in a case in which that could not be done I would suggest that an adult person, who is competent to look after himself, should be employed to carry the lamps back from the parting to the pit bottom, and not to allow this great risk to be run by the boys.

30624. (*Chairman.*) You think there might very well be places where safety lamps were kept under lock and key—in a cage, we will say?—That is very difficult to do, because lamps kept in that way are not very satisfactory to the workmen.

30625. How do you mean? There is a deputy or somebody with a key who can go and open the cage and take out the lamp that is already lit?—Yes; but if there should be a large number of lamps burning in the kind of place you describe, they would get into such condition that they would not be of much use to the collier.

30626. Still, that is a common thing to do, is it not—to have lamps placed in cages or places where they cannot be got at, being under lock and key, except by the officials?—That is not the case with us. We have no lighted lamps kept anywhere underground to any extent.

30627. That is done in some parts of the country?—Yes.

30628. (*Mr. Wm. Abraham.*) Have you anything to suggest with regard to lamps being given to the men in the morning, and every man having his own lamp?—I think there should be a rule rigidly enforced with regard to lamps. The reason why I advocate that is that there is greater care then taken of the lamp by the man, and the officials have an opportunity of seeing how that lamp has been looked after when it comes back into the lamp-room. Unless a register is kept, and that same lamp is given to the man each day, a lamp may be brought back to the lamp-room damaged in a very serious way, and there is no possibility of tracing the offence the next morning. At a colliery where we have had some trouble with regard to this, the management complained that their lamps were being continually broken and so forth, and we found that the reason for that was that the lamps were even left lying about by some of the workmen who got careless in the matter, and the lamps were being damaged in that way. We strongly advocate a register being kept so that there should be that fear always hanging over the head of a man that he must properly look after his lamp and see that it is taken back to the lamp station.

30629. When the lamp is taken back it is known that it is his lamp and no one else's?—Yes, and if anything does happen to it then he has to render an explanation as to what has taken place.

30630. Then in the case of an explosion, or anything of that kind happening, it is more satisfactory too, is it not, that it should be known what lamps are out and with what men the lamps are?—Yes, that is another reason. It was of great advantage to us in the National explosion, which you know took place two years ago.

30631. And the absence of such a system was a disadvantage somewhere else?—Yes, such as the Albion colliery and the Cambrian colliery; we had a great deal of difficulty in the Cambrian colliery in identifying the man, because there was no regular lamp being given out to each man each day. In those cases, of course, we could only know the men by knowing that they were put in a certain place to work.

30632. (*Mr. Cunynghame.*) Have you had in your mine, or in any mine that you know of, any re-lighting arrangements?—Do you mean re-lighting batteries?

30633. No, I was speaking first of an apparatus which is largely used in Germany, called the Wolf re-lighting arrangement: they have a little coil of paper with some phosphorus on the paper inside the lamp, and then if you pull a trigger the paper ignites and re-lights the lamp. You have not seen them, perhaps?—I do not think they are in use in our district, but I have seen them.

30634. I should like to know whether you have any opinion as to them?—No, I cannot offer any opinion with regard to that.

30635. I want to get your impartial view upon this point: it has been thought by some people that it is unwise to allow a miner to have any means of re-lighting the lamp, even if it were quite a safe means of re-lighting, without having the lamp examined by a totally independent person. What is your view upon that?—I quite agree with that view: I think the lamp ought to be examined.

30636. From the mere fact that it goes out, it should be put through a good examination by somebody other than the miner. The question is, is the miner to be trusted to examine it before he re-lights it?—I think it would be much more satisfactory to have that examination made by a competent person appointed for the purpose.

30637. Then you would rather be inclined to think that if these re-lighting arrangements were found after experiment to be quite safe, as the Germans think they are, it had better be done not by a mere button which anybody could press, but by some form of key which only the authorised person would have?—That is so.

30638. Have you discussed that matter with others?—Yes, I have paid some little attention to the system we have in our district. The only objection which we offer to the lighting machinery which we have is that the owners sometimes leave that unattended, with nobody in charge of it. You know we have got the electric batteries underground.

30639. Yes, so that anybody could use it?—Yes. We think it ought to be placed in such a position and also in charge of someone who would know exactly how to use it.

30640. That may be stronger still, having regard to the fact that boys appear to be entrusted with lamps also?—Yes.

30641. With regard to the electric re-lighting, have you got an electric arrangement for re-lighting in your mine?—Yes, at several collieries.

30642. In the ones that you are familiar with?—Yes.

30643. Do they act well or not?—I think on the whole they act very well, but the complaint we have, as I have

Digitized by Google

Mr. D. W. Meryon

21 Nov. 1907

already indicated, is that they are left unattended in those places.

30644. If there was some such arrangement made that they could not be used without the use of a key which would be in the possession of some authorised person, would there be a way of meeting the objection?—I think so.

30645. I want you to deal with this question very much from the Home Office point of view so as to get your opinion. I put it to you that otherwise the apparatus is on the whole safe, so far as you know ?—I think so. Of course it is well known, since a recent explosion which occurred in our district, that it is possible to have a light from it—I mean outside the light to the lamp—and that is why we say it ought to be in charge of somebody who would understand it.

30646. You mean that has happened in a case in which it was not properly used, and it was left unlocked ?—That is so.

30647. But I suppose if it is really looked after and used properly, on the whole it is safe as at a re-lighting-station, if it is put in a safe place ?—I think so.

30648. Do you happen to know whether it is a high tension or low tension re-lighting arrangement that you have ?—I think it is low tension.

30649. With a battery ?—Yes.

30650-2. (*Mr. Ratcliffe Ellis*). Who is your inspector ?—Mr. Fred Gray.

30653. You say that the inspectors do their work satisfactorily ?—So far as I know we have no complaint at all. I think they do it exceedingly well, if I may be allowed to say so.

30654. Are they properly qualified to do the work they have to do ?—Yes.

30655. Have they worked at the face before they inspected, do you know ?—I could not say. I do not think so.

30656. At all events, whatever their training has been, they are thoroughly qualified men for their work, but they have too much work to do, that is your complaint ?—That is our complaint.

30657. As to these gentlemen, whatever their training has been you have no complaint to make with regard to their qualifications ?—I think they do their work remarkably well.

30658. With regard to the third class of inspector that you suggest should be appointed, what would his duties be ?—He would practically do what is being done by the workmen now, except perhaps he would do it more thoroughly, and he would be in an independent position to make a report. He would examine the mine—not a part of it, but the whole of the mine in its turn.

30659. You agree, I suppose, that a man who is to make that inspection ought to be in an independent position ?—Yes.

30660. With regard to the men who you suggest should make the inspection (I am speaking now about the third grade of inspectors) do you honestly consider that they would be absolutely free from any influence on the part of the men—any leaning towards the men ?—I did not quite follow the first part of your question.

30661. I want you to carry your mind in this direction, you agree that a man to be a proper inspector ought to be independent both of employers and workmen ?—To a certain extent, yes.

30662. Would the men whom you propose be men who were free from any influence on the part of the workmen: would they be independent of the workmen ? They would be independent of the employer: that is why you suggest them: but would they also be independent of any influence from the men ?—Oh yes. Of course they would have some leaning, certainly, but they would be independent of any influence.

30663. They would have some leaning towards the men ?—Yes, undoubtedly.

30664. You object to the inspector having a leaning towards the employer ?—I do not know that I do.

30665. I want to know whether you do or not. Do you ?—Well, to a certain extent one would, I daresay.

30666. I ask you whether you object to it. You would object to an inspector having a leaning towards the employer. Why do you not say that you do object to it ?—I should say yes, then, in this case.

30667. Is it not equally reasonable for an objection to be made to an inspector who has a leaning towards the men ?—Yes.

30668. You will agree with me that whatever he is, he ought to be in a position independent to both ?—Yes, I have already said so.

30669. A Government inspector, a man appointed by the Government, we suppose would be independent of both ?—Well, I do not know so much about that: I should not like to guarantee that upon every occasion.

30670. But that is one of the qualifications you would expect to find in a Government inspector ?—True.

30671. You do not find in the Government inspectors with whom you are acquainted that they have any leaning to either one side or the other ?—I do not know that is not the case, because naturally they are selected as a rule from amongst that class—from amongst the managerial department—and they certainly have a leaning towards employers.

30672. Then is your view this, that because a man is selected from a particular class he must necessarily have a leaning towards that class, and he cannot exercise an independent judgment ?—Well, is it not natural for him.

30673. Is that the view which you take ?—Yes.

30674. You start off with that impression ?—Yes.

30675. I suppose the third grade inspector whom we have been speaking about would be a Government inspector appointed by the Government ?—Yes.

30676. What would his duties be ?—To examine the mine, the working places and roadways.

30677. What would he examine them for ?—To find out what the condition of the roadways were, so far as timber and their general safety were concerned, and to examine the working places and to examine for gas.

30678. In fact he would do the same work as the chief inspector would do if he had time to do it ?—Yes.

30679. Then why should he be less qualified ?—It is not a question perhaps of being less qualified.

30680. I want you to forget for the moment the question of class altogether and wipe that out ?—Yes.

30681. Why should he be less qualified to do this work than the the chief inspector ?—I do not know that he would be less qualified to do this work which we ask that he should do now.

30682. You think he ought to be similarly qualified ?—No, that is not what I mean. What I say is that for the work of inspecting the colliery, so far as its general safety with regard to gases and so forth is concerned, I do not know that the man I have in my mind would be less qualified for that particular work. If it came to a question of deciding with regard to the machinery of the colliery, say, such as the winding engine and the other things, it is there that the theoretical part and the qualification of the chief inspector would come in.

30683. But is not the great danger you wish to guard against the danger in the mines down below ?—Yes, that is the one object that we have.

30684. That is the great danger you want to guard against ?—Yes.

30685. Why should he be less qualified for that particular work than the chief inspector ?—Because we do not regard the qualification required for that work as being so high as in the case of the chief inspector.

30686. Why not ? That is what I cannot understand ?—Because that qualification is not necessary.

30687. He is to have a knowledge of ventilation ?—Yes. A man who has been 10, 15 or 20 years in a mine would know all that is required to be known in connection with the system of ventilation, the system of dealing with gases, and whether roadways would be in proper condition with regard to timber, and so forth.

30688. Would you even appoint a man who had not a certificate at all of any competency ?—Under certain conditions I would.

30689. What conditions ?—Supposing we had two men to select from, and one had a vast experience behind him and the other had but only very little experience, but held a certificate in mining, I would much prefer, if I were asked to select which of those two men I would trust and appoint, to select the man who had the vast and wide experience behind him in preference to the other man.

30690. Then you do not think it necessary that firemen should have certificates; experience would be sufficient?—

Digitized by Google

Yes, I do not think a certificate is necessary, but I think an examination should be made.

30691. You do not agree with the necessity for engine-winders having certificates, but experience is what you would rather go by?—Well, I do not know exactly what you mean by "certificates." Perhaps I am misunderstanding you.

30692. Certificates after examination?—I am of the opinion that an examination should be made of firemen to test their efficiency.

30693. But if the sub-inspector who has to have charge of this place can be selected for his experience, why should a fireman not be selected for his experience?—The sub-inspector, I daresay, would be examined.

30694. If you say that he must be examined, and that he must pass an examination and have a certificate, we agree; but if you say, as I understand you to say, that you would appoint men from experience in preference to men who have passed an examination, that is a different thing. I understood that that was your view?—My view is that it is not always a guarantee of a man's capability that he has secured a certificate.

30695. Then you would apply that also to firemen and to engine-winders with reference to the point of having a certificate?—Yes.

30696. Have you the Act of Parliament before you?—Yes.

30697. Will you kindly refer to Section 39: "A Secretary of State may from time to time appoint any fit persons to be inspectors (under whatever title he may from time to time fix) of mines, and assign them their duties, and may award them such salaries as the Treasury may approve, and may remove any such inspector. Provided always, that in the appointment of inspectors of mines in Wales and Monmouthshire among candidates, otherwise equally qualified, persons having a knowledge of the Welsh language shall be preferred." What do you want beyond that? That gives the Secretary of State power to appoint as many persons as he may think fit, if they are proper persons, with the additional qualification that if they are to go into the Principality they must speak Welsh. What more do you want than that?—If they are prepared to appoint a sufficient number even of those, it would remove to some extent our objection and remove our complaint.

30698. But what I am speaking about is that the power exists now in the Home Office to do all you ask they should do, namely, appoint an additional number of inspectors. There is no limit, you see. All they have to consider is whether they are fit persons?—Of course I do not know what is the reason, but I daresay it is the question of cost which prevents them appointing a larger number than they do at the present time. At any rate, that is what has been said.

30699. As a matter of fact, there is at the present time a power at the Home Office to do all that you ask should be done?—That may be.

30700. Then it is so, we agree?—Yes, but they do not appoint.

30701. If you have a sufficient number of inspectors appointed who are fit persons—it does not matter what class they come from if they are fit persons—to do such inspection as you think is necessary, is it then worth while having any inspection at all under General Rule 38?—As I said yesterday, I think if we had a sufficient number of inspectors, so that the mine could be examined within the time laid down in the Mines Regulation Act, within a reasonable period, that General Rule could be done away with—it could be repealed.

(*Chairman.*) You would not call a month a reasonable period? The period which is fixed for the men to make the examination under Rule 38 is, if they choose to do it, once a month.

(*Mr. Wm. Abraham.*) At least once a month.

30702. (*Chairman.*) At least once a month. Would you suggest that a sufficient number of sub-inspectors should be appointed to examine the mines thoroughly once a month, or do you not think that would be necessary?—No, I think that would be perhaps asking too much; but I think the mines ought to be examined thoroughly at any rate within three or four months.

30703. That is to say not less than three or four times a year?—That is so.

30704. (*Mr. Ratcliffe Ellis.*) You disapprove of fining as a punishment for offences?—Yes.

30705. Of course you know that there cannot be a fine inflicted without the man's consent?—That is so.

30706. But even safeguarded in that way you disapprove of it?—Yes.

30707. I suppose men are not so perfect in South Wales as to make it unnecessary to punish for breaches of the Mines Act. It is necessary that there should be some punishment in order to secure discipline and to secure safety?—Yes.

30708. If a prosecution has to be taken in every case, I suppose the first step would be that some of the officials of the mine have to go down to the magistrate's clerk's office and take out a summons?—That is so.

30709. They are taken away from their work and their duties probably for a day; I do not know how far away from the pit the magistrates' clerk's office may be, but probably for a day the official would be away from his duties getting the summons. That is the first step; do you agree?—Yes.

30710. Then the case has to be heard before the magistrates, and again the official has to be away from his duties?—I agree.

30711. It happens in some districts—and perhaps it is so in South Wales—that there is not a magistrate sitting on the Bench who could try the case; they may be all either colliery proprietors or their brothers, or miners' agents, and so on. Do you find that is so?—No, we do not find that very often in our district.

30712. You are free from that. Then at any rate it takes another day there; and then the question of cost in connection with the prosecution is considerable to the owner?—No doubt it is.

30713. You wish discipline to be maintained, I suppose?—Yes.

30714. Do you not think that if a prosecution had to be taken in every case a good many breaches of the rules would remain unpunished altogether?—I do not think so.

30715. If they did remain unpunished it would be prejudicial to discipline?—If they did, yes.

30716. Therefore you do not think that if you say to an employer, "Now the only way in which you can punish an offence against discipline is by going to this great expense, and taking your official away from his work," there is a chance that he will leave the offence unpunished altogether?—I do not think so; at any rate, speaking for our own district, I do not think that would be the case.

30717. Do you think that in the numberless cases of small breaches of the Act they would go to the expense of prosecuting in each case?—I think so. At any rate they ought to.

30718. Supposing they did not choose to do that; then, in your opinion, would discipline suffer?—No, I do not think it would if the plan which I advocate were adopted, of taking all these cases to Court, because there would be so many less offences against the Act if that were done.

30719. Then you think force is a remedy in that case?—You know the fear of the police court held over the men in that way would have a very salutary effect upon their discipline in the mine. [redacted]

30720. How long do you think it would take in South Wales to bring that salutary effect into operation?—I think we are decidedly improving now. We have had in some cases a system creeping in of finding men at the colliery office, but not to a very large extent; but since it has been done away with entirely the men are taken to Court, and it has had an appreciable effect upon the conduct of the men.

30721. Now I will ask you about the Special Rules. You know that under the Act now there is an obligation put upon the employer to propose Special Rules when he commences working a pit?—That is so.

30722. You propose to alter that?—To the extent of inviting the parties who have to live under those rules to be a party to the framing of them.

30723. Supposing your view was carried out, and that before an owner could propose a rule he should have to invite the men, would you entitle him, whether the men agree or not, to go on and propose a rule, or would you say, "You shall not propose the rule unless the men agree that you shall propose it"?—I do not know that I would prevent the owner from carrying out what is provided in the regulation at present of going to arbitration with regard to the matter in dispute.

30724. But he goes to arbitration at a later stage; first of all the rule has to be proposed to the Home Office?—Yes.

Digitized by Google

Mr. D. W. Morgan

21 Nov. 1907

30725. Then if the Home Office and the employer do not agree, the matter goes to arbitration. But you want to say that before the owner shall propose the rule he must invite the men to discuss it with him?—Yes.

30726. What I want to know is this: at that invitation are the men to have a veto, or are they merely to be allowed to say what they like, and then the owner is to go on and propose a rule, whether the men like it or not?—In case they may fail to agree I do not know that I would veto the right of the employer to still propose the rule, provided that the workmen had an opportunity upon the same footing exactly as the employer before the Secretary of State, or before any arbitration occurs.

30727. What I suggest to you is that, instead of having the men intervening before the rule is proposed, before the rule is established it should be advertised by the Home Office, and that the men should then have an opportunity of stating any objections they have to the rule and having those objections decided by arbitration?—In my opinion that would be rather a cumbrous way of getting at the matter, and once the rule had been framed it would be much more difficult to get the owner to agree to change that.

30728. But do you not see the owner is absolute; he can say, "The Act of Parliament may allow you to come here, but now I am going to propose this rule." The owner is absolute even on your own scheme, and what I suggest is that the coming in of the men should take place when the rule is proposed?—I do not agree with you. I want the men to come in at the first going off, when there is an inducement to the owner to frame the rule in such a way that the men will have no objection to it.

30729. You quite agree that, whatever the result of that conference may be, the owner can propose a Rule as he thinks fit?—I would not veto his right to do so.

30730. That is to say, that he can propose the Rule?—That is so. After they have failed to agree, if the workmen and owners have failed to agree.

30731. (*Mr. Wm. Abraham.*) The probability is that in nine cases out of ten they would agree?—Yes. That is what I suggest. That is my experience.

30732-7. (*Mr. Ratcliffe Ellis.*) With reference to safety lamps you say there should be a standardised lamp, and that there ought to be one safety lamp in each district. Why should there only be one?—The workmen would become familiar with it.

30738. But would not that be rather establishing a monopoly?—It may be so, but I would even risk that evil to get a lamp in the hands of the workmen as to which everyone was acquainted with all its parts and everything in connection with it.

30739. Yes, but the risk you are running is not yours: the risk is that of the employer, and if he is compelled to buy a particular lamp he might have to give a good deal of money for it. It is not your risk that you are running?—That may be true: I have not looked into that.

30740. Do you seriously think that if there are a number of lamps pronounced to be satisfactory by some official test it would make much difference to you what lamp the employer used?—It does make a big difference in our district, because we have a large number of unskilled workmen brought into the district, and these lamps are given into their hands, and the workmen, not knowing in some cases with regard to the lamp itself, there may be changes brought about in the colliery so that these people would not be able to know and would not be able to deal with the lamp. We have also a very large number of young lads employed.

30741. I suppose any lamp would be a mystery to them?—To some extent, yes.

30742. However, your view is that you should be able to say that there should be only one particular lamp. With regard to shot-firing, do you usually fire shots in the roadways when the men are in the mine?—No, they are fired between the shifts, generally speaking. Of course we have some collieries where the shots are fired by the men.

30743. But not many are fired in the roads, I should think?—No, not a large number.

30744. Have you any suggestion to make beyond what is provided for in the Rules under the Act of Parliament as to shot-firing in roadways. Is there any further precaution you would suggest?—Yes. I think the explosive to be used ought to be under the control, and the detonator ought to be in the charge, of a competent person who would be employed in going through the roadways in which shot-firing is required, and who would do all the work in connection with charging the holes.

30745. We will speak about the roadways and not the coal for the moment?—Yes, I am speaking of the roadways.

30746. Is not that the case now?—No.

30747. What is your practice in South Wales now as to shot-firing upon the roadways?—A man would bore the hole———

30748. What man?—The man in the working place.

30749. I am not talking about firing shots in coal, but in the roadways?—I am speaking of the roadways where the men rip the top themselves—the men who are working in the working places carry on and rip so much of the top.

30750. It is only at the immediate entrance to the working place?—No, almost the length of the road.

30751. How far away from the working place does the collier, the coal getter, rip the top down?—They would carry this thickness of ripping down with them as far as the tram would go.

30752. On to the main haulage road?—Yes, from the main haulage road up to the end of the road.

30753. What distance would that be?—40, 50 or 60 yards, as the case may be.

30754. (*Mr. Smillie.*) The ripping is done almost at the face—within a few yards of the face?—Yes.

30755. Mr. Ellis is now dealing with the part back in the road. The colliers do not bore holes out in the main haulage ways?—No, not in the main headings. I beg your pardon.

30756. (*Mr. Ratcliffe Ellis.*) We will come to the face afterwards. Who drills the holes in the roadways?—The staff of men we call the repairers.

30757. Are they competent?—Yes.

30758. So that you have no objection to make to that practice? Then who charges the holes?—The men who are employed on the job—the repairers.

30759. Are they competent to do that?—Having regard to our experience, they are not at all times as careful as they should be.

30760. Nobody mortal is wise at all hours?—No.

30761. But, generally speaking, are they competent men who do it?—Generally speaking, perhaps they would be.

30762. Who fires the shots?—The shotsman—the shot-firer appointed for the purpose.

30763. Then he is a competent man?—Yes.

30764. He goes down between the shifts and fires those shots?—Yes, or he has done it already.

30765. Have you any arrangement by which, before a shot is fired in the main haulage roads, it has to be brought before somebody other than these repairers to see whether the shot should be fired, and to deal with the conditions under which it should be fired, and the weight of explosive that should be put in—in fact, all the details with reference to the shot? Has that to be decided by some official superior to the road makers?—Yes, generally the under-manager.

30766. Then you have not any suggestion to make beyond that?—Do you mean with regard to shot-firing?

30767. Yes?—Oh yes. I suggest that the stemming or the charging of all the holes that are to be fired ought to be done by the shotsman.

30768. I understood you to say that so far as the charging is concerned you had no fault to find with that. It is charged by a competent person. I am speaking now of in the roadways—not in the coal, or in the immediate access to the coal?—That is what I am speaking of, too. We find instances taking place now and again of accidents in shot-firing.

30769. Are those accidents frequent? I understood generally you thought those men were competent?—We have had quite a large number during the last two or three years.

30770. You think even with reference to shot-firing in roadways, the men who charge the shots now are not competent men. They can drill the shots, but they ought to be charged and fired by a specially appointed official?—That is so.

30771. With reference to shot-firing in the coal, is that done during the shift?—I could not speak as to that. We have no shot-firing in coal in our district: I am only dealing with shot-firing in the roof.

Digitized by Google

30772. (*Mr. Smillie.*) In the ripping ?—Yes.

30773. (*Mr. Ratcliffe Ellis.*) So far as shots are fired in the ripping, are they fired between the shifts or during the work ?—Between the shifts.

30774. So that you have no shot-firing there except between the shifts ?—That is so.

30775. What is the explosive which is generally used there ?—It varies. Gelignite or Roburite is the explosive used in the roadways, generally speaking.

30776. Are they fired by electricity ?—Yes.

30777. The man who has the detonator is not the same man who has the explosive, is he ?—That is part of the system that we make some complaint with regard to it. The detonator is given out by the shotman, and may be lying about for hours before it is used.

30778. That is a breach of the rule, surely ?—It is a breach of the rule, but how can you detect it ? Supposing the shotsman is being sent round the colliery at about 12 o'clock, he goes round at 12 o'clock in the day, and if he has 10, 15 or 20 holes to be fired he starts at 12 o'clock and goes round and gives a detonator to the first man, another to the second, and another to the third and fourth, until he has covered the district.

30779. But do you ever find any of these detonators in the coal ?—They have been found even sent out with the rubbish. They have been found in the rubbish tip on the surface at one colliery in our district.

30780. That is a very infrequent occurrence, I should think ?—It is an infrequent occurrence, but it was rather startling when we did find it.

30781. I suppose you think there ought to be more care exercised in regard to this matter ?—Yes. We think the explosive and the detonator used should be in the custody of the man, and that the shotsman who is in charge of the district should charge the hole himself.

30782. Have there been many accidents in consequence of the absence of such a regulation as that ?—I could not say that there have been many accidents in consequence of that.

30783. But you think it would be safer to have such a regulation ?—We think it would be safer. We should be much more satisfied.

30784. With reference to the travelling roads, you propose to use the return airway for travelling ?—I think it would be safer than the present method.

30785. But is the return airway a place in which people should be encouraged to go ? You see you cannot light lamps in the return airway ?—No, but that would only be used for travelling in and out from the mines.

30786. But is it a nice place to travel in ?—It is not nice, but you sometimes prefer doing that when you have got it safe. It is quite true that the atmosphere there is not very pleasant, but it would be much safer.

30787. You suggest that as the alternative to travelling along the haulage roads when the machinery is in motion ?—By all means.

30788. When the men go into the mine in the morning is the machinery in motion ?—No, it is idle at that time.

30789. So that so far as that goes there is no great danger in getting into the mine ?—No.

30790. It is the coming out of the mine—they cannot come along the roads when the machinery is in motion ?—Yes, at the end of the shift.

30791. Is it generally the case that the machinery is in motion as they are coming out ?—Yes.

30792. You think that however disagreeable the return airway might be from an atmospheric point of view, yet it is safer than passing along the haulage roads when the machinery is in motion ?—Yes, and especially so during the day, more than at the end of the shift: men require to come out then.

30793. The only cases of men coming out are cases where men go to light their lamps ?—But there is a good deal of trouble from that; you find ordinarily 5 per cent. or 10 per cent of the men at least require to come out at some time during the day to go up the pit.

30794. That is where the danger is ?—Yes.

30795. Are these haulage roads originally constructed wide enough to have a travelling road at the side ?—In some cases they are. I have seen cases where that system which I have pointed out of having room at the side is kept.

30796. But are they generally sufficiently wide, if they are kept at their original width, to make sufficient room for a travelling road alongside of them ?—If they were kept as wide as they were originally, then that would be the case. But what I should like to explain is this: what we complain of is that rubbish, timber, ropes, and everything else are oftentimes allowed to accumulate on the roadways, especially on these engine planes.

30797. (*Chairman.*) Is not that contrary to one of the General Rules, which provides that the roadways should be kept clear ?—The roadway itself would be kept clear; this would only apply to the sides.

30798. But then the side is a roadway: it is a place where people walk, is it not ?—No, I am afraid not within the meaning of the Act.

30799. (*Mr. Wm. Abraham.*) There is one question which I should like to put to you with regard to the return airway. Of course in nine cases out of ten, to a man who has been working and perspiring all day, a good return airway would be more pleasant to travel in than going straight against the current ?—That is so; it would certainly help his temperature, if one may say so, in coming out of the pit bottom.

30800. (*Chairman.*) In the South Wales code there is a Rule with regard to keeping the roadways clear, but that only refers to where there are falls ?—That is so.

30801. That is quite different, of course, Your complaint is that all sorts of rubbish is kept at the side of the roadway where men walk up and down, or may have to walk up and down ?—Yes.

30802. There is a Rule, Rule 156 in the Code of Special Rules for South Wales, with regard to roadmen, which says: "He shall carefully remove all obstruction from the roads in his charge, so as to maintain them constantly in a safe state for travelling therein"—so that if the roadman did not do his duty he might be reported ?—If that rule were carried out, and if all the rubbish were removed daily we should not have much reason to complain.

30803. Are there not always such persons as roadmen ?—Yes, there are roadmen, but all that they are asked to see to is the roadway itself, and if the roadway is itself clear sufficient for the trams to be passing, that is all that is thought necessary.

30804. Surely you cannot say that a roadway is clear if the gangway at the side of the road is filled with rubbish ? I should have read this Rule as implying that it was the duty of the roadman to remove all obstructions from every part of the road in his charge. Surely the gangway at the side along which the men come would be part of the roadway ?—That is not so. It may be obstructed for days.

(*Chairman.* Then it seems to me that Special Rule 156 is not carried into effect, and you ought to see that it is carried into effect.

30805. (*Mr. Enoch Edwards.*) The Inspectors you refer to are the District Inspectors ?—Yes.

30806. They have assistants, I believe ?—Yes.

30807. How many assistants has Mr. Gray ?—I believe Mr. Gray has two.

30808. They are confined to what you call the Rhondda ?—No, they have to cover more than the Rhondda: they have the Aberdare district. It is a very very large district which they have to cover.

30809. How many pits are there ?—I could only give you approximately the number: they would have about from 80 to 100 pits.

30810. Most of them large pits ?—Very large pits: and as we grow older of course the collieries to some extent grow older, and the distance to travel underground is much more than was formerly the case.

30811. You have stated that you have no complaint to make about the present Inspectors ?—Not with regard to the work.

30812. Not with regard either to their ability to do the work or their disposition to do it ?—No—no complaint whatever. But we do complain that we see them but very seldom; and as I have already said, their time is taken up in dealing with accidents, and they are there only after the accident has taken place, and not before. To show the unrest that there is amongst the men, we have had occasion during the last two months in three or four cases to call the attention of the Inspector to some things going on, and he has gone there to examine and put the matter right.

Mr. D. W. Morgan
21 Nov. 1907

30813. What number of inspections would those three be able to make in a year at each pit?—It is very difficult to say, because one has not seen them working to the best advantage, in consequence of their time being taken up with the accidents. At present I do not know that they could examine these collieries once a year—that is to say, properly examine each colliery.

30814. You mean that they would visit the pit in the case of an accident?—Yes, they would go and see the locality where the accident took place, and they would have to go back and attend the inquest. A large number of collieries are only visited in that way.

30815. So that that would not be an inspection of a colliery?—No, not what we call a proper inspection.

30816. Except the place of the accident?—Except the place of the accident.

30817. When Mr. Ellis asked you about the appointment of further Inspectors he asked you whether it would be necessary that they should have the same qualifications as the first-class Inspectors. First of all you consider that they should be practical Inspectors?—I do.

30818. You mean by that that they should be men who have worked in mines and understand mines and every part of them?—Yes.

30819. You mean that although they would not be able to pass a technical examination on the higher subjects, like electricity, and so forth, they would thoroughly understand the mine?—Yes.

30820. That is the type of man you have in your mind?—That is the type I speak of.

30821. Now will you give the Commission the reasons which exist in the minds of the men for their wanting this type of Inspector?—My own way of putting it is that the men think this class of men would be much nearer to them and would be able to do the work, because to a certain extent the thorough examination of a mine is very laborious work; and for that reason they would be more approachable, and they could be asked to go to those places, which is not the case with the general body of workmen now. We, the miner's agents, or somebody in authority at the present moment, are perhaps only able to approach the District Inspector: the workmen themselves would never dream of approaching the Inspector. If a lower grade of inspectors were appointed they would be in that sense much more open for consultation, and that kind of thing.

30822. (*Chairman.*) Why should not a workman approach even a District Inspector direct if he likes?—Well, there is such a distance between the two grades.

30823. Surely if a workman has something important to say he would be able to speak to the Inspector.

(*Mr. Wm. Abraham.*) He may live too far away.

30824. (*Chairman.*) Yes, but when the Inspector happens to be there; supposing an Inspector is going round a mine, and a workman wants to say something to him about the state of the mine, do you mean that an ordinary workman would not speak?—There would be generally the foreman or the overman and manager with the Inspector at that time: that is the difficulty.

30825. They can communicate by letter. Do not the colliers communicate with the Inspector by anonymous letters sometimes?—It may be the case, but they generally come to us, the Miner's Agents.

30826. You are the go-between?—Yes.

30827. (*Mr. Enoch Edwards.*) What are the reasons you give now.?—You think some of the reason is that the great bulk of the workmen are not brought into touch with the Inspectors at all, and do not see them?—Yes; they do not see them.

30828. And of course the District Inspector, or any Inspector at all, is very rarely at the colliery?—Very seldom.

30829. I should like to put it to you further, are there any other reasons why the workmen are anxious that this new class of Inspectors should be practical men in the pit?—I have said in answer to Mr. Ellis that I think one other reason which is given is that there is very much too much importance attached to the theoretical part of it, and that more attention should be paid to the practical part, and the Inspectors who are appointed already even doing their best will have a leaning towards the employers, and naturally so, because they have been brought up in that groove themselves: and the men think that someone ought to be appointed on the other side who will have some sympathy with the workmen.

30830. Does it not arise largely among a number of men from an impression which they have that the mines will be more thoroughly and exhaustively examined by the practical workmen?—Yes. The mine under this system will be examined as I said, every nook of it; the examination will be started at one end, and they will go right through the whole of the mine and inspect it from top to bottom.

30831. I noted your answer to Mr. Ellis as to the inspectors leaning towards employers. The inspectors are supposed to discharge their duties as between employers and workmen generally?—That is so.

30832. Of course the workmen you referred to were workmen who inspected under General Rule 38?—Yes.

30833. That is rather a different thing?—Yes.

30834. With reference to your complaint about timber, I understood you to say that workmen had set timber in a roadway and that the officials had knocked it out again?—Yes.

30835. Why was that done?—The officials held the opinion that it was not required, and in order to prove that they knocked this timber out.

30836. The officials were of opinion that it was not a dangerous place?—Yes, and that the timber should not have been put up.

30837. That would be in the main roadway?—Yes.

30838. Then you do not timber all the main roadways: there are portions that are not timbered?—There is no portion that is not timbered at all with timbering of some description. In some cases we only put a road post on the side of the road, and in other cases we put up a post and bar across. I have two instances in my mind where a fall has occurred immediately after the timber has been struck out.

30839. Of course you are not now dealing with timber at the face?—I am dealing with timber in the roadway.

30840. You do not suggest that this has reference to the face and the workman setting his timber there, but it is in the roadway?—The roadway.

30841. How far back would that be from the face?—It would be within four or five yards from the face, sometimes quite at the face.

30842. Would it be such timber as the contractor is called upon to do in his contract?—No; that timber would be timber that would be paid for, and it is for that reason, that it was to be paid for, that there was this action on the part of the official in knocking out the timber.

30843. So that it is not so much a question of safety or otherwise as a question of having to pay 1s. or 2s. or 2s. 6d. for setting and repairing timber?—That is so.

30844. (*Chairman.*) The man would demand to be paid for the timber, and then he would be told that it was not necessary, and that they would not pay him, and to prove that it was not necessary they would knock out the timber?—That is so.

30845. Then supposing a fall occurred, showing that the timber was necessary instead of being unnecessary, I suppose in that case the man would get paid. In the case of a fall having occurred, which fairly proved that the timber ought to have been put up, the man would be paid even although he was not paid beforehand?—Yes; in that case the company would pay for the repairing of the fall, and also for the timbering.

30846. They would also pay for the first setting of the timber because it was proved by the fall that there was need to set timber?—Yes, but he would not be paid until we were called in to deal with the dispute, probably.

30847. (*Mr. Enoch Edwards.*) What you mean by systematic timbering is that there should be one general rule?—Yes, and that timber should be put up as a precaution, whether it appears that it is really wanted or not, at stated intervals.

30848. Then you think the collier would clearly understand his duty?—Yes.

30849. And it could not arise afterwards that he would be blamed for setting timber where he should not, or blamed for not setting timber where the Manager said he should not?—He would have no doubt at all in his mind.

30850. I think the difficulty now is that in the absence of any precise rule, somebody in the mine must decide whether timber ought to be set or not?—Yes.

30851. It would be the duty of the collier, in order to keep himself safe, under the Rules to set his timber?—Yes.

Digitized by Google

30852. If it is not so set he is liable to be hauled up before the magistrates ?—Yes.

30853. Do you suggest that while that is the case he may set timber in the belief that he has discharged his duty and that the official will come and knock out the timber again ?—That is the case with us now ; that has happened. Perhaps I should explain also that we have another case in which the men were out two days from the pit and refused to work. One of the causes, as we found, was—I must say that it was quite unknown when we investigated the matter, and quite outside the knowledge or instructions of the Head Manager of the collieries—that the under-officials were going round and doing this kind of thing and preventing the men standing timber on the roadways because there was payment for it, and thereby causing a great amount of danger to the men where they were filling their coal. They were refusing to allow them to put the double timber on the flats up on the coal just immediately in front of the tram, and the men kicked against it and objected to work under the changed method of working. When we investigated the matter we found that their timber had been knocked out, and they had been refused payment for it. I may say to the credit of the General Manager that he at once strongly reprimanded this man for it having been done, and said it must not be done again.

30854. You suggest that if there were one general system adopted for the whole district, it would be evident then that these men would get the timbering done, and this difficulty would not arise ?—Yes, that would be done away with. It could be settled so far as each seam or each colliery is concerned ; and I should also like the man to have power, if he thought it necessary, and if the place required that, to add to whatever timber had been put up by regulation.

30855. Of course he is supposed now to set timber to keep himself safe—that is the rule ?—Yes, but there is a continual dispute arising as to who is to determine and decide as to when a place is safe or not.

30856. Then the practice, as you say, in Wales is that if a collier considers his place is unsafe, and that it requires timbering, if the manager or the owner, or whoever he may be, comes in and differs from him, he is liable to have his timber knocked out again ?—Yes.

30857. When you were asked the question yesterday afternoon as to the fireman's duties, you said he would have to travel half a mile to three-quarters of a mile before he got in his district proper ?—Yes.

30858. That would be along the main haulage road, I presume ?—Yes.

30859. Whose business would it be to examine that road ?—Perhaps that would be allotted to some fireman who would be quite close. In some cases it would be done by one of the men who have to travel to the innermost places that I have mentioned.

30860. Have you any reason to think that they ever do examine that part ?—How can they ? It is a matter of impossibility. I want to be quite fair in this. They travel over the roadway, and if there is anything there which forces itself upon their notice, they no doubt see it and report it then ; but as to making a detailed examination of the roadway, I do not think it can be done.

30861. With reference to fines inflicted at the colliery, you have not much of that in Glamorganshire, I take it ?—Not in the Rhondda.

30862. But there is a considerable amount of fining in Monmouthshire, I think ?—So I understand.

30863. When you said in answer to Mr. Ellis that you objected, does that reflect the opinion generally of the men in the Rhondda—that they object to fines at collieries ?—Yes, they strongly object to it, because they feel it is very unfair that the manager should set himself up as the judge, jury and everything else, and that he should decide the degree of offence and also the amount of fine that a man has to pay.

30864. Of course the fine may not necessarily be for any breach of the General Rules or Special Rules, but it may be a fine which has somewhat to do with the man's work, and deductions for dirt, slack, or something of that sort ?—Yes, quite so. We have had some instances where they have been trying to introduce the practice of fining the men for so much small coal sent out, or so much dirt.

30865. With reference to the suggestion which was put to you by Mr. Cunynghame, that a key should be kept for the lamps, that is the case where the men are sending out their lamps, and where the lamps have gone out ?—Yes.

30866. The man sends his lamp out to get another ?—Yes, to get another or for it to be re-lighted.

30867. It is a case of his lamp having gone out by reason of some accident, or for some reason ?—Yes.

30868. And he must, of course, send it to some place, some lamp station ?—Yes—at the pit bottom.

30869. That lamp station would be at a place which is considered a place of safety. Of course, if the man could not send it there by someone else, he would have to tramp to the place himself in the dark ?—Yes.

30870. He is only given one lamp ?—That is all.

30871. When you said that the men complained about this, and it was suggested that there should be a key which should be kept by someone, do the men complain not because there is a key, but because there is no one there to light the lamps for them ?—The complaint is that there is no one there to attend to this work, and also there is the danger more especially to which I was referring, of the electric batteries, that boys or lads may play with them in such a way, and that in manipulating the battery they may have a flame—they may light anything with the electric flame which would be brought from the battery.

30872. So that the complaint is not that the man cannot get his lamp lit, but the complaint is that the place is left unattended, and that there is risk ?—There is that danger of the lads playing with it.

30873. (*Mr. Smillie.*) Do the miners in any part of South Wales pay for the use of the lamps or the oil ?—No.

30874. They are supplied by the owners free ?—They are supplied by the owners.

30875. Each miner who is employed at the colliery at the working face has pins or tokens to indicate which are his tubs coming to the surface ? — Generally they use chalk-marks with us.

30876. It would be quite possible for each man to have a number and for each lamp to have a number, so that each person could get his own lamp. There is no difficulty really with regard to that part of it ?—None whatever. There is a large colliery where unfortunately we had an accident two years ago, as you know, in which there is the lamp of the same number given out to the men and the numbers correspond. I mean numbers are kept for each man in that way, as you indicate.

30877. That is really done in many parts of the country ?—Yes.

30878. Do you think that the Managers of a colliery and the workmen should be the same in the eye of the law so far as offences are concerned ?—I should think they ought to be : I should think the workmen ought to have the same right to initiate an action in the Police Court for some breach of the regulations under the Act as the employers.

30879. Did you ever hear it seriously suggested that it should be left to the Mines Inspector to initiate fines against colliery Managers for breaches of the Act ?—No. It is most difficult to get prosecutions initiated at all against colliery Managers.

30880. Do you think the Home Office would be in favour of such a course as putting it into the hands of the Inspector to fine a Manager instead of prosecuting him for a breach of the Act ?—I do not think they would.

30881. Would it be a wise course to take ?—No, I do not think so at all.

30882. If that is applicable to the Manager, you say you think the same thing should be applicable to the workmen ?—That is so. I am in total agreement with this, that whatever conditions are to be observed by the workmen, the same should be observed by the employer, and whatever conditions are observed by the employer the same should be observed by the workmen.

30883. I suppose we might say that 75 per cent. of the lads in your district will in all probability find their way into the pit ?—Yes, I put it at more than that.

30884. A rather higher percentage than that ?—Yes—nine out of every ten.

30885. Mining being the staple industry there, you advocate that boys should be taught the Special Rules in the last year or two before leaving school ?—Yes, and the nature and perils of gases, and other things.

Digitized by Google

Mr. D. W. Morgan
21 Nov. 1907

30886. I was going to add that: would you also be prepared to go to the length of teaching them something of the nature of mine gases and the dangers of them?—Yes.

30887. You think it might tend to greater safety underground if in all mining districts that was part of the lads' education?—I do. I am very glad to think that the Glamorgan County Council are taking some slight steps towards trying to improve matters in that direction, in holding evening classes, and so forth.

30888. You think that even where a lad did not go into a pit, if that instruction were made part of his education, it would broaden his mind, and so on?—Yes, it would be useful to him.

30889. With regard to inspection by workmen, there is not much of that done in your own district?—Very little; it is almost a dead letter.

30890. But where workmen are inspecting a colliery, is it not in the power of the Manager to close up certain parts of it during the time an inspection is going to be made, or just when an inspection is going to be made, which parts he does not want the inspectors to visit?—That may be possible, but I could not say that I have known any instance of that.

30891. You have never known of it being done?—No, I have not known of it being done: but I do know that when such inspection is being carried out there is a hurrying and scurrying on the part of the under officials and the day wagemen with brattice-cloths and that kind of thing, to put up temporary doors, and so on.

30892. General Rule 38 says that they shall be entitled to inspect every part of the mine, but in the event of any portion being closed and a danger signal being on it, they would not be entitled to go beyond that?—That, no doubt, would be the construction placed upon it by the management.

30893. You say that the general conditions of a mine are safer for some time after an inspection is made either by a Government Inspector or a workman inspector because of the preparations that are made for complying with the provisions of the Act?—Undoubtedly.

30894. And if you had more extensive inspection you think that would be the normal state of the mine instead of the abnormal state of the mine?—Quite so.

30895. That is really what you aim at?—Yes, if we could continue what we look upon as the exceptional condition of the mine during the examination, and if that could be continued for all time we should be much more satisfied.

30896. Mr. Ellis put it to you that you have no fault to find with the qualifications of the present inspectors, and you said you had not. But would you add to that that had they been practical miners with their present qualification they would be better even than they are now?—Yes, undoubtedly that would be the case.

30897. You think that no person really can inspect the face of the workings so well as a miner who has spent some years of his life working at the coal face?—That is so.

30898. The question was put to you, I think, whether you could not object to Special Rules proposed by the employers when they are posted and you said "Yes." But could you really object? Have you any standing?—No, none whatever.

30899. What you really meant was that the workmen employed at the particular colliery might object?—Yes, they might object to them.

30900. Is it not the most difficult thing to get a workman who is daily employed in a mine to object to Special Rules?—It is. If they take a permanent part in that work there is always the same fear as I pointed out in the other case where the inspection is made, that the man may be dismissed.

30901. I suppose one of the chief reasons why persons claim the franchise in this country is that they want to have a voice in the making of the laws which they have to obey?—That is so.

30902.—Special Rules, when they are posted, have all the powers of an Act of Parliament?—Yes; if they are in any way broken men can be proceeded against.

30903. Most of the Special Rules are made in order to ensure greater safety?—Yes.

30904. Greater safety to whom: is it to the owner or to the Manager?—To the workmen.

30905. Is it to the workmen employed underground?—Yes.

30906. Consequently it is to the workmen that Special Rules for their safety are of the greatest importance?—Yes; and I should say that they should have some voice in the proper drafting of those rules, inasmuch as they have to live by them, and to carry them out. Then they ought to be framed in such a way that they can be carried out practically and not be a dead letter.

30907. I should like to put this point very plainly: it is not as to the individual workman in the colliery, but what you mean really is that the workmen through their organisations might be consulted in the drafting of Special Rules?—Yes.

30908. And that those men having practical knowledge, and knowing what the workmen want, might assist the employers in drafting rules for greater safety?—Yes; and it would be with greater advantage that the power could be used so as to bring about and create an inducement for the rules to be properly observed.

30909. You think that if the workmen through their leaders or advisers were consulted, and had a voice practically equal with the employers in the drafting of the rules, there would be a greater likelihood of those rules being observed?—Yes. Fewer breaches would take place than take place at present, I am convinced.

Mr. JOHN DANIEL MORGAN, called and examined.

Mr. J. D. Morgan

30910. (*Mr. Wm. Abraham.*) Do you agree with a great many of the points which have been laid before the Commission by Mr. Watts Morgan?—Yes.

30911. There are some points which concerned your district which he has not dealt with?—That is so.

30912. With regard to the question of bar-hook or trailer, you wish the use of them to be made compulsory?—Yes.

30913. You think that runaway or safety points should be used below the heaviest gradients in these slants or drifts?—Yes.

30914. Do you agree with Mr. Watts Morgan that sufficient room to walk should be provided alongside the roads?—Yes.

30915. Do you wish it to be made compulsory that no person should be appointed to ride on a journey of trams drawn by mechanical power?—Yes.

30916. Have you any special reason for that?—Yes: we have had a good many accidents arising out of riding on trams underground.

30917. Would the work be equally facilitated if that was done away with?—Yes; they have done away with them in some collieries now in our district.

30918. You say that in lowering and raising men in pit shafts, doors should be fixed on the cages so as to prevent the men falling out?—Yes.

30919. Do you agree generally with Mr. Watts Morgan with regard to firemen?—Yes.

30920. Have you any particular instances where incompetent men have been engaged?—Yes.

30921. You had two accidents in one colliery lately where men were killed?—Yes.

30922. Are you now of the opinion, since you have known of it from the inquest, and so forth, that the first of those accidents could not have happened if a practical man had been fireman there?—Yes.

30923. Perhaps you will explain to us the accident at Coegnant?—There was an accumulation of gas in a certain place and the fireman took four men on with him in order, in the first place, to raise a tram there, and in the second place in order to remove the gas. They had only two safety lamps between them, and one safety lamp was put behind the four men. The fireman was putting up canvas in order to remove the gas from the place, and it had to pass over the men and to the lamp that was behind them, and in some way or another an explosion of the gas took place, and three of the men were killed. A competent

Digitized by Google

fireman would not remove the gas when the men were behind it.

30924. (*Chairman.*) I do not understand how the explosion took place, because as I understand, there were only safety lamps used there. Was it owing to a defect in the lamps?—We cannot say whether it was through a defective lamp or not.

30925. But you say that was a dangerous operation which a skilled workman would not have undertaken?—Yes.

30926. (*Mr. Wm. Abraham.*) In the first instance the naked light was left behind at the pit?—Yes.

30927. The colliery was worked with naked lights, to start with?—Yes.

30928. The accident took place on a Sunday night, did it not?—Yes.

30929. On that Sunday night this fireman had three or four labourers with him down the shaft?—Yes.

30930. A tram was off the rails in the heading?—Yes.

30931. And he said that he took the men there to help him raise the tram?—Yes.

30932. The fact is that he suggested they should leave their naked lights at the bottom of the shaft and he took in with him the two lamps?—Yes.

30933. The chief witness, who was the only man saved, said on his oath at the inquiry that they were put there to brush the gas out?—Yes, that is so.

30934. He himself went beyond them to put up a piece of brattice?—Yes.

30935. And the effect of the brattice he put up was that the gas came back towards these men and passed them?—Yes.

(*Chairman.*) Did the gas travel as far as the naked light: is that what happened?

(*Mr. Wm. Abraham.*) No: we do not know exactly: it is not explained yet: but an explosion took place. It was an old type of lamp, was it not?

(*Witness.*) Yes.

30936. The inspector had recommended that safety lamps should be used some time prior to that?—Yes.

30937. And they were not put there?—No.

30938. A second explosion took place in the same place?—Yes: safety lamps were introduced after that.

30939. In your opinion, would it not be a great improvement if the inspector had the power to enforce the use of safety lamps where necessary?—Yes.

30940. Are there any unskilled men, or a number of unskilled men, employed in that district?—Yes, quite a number of them in every colliery, especially in these good times.

30941. Is there a rather notorious fact connected with that explosion?—Yes: one of the three men who were killed had only been one day underground before the accident took place. He was employed first of all on the surface: then he asked the manager to go underground: he was a stranger to the manager, and he told the manager that he was a fit person to go—that he was an experienced person—but after going down the men did learn that he knew nothing about underground work: and on the following night he was killed.

30942. And it has been proved since that he was not a miner?—Yes.

30943. You would have the return airways made so that men could safely travel through them?—Yes, I believe that should be so.

30944. Have you any reason to believe that accidents could have been avoided if that had been done?—Yes. I have one special case in my mind now of an accident which took place on the 19th February last at a certain colliery in our district. The hitching plate of the tram snapped on the point of landing, and the trams ran back to the distance of 150 yards. Men were travelling up on their way home and six of them were killed. If a separate travelling road had been kept that accident would not have occurred.

30945. As it happened, there was a return airway in that case running pretty nearly parallel with the slant?—Yes, only it was too small for the men to travel in.

30946. Had it been in good repair it could easily have been made a travelling road?—Yes, very easily.

30947. Without any special extra expense?—Yes, without much extra expense: there would be a little extra expense in the beginning, but the cost of maintaining it in good repair would have been very small.

30948. Had it been in existence at the time, those men travelling through it would not have lost their lives, and the ventilation of that colliery would have been considerably improved?—Yes.

30949. I am putting the words into your mouth, but I want you to give your opinion yourself as a practical collier. That is your honest opinion?—Yes.

30950. You know that it was shown at the inquest that had that return airway been properly made it would have been an easy travelling road, and the accident, although it happened, would not have caused any loss of life?—It could not have happened if the men had had a proper travelling road.

30951. Do you think there is any inconvenience to men by having to walk out through a return airway?—No; I have walked out many a time. There is no inconvenience, only you must have the road wide enough and high enough to walk in.

30952. It is necessary to have the road made properly?—Yes.

30953. Is there anything else that you would like to emphasise?—With regard to firemen, I think their eyes should be tested. I have known some firemen who have been appointed who have had defective eyesight and were quite unable to see gas. It is very important that the firemen should see well, and that the sense of hearing should be well also.

30954. It is important that he should have no infirmity of that kind?—Yes.

30955. Do you think it is often the case that men like that are appointed?—It is very often the case that their eyes become unwell. When they are appointed as a rule their eyes are all right, but after being firemen for a number of years their eyes get bad, and they are not removed, but are allowed to keep on their employment.

30956. Do you agree with what has been said, that they should be practical men and should be proved to be so?—Yes, they should be proved to be practical men.

30957. With regard to safety lamps, how far ought the use of safety lamps to be enforced, in your opinion?—They should be enforced where gas is found in every colliery. There are some collieries—I think we have a few—shallow mines, where no gas has been found. I would not recommend safety lamps into those mines, but in any mines where gas has been found I would recommend safety lamps.

30958. (*Mr. Cunynghame.*) I understood from the last witness that as regards timbering he thought there ought to be a fixed distance for timbering in each mine, or in each seam of a mine?—Yes, I believe that is so.

30959. Is that your view also?—Yes.

30960. And that the timbers ought to be set at least that distance apart, but that the miner ought to have a right of setting them closer if he thought it expedient for safety?—Yes.

30961. You agree with that view, too?—Yes. It is the general complaint, if I may say so, in our district that the men are not allowed to put timber in the roadways except with the consent of the management. Things are carried so far in our district in some collieries that they have it as a condition in the price list—that timbers are not to be stood in the roadways except with the consent of the management.

30962. (*Chairman.*) When you speak of roadways, you do not mean only some roadways; you mean every roadway leading up to the face?—Yes, I mean every roadway. We are allowed to put timber up in the face according to our own judgment when we are not paid for them, but we are not allowed to put them on the roadways only with consent because we are paid for them.

30963. Where you are paid for them?—Where we are paid for them—only with special consent.

30964. (*Mr. Wm. Abraham.*) Only when ordered?—Yes, only when ordered.

30965. That is printed in the price lists?—That is printed in quite a number of our price lists.

30966. (*Sir Lindsay Wood.*) You said you would prohibit all riding of the men on the coal tubs on all main engine roads?—Yes.

30967. Do they run trains of men in your district? Yes, in some collieries, but not in every colliery.

Digitized by Google

Mr. J. D. Morgan
21 Nov. 1907

30968. Do you have many accidents on those?—Yes, we have had serious accidents from time to time. We have as many as six or seven killed at a time.

30969. Are the seams very steep?—Yes, they are all very steep; the coal is cropping. We have not got many pits in our district. The workings are reached by slants running in the coal, and the gradient is as a rule about 12 in. to the yard—perhaps more.

30970. Then when the men are riding, do they take any special precautions with those trains?—Yes.

30971. They have to take extra precautions besides those which are taken when coal only is going?—Yes.

30972. And yet they still have accidents?—We have had accidents in the past.

30973. Would not the men prefer to walk in rather than ride in?—No, they prefer to ride after all.

30974. Is it compulsory for them to ride in?—No, it is not compulsory for them to ride.

30975. Are they allowed to ride out?—Yes.

30976. Is that as they come out, or in train-loads only?—When they send the train down specially for them at the end of the shift, but the men walk up the slants.

30977. If sufficient precautions were taken to prevent accidents there would be no objection to the men riding in?

30978. (*Mr. Wm. Abraham.*) I am afraid the witness has not understood. (*To the Witness*): You mean riders who are riding on the tram up and down the slants?—Yes—men who are appointed in charge of the journey.

30979. Men who are appointed to go up and down on full tubs?—Yes.

30980. That is in full tubs. You do not object to men riding in and out of collieries?—No, we agree with that.

30981. You have not had accidents in those cases?—Yes, we have had accidents in those cases.

30982. You object to men riding on journeys of full trams and on empty trams up and down the slants. There is a man appointed by the management to ride up and down on the slants?—Yes. A large percentage of them are killed from time to time.

30983. (*Sir Lindsay Wood.*) Do you think the men who are appointed as firemen in your district are generally incompetent men?—No, I think generally they are competent men, but they are not the best and most experienced men as a rule that they can get in the colliery; they could have better men. I will not say that they are incompetent, but they are not such good men as they could get. If their hours were less and their district less and their remuneration greater, they would have better men to act as firemen, but now the best men prefer working on the coal.

30984. There are sometimes incompetent men appointed?—Incompetent so far as their eyesight is concerned.

30985. Do you consider that it would be safe for people to travel on the main return airways?—Yes, if they had the main return clear of the ropes and trams, it would be all right.

30986. But how about gas?—There is no inflammable gas in the return airways. The only drawback would be that the air is warmer in the return than in the intake.

30987. Where does the gas go to? I understand you have gas in your collieries?—Yes, there is gas found, but it is not an explosive mixture in the return airway; there is not enough quantity of gas in the air to turn it into an explosive mixture, but of course the gas is there, only it is diluted with the air.

30988. It has only to be mixed with the air to become explosive?—Yes.

30989. It is only a question of degree?—Yes, it is only a question of degree.

30990. Are safety lamps general in your district?—Yes, in about two-thirds of the collieries.

30991. Are the other parts non-gassy mines?—Not the whole of them; some of them are.

30992. (*Mr Ratcliffe Ellis.*) You say you do not suggest that lamps should be put in mines where there has been no gas seen?—Yes, I say that.

30993 If gas is seen in however small a quantity—a blower, for instance—would you then say that lamps should be compulsorily introduced?—Yes.

30994. However small a quantity of gas there was?—However small a quantity of gas, they should be introduced.

30995. Then when once safety lamps are put into the mine would you ever allow them to come out again if gas was not seen say for 12 months?—No, once put in I think we should stick to them, because seeing gas once it may be seen again.

30996. (*Mr. Enoch Edwards.*) You say in your statement that rubbish produced by falls and otherwise should be stowed underground so far as possible. Of course the object of this Commission is to find a remedy for accidents. What relation has this point to accidents?—The rubbish is sent out now when it ought to be sent into the faces in order to fill up the gobs—in order to support the roof in the first place, and in order to shut up all vacant places so that there should be no room for accumulation of gas. Now it is sent out in some of our collieries because it is more convenient to send it out than to convey it to the faces when it should be sent there to fill them up.

30997. There may be falls, so that of course it is very difficult to carry the rubbish into the faces?—There might be extra difficulty in dealing with it, but I think after all that rubbish is sent out to the surface that could be dealt with underground.

30998. You are dealing now with cases where an attempt is made by the management to keep up the roof always?—Yes.

30999. Of course you are aware that in a large number of collieries the object is to break the roof in and to send it back to the goaf?—Yes.

31000. So that there is nothing gained there?—In our district the management always attempt to do the packing as tight as possible in order to support the roof; we do not want the roof to break down at all.

31001. You are suggesting that in your view where it could be done this rubbish should be taken back and packed into the waste?—Yes.

31002. I am only putting it to you that that is not the view in collieries generally?—I am only speaking of our own district.

31003. You said in answer to Mr. Ellis just now that safety lamps should be used in any pit where gas has been found?—Yes.

31004. Explosions have happened at many collieries where gas has not been seen?—Yes.

31005. Have you had any experience of explosions?—Yes.

31006. Where candles have been used?—Yes.

31007. Has gas been found in those mines before the explosion?—Yes.

31008. Did you ever hear of a case where an explosion has happened and the men have said that gas was in the pit. Are they not usually up to that time the safest pits? Did you ever hear of one where gas was found before?—Yes, I have heard of one colliery in our district where an explosion took place and where no gas was ever found or reported in that colliery before.

31009. Does that not rather suggest that there should be safety lamps in all pits?—I will not go so far as to say that. That was only an exception.

31010. At any rate, you think that if gas has been found, safety lamps should be put in?—Yes.

31011. And that once in they should stop in?—Yes.

31012. (*Mr. Smillie.*) Have you had personal experience of working with candles in a naked light pit?—Yes.

31013. You have also had personal experience of working with the close lamp?—Yes.

31014. Do you think a workman has more light with a candle than he has with a close lamp?—Yes, a much better light.

31015. Do you think a workman can look after his safety, so far as the nature of the roof and sides is concerned, better with a naked light than with a close lamp?—Yes.

31016. It is more easy to examine and find defects in the roof?—Yes.

31017. If that is so, does not the safer light, because of the nature of the close lamp itself, tend to a large number of accidents from falls?—Yes.

31018. And even haulage accidents where the light is not so good?—Yes.

31019. In view of that, if that is so, do you set the danger of an explosion against the greater safety of naked

Digitized by Google

lights ?—Yes: where gas is found the danger from explosions after all is more than what is gained by using naked lights.

31020. Could not the danger from gas be largely minimised by improved ventilation in some cases ?—Yes, it could be minimised.

31021. Is there not a tendency, where safety lamps are used, for the management to feel that there is less danger, and thus sometimes is not less attention paid to ventilation than ought to be paid to it ?—No, I do not know of that.

31022. With regard to stowing the rubbish underground, your real object is to prevent reservoirs for gas ?—Yes.

31023. The goaf at the present time is very often a reservoir for gas, if there is gas in the pit ?—Yes.

31024. You think that so far as possible the goaf should be solidly stowed up so that gas could not accumulate ?—Yes.

31025. Is it your opinion that many of the large explosions which have taken place may have arisen from reservoirs of gas in the waste ?—Yes, I believe that to be so.

Mr. J. D. Morgan

21 Nov. 1907

31026. And that if the waste had been properly stowed up there would have been less likelihood of a large accumulation of gas and consequently a serious explosion ?—Yes.

31027. That is the real reason why you advocate that the waste should be thoroughly stowed up as far as possible ?—Yes.

31028. (*Mr. Ratcliffe Ellis.*) Do you suggest that stuff should be taken down the pit to fill it up, or that they should utilise the débris that is in the pit ?—Utilise the falls that are in the pit and put them in the goaf.

31029. Not that stuff should be taken down ?—No, I do not go so far as that.

31030. (*Mr. Smillie.*) I suppose you would not object to stuff being taken down the pit should it be necessary to fill up the goaf, but you do not advocate that at the present moment ?—No, I would not go so far as that: it may be a good thing in certain cases to do it where rubbish could be had and where it was needed underground.

31031. (*Mr. Wm. Abraham.*) You know it is being done in some cases ?—I have heard that it has been done.

Mr. William Evan Morgan, called and examined.

Mr. W. E. Morgan

31032. (*Mr. Ratcliffe Ellis.*) I see that you say in your statement you think there should be better protection to examiners appointed by the workmen, and also that there should be power to appoint check weighers as examiners. What do you mean by that ?—As Mr. Morgan has stated already, there is no protection for the examiners under the present Act, although there is a provision in the Act to appoint persons to inspect the mines monthly. But only a few of the collieries avail themselves of the power to appoint them, the reason being that if they report they are open to dismissal in some way or other for giving a bad report; and I was thinking that, inasmuch as a checkweigher is not dependent upon colliery owners, if the men desired to appoint him to examine the place he would be independent, and the company of course could not dismiss him.

31033. But he is absolutely dependent upon the workmen. Is he an unbiassed man to make such an inspection ?—The majority of the checkweighmen are, I think, unbiassed.

31034. Do you think that the Inspectors of mines are biassed ?—No, I do not think so, from my experience.

31035. You do not think that because they are drawn from a particular class they have any bias at all ?—No, I do not think so.

31036. You think the checkweigher would be a suitable person to go and make this examination ?—I believe so, because he is independent of the colliery owners: that is the reason I suggested it.

31037. A checkweigher has certain work to do under the Act of Parliament, and he is not entitled to interfere with the management of the mine, except as to settling the deductions for dirt ?—Yes, I know that.

31038. You want to alter that ?—If we could alter the Act and amend it in such a way to give the necessary powers to the checkweighmen.

31039. What you want to do is to alter the Mines Act and to make a checkweighman independent, and that then he should be eligible for one of these appointments ?—Yes.

31040. You say further on in your statement that unskilled workmen are the cause of many accidents. What character of accidents do you consider are due to unskilled workmen ?—They come into the mines from every part and they have no knowledge at all of mining.

31041. What sort of accidents do you think are due to the employment of unskilled workmen ?—They are sent to do many things, and are a source of danger to others because they are not skilled.

31042. But what sort of accidents do you attribute to the employment of unskilled workmen ?

(*Mr. Enoch Edwards.*) Do you refer to their working in the face ?—In the face and on the roads, and with regard to safety lamps.

31043. (*Mr. Ratcliffe Ellis.*) At the face what unskilled workmen are employed ?—Sometimes they are sent into the face to unload rubbish.

31044. Have you any statistics to show that when those unskilled men are sent into the face accidents result ?—No, I have not any statistics.

31045. Have you any evidence of any sort or kind to put before the Commission in support of this view ?—No, it is my opinion.

31046. You have no evidence of any sort or kind in support of that ?—Mr. Morgan has given evidence about filling the gobs. By night at some collieries these men are sent into the face and they unload the rubbish in order to fill the space.

31047. Have you any sort of evidence that you can put before the Commission to show that accidents have resulted from the employment of unskilled workmen ?—It is difficult to ascertain facts.

31048. Can you answer my question: have you any evidence ?—No, not now. I should like to explain: an unskilled workman, or a man coming direct to the colliery with no previous knowledge, is sent to the rubbish holes, and those places are most dangerous. We cannot always of course ascertain the real cause of accidents, but we surmise that a lot of explosions have happened owing to those men.

31049. It is a fact that you have no evidence of any sort or kind to put before the Commission in support of this view of yours. It is your opinion, as you say ?—Yes, it is my opinion.

31050. But I understand you to admit that you have no evidence of any sort or kind to put before the Commission in support of it ?—No, I have no statistics whatever.

31051. You go on to deal with inaccurate plans: you say that there should be an independent person to make a survey; and that cases are known where collieries have been worked beyond the boundaries which are not shown in the plans. What has that to do with safety ?—I think it has a lot to do with safety, if colliery owners work beyond their proper boundaries and it is not marked on the plan, and especially if they are working down to the dip and other people are coming to work the barrier afterwards—they will strike into the water or old workings.

31052. But then, so far as water is concerned, I suppose you know that there are provisions made by which you must bore in advance. That is provided for and you are not dependent upon the plan for that ?—No.

31053. (*Mr. Wm. Abraham.*) Do not say "no" before you understand the question, because you have a case to prove that lives were lost notwithstanding boring being done, and lives were lost because of the inaccuracy of the plan ?—Yes.

31054. (*Mr. Ratcliffe Ellis.*) What alteration do you suggest should be made ?—I only give it as a suggestion; I think an independent party, an inspector, should have the power to test whether these plans are made accurately. That is the only thing I suggest. We had a case the other day where they had been working over the boundary for nearly nine years. Four lives were lost at a colliery called Caradog Vale through striking into water. No plans available.

Digitized by Google

Mr. W. E. Morgan

21 Nov. 1907

31055. (*Mr. Wm. Abraham.*) And there was also a case in Glenavon?—Yes, Glenavon Colliery, Cymmer.

31056. (*Mr. Ratcliffe Ellis.*) You know there is a provision in the Act of Parliament with reference to plans now. What alteration do you suggest should be made in that provision?

31057. (*Mr. Wm. Abraham.*) You want some independent man to make the plans?—Yes, periodically.

31058. (*Mr. Ratcliffe Ellis.*) Do you mean some person who is paid by somebody other than the employer?—Yes, certainly.

31059. By whom should he be paid?—By the Government. In my opinion the inspector should have the power to appoint the person.

31060. And that he should be paid by the Government?—Yes, paid by the Government.

31061. (*Mr. Wm. Abraham.*) You would not want that in every colliery, but you come from a district where lives have been lost and the jury have found in one case that it was by reason of the want of plans?—Take the last case I have referred to, where they have been working for nine years across the boundary and where according to the plans that place was solid coal; there was nothing to indicate that the coal had been worked.

31062. (*Mr. Cunynghame.*) With regard to this question of plans, the law is that the owner or agent should keep in the office an accurate plan of the mine. Is that so?—Yes, that is the law.

31063. Now what you want is, I suppose, that there should be some means of securing that the plan is an accurate one?—Yes.

31064. If the law is at present that the owner should keep an accurate plan, I suppose that the inspector would have power, in a case in which he thought the plan was inaccurate, to order him to make it accurate?—Yes.

31065 Is that not enough?—No.

31066. What you want is an accurate plan, and that is quite right?—Yes—something reliable.

31067. If the law is that the owner is bound to keep an accurate plan and that the inspector has power to keep him up to his work, is that or is that not sufficient? If not sufficient, I want to understand why?—According to the Act, it is all right—if they would carry out its provisions. In the case I mentioned they had been working for nine years, and the plans were inaccurate.

31068. If nobody knows whether the plan is accurate or not how is the matter to be put right. What would you suggest?—By giving power to the inspector to send a surveyor occasionally to these collieries, and colliery owners then would be on the alert.

31069. That is what I want to come to. Do you mean that you would have every single colliery planned from time to time to see whether the plans were accurate or not?—Yes.

31070. Or do you mean that you would only have that done where there was a suspicion that the plan was inaccurate. Which of the two?—For the inspector to act according to his own discretion; for him to have power, if he thinks that it is necessary, to send a surveyor to make a survey.

31071. That is what I want to understand. You do not propose, as I understand, a re-making of plans by the Government, of every colliery in the Kingdom?—No, nothing of the kind.

31072. (*Mr. Ratcliffe Ellis.*) You say further in your statement that there is defective ventilation in shallow mines?—Yes.

31073. What is the meaning of that?—Our district is differently situated to other districts; we are working shallow seams, and shallow mines are worked; it is not the same as in the Rhondda. In those shallow mines there is no gas found, and owing to that the ventilation is neglected.

31074. You know General Rule 1?—Yes.

31075. That rule not only obliges ventilation to be complete where there is gas, but where there is any noxious vapour. It provides: "An adequate amount of ventilation shall be constantly produced in every mine to dilute and render harmless noxious gases to such an extent that the working places of the shafts, levels, stables, and workings of the mine, and the travelling roads to and from those working places shall be in a fit state for working and passing therein."—Ye .

31076. It is because that General Rule is not carried out that there is defective ventilation?—Yes. There is too much work for the inspectors; they cannot go to these collieries.

31077. Is that the case in all the mines in your district?—Not in all of them.

31078. Who is the inspector of the district?—Mr. Dyer Lewis.

31079. You think that he does not see sufficiently that General Rule 1 is carried out?—As I have said, they cannot go to all these collieries; they have too much work.

31080. (*Chairman.*) Can you mention any particular cases of shallow mines in which you say that occurs. I do not wish you to mention them to us now so that the names should be taken down, but will you mention cases to the secretary afterwards?—There are mines in our district that depend upon natural ventilation, and it depends entirely how the wind blows. I have been in those mines myself, and the candle could not burn in them.

31081. We should like to know where that takes place. Will you give some names to the secretary in confidence?—I will mention one name now: Cwm Gelly Colliery.

31082. (*Mr. Ratcliffe Ellis.*) Your complaint is that the General Rule is not being observed in some collieries?—Yes.

31083. (*Chairman.*) You say there are certain shallow collieries where Rule 1 as to ventilation is not observed?—Yes, a large number.

(*Chairman.*) You can either give the names of those collieries to the Commission to be published, or if you like you can give them privately to the secretary—whichever you prefer.

(*Mr. Wm. Abraham.*) He has named one.

31084. (*Chairman.*) Do you object to that name being taken down and put in your evidence?—No, I have no objection. It is Cwm Gelly Colliery.

31085. (*Mr. Ratcliffe Ellis.*) How many men are employed at that colliery?—About 20.

31086. Does that state of things apply generally in your district?—No, it is not general.

31087. Are there other collieries besides the one you have named in which that state of things exists?—Yes.

31088. Perhaps you had better give the names to the secretary?—Some of them have been abandoned.

31089. Will you give the names to the secretary?—Yes.

31090. You say that the inspector should analyse the air?—Yes.

31091. You do not mean that he should measure it?—Measure and analyse it.

31092. But why the inspector?—I only suggested the inspector. I have no objection to another person analysing it, but I think the air ought to be as pure as possible.

31093. You think it should be analysed?—Yes, in order to ascertain its quality.

31094. How often would you provide that the air should be analysed?—I think once in 12 months at a colliery would be sufficient, because the management would take more care after the custom is established.

31095. When you speak of the inspector, you mean that somebody should analyse the air?—Yes, somebody with authority to deal with the matter.

31096. You think once in 12 months would be sufficient?—Yes.

31097. You say in your statement, with regard to safety lamps, "I would not advise the use of safety lamps at all collieries, only where the roof is brittle better ventilation and more thorough supervision is necessary. Lamps would be a source of danger where bells are numerous in the top, &c." What are "bells"?—"Pans" in the roof with smooth surface.

31098. Crevices from which big stone might come down?—Yes. You cannot easily detect them with safety lamps.

31099. Is your objection to the use of safety lamps in that case that you cannot examine the roof because the light is not sufficiently good to examine it by?—Yes.

31100. And that a torch would give you a better light?—Yes, especially if the roof is good. We have now a case in point.

Digitized by Google

31101. Do you think there cannot be an examination made sufficiently with a safety lamp?—No, not so thoroughly as with naked lights. Another thing is this: at a certain colliery there was a slight explosion recently, 20 years have elapsed since the last slight explosion happened. The men went out on strike for a month; they preferred to risk the gas than risk the "bells."

31102. Do you encourage that view?—Yes.

31103. You say they found gas and they put safety lamps in one colliery, and the men went on strike for a month?—Yes, owing to the "bells" in the roof. They thought that the "bells" were a greater source of danger to the men than the gas.

31104. And that met with your approval?—Yes, I have had experience of "bells." They are very treacherous.

31105. What was the end of it?—In the end a deputation waited upon the inspectors, and the inspectors went and examined the place themselves, and they upheld the view of the men.

31106. Then lamps were not introduced there?—That is so.

31107. (*Mr. Wm. Abraham.*) In your district you have had two or three instances whereby you are convinced that if correct plans had been available accidents would have been avoided?—Quite right.

31108. Let us come back to Glenavon. That is a case of re-opening an old colliery?—Yes, driving towards an abandoned colliery.

31109. Where no plans were available at all?—No.

31110. And water came in from an unexpected place?—Yes, it broke down through the roof.

31111. I want you to prove this case. Do you remember the investigation that we had there?—Yes.

31112. No fault was found or could be found with those managing it at the time?—No.

31113. When we asked for the old plans they were not to be found at all?—No.

31114. Hence that is one of the reasons why you think a correct copy of the plans of abandoned mines should always be kept available?—Yes.

31115. That was Glenavon?—If you remember rightly, there was an overlap. They were following the coal, and where they struck the water they were under the old workings; and they were boring, and the water broke down from the roof.

31116. That was distinctly because no plan of the old workings was available. That was the opinion at the time?—Yes. I should like to suggest this, not only plans but there ought to be something to indicate the nature of the strata at the time when they are stopping the colliery.

31117. That is a question of detail. It is important to agree on a principle. I daresay the Home Office will look after the question of detail as much as is necessary. How many lives were lost in Glenavon?—Five.

31118. You understood that was distinctly because there was no plan available of the old colliery, and notwithstanding that the men did all that they were expected to do, this accident happened and five lives were lost. Take Caradog Vale Colliery: what happened there?—They struck the water in old workings.

31119. That, again, because there were no plans available?—Yes.

31120. No recent plans. That was so?—Yes.

31121. Three or four of the men present can testify to that if it is necessary.

31122. (*Dr. Haldane.*) Were they working with boreholes in advance?—Yes. I drew a rough sketch. It is possible to strike into the water and comply with the law, from my own experience.

31123-4. (*Mr. Cunynghame.*) What was the date of those abandoned plans that were imperfect? There has been a great improvement of late years in abandoned mine plans. It may be a very old case, and that is important?—I am not able to say.

(*Mr. Wm. Abraham.*) Mr. David Morgan would be able to tell us the last case.

(*Mr. D. Watts Morgan.*) It would be within 12 years in the case of Caradog Vale.

(*Mr. Wm. Abraham.*) It would be well within 20 in the Glenavon case.

(*Witness.*) Yes.

(*Mr. Cunynghame.*) Something has been done to amend the law since those bad plans were delivered. That is the point. In the Act of 1896 there is considerable improvement, possibly not enough; the rules as to abandoned mines have been made much stricter, and these old plans, of which complaint is justly made, were before the Act of 1896.

31125. (*Chairman.*) Since the Act of 1896 the law with regard to the plans of abandoned mines has been much more stringent, I understand?—Yes.

31126. You are aware of that?—Yes.

31127. Have you any fault to find with the law as it stands in 1896? Do you know the provisions of the Act of 1896?—No, I do not remember them at present, but I have a suggestion to make when working towards the boundaries. My suggestion is to bore sufficient holes in the barriers when these workings are abandoned, especially when they are working to the dip.

31128. (*Mr. Wm. Abraham.*) I think you are also in your district strongly in favour of a second enquiry after these accidents have happened?—Yes. Second enquiries would be appreciated.

31129. The putting in force of what is in the Act already would meet the requirements, you think?—I believe so.

31130. In the case of Caradog Vale there was a prosecution?—Yes.

31131. Did it fail?—I believe there was a verdict of manslaughter against the manager.

31132. The coroner's jury brought in a verdict of manslaughter?

(*Mr. D. Watts Morgan.*) That is so.

(*Mr. Wm. Abraham.*) These are points essential to be brought out. I did not like to keep Mr. David Morgan too long. The Home Office undertook a prosecution against these men?

(*Witness.*) Yes.

(*Mr. Wm. Abraham.*) And the prosecution failed.

(*Mr. D. Watts Morgan.*) For the reason that the same evidence was not tendered at the Assizes at Swansea that we had at the inquest before the coroner.

(*Mr. Wm. Abraham.*) The fact was this, that even the manager was not compelled to stand to the evidence that he gave before the coroner, and other witnesses.

(*Mr. D. Watts Morgan.*) Yes, and other witnesses as well.

(*Mr. Wm. Abraham.*) So that the intention of the Act of Parliament to correct these evils failed?

(*Mr. D. Watts Morgan.*) That was so.

(*Mr. Wm. Abraham.*) Whereas had the coroner's inquest power to order a prosecution, or indeed to call a second enquiry from the Home Office, it would be an easy case to prove negligence on the part of the officials, the manager and the part-owner.

(*Mr. D. Watts Morgan.*) Yes: in that case I believe the prosecution would have been successful.

(*Mr. Cunynghame.*) I have not followed that properly. What is the complaint?

(*Mr. Wm. Abraham.*) The point is that the coroner's inquest brought a verdict of manslaughter against the manager and the owner.

(*Mr. Cunynghame.*) No, they found them guilty of culpable negligence, and the coroner saying that amounted to a verdict of manslaughter, the jury assented. What was the next thing?

(*Mr. Wm. Abraham.*) You ordered a prosecution.

(*Mr. Cunynghame.*) No, the Director of Public Prosecutions; Kingdon and Quinton were committed for trial and tried for manslaughter before Mr. Justice Jelf at the ensuing Assizes, and they were acquitted. What is the complaint? Is it that the jury acquitted them, or Mr. Justice Jelf, or who?

(*Mr. Wm. Abraham.*) The complaint is this: I think it is as well to have it down.

(*Chairman.*) Somebody will tell us what it is they complain of. It is better not to come from you, but from one of the witnesses.

(*Mr. Wm. Abraham.*) The case is this, that on the evidence given before the coroner's jury these men were found guilty of manslaughter.

(*Witness.*) Yes.

Digitized by Google

Mr. W. E. Morgan
21 Nov. 1907

31133. (*Mr Wm. Abraham.*) When prosecuted at the Assizes in Swansea the case against them broke down?—Yes, they were acquitted.

31134. Other evidence was also allowed to come in.

(*Mr. Cunynghame.*) How on earth could you have prevented it?

31135. (*Mr. Wm. Abraham.*) In your opinion if the coroner and his jury had power to order a prosecution they would have done it?—Yes.

(*Mr. Cunynghame.*) But they did. You can indict when a coroner's jury finds a verdict of manslaughter. You indict on that straight away. It is equivalent to the finding of the Grand Jury, and the indictment takes place with the Director of Public Prosecutions. The coroner's jury could do no more, and do no less. What is the complaint?

(*Mr. Wm. Abraham.*) What we try to suggest to you is this: if they had the power of punishing they could say what punishment was due to these men. They would evidently have done it there and then. Or if we had power to demand a second investigation under the Act.

(*Mr. Cunynghame.*) You could not punish a man. That would be out of the question. You could only enquire. You can do no more than prosecute.

(*Mr. D. Watts Morgan.*) May I explain that they were not tried in any way to this evidence at the Assizes at Swansea, and the man was not compelled to give evidence against himself: therefore the prosecution fell through on that ground. That is what we complain of.

(*Mr. Cunynghame.*) Your complaint is this, that in the case of a mining prosecution a man is not compelled to give evidence against himself. Is that your complaint? Do you want a change in the law?

(*Mr. D. Watts Morgan.*) We cannot put the evidence in before the Court as against him.

(*Mr. Cunynghame.*) Do you complain that the man is not compelled to give evidence against himself?

(*Mr. D. Watts Morgan.*) Yes.

(*Mr. Cunynghame.*) Is that the complaint?

(*Mr. D. Watts Morgan.*) That is one form of the complaint.

(*Mr. Cunynghame.*) I will investigate that form of complaint. I suppose you know as a principle of English law that no man is compelled to give evidence against himself on a criminal matter.

(*Mr. D. Watts Morgan.*) I quite follow that.

(*Mr. Cunynghame.*) You propose an exception should be made to that rule in the case of mining prosecutions?

(*Mr. D. Watts Morgan.*) We ask that unless the coroner's jury——

(*Mr. Cunynghame.*) Do you or do you not?

(*Mr. D. Watts Morgan.*) Unless the coroner has power to inflict punishment on the man.

(*Mr. Cunynghame.*) Would it not be better to answer the question first. Do you propose a man should be compelled to give evidence against himself—I do not think you do: I should think it unlikely, but still, do you?

(*Mr. D. Watts Morgan.*) No.

(*Mr. Cunynghame.*) What is the other complaint on this prosecution?

(*Mr. D. Watts Morgan.*) The complaint is that there ought to be some further enquiry with regard to this matter, and as the result of that enquiry, if he was found guilty, he should be punished.

(*Mr. Cunynghame.*) Do you mean that after a prosecution and an acquittal by a jury there should be a second trial?

(*Mr. D. Watts Morgan.*) Before that.

(*Mr. Cunynghame.*) Do you mean a man should be punished except by a jury of his own countrymen—tried at Assizes without a jury?

(*Mr. D. Watts Morgan.*) No, in the form of enquiry we suggest that would not be so.

(*Mr. Cunynghame.*) If you had the enquiry you suggest it would not be able to punish him. He could not be punished by the persons conducting that enquiry. Do you suggest that he should?

(*Mr. D. Watts Morgan.*) He may not be punished in the sense you look upon it, but something would be done in order to correct the offence that had been committed, which is not the case now.

(*Mr. Cunynghame.*) How would you correct it by punishing him? You use the word "correct."

(*Mr. D. Watts Morgan.*) The publicity given to it would be the means of preventing another occurrence of the same kind.

(*Mr. Wm. Abraham.*) You should have power to take his certificate from him.

(*Mr. Cunynghame.*) There is that power if he has the certificate.

(*Mr. Wm. Abraham.*) It is not a question of sending a man to gaol. It is a question of preventing a negligent man managing men again.

(*Mr. D. Watts Morgan.*) That is one point. So far as Mr. Kingdon is concerned now there is nothing on his certificate to prevent him managing a colliery if an owner cares to give him an appointment.

(*Witness.*) Could there not be an enquiry when serious accidents happen? Could not the Government step in and hold an enquiry?

31136. (*Mr. Wm. Abraham.*) Is it not our complaint in South Wales on several occasions that we have failed to move the Home Office to put in force the power that they have under the present Act to investigate the conduct of these men whose negligence has been the cause of the loss of life?—Yes, that is the complaint.

31137. That is our point. It is not a question of punishing these men in the sense of criminal punishment, but a question of preventing a negligent man managing again until he has given proof of his ability to become a manager of our men?—Yes, and when the inspectors take a case into Court they lose very often.

31138. Are you of opinion than an inspector loses a great deal of influence in the district when he is not able to enforce his orders?—Yes, and in other districts as well.

31139. It is the opinion of South Wales miners and the opinion of South Wales leaders that the failure of these prosecutions reduces the power and the influence of the Government inspectors in that part of the country?—Yes, it has a tendency to discourage them from taking cases into Court. I could cite another case.

31140. I am just going to give another case. Take Gowerton, the Elba Colliery case. Is not that a similar case, where the coroner's jury found the manager in fault and the cause of the death of the men under him?—There was an error of judgment on the part of the official. The under-manager, I believe, it was, if I remember rightly.

31141. That would be a very mild way of putting it?—Yes.

31142. Misplacement of a pipe instead of effecting a cure created evil?—Yes.

31143. The inspector took the matter up?—Yes.

31144. And a prosecution was entered against him?—Yes.

31145. It was lost?—It was the opinion of the inspector that he had a clear case against the management.

31146. You were laughed at in Court?—Yes.

31147. Have you any opinion of your own or your fellow officials there as to why that prosecution failed?—Other evidence was given at the Court than what was given at the enquiry, and I believe it happened that they had a sympathetic Bench. That is the opinion of all the miners, and the public.

31148. One of the magistrates was an old colliery proprietor?—Yes, there was a colliery proprietor on the Bench at the time.

31149. (*Chairman.*) A colliery proprietor was one of the magistrates? There were some colliery proprietors on the Bench?—Yes, on the Bench at the time.

(*Chairman.*) Ought they to be on the Bench?

(*Mr. Cunynghame.*) What were their names?

(*Mr. Wm. Abraham.*) They were retired from business.

31150. (*Chairman.*) They were people whom, in your opinion, were likely to be biassed?—Yes.

31151. As having been once colliery proprietors?—There would be an inclination, of course, on their part to agree with their own side. That is human nature.

Digitized by Google

31152. (*Mr. Cunynghame.*) I should like to take those two points up. Take the first case: that was an inundation of water at the Caradog Vale Colliery, the one you first spoke of?—Mr. Watts Morgan is more versed in that case than I am.

(*Mr. Cunynghame.*) We will not ask you anything about that.

(*Chairman.*) Would you like to ask the other Mr. Morgan?

(*Mr. Cunynghame.*) Yes. What, and against whom, is the complaint with regard to this Caradog Vale case? Is it against the law or against anyone?

(*Mr. D. Watts Morgan.*) In the first place perhaps we should have to deal with the manager. Something ought to be done in respect of his certificate. He holds his certificate to-day, and there is nothing to prevent him getting another post. The only thing is if the owner does not care to employ him because of his connection with that place. In the eye of the law he is as competent to manage a colliery as at any time.

(*Mr. Cunynghame.*) Supposing application were made, as can be made under the Act, to take away his certificate, I suppose he would plead the acquittal of the jury, that they had heard the case and acquitted him?

(*Mr. D. Watts Morgan.*) I daresay he would.

(*Mr. Cunynghame.*) Still, the matter can be enquired into, I presume?

(*Mr. D. Watts Morgan.*) Yes. That is one of the reasons why we are seeking for this court of enquiry. That court of enquiry would be a competent authority to enquire into all the circumstances, and better than the jury at an Assize Court, because it would be able to understand the value of the offence committed.

(*Mr. Cunynghame.*) I agree, but at the same time there is no punishment you would propose to inflict where he has been acquitted, other than taking his certificate away?

(*Mr. D. Watts Morgan.*) No.

(*Mr. Cunynghame.*) What is your complaint in this case? You do not complain of the law?

(*Mr. D. Watts Morgan.*) I think proceedings should have been taken against him with regard to the cancellation of his certificate.

(*Mr. Cunynghame.*) I will take the second case—the Elba Colliery at Gowerton. They were prosecuted, were they not?

(*Witness.*) Yes.

31153. (*Mr. Cunynghame.*) What more do you say ought to be done in that case? How ought the law, or the administration of it, to be strengthened, or anything else?—I do not know. We are only stating facts. I had a conversation with Mr. Robson, and he was of opinion that a conviction ought to have been made in that case.

31154. That is not an answer—what conversation you had. I am asking what could be done. We are here to see what can be done in these cases. What more do you say could be done, or could be done in that case? It is for you to make suggestions?—An independent Court. I think when something happens on the sea, a shipwreck, or something of that sort, there is a Court of Enquiry. Could we not have something in connection with the mines independent of magistrates?

31155. You are aware under Section 45 an enquiry can be ordered? Do you know Section 45 of the Coal Mines Regulation Act?

(*Chairman.*) Would that be a satisfactory thing supposing that enquiry was put in force? Would it be a satisfactory kind of enquiry, the enquiry such as that under Section 45?

(*Witness, after perusing the Section.*) The only thing needed is to put this in force.

31156. (*Chairman.*) Your complaint is that the Home Secretary did not act under Section 45 and order another enquiry?—Yes.

31157. You think he ought to have ordered another enquiry, and that that would have been better than a prosecution?—Yes.

31158. The prosecution failed, and you think the enquiry might have done some good?—Yes.

31159-60. (*Mr. Cunynghame.*) What result would the enquiry have arrived at?—I think if an enquiry were held, competent persons could be appointed to deal with the question, and not leave it to magistrates without knowledge of mining to decide.

31161. (*Chairman.*) I understand the position of the witness to be this: he thinks it was a mistake to order a prosecution, and it would be better if the Home Office had ordered an enquiry under Section 45?—That is what I think.

31162. (*Mr. Cunynghame.*) I should think we should have been guilty of a grave dereliction of duty if we had not ordered a prosecution. You think there should have been no prosecution in that case?—After the case had been fully enquired into to decide whether a prosecution would benefit or not.

31163. (*Chairman.*) You would have the enquiry under Section 45 first, and according to the result of the enquiry you think the Home Office ought or ought not to have ordered a prosecution. You think the enquiry ought to have taken place before the prosecution?—Yes.

31164. That is the point, as I understand it?—And when the inspector goes with these cases before magistrates and loses them, it discourages him.

31165-6. (*Mr. Wm. Abraham.*) I think you agree with Mr. Morgan with regard to the additional inspectors being appointed?—I do. I should like to point out the difference in the Western District of Glamorgan, or South Wales. There are so many small collieries that it is almost impossible for the inspectors to do their duty properly. I know, because I live close to them, and they are away early in the morning and late at night, and there are so many accidents; they make enquiries at the collieries and attend inquests, and it is impossible for them to perform their duties properly. We have hundreds of small collieries isolated in the hills, and it is very difficult to go there. It is not the question of the number of men working at the collieries, because we have collieries from 4 to 500, and in our own district we have collieries large and small, and it takes as much time to visit a small nearly as a large one.

31167-8. When you said "hundreds of collieries" you meant a large number of collieries in the hilly district?—A large number.

31169. You agree with Mr. Watts Morgan with regard to working-men inspectors?—Yes.

31170. Have you anything now to add to what he said with regard to the necessity of them?—No, I have nothing to add. I endorse what he has said.

31171. Do you agree with him as to what he said about firemen's duties?—Yes.

31172. The firemen's districts?—Yes. I could cite many cases, but I should like to add one thing. We know of firemen that are not able to write, and I have one in my mind who, when he was making his report, could not make the report himself, and the weighman or somebody else wrote in lead and he had to follow, and that was the way he was signing the books. There was a case the other day when a fireman admitted before the coroner that he could not write. I think some sort of examination should take place before a fireman is appointed.

31173. To prove whether he is competent or not?—Yes, competent, and to have the approval, in my mind, of the mines inspector before he commences his duties.

31174. You think, then, that in addition to the manager having the right of appointing him, he should in a sense appear before the mines inspector to satisfy the mines inspector that he is qualified?—That he is qualified for the post.

31175. One of the qualifications added to the other practical requirements would be that he is able to write his own report?—Certainly.

31176. Do you know more than one case where men so appointed are not able to make their own reports?—I know of about four or five cases; when accidents occur things are disclosed, and then they are reduced to the ranks. I want these men to be qualified before being appointed.

31177. (*Chairman.*) The managers of the mine do not know that these people cannot write when they are appointed. They would not knowingly appoint a fireman who could not write. They find out by an accident happening and an enquiry taking place?—Yes.

31178. How do these reports get before the managers? Somebody writes them for the firemen?—Somebody writes, and they follow with ink, with a pen.

31179. (*Mr. Wm. Abraham.*) This is one of the serious complaints we have to make where incompetent men are appointed, is it not?—Yes.

Digitized by Google

Mr. W. H. Morgan
21 Nov. 1907

31180. (*Chairman.*) The blame of that rests not so much with the management, who do not know about it, as with the persons who recommend these incompetent firemen to the management. Who would they be?—As a rule from what I know, a large number of these firemen are appointed because they are friends of the managers and overmen.

31181. The management does not know very often. The under-managers do it without the knowledge of the principal manager?—I do not know who appoints them, but we can gather when a person is appointed whether he is a friend of the officials or not.

31182. If you find out a case of that sort I should think it was your duty to report it at once to the inspector of mines, and that the inspector of mines ought to deal severely, or see that the management dealt very severely, with anybody who recommended a man who could not write a report.

(*Mr. Wm. Abraham.*) In a small colliery a manager would know his men.

(*Chairman.*) I think the witness said the manager did not know, and only found out very often by some accident taking place.

(*Witness.*) The way we find them is when we are attending the inquests.

(*Mr. Smillie.*) The witness meant when publicity was given to it the person was reduced.

31183. (*Chairman.*) Very often the manager, the witness says, does not know that this fireman was incapable of writing the report. I want to know who is really responsible for appointing a man who does not know how to write, because he ought to be severely dealt with?—It depends on who has the power to appoint these men, the under-manager, the overman or manager.

31184. Whoever recommended a man to be appointed as a fireman and knew that the fireman could not write ought to be dealt with severely?—We had a case the other day.

31185. (*Mr. Smillie.*) Do you suggest that the manager did not know?—I do not doubt that. When the case was investigated—there was a fatal accident—in his evidence he admitted that he could not write, and the mines inspector, Mr. Dyer Lewis, said "You will not act as a fireman again."

(*Chairman.*) All I can say is that it is the duty of somebody to see into that. It ought to be a reason for taking away a man's certificate, to deliberately appoint a man as a fireman who did not know how to write.

31186. (*Mr. Enoch Edwards.*) Following this particular question that you are asked, you suggest that you have firemen who may be qualified otherwise, but who cannot write?—Well, they are practical men.

31187. Of course ordinarily they would understand their duties?—Yes.

31188. Is this class of men you are referring to old men?—Yes, as a rule they are.

31189. Before the pre-historic School Board days?—Yes.

31190. One can hardly conceive a man who cannot write now, particularly in Wales, where your education is so advanced?—No.

31191. It would be rather a small number who cannot write, after all?—Well, I should think so.

31192. In your smaller pits you do come across men?—I have come across three or four cases in that way, and in my opinion they ought to be able to read and write.

31193. (*Chairman.*) Are they old mining men?—Yes, elderly men.

31194. (*Mr. Enoch Edwards.*) That would not happen at your larger collieries?—No, I do not think so.

31195. At the smaller places these men have acted for years?—In the case I cited now there are about 80 or 90 workmen employed at the colliery.

31196. I gather from you that a number of these mines you are referring to have no proper means of ventilation?—Yes.

31197. Have you ever called the attention of the mines inspector to it? Have you, or any of your people, called attention to it?—I have been speaking personally to the inspector about it, and he was telling me that he would give his attention to them.

31198. Of course now the inspector would have some power to enforce ventilation?—Yes.

31199. And if your district complained that certain collieries were not ventilated, he would attend to them?—Yes, but in my opinion they ought to be compelled to ventilate the mines with a mechanical contrivance, and not depend on the wind.

31200. Natural ventilation, you mean?—Yes.

31201. Where you have natural ventilation is there much blasting in the mines?—Yes.

31202. I suppose sometimes they get the fumes away from the men's working places?—It is stagnant there all day.

31203. With regard to your observation about these bore-holes, I do not know whether I am rightly interpreting you. We have bore-holes now?—Yes.

31204. Bore-holes taken on a head and flank sides when you are approaching water?—Yes.

31205. I gather what you mean now is a person working up to his own boundary?—Yes.

31206. And the coal belongs to another person in another mine. That shall not be abandoned before he puts in the bore-holes?—Yes.

31207-8. That is different from the bore-holes we have now?—Yes.

31209. You suggest that where they are going to abandon the work in the lower side they should be compelled to leave bore-holes of such a depth?—And plug them, and when approaching from the lower side they will be safe by boring. Perhaps they will strike the hole first of all, before striking the water, and by having the plug inside the water would not rush. That is my idea.

31210. I think the idea is so far as protecting the person who gets the mine lowered and comes up to it in the case of a pound of water. It would drain off gradually without carrying with it a whole body of coal, as it has done in some disasters?—Yes.

(*Sir Lindsay Wood.*) Is that exactly what he means? He says coal is on the inside, and then the water would come in the inside. He said the bore-holes were put in and plugged up.

31211. (*Mr. Enoch Edwards.*) I am not following the suggestion about plugging, but the bore-holes are bored and left there?—Yes, and plugged.

31212. I do not know what the plugging may involve in it. If plugged they may go on with a piece of working past it, and find it very thin, and the bore-holes would not help very much. My idea is that when a colliery is approaching its boundary, these bore-holes being there, they tap the water out of the bore-holes long before they take the barrier out?—Yes.

31213. In answer to Mr. Ellis about checkweighers you suggest that in inspections by workmen they should have power to appoint checkweighers as examiners?—If we should succeed in getting additional inspectors, it would be, in my opinion, better to do away with the workmen's examinations.

31214. That is, he should not be debarred by law from being appointed?—No. I was thinking that he was an independent person, and that he could give a correct report of the state of things underground.

31215. Have you had much experience of these workmen's examinations?—Yes. I have been examining collieries myself.

31216. Of course you have made your report out?—Yes, a correct report.

31217. Have you ever felt diffident about this report?—Yes.

31218. That is to say, if there was something wrong in the mine and you reported it, the manager might not like it?—I was condemned for giving a report of that nature. That happened 25 or 29 years ago.

31219. I am pleased to think that many of these things happened a good while ago, because I could tell you an experience of that sort myself. The men have it in their minds, if they report truthfully what they have seen, it is likely the under officials will not like it to be on record in the office?—Yes.

31220. You do not have much difficulty from the general manager in those cases?—No, not in many, but the men do not take advantage of that provision in the Act. They are afraid if they go round and report what they have seen that they will be persecuted, and therefore it is a dead letter as far as our collieries are concerned.

Digitized by Google

31221. Could you in a word tell us exactly what you mean by these inaccurate plans. Is it the plan of the adjoining property, or the plan of the colliery that is working. What have you in your mind?—All the collieries. If one colliery works beyond its distance and does not insert it in the plan, that would not be a correct plan.

31222. If a colliery works beyond an agreed distance, where there is a question of royalty involved, that would be the reason for not putting it on the plan?—I do not know.

31223. Having stolen his neighbour's goods?—Yes.

31224. You think in that case he would not put it on?—Yes.

(*Chairman.*) I will just call attention to the report on the Caradog Vale case, by Sir David Brynmor Jones. He says, in the course of the Report in regard to the matter on page 10: "I do not, upon the whole, feel that it would be just to cast any blame upon the present owners, Quinton, or Kingdon, in respect of the inaccuracy of the working plan," and he finishes up with this: "The trial at the Assizes attracted considerable and widespread attention and interest throughout the coalfield of South Wales, and will, I believe, have a very salutary effect on those responsible for the safety of the persons employed in and about the mines situate in that important district." In Sir David Brynmor Jones' opinion, at all events, some good was done by this investigation, and he does not advise any further legal proceedings against these men, although, having been acquitted of manslaughter did not prevent them from being prosecuted for an offence against the Coal Mines Regulation Act, 1887. He says they might have been prosecuted, but he does not advise it. It does not seem to be a very strong case to support your contention that there ought to have been a further investigation.

31225. (*Mr. Wm. Abraham.*) It was strong enough to lose a lot of lives?—Yes.

(*Chairman.*) A lot of lives were lost, no doubt.

31226. (*Mr. Wm. Abraham.*) You believe there ought to be a "thorough examination of shackles, couplings, etc., and to have them annealed at least every six weeks." Will you explain that?—That is my opinion.

31227. Will you kindly explain it?—There is some sort of examination; they say that they examined the shackles, but I have attended four or five enquiries where men have been killed owing to the snapping of the shackles. In order to detect any defect that there may be in a shackle or a coupling, in my opinion, it ought to be thrown into a furnace once every six weeks. It would improve the quality of the shackle and show the defects.

31228. The shackle is the chain that hooks two trams together?—Yes, the coupling.

31229. (*Mr. Smillie.*) See to the couplings, you mean?—Yes.

31230. (*Mr. Wm. Abraham.*) You think so, and it is the opinion of some engineers, is it not?—Yes.

31231. That there is a way of finding out a defect in these shackles if they were annealed?—Yes.

31232. Other couplings you would have placed on the side of the tram?—Yes.

31233. So that if the shackle broke these couplings would keep the journey together?—Yes. Perhaps it would be better to explain that we have got a large number of collieries which are steep, the gradient about 22 inches in the yard, and the strain when going up is great.

31234. You know cases, doubtless, where in your opinion and in the opinion of a fellow workman the extra couplings in use have been of assistance to the shackles, and although the shackle broke the trams could not run away?—Yes, and in the Inspector's Report for last year he recommends them.

31235. (*Sir Lindsay Wood.*) Do you confine these remarks to where the seams are steep, or practically on a level?—Where they are steep.

(*Mr. Wm. Abraham.*) It is with these collieries he is dealing.

(*Sir Lindsay Wood.*) He made a rather general remark.

(*Witness.*) The danger on the flat would not be so much, but when the gradient is great and when the couplings break, there is a danger of persons being killed.

31236. (*Mr. Wm. Abraham.*) There would not be any danger in a shackle breaking on the flat?—No.

31237. The real danger is on the slope?—Yes.

31238. Take Trimsaran; if these couplings had been in use with the shackle the probability is that accident would not have happened?—I agree.

31239. That is a case within the knowledge of us all here?—Yes.

31240. Could you add other cases in your own district?—Yes. There was a case at Pencoed Colliery, and I remember a discussion with the manager and the inspector at the time. The inspector was condemning the shackle and suggesting that there ought to be better protection in these places where the gradient is great—short couplings in addition would materially reduce accidents.

31241. So that the inspector of the district agreed with your view and our view in this matter?—Yes. I suggested another thing; when the men are going backward and forward down these planes there ought to be a chain underneath in addition to the coupling. There is a danger for the rope to go under the wheels, and add to the danger, unless you can have something to attach the rope or the chain underneath to the coupling and keep it under the trams or under the car.

31242. Keeping it from trailing on the ground?—Yes.

31243-5. Those suggestions of yours you are conscientiously of opinion would reduce the accidents from cars running away?—Yes, materially. By the report of the inspector for last year there were 90 cases where persons had been injured in haulage by trams, and so forth.

31246. The district now under Mr. Dyer Lewis?—Yes. And it is a serious question.

31247-8. You are of the same opinion as Mr. Watts Morgan with regard to giving the same facility to workmen to express themselves as to the owner when Special Rules are made. Then you suggest as an improvement in the system of timbering that cogs should be used?—Yes. I know collieries where there is a good roof, rock top, and they are working on the longwall system, where there is not sufficient rubbish to pack up the gob. They are only standing posts, and when the top begins to work it is very dangerous, but if they had stood cogs in addition to packing, it would support the top and make it less dangerous for the men.

31249. If there is anything we have missed, now is your time to say it. We are reluctant to keep you all day, but do not leave anything important?—There is one important thing I want to mention with regard to manholes. In steep measures I would suggest that the manholes should be made oftener than is provided in the rules. When they are working on the slant, and if a journey of trams follow and you are climbing up a place dipping 18 or 20 inches, it is a matter of impossibility to reach the manhole unless there is plenty of room alongside the road.

31250. Your complaint is this: where coal is brought up by surface haulage, the roads in some cases are narrow?—Yes, that is one complaint.

31251. There is no room for the men to shelter, and the manholes are not frequent enough?—Yes.

31252. There, again, could you give some instances?—A man was killed about 12 months ago.

31253. We only want one instance?—He was running in front of the journey, and the journey killed him because there was not sufficient room between the side and the trams; he was crushed. If he had only gone a yard further he would have been on the surface.

31254. There was not room for a man between the tram and the side?—No.

31255. (*Sir Lindsay Wood.*) How far were the manholes apart at that place?—I do not remember how often they were at that colliery.

31256. (*Mr. Smillie.*) Was it an engine plane?—Yes.

31257. (*Sir Lindsay Wood.*) You are aware if there is not room alongside the side of the line to travel, the manholes must be 10 yards apart, and not 20 yards?—Every 20 yards I believe, on an engine plane.

31258. (*Chairman.*) It is 10 yards in the Act of Parliament?—And 50 yards on levels.

31259. (*Mr. Wm. Abraham.*) What is it?—10 yards apart, and in steep measures the distance should be less.

(*Mr. Smillie.*) We were dealing with this yesterday.

(*Chairman.*) Rule 14 says "or if there is not room for a person to stand between the side of a tub and the side

Digitized by Google

Mr. W. E. Morgan. 21 Nov. 1902.

of the plane then (unless the tubs are moved by an endless chain or rope) at intervals of not more than 10 yards." Why should that be so?

(*Mr. Smillie.*) If moved by an endless chain or rope, 20 yards is sufficient.

(*Chairman.*) I suppose it is because it goes more slowly.

(*Sir Lindsay Wood.*) Yes, about a mile and a half per hour.

31260. (*Mr. Smillie.*) It was a tail rope you were referring to?—Yes.

31261. (*Mr. Wm. Abraham.*) In this case you are citing now how far would the man be on the road?—He started out when the journey was coming, and he thought he could manage to go out to the surface before the journey, and was caught between the journey and the wall.

31262. How far behind him was the next manhole. Could he have turned in there?—Yes, I daresay he could.

31263. How far behind him?—About 20 or 25 yards.

31264. That is the point. That is the cause of your complaint, that there was no manhole for him to turn in within 20 yards of the mouth of the drift, or 25 yards as you say?—My point in regard to that case is this. The man had gone beyond the manhole, thinking he could succeed in getting out. If there had been sufficient width between the road and the side he would not have been killed.

31265. That is another thing. You are now advocating sufficient room for the man to go to the side?—Yes.

31266. The original point is, you want the manholes to be oftener when there is no room?—Yes.

31267. My point is this. We want to know, if you can tell us, how many yards had that man passed the nearest manhole to the surface?—I do not remember; I am not in a position to say, although I attended the enquiry.

31268. Were there 10?—Yes.

31269. Were there 15?—Yes, more than 15.

31270. Were there 20?

(*Sir Lindsay Wood.*) He says he does not remember.

(*Chairman.*) In that case the law was not complied with.

(*Mr. Wm. Abraham.*) That may be so.

(*Chairman.*) If that is so, the suggestion is that the law has not been carried out, not that it requires alteration. I understand you to say you think that there ought to be more numerous manholes than there are now. This particular case does not bear out the contention, because there ought to be manholes every 10 yards according to Rule 14, and if not the law has not been complied with. He could not possibly be more than five yards from a manhole if the rules had been carried into effect.

(*Witness.*) What I want to point out is this, whether it is not possible to have improvement in these steep measures. A man cannot move quickly when the gradient is great.

31271. (*Chairman.*) That is another matter. Mr. Abraham pointed out that you are talking about two different things. First of all, you suggest that there should be a gangway at the side sufficiently wide for a man to pass?—Yes.

31272. Another thing is about the manholes. With regard to the manholes in this particular case of an engine plane and there not being room for a man to pass between the trucks and the side, that was a case where under the present law the manholes should be every 10 yards. You do not suggest that that is too long?—As far as that goes, in my opinion that could remain; but in steep measures I think the manholes ought to be oftener—a great deal, too.

31273. (*Sir Lindsay Wood.*) You would rather have sufficient room alongside the wagon-way and the wall for the men to travel?—Yes, and manholes.

31274. Ordinary manholes, 10 yards apart?—Yes.

31275. (*Mr. Smillie.*) You say that the dip in some cases is 18 inches to 2 feet 10 inches. That is practically the edge of the workings?—Yes.

31276. Is it safe in any case for a workman to travel on a road of that kind while the trams are being run?—No, it is not safe. One cannot say that it is safe. There are men constantly working as road-men, timber-men and repairers on these steep slants.

31277. Do the men travel these roads?—They must travel backwards and forwards in order to carry on the work.

31278. I do not mean those who are engaged on the road, but do other men travel those roads?—Yes.

31279. Are they allowed to travel those roads during the time the trams may be drawn up?—Yes, they come out as soon as they have finished.

31280. Supposing a rope breaks in a case of that kind, could any manhole save a person where the inclination is very great. Would not the tubs go down almost as if dropping them down a shaft?—Yes.

31281. A person has not time to go into a manhole in a case of that kind?—No, not much.

31282. It is absolutely unsafe for persons to travel a road of that kind during the time the trams are being drawn up. Is not that so?—Yes.

31283. Consequently it would be necessary to have a travelling road?—A travelling road would be better, certainly.

31284. If it is at the risk of men's lives every time they go up and down a road of this kind, would it not be well to make a rule that persons should not travel a road of that kind?—I did not understand that.

31285. If it is unsafe, and you say it is, would it not be well to lay down a bye-law that workmen are not to be allowed to travel a road of that kind, where the inclination is great?—For the sake of safety it would be good.

31286. This Commission is dealing with safety, and you are here to give evidence as to what would be safe?—Yes.

(*Sir Lindsay Wood.*) You are asked whether it would not be better to prohibit the men coming up and down these inclines altogether. Would you add the words "while the setts are running"?

31287. (*Mr. Smillie.*) I was going to put that. If there is a place where there is no travelling road distinct from the haulage road, it could be laid down that persons were not to be allowed to travel to and from work during the time that the trams were running?—Yes, they could do that; and we have collieries where, after finishing winding coal, they send cars down and the men come up on the cars.

31288. They are brought up on the cars?—Yes.

31289. I think you put it here that in every case there should be room alongside a haulage road for men to stand out of danger during the time they are travelling in the event of the trams running away?—Yes; there is better chance of escaping if they fail to reach a manhole.

31290. And the workmen should not be required to travel those roads during the time the trams are running up and down unless there is sufficient room?—Yes.

31291. In addition to that you would have manholes every 10 yards at the furthest?—Every five yards.

31292. In a very steep gradient?—Yes.

31293. You would be in favour of having all manholes in mines white-washed perhaps four times a year?—Yes, for them to be visible to the men.

33294. At the present time that is not compulsory, I think?—I am not sure. I have seen them whitewashed.

31295. Is it done?—In our way?

31296. Is it done universally?—In the majority of cases.

31297. Is it a good precaution?—Yes.

31298. I could not really grasp the difference between shackles and couplings. Will you let us know what is meant by shackles in the case of a train of trams?—I believe "shackles" and "hitchings" are the same. They connect the trams. We have short chains with hooks in some places coupling the trams.

31299. They are connected with the draw-bars of the tubs?—Yes. There is something by the side of the tram.

31300. You propose short couplings in addition to the central couplings?—Yes, in addition. There are collieries now who have chains at the side of the trams.

31301. Which go the full length?—Yes.

(*Sir Lindsay Wood.*) Side chains between each tub?

31302. (*Mr. Smillie.*) Those side chains are, as it were, additional couplings?—The journeys are not always safe when going down. I have noticed that on many trams the chains are slack and are apt to unhook, and the trams run away. If there were a chain or something in the middle and at the sides it would be better protected.

31303. What you want to provide for here is not for the breaking of the rope but for the breaking of the couplings?—Yes.

Digitized by Google

31304. It has been proposed that there might be either a bottom chain going the whole length of the train or a top chain over the top. Would it be suitable to have a top chain, in your opinion, or are the tubs filled so high with coal that it would not be possible to have one ?—I do not think I would object to the top chain where the tub is not built up with coal, or to a bottom chain. I prefer the chains at the side.

31305. Do you mean a continuous chain or short chain from one tub to another ?—A short chain from one tub to another.

31306. That is an additional coupling really ?—Yes. In the district from where I come they are not filling large coal. It is not the same as in the Rhondda Valley, where they work large coal and the coal is built outside the tram.

31307. What is your objection to a top chain going the whole length of the train ?—I think if they fill above the tram it would tend to throw the coal down and it would make it more dangerous. I do not think it would be as safe when men were travelling on top as underneath or on the side.

31308. Is it usual at any of your collieries, or is it general, for pony drivers to drive coals out from the face to the pit bottom ?—Yes, with the exception of steep places.

31309. Is that the class of rider you mean ?—No.

31310. Is this loading on the train of trams ?—Yes, on the trams. There is no horse at all attached to it.

31311. Roads should be of sufficient height and width to give room for him to ride without danger ?—Yes.

31312. There are cases when quite suddenly the roof may be too low ?—Yes, we have instances of riders who have been killed. There was no height at all.

31313. They have been crushed between the trams ?—Yes, between the trams and the roof.

31314. The same thing in some cases may apply to pony drivers who sit on the trams ?—Yes.

31315. There is a tendency to prevent sitting on the trams altogether, either in trains of trams or in a pony driver's train. There is a feeling that they should not be allowed to sit on them. Have you heard that put forward by the managers or owners ?—Yes, they object to riding.

31316. Take the case of a pony driver; where is the safest place ? Is it safe for him to go between his horse and the trams, or to walk behind his horse and the trams ? Is that a safe position to be in ?—No.

31317. If he is behind his trams altogether, can he effectively drive his horse from that distance if behind six or seven trams ?—No, unless there is sufficient room at the side to pass.

31318. You know as a matter of fact that is not so ?—I have seen places myself where if a tram goes off the rails the haulier could not pass: he could not go on the top of the trams, and could not pass by the side. He must wait for somebody else to come and raise the tram.

31319. If behind the train of trams, and the first tram goes off the rails, he is powerless. He cannot pass by the side or the top ?—No, he must wait till somebody comes in search of him,

31320. As a matter of fact the safest place is to sit on the first tram, if the roof is high enough ?—Yes, provided there is sufficient height. You do not find that in collieries, worse luck.

31321. You consider the law should lay down that there should be sufficient height where it is necessary for a person to ride on a tram ?—That is my opinion.

31322. To remedy any danger ?—Or abolish the riding altogether.

31323. With regard to unskilled labour in mines, have you any unskilled labour in your mines ?—Yes.

31324. Will you give us roughly the proportion. Is it five per cent. of the men at present employed who are unskilled workmen or ten per cent. ?—We are in close proximity to the agricultural district where the majority come from.

31325. Your area has been a rapidly developing coalfield for some years ?—Yes, and it will in future. It has been so in the past.

31326. You have had a large influx of unskilled labour into the mines ?—Yes.

31327. I think you have already said you consider it a source of danger to themselves and other workmen ?—Yes.

31328. Is there any care taken to ascertain whether they have been previously employed in the mine before they are engaged ?—No; these men are taken on because they are cheap labour. I know of instances where these men are taken on thinking of course they will work cheaper than skilled workmen.

31329. Is it a general rule in your district that no person is to be employed or go underground without the consent of the general manager or the under-manager. Must he know before any person who is employed goes underground ?—I believe so, or the man who employs him; but the rule differs at some collieries. The over-men have power to engage them, and at other collieries the firemen have power, and in those cases the manager would not know.

31330. Have contractors power to engage men and take them down ?—Yes.

31331. Do you mean to say without the manager having any knowledge of it, contractors may employ them ? Is there any such thing as a contractor employing 10 or 15 or 20 men ?—There was a case not long ago in our district where there were about eight working under a contractor, and he employed them directly.

31332. Do you know whether or not he had the consent of the manager to employ men ?—I do not know that.

31333. He might employ unskilled persons and take them down ?—Yes.

31334. The employment of unskilled persons, unless it is at the face to work alone, is not a breach of the Coal Mines Regulation Act. You are aware of that, of course ?—Yes.

31335. Those men may be employed at very dangerous work, although not working at the coal face ?—Yes.

31336. They may be employed removing rubbish and stowing it in vacant places ?—Yes. If they are not experienced men they are sent to these abandoned places, and if they do not have the experience of practical men, sometimes they interfere with a post and bring down a fall, while a man who knew the conditions would not.

31337. In the Welsh fiery mines the abandoned places where they stow rubbish may be sometimes the most dangerous parts of the whole mine ?—Yes.

31338. In addition to firedamp which may be there, the nature of the roof may be very dangerous ?—Yes.

31339. You think it unsafe to employ an unskilled person with no previous experience of mining to do work of that kind ?—I do, unless he is not working by himself.

31340. Under the supervision of a skilled person, you mean ?—Yes.

31341. Who would be responsible for his safety, of course ?—Yes.

31342. I daresay you are not able off-hand to give any figures, but you believe that more than the average number of accidents have taken place to unskilled workmen ?—Yes, although I cannot prove that by figures.

31343. (*Sir Lindsay Wood.*) "Improvement in the mode of signalling, in particular in narrow and steep places." What do you refer to there ?—My experience about two or three months ago was this: I went into the colliery and the slant was dipping about 20 in. The trams were rubbing both sides, and there was no height at all. We were riding in the trams, and the trams went off the rail. The man in charge had to draw the wire before he could stop. I was in one of the trams, and I was thinking at the time that there ought to be a better system of signalling than that, because if the trams had gone on and knocked double timbers out probably all of us would have been killed. If there were electrical signalling at the colliery it would be easy to touch the wire and the engine would stop at once.

31344. Was this an engine plane ?—Yes, and there was no room for any of us to jump out of the tram.

31345. Was this an engine plane ?—Yes.

31346. Worked by a steam engine ?—Yes.

31347. Are the men allowed to ride in the tubs on these steep gradients ?—From what I gather, the men were descending and ascending in the trams, and no cars provided, and naturally, if the weight was at the end of the tram, it was raising the front part of it.

31348. Are men permitted by the colliery manager to ride in the tubs ?—Yes. He allowed me and others to ride.

(*Mr. Wm. Abraham.*) That is the way they go in and out. You had better answer it direct, "Yes."

Digitized by Google

Mr. W. E. Morgan
21 Nov. 1907

31349. (*Sir Lindsay Wood.*) I only want yes or no. You think that there should be better signalling along the engine plane?—There should be better roads and better signalling. There was no chance to get out of the tram there. It was rubbing both sides, and I swore I would not go down a colliery again.

31350. Is that the usual state of the engine planes in South Wales?—No; there are some collieries in good condition. I have been in many, and could not suggest any improvement.

31351. These are exceptional?—Exceptional.

31352. Then you refer to the plans. Is that done through inefficient men, or is it done wilfully?—Wilfully. They knew very well that they were working other mines' boundaries.

31353. What is the object of their doing it wilfully?—They would not be called on to pay royalties. An economical point of view, I think.

31354. Would it be economical to work somebody else's coal?—Yes.

31355. How is it economical?—They would not pay royalties, and the colliery would last longer. In the case I mentioned they had been working nine years, and the life of the colliery would be nine years more.

31356. In that case did they pay any royalty for the coal they had worked wrongfully?—No.

31357. How do you know?—Because I read it in the paper. The case was on.

(*Mr. Wm. Abraham.*) The case was tried by a law court.

31358. (*Sir Lindsay Wood.*) That was a purely criminal act. It is an allegation of criminality. Is that common in South Wales?—It actually occurred.

31359. Is it common?—No, it is not common; but after all, if men would go and work that piece of coal it may be the means of perhaps 100 men losing their lives.

31360. The wrong was in the theft of the coal?—That is the reason why I was suggesting that power should be given to the inspector to pay an occasional visit, and order a person to make a survey.

31361. You suggest that the inspector should be compelled to make plans wherever he considers that there is theft going on?—No, I do not look upon the question from that standpoint. I look upon the question from the point of view of safety to the men.

31362. Where is the danger?—It does not matter to me whether he paid royalties or not.

31363. Where does the danger come in? Why was it unsafe?—If it is not marked on the plan that the coal has been worked, it would appear to everybody who would work in that direction that the place is solid.

31364. It might be?—And if they were working to the dip that place may be full of water.

FORTY-FIFTH DAY.

Wednesday, 4th December, 1907.

PRESENT:

Lord MONKSWELL (*Chairman*).

H. H. S. CUNYNGHAME, Esq., C.B.
F. L. DAVIS, Esq.
ENOCH EDWARDS, Esq., M.P.
THOMAS RATCLIFFE ELLIS, Esq.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. JOHN GUEST, called and examined.

Mr. J. Guest.
4 Dec. 1907.

31365. (*Chairman.*) I understand you attend here on behalf of the Yorkshire Miners' Association?—Yes.

31366. I suppose you have been deputed by the Yorkshire Miners' Association to give evidence, and you have talked over the matter with them?—I have not.

31367. Then can you tell us for certain that the evidence which you will give is evidence that will commend itself to the Association? How far do you speak on behalf of the Association, if you have not talked the matter over with them?—I am representing the Association here.

31368. No doubt your Association is always discussing these questions?—That is so.

31369. You have been deputed by them to give evidence, but you have not had any special instructions from them?—That is so.

31370. They held no meeting before you came here to give evidence?—We have had no special meeting. Of course these matters crop up in our business meetings from time to time.

31371. (*Mr. Enoch Edwards.*) Do you mean at your Executive meetings?—At our Council and Executive meetings these matters are matters of discussion.

31372. (*Chairman.*) But you have had no special Executive meeting to discuss the question of the evidence which you are going to give here?—No.

31373. You say that as regards Government inspection you think the number of inspectors is inadequate, and that they are totally unable to efficiently inspect the mines under their charge, and that a very large proportion of their time is taken up in visiting places where accidents have occurred?—That is so.

31374. You say that on such occasions only the scene of the accident is visited, and on no occasion will the time at the disposal of the inspector allow of a thorough examination of the mine?—Yes.

31375. What is your view as to a mine inspection; how much inspection do you consider is desirable?—I should consider an inspection of a mine was an adequate inspection when the mine was inspected as a whole.

31376. You mean when every working place of the mine was inspected, and all haulage roads and every part of the mine?—I consider that is desirable.

31377. How often do you think it desirable that that should be done in the course of the year in each mine; would you say twice a year was sufficient, or once a year, or would it depend upon circumstances?—I take it that would depend to a certain extent upon the circumstances of the mine. At all events, I should say not less than twice a year.

31378. You think that every mine ought to be thoroughly inspected at least twice a year?—Yes.

31379. I suppose if every mine ought to be inspected at least twice a year, there are some mines where there are difficulties in working, or where there have been accidents, which ought to be inspected oftener than twice a year?—Yes.

31380. How many inspectors do you think you would require, say, in your district to inspect every mine in the district at least twice a year, and some mines oftener?—I take it that we should want at least 10 further inspectors.

31381. Ten for your district?—Yes.

31382. At present you have three?—That is so.

Digitized by Google

31383. So that you would want at least three times as many more. How would you distribute the inspectorate; would you have your district cut up into several districts, or would you have a head inspector over the whole district, and more assistants?—I should be in favour of the ground being split up into districts, under the supervision of the head inspector.

31384. You would have the inspectorate district as large as it is at present, and you would have it divided up into perhaps nine or ten sub-districts, and at the head of each sub-district there would be a sub-inspector?—That is so.

31385. Then what about the second-class inspectors whose appointment you recommend. Would they have a district, or would they be under the inspector of the district?—My idea with reference to the sub-inspectors was that these, as I should term them, working-men inspectors should act under the direction of the chief inspector, and have a separate district allocated to them.

31386.—Then would you have three separate grades of inspectors, or only two grades? Would you do away with the present grade of assistant inspector and keep the chief inspector of the district as he is now, and give him working-men assistants only?—I should see no objection to it being split into three districts under the supervision of the present three inspectors.

31387. That is a different story from your first story. Then which do you prefer—that your district should continue one district and that you should have a head inspector over the whole district, or would you prefer it to be split up into three districts, and that the head inspector should only have a third of the district to look after, and the assistant inspectors should have the other two-thirds? In that case you would make the assistant inspector, as I understand, of equal authority with the inspector, because each would be supreme in his own district?—I see no difficulty in the inspector being head of the district, and that there should be three sub-districts under the charge of the assistant inspectors, and then the working-men inspectors under those.

31388. Do I understand you to mean that the district should remain as it is, one district, that at the head of the whole district there should be an inspector, and that there should be two or three assistant inspectors who would work under the head inspector, but who should only go into a part of the district—that the district should be mapped out into two or three sub-districts, and that each assistant inspector should have a sub-district assigned to him, but that he should be under the chief inspector of the whole district?—Yes.

33389. Then we have got four. First of all we have the chief inspector, and now we have three assistant inspectors—that is four. Then you would have, in addition to that, at least six working-men inspectors in your district, I suppose?—Yes.

31390. What would you pay them?—We have not gone into the question of the payment of these inspectors, They would be in the employ of the Government, I take it, and the Government would pay them.

33391. What would you suggest the Government should pay them—£3 or £4 a week? Is that the sort of wage that you would consider a desirable wage for men of that class, doing that work?—I should think that they ought to have a wage adequate to the work that they have to do, but the question of wage is not a point which we have gone into, or which I have thought about. I take it that at all events they would require a wage equivalent to, say, that of an under-manager in a colliery.

31392. In fact the wages would be such as to attract the very best workmen to undertake the duties?—That is so.

31393. And I suppose they would be appointed like the other inspectors, for life; they would not have to go back again to the pit, and they would not be inspectors appointed for a term of years?—I should say they would be appointed for such time as they gave satisfaction.

31394. The same as the other inspectors. You say that there ought to be a qualifying examination. What is your idea of the qualifying examination which there should be for a third class inspector?—I should say such an examination as at all events would equip him for the position of an under-manager.

31395. A second-class certificate?—A second-class certificate.

31396. Then you would not have a special examination, but you would make him pass an examination for a second-class certificate the same as the under-managers have to do?—I see no objection to it being a special examination, but I should make it, as far as its character was concerned, of the same class, so that they would have the same rate of ability.

31397. I am now going to ask you about the inspection by the men under Rule 38. You would wish to alter the rule which limits the inspection by men. You propose to extend that rule so as to include not only persons who had practical experience underground, but also men who have only acted as checkweighmen. You say in your statement, "We desire that the rule which at present prohibits any but men working at the face from making an inspection should be amended so that other men working in the mine, or men who have practical experience, such as checkweighmen, should be appointed"?—Yes.

31398. So that you consider that practical experience of a man as checkweighman, without having been underground at all, would be sufficient?—No.

31399. Then I should like to know your views?—My idea with reference to that is that men who have had practical experience, and who may be checkweighmen, should be eligible for the appointment, not that checkweighmen should be appointed who have had no experience. But I may say that in that connection we have very few checkweighmen in Yorkshire who have not been practical miners.

31400. You would not consider that a checkweighman was eligible for such an appointment unless he had in point of fact either worked at the face or had gained experience underground in some other manner?—No.

31401. Then you do not consider it necessary that a man should actually work at the face. Supposing he has been engaged in other operations underground, in looking after the haulage, and that sort of thing, do you consider that he would be eligible?—I consider that he should have had practical experience as a working miner.

31402. You mean working at the face?—Working at the face.

31403. The general objection that has been taken hitherto by the men to Rule 38, is that it limits the employment of persons to men who are at present practical miners working at the face, and does not allow the appointment of persons who may have left the mine for some years, but who have had very large experience of working at the face previous to their having left for some other occupation, we will say?—Yes.

31404. Do you think that the rule might very well be amended in that way, so that not only men should be eligible for this inspection who are at present working at the face, but also men who have at any time gained sufficient experience at the face to make them experts in mining matters?—I think that the rule should be amended so as to say "who are or who have been practical working miners."

31405. That has been suggested before. You would be satisfied with that emendation?—Yes.

31406. With regard to the question of cost, I understand you say that some provision should be made for payment. What sort of provision do you suggest should be made; who should pay?—I consider it desirable that some provision should be made for this money being collected. At the present time the rule says that it should be done at the cost of the miners, but it makes no provision for that cost being collected in any way.

31407. How do you mean "collected"; do you suggest that there should be a sort of levy on all the workmen in the mine, and that it should be collected in that way, or what do you mean by "collected"?—I suggest that it should be obtained in the same manner as the checkweigh money.

(*Mr. Ratcliffe Ellis.*) That is by a levy; the checkweighman is appointed by ballot, and then he can levy upon the whole of the men employed, for his wage.

31408. (*Chairman.*) If there is no levy, how are they paid now?—At the present time they are paid from the funds which may be in hand at the colliery for local purposes. They are paid from local funds at the colliery, but there is no compulsion on any man to contribute, I take it.

31409. So that you think they should be put in the same position as regards payment as the checkweighmen?—Yes.

31410. You do not suggest that this sort of inspection should be paid for either by the Government or by the owners; what you suggest is that there should be a levy made upon the men for payment?—Provided the

Mr. J. Gues. 4 Dec. 1907.

Government go in for working-men inspectors, to make what we should term an adequate inspection of the mine I should not suggest that this charge be a further charge upon the Government. But under the present system if the men's inspection is to some extent to take the place of the Government inspection, of course the Government ought to pay for it.

31411. Supposing you had your way, and that all these third-class inspectors were appointed, would you think it desirable to have any further inspection at all under Rule 38, or would you be content with the inspection that you would get by the Government inspectors in that case?—I take it that, provided the men were satisfied that the mine was thoroughly inspected, they would not desire to appoint men to further inspect.

31412. I understand that in Yorkshire you inspect more under Rule 38 than in any other part of the kingdom; about a third of your mines are periodically inspected in this way?—Possibly.

31413. We have had that stated in evidence by one of the inspectors, Mr. Walker?—I could not state any given percentage.

31414. Then you would, as I understand it, not lay any very great stress upon the retention of this power by the men to inspect under Rule 38 if you had a number of working-men inspectors, sufficient to thoroughly inspect the mine twice a year or more, appointed by the Government. You would be very fairly content to leave it to the Government inspection in that case?—I do not see any objection on our part to the rule being retained even then. The men would not take advantage of it if they were satisfied with the examination of the Government.

31415. In that case, of course, you would not suggest that the Government should pay these men—you suggest that they should be paid by a levy on the miners?—That is so, provided the additional working-men inspectors were appointed.

31416. Would you suggest that no man should be allowed to inspect a mine who was not working in it or who had not been working in it; that no man should be transferred, say, from one pit to another for inspection purposes? At present, I believe the general rule is that you appoint two men who are working in the very pit itself which they are to inspect?—Yes.

31417. Do you think that is a good plan, or do you not think that the men should be allowed to appoint anybody they please, whether he is working in a given pit or whether he is working anywhere else, to go down any pit in the district?—We have had cases in our own district where men have been appointed from other collieries already.

31418. Do you object to that or not?—I think that plan is desirable.

31419. That the men should not be restricted in their choice?—That is so.

31420. With regard to inspection by officials, you say that the deputies who have the oversight of the various districts, have often too large a district, or have so many other duties imposed upon them that they have not opportunity to make that strict examination which is always desirable. Do you think as a general rule the districts of the deputies are too large, or is it only in certain isolated cases that you complain?—My opinion is that the districts, speaking in a general sense, are too large for the men to thoroughly examine the gates and roadways during the time at their disposal.

31421. They quite understand that that is part of their duties—that they ought not only to examine the working places, but they ought to examine all the gates and roadways if they have got time to do it. Every deputy understands that is part of his duty, I suppose?—I suppose so.

31422. But you think that in many cases it is physically impossible for them to do that?—I think that in many cases it is physically impossible for them to exercise supervision over the districts under their control.

31423. Another complaint which you have is that they have other duties to perform which are not concerned with the safety of the men, that is to say, in looking after the haulage, seeing how the tubs are filled, and that kind of thing?—Yes, and they are responsible for them in their own district.

31424. That you think is a wrong system?—I do.

31425. Supposing all those duties were taken away from them, and they only had to perform duties appertaining to the safety of the men, do you think that then their districts would be too large?—I would not say that, if they were confined strictly to the safety of the men, and the examination of the district. Of course districts would vary in character as to the necessity for examination.

31426. But the great thing that you complain of, I understand, is that they have other duties to perform, and if those other duties were taken away from them, and performed by someone else, probably the number of deputies at present engaged in looking after the safety of the men would be fairly sufficient to enable them to do their duty?—Possibly so, except in the case of a man who is examining for the morning shift, who is running his district prior to the morning shift commencing work; in our district, say, he may be limited to three hours to supervise his district and get in to make his report.

31427. That is not enough?—If he has a large district he cannot properly do it.

31428. Then you say that even if the deputies were only called upon to do the duties which you think they ought to be called upon to perform, still, in many cases, the districts would be too large?—In some cases.

31429. Or at all events that some arrangement ought to be made to enable them to get through those districts?—Yes.

31430. Then you say that you are totally opposed to the enforcement of discipline by fines, which you think is a most pernicious system, and one which does not produce the result aimed at, its being rather a cause of laxity than a remedy for it. Why should fines be a cause of laxity? What do you mean by saying that they are a cause of laxity?—In my opinion, if a man knows that if he is caught in a certain offence he may be fined half a crown or five shillings, there is not the same discipline over him as if he knew that if he was caught in an offence he would be taken to court.

31431. Supposing there were no fines at all, and no prosecutions or anything done, then things would be worse, would they not? You do not mean to say that the fines would make things worse than if there were no fines?—No.

31432. Supposing a man was simply had up and reprimanded, that would not be as good as a fine, would it? A fine does some good, I imagine, in promoting discipline?—Not in my opinion. I take it that if a man was prosecuted——

31433. I am not supposing that, but I am taking another point altogether. You seem to think that the system of fining is a bad system in itself, and that even if there were no prosecutions it would be no use to have fines. I should have thought that a fine, although it might not be as good as a prosecution, was at all events of some use in preserving discipline?—I look upon it in this way: if a man breaks a rule he may be fined at the discretion of the colliery owner, or he may be taken to court. The practice of fining men for breaches of discipline, to my mind, is a weakening of the rule. If a man's case is one that will be met by a reprimand, he should be reprimanded; if it is not one that will be met by a reprimand, he should be prosecuted, and that prosecution will have more effect on the discipline of the colliery than, say, a score of fines.

31434. I was only objecting to your statement that the fining was rather a cause of laxity than a remedy for it. Fining is a better remedy than nothing at all, I suppose; but the best remedy in your opinion is that the men should be always prosecuted. That is what I understand you mean?—I mean what I say there: there is no question about it that in collieries where fining is in vogue, it is no use in enforcing discipline, because there is the general knowledge that if anything is found out it will be met with a fine. If the men knew that there would be a prosecution, it would have a better effect.

31435. Looking over the number of prosecutions in all the districts, I see that your district is very much at the head of the list. As to prosecutions of workmen the Yorkshire district had, during five years, 785 prosecutions and 758 convictions?—Yes.

31436. However, you think they are not numerous enough; you would like to see more prosecutions?—I object to the system of fining; if the cases demand prosecution they should be prosecuted.

31437. You do not think that even for minor offences fines should be inflicted?—I do not.

31438. Not even for offences that have very little to do with the safety of miners?—I think that it ought not to be left to the discretion of an owner when a man is to be fined or when he is to be prosecuted.

Digitized by Google

31439. You are pretty certain that your Association agree with you in that opinion?—Yes; I feel convinced on that point.

31440. With regard to setting up Special Rules, you say that the workmen should be consulted when any Special Rules are being prepared, or when alterations are suggested, and that this would create more interest in the rule and would prevent misunderstanding. I understand that when the rule has been promulgated, any workman is perfectly at liberty to state any objection to it that he pleases, either straight to the management or to the mines inspector, or your Association would probably take up the matter, would it not?—I suppose it is the law that notice shall be put up with reference to these Special Rules; but our point is that if our Association and our men were consulted directly, and our opinion taken, the matter would be discussed and interest would be created, and the rules would be better understood when they were brought out.

31441. You mean you are not consulted at a sufficiently early period; these rules are promulgated and then you are told that you may make any objections you like?—That is so.

31442. But what you want is to have a voice in the framing of the rules before they are promulgated?—Yes. We had a large amount of trouble in our county with reference to the Special Rules *re* timbering. I believe we had one or two cases of stoppage arising through misunderstanding, and I do not know that prior to those rules being put out they had ever been discussed in our society.

31443. They were so badly expressed that there was difficulty in understanding their meaning; is that what you mean?—I mean to say that there was a misunderstanding as to the meaning of certain words in the rule.

31444. So that you think the rule might be more clearly expressed, and that if you had had the drafting of the rule it would have been more clearly expressed. Is that what you mean?—I think that if our officials had been discussing this rule with the other side and then had explained its meaning to the men, it would have helped the men to understand the real meaning and object of the rule, and would have facilitated its working.

31445. But if you thought the rules were ambiguous, or you did not know what they meant, or you thought there would be any difference of opinion as to them, you might, I suppose, have always gone to the owners and asked them what they meant; your Association, or someone on behalf of your Association, I suppose, might have gone to the owners. I understand you would go to the Home Office or to the inspector, and from the Home Office or the inspector you would find out what the rule intended to do, and then if you thought that the wording was not sufficiently clear you could always suggest other wording, I suppose?—Yes. We would prefer to be consulted before the rules are drafted and put out.

31446. With regard to accidents, you say a stricter supervision of the gates and roadways by the deputies is desirable, and that they might also be called upon to make periodical special reports as to the state of the gates in their districts. What do they do now; they make a mark, do they not, to show that they have been through a roadway at a particular time?—Yes, say in each working place.

31447. And you consider that it should be their duty to go through all the roadways to look at the condition of them, and every now and then to report not only upon the state of the working faces, which is the only report they are bound to give, but that they should also be called upon to make special reports as to the state of the gates?—Yes.

(*Mr. Ratcliffe Ellis.*) It depends upon the Special Rule. There is a rule in Lancashire that "the manager, undermanager or fireman shall travel all airways once a week, and the result of his examination shall be recorded without delay in a book to be kept at the mine for the purpose, in the same manner as provided for with regard to the inspection required by General Rule 4."

31448. (*Chairman.*) So that under that Special Rule a man would be obliged to make a report once a week, I suppose, as to all the gateways and roadways?—Yes, but what I had in my mind was a special examination of these gates and roadways, apart from his normal duty, and a special report.

31449. (*Mr. Ratcliffe Ellis.*) Under General Rule 4 he has to make an examination and then he has to report, but now we have this additional rule in Lancashire, which I have mentioned, putting upon him the obligation once a week to make a special examination of all airways that he has to travel?—Yes.

31450. (*Chairman.*) Do you think that that Special Rule would be sufficient to meet your objection?—No.

31451. (*Mr. Ratcliffe Ellis.*) You wish to have that extended to all roadways—not merely to airways, I suppose?—Yes. The point that I have in my mind more particularly is in connection with the gates: of course it applies to all, but to the gates particularly—where the drivers or the trammers are travelling.

31452. You mean the roadway immediately adjacent to the working face?—I mean the total roadway should be examined by the men, but particularly the gates. What we term the "gates" are the roads adjoining the face. We think that a special report as to the state of those gates should be made from time to time over and above the present method of inspection.

31453. (*Chairman.*) Then you think that that Special Rule ought to be strengthened by adding an inspection of the gates, as you call them, to an inspection of the airways: you would say "all airways and gates"?—Yes, and roads where the men are travelling, decidedly—or where they may be driving along the level.

31454. Would about once a week be the proper interval of time?—Yes, I think it would be desirable.

31455. Then with regard to haulage, you say that separate travelling roads where practicable should be provided?—I suppose in some old collieries that could not be done very well. I suppose there are such collieries.

31456. At least, it would be very expensive and almost prohibitive?—I take it it would be possible, although, as you say, it might be very expensive.

31457. Then where you do not have the separate travelling roads, I suppose you would say there ought to be a gangway on one side of the road wide enough for a man to pass while the tubs are running?—Yes; I think it is desirable that in the haulage roads generally it should be as wide as is practicable, having regard to the nature of the roof.

31458. Then you say that manholes should be kept well whitewashed. Do you think that they are sufficiently numerous, or do you suggest that they should be put up at less intervals than is now the case?—I should say that, particularly with reference to where it is 50 yards, the interval is too large.

31459. In those cases where there are 50 yards allowed by the Act of Parliament would you suggest that it should be 30 yards or what?—I should say that 20 yards is far enough for a manhole at any time.

31460. But 50 yards is only as I understand where there is animal haulage?—Yes, but you may have some quick haulage with a horse.

31461. Then you say that in all cases there should be a not greater interval than 20 yards between the manholes?—I do.

31462. What do you say about the number of accidents in horse haulage? Do you know of many accidents that occur in horse haulage?—I have no figures of any with reference to that matter.

31463. Do you know of your own experience of several accidents that have happened in horse haulage which might have been avoided by a manhole being only 10 yards off as you say?—I have known the drivers get hurt, but I have no record with me. We had a case not long ago—of course it was not on a horse haulage road—where a man was killed in a jenny road.

31464. And you think he might have been saved if there had been a manhole close by?—Yes, if there had been a more adequate provision of manholes, or if there had been a separate travelling road.

31465. The haulage road, you say, should be as wide as is compatible with safety? You mean that it should be as wide as possible, I suppose?

(*Mr. Ratcliffe Ellis.*) No, I think not: there is a danger in having it too wide.

31466. (*Chairman.*) Is there a danger in having the haulage roads too wide?—I take it that the nature of the roof would have to be considered.

31467. That is to say, taking into consideration the nature of the roof, you must make them as reasonably wide as you can without causing a greater tendency on the part of the roof to fall?—Yes.

Digitized by Google

Mr. J. Guest.

4 Dec. 1907.

31468. And you say that they should be kept free from incumbrance. The rule at present is only that every manhole and every place of refuge shall be constantly kept clear: there is nothing about roads. Rule 16 seems to be of very narrow application. It provides "Every manhole and every place of refuge shall be constantly kept clear, and no person shall place anything in any such manhole or place of refuge." That would seem merely to indicate that the entrance to the manhole must be kept clear, and it does not seem necessary under the rule that the place between the two manholes should be kept clear, so that the men shall always have a clear roadway to run along to get into the manhole. That is, I suppose, what you understand by the rule?—That is so.

31469. It seems that in the case of Yorkshire there are no Special Rules to keep the roadway clear, but that in some districts there are?—Yes.

31470. However, you say that there should be some rule either in an Act of Parliament or Special Rule, to say that the haulage roads should be kept quite clear from incumbrance?—Yes.

31471–3. So that any man walking along the side should be able to run along until he gets to a manhole so that he can then go in without obstruction?—Yes.

31474. Would you be satisfied with such a General Rule as is in force in the Scottish district, Rule 47: "The roadsmen, in their different divisions and shifts, if more than one, shall, at least daily, make careful inspection of the whole roadways from the pit-bottom throughout the mine where men are to work or pass, and shall keep the same free from all obstructions, and of the height and width necessary for proper passage and for ventilation." Do you think that meets the case?—Is that with reference to the haulage roads?

31475. Yes?—If they are kept free from obstruction.

31476. It says, "shall make careful inspection of the whole roadways from the pit-bottom throughout the mine where men are at work or pass": that applies to what you call the gates also, because men have to pass along the gates?—I prefer in that connection that a special examination be made periodically. There is the daily examination at present.

31477. Examination is another matter: you see that is done: but as regards what you think ought to be done, that rule I imagine would meet your view and do all you require—if it was carried into effect?—If it was carried into effect.

31478. We come now to the question of winding enginemen. You say they ought to have certificates of competency. Are they competent at present?—They are not compelled at present to hold certificates.

31479. I know they are not, but are they in your opinion competent for their work, notwithstanding that. Can you point to any accident which has occurred in your district owing to an engineman not being competent, or making a mistake?—I could point to accidents that have occurred, decidedly.

31480. I mean accidents that have occurred owing to the incompetency of winding enginemen. Accidents may occur from various reasons?—Yes, they may. Some time ago, in connection with the Hemsworth Colliery, we had very serious complaints on behalf of the men as to the qualifications of the men under whom they were expected to ride.

31481. They complained and said they were not properly qualified?—They complained that they were not properly qualified and that they were bumping them up and down in the shaft.

31482. You say that those men complained to you that the winders were not up to their work?—They did.

31483. And you think it was a just complaint?—Yes, at the time we thought it was a just complaint.

31484. Did you complain, or did anybody on the part of your Association complain, to the managers?—Yes.

31485. What happened?—The inspector was written to, I believe, and he came to the colliery: but I think in spite of the complaints of the men there was no alteration.

31486. The same men were kept on?—The same men were kept on.

31487. Then I suppose the inspector satisfied himself that in his opinion the men were competent men: I should imagine he looked into the matter. Then you say that cages used for the purpose of lowering or drawing men should be provided with gates to prevent men falling or being thrown out. It has been suggested to us, I think, by one witness, that these gates might by a possibility be the cause of an accident instead of preventing it, and that there was an instance in one case of a man desiring to jump out of the cage suddenly to prevent an accident being stopped by the gate, and either losing his life or being badly injured—I forget which. However, in your opinion, the advantages would outweigh the disadvantages very greatly?—In my opinion the advantage is with the gate. We have a great many cases of men falling out or being thrown out.

31488. (*Mr. Smillie.*) You can give some recent instances?—Yes, we had a very serious case within the last month.

31488A.—(*Chairman.*) I know quite lately there were several men killed?—Yes.

31489. Do you know of any other case of men being killed by reason of the want of a gate?—I have not the cases in mind, but I think it is pretty well a matter of common knowledge that men have been thrown out of the cage at different times, and have also fallen out through attacks of sudden sickness.

31490. Then as regards ambulance under Rule 34, you say that that rule is too vague and that proper ambulance appliances should be kept in each district, and men should be employed near to the ambulance station who have qualified in ambulance work?—Yes.

31491. You say that it should also be made compulsory for the owners to provide an efficient ambulance carriage for the purpose of removing injured workmen to their homes. I understand that things are becoming much better as regards the ambulance service. Are not the mine owners taking up the matter now?—Yes, it has been taken up better of late years.

31492. But still you think there is a good deal of room for improvement?—I think it is desirable that in the different districts of the mine there should be some ambulance provision for each separate district. At the present time I know of cases where the ambulance appliance is merely kept at the pit top a mile or a mile and-a-half away from where the men are working.

31493. You think there ought to be ambulances down below at certain separate distances, is that so?—Yes, in the separate districts of the mine.

31494. Down below and not above?—Yes.

31495. How would you define a district for which an ambulance ought to be provided? Would you say, for instance, that an ambulance should always be within a quarter of a mile of every man who was working, or what sort of provision would you desire?—The collieries are generally split up into districts, and a deputy would have charge of a certain district.

31496. You would take that as a district and suggest that each deputy's district should have an ambulance. Is that your suggestion?—Yes, I think that would be a good idea.

31497. With regard to safety lamps you say, "I am of opinion that it is desirable that the use of safety lamps should be extended to all collieries where gas is found." Do you mean in however small quantities gas is found?—Yes. I should say where there is a report of gas safety lamps should go in.

31498. And that they should remain in for ever—or should there be any provision for taking them out again?—While gas remained in the mine, I should say lamps should remain in.

31499. That they should always remain in—that there should be no provision that they should ever be taken out again, even where gas was not seen for some years?—While gas was found in the mine decidedly lamps should continue to be used. If there was no gas in the mine of course it would be another matter.

31500. But where gas was once found there would always be a possibility of finding more?—Just so.

31501. So that you would say that wherever gas is found, the mine should always afterwards be worked by safety lamps. That is what I understand you to want?—Unless it could be clearly proved that there was no gas existing of any kind in the mine.

31502. If gas was found in a mine what sort of proof could you have that no gas would ever be found in the mine?—It is not probable that that report would ever come.

31503. (*Mr. Smillie.*) Supposing your report books were signed that there were no signs of gas for six months, would you not take it that if the report was an honest one.

Digitized by Google

there was no gas in the pit?—If the report book was signed say for 12 months (I would not be satisfied with six months) that no gas was found in that pit, then the matter might be reconsidered.

31504. (*Chairman.*) Then perhaps it might be open to discussion as to whether the use of safety lamps should be abolished?—The matter might be reconsidered.

31505. With regard to enquiries you say, "I consider it desirable that when a member of a trade union is killed in the course of his employment, his society should have the right to be represented at the inquest, and to take part in the proceedings." Section 48, Sub-section 8, says that "Any relative of any person whose death may have been caused by the explosion or accident with respect to which the inquest is being held, and the owner, agent or manager of the mine in which the explosion or accident occurred, and any person appointed by the order in writing of the majority of the workmen employed at the said mine, shall be at liberty to attend and examine any witness," and so on. That is not enough for you?—No.

31506. But then any workman might appoint any member of the trade union to attend under this provision, might he not?—"any person appointed by the order in writing of the majority of the workmen employed at the said mine." I suppose you would have no difficulty in getting the majority to agree as to a union official or someone to represent the workmen? Is there any difficulty found in working that provision?—We have a difficulty. We have a coroner in our district who has held that an order should be signed by the majority of the workmen. It is difficult to get an order signed by a majority of the workmen.

31507. The section says, ". . . appointed by the order in writing of the majority of the workmen." You think that the rule might very well be altered to say that certain persons should be definitely considered to be representatives of the men, and that say a reasonable number of the men, a dozen or twenty, or something of that kind, should be empowered to say, "We appoint so and so on our behalf," and unless the other men objected that appointment should hold good without your being compelled to show that the majority of the workmen desired that particular person to act for them?—We think that where a man is a member of our society, we should have a right to attend at the coroner's inquest.

31508. Which man? There would be a good many men.—Any man who might happen to be killed and who is a member of our Society.

31509. You mean that if a member of your Society is killed, any member of your Society could go and represent him. But surely that would lead to a good deal of confusion?—No, we do not seek that. We ask that as a Society we should have a right to be represented.

31510. That is to say, you would not call upon the workmen of the pit to specially appoint a man, but you would say that when a member of your Society was killed the secretary of the Society, or any responsible official, could give notice in writing, say to the manager, that so and so was appointed to attend the inquest and that that should be held sufficient?—Yes—that he was appointed by our Society, and that the man was a member of our Society and that he had given notice to the manager.

31511. You think that if the manager got a note from a responsible member of your Society to say that so and so was appointed to represent the man, it ought to be the law that that should be sufficient for the coroner to admit him to the proceedings to represent the relations of the man who was killed?—Yes, that if he gave proof that he was appointed by the Society, he should be admitted to the inquest and take part in the proceedings.

31512. You say you have had difficulty—that coroners have said you must show that a man has been appointed by the majority of the workmen, and that it has been rather difficult to show that?—Yes.

31513. You say also that the inquiry provided for in Section 45 should be held in serious accidents causing loss of life, when required by either side?—Yes.

31514. That is as to formal investigation when directed by the Secretary of State. You say "when required by either side." What evidence do you think would be necessary in order to show that further inquiry was required by one side or the other? Would you say that any person who was at all interested—any relative of the person who was killed—should have the power to compel the Secretary of State to hold an inquiry, or how would you work it? Would you say that if anybody was present, for instance, at the coroner's inquest and dissented from the verdict, or dissented from some of the findings of the jury with regard to the cause of the accident, or anything of that sort, he should be able to force a second inquiry, or how would you limit this right to have a second inquiry. You must limit it somehow, I suppose. I want to know what you mean by "when required by either side." "Either side," means, I suppose, either in the interests of the man who was killed or in the interests of the owners or managers of the mine?—Either the workmen's or the owner's side.

31515. You mean, I suppose, that if one party was dissatisfied with the verdict of the jury on one ground, or another party was dissatisfied with the verdict of the jury on another ground, either party who was dissatisfied might have an inquiry as a matter of right, as I understand?—We seek to be represented at the inquest first of all.

31516. But supposing you are represented at the inquest, that there is a certain man who has been deputed by the Trade Union to represent the interests of the men we will say at the inquest: then suppose that man who represents the interests of the men is dissatisfied with the verdict of the jury, or with the reasons they gave, or as to the way in which the inquiry has been carried on, or with some other matter: would you give him power to insist upon a second inquiry: supposing everyone else agreed that it was all right, ought this representative of the man, in your opinion, to have the power to force a second inquiry, even although everybody agreed with the first inquiry?—I would not give him the power, but give his Society the power.

31517. Then he would issue a report to the Society to say that he was dissatisfied, and then the Society would look into the matter, and if the Society came to the conclusion that he was right and that the inquest was unsatisfactory, the Society could by a vote compel the Secretary of State to hold a second inquiry. Would that be what you wish? First of all, you would, I understand, give the Society power, on the representation of the man who represented the Society at the inquest, to call, as a matter of right, for a second inquiry?—Provided the Society confirmed his opinion.

31518. Yes, I say supposing the Society confirmed his opinion; but then it is suggested to me that he might not belong to the Society. How would you work it then: would you allow any relative to ask for a second inquiry?—Well, I am representing the Society.

31519. You do not feel called upon to give an opinion as to what should happen in another case. I suppose you would say that with regard to the men's side, where a man is a member of your Society, the Society ought, if a member of theirs is killed, to have the power, if they think right, to force upon the Secretary of State a second inquiry. That, I understand, is your opinion. But now supposing the other side are dissatisfied, supposing that the mineowner or a man against whom a verdict of manslaughter has been recorded objects to the way in which the inquiry has been conducted, would you allow the man against whom a verdict had been recorded, or any mineowner or mine manager who was dissatisfied in the same way to force an inquiry by the Secretary of State?—I say "either side"; the other side is the mineowner, in my opinion.

31520. (*Mr. Ratcliffe Ellis.*) Supposing there is an inquiry held, and the court comes to the conclusion that a man ought not to have been sent to trial for manslaughter, what would you do then? Would you give it power to set aside the verdict of the coroner's jury, or how would you deal with it? It would be a complicated state of things. Here is a man committed for manslaughter who would in the ordinary course take his trial at the Assizes, and of course that has to be stopped, and he would say, "I want to appeal from the verdict of the coroner's jury and I want an appeal to the Home Office," and, then, supposing the result of the inquiry was the conclusion that he should not be committed for manslaughter, would you do away with the verdict of the jury, or in what way would you deal with that committal?—You see I am not a lawyer.

31521. But then you are offering suggestions upon the matter.

(*Chairman.*) I suppose you would say that the lawyers must fight that out amongst themselves.

(*Mr. Ratcliffe Ellis.*) A very complicated question would arise under those circumstances.

(*Witness.*) You get there the question of a man's criminal liability in law.

Digitized by Google

Mr. J. Guest.

4 Dec. 1907.

(*Chairman.*) If a man had a verdict of manslaughter found against him by a coroner's jury, and if he was rehabilitated by a subsequent inquiry, I take it the strong probability would be that even if that prosecution went on the grand jury would throw out the Bill, so that I do not suppose there would be any very great difficulty in dealing with it as a matter of fact.

(*Mr. F. L. Davis.*) But I think Mr. Ellis's point is this, that if the Federated Society is going to have the chance of saying "We will have another inquiry," anybody interested should also have the same opportunity?

(*Chairman.*) I understand the Witness to say that he would put it in the power of the mine owner or manager—he does not exactly say by what process, but by some process or other—to insist upon a second inquiry if dissatisfied with the inquest.

(*Witness.*) Just so.

31522. (*Chairman.*) I do not imagine that you would object to the form of inquiry when it takes place, because the sub-section dealing with it is: "The Secretary of State may appoint a competent person to hold the investigation, and may appoint any person or persons possessing legal or special knowledge to act as assessor or assessors in holding the investigation." You would have no objection to that, I imagine. Then Sub-section 2: "The person or persons so appointed (hereinafter called the court) shall hold the investigation in open court, in such manner and under such conditions as the court may think most effectual for ascertaining the causes and circumstances of the explosion or accident, and enabling the court to make the report in this section mentioned." Would you be satisfied with a second inquiry which was held by a person appointed to hold the inquiry by the Secretary of State, or would you say that there ought to be some permanent board established which would hold the inquiry rather than the person appointed for that purpose by the Secretary of State?—I have not gone into the question of the Board. What we are complaining about is not the present inquiry, but that we have no right to that inquiry.

31523. Then, at all events, you are not authorised by your Society to make any suggestions as to the nature of the inquiry. The nature of the inquiry is fixed under Section 45 of the Coal Mines Regulation Act, 1887, and, so far as that goes, you are satisfied with the nature of the inquiry that is held, as I understand, but what you want is to be able to compel the Secretary of State to hold the inquiry under certain circumstances?—Yes, under certain circumstances.

31524. You do not complain of the nature of the inquiry at all, or of the method of proceeding under Section 45, as I understand. That is not a question, apparently, which you have gone into much; you have not gone into the question of the kind of investigation set up under Section 45?—No.

31525. You merely say that you wish Section 45 to be put into operation oftener than it is?—That is so—with regard to the right of these inquiries. No doubt we thought it desirable to have the right before we discussed the constitution of the inquiry.

31526. However, now and then there is an inquiry under Section 45, so that if you are dissatisfied with the method of inquiry under the Act of Parliament we should like to know what objections you raise; but, apparently, that is not a point which you have considered?—No.

31527. (*Mr. Cunynghame.*) I am not going to ask too much about Section 45, but there seems to be an impression among the Trade Union societies that Section 45 has not been used sufficiently—that there have not been enough of these inquiries. Is that so?—It is the opinion of our Society that in these cases of serious accidents the fullest inquiry possible should be made.

31528. Of course it is necessary in the case of an accident to find out about it, but I am asking you another question: is it the impression of your Society that Section 45, to which your attention has been called, has not been sufficiently used—that the powers under it have not been exercised sufficiently?—Yes, that is our opinion.

31529. Can you mention any case which gives weight to that opinion and which supports that opinion? Can you mention any case of an accident in which an inquiry was not held and in which you think an inquiry ought to have been held. I am not aware of one myself. I am not laying any trap for you. I do not know of such a case, but I should like to know whether you do?—I am not prepared to quote a case at the present time, but there is a general impression abroad that there have been cases of that description: and the very fact that we have not the right to demand an inquiry may cause us not to make that application—may affect the question of the application.

31530. I do not see what the fact that you have or have not a right to demand the inquiry has to do with the question whether you are able to name any case in which an inquiry ought to have been held that has not been held. That is what I want to come to. You cannot name any case at present?—Not at present.

31531. I do not think there has been any application made by your Society to the Secretary of State for an inquiry?—Not that I am aware of.

31532. (*Mr. Enoch Edwards.*) The Chairman, in dealing with the early part of your statement, asked you whether you represented the Yorkshire Miners' Association?—Yes.

31533. You are a member of their executive, I suppose?—I am the vice-president of the Society.

31534. You come with the knowledge and consent of the executive of your Society?—I am appointed by the Society.

31535. When you were asked about the inspection you expressed an opinion about Yorkshire and said you thought Yorkshire would require twice or three times as many inspectors as there are now?—Yes.

31536. What is the number of men employed in Yorkshire underground—about 100,000?—I should say it is over that.

31537. You have now three inspectors?—Yes.

31538. A chief inspector and two assistant inspectors?—Yes.

31539. You are familiar with the text of the Bill that was before the Miners' Conference. Are you familiar with the clause with reference to inspectors, which proposes one for every 10,000 men?—Yes.

31540. Twice or three times the number of inspectors would not give one for every 10,000 men?—No, it would not, but I think I mentioned 10 inspectors.

31541. I understood you to suggest that the county should be divided into three districts rather than being one district?—Yes.

31542. There you get a chief inspector and an assistant under the chief inspector in each district?—Yes.

31543. What amount of time will be taken up now by the inspectors in travelling in Yorkshire? What distance do they live from the collieries?—Our coal area is very large. I should say it extends for at least 50 miles. That is under the control of these inspectors, consequently a very large amount of time is taken up in travelling to the respective collieries.

31544. They do not live all in one centre?—No. Mr. Mellor lives at Outwood, and Mr. Walker at Doncaster. Those places are 18 miles apart.

31545. If the district was divided you would have less travelling?—Yes.

31546. The inspector would be able to do his work in less time?—Yes.

31547. You have no complaint to make about the present inspectors or the way they do their work?—We do not complain about the work so far as it is done, but we complain that they are not able to do it. Take a case of an accident: an inspector may have to travel possibly 30 miles to the scene of the accident, and when he gets there in all probability he has to change and go down the colliery, and when he gets to the scene of the accident it is time to come back. We contend a very large proportion, in fact pretty well all the time of the inspectors is taken up in enquiring into cases of fatal and serious accidents, and in attending inquests, and that at the present time there is little or no, what we should term surprise inspection.

31548. You have no complaint about the inspectors, but you think that the work is more than they can do?—That is so.

31549. In dealing with that class of inspection by the workmen I am not sure whether the Chairman understood exactly what was the practice now. What you said was, I think, that there was no rule laid down, or law, as to how these men should be paid?—I made that statement.

31550. The workmen may appoint men to inspect on their behalf, but there is no provision made for payment of their expenses?—No, it says "at their own cost," but it makes no provision for that cost being collected in any way.

31551. Usually they are paid out of the checkweigh fund?—Yes.

Digitized by Google

31552. You suggest that there should be some machinery whereby the men should be paid?—Yes.

31553. Do you think seriously after all that that has prevented men from examining collieries?—No; the chief factor in preventing the men examining the collieries has been the fact that no man has been available except the man who has been employed at the coal face in actual employment—a practical miner.

31554. It is not an unusual thing for a man or two men to examine a colliery or a number of pits under the same firm?—No.

31555. The employers do not raise objections?—No, not that I am aware of.

31556. You suggest that the men should have a rather wider choice, including the checkweighmen, if they thought fit?—Yes, that the men should have the right to choose the checkweighman where the checkweighman has been a practical working miner.

31557. You say your checkweighmen are, as a rule, taken from the colliers in the pit?—Very few, I should say, but are men who have originally worked at the coal face.

31558. If you had a checkweighman who had no experience in the pit, you would not suggest that he was a competent person?—Not at all.

31559. I understood you to say with reference to fines that your county is opposed to the imposition of fines for offences in the coal face?—Yes.

31560. Your people would prefer that instead of the enforcement of fines, breaches of the rules or disobedience should be carried to the court?—Yes. We object to the colliery owner having the right to fine: it does not confine itself to breach of rule entirely.

31561. You have had considerable experience yourself in the pit?—I have worked in it all my life.

31562. With regard to what you have to say about manholes and haulage roads, in your experience is there an amount of carelessness in the roads, coal and debris being allowed to lie about and block it up?—Yes.

31563. Is that what you mean by the haulage road being kept clean?—It is what I mean by "kept free from incumbrance." These different obstructions should be kept clear of the haulage road. There are collieries where coal is hauled a good distance, and a certain amount of coal falls from time to time.

31564. They are expected to clear it away. It is not allowed to lie about?—No.

31565. You think that a double road should be made, but it might not be possible in a haulage road to make a road for travelling because of the roof?—I think it would be practically impossible in all cases to provide a double road and a travelling road.

31566. They usually make a road wide at the start?—At the start.

31567. If the roof will stand the pressure you are all right?—Yes.

31568. It may be the conditions are such that they could not have it because of that?—Yes. Where the roof was brittle they could not get that result.

31569. Have you any complaint about the manholes in Yorkshire?—We complain that the manholes, especially on the roads where the drivers are, and on some of the jinny roads, are not as frequent as we should like them to be.

31570. Do you mean the manholes?—Yes.

31571. They are placed now according to rule and law?—Yes, but there are exceptional circumstances. You get a jinny (with a rope swinging in it) that the men have to travel. It is difficult. A manhole may be *that* side and another manhole *on this* side, but we believe that the manholes should be all on the one side. There are the ropes to contend with, and a man does not know on which side the manhole may be, and the rope may be swinging a yard high in the jinny road, which makes it difficult to get to the manhole, and makes it more important that the manholes should be at frequent intervals.

31572. You consider that according to the present law manholes are placed too far apart. Is that what you mean?—Yes. We do not complain, so far as I understand, that the present law is not carried out with reference to manholes, but we think it is desirable that there should be more—that it should be stricter.

31573. You were asked a number of questions about a formal investigation under Section 45, but evidently you had not given sufficient thought to it to enable you to give a complete reply to the Chairman and the other Commissioners. You have been connected with the Yorkshire Miners' Association for many years?—Yes, ever since I started work.

31574. You were asked by Mr. Cunynghame as to whether you had ever had a case in Yorkshire where you applied for this special inquiry, and were refused. You did not know that you had?—I said that I could not state the case.

31575. He asked you whether you had had a case and had been refused, and you said "Not to my knowledge"?—I could not quote a case.

31576. You have heard discussed that the Miners' Federation have applied and been refused?—Yes.

31577. That would be what was operating your mind?—Yes.

31578. Although it had not happened in Yorkshire, it had happened in the Federation?—It had happened in the Federation of which I was a member.

31579. (*Mr. Ratcliffe Ellis.*) Upon the subject of inspection have you formed any opinion—I did not gather that you had—as to the number of workmen who should be comprised in an inspector's district?—We should say roughly 10,000, but I take it in connection with forming an inspector's district that the size of the respective collieries would have to be taken into consideration.

31580. Yes, and their situation?—Yes.

31581. You think something like 10,000 men should be in one inspector's district, not more than that?—Yes, as an average.

31582. In that inspector's district your scheme is that you would have a chief inspector?—Within the 10,000.

31583. In that district. That an inspector's district should not exceed more than 10,000 men, and in that district you would have a chief inspector, to begin with. I want to see if I understand your scheme?—No.

(*Mr. Enoch Edwards.*) He rather suggested Yorkshire should cover three districts.

31584. (*Mr. Ratcliffe Ellis.*) I will take Yorkshire. I want you to explain your scheme. You suggest some area all under a chief inspector, three assistant inspectors and six sub-inspectors: that would be 10 inspectors?—Yes.

31585. What number of men should that inspection extend over?—At the present time we have three inspectors for Yorkshire. If I were to outline a scheme I should say we divide it into three sections, with a chief inspector.

31586. In each section?—A chief inspector over all.

31587. How many men have you in Yorkshire, East and West. You are dealing with East and West, are you not?—Yes.

31588. How many men have you in Yorkshire, roughly speaking?—From 90,000 to 100,000, underground. I suppose the inspector supervises those above ground too.

31589. He supervises above ground and underground.—The quarries as well. Do they not take those?

31590. Yes. You would have one head inspector, one chief inspector, in Yorkshire?—Yes.

31591. You would have three assistant inspectors, and six sub-inspectors, as you term them, and divide the county into three divisions. Is that your scheme?—Yes; I think it would be a practical scheme.

31592. Will you take number one division. Is that immediately under the charge of one of the assistant inspectors? There are to be three assistant inspectors, I understand. Do you follow? Take No. 1 division: is that in charge of one of the assistant inspectors?—He would be at the head of his district.

31593. That is what I am asking you?—Under the supervision of the chief inspector.

31594. The chief inspector is at the head of all. Take No. 1 district. That is under the immediate supervision of an assistant inspector?—Yes.

31595. His duties are confined to that particular district I suppose, that division, the No. 1 division?—I take it it would be his division.

31596. I am asking if his duties would be confined within the limits of No. 1 division. Do you follow? I am asking you that?—Well, I should see no objection to his acting under the discretion of the chief inspector.

31597. But I want to know what your view is. Is he to inspect the collieries all over Yorkshire, or confine

Digitized by Google

Mr. J. Guest.

4 Dec. 1907.

his inspection to the collieries in the division No. 1 to which he was allocated?—I should say that his duties should be allocated to division No. 1 unless he went to another colliery under the direction of the chief inspector.

31598. He is to go where the chief inspector sends him?—Yes. but his primary duty would belong to his own district.

31599. His primary duty is No. 1, but he is subject to be sent by the chief inspector elsewhere?—Yes.

31600. With regard to those two sub-inspectors (there are six altogether) would they be also allocated to a particular district?—I should not object to three.

31601. You have not got enough then; there are only six in Yorkshire. Would you have nine sub-inspectors?

(*Chairman.*) He says he would not object to nine.

31602. (*Mr. Ratcliffe Ellis.*) He said six, and that is why I took six. Do you think six are enough? Would two be enough for each of these divisions, or do you think that there ought to be three in each division?—I should say two or three, as circumstances might require. One district might require stricter supervision than the other.

31603. What is your view of the object of inspection?—Safety of life and limb.

31604. At the present time the Coal Mines Act puts the responsibility on the management? Is that so?—Yes.

31605. Do you want to remove that responsibility from the management, or leave it with the management?—We do not want to remove it from the management.

31606. Why not?—Because we believe that the management are responsible for the colliery.

31607. I want to know why you do not want to relieve them from that responsibility?—I will give you my reason: because they are the people appointed, and they should be responsible.

31608. Do you believe it is the safest system that the management should be responsible?—I believe the safest system is for the management to be responsible, and for the Government inspection to be so provided for that the inspector can visit from time to time, and pay what we should term surprise visits, to see that the rules are being carried out, and that the management are doing their duty.

31609. You think safety is best secured by placing upon the management the responsibility for the safety?—That is the first position, I take it.

31610. Do you agree with me that safety is best secured by placing upon the management the responsibility for safety?—The first responsibility; put it in that way.

31611. Who else is responsible?—I take it the workman. You place a certain amount of responsibility upon the workman; he is responsible for his own working place. The management is responsible for the general safety of the mine, and the inspector, I should say, above him would be responsible for seeing that the manager did his duty.

31612. Do you propose to place the responsibility—when I say "responsibility" I mean a responsibility for which a man may be punished—upon the inspectors?—I do not hardly follow you there.

31613. You say that there are three persons responsible in your view: the management, the workmen, and the inspectors. If the management fail, they are responsible now and can be punished for failing; if the workman fails he is responsible and can be punished for failing. Do you say if the inspector fails that he should be responsible and should be punished?—I should say that the inspector should be there to see that the workmen and the managers carry out the Coal Mines Regulation Act.

31614. This is an important question. Do you go so far as to say you would place on the inspector a responsibility for which he should be answerable in the case of an accident, and that he should be liable to be punished, just as the manager and the workmen are if anything goes wrong?—I do not hardly follow you in that question. I do not want to evade the question, but I take it that the inspector would be there and would be inspecting those collieries periodically, and paying surprise visits to those collieries. I do not see how he could be answerable very well for circumstances that occurred when he was not there.

31615. The manager would not be answerable unless he is found to have neglected his duty, and the workman would not be answerable unless he is found to have neglected his duty. Supposing the inspector is found to have neglected his duty, would you make him responsible just as the manager and the workman are responsible now?—If the inspector neglected his duty, I suppose he would be responsible.

31616. He is not in that way. Would you make him liable to be prosecuted, just as a manager?—If he neglected his duty he should be prosecuted.

31617. That is your view. Your view is this principle, whether it is right or wrong, ought to be altered, and there ought to be a responsibility put on the inspector for the proper management of the mine as well as on the employer and the workmen?—I do not say that.

31618. What do you say?—I say that the inspector should be appointed, but he could not be made responsible for the management of the mine.

31619. The responsibility is still to rest with the owner and with the workmen?—That is so.

31620. You should give him a fair chance, if he is to be responsible. If you have these inspectors going there and inspection constantly taking place, do you not think it would rather lessen the feeling of responsibility upon the management?—No.

31621. If a man goes there constantly would it rather not tend to lessen the responsibility of the firemen, for instance, or officials of that sort, who are responsible for the mine now?—There is no suggestion on our part that an inspector should be there constantly.

31622. Very well. I will go by steps. I daresay we agree. Do you agree with me if they were there too frequently that it might have that tendency?—No, I do not. Of course it is all a matter of what you mean by "too frequently."

31623. They might be there so often, and the very frequency of their visits might tend not to safety but to danger?—The work of the inspectors, to my mind, tends to safety.

31624. Supposing they are there finding fault here and finding fault there, do you not think that might lessen the responsibility of the management?—I do not see it. Of course it is a matter of what you mean by "too frequently."

31625. Do you think that there would be an objection to an inspector going down every day? I want to put an extreme case to you?—Do you mean continuously throughout the year?

31626. Yes?—I should say it would be an extreme case if it was necessary for an inspection of that kind. We do not seek for an inspection of that kind.

31627. You do not seek for it because it is not necessary. That is so: it is not necessary?—We seek for an adequate inspection and we do not seek for an inspector to be going down a colliery every day, because we realise that the number of inspectors we suggest would not allow them to go down every month.

31628. Do you think it would be necessary? Would it conduce to safety if an inspector could be down every day?—We are not seeking for an inspection every day.

31629. You would rather not answer that question. What is to be the qualification of a sub-inspector?—I should say, first of all, that he should have practical experience as a miner. I prefer that he should be at the coal face when he qualifies by his examination.

31630. He is to qualify by an examination?—He should, in my opinion.

31631. Which the Home Office should prescribe. Do you think he ought to have a first-class certificate?—I think that he should have qualifications equal to the present under-manager, who is very often responsible for the safety of the mine.

31632. He has a second-class certificate?—Yes.

31633. Do you think that the men who have second-class certificates are suitable for discharging the duties of a mines inspector?—You first of all qualify them.

31634. The second-class certificate should qualify them?—I said equal to a second-class certificate. I did not say a second-class certificate. I take it in an examination by the Home Office you could put out a syllabus for an examination that would prove whether a man was qualified for the work or not.

31635. Do you seriously think a man only equal to passing a second-class certificate examination or its equivalent is suitable to discharge the duties of an inspector of mines?—The present second-class men are qualified to take charge of them.

Digitized by Google

31636. You think an inspector of mines would be sufficiently qualified if he could pass an examination for a second-class certificate, or its equivalent. What would those sub-inspectors have to do?—He would have to inspect the mines, I take it.

31637. For what?—For danger.

31638. What are the various sources of danger he would have to look for?—And for the carrying out decidedly of the provisions of the Coal Mines Regulation Act.

31639. The whole Act of Parliament. Really he would have to do the same duties as the chief inspector would have to do, so far as inspection goes. He would have to understand ventilation, gases, and all the other sources of danger in connection with the working of mines?—Yes.

31640. He would have to see if the management was carrying out the Act and to call the management's attention to defects. Do you think a man would be of any use doing that work who was not equal to doing more than pass a second-class certificate such as an under-manager?—At the present time you have the manager.

31641. Will you answer my question first, and give any explanation you like afterwards?—I think a man that passed the examination of the Home Office would be qualified for the work.

31642. If you give the Home Office the right to prepare the examination sufficient to qualify a man. I want to see what is the qualification you suggest. Do you consider a man equal to discharging the duty of an inspector of mines would be a man whose limit of qualification is being able to pass an examination for a second-class certificate?—As a sub-inspector within the district under the control of the assistant inspector?

31643. Call him what you like. His duties must be those of a chief inspector *qua* examination. Very well: I will not press you?—I do not wish to evade the question. These questions come, and you do not want to give an answer without due thought. As a sub-inspector under the direction of the assistant and chief inspector, I consider that a man who could pass an examination put forward by the Home Office on lines similar to the examination for a second-class certificate would be efficient.

31644. You say under the direction of the chief. How is the chief inspector to direct him?—Is he to teach him what to do?—No.

31645. All the chief inspector could say would be "You go and make an inspection of a certain colliery." Would you expect the chief inspector to mention certain dangers and tell him how to find them out?—What is the present system of management? Do you mind my asking you that?

31646. I am talking of inspectors. You say you think a man of that sort would be efficient under the direction of the chief inspector. I want your view as to the directions the chief inspector would give him to assist his defective qualification?—I do not admit his defective qualification for the work he has to do.

31647. I thought we were agreed that he is qualified to do everything a chief inspector has to do below by way of inspection. There is only one examination, whether it is done by a chief inspector or a sub-inspector?—He would have to inspect the workmen, the firemen, and the deputies.

31648. Do you say he would have to inspect to see the whole of the Coal Mines Regulation Act was carried out?—Yes.

31649. That involves more than a knowledge of getting coal?—What is the present system of management?

31650. I want you to tell me this. I gather from you that these sub-inspectors would be less qualified than the chief inspectors. Is that so, or should they be equally as qualified as the chief inspectors?—What is the present position?

31651. Will you answer my question?—You said I might make a statement.

31652. Will you answer my question first. Is your view that these sub-inspectors should be less qualified or equally qualified with the chief inspector for the work of inspection?—My idea with reference to these inspectors is that they should be fully qualified for the work they have to do.

31653. The work they have to do is, as you say, to see that the Coal Mines Regulation Act is being carried out. Can they see that if they are less qualified than a chief inspector. If you say they ought to be equally qualified with the chief inspector I have not another word to say to you about it.—They should be qualified in the details of the working of the mine and have the working experience. I do not say that it is necessary they should be so well qualified in the theoretical mining and in some, perhaps, of the technical points in connection with the work———

31654. Will you give me an instance of what you mean by "theoretical mining"?—I will give you an instance of what we find in mining at the present time, so far as the management is concerned.

31655. I would rather you gave me an instance of what you call the technical qualifications?—That will help me to explain my position.

31656. Very well: go on.—At the present time you have a manager with a first-class certificate in charge of the mine and everything in connection with the mine. You may, so far as the supervision of the mine underground is concerned, have an under-manager with a second-class certificate responsible for the working and safety of that mine. Then underneath him, and taking his separate district, you have a man without a certificate at all, going round that district and reporting on the safety of that mine and on the work of those men, and taking his district under his own charge. I take it there are working miners who could pass an examination and qualify themselves to examine the work of these men.

31657. (*Chairman.*) May I clear up, at all events, my notions in regard to this matter. I understand the witness to say that these sub-inspectors should have the same relation to the inspectors very much as the under-manager has to the manager?—That is so.

31658. The under-manager may have to perform all the duties of a manager, and therefore, according to your suggestion, the under-manager ought to have a first-class certificate as well as the manager. He says that is not the case with regard to under-managers, neither is it necessary to be the case in the case of sub-inspectors. Is that not your view? You want to draw a comparison between the respective positions of under-manager and manager, and between the respective positions of chief inspector and sub-inspector?—Yes.

31659. (*Mr. Ratcliffe Ellis.*) It must be remembered that this inspector is the man who has to put right the chief manager; the Government inspector, whatever you may call him, is the man who is to criticise the chief manager of the mine. That is the object of the Government inspector. Do you think it would be desirable that the chief manager of the mine, a man of considerable skill, and who has a first-class certificate, should be told what he had to do by an underlooker, a man only qualified to act as an under-looker?—I see no objection to a man with the qualifications I have outlined examining the mine under the direction of his inspector, on the same lines as the under-manager acts under the direction of the manager.

31660. Do you know how the inspectors are appointed now?—I have read it in the rules, I believe, but I am not prepared to say at the present moment.

31661. Do you know that they are appointed after examination by the Home Office?—Yes.

31662. If you look at the Act of Parliament, Rule 39, you will find that the Home Secretary may appoint as many inspectors as he likes. The only qualification is that they must be fit persons?—Yes.

31663. Are you satisfied with that as it is, or do you want to alter it and say that he must appoint a certain class of persons, whether fit or not, or will you leave it in the hands of the Home Secretary to say what is a fit person for the duties of a mines inspector?—I am not satisfied with the system at all as it is.

31664. Do you mean you are not satisfied to leave with the Home Secretary the appointment of fit persons, but that you must tell him the particular class he must appoint?—I have endeavoured to outline my views in regard to this matter.

31665. You cannot answer my question any further than that?—I have endeavoured to outline my views with reference to this matter. In my opinion it is desirable that we should have men as inspectors who have had practical experience at the coal face, and who shall decidedly satisfy the examining authority as to their qualification for the position.

(*Mr. Smillie.*) He has not suggested that persons should be appointed who are unfit.

(*Mr. Ratcliffe Ellis.*) It is a question of what fitness means.

Digitized by Google

Mr. J. Guest. 4 Dec. 1907.

(*Mr. Smillie.*) He gives a definition of that with which you do not agree.

31666. (*Mr. Ratcliffe Ellis.*) With reference to inspection under Rule 38, if you had these additional Government inspectors do you agree that it would be less necessary to have the inspection by the men under Rule 38? That has been suggested here?—It would be less necessary, but at the same time I should retain the clause.

31667. You say a man can only inspect now who works at the face?—That is the law. That is, at all events, as it has been rendered in court.

31668. It is "a practical working miner." Do you consider a man who has worked at the face and gone from the face to be a fireman, for instance, or a roadman, is a practical working miner?—Yes.

31669. Would he not be qualified?—Yes, but he is not qualified under the present law as it is rendered at the courts.

31670. Why not?—Because he is not a practical working miner.

31671. I understood you to say that he would be a practical working miner if he had gone from the face and was engaged on the road.

(*Mr. Smillie.*) He means he is not considered under the Act a person who can make that examination unless he is working as a practical working miner at the time.

(*Witness.*) At the coal face.

31672. (*Mr. Ratcliffe Ellis.*) Is that the construction put on this? It is only a man working at the coal face. Would not such a man be much less competent to make an examination than a man who was actually working in the roads?—I am under the impression—I may be wrong in regard to that matter—that the courts in Yorkshire have rendered it that he must be a man actually working at the coal face.

31673. I may be wrong, too, but I think they rendered it that he must be a man who is practically working in the pit at the present time?—What is the clause?

31674. It is General Rule 38. You would not hold a man who had worked at the face and had gone to work on the roads was not a practical working miner?—No.

31675. You want it to be extended to a man who is or who has been a practical working miner?—Yes.

31676. Why do you want to go beyond the class of practical working miners, beyond the class of men who are actually working in a pit somewhere?—Because we feel that it is desirable that this inspection should be made by men who are independent of the colliery proprietors.

31677. You suggest the checkweighman. Of course he would not be entitled to make an inspection now for other reasons. He is only entitled to do what he is allowed in the place to do?—Of course this clause excludes him.

31678. Yes, this clause, and another clause, too. The clause of the Act with reference to checkweighmen would exclude him. Would you alter that and allow the checkweighmen to have a right to make these inspections?—If the men thought fit to appoint him.

31679. You want two alterations. First of all to extend it to people who have been practical working miners, and then to have a special exemption in favour of checkweighmen from the general law with reference to checkweighmen?—Of course you submit a point with reference to the appointment of checkweighmen. I take it if the men appoint him also to inspect the mine——

31680. Up to the present he would not be allowed?—But if the clause read "are or who have been practical working miners," they would.

31681. That would not help you?—It has never been tested, as far as I remember, from that standpoint.

31682. I suggest to you that unless the clause under which the checkweighman is appointed is altered—he is appointed to do a particular work, that is with reference to the weight, Section 12 of the Act appoints him to do certain duties—he would not be entitled to inspect the mine?—Not if appointed by the men.

31683. I should say not. You want it to be made that he could inspect?—We want it to be made so that a man who is, or has been, a practical working miner, has a right to inspect, provided the men appoint him.

31684. Would you extend the right to make an inspection to a man who had been a practical working miner, but had kept a shop for 25 years, because at some time in his life he had worked in a mine?—He would first want the confidence of the men.

31685. Would you give a man of that character the right to inspect if the men chose to appoint him?—I do not suppose that the men would choose to appoint him. We have never had a case of that kind.

31686. You wish to allow them, and let them appoint a man of that kind if they wished to?—We wish to appoint those who are or have been practical working miners. First of all they would require the confidence of the men to appoint them for that duty.

31687. Take the question of deputies' districts. As a general rule do you think that the districts are too large?—Yes.

31688. Is it possible to suggest a rule defining what the maximum size of the districts should be?—I should say to define it strictly in a rule would be difficult. It would be possible, I take it, for the inspector or the manager, acting along with someone, to define a reasonable amount for a man to inspect.

31689. You take it that it is impossible to make it a rule. Is it generally the case in Yorkshire that the districts are too large?—Yes, in my opinion.

31690. Can you give me any particular collieries where you think the districts are too large?—I am not prepared to do that.

31691. Is it possible to get them?—I am not prepared to give you them.

31692. Will you give them to the Secretary? Do you not think when you say that there are collieries where the districts are too large, and it is a source of danger, that it is due to those collieries that you should give the name, so that inquiry could be made to see what size the districts are, or whether there are more accidents there? Does it not occur to you that your evidence would be more useful if you could give names so that inquiries could be made as to the size of the districts?—Would not that rather be the work of the inspectors?

31693. Will you tell the inspectors that?—I take it as a matter of information the inspectors would be prepared to communicate with you.

31694. Would you give the inspector the names of collieries where you think the districts are too large; that will be quite satisfactory to us. Will you do that?—I am not prepared to take that responsibility.

31695. Will you bring it before your Association and ask them if they will communicate with the inspector the names of collieries where they think the districts are too large. Do it confidentially, so that the inspector may inquire about it and bring the information here if he finds it so. Will you do that?

(*Mr. Enoch Edwards.*) Are you not asking this man more than you should do?

(*Mr. Ratcliffe Ellis.*) No, I do not think so. He makes a statement.

(*Witness.*) May I submit a point in connection with that. You have already had the inspectors here. They have already made, I believe, pretty much the same statement. They were never asked to supply the names or the collieries where this state of things exists.

31696. You make a statement. The Commission has to inquire into any regulations that can be made to secure greater safety. You say in Yorkshire, which is a very important district, that generally the districts are too large, and that the firemen cannot do their work. I want to ask you if you will follow that up by communicating with the inspectors and giving them the names of the collieries where that state of things exists, so that they may inquire into it and communicate the information to the Commission?—In reply to that I say our inspector has already made the same statement to this Commission.

31697. Will you say that you prefer not to do it, or that you will do it?—I prefer to leave that with the inspectors.

31698. I want you to give the inspector the information?—He has already made the statement.

31699. May I take it that you prefer not to make that communication to the inspector?—The inspector has already made the statement to this Commission.

31700. That is as far as you will go?—Yes.

(*Chairman.*) Mr. Walker did say this at *Q.* 3978: He is asked "Generally do you think their districts are too large for them to fulfil their duties?"—(*A.*) "I think in many cases they are, and that they should be reduced so as to allow them to make two inspections during the shift."

(*Mr. Smillie.*) It was never put to him to name the collieries.

Digitized by Google

(*Witness.*) He was not asked to name the collieries.

31701. (*Mr. Ratcliffe Ellis.*) You agree that it is important to maintain discipline?—Decidedly.

31702. You think that there should be no fines?—I do.

31703. I think you said that it should not be at the option of the manager to impose a fine; I understood you to say that?—Yes, I do say that.

31704. Are you under the impression that according to law a man can be made to pay a fine, whether he likes it or not, by the manager?—I am under the impression that under the law the men are given the option either of being fined or having proceedings taken against them.

31705. He can please himself whether he pays the fine or not?—There is no option, because he may be prosecuted.

31706. Or he may be discharged. A man can please himself whether he is fined or not. Do you not know that these fines are almost invariably inflicted at the request of the man? The man desires to be fined rather than be prosecuted?—I do not. Our men object to fining very strongly.

31707. They do not agree to be fined, although every time a fine is imposed upon them it is done by their own consent. It may be that they consent rather than be prosecuted or discharged, but although every fine that is inflicted can only be inflicted upon the men agreeing, still they say they prefer to have no fines?—You say they cannot be fined without agreeing to it.

31708. Yes.—They cannot be fined without agreeing to that or to some other punishment. That may be the position for the moment.

31709. Notwithstanding that they can accept the fine rather than the other punishment, they instruct you to say that they wish the fine to be abolished altogether, and the other punishment to be inflicted. Is that what they instruct you to say?—That is my position with reference to fining, but with reference to the option of the men in connection with fining I do not suppose that it exists to the extent you suppose it does. I had a case within my own experience not very long ago where a man was fined 5s. He was never asked whether he would be fined 5s., but he was fined 5s., and it was really on account of not doing sufficient work.

31710. Was it a case of a fine being unjustly inflicted? Did he report that to you as the miners' agent?—Yes, the case came within my personal knowledge.

31711. Did he report that to you as the miners' agent, that he had been fined 5s.?—He did not pay the fine. The fine was kept back. There is no paying; it is taken off.

31712. It was deducted. Did he report this to you as the miners' agent?—He complained about it.

31713. What did you do?—We got the man's money back.

31714. There was no great harm there, was there? When it was reported to you you got the money back?—Supposing that man had not taken the opportunity to report, the system of fining goes on without being generally known.

31715. That is your objection to fining?—There is a matter with reference to these fines. I take it in a case of prosecution not only the men would be braced up to keep the law, but it would have a certain effect on the manager. In prosecuting the men he would at all events be kept up to the mark himself, and I see a beneficial effect in that.

31716. You are entitled to give your view of it. Now with regard to the Special Rules, your suggestion is that before a Special Rule is proposed by the employer, if he wishes to propose a rule he should invite somebody, say the men at the pit, to talk it over with him?—Yes. In my opinion it would be conducive to the carrying out of the rule if the men were consulted when the rule was being drafted.

31717. Would you go so far as to say that if the men did not approve of the rule the employer should not be allowed to propose it?—No, I would not take the responsibility of saying that he should not be allowed to propose it, but I do think that a conference between the two parties would bring out both sides of the question and bring the men in touch with the rule.

31718. It would be useless in this case. If the employer proposed a rule he could do it whether the men liked it or not. You think it would prevent friction?—Yes.

31719. Supposing the employer wished to propose a rule, would it be likely to prevent or encourage friction if he was obliged to send for the men in the first instance to say what the proposed rule was, and whether the men like it or not he goes on proposing his rule. Would that be encouraging friction, or preventing friction, do you think?—In my opinion if he consulted the men it would prevent misunderstanding.

31720. Would it meet your views that the owner, having proposed a rule to the Home Office, it should be advertised, and the men should be entitled to object to it and be heard, and, if need be, go to arbitration before the rule is established?—That is the present position, is it not?

31721. Not quite. The inspector can object to it; the Home Office can object to it, but you should have an express position given to you to object to this rule. Any person interested might object to it, and before it is established you should be heard, and if need be the matter should go to arbitration?—In the first place I take it if the men were consulted it would prevent misunderstanding. After that, if the owner intended to carry out the Special Rule, the present law makes provision for objection. Is not that so?

31722. Yes. You say that no rule should be proposed without in the first instance the owner being compelled to invite—who must he invite, the men at the colliery—I do not quite gather—to discuss it with him. Whom do you say he must invite?—His workmen, I take it.

31723. He must invite his workmen to discuss it with him, and whatever they may say he can propose his rule. Do you think that would prevent friction?—Yes. We had a case in our Society where we had a considerable amount of trouble with reference to the enforcement of the Special Timbering Rules.

31724. I was going to ask you about that. Those rules were proposed by the Home Office?—I believe so.

31725. They did not invite the men to discuss them?—No.

31726. Where is the difficulty about the carrying out of the rule?—The difficulty was with reference to Clause B.

31727. What was that?—We had a difficulty with reference to the meaning of "working place."

31728. What is Clause B? Will you read it?—"Where the timbering of the working place is done by the workmen employed therein the miners shall have a sufficient supply of suitable timber such as is ordinarily used at or within 30 yards of every working place where mineral is being gotten, and the deputy shall see such supply is so kept there."

31729. That rule was proposed by the Home Office. You can answer that question?—Yes.

31730. When was the first you heard of it?—How long is it since those rules were proposed?

31731. After it was proposed by the Government did you hear of it before it was established?—I am not prepared to say that. I should take it that is a matter of seven or eight years ago.

31732. I want to see exactly what your objection is. You represent the miners in your particular district?—Yes.

31733. When was the first you heard of this rule after it was proposed? Did you hear of it before it was established, or your Society?—I am not prepared to say that. I take it no doubt our officials would hear about it, but I am not prepared to answer that question.

31734. Did not your officials meet the inspectors and the coal owners in Yorkshire when it came from the Home Office, and did they not have a full discussion upon it before it was established, at the Home Office. Was that not so?—I am not prepared to say that.

(*Mr. Enoch Edwards.*) He was not an official at the time.

31735. (*Mr. Ratcliffe Ellis.*) He says there was a difficulty in carrying out the Timbering Rules because the men were not consulted. I want to show that the men were consulted, at any rate the officials. The Home Office proposed these rules, they were commented upon by the inspectors, the men and the officials, and established, and then the men would not carry them out. That is what I understood you to say?—Who would not carry them out?

31736. You say that there was a difficulty in getting the men to carry them out.

(*Mr. Enoch Edwards.*) It was a matter of contract

(*Witness.*) I said there was a misunderstanding.

Digitized by Google

Mr. J. Guest.

4 Dec. 1907.

31737. (*Mr. Ratcliffe Ellis.*) What was the difficulty in carrying out the Timbering Rules?—The first part of the question was with reference to what was meant by "working place," and the second part of the question was with reference to contract.

31738. That was after the rules were established?—That was after the rules were established.

31739. The men had some difficulty from that point. However, they did ultimately carry them out?—Yes.

31740. Or you made some arrangement.

(*Mr. Enoch Edwards.*) They got some stoppages.

(*Witness.*) We had a six weeks' strike.

31741. (*Mr. Ratcliffe Ellis.*) It has been suggested where a travelling road is not wide enough the men could travel in the return airway. Do you approve of that?—I approve of them travelling in the return airway before travelling in the haulage road.

31742. Rather than travel in the haulage road with machinery in motion, you think they had better go along the airway?—I prefer a separate travelling road independent of the return airway.

31743. You say "practicable," but when you say "practicable" I suppose you mean commercially practicable. You would not impose on a colliery the cost of making wider roadways if it would mean that the place could not be worked at a profit? You said "practicable" in your statement?—I was alluding there, of course, to the difficulties of mines that are already set out, and where the difficulty might be in an old mine which was practically coming to the end of its tether.

31744. When you say "practicable" you mean commercially practicable, and not physically practicable?—I would not agree to put commercially entirely in the scale. I would rather say physically practicable.

31745. If you mean commercially practicable, I do not know that I should disagree with you?—The thing I had in my mind with reference to "practicable" was this: there may be in old collieries just about to close extreme difficulties that make it pretty well impracticable, but to put it "commercially practicable" I am not prepared to agree with that.

31746. With reference to engine-winders' certificates, why do you want them to have certificates?—As a proof of their competency.

31747. In your experience do these accidents happen because the engine-winder is not competent, or because he is for the moment careless, that is to say, where there is any blame to the engine-winder at all?—The only thing that I have more particularly in my mind is this——

31748. Would you mind answering my question? Where the engine-winder is blamable, do the accidents happen because he is incompetent, or because he is for the moment careless?—I should say both.

31749. Will you give me a case where an accident happened from the incompetency of the engine-winder?—Would not carelessness prove incompetency?

31750. Certificates would not guarantee a careful man. Can you give me a case where an accident has happened from incompetency?—We generally take it an accident in that sense is a proof of incompetency. If a man is careless it is a proof he is incompetent.

31751. Do you agree that these accidents which happen where the engine-winder is blamable happen because he is careless and not because he does not know better?—I should say they happen from both sources.

31752. Will you give me a single case in which it happens through a man not being able to look after his engines?—We have many accidents occurring from time to time.

31753. Will you give me a single case in which a man did not understand his engine, or anything which could be ascertained by examination?—I could simply give it as a matter of opinion. In our district we have a large number of accidents and it would be advisable for the men to pass an examination to prove their competency, and if subject, as men may be, to sudden illness or carelessness that would be a thing that could not be avoided, but first of all they should be proved competent.

31754. You cannot guarantee carefulness by examination or certificate?—But you can prove ability.

31755. Can you give me a single instance where a winding accident has happened through want of ability on the part of the engine-winder?—Is not the accident proof of want of ability?

31756. You agree with me that carelessness, or rather carefulness, will not be secured by certificate, but that ability will. Will you give me a case where a winding accident has happened through want of ability on the part of the engine-winder?—I take it that where the accident occurs it is a proof of want of ability.

31757. Will you give me a single case?—We have cases occurring from time to time.

31758. If you cannot give it now will you supply the Commission with a case in which an accident has happened through want of ability on the part of an engine-winder?—I take it first of all——

31759. Will you see if you can find a case of that?—You get an engineman without a certificate. He winds for a certain length of time and then has an accident.

31760. Will you supply it to the Commission if you can find one? Will you look it up, and if you cannot supply it, of course you cannot, but if you can find where an accident has happened in consequence of want of ability on the part of the engine-winder, I should like to have it. You will find cases where it is carelessness or a man forgets for the moment, but I want a case where it is an accident caused from want of ability on the part of the engine-winder. Perhaps you will think about that if you are not prepared to answer that question now?—I take it that the accidents, so far as can be proved, are in many cases proof of want of ability.

31761. If you can find such a case will you let us have it?—There is no qualification at the present time. There is no certificate required.

31762. It is a question of whether it is wanted or not. If you can find a case in which it was caused by the want of ability, something which you would have ascertained by examination, and an accident happened from that, I should like to know of it?—I am able to point to a case, but I do not know that it is a case of direct accident. At Hemsworth Collieries there was a dispute with reference to firemen or something of that sort. Some of the enginemen, I believe, for the time being refused to wind, and the manager appointed men who, in the opinion of the men who were riding in the shaft, were not competent. Those men had been riding in that shaft and there was no complaint, but there was a change made in the enginemen, and these men bumped the men about in the shaft and caused considerable alarm.

31763. Was there an accident resulting from it?—I am not prepared to state at the present time that there was any serious accident.

31764. That was at the Hemsworth Colliery, in Yorkshire?—Yes.

31765. How long ago was that?—A few years back.

31766. That was a case in which there was a dispute, when the winders refused to wind, and the colliery was stopped, and the colliery owner, to keep the place going, got somebody else to wind and the men were alarmed, but there was no accident so far as you know. What was the end of the dispute?—We had considerable difficulty in keeping the men at work on account of the alarm which was occasioned.

31767. I will see if there is any accident at this place?—We are to assume the man is to kill men before we can prove incompetency.

31768. That is the only case you can give me?—That is the position. We have men who have ridden in that shaft for years, who are members of our Society. The change was made and they rode in the cage and found it bumped up and down, and that it was not safe, in their opinion, to ride in it.

31769. (*Mr. F. L. Davis.*) Supposing that man had a certificate, he might bump them just the same?—It would be a proof that the man was in the eyes of the examining authority a capable man. There was no option in this case.

31770. It would make the bumping more pleasant because he had a certificate?—Of course not. That is not the point.

31771. (*Mr. Ratcliffe Ellis.*) You think that there should be ambulance appliances in each fireman's district down below, so as to be available in case of accident?—Yes.

31772. And also that there should be an ambulance carriage to take the men to the hospital?—Yes.

31773. Is that not generally the case?—Generally, no doubt, but it is not in all cases. It is not compulsory.

31774. Never mind about it being compulsory. If the man does it you do not want to have a law to make him do it?—They do not all do it.

Digitized by Google

31775. Are there many cases in which that is not so ?—There are cases.

31776. Are there many cases in Yorkshire ? You have generally large collieries there ?—They are not all large. They are large and small.

31777. At the larger collieries there is an ambulance ?—Generally speaking there is.

31778. Are there many of the smaller collieries where there is not an ambulance ?—Yes. In our opinion if it was put in the rule it would end the question. There are collieries where the men have subscribed to provide their own ambulance, and where that ambulance is in existence even at large collieries.

31779. You think they should not do that, but that the employers should do it ?—I do.

31780. With reference to lamps, would you be in favour if the lamps had been taken into a mine, of their being brought out of that mine supposing there had been no gas seen for 12 months, and work with naked lights again ?—I stated that in my evidence.

31781. Do you agree with that ?—Yes.

31782. Is there a disadvantage to the men in working with lamps ?—Yes. There is no doubt that it is a disadvantage in working.

31783. You rather favour their being brought out in the interests of the men, that they should come out if there is no gas found within 12 months ?—I take it it is in the interests of the men that lamps should go in where gas is found, but if it is proved that the colliery has no gas for 12 months I should not object to their coming out.

31784. Why should they come out ?—Because the danger is not there.

31785. If the lamps are already provided, and everybody has the lamps, and the management has found the lamps, why should they not go on using the lamps ?—You asked me if it is a disadvantage to some extent.

31786. It is in the interests of the men who are working to have more favourable conditions. You say that the lamps might come out if no gas was found for 12 months. It is to enable them to work under more favourable conditions. That is your object ?—My idea with reference to lamps is, first of all, that they should be in almost general use. I do not believe in the system of working a colliery until there is an explosion and then putting lamps in. After gas is found in a mine lamps should go into the mine and be kept so long as that gas remains. If there is adequate proof for a period of 12 months that there is no gas found within the mine, the conditions that prevailed prior to their going in might obtain again, but I am not prepared to say that I am disposed to favour their coming out.

31787. (*Mr. Smillie.*) The Yorkshire mines are what are called fiery mines. It is a fiery district ?—Yes.

31788. Some of the mines are of considerable depth, I think ?—Yes, over 600 yards.

31789. You have ventured the opinion that you personally, and the Association to which you belong, consider that the deputies' districts—the firemen's districts—are too large ?—Yes, I do.

31790. In your Special Rules the provision is that the examination must be made within three hours of the men starting work ?—That is so.

31791. In fiery mines do you think it is safe for the inspection of the places to be made three hours before the workmen go into their places ?—I do not.

31792. I suppose that a considerable accumulation of gas might take place in a period of three hours ?—Decidedly.

31793. In deep mines where there is a crush, the whole position of the working face might be altered within three hours ?—Yes.

31794. Do you think that the only reason that three hours was put into the Special Rules was with a view of giving the deputy three hours to cover his district ? If you have no idea on the matter you need not give an opinion, of course. The Scottish miners' Special Rules provide for two hours before the starting of the work ?—Yes.

31795. Durham provides two hours as the time prior to the workmen starting. South Wales for two and-a-half hours, but in Yorkshire it is three hours ?—Yes.

(*Mr. Ratcliffe Ellis.*) I think you will find it is two hours in Lancashire, too.

(*Mr. Smillie.*) I think the managers conflict in Lancashire.

(*Mr. Ratcliffe Ellis.*) Generally in practice it is two hours.

31796. (*Mr. Smillie.*) You think two hours is a safer period after which the workmen shall start work ?—Yes.

31797. There is no reason why it should be three hours other than that the extent of the district is so large that it takes three hours to make the inspection ?—That is the case.

31798. There is no other reason so far as you know ?—No ; that is my opinion.

31799. The fact that three hours is allowed might be reasonable proof that the districts were too large ?—Yes.

31800. Have you had personal experience of working with naked lights in the shape of candles ?—Yes.

31801. Are candles used in your naked light collieries in your county ?—Yes.

31802. Is the light from candles more suitable and more effective to allow workmen to discover dangers from the roof and sides ? Can they make a more thorough examination with a naked light than with a safety lamp ?—Yes, in my opinion, they can.

31803. Other things being equal, in a non-fiery mine where gas had not been discovered, naked lights would be more safe so far as falls from sides and roof are concerned ?—Yes, they would be more effective in that direction.

31804. You are aware that by far the largest number of deaths takes place from accidents from falls of roof and sides ?—Yes.

31805. A very considerable number of accidents take place from accidents on the haulage roads ?—Yes.

31806. Some of those may occur through insufficient light ?—Yes.

31807. Have you ever found any difficulty yourself in examining the nature of the roof and sides with your own safety lamp or close lamp ?—Yes, there is no doubt that it is not so well adapted at the present time to examination as a candle, so far as the roof is concerned.

31808. To some extent it may be guess work as to what the condition of the roof is ?—So far as the sight is concerned. You also take the sound.

31809. The sound might guide you ?—Yes.

31810. So far as seeing a fissure or a slit, there would be considerable difficulty in seeing that with a covered light ?—Yes, much larger difficulty than with a naked light.

31811. Is there very much shot-firing in Yorkshire in the coal ?—Yes, in certain mines there is a great amount of it.

31812. Are the shots usually fired at the present time by a battery ?—Yes, by battery in the fiery mines. Of course, in the shallow mines, naked-light mines, they do not use the battery.

31813. They fire with a fuse or squibs ?—Yes.

31814. In fiery mines do the workmen stem their own shots, or does the competent person appointed by the manager as shot-firer stem the shots ?—So far as my experience goes, the workmen usually stem the shot, but, of course, in speaking in that connection it would not extend to what you would term the extreme fiery mines.

31815. In the case which you now mention it is what are called permitted explosives or high explosives ?—Yes.

31816. Are the workmen who stem their own shots put in possession of the explosive and the detonator ?—Yes, so far as I know.

31817. Do you consider that a safe course ?—No.

31818. Do you think in fiery mines, where high explosives or permitted explosives are being used, that the shots should be stemmed and fired by a competent person appointed for that purpose ?—I do, decidedly.

31819. With regard to certificates for firemen, I suppose your present class of firemen in Yorkshire, the vast majority of them, are thoroughly competent men ?—I should not say they are not.

31820. There is no guarantee so far as the certificate is concerned at the present time that persons who are incompetent will not be appointed to that position through favour with the managers ?—No, there is no guarantee whatever.

31821. Have you known any cases in which persons were appointed to that position whom you felt and your Association felt were incompetent ?—Yes.

Digitized by Google

Mr. J. Guest.

4 Dec. 1907

31822. You have known of individual cases?—Yes, I have.

31823. The holding of a certificate of competency would at least prevent anything of that kind being done?—Yes.

31824. A fireman's is a very responsible position?—Very responsible.

31825. Do you consider as a practical miner with long experience that the safety of the workmen depends to a far greater extent on the ability or the competency of the fireman than it does on the general manager?—I do.

31826. Have you cases in which the fireman may have from 50 to 70 men under his charge?—Yes, more than that I should say.

31827. In some cases more than that?—Yes, more than that.

31828. It depends on his experience and competency as to whether the safety of those men will be properly looked after?—It does.

31829. The whole of those men?—Decidedly.

31830. Every morning the men go down the mine they place their lives unreservedly in the hands of the fireman who has made an examination of those places?—They do.

31831. Unless he is competent, a very serious accident, involving the lives of all the men employed in the pit, may occur?—That is so.

31832. Are you old enough to remember the conditions of the mines prior to the compulsory certificates for managers? Were you working in the mines prior to the passing of the Act in 1872?—No.

31833. Would you take it as a good argument against compulsory certificates for colliery managers that the staff of men employed prior to the passing of the Act were fairly good; supposing it had been proved that the experience of the men employed previous to the passing of that Act proved that they were capable men, would that be any reason why they should not hold certificates?—Not at all, in my opinion.

31834. You admit the necessity of colliery managers passing an examination and holding a certificate of competency?—Yes, decidedly.

31835. You think it is a very good thing?—I think it is a necessary thing.

31836. You only urge that the same thing should apply to other responsible officials under the Act?—Yes.

31837-8. That there should be an examination to prove their competency?—Yes, the men responsible for the management and government of the mine should pass an examination to prove their competency.

31839. Is it your opinion that the death and accident rates would be considerably greater were it not for inspection by Government inspectors?—Yes, I am of that opinion.

31840. Are you of opinion that additional inspection would lead to greater safety?—I am, and that is the reason why we are seeking it. We have no other object in view.

31841. Do you think there is any real inspection of mines going on at the present time?—So far as our district is concerned, I am of opinion that there is no practical inspection—that is what I should term surprise inspection. The work is almost exclusively confined to examining where accidents have occurred.

31842. Do you know personally of any thorough inspection by a Government inspector of any mine in Yorkshire?—I do not.

31843. In your whole experience as a working miner you have never known of a thorough inspection, that is, going in at one end of the mine, round the working places, by a Government inspector?—I have not—never.

31844. Is that what you mean by a thorough inspection really?—I take it that occasionally, at all events, a thorough inspection of every part of the mine should be made on behalf of the Government.

31845. Do you think that would interfere in any way with the management of the mine?—Not at all.

31846. Do you think it would take any responsibility off the present managers?—Not at all; I think it would to some extent increase it.

31847. Do you to any great extent take advantage of the rule which gives you the right to appoint two persons to make an examination on behalf of the workmen?—Not to a great extent.

31848. Have you known where it has been done it has led to improved conditions underground?—Yes.

31849. Notice must be given to the management of the appointment of persons under that rule?—Yes.

31850. Have you known whether preparations have been made from the time the notice was given up to the time the examination was made?—I think it is a customary thing almost.

31851. I want you to put it frankly. If there was a large increase in the staff of Government inspectors and the managers of collieries generally in Great Britain, do you believe that the staff would be sufficiently large to bring about surprise visits occasionally more often than they are at the present time. Would it lead to increased safety?—In my opinion it would, decidedly: there is no hesitation on my part in saying that.

31852. Do you know whether or not it is a common thing when it becomes known that an inspector is about to visit a colliery because of an accident, or because he has been requested to do so, that preparation is made for his coming there in the shape of additional timber, or brattice it may be, being sent down the mine?—Yes, that is the custom so far as I know it.

31853. Have you known that personally to take place in your experience?—Yes, I have.

31854. I want to ask you a question or two with regard to inquiries. At the present time the Coroner's Inquest is not at all satisfactory to the miners, because of the power vested in the hands of the coroner to refuse to allow a person to take part in the examination of the witnesses?—That is so.

31855. You have now, or have had, coroners in Yorkshire who refuse absolutely to allow any person on behalf of the workmen to put questions?—Yes.

31856. And would only permit questions to be put through him as coroner?—Yes.

31857. What you claim is not that every person employed at the colliery should be entitled to appoint a person to cross-examine on their behalf, but that the men or the organisation—the Society to which the workman who is killed belongs—should have the right as a Society to appoint a person to look after their interests?—That is what we ask.

31858. Under the inquiry which Mr. Edwards spoke about, the second inquiry which the Secretary of State has the right, if he cares, to order, do you claim that the workmen through one of their own accredited representatives should be entitled to take part?—Yes, I think that would be a necessary part of the inquiry from our point of view.

31859. Is it your opinion that sometimes men who have had many years experience of underground work are better fitted to bring out the real facts of the case than a person who has merely a theoretical knowledge, such as a skilled lawyer: I mean a person who has no practical mining knowledge?—My opinion is in favour of the man who has had practical experience.

31860. Have you ever known of any ambulance carriage for use underground for bringing injured persons to the pit bottom?—I have not, except the ordinary stretcher. That is not an ambulance carriage.

31861. The ordinary stretcher may be a very painful method of bringing a person, if he is seriously injured?—Very much so.

31862. You would be favourable not only to proper ambulance appliances being kept, but if such a thing was perfected as an ambulance carriage which might be run underground on the rails to bring an injured person or persons to the pit bottom, you would also be favourable to that?—I should say that is very desirable.

31863. Is it desirable also that the various districts of a mine underground should be in telephonic communication with the surface?—Yes.

31864. In order that as quickly as possible word of an accident should be sent to the surface?—Yes.

31865. Sometimes at present it takes a considerable time for information about an accident to reach the surface?—Yes, it does.

31866. I think with regard to the Special Rules, you said in answer to Mr. Ellis that in the event of the colliery owners initiating rules and sending them to the Home Office, your Society would be entitled to object to them when they were hung up for 14 days?—Yes.

Digitized by Google

31867. Could your Society object to them ?—I do not suppose they could object: they could enter a protest.

31868. In what way ? Under the Act is it not only the workmen who are employed who could object ?—I may be wrong in that statement. I had an idea that we could object.

31869. If you were told that it is only the workmen employed who could object, that only any single workman could object, and that your Society could not object, would that not make a considerable difference ?—It would.

31870. Do you think that if Special Rules—I am dealing now especially with Special Rules with regard to the safety of underground labour and above-ground labour—were mutually adopted with a view to securing greater safety by consultations and joint meetings between the workmen and the employers—if rules were adopted in that way would they not be more likely to be carried out than rules adopted to a very great extent without consultation with the workmen ?—That is exactly my point in connection with the statement I have made. If there was a joint consultation it would lead to a better carrying out of the rule and more interest in the rule.

31871. It has been suggested that the coal masters, because they are responsible, should have the right to suggest Special Rules ?—Yes.

31872. Who do you think has the greatest responsibility, the men who risk their lives underground or the coal master who merely risks his capital in the concern ?—Decidedly the man who risks his life is the most concerned.

31873. And would have the best right to draw up rules for his own safety ?—Yes.

31874. At least, to have a voice in the drawing up of the rules ?—Yes, to have a voice in drawing them up.

31875. You think it is not unreasonable to ask that the workmen, through the representatives of their Society, should be consulted on a question of this kind ?—I think it is a matter of simple justice, if you care to put it in that way.

31876. (*Mr. F. L. Davis.*) Mr. Smillie asked you which you thought had the most responsibility, the man who works underground and risks his life, or the owner who risks his capital. I put it to you, does not the manager risk his life, too, under the Act ?—Not to the same extent as the workman: if he is in the mine he risks it to that extent.

31877. He is responsible for the safety of the whole of the men in his pit. If he does what is wrong he may lose his life as well. Is not his responsibility just as great ?—His responsibility with reference to life is not so great, because the man at work at the face is risking his life during the whole of his employment. The manager will risk his life when he is in the mine, and then only.

31878. If he does not do what he ought to do to carry out the conditions of the Coal Mines Regulation Act, is he not in a very serious position himself ?—Decidedly.

31879. It is not a question of the workmen on the one hand and capital on the other hand. The owner or the manager may be responsible, and may be in a very awkward position if he is found to have done what he ought not to have done. Is that not so at present ?—Yes, but this point was with reference to the drafting of Special Rules as I understood it.

31880. It does not matter whether it is with regard to the drafting of Special Rules or anything else. The manager is the man who is responsible if any lives are lost, and he has not done all that he ought to have done ?—With reference to the drafting of Special Rules, that is something that has to be suggested and drawn up, and the point was as to the responsibility with reference to that.

31881. You think if the workmen and the owners were to consult about any new Special Rule together it would tend to better observance of the rules and a better understanding of the rules by the men ?—I do.

31882. Do you think that there is a chance of the men objecting to a rule at any time which may be proposed by the owners in the interests of safety or for the better carrying out of the work of the mine ?—I do not suppose it is probable that the men will object to any Special Rule in the interests of safety or for the better working of the mine.

31883. You do not think so ?—I do not think so.

31884. Do you think that the men in your district would have agreed to the Timbering Rules, supposing they had been discussed by the men and the owners in the first instance, as they are at present—as they were proposed by the Home Office ?—We did not discuss the Rules at the time.

31885. Do you think that they would, supposing then what you suggest had taken place, that the men and the owners in that case had met together and discussed the thing—do you think then the men would have agreed to those rules ?—I think after the rules were in force they would have been carried out without any difficulty.

31886. I am asking about before they were in force. I am taking as my point the position you want to see obtain ?—The Special Rules for that purpose were put in force without our approval, we will put it in that way. We were not consulted about that so far as the men were concerned. If we had been consulted the position would have been created.

31887. I do not understand what you mean: what position would have been created ? It may be a matter of opinion, but I am asking you your opinion. Supposing the owners and you talked over that particular existing rule before it was established, do you think the men would have agreed to it then ?—I do.

31888. You do ?—I do.

31889. What was your objection afterwards ?—Because the difficulties with reference to misunderstanding on the contract question would have been discussed and an understanding arrived at.

31890. You say it would have been discussed and an arrangement would have been arrived at, but here is the rule existing at present. The men after it was established objected to it. Would they not have equally objected to it before it was established if there was a meeting between them and the owners ?—If there had been a meeting and the matter discussed—it had to be discussed ultimately, it was after approval, but if that had been done before that difficulty and trouble would have been avoided.

(*Chairman.*) Do you suggest the draft might have been put in a different form, and they might have had this discussion before ? Do you think the drafting of the rule would probably have been altered to make it clear as to what exactly it was going to be.

(*Mr. Ratcliffe Ellis.*) What would the alteration have been ?

31891. (*Chairman.*) You suggest that the rule was drafted in such a way that the men did not understand what they had or had not to do ?—There was a difference with reference to the term "working place" to begin with.

31892. (*Mr. Ratcliffe Ellis.*) The question was as to who should take the timber to the working place, whether the workman should or the management ?—There was a misunderstanding as to what was the working place within the meaning of the Special Rules.

31893 That was the question ?—That was one question.

31894. That was a question of wages ?—The first question was what was the meaning of "working place" within the meaning of the Special Rules. It said, "It shall be taken within 30 yards of a man's working place," and it was a question of what was a man's working place—is it the face or the bottom of the gate ?

31895. (*Chairman.*) It would have been clear if there was an understanding with the men before the rule was promulgated. You would have had a talk and made it clear what the management meant by the term "working place" ?—Yes.

(*Mr. Enoch Edwards.*) There is an explanation of that difficulty, but we cannot go into it here.

(*Mr. F. L. Davis.*) That was a question of wages, and I will not go into it.

(*Witness.*) One question was a question of wages, and another question was the question of definition.

31896. (*Mr. Smillie.*) The question of definition is a question of safety, because the supply of timber is one of the most important things. The workmen say "Under this rule we do not require to take it 50 yards from our face," and the employers say, "You must." The rule says 30 yards from your working place, and that is down to your gate-end. It may mean 50 yards from the working place ?—Or it may mean 100.

(*Mr. Ratcliffe Ellis.*) The substantial question was who should take it there.

(*Mr. Smillie.*) Take it where ?

Digitized by Google

Mr. J. Guest.
4 Dec. 1907.

31897. (*Chairman.*) The contention seems to be that under these rules there was a difficulty in working which might have been avoided, either by a conference between the owners and the men or in some other way, and possibly that the conference might have resulted in the rule being varied in such a way that it would be impossible to put two interpretations upon it.

(*Mr. Ratcliffe Ellis.*) There was that conference in Yorkshire if I am not mistaken. There was in most of the counties, and I think there was in Yorkshire.

31898. (*Mr. Cunynghame.*) I want to understand the improvement you suggest. That was a rule proposed by the Home Office?—Yes.

31899. How could the Home Office have consulted the men before proposing the rule? What procedure would you have us carry out? What would you have us do? It came into our mind that it was a good thing to have some form of systematic timbering, and we wanted to carry that out. What would you have us do?—My suggestion with reference to that is that the men should be consulted. It could have been sent down to our Society asking them to put it before their respective lodges and ask for suggestions.

31900. Before we proposed it to the owners?—You might take it from both sides at the same time.

31901. Before we could send it to you we must draw it up?—Yes.

31902. As a fact it was drawn up. It was proposed to the owners and also copies were sent to the inspectors with instructions to send it round and let it be known to the representatives of the men. Was that not so?—I was not an official at the time, and I am not prepared to answer that question.

31903. We will not deal with that particular case. In general, all the Home Office can do, as soon as they have drawn up what they imagine to be a good outline of a rule, is to let it be thoroughly known to the owners and men? That is all you could desire?—Yes.

31904. Take the Electricity Rules that were brought into force the other day. Are you aware that rules have been brought into force with regard to electricity in mines?—I have not seen those up to the present.

31905. I will tell you, because I should like to have your opinion as it has been referred to. Do you know how those rules were first designed and drawn up and arranged?—No, I do not.

31906. Then I will tell you. A Committee sat for a whole year and examined every witness they could get hold of—engineers, owners and men—and ultimately it resulted in recommending a set of rules which they appended to their report to the Secretary of State. That was published as a Parliamentary Paper, and issued to Parliament. The next step that was taken was to send a copy of those rules to the owners privately asking them what they thought of them, and at the same time a copy of those rules was sent to the Miners' Federation of Great Britain, as Mr. Edwards will know, and various unions, and made available in every way possible. Ultimately the rules were promulgated by the Secretary of State as required by the Act, and no objections having been raised, they passed into law and became rules. Can you suggest any improvement on that procedure, and, if so, what is it?—Suppose we deal with the question of these rules, which I am more familiar with than the question of the Electricity Rules. It may affect every man in a coal mine.

31907. You would be more likely to know about the timbering?—Yes, electricity will only affect a certain proportion of the men.

31908. Supposing these rules, instead of being Electricity Rules, had been about timbering, what else do you suggest the Home Office could have done other than it did with regard to those rules, namely, to draw up the best set of rules they could make after the fullest inquiry they could have, and submit them to the owners and men for the favour of their opinion?

(*Mr. Enoch Edwards.*) That was not done with the Timbering Rules.

(*Witness.*) With reference to these Timbering Rules, if they had been put before——

31909. (*Mr. Cunynghame.*) Supposing those Electricity Rules had been with regard to timbering instead of with regard to electricity, can you suggest anything that could have been done by the Home Office, and if so, what is it?—First drawn up *and* then submitted to the owners and men for their opinion. If that had been done, I do not suppose we should have any objection.

31910. There is nothing you could suggest?—No.

31911. If that was done with regard to the late Electricity Rules, that would afford a procedure you approve of, or at least upon which you cannot suggest an improvement?—That is speaking of rules put forward from the Home Office?

31912. Yes?—I understand that a manager can suggest a Special Rule.

31913. You are aware that the Timbering Rules were not suggested by the managers; they were suggested by the Home Office?—I suggest if it had been submitted to the men and a conference called, it would have removed the difficulty.

31914. At what period could the Home Office have consulted the men? They could not consult them before putting the rules upon paper?—No.

31915. They must put them on paper before they consult the men?—Yes.

31916. If, after putting them on paper, they consulted the men, what more could you want?—Did they send them to our officials and the Federation and ask them to call meetings and discuss the matter?

31917-8. I will read this letter. This was written on the 7th January, 1903: "Sir,—I am directed by the Secretary of State to transmit to you herewith a notice of proposal under Section 54 of the Coal Mines Act, 1887, of new Special Rules and amendments of existing Special Rules in regard to timbering and other matters. The Timbering Rules are based upon a model code which has been agreed upon between the Secretary of State and the Mining Association of Great Britain, and the rules generally, in the form now proposed to you, have been settled at a conference between Mr. Hall, H.M. Inspector of Mines, the North Wales Coal Owners' Association, and the representatives of the miners. If you do not object in writing to the rules within twenty days after the receipt of the rules by you, the rules will become established at your mine." That was directed to the owner. This letter stated that these rules were settled at a conference between Mr. Hall, the Inspector of Mines, the North Wales Coal Owners' Association, and the representatives of the miners. If this letter is true—assume for the moment that letter correctly states what had taken place—that would satisfy you?—The representatives of the men had agreed to it apparently.

31919. If it had been settled in that way, would that be enough for you?—Decidedly.

31920. If that is true in regard to this district, and this is a circular letter sent to all the miners, that would content you?—Yes.

31921. (*Mr. Ratcliffe Ellis.*) After all that in Yorkshire there was a difficulty about carrying it out?—That did not apply to Yorkshire.

31922. (*Mr. F. L. Davis.*) With regard to the third class of inspector that you suggest, I do not quite know what is in your mind. Do you suggest that that third-class inspector might in time become a second-class inspector and then a chief inspector?—If he qualified for the work entirely.

31923. At the present time, as I understand it, any sub-inspector may in time become a chief inspector?—Under the present system, I suppose.

31924. Under your proposal of three classes of inspectors, would you suggest that this class should be a separate class and should not be eligible for an assistant inspectorship or a chief inspectorship?—No.

31925. How would you do it? because so far as I understand you, the qualification would be a second-class certificate or some examination similar to a second-class certificate?—I do not see that any limit should be put upon the man's possibility in any way. At present, if he is in any mode of life, he has the opportunity of qualifying for any position he shows himself to be able to qualify for, and I do not see why any restriction should be put there.

31926. (*Chairman.*) He would have to go through the examinations for a chief inspector before he could become one?—Yes.

31927. (*Mr. F. L. Davis.*) If he has served the time, you would give him an opportunity of passing an examination which would put him up a grade to the grade of the assistant inspector, and after that to the chief inspectorship?—I see no reason why the man should be restricted. I would

Digitized by Google

let him go as far as his abilities will allow him to go. The question as to how he would be moved up would be for the Home Office to arrange in accordance with the examination they devised.

31928. This third class is new to us, and I want to see what you mean?—They would not appoint him in the first instance unless he was fit for the work.

31929. That is the difference between your suggestion and the present state of affairs; at the present time they are all qualified, but you are suggesting starting a class which is not as qualified as the other two; that is why I asked you whether you intended these men to remain in the particular third grade or not?—Are they all qualified for chief inspectors?

31930. Yes.

(*Mr. Ratcliffe Ellis.*) There is no such thing as a chief inspector and an assistant inspector in qualification?

(*Witness.*) You have chief inspectors and assistant inspectors.

31931. (*Mr. F. L. Davis.*) They are equally qualified?—In some directions, of course, naturally. A chief inspector will be expected to know more than an assistant inspector.

31932. One man has had 10 years' experience and another man has only had two years' experience. You naturally would not put him to be a chief inspector with two years' experience, even if his qualification is the same?—His experience qualifies him for the position of chief inspector over and above examination.

31933. Your men would not be so well qualified as the present inspectors, to start with.

(*Mr. Enoch Edwards.*) He could not prevent him qualifying in time, he says.

(*Witness.*) I do not admit for the purpose of inspection that he would be less qualified. He might be in some of what I should term the theoretical work.

31934. (*Mr. F. L. Davis.*) From what class would you draw these third-class inspectors to start with?—From the miners. They recruit very largely the under-managers and the deputies from the miners at the present time.

31935. So that any man who took a second-class certificate, or passed an examination equivalent to it, whatever it is determined to be, would be eligible for the post of a third-class inspector?—A second-class examination?

31936. Yes.—I did not suggest that. I suggested that the Home Office should propose the examination which these men should qualify under.

31937. First of all you said a second-class certificate, or some similar examination you thought sufficient, whatever the Home Office decides that any man should pass; if he passes that he would be eligible for it?—We have workmen working at the face with first-class certificates. So far as I am concerned I should not object to them. They would qualify first, and it would then rest with the Home Office to choose the best men.

31938. Whatever this examination is settled to be by the Home Office, any man who passes that would be eligible for this post of third-class inspector?—Provided he had experience as a practical miner.

31939. In answer to Mr. Smillie you made a rather sweeping statement that when the inspector is known to be coming to examine a place where an accident has occurred, that there are preparations made for his visit. He suggested brattice-cloths were sent down, and other things. You stated that is a general rule in your district. I think that your answer was something like that. Where is it the custom? How do you mean to say it is general by the rule that these preparations are made when it is known an inspector is coming?—It is a matter of common knowledge throughout the county so far as the men are concerned.

31940. If it is a matter of common knowledge, will you tell us some place where it has occurred?—I do not know any place where it has not occurred.

31941. You do not know of any place where it does not occur?—No, I do not.

31942. It is one thing to tell us that it is general knowledge, and it is another thing to give us an instance. Will you give us an instance?—There are so many of them. I quote Yorkshire as a whole; so far as my experience goes I do not know an instance where it does not occur.

31943-4. Will you give me ani nstance in Yorkshire where it is done. You say this is done at every colliery, or rather, you do not know a colliery where it is not done? It must be a very simple thing to give an instance. Will you give us a case where you can tell us that before the inspector came these preparations were made?—It is so simple I am not prepared to take that step. I say it is generally done, and it is a matter of common knowledge among our men. In fact, I do not know of a colliery there that does not do it; but I am not prepared to quote any colliery. I put them all in one, because so far as this is concerned when an inspector is coming preparation is made.

31945. (*Mr. F. L. Davis.*) That does not impress me much if you cannot tell me cases where these preparations were made. Do you tell me it is done in every colliery?—What do you want me to do—to name this colliery and that colliery?

31946. Yes, and tell us what preparations were made on a particular occasion?—Preparations were made to put the place, so far as the inspector is likely to travel, in a thorough state of repair and condition so far as the Coal Mines Regulation Act is concerned, so that what he sees will be as it should be.

31947. The inference from that is in all the collieries in Yorkshire the places are not as they should be?—You can take it that way.

31948. When they know the inspector is coming, then they put it right. That is the only inference I can draw from what you say?—Draw what inference you choose. I make that statement, and I believe it to be true.

31949. With reference to inspection under Rule 38 by the men, you have told us that you want an alteration in the rule allowing men who are now practical working miners, or who have been, to make the inspection. I am not sure whether you said that you wished the rule to apply to men from other collieries; that a man should be appointed to make workmen's inspections under that rule not in the particular colliery in which he worked, but a man from another colliery should be appointed?—I see no objection to it being made so that a man from another colliery should be appointed; in fact, we render it at the present time that a man from another colliery can.

31950. There is some doubt as to the reading in some places. You would like to see that?—I should like to see the clause "who is or has been a practical working miner."

31951. Supposing you have men from other districts coming to examine a certain colliery, do you think that they should be put under certain restrictions as to keeping the information to themselves, in fairness to the colliery manager and the colliery owners?—What information?

31952. You get an outsider, not one of a particular owner's workmen, but somebody quite outside his own property, to inspect his property. The man might make use of any information he may get to the detriment of the manager or the owner. Do you think he ought to be under the same restriction as the mines inspector is at the present time?—Not with reference to making no statements about the mine that are likely to be detrimental, but I suppose you mean, with regard to the area of the workings and the class of workings, apart from mines inspection. Is that the point?

31953. Yes, a man gets information he otherwise would not get. It may apply to conditions of working, wages, and all sorts of things outside the inspection?—Apart from the question of inspection and the question of danger, I see no objection to the man being restricted, that is, with reference to any information outside the report. He ought at all events to be in a position to make a fair report as to the state of the mine.

31954. (*Mr. Enoch Edwards.*) His report may be to the detriment of the manager?—Yes.

31955. (*Mr. F. L. Davis.*) Do you not think it is only fair that an outsider who examines a colliery should do it under the same restrictions as a mines inspector at the present time?—I think that his work should be confined to attention to the question of the safety of the men, and up to that point he should be privileged to make a report. Over and above that, and with reference to other matters, for instance we will say as to what direction the workings are going, or anything else, he should be under restrictions just as the mines inspector.

31956. I am not suggesting any kind of restrictions, or any unfair restrictions, but something similar to the mines inspector?—I have no objection to that.

31957. I did not understand one thing in connection with fines. You are against the system of fining altogether?—Yes.

Digitized by Google

Mr. J Guest.

4 Dec. 1907.

31958. You said that where fining is in operation it tends to make discipline slack?—In my opinion it does.

31959. Because if it is known that fines are inflicted a man will not be so careful. If he is not going to be prosecuted but is going to be fined, he possibly is more careless. I do not understand that; when we had here the statistics, they shewed that the prosecutions in your district were very heavy?—Yes; the discipline may be good.

31960. Fines do not take the place of prosecutions altogether?—In our district, so far as we possibly can, we fight the fines. We never encourage our men to accept the fine, and that may account for the increase of prosecution. As a Society we set our face against it.

31961. In your district do you say fining is done very little?—I do not say so, but you say we have a lot of prosecutions. It is possible we get more prosecutions because we set our faces in such a determined manner against fining.

31962. I understood you to say where fining is in operation you do not get nearly so many prosecutions. That is what you did say earlier in the day. After that we found out in your district there were a very large number of prosecutions, so that your statement did not seem to be consistent?—I do not see anything inconsistent in it.

31963. You objected to fines because, when men knew they were fined instead of being prosecuted, it made them more careless, and if they did anything wrong they knew they were not going to be prosecuted but were going to be fined. and they did not mind?—You are putting something I did not exactly state. In my opinion, we oppose fining, and we believe if a man commits an offence against the Coal Mines Regulation Act he should be treated as the management is treated by the inspector; he should be reprimanded, and if a reprimand is not sufficient he should be prosecuted. We hold that the Act applies equally to the manager as well as to the men, and that there should be no middle course as to fining. If a man is fined he may accept the fine and nothing is known, and if another man is fined he may accept the fine and nothing is known, and so the system goes on, but if a man is prosecuted the case is known, and it has, in our opinion, a better deterring effect than fining. Not only that, but the very fact that the owner has to prosecute a man for not having sufficient timber set, or for not spragging, is bound to make him keep timber and spraggs sufficient for proper working. It is bound to have a better effect than fining.

31964. I do not think I disagree with that. There are many cases where a man prefers to be fined rather than being prosecuted?—There may be cases.

31965. I daresay you will agree if the management prosecute in every case they would be taking their officials away from the colliery, the people who are responsible for the safety of the mine, and constantly taking them down to the Court?—I do not think so.

31966. It surely is so in Yorkshire. Where there is a prosecution you have to take your fireman, and the undermanager or the manager, in order to go to the Court to give evidence?—Yes.

31967. If you are constantly doing that you will often take the men responsible for the safety of the miners away from their duties?—We are not seeking to be constantly doing that. Our opinion is that the system will tend to better observance of the Coal Mines Regulation Act, and that there will not be the necessity for prosecution.

31968. You think that there will not be so many breaches?—I think so.

31969. You said that a stricter supervision of the gates and roadways by the deputy is desirable. Do you not think something more might be done by the men themselves to obviate accidents?—Do you suggest that the men should take the responsibility of the deputies.

31970. They are responsible for the safety of their own places?—Yes.

31971. Do you not think something more might be done by them when there is no deputy there or no deputy could be there. Do you not think that the men might be more careful than they are at the present time?—I do not see that that affects the position of the gates. The gates are largely under the control of the deputy.

31972. Accidents happen to men, a good many of them, I put it to you, from their own carelessness. You are rather suggesting if the deputies did more that there would be fewer accidents. I am suggesting that if the men took more care themselves, that there would be less accidents?—Shall we suggest it from both sides.

31973. I am trying to suggest the other side, but you only put one side?—A man in the working place has as much at stake as anyone, and I submit that our men on the whole take every reasonable precaution so far as the working faces are concerned.

31974. Do you do anything, or your Federation, in your district to draw the attention of the men to the necessity of carefulness?—We always encourage our men to obey the rules with reference to spragging and timbering, and to keep themselves safe.

31975. Do you in public meetings or by lectures take an interest in the work—we have heard that in one or two districts they try to rouse the men to the necessity of being very careful of their own lives?—I do not know that we have done anything in the way of lectures at all for that purpose, but wherever our officials go and address a body of men they encourage them to go in for safety to life and limb, and to be obedient to the rules.

31976. On the question of haulage on the roads, there are three short clauses here in the South Wales Special Rules. I should like to read them to you and see if these will carry out what you said you would like to see: "The following rules apply to every roadman:—156. He shall carefully remove all obstructions from the roads in his charge, so as to maintain them constantly in a safe state for travelling therein. 157. He must give the fireman of the district immediate notice of any fall, or loose overhanging stones, or broken timber, or any squeeze or danger in the top or sides of any roadway or airway, or any other defect or danger which may come to his knowledge. 158. He shall daily remove all rubbish, and clean out and keep clear every incline-plane and every travelling road or heading, and every manhole in the district in his charge." I gather from what you said, those rules would, if adopted in your district, cover what you would like to see done?—This applies, so far as I see, simply to the cleaning of the rubbish. Two of those rules, at all events, 156 and 158, are confined to removing obstruction and keeping clear the travelling roads. Of course that would be desirable, but that does not affect the question of the manholes.

31977. Yes, "and every manhole in the district in his charge"?—It does not affect the question of the increased number of manholes.

31978. My point was the keeping clear of the travelling roads?—Simply the keeping clear of the travelling roads.

31979. The sides?—Yes, I think that would do.

31980. You said you thought that there ought to be some further rule with regard to that. Mr Ellis told you in Lancashire that they have a rule very similar to the South Wales Rules.

(*Mr. Ratcliffe Ellis.*) No, it is Scotland.

(*Witness.*) I think that, with reference to the question of obstruction, would meet it.

31981. (*Mr. F. L. Davis.*) With regard to safety lamps you suggest wherever gas has been found that safety lamps should be compulsory?—Yes.

31982. Do you know that the men themselves object very strongly to the putting in of safety lamps in many places?—If it was a question of equal safety the men, no doubt, would prefer to work with naked lights, but I do not suppose where the men know there is gas that they would object to working with lamps. It is a question of danger and degree.

31983. Do you not know many cases where the management are anxious to put in safety lamps where the men prefer naked lights. That would not necessarily be a fiery mine?—I know of no cases in my experience where the men, where there is gas in the colliery, have objected to taking in lamps. We know it is a question to some extent of arrangement, as far as wages are concerned. The men are naturally working, as Mr. Smillie has explained at a certain disadvantage, and it becomes a question of pay. There may be a difficulty in that direction but where it is a question of safety and where gas has been found our men generally are prepared to take in the lamp. The only point is in taking in the lamp they hold that it is detrimental to their working and their earning power, and that they should have a consideration in the tonnage rate.

31984. On this point Mr. Smillie asked you, in reference to naked lights against safety lamps, when a man is

Digitized by Google

examining a place is it only by sight that he examines ?—No, he examines by sound.

31985. I was going to put that to you. When he examines he tests practically as much by sound as he does by sight ?—Both combined.

31986. He does both always ?—Yes.

31987. (*Mr. Smillie.*) Can he examine by sound where there are conveyors working at machine walls ?—Not very well, in fact I should say where a conveyor is working he is deprived of the privilege of testing by sound. *Mr J. Guest.* 4 Dec. 1907.

31988-90. (*Mr. F. L. Davis.*) You mean a conveyor in the face after a cutting machine.

(*Mr. Smillie.*) Yes, the noise is deafening.

(*Witness.*) On that point as to conveyors, the noise deprives him of one of his best assets so far as safety is concerned.

Mr. HERBERT SMITH, called and examined.

31991. (*Mr. Enoch Edwards.*) You are here to represent the Yorkshire Miners' Association ?—I am. *Mr. H. Smith*

31992. You are now the president of that body ?—Yes.

31993. It has a membership of some 70,000 or 80,000 ?—Yes.

31994. What is the view of Yorkshire on the question of Government inspectors: have you any complaint to make about the present Government inspectors ?—Not directly, but what we say is that they cannot cope with the work.

31995. There are not sufficient of them ?—No.

31996. You have no complaint with the work they do ?—No.

31997. You have three in Yorkshire ?—Yes.

31998. A chief inspector and two assistants ?—Yes.

31999. What do you think would be a fair number of inspectors for a County like Yorkshire ?—I think we ought to have at least another seven inspectors in Yorkshire.

32001. What distance from the mines do most of the inspectors live ? They do not all live in one centre ?—No: I should say they live on an average six miles from the nearest mine, and from the furthest mine, 46.

32002. In travelling from their home to that mine, in case of an accident, or for an inspection, a good deal of time would be taken up in coming and going back home again ?—Yes, it is.

32003. Have you given much thought to the question of another type of inspector, a practical working-man inspector ?—Yes.

32004. What is the view of Yorkshiremen on that question ?—Our general view is that these men ought to be qualified with five years' practical experience at the coal face to pass an examination similar to a first-class manager, because we realise that if he is not up to a first-class manager's standard he may be looked upon lightly by the manager, who would say he is somewhat his superior.

32005-6. In your judgment, while he has practical experience as a pitman, he should have sufficient technical knowledge to enable him to understand questions on an equal with the manager ?—I think those are three things required in an inspector—practical experience, theoretical experience and backbone when he has got that experience.

32007. Is there much inspection done by workmen under the present rule in Yorkshire ?—I should say, roughly speaking, about 30 per cent. of the mines take advantage of Rule 38; more would do so, but there are certain reasons why they do not.

32008. That 30 per cent. of inspection by workmen, year in and year out, would apply to the same collieries ?—Yes, largely.

32009. You have some collieries where they do not put this rule in force at all ?—Yes, for certain reasons.

32010. Where the inspection is done by workmen under Rule 38 it is done generally with the consent and approval of the colliery managers and people ?—Yes, largely.

32011. At any time, if there are wild rumours about the safety of a pit it is open to the men to appoint inspectors to go round and examine themselves ?—It is only that the managers insist upon a certain notice being given to them. We object to that notice. Certain work is done so as to take away somewhat the benefits of the inspection.

32012. Usually the under-manager accompanies these men round the pit ?—Generally the manager or under-manager.

32013. Do they manifest any unwillingness to go into certain parts of the pit or do they show all that is to be seen ?—My general experience is that they have given me privilege to go where I like, but the experience we get from other people is that they want to dictate what part they shall go into on a particular day.

32014. Have you yourself made these inspections as a workman ?—I did until 1904, when they took proceedings against me to stop me doing it any more.

32015. In 1904 you were appointed to make an examination of the pit you worked at ?—For 10 years prior to that I had been inspecting under Rule 38, but in 1904 I was appointed to make an inspection at the very pit I was checkweighing at.

32016. It was the colliery you were employed at ?—Yes, as a check-weighman.

32017. Did they object to your making an examination ?—Yes, and they took proceedings to prevent me from doing so.

32018. They objected because you were not employed in the pit ?—They put in that phrase "a practical working miner." They admitted the practical side and the mining side, but they said I had no working side at present, being a check-weighman.

32019. For 10 years you had made an examination of the collieries, but after you were appointed check-weighman they refused you ?—For nine years during my life as a check-weighman I examined that pit, and in the tenth year they objected to my doing it any more.

32020-1. Was their objection successful ?—Yes, the magistrates decided that I was not a practical working miner at that particular time under Rule 38; although I had done 23 years at the pit bottom prior to that and 14 years at the coal face.

32022. (*Mr. Enoch Edwards.*) That will explain why Yorkshire is anxious to include check-weighmen or that the check-weighman should not be excluded from examining ?—That is so.

32023. (*Chairman.*) Do you know whether there was any reason for suddenly taking this objection after allowing you to go down for nine years ?—I can give an explanation, but I do not know whether the other side will agree to that. I was appointed two months before to examine Hemsworth FitzWilliam Collieries, and we charged the manager with a breach of two rules, one was not providing sufficient manholes, and the other allowing horses to rub against roof, and not remedying it.

32024. You gave a bad report of that particular mine, and you think that report may have had something to do with raising the objection as to your not having qualified. That is your suggestion at all events ?—It proves I gave a too truthful report.

32025. That is what I say. You gave a report which was not favourable to the mine, and you think the reason why the managers turned round and did not allow you to examine any more was because you gave a truthful report, what they call a bad report, of the particular mine ?—Yes, arising out of that case. I also gave evidence against two men for breach of rules at the same time as I charged the manager.

32026. (*Mr. Smillie.*) Two of your own members ?—Yes, two of my own members, men who were paying my wages.

32027. (*Chairman.*) You think you not only got into bad odour with the masters but with the men ?—No, the men took no objection; they wanted a faithful report.

32028. Then why do you mention the men at all in connection with not being allowed to go on. The facts were that you had been as a check-weigher employed at least nine years in making the men's inspection, and no objection had been raised that you should be acting in

Digitized by Google

Mr. H. Smith
4 Dec. 1907.

that capacity during those nine years, and at the end of that time you made a report which you considered truthful, and this report was not favourable to the managers, and after that they took objection to your being an inspector and did not allow you to go on under Rule 38.

(*Mr. Smillie.*) A different mine under a different company.

(*Witness.*) I should like to submit to you that the offence was proved because the manager was convicted.

32029. (*Chairman.*) I am only on the question why they should suddenly raise this objection. Mr. Smillie says it is a different mine?—It was not a different mine where I was objected to. I was employed as check-weighman at Glass Houghton, and I spent 30 per cent. of my time working under Rule 38 inspecting mines in Yorkshire.

32030. Could there have been any reason other than your giving this unsatisfactory report of the mine? I thought Mr. Smillie said another reason might be you were employed under a different set of mine managers, who might raise the objection without knowing anything about your report. It seems objection was taken by a different set of men. Is that so or not?—No. The manager I inspected under was John Parkin. It was Mr. John Parkin under whom I was stopped.

32031. The same people stopped you after you had made this report who had always allowed you to be employed by the men under Rule 38?—Yes.

(*Mr. Smillie.*) The mine at which he gave an adverse report was a different mine from which he was employed at as a check-weighman. At Glass Houghton he had been check-weighman for nine years, and he had examined for nine years. At the end of that time he was appointed by the workmen to examine another mine at Hemsworth, and this is the examination in which an adverse report was made, and the manager at Glass Houghton, John Parkin, refused to allow him to make any further examination under Rule 38.

32032. (*Chairman.*) I will ask you what the circumstances were. Is this the state of the circumstances: after having acted in this capacity for nine years at this particular mine, you went to another mine and made an unfavourable report as to that mine, and when you went back to your old mine the objection was first taken by the officials of your old mine that you were a check-weighman and, consequently, not eligible for the appointment?—Yes.

32033. (*Mr. Enoch Edwards.*) It has cleared the point up to everybody's satisfaction, that for a number of years as checkweighman you acted as inspector for the workmen and all went well until you went to the pit of another firm. In your mind you were precluded from inspecting at your own colliery, because of what had taken place at the other colliery?—Yes.

32034. There was nothing else which happened at your own pit?—Except we got convictions there, but I am under the impression that this was an arranged thing with the coal owners, that I should be prevented from making inspections.

32035. You did come under that class?—Yes.

32036. For that reason your Yorkshire people think in any new Bill or in any recommendation of this Commission that checkweighers should not be debarred?—Yes. We think we stand in rather a more independent position than the workmen who work in the particular pit?

32037. You think the checkweighman would be less liable to be interfered with by the management if he is called upon to report any proceedings which may be looked upon as unfavourable to the company?—Yes.

32038. I have no doubt that what you did report was a true state of things as to what you found?—And to prove it the people were convicted by the Court.

32039. In regard to inspection by officials under Rule 4, what officials of the colliery do you mean?—I mean deputies particularly, more than anybody else, and shot-firers.

32040. A person whose duty it is to examine the working place?—Yes.

32041. Do you include firemen in that definition?—Not largely. In some pits they do in Yorkshire. He carries a joint position as deputy and shot-firer.

23042. Is it the deputy's business to examine the working place?—Yes.

32043. And the workings too?—Yes.

32044. It is his duty to examine the pit before the men go in in the morning?—Yes.

32045. In your experience what is the position of these deputies? Are the districts of such a size and area that the men can examine thoroughly within the meaning of the Act?—My opinion is the districts are too big, and that they have too many other duties to call them away, so that they cannot devote the time they ought to it.

32046. This deputy who performs the duty acts as a fireman?—Not in all instances.

(*Mr. Smillie.*) As a shot-firer, do you mean?

32047. (*Mr. Enoch Edwards.*) The point is a deputy as against a manager or an under-manager. I want to get at what you mean by a deputy. We will take the person who examines in the morning. Will he be a deputy or a fireman?—He is a deputy.

32048. He is supposed to make an examination within the area before the men go to work?—Yes, within three hours.

32049. This examination means an examination of roof, sides and travelling roads, and working places?—It should do, but what I find they do generally is to first inspect the ordinary roads, the main gates and haulage roads, and devote the latter three hours solely to the working places, running across faces.

32050. They are examining to see if the ventilation is all right, and if the place is free from gas?—Yes.

32051. Do they examine to see whether the faces are timbered correctly?—Yes.

32052. From your experience you think that the districts are too large to be properly examined and inspected?—Yes, I do.

32053. That is what you mean by "deputy or fireman in the discharge of his duties." If he is a fireman what other duties has he beyond examining the roadways and roof and sides in the working places, and seeing to ventilation?—The deputy, do you mean?

32054. Yes, the deputy?—He is expected to give a report as to why they have not got more coal out. He is expected to look after the trams and help them on to the road if they are off.

32055. When superintending the output of the coal he is not examining?—Yes, he is doing it between. He runs to a gate, examines that, and then comes back to the pass-byes to see that all is going on right, and so on.

32056. In all cases it should be somebody else's business to see that the coal was being sent out?—Certainly it should.

32057. You think that the fireman or deputy whose duty it is to see to the safety of the pit should have his duty entirely confined to safety?—In that district. He should not have to spend so much time in looking after other things.

32058. What is your experience with regard to falls from roof and sides? Is it caused because the timber is set badly? Do the workmen set their own timber at the face?—Largely they do.

32059. That will be their contract?—That is in the contract largely, except in some instances where they are paid separately for timbering. I want to deal with gate roads.

32060. Is that under the collier?—No, that is under the deputy.

32061. The collier is not responsible for the keeping of the timbering of them?—No, only for the working place, up to the edge of his ripping. These places are simply ripped, and in many instances they say, "This is safe, and it needs no bar." My experience has been that you cannot make it too safe. I say if it is safe, keep it safe rather than let it get worse. They allow these roads to break down and gutter, and there are continual falls, but they do not re-timber; they let it stop as it is for a day or two.

32062. Is the nature of the roof such that if first timbered they can constantly keep the roof up?—No, but you would have more notice of anything taking place, and then it would be a question of re-timbering again. I think there ought to be a system of timbering in a gate road, as in a bank.

32063. Do many accidents occur in the gate roads?—A fair number do occur on gate roads.

Digitized by Google

32064. In your judgment many of them would be obviated if they timbered more quickly ?—Yes, and more systematically.

32065. What about the working face ?—At the working face men have largely provided for timbering, and get it in their prices. When that new timbering rule came about there was no consultation to ask whether the men thought it would be advisable. The contracts were already made when that new timbering rule came into force, and that rule meant 20 per cent. more work to our men in many instances, and there was no consideration given to them for that. I think special men ought to be appointed to solely attend to this timbering, and particularly withdrawing. Withdrawing ought to be done when the place is not turning coal.

32066. Are the men responsible for drawing the timber as well as setting it ?—Largely.

32067. In some districts they have a method of separate people setting timber. That is what you mean ?—Yes.

32068. The collier would be under an obligation to set timber to keep himself safe ?—Yes. The difficulty you have even with timbering rules is this, and I have had to write continuously to our inspector about it: it says timber shall be supplied within a certain distance of the working face, and the men go to work, but there is nothing said, only that the place is all right at the pit bottom. When they get in they find they are short of timber. Then it is the man's duty to come out; that is what the Act says: you must not work in danger. We think that there ought to be more than that, because this man is losing time; he is not told there is no timber, but when he gets there he finds that out himself, and has to go back, and lose his time through being short of timber.

32069. When he gets to the face he finds that he has not enough timber to go on with ?—Yes, that is it.

32070. Will you tell the Commission what was the special difficulty about timbering in these rules in Yorkshire ?—Before these rules came in we used to have a recognised system of 6 ft. Of course setting timber was always required. There was always that provision. Now we have it reduced from 6 ft. to 2 ft. 6 in., in instances, a prop every 2 ft. 6 in., 4 ft., 4 ft. 6 in.; very few 6 ft. I do not object to more timber being used, but we have not been recompensed for the extra work.

32071. That was the new timbering rule. Was any intimation given to the Yorkshire Miners' Association about those rules ?—What was given was simply a notice from the Home Secretary, as has been given, or it is hung up on the pit hill for a fortnight for any man to take objection to. I would not give much for that.

32072. Was the Association consulted at all about the price ?—Not that I know of; there was a strike in some parts of Yorkshire over this rule.

32073. I thought you would have some knowledge which would be information for this Commission. Was the Miners' Association, as such, consulted about the special timbering rules ?—Only in the ordinary way any new rule is.

32074. You suggest to the Commission that there was a wage question involved in these Timbering Rules ?—Yes.

32075. It was not that the men objected to setting any amount of timber for their own safety ?—No, not at all; it was reducing their earning power by putting additional work on to them without any recompense.

32076. You had a contract to get so much coal and set timber at such a distance in such a way, and this interfered with your contract ?—That is so.

32077. In your judgment, supposing a notice had been sent to the Yorkshire Association, would it have been possible for your Association and the coal-owners to have agreed to a general system ?—I think it would, much better than what is done at present. There should be a round-table conference as to any alteration in mining rules, which ought to take place between the Society and the coal-owners.

32078. You think you could have got Timbering Rules through to everybody's satisfaction without any stoppage if you had been consulted about the matter ?—Yes, I do.

32079. What do you mean by the cages being stopped in the shaft to collect men from various seams? Is that lowering and raising men ?—Yes, it is, and some serious things are happening in Yorkshire, particularly with this, and it is causing us to look at it. Some of us have been cognisant of this danger for some time. Just now there was a serious accident at Barrow, and one before at Orgreaves, and one before, smashing into the bottom, at Glass Houghton. We lost seven men at Barrow, and six injured. My contention is this: I know I shall be told it is expensive, for every seam there ought to be a shaft. Once a man starts from the pit bottom, there ought to be no gathering and getting so many men at a seam, but they should go straight through. At Barrow they picked up six men and made those six into 17 at another seam. There was a flatsheet with two hooks fixed in. This is an iron door which falls down on the cage, with two hooks for the purpose of men getting in.

32080. That is to fill the gap between the cage and the side of the shaft ?—Yes, when that falls it should hold the cage and prevent it from vibrating. This door was never picked up, and hence when they started raising the cage it caused it to tilt, and then it went into one side and knocked it back to the other side. There were no gates at the end of the cages, and the men tumbled out. A pit cage ought to start from that particular bottom and go to the top, and if it wants to take more it should come down and go to the top again. There should be no stopping process.

32081. That would be practicable to carry out. He fills a load from the bottom of the shaft, and the next cage he takes two-thirds of the shaft, but he must take only from that place. That is what you mean ?—Yes.

32082. What is the distance between the hooking holes, commonly ?—From the bottom how far up do you go before stopping ?—I think about 75 yards, but I will not say that I am correct as to the figures.

32083. Have you another one ?—About 110, the next, I think.

32084. You lower the men and take the men to all these various stages night and morning ?—Yes.

32085. You are objecting to having a part cage of men from the bottom, another part at the next place, and filling up at the next ?—I am objecting to having any resting place in the pit mouth. It is simply resting on a rope at all times. There are no fallers for the cage to rest on at any of the two mouths.

32086. Are the coal measures flat ?—Fairly flat.

32087. That is rather a sharp grade. They lower this coal to the bottom level ?—They lower coal down to this bottom and fetch all coal from the bottom seam with the winding engines to the surface.

32088. Could they not treat the men similarly, rather than run this risk ?—It is a hydraulic appliance they lower the coal with, and a clutch brake.

32089. (*Mr. Ratcliffe Ellis.*) Do they bring it to the mouth and take it to the bottom and bring it all up ?—They lower it down.

(*Mr. Enoch Edwards.*) There is no difficulty with the coal; it is with the men.

32090. (*Mr. Ratcliffe Ellis.*) Would the men get out less quickly ?—It is not a question of quickness; it is a question of safety.

(*Mr. Enoch Edwards.*) The witness suggests the danger in raising would be less if the cage filled at one point rather than filling at so many.

32091. (*Mr. Ratcliffe Ellis.*) Would not the men object to that ?—No. In this instance the accident happened to roadmen. It was a gathering up. They put seven on at the bottom landing, and made them into 17 at the next landing, and so the thing happens.

(*Mr. Ratcliffe Ellis.*) It occurs to me the men would get out more quickly.

32092. (*Mr. Enoch Edwards.*) You say it is a dangerous process, and you think that the attention of the Commission should be called to it. With regard to the question of travelling roads what do you mean by travelling roads for workmen in and out ?—What I mean is on the haulage roads and the jinny gates more particularly than the ordinary gates, where accidents happen in Yorkshire, because you have manholes at each side and endless rope continually running about one yard and six from the floor, and tubs fastened on this rope at intervals of about 8 yards apart.

32093. Interrupting you for a moment, can you tell me the reason for having one manhole on one side and one manhole on the other ?—There are several reasons. First of all, perhaps, for cheapness. The next thing is it will be because men travel in on one road side and out at the other side to try to keep out of the way of the tubs.

Digitized by Google

Mr. H. Smith 4 Dec. 1907.

32094. You suggest men may travel down on one side and up on the other, and that the manholes should be on the side he is travelling?—Yes.

32095. Is there any physical difficulty in making these manholes?—I do not think there is at all one side, but if we are going to prevent these accidents—a very serious accident happened last week at Allerton Byewater Colliery, where a man was travelling up a jinny gate—a single road at the bottom and a double road at the middle, and he was travelling to his working place and the run was off the road, and he was not stopped from travelling: and he was not able to get to the manhole before he was caught and killed by the jinny setting off again.

32096. (*Mr. Ratcliffe Ellis.*) Did they break away?—No, they had been off. If it had been a separate travelling road he would not have come into contact with them and he might have been living now. He was only 27 years old.

32097. (*Mr. Enoch Edwards.*) You have a single road up to the middle, and then a pass-by, so that there are no physical difficulties existing. They could make the whole road a double road?—There is no room at either side for a man to stand clear.

32098. Is it customary for men to travel up and down?—A notice says at the bottom that while the jinnies are running the men shall not travel, but the man at the bottom says "You can go up: we do not know how long we shall be getting the run on again."

32099. You suggest that a separate travelling road should be made in all these main haulage roads?—Yes; as tubs are continually running on these roads.

32100. Would it be convenient to make that road alongside your haulage road?—Yes, it would. I have another idea as well. You generally make them either intake or outlet. When men have to travel you keep it in better condition than if used for an air road pure and simple.

32101. If the return airway was used as a travelling road it would be better kept if traversed by the men than it would as an air road purely?—Yes. Then there is another difficulty, the large amount of dust on these haulage roads through the men and ponies travelling together. It is simply a blinding process. What has interested me for some time has been to find out what has been the cause of so many bronchial complaints, and doctors tell me that it is so much dust. There is so much dust inhaled in the mine.

32102. You suggest that there should be separate travelling roads?—I do. There would be more safety and less dust to contend with, and you could sprinkle them with water more systematically.

32103. Where it is not physically possible to make a separate travelling road do you suggest that there should be more manholes?—I suggest that the roads should be made wider, and that you should have a travelling road at the side.

32104. Would there be a difficulty in keeping up the roof in a place so wide?—No: you would get your bars crossed and put an extra prop, which would serve as a partition.

32105. You think, in your opinion as a practical working miner, that it could be done?—Yes.

32106. As far as you can see you could do it in Yorkshire?—Yes.

32107. What do you wish to tell the Commission about machines?—What I want to say is this: we are not opposed to machinery—I do not care how easy they make work—but by using machinery you cannot hear anything clearly, which is a great disadvantage to a man in a pit. He can hear a roof breaking, as a rule, when he is working by hand, but if you have a machine cutting there is as much noise as if you were hitting a hammer on an anvil in a blacksmith's shop. If possible there is more where there is a conveyor used, because you fill coal into an article 2 ft. wide of sheet iron. 20 men at a face of about 100 to 150 yards in length. You cannot hear the roof at all, and there is a certain amount of danger when you cannot use your ears to advantage while these machines and conveyors are working.

32108. In the face of that danger what do you suggest to us?—As soon as there is room made, when there is plenty of coal filled out for a yard, or whatever distance you like, a bar shall be set. I want it so that a man shall be safe, but I do not want to go to the extreme and say 4 ft. or 4 ft. 6 in. The bars set in machine faces let over on top of the coal do not look as safe as a bar with a leg under each end. I think a man ought to be engaged in doing nothing else but timbering, because when men are filling with conveyors they are filling at a rate, and they are not supposed to stop to set timber until the conveyor stops, and the danger of noise ought to be enquired into.

32109. You suggest as the coal is taken out and the ground is cleared and a new roof made, it is impossible to ascertain with the noise, so that you would make doubly sure by setting a bar as you go on?—Yes.

32110. Is there any difficulty in doing that?—No, except this: employers point out it may necessitate stopping the conveyers somewhat more often; that difficulty can be got over by using a longer bar, and having special men to set timber.

32111. It need not interfere with it, but in a new roof you would have the satisfaction of covering it with a new bar?—Yes.

32112. You raise the question of small coal being put in the goaf?—Yes.

32113. What is the objection to that? Are you afraid of goaf fires and spontaneous combustion?—That is what we are afraid of, because it is small stuff that is cut by the machine, smaller than that cut with a pick. The majority of our machines cut coal 5 ft. under which is thrown into the goaf. The goaf is completely filled with that small stuff. It is small coal, as small as it is possible to grind it, and there is bound to be a certain amount of danger from dust.

32114. Is there much dirt mixed with it?—Not very much. In our Silkstone seams there is hardly any dirt.

32115. Apart from Denaby have you had much goaf fires in Yorkshire?—We have had little ones, apart from Denaby, burst out. There has been nothing particularly serious, but I think that prevention is better than cure. We think this thing may prove much more serious in the future than we anticipate at present with this large amount of small stuff being put into the goaf.

32116. It is small slack—smudge?—It is small coal.

32117. It is fairly clean?—Yes.

32118. You do not hole in the dirt at all?—You have to skim the bottom sometimes.

32119. This small dust you think will be a source of danger: in your opinion you will get spontaneous combustion: that is your view?—Yes.

32120. What do you mean by altering the present system of investigating mine accidents? As a practical pitman I would rather prefer that you should put your view of this question before us. I think it is better that you should do so?—We have a provision for coroner's inquests and I have had some funny experiences with regard to coroner's inquests. They are not all bad, but some of them have funny ideas.

32121. We know that most of them are lawyers and doctors?—One man considers that before you can go as a Society, or on behalf of the workmen, you must get a petition signed by all the workmen at this pit. You have 1,000 workmen in some pits, and to stand there with a petition and get it signed by every man every time there is a fatal accident, I think is a bit absurd.

32122. (*Chairman.*) It is only a majority that is required. 501 men would be enough if there are 1,000 men in the pit?—Yes, but it would be difficult to get 501. Another point is this: we find a difficulty in this way. Sometimes they ask you to put a question, but you have to put it through the coroner, and you cannot get from a witness through the coroner what you would get from the witness by cross-examination yourself as a practical man. I think you see what I mean. We say we ought to have some *locus standi*, and be able to examine and cross-examine the witnesses.

32123. (*Mr. Enoch Edwards.*) Have you had much difficulty in Yorkshire about this?—Not as much as in some counties, but a fair amount in Yorkshire.

32124. All your coroners do not take that view, that you should have a petition?—No, there is only one.

32125. You are often in court on cases because you have so many accidents?—Yes, we are often in court.

32126. With the majority of your coroners, you do not experience any difficulty?—Except that we have to put our questions through him instead of cross-examining. It is necessary to cross-examine a witness when you put questions to try to get further evidence. That is what we object to, somewhat.

Digitized by Google

32127. (*Chairman.*) The coroner always puts your questions, I understand you to say —Yes, but he perhaps would not put them in the typical way I should like to put them to the man to get my answer.

32128. (*Mr. Enoch Edwards.*) You want to feel that the law should be such that you or any of your friends may go and represent your Society ?—That is so.

32129. I want to know what are your views with regard to an examination for certificates for managers and under-managers ?—The rule says that they shall have five years' experience—mine experience, the rule says—before a man sits for a first-class certificate.

32130. He shall have those years of practical experience at a mine; it does not say that he shall be a collier ?—What we find happening in Yorkshire to-day is this: young men who could not show any practical experience so far as workmanship is concerned, are put there and get a certificate. They are popping up and down the pit, and being a kind of office-boy, and they call that their five years' experience, but what we say is that a man should have five years at the coal face and get practical experience in order to qualify.

32131. It would still be necessary that the pitman with his knowledge of the face should have the theoretical knowledge to get the certificate ?—I do not want to debar him from that, but I want him to have some practical experience. I do not mind his having a good knowledge of theory.

32132. Your practical man to be a manager must have been a collier ?—I think that ought to be one of the conditions.

32133. Supposing he had walked about the mine, measured the mine, taken tests of ventilation in a mine, been in an outer pit for five or six years, you would not, call that practical experience ?—No, I think I could walk up and down a mine for 20 years, and I should not, apart from theory, know much about it.

32134. Whatever special qualifications he may have, whatever expert knowledge he may have, you suggest in these certificates that he should have some experience as a collier at the coal face ?—I do. I think that should be one of the conditions.

32135. You apply that to managers ?—Yes, and under-managers.

32136. (*Mr. Ratcliffe Ellis.*) And inspectors, I suppose, too ?—And inspectors, too.

32137. That would mean the whole of the management of the mines in this country, and the inspection of these mines must be by persons selected from the working face ?—It does not necessarily follow.

32138. Working at the face, then ?—It does not follow. He may have ordinary ability as a practical workman, but he would have to get his theoretical knowledge also, and then he would be suitable.

32139. Whatever knowledge he had, he could not get it unless he worked at the face ?—Then he would have to be appointed by the owners after that.

32140. (*Mr. Enoch Edwards.*) Your position is that he must have practical knowledge as a pitman; but you admit that he must have sufficient technical knowledge of all these questions to entitle him to take his first-class certificate ?—Yes, that is so.

32141. (*Mr. Ratcliffe Ellis.*) You said that the inspector ought to have backbone, that is to say you explained it, he must be able to hold his own with the management ?—Yes.

32142. He must be equal in qualification. He ought to know as much as the manager ?—Yes.

32143. If your view was carried out, and there could be neither inspector nor manager who was not selected from the workmen, then they would be all alike, if a man must have five years at the working face. That is your view I understand, before he can qualify either to be manager, sub-manager or inspector he must have five years at the working face. It means you must select all these men from men who have worked at the working face. That is the meaning of what you say ?—Yes.

32144. Would you go so far as that ?—I should go to practical experience. I do not think I quite follow what you say. You do select them largely, but you do not select officials now. A manager has not the control he ought to have with the practical experience, because he has to appeal to an agent who, in many instances, knows nothing about a mine, before he can carry out any reforms for safety which entails any expense.

32145. If this is your view, all managers, sub-managers and inspectors of mines must qualify themselves by five years at the working face ?—I think he ought to have five years.

32146. However theoretical he may be, and however able he may be, and however scientific he may be, unless he has had five years' experience at the working face you consider that he should not be able to qualify as an inspector or a manager or a sub-manager ?—If he was not practical he would lack something.

32147. That is your view, whatever qualification he has unless he has been five years at the working face as a collier, he should not be selected as a manager, a sub-manager or an inspector ?—When I say a "collier," I mean at the coal face. A man is not considered qualified to work by himself until he has been two years at the coal face.

32148. It does not say two years ?—As a collier.

32149. Do you go as far as this, that there should be no inspector appointed, that there should be no manager appointed, no sub-inspector appointed, however scientific his attainments may be, and whatever experience he has had down the pit, unless he has had five years' actual working at the working place ?—I do.

32150. Then I do not think it is much use my asking you any further questions about that, because we do not agree upon that subject. The Act of Parliament requires now before a man is given a certificate that he must have practical experience ?—Yes.

32151. You say that is not enough and that it must go further and say "practical experience as a workman at the face" ?—Yes.

32152. You must know many colliery managers in Yorkshire who have never worked at the coal face ?—Yes.

32153. Are there none you know who are qualified for the duties they have to perform ?—There are some, but if it is a question of giving the names———

32154. No, I do not want you to give me their names. —There are some who are theoretical and scientific.

32155. I should not ask you to give names because that would be invidious, but amongst the various colliery managers in Yorkshire there are many distinguished men, are there not, who have never worked at the coal face. Do you say that none of those men are qualified to manage a mine ?—Not in my opinion, from a practical standpoint. Of course we have some good managers in Yorkshire that have certificates from the coal face.

32156. In your opinion these men are not qualified to do the work, because they have not worked at the coal face ?—Because they have not had the practical experience at the coal face.

32157. You mean by that working at the coal face ?—Yes.

32158. You think that there ought to be five years at the coal face ?—I do.

32159. Under General Rule 38 you made these examinations at the colliery at which you were checkweighman ?—Yes, and other collieries, too.

32160. Had you made bad reports before ?—Yes.

32161. But still you were allowed to go on making them ? —Yes.

32162. You do not know any other reason that stopped you than this bad report which you have suggested ?—I do. I think that I was examining too carefully, and the people did not like the idea of it.

32163. You said you had made bad reports, but still you went on examining ?—Yes.

32164. Does it not occur to you that there might be some other reason ?—I do not know that it does. Why I was stopped in my opinion was this: I only give it as an opinion, that they found out I was debarred by the wording of Rule 38 as a checkweighman, but I think the reason was that I went and inspected the pits too minutely for them.

32165. You had made bad reports before, but you were allowed to go on examining ?—Yes, I made bad reports both against the men and deputies before as an Inspector under Rule 38.

32166. And still you were not interfered with but were allowed to go on ?—Yes, that is so.

32167. The object of that rule, so far as one knows, I suggest to you is this, that where the men in the mine

Mr. H. Smith
4 Dec. 1907.

suspect there is some danger they want to be assured that it is safe, or, if it exists, it is removed. Do you not think they would be more encouraged to be satisfied if there was an examination made by a man who himself had to undergo the same danger in case there was a danger?—I do not think they would. All that men fear (and there is a fear) is this: there are some cases one could name where, when men have ventured to make a report, their position has not been worth much at that pit after.

32168. Supposing we forget the fear of recriminations, do you not think if they were free from that fear they would really be the best men to make an examination into the conditions under which they were going to work themselves?—I am bound to take my own personal experience. I do not think a man working at a pit to-day knows more than I do by continually going in, and I have had 23 years continuous work at the pit.

32169. You do not think the men would be more satisfied with their examination?—I do not.

32170. You said you objected to notice being given that such an examination was going to be made?—Yes.

32171. Why?—For reasons and circumstances that have happened. Perhaps you have had the report from a certain district that for two or three days they have been short of timber, and you send a requisition to the manager to say at 4 o'clock to-day that to-morrow you will inspect that pit, and then there will be any amount of timber sent down on the date he receives the note preparing for the inspection.

32172. That is what you want, to get the material sent down?—Yes, but I want to point out this: if that notice had not gone probably that timber would not have gone either.

32173. You want to secure the safety?—Yes, but I want to prevent that occurring again, and I can only do it by showing these people when it happens.

32174. You mean by prosecuting them?—Certainly: that is the only solution.

32175. With reference to the suggestion that the districts for the firemen are too large, is that generally the case in Yorkshire?—Generally it is, but in some of the pits it is not.

32176. Can you suggest any rule prescribing the size that a district should be under one fireman?—I do not know that I could properly, but I could if I thought it out. I will give you a rough idea. I think that no man ought to be asked to supervise 100 men working at a face in different places.

32177. Could you suggest to the Commission any rule that could be made to secure that the districts were not too large?—I do not think that any man can properly examine 30 places—from 20 to 30 longwall faces in three hours, and find out what he ought to try to find out.

32178. That is some guide: 20 or 30 longwall faces are more than a man can examine in three hours?—Yes.

32179. Is that the nearest you can approach to a suggestion?—I think if a man had say 15 gates in a certain district in addition to his air roads, that would be plenty of work for him to give his whole time to.

32180. You think a rule might be made to say that a man should not be equired to superintend and examine more than a certain numb r of gates within a certain time, including his airways and the other things he has to do, and you think that 30 is too many?—I think that 20 is too many.

32181. How many do you say then?—I think 15 are plenty.

32182. How many gates as a rule do they have to examine now?—I can give you three or four particular pits straight off. In one pit we are doing about 2,500 tons a day with four deputies.

32183. How many gates. I want to compare the state of things now?—What you have down the pit on day shift would be anywhere from 500 to 550 colliers.

32184. There would be more than one collier at a gate?—Four colliers as a rule.

32185. Would there be 100 gates there?—More than 100 gates: four men and three men: four men in some and three men in others.

32186. How many deputies are there?—Four deputies, and in addition to that they have to do all the haulage roads.

32187. You think some rule might be made of that kind which would afford a guide as to the extent of the deputies?—I do, and *it* will take him his eight hours to examine 20 gates and the air roads. He cannot do it in three hours: it will take his shift.

32188. Do you find it general that the deputy has to do more than examine?—Yes, I do, as a general rule in Yorkshire.

32189. There are exceptions?—There are exceptions to every rule.

32190. There are exceptions in Yorkshire, where the duty is confined to the examination of the place?—Very few, but there are a few.

32191. I want to ask you about timbering. Do you agree that at the face the collier is the best man to do his timbering from the point of view of safety, if he has time?—I think there ought to be special men appointed for timbering alone.

32192. Do you agree—we have had evidence about this—that the collier is the best man to look after his safety at the face from the point of view of timbering?—I expect we shall differ in opinion. My opinion is that special men ought to be engaged for timbering. I think that is the best thing that can happen.

32193. You think that the collier is not the best man to do the timbering?—The collier is working by results.

32194. We will not talk about wages or time?—That is one of the main things, apart from safety.

32195. You have pressed on the Commission that working at the coal face is the only place you can get this practical experience. A collier having worked at the face knows most about timbering?—Yes.

32196. Then is he not the best person to look after his own safety and to put up timber wherever it is wanted?—I should engage one of those men with experience at the face to do nothing but devote his whole time to the place, and setting and withdrawing timber.

32197. You do not agree that the collier can best look after his own safety in regard to timbering, if he had time to do it?—If he has practical experience he is; but I think the best thing is to engage special men to do the timbering.

32198. So far as the collier is concerned, if he has time, can anybody look after his safety better than he can himself in regard to timbering at the face?—I do not know; there are degrees in that.

32199. I mean if he had time to do it?—I should say the collier who has worked at the face knows how to timber the face. I say the best system to prevent accidents is to have special men engaged to see to the timbering.

32200. Is that to give the collier more time to get coal, and have his whole time to get coal?—It is not particularly to give him his whole time to get coal, but to put more liability on the company to see that there is a sufficient supply through the special men they appoint.

32201. You do not agree with me that the collier is the man who can do the timbering the best in the interests of safety, but you think somebody can do it better?—I think that special men is the best thing to be got for that.

32202. Your Rule 100 in Yorkshire is: "The miners must build good pack walls, and set a sufficient quantity of props and bars for safely securing the roof and sides of their own working places, and add to them or renew them when necessary, or when told by the manager, undermanager or deputy." That was your rule before the new timbering rule was established?—Yes.

32203. You had to put up what timbering was necessary?—Yes.

32204. However near the face it might be, it was the colliers' duty to put it up?—Yes.

32205. The new Timbering Rule says you must put it up within a certain distance of the face?—Yes.

32206. Now with regard to systematic timbering, your objection was because more timber had to be put up than you had been in the habit of putting up?—Yes.

32207. Was it necessary for safety?—I do not object to the amount of timber that is put in.

32208. Do you think that the Timbering Rule was necessary for safety?—I do not object to the new Timbering Rule, but it put more work on our men without any counterbalance of earning power.

32209. From the point of view of safety, you think that the rule was desirable?—I think it can be better discussed at a round-table conference.

Digitized by Google

32210. Do you not think it desirable in the interests of safety? It is better than it was before?—I should not say it was worse. I think it would be better discussed between the two contending parties.

32211. It was better than it was before; it is safer?—I do not know whether it is safer or not.

32212. If it is not safer than before, it is not better?—I do not know whether it is or not.

32213. Supposing you had been invited to discuss that rule, you would have agreed to it?—It is not a question of whether I should or not.

32214. You would have said no?—I do not know. I probably should have said yes. I am prepared to do anything for safety, only we work by results under contract condition, and now we are going to alter it I should say that it was necessary to have a re-arrangement of prices.

32215. The objection you would make if you had been called in to discuss it would have nothing to do with safety. You would say it may be safer, but we must be paid more money if that rule is to be carried out. That would be your objection?—I do not think that would be altogether my objection. I am always prepared to agree to anything for safety.

32216. Then what would have been your objection?—I think that rule could have been improved considerably had some practical experience been brought to bear upon it.

32217. In what direction could it have been improved?—We have men now at collieries where they order them to set timber every 2 ft.

32218. In what respect can that rule be improved?—I think considerably.

32219 How?—By appointing special men to do the work.

32220. Your objection would not have been to the rule, but because you want more wages, or somebody else would have had to have done it. That would have been the objection?—Not particularly.

32221. What particularly, then?—Practical experience taught me it ought to be so and so. I will give an instance. In some places you are paid for setting bars, especially on a face side.

32222. I know all about that?—I want to give you this, which bears upon it.

32223. It does not answer my question?—Yes, it does. I am trying to show you. We are paid for bars under special contract, 3d., and we have to set when ordered by a deputy; but where we have to set them under systematic timbering, we cannot leave too many up. They knock them down when they are paid for, and say they do not need a bar there.

32224. I will not press you about it. It seems to me clear, and I think it will appear so when we get it on the notes. Your objection, if you had been invited, would not have been to the rule itself, but that new conditions must be made with the men involving wages before that rule should be established?—I think if you started me to dig a dyke a foot deep for a 1s. per yard, and you wanted me to make it twice that depth, I should want more than 1s.

32225. What is your objection with regard to this small coal that comes into the goaf. What do you say should be done with it?—I do not think it ought to go into the goaf. I should think the safest place would be at the top.

32226. The men would be paid for it?—Do not put that argument to me, because it is not correct. They are paid for throwing it into the goaf, so much per ton. When you have a good trade they let it go out at some pits, but when trade is bad they keep it in the pit.

32227. Would it be any advantage in point of wages if brought up the pit?—I do not think so.

32228. You say by putting the stuff in the goaf there might be a danger of spontaneous combustion, or a goaf fire?—Yes.

32229. That is the only objection to it being put there?—Yes.

32230. With regard to the investigation in coroners' enquiries, what alteration do you suggest should be made in the present law?—That a provision should be made for any trade organisation to send representatives to an enquiry to put questions and cross-examine witnesses; that it should be made law that we should have such facilities granted, and that we should have reasonable notice of any inquest.

32231. What would be your object in attending an inquest?—To see whether that man has been supplied with suitable timber, or whether there had been an outburst of gas, and whether that place was properly inspected.

32232. The relatives can attend now?—Yes.

32233. They can appoint persons to represent them?—Yes.

32234. They do, frequently?—Yes.

32235. Would you extend that right to anybody to attend the coroner's inquest?—I should extend it as far as appointing people from trade organisations to attend.

32236. Your view is that representatives from trade organisations should attend?—Yes.

32237. The right to put questions would have to be subject to the coroner's discretion, as to whether a question was a proper question to put. The coroner now says, "I will put your question for you," and puts it. You would not wish to have a right to put a question which a solicitor would not be allowed to put?—I should want the same right as a solicitor. I should not ask for much more, because he gets his own way to a fair extent.

32238. (*Mr. Smillie.*) Are you aware that in every case of a mining inquest, information must be sent to the inspector of mines for the district?—Yes.

32239. No coroner is supposed to go on with an inquest without first having intimated it to the inspector of mines?—That is so.

32240. The inspector of mines is entitled to be present and watch the proceedings?—Yes.

32241. So far as your experience goes, the inspector of mines is entitled to put questions and cross-examine?—Yes.

32242. With a view to bringing out the facts?—That is so.

32243. You claim your fellow workmen, in the interests of future safety, should be entitled to the same right as the mines inspector?—I do.

32244. The vast majority of your mines in Yorkshire are worked with safety lamps?—They are largely, not many without.

32245. Yorkshire is known as a fiery district?—Yes.

32246. Is the use of coal-cutting machinery largely on the increase in Yorkshire?—It is.

32247. You have two kinds of machines—electric machines and compressed air machines?—We have.

32248. You undercut to the extent of 5 to 6 ft.?—4 ft. 6 in. to 5 ft. 6 in.

32249. Is a compressed air machine with a disc in use?—Yes.

32250. It would make an undercut at the outside of 5 or 6 in.?—It tapers down.

32251. It tapers down to 2 or 3 in. at the back of the cut?—Yes.

32252. That will produce a very considerable amount of small coal?—It does produce smaller dust than a pick would.

32253. There is a considerable quantity of dust produced in a cutting of that kind when you are undercutting 4 or 5 ft. an average of a 5-in. undercut?—There is a large percentage of dust.

32254. Is that dust so small which is given off in the cutting as to practically fill the air, and be in suspension in the air while the cutting is going on?—It is. You cannot see a lamp 7 yards off in some instances.

32255. When the men undercutting with the pick there is not so much dust in suspension in the air?—No.

32256. Not the same clouds of dust?—No.

32257. You mean the coal does not come down itself when it is undercut?—No, it has to be blown in many instances.

32258. Blown down?—Yes.

32259. In a machine wall you may have as many as 6 or 8 or 10 shots?—Yes.

32260. Right in the coal face to bring down the coal?—Yes, all in a row.

32261. Is it a safety explosive that is used in a case of that kind?—Largely safety explosives are used.

32262. Who stems the holes?—In some cases the men.

32263. The workmen?—Yes.

Digitized by Google

Mr. H. Smith
4 Dec. 1907.

32264. Are they placed in possession of the explosive and the detonator ?—Not the detonator, but the explosive.

32265. They must get possession of the detonator before they stem the hole ?—Yes. The deputy comes and sees they put the ammunition in.

32266. He gives them the detonator to put in ?—Yes.

32267. They stem the shot, and the shot-firer fires the hole ?—They are not always competent persons. We had two serious accidents of recent date.

32268. A person supposed to be a competent person under the Act fires the shots ?—They should be.

32269. Have you any reason to think that persons who are not competent are sometimes appointed ?—I have two cases now before me which I can give you. One man was killed, and the other is walking up and down totally blind. It is at Allerton Silkstone. On November 16th, 1906, a man called William Tinker had both eyes blown out. He was a miner; and they appointed a shot-lighter who had been receiving compensation who had had no previous experience shot-lighting, or with caps and detonators, calling it light work, and this miner went to his working place where the shot had miss-fired, and another hole had been put in about 15 inches away, and this shot-lighter fired it, and made no report as to the miss-shot, and as soon as that poor man started to work he had both eyes blown out. We have a more recent case at the same pit, 11th September, 1907; Henry Wilkinson was fatally injured. This man was a miner, and this man they appointed to be shot-firer had previously been engaged in other work at the pit, and happened an accident for which he had been receiving compensation, and they sent him to shot-fire as light work, and to prove that he had no experience the jury at the inquest told the coroner to reprimand the shot-firer and mind in future that he used more care. He said "I never shall be a shot-lighter any more." Here are two cases, one killed and one blinded, and the accidents came about by employing men lacking experience as shot-firers. I do not think I should be qualified to use a detonator with the 23 years' experience I have got. I have had no practice in it. He ought to pass an examination before he is allowed to do it.

32270. When you say it should be necessary that a shot-firer should hold a certificate of competency, you mean as to his knowledge of explosives ?—Yes, and as to gases, too.

32271. He is supposed to make an examination of the working place for gases and dust ?—Yes.

32272. You say all the small coal and dust taken out of the holes is put back into the goaf ?—Yes.

32273. You think one of the dangers is goaf fires, which may break out in the future ?—I do.

32274. Is there not a second danger of blown-out shots going into the goaf and rising, and perhaps igniting coal dust and causing an explosion ?—That is possible, and that does happen; and sometimes you get a little spark. You can get a spark from the machine in cutting.

32275. Electrical machines and compressed air machines? —Yes.

32276. On that ground also, in order to avoid the risk of a coal dust explosion from blown-out shots, you think it would be safer not to put the dust and the small coal in the goaf ?—I do. I think it is the wrong place to put it.

32277. You understand from what you have read, and discussion at conferences, whether it arises from practical knowledge or not, you believe that coal dust is largely responsible for some very violent explosions ?—Yes.

32278. Either by itself or in combination with an explosive mixture ?—Yes. We thought that caused an explosion at Pope & Pearson's, Altofts, Normanton.

32279. Special Rule 92, referring to miners, workmen and others says, no persons where locked lamps are used shall fire a shot without authority from a manager or an under-manager. That will apply to the coal as well as the stone ? Yes.—

32280. Do you think where coal-cutting machinery is in use and seven-eighths of the shots may be bored, that the under-manager or manager gives permission to fire the shots on all occasions ?—9[illegible] times out of 100 he does not know until after they are fired.

32281. He gives permission ?—He gives a wholesale permission.

32282. He does not make any personal examination of the shots as to how they are placed or the nature of the stone ?—The manager or under-manager ?

32283. Yes.—No, very seldom.

32284. If that is so this Special Rule 92 is not carried out ?—No.

32285. The shots are fired first ?—The under-manager or the general manager does not know they have been fired until they are reported in the book.

32286. The shot-firer is supposed to report every night the number of shots that he has fired in the book in order to ascertain the total number of shots fired ?—Yes.

32287. Your Special Rule with regard to the deputy's examination in the morning provides that an examination must be made within three hours of the men starting work ? —Yes.

32288. Is three hours not rather a long time from the time a working place is examined until the men are entitled to go into it ?—It is too long in many mines.

32289. There might be a serious accumulation of gas in three hours ?—Yes, and a very serious accident.

32290. In longwall workings there might be a serious alteration from the weight and bad stone which was all right when he was in ?—Yes.

32291. On that ground you think the time ought to be shortened ?—Yes.

32292. You think it is not possible at the present time because of the extent of the deputy's district to do it in less than that time ?—He cannot do it in these cases now in three hours.

32293. His examination at the present time in the larger districts may be largely examination of the working faces only ?—Yes.

32294. From your own experience of certain districts you have seen underground, would it be possible for the deputy to make the examination he is expected to make by this Act and go in and out all of the roads and gates ?—Do you mean within three hours ?

32295. Yes.—No, it is impossible.

32296. In addition to making his examination in three hours in the morning he is also supposed to make a second examination during the course of his shift, which should be as extensive as the first examination ?—Yes.

32297. If it requires three hours of the morning and cannot be done in that time, that would mean that six hours of his time would be taken up with the two examinations ?—Yes.

32298. What are their hours, they are generally eight per day, are they not ?—Yes.

32299. In addition to that, under the rules he is entitled to look after the general safety and the ventilation, the pony drivers, and other things ?—Yes.

32300. Is he supposed to do all that in his two hours' additional time ?—Yes. He does not make two examinations as a rule because he cannot do it in one shift.

32301. Under Rule 13 he is supposed to do that ?—But he does not go to those places twice in one shift as a rule.

32302. It is largely because of the extent of the district ? —Yes, it is.

32303. As a class your deputies in Yorkshire are quite as good as in any other part of the country ?—They are good as a rule.

32304. You have no fault to find with them ?—No, with the exception of the young men who start deputying when they know nothing about it.

32305. You have in your mind some cases where, in your opinion, persons have been started as deputies who have not had the necessary theoretical qualifications or the practical knowledge to qualify them for the position ? —Yes.

32306. Is it your opinion that the position of deputy about a colliery is the most important from the point of view of safety of any official about a colliery ?—Yes, it is. I think he is in daily touch with workmen and the general conditions much more than a mine manager or an under-manager, and that a large responsibility devolves upon him.

32307. You are of opinion that he should hold a certificate of competency after an examination ?—I am.

Digitized by Google

Mr. H. Smith
4 Dec. 1907

32308. In order to secure that no person who is not qualified, so far as examination can prove qualification, shall be appointed to that position?—Yes.

32309. You have no real objection to persons who are not merely working class men gaining five years at the coal-face in order to qualify for a mines inspector?—Certainly I have not.

32310. The present class of mines inspector you have very little objection to, but you seem to think that with their present very great qualifications they would be additionally qualified if they had had five years' practical experience underground?—I do.

32311. That is really your position?—Yes.

32312. Your suggestion is not to limit the appointment of managers and mines inspectors to merely working men so much as to secure that they will have the necessary practical experience?—That is what I am after, I want efficiency all round. It does not matter to me which class they come from.

32313. (*Chairman.*) With reference to Mr. Ellis's inquiry as to why you were dismissed from your position as an examiner of the mine under Rule 38, you said you had on previous occasions made bad reports. Had you ever made a bad report of a mine on the occasion when you went into another mine?—Yes.

32314. You had made bad reports before?—Yes, and also good reports. I reported as I found things.

32315. On previous occasions you had found no disadvantage in having made those bad reports?—Not directly, because they could not take disadvantage. I was paid by the workmen. I did not suffer myself, but my family had to suffer.

32316. How do you mean?—I had one boy out of work nearly three years through the action of his father.

32317. Notwithstanding that they did not take the objection they might have taken, namely, that you were a check-weigher and were not eligible to make the examination?—I expect they suddenly found out that the wording of Rule 38 was against me.

32318. You think you did suffer every time you made a bad report, not you yourself, but you think as they could not get hold of you they got hold of your boy?—Yes.

32319. Your theory is you were disqualified on the last occasion because they suddenly found out what the law was?—Yes, they found out a case which happened 16 years prior to my own in Durham.

32320. A check-weigher appointed under Rule 38, and that appointment was disallowed as being illegal?—Yes.

32321. That is your view, at all events, as to what happened?—Yes.

32322. (*Mr. Smillie.*) Under your Special Rules a miner employed at the coal-face is not entitled to go into any other place than his own working place?—Not without permission from the manager or under-manager.

32323. He may go into the working place next to him to look for lost tools?—No, they will not allow that at some mines without permission from the management.

32324. Consequently, a person might be employed in one of your large collieries in Yorkshire for years and not know any part of the mine except the particular district in which he is himself employed?—That is what generally happens.

32325. It has been suggested the fact a person works in a mine specially qualifies him, other things being equal, to make the examination because he knows the mine so well. Is it the case that many know very little about the mine except the particular part in which they work?—80 per cent. do not know about the pit except their own places.

32326. Consequently, a man who has been a practical working miner will be quite as able to make an examination with the manager with him as a person employed in the mine?—Yes, he would be.

32327. (*Chairman.*) Do you wish to say anything more to the Commission?—No. I do not know there is anything more I want to say.

FORTY-SIXTH DAY.

Thursday, 5th December, 1907.

PRESENT:

Lord MONKSWELL (*Chairman*).

H. H. S. CUNYNGHAME, Esq., C.B.
F. L. DAVIS, Esq.
ENOCH EDWARDS, Esq., M.P.
THOMAS RATCLIFFE ELLIS, Esq.
JOHN SCOTT HALDANE, Esq., F.R.S.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. SAMUEL HENRY WHITEHOUSE, called and examined.

Mr. S. H. Whitehouse.
5 Dec., 1907.

32328. (*Chairman.*) Whom do you represent?—The Somersetshire miners.

32329. You have been deputed by them to give evidence on their behalf?—Yes.

32330. Have you had any special conference with the Somersetshire miners with a view to finding out what their opinions are upon the various points which you are going to discuss to-day?—I have discussed them with the Executive.

32331. The proof which has been put into my hands represents the conclusions which you and the Executive arrived at in common?—Yes.

32332. You say that inspectors should be appointed on proof of their fitness for the work of the district to which they are so appointed?—Yes.

32333. You think the conditions are so varied in mining districts that a person who would be competent to carry out the duties in one district would not necessarily be able to do so in another district?—Yes.

32334-5. I suppose you would meet that, as you say in your statement, by appointing a board of examiners who should examine all candidates for inspectorships, and that no inspector should be appointed until and unless he satisfied the board as to fitness for the special work of the district to which he was to be appointed?—Yes.

32336. You would have some special examination for a particular district, and if an inspector passed in one district he should not be able to be transferred to another district without passing another examination. Is that your notion?—That is my idea.

32337-8. Then you say that one of the qualifications should be that a Government inspector should have at least five years' experience of the working of mines in the district to which he is to be appointed, or in a district which had similar conditions. What do you mean by five years' experience of the working of mines—experience as an inspector or practical experience as a working miner, or as an engineer, or what?—So long as he had practical

Digitized by Google

Mr. S. H. Whitehouse.
5 Dec., 1907.

experience, whether as an inspector or a miner or anything of that kind, I should not differentiate. I should be satisfied so long as he had the experience.

32339. Then what experience would you consider good enough?—I think at least he should have some experience in the management of a mine.

32340. You think that at all events he ought to have been an under-manager or something of that sort, for five years?—Yes, something of that kind.

32341. Supposing he had been a fireman for five years, would that be the requisite experience?—He would have to be a very good fireman for me to think that he was qualified for the position of inspector.

32342. But supposing by chance a fireman was an extremely good man as fireman and had five years' experience as fireman and perhaps he had a first-class certificate, as I understand some firemen do have?—Yes.

32343. Then would you consider that experience was sufficient to enable him to sit for examination for the district in order to qualify him to be an inspector?—Yes.

32344. Do you say then that a man should not be appointed to inspect a fiery district who had only experience of a non-fiery district, and *vice versa*?—I think it is obvious.

32345. You go on to say that you think that the Secretary of State should only appoint on the recommendation of the Board of Examiners. Now, as you are aware, the Secretary of State does as he pleases, and in point of fact the mines inspectors have to pass a very severe examination I understand; but you say it should be compulsory on the Secretary of State to set up a Board of Examiners and that everybody who wished to be a mines inspector should come before that Board of Examiners?—Yes.

32346. (*Mr. Ratcliffe Ellis.*) You think that not only this Board of Examiners should be appointed to examine into a man's qualifications, but that the Home Office should not be entitled to appoint even a qualified man unless he was nominated by this Board?—That is what I say.

32347. (*Chairman.*) Then you say that the whole system of Government inspection should be arranged on a different basis, and the inspection districts should be so arranged as to enable the inspector in charge to visi each pit in his district at least once in three months. How many inspectors do you suppose you would want for each district in order that that might be carried into effect?—Just about one or two more than we have now; but they would all be allotted to districts—and would be responsible for their districts. We have three now.

32348. What is your district?—Somerset—the western district.

32349. How many are there now? There are a chief inspector, and two assistants, I suppose?—Yes.

32350. Do you think that perhaps another three, making altogether half-a-dozen inspectors, would be sufficient?—Yes.

32351. That is to inspect every pit at least once in three months?—Yes.

32352. But at present, I understand, in all the districts, including, I imagine, the southern, as a rule each pit is only inspected once a year?—I do not think it is inspected anything like that.

32353. Then do you mean that the present inspectors do not do their duty?—I mean to say that the area is so large and so much of their time is occupied in clerical work, in reporting to each other, in travelling, and all that sort of thing, that they are travelling and doing clerical work during a great deal of their time.

32354. First of all as to the size of the district in your southern district, you have three inspectors, and according to your information I imagine the southern district should be divided into three parts and each inspector should be given one district?—Not necessarily three parts. I think more than three.

32355. Yes, but supposing you only had those three inspectors as at present, on that basis, as I understand you, the three inspectors would not go about the whole district, but they would each have a district apportioned to them?—Yes.

32356. But then there being only three inspectors in the whole southern district results in this, that the pits are not visited even once a year?—I do not think they are.

32357. Then how could half-a-dozen men visit the pits three or four times a year?—The system, as I understand it, is that the chief inspector has to be in constant correspondence with his assistants, and the assistants have to be in constant correspondence with the chief. If the chief inspector lives in Newport, Monmouthshire, and an accident occurs in Cornwall, if the chief cannot go himself he has to find out which of the other two can go, and it takes a considerable time to find that out. Then the travelling has to be done, and then the assistant has to report to the chief and the chief has to put the report in proper form, and there is time spent in travelling and time wasted on clerical work and all that sort of thing. Therefore, if the matter were reorganised on the basis I suggest twice or three times the number of pits could be inspected as are at present inspected by the same staff.

32358. By the same number of inspectors?—Yes.

32359. Therefore, you consider that under your system it would only be necessary to appoint double the number of inspectors that are at present at work?—I think so.

32360. Then you take a very different view from many of the witnesses who have been before us on behalf of the men. You say that there should be no assistant inspectors, but that each district should have one inspector who would be responsible to the Board of Examiners?—Yes, and that office should be open to the best of the working men to become inspectors.

32361. (*Mr. Ratcliffe Ellis.*) To everybody?—To everybody—that there should not be three classes or two classes, but that there should be only one class.

32362. (*Chairman.*) Then how would you pay that class? Would you pay them on the same scale as the present inspectors and assistant inspectors are paid?—I should not lower the salary at all.

32363. Then would you have everybody paid on the same basis as the chief inspectors?—Yes.

32364. You would have six inspectors in your district, all of whom should have the pay of the present chief inspector?—Yes, I think so.

32365. Then you also add this, which is a new point to me, that the appointment should be for a term of years, at the end of which the appointment should be open to a competitive examination to find out whether the inspector has kept himself in touch with the advances of the times. Do you think that the man would be willing to take the appointment on those terms?—I do. I think it is absolutely necessary in the interests of the safety of the miners and of the property that the inspectors should keep up with the times.

32366. Do you suggest that there should be at the end of every number of years an examination?—Yes.

32367. At the end of what number of years?—Ten years.

32368. That is to say that at the end of 10 years an inspector should submit himself to an examination. If he did not pass that examination what should happen to him. Do you suggest he should be retired on an allowance or what?—Yes. It would pay the country to make an allowance to get rid of a man who was not competent.

32369. Then you say that the Board of Examiners should have power to revise the areas of inspection districts from time to time in order to enable the inspectors to fulfil their duties. That is to say, that you would place on the Board of Examiners which you would set up some of the duties which are at present carried out by the Home Office?—Yes.

32370. Then, in point of fact, that Board of Examiners would, to a very considerable extent, take the place of the Secretary of State?—To some extent, yes. Might I amplify that by saying that what I mean is that the coalfields are considerably changing. In some counties and in some districts mines are opening and in others mines are closing up, and if one inspector had a district which was being opened and another inspector had a district which was being closed, I think that the Board should have power to revise those districts so as to give the inspectors as nearly equal work as possible.

32371. But why should not the Home Office do that now?—I think the Home Office has plenty to do.

32372. Then you say that provisions should be made so that any alleged neglect of duty or incompetence on the part of an inspector, whether such allegation be made by coalowners or miners, should be properly and fully inquired into. What sort of provision do you suggest for that?—That a number of examiners, or a number of owners, or a number of managers, may make a complaint if they have good grounds for it, to some court to be named and the court should inquire into the truth or otherwise of those allegations.

Digitized by Google

32373. That some court of inquiry should be set up?—I think so.

32374. Not an ordinary court of law?—No.

32375. What sort of people would you make the judges in that court of inquiry?—I think that is rather outside my province to say. I will content myself by saying "a suitable court."

32376. You suggest that a special suitable court should be set up. You would have a Board of Examiners—that is one sort of court which you would set up—and then you would have a further body of men who would decide only one question, namely, as to the competency of the Government inspectors?—Yes.

32377. First of all, you would have a Board of Examiners to say whether, in their opinion, a man was qualified; and then you would have this court to say when they thought a man had become disqualified?—I lay most stress upon what I consider the first point, namely, neglect of duty.

32378. What you would bring before this court would be not so much incompetence as neglect of duty?—Yes, neglect of duty.

32379. Then you say that if an inspector should find a mine dangerous, he should have power to call in two of his colleagues from some other similar district, who, if they confirm the local inspector's opinion, shall join him in making application to some authority to be provided (that is another authority) for power to suspend work in the mine until the danger has been removed. That is to say, you would give absolute authority to three mine inspectors to make application to some other authority with power to suspend working the mine, and the other authority to be provided would not be the Home Office, because the Home Office already has authority to do that, I imagine, has it not? Looking at Section 42 of the Act, you do not agree that that is sufficient to effect your purpose—to bring the men out of the mine if it is dangerous?—I do not. I will tell you in a few words what I do mean. I have known cases in which the inspector has considered the mine dangerous, and the manager has not considered it dangerous. It takes such a long time to put these provisions into operation that the men continue working in danger while the inspector and the manager are disputing. What I want to do is to get that matter settled quickly. I would not depend upon the judgment of either one manager or one inspector. The inspector is appointed, as I think, in order to secure safety, and he may consider the men are in danger and the manager may think otherwise. Now I would have it, if I possibly could, so that that point should be settled as quickly as possible; and if the manager would not agree with the inspector, the inspector should call in two others in order to confirm his opinion, and if they confirmed his opinion those men should apply for an injunction to stop the working of the mine until the danger is removed.

32380. That they should apply for an injunction not to an ordinary court of law, but to a special tribunal set up for the purpose?—I am not so sure about that. They might apply to an ordinary court of law, I should think.

32381. Then you are not very strong on having another authority?—No.

32382. You are strong on the point of the Board of Examiners, and you are rather less strong as to the court that is to decide with regard to neglect of duty, but you think there ought to be a court that should decide as to whether inspectors have been guilty of neglect?—Yes.

32383. You have some doubt as to whether it would not be desirable to set up yet another court who should be the supreme authority to decide whether or not the men were to be brought out of the mine?—I am very strong upon the thing being done, but as to how it should be done I am not disposed to suggest.

32384. But you think it quite probable that an ordinary court of law would be a satisfactory tribunal?—I do.

32385. I think that pretty well covers all you say under that head. Now we go to the question of inspection by men under General Rule 38. You agree with a good many other witnesses who have been called before us that the Act ought to be amended so as to give the men power, under General Rule 38, to appoint not only persons who are at the moment practical miners, but who have been practical miners?—Yes.

Mr. S. H. Whitehouse.

5 Dec., 1907.

32386. Then you also add, "The restriction contained in the Act that the persons to make the inspection must be working at that particular mine at the time they are appointed, considerably reduces the value of the provision made." But that is not so. I understand the wording of the Act of Parliament is that men from any other mine may be appointed under Rule 38. There is no such restriction in the Act of Parliament. I believe managers sometimes object to men from other mines going down the mine, but I fancy it has been decided that they have no right to object?—My reading of the Act is different to yours.

32387. I think you are wrong there, and that your second objection to the Act falls to the ground, so that if the first amendment which you suggest were put in, namely, that the men should be free to employ men who have been practical miners, that would meet your view?—Yes. I find I was wrong with regard to the meaning of the Act.

32388. Then what are the reasons why you think men who have been practical miners ought to be appointed, rather than that the men appointed should be restricted to those who are at present practical miners?—In actual working, while the law, as you say, gives the miners power to appoint two from other collieries, the managers generally object.

32389. But why do you consider it would be advantageous sometimes that men should be appointed who have not been practical miners? If your amendment became law, it would be possible for you to appoint a man who had been out of the mine for 30 years, and who, say, had been a tradesman, and had kept a shop for 30 years. You would not have any limit. Supposing a man has been five years in the pit and has made himself practically acquainted with the working of a mine, he would be eligible under Rule 38, however long he has been out of the pit?—Well, he is eligible to sit upon a jury to decide at a coroner's inquest, and if he knows enough for that, surely he ought to know enough to inspect a pit.

32390. What qualification is there for sitting on a coroner's jury? I thought any man was qualified to sit on a coroner's jury, without special qualification. Surely he need not have been a miner in order to be able to sit upon a coroner's jury?—Exactly.

32391. However, you would have no restriction. You say that however long a man has been out of a pit he should be eligible under Rule 38?—Yes, because I think the good sense of the men would lead them to appoint the right persons.

32392. Do you suggest that partly because you think from your experience that the men are afraid to make an unfavourable report with reference to a mine?—In some cases.

32393. So that you think it is desirable to appoint a man who is not working in the pit, and who perhaps never expects to work in a pit again in the course of his life, so that he may not be subject to any influence on the part of any mine manager or owner?—Yes.

32394. That is one reason?—That is one reason.

32395. Have you known any cases in which men have suffered in any way from giving unfavourable reports?—They cannot possibly suffer in my district where I am now because they do not get appointed. We do not take advantage of this Rule 38 for fear of the consequences.

32396. Then you think that if the fear of the consequences was removed by this alteration of the law which you suggest, you would take advantage of Rule 38?—I do.

32397. How long is it since you have had an inspection made in your district under Rule 38?—We do occasionally make them where the mine owners are favourable to the men doing it. I suppose it has been constantly done in some pits. In fact I know it is done.

32398. You mean that where you have confidence in the mine owner, and where you think a mine owner will not object to be told the truth about his mine, you constantly inspect under Rule 38?—Yes.

32399. But where you have not sufficient confidence in the mine owner so as to be at all certain that the men will not get the worst of it if they make a bad report, Rule 38 has not been put in operation?—That is so.

32400. With regard to the payment of these men you do not suggest that they should be paid otherwise than by the workmen—the miners?—No.

Digitized by Google

Mr. S. H. Whitehouse.
5 Dec., 1907.

32401. With reference to the inspection by officials under Rule 4, you say that you think the persons appointed for this purpose should be compelled to undergo a suitable Government examination to ensure the appointment of really competent persons, and that the class of persons appointed as examiners are not always competent to carry out the duties contemplated by this rule?—Yes.

32402. But both the manager and an assistant manager must have got a first or second-class certificate, must he not. Is that not enough?—I think the person who has charge of the safety of the mine and has to report whether the mine is safe or not should at least show that he is competent to make such a report.

32403. Do you mean the fireman?—Yes.

32404. You think that there should be an examination for the fireman?—Yes.

32405. And you say that the examination papers should be couched in terms which could be understood in the district where the examination is held? You would have naturally different examinations for firemen in the different districts?—Yes.

32406. You say you cannot think of a better way to ascertain whether firemen or other officials are competent than by an examination. Would you insist that previous to that examination being held they should have had experience underground?—Yes.

32407. How long experience would you suggest?—At least 10 years.

32408. With regard to the standard of discipline and enforcement, you say the highest standard should be attained?—Yes.

32409. You say you would not allow a colliery owner or manager to impose fines for breaches of discipline. Then how would you deal with breaches of discipline? Would you deal with them in all cases by prosecution?—Serious breaches.

32410. Or first of all, perhaps, by a reprimand or by dismissing a man?—First of all by reprimand.

32411. Then if the man persisted you would deal with the case by prosecution and perhaps by dismissal?—Yes.

32412. You say that the establishment of Special Rules is dilatory and expensive. With regard to that you say that the framing of Special Rules, instead of being the duty, as it now is under the present Mines Act, of the owner, agent or manager in every mine in a district who have to submit them to an inspector, would be better, more cheaply, more quickly and more effectively done if the Joint Committees in force in almost every mining district, representing as they do the body of the owners and workmen, were to undertake that duty, with the inspector present at the inception and during the progress of the framing of the rules, and the findings of the Joint Committee plus the inspector sent direct to the Secretary of State. Who composes the Joint Committee which you say is in force in almost every mining district?—The representatives of the workmen and owners who meet for other purposes.

32413. Then you suggest that that Joint Committee which meets for other purposes should first of all have any suggested rule by the owner submitted to them before it is promulgated and before it goes any further?—Yes.

32414. Then as to falls of roof and sides you say that there should be a plentiful supply of timber properly and systematically set, and that to secure proper timbering only skilled workmen should be employed in setting it, and in working places. Then you would have special men, as they have in Durham, who are appointed to look after the timber of the mine; you would not leave it to the man who was working at the face to do his best for himself?—I would certainly insist that a man should do his own timbering in the face.

32415. But not behind?—Not behind—not in the roads. Of course that all depends upon the system of the district; some districts find it best to do it one way and some another. I am in favour of the coal-getter doing his own timbering.

32416. You say that more frequent inspections should be made by officials in places known to be requiring special attention. Then I suppose if more inspections have to be made by officials it would be necessary that the fireman's district should be reduced in size?—Yes.

32417. With regard to the ordinary work of a fireman, as he understands it now, do you think he can get through his work as a rule in the mines you are acquainted with, or is his district too large?—I am afraid there are too many firemen or examiners, as we call them, who have other work than examination to do, and they cannot get through their work.

32418. Supposing they had not other work besides the examination to do, but supposing their work was entirely confined to looking after the safety of the miners, do you think the districts would be too large?—No, I do not.

32419. Then you say the rules as to timbering should be made to suit the special circumstances of the district or colliery, and should be strictly enforced?—Yes.

32420. You point out that General Rule 22 provides that: "The distance between the sprags or holing props where they are required shall not exceed 6 ft. or such less distance as may be ordered by the owner, agent or manager." In the absence of an official it is left to the workmen to decide whether they are required. In Rule 83 of the Special Rules of the Bristol and Somerset districts it is provided that certain persons shall see that: "The roof is safely secured and maintained in accordance with the notice posted near the top of the shaft or entrance to the mine, specifying the maximum distance at which the roof shall be supported, and that it has such additional supports as may be necessary to make the place safe."—That is so.

32421. You go on to say here again the discretion of the workmen comes in; you do not say this ought not to be, but you adduce it to support your suggestion that only skilled and competent persons should be employed and made responsible for their own and others safety. Then you do not object to this General Rule, but what you do object to is that persons are working at the face in some of the mines you know who are really not competent to set timber, and not competent to judge whether such timber ought or ought not to be provided?—Yes; and that the inspection is not frequent enough.

32422. Then as to accidents in haulage roads, you suggest there should be separate travelling roads, that the best materials should be used, and that proper persons should be employed to manipulate the appliances used in haulage roads. I suppose you would acknowledge that in some mines separate travelling roads would be a matter of so much expense as to be practically prohibitive, or do you think that in your mines you could always have separate travelling roads?—It would certainly be expensive, but I should not consider the question of expense in a matter of safety.

32423. Then you think that however expensive it might be it should be compulsory to provide travelling roads?—Yes.

32424. And you would not be content with having a gangway on one side?—Well, that is a separate road, is it not—if it is wide enough and properly secured.

32425. If the haulage roads were so wide that the men had room to walk at the side that would be sufficient, in your opinion?—And if there was a partition at the side.

32426. Would you have a regular partition or would you be content with props put up now and then?—I should want it fenced off like a railway.

32427. Then you suggest the employment of proper persons to manipulate the appliances used in haulage roads. Do you suggest that persons who are not sufficiently skilled are employed in looking after the haulage?—Yes. It very frequently comes under my notice that men who understand nothing about machinery are employed to let down inclines and use all sorts of appliances, and they cause accidents to themselves and others through their want of knowledge.

32428. As regards safety lamps, you say you consider it unsafe to use open lights in any mine where parts of the mine contain or give off gas. You say you think safe lights should be used wherever gas is given off, and that it is open to question as to whether a safety lamp has yet been discovered. You mean, I suppose, that the present safety lamps are not perfect in construction?—I do not think they are.

32429. Are all your mines worked by naked lights?—No, we have some safety-lamp pits in the south of the district.

32430. Have you paid any attention to the various kinds of safety lamps? Is there anything you would like to say to the Commission as to your experience of what classes of safety lamps are best?—I should not like to recommend any of them; I think they are all faulty.

Digitized by Google

32431. (*Dr. Haldane.*) Do you mean faulty as regards safety ?—Yes.

32432. Not faulty as regards light-giving power ?—No, as regards safety.

32433. (*Chairman.*) At all events, you have had some experience with safety lamps ?—I have worked with them.

32434. In your opinion every lamp that you have worked with is more or less faulty ?—Yes.

32435. You think that they might be improved ?—I do. I think it is for the management to decide which class of lamp they will use at a colliery.

32436. Then we come to investigations into mine accidents. You say that all or any of the persons entitled under Sub-Section 8 of Section 48 of the Mines Act to be present at an inquest and to examine witnesses should have the right to appoint some practical person or persons to inspect the scene of the accident as soon as possible after the happening thereof. As a matter of fact, the inspector always does hurry down after an accident, does he not ?—Yes—a long time after; especially in districts with big areas it is a long time afterwards that he comes.

32437. Do you think that a great many more people besides the inspector should be allowed to immediately go down a mine and see the scene of the accident ?—I think the scene of the accident should be inspected as soon as possible after it has happened; and it occurred to me that the workmen, the relatives of the deceased and other persons who would be entitled to be represented at the inquest should also be entitled to make inquiry immediately after the accident and appoint somebody to inspect.

32438. That would mean, among others, an official of the Union, if a workman who was killed belonged to the Union ?—Not necessarily.

32439. Then someone who had a right to speak on his behalf. It is usually, if he is a Union man, an official of the Union, is it not ?—Yes.

32440. Then you say that the power to exclude these persons, as well as the general public, should be taken from the coroner—you mean to exclude them from the inquest ?—Yes.

32441. You think the coroner should be obliged to hold the inquest in public and not to exclude anybody ?—Yes. I do not think he ought to have power to keep anybody out of the inquest as he has at present. All the privileges in the Mines Act are subject to the orders of the coroners, as you know, and I do not think they ought to be.

32442. Then you say that the selection of the jury by the local police is open to objection. I do not know how coroners' juries are selected. Are they selected by the police ?—I will tell you what happens in country districts. The local policeman is the coroner's warrant officer, and he gets the writ and warrant from the coroner and he selects the persons to serve on the jury. That is open to great objection.

32443. Then your complaint is that these coroners' juries are frequently composed of men who are not practical and not the best men for the purpose ?—That is so.

32444. Who would you suggest should choose the jury ?—That is where the difficulty comes in.

32445. You have not thought that out, perhaps ?—No. I know it is objectionable. It is much more easy to find fault than it is to mend sometimes.

32446. Then you say as to examinations for managers and under-managers that it is open to objection that candidates living in a district and having only local knowledge should be allowed to sit in another district under another Board where the conditions are totally different. I think we have rather dealt with that already ?—No, that is a different thing altogether This refers to candidates for managers' and under-managers' certificates, not to inspection at all.

32447. You would have the same rule applied to candidates for the position of managers and under-managers, and you would have the same system applied as you would have applied to the Government inspectors ?—Yes.

32448. That is to say, that each man should only be competent to act in the particular district for which he was certified ?—Yes, and the papers of questions for those candidates should be local.

32449. Would you have a *viva voce* examination besides the papers ?—Yes.

32450. (*Mr. Enoch Edwards.*) You say that the area of the inspection district in which you are included is a large one ?—Yes.

32451. Can you tell the Commission how large it is ?—It includes Somerset, Gloucester, Monmouth, parts of Brecon and Glamorgan, Cornwall, and, I think, Dover.

32452. You have one district inspector and two assistant inspectors ?—Yes.

32453. They do not all reside at Newport ?—One resides at Newport and one at Bristol; and one, I think, near Weston-super-Mare.

32454. So that in case of accident the inspector or assistants, or any one of them, would have a long way to travel ?—Yes.

32455. How far would it be possible that he would have to travel ?—From Newport to the Cornish mines would be well on for 200 miles, I suppose.

32456. Have you calculated what amount of the inspectors' time is taken up in travelling ?—I should hazard the opinion that quite half of the time of these men is taken up in travelling, correspondence and clerical work.

32457. Have you carefully thought out your statement that pits are not examined once a year by inspectors ?—I do not think I have said that. I said that I did not think all the pits are examined once a year. Some of the pits are not examined once a year.

32458. Do you mean the colliery as a whole, or part of a colliery ? Do you suggest that there are some collieries which the inspector never goes near in 12 months ?—Again, that is not what I said. I do not call a visit to a colliery and a talk with a manager, inspection. I mean actual inspection. I think the insides of some pits are not examined once a year by anybody.

32459. Then you do not wish to state that the inspector does not visit the pits ?—No.

32460. What you suggest is that he does not always inspect the pit when he visits the pit ?—That is what I mean to say.

32461. But if he did so visit and inspect, he would inspect part of the pit ?—Part of the pit.

32462. Do you know any cases where the inspector has examined thoroughly, as a fireman or a manager would examine, all the working places of a pit ?—No.

32463. Did you ever hear of one such case ?—No.

32464. Do you suggest that if there were double the number of inspectors in your district that would meet your view as to the inspection that is necessary ?—Speaking off-hand, I should think so, provided that all the clerical work was taken from them and they were set down in a centre so that they could reach the pits easily, and that the only reports they had to make were to the Home Office instead of to the district inspector.

32465. Let us examine that for a moment, because that is rather an important matter. I understand you to suggest that there should be somewhat equal districts, and that there should be single inspector districts and no chiefs ?—Yes.

32466. You say that the present assistants have to send reports to their chief ?—Yes.

32467. Would not the inspectors in the single-area districts have to make reports to someone ?—To the Home Office, certainly.

32468. What would be the difference between making a report to the Home Office and making it to the district inspector ?—What I want to save is the time of the chief in having to put forward the reports of the other two.

32469. So that you do not apply that to the assistants ?—No.

32470. But you see he would have to make a report of his work to someone ?—Exactly.

32471. And it would occupy the same time, probably more, in making a report to the Department than making a report to his chief ?—Yes.

32472. Of course if you suggest that you would spare the chief so far as his report was concerned ?—Yes.

32473. And he would only make his own report like all the others ?—Yes. What I wished to drive home was that I think six men would thoroughly inspect each colliery in the south-western inspection district once in three months. If you gave six men 60 mines apiece they would be able to do that.

Digitized by Google

Mr. S. H. Whitehouse.

5 Dec., 1907

32474. Would they be able to make such an examination as an overman or a fireman makes?—No, I do not think they would, and I do not think it is desirable. So long as they see the whole of the pit generally, and so long as a man who has had experience and who is a practical man sees the pit generally, he does not want to make such an inspection as the fireman does. The fireman has to sound the roof in every working place, and he has to make marks and all that sort of thing.

32475. Still, you suggest it should be a more general inspection than it is now?—I do.

32476. Taking the class of men dealt with under your scheme as inspectors, you suggest, first of all, that they should be practical colliers or practical pit-men?—I do.

32477. Do you draw any distinction between a man who spends 10 years in a pit at one job or 10 years at another?—Do you mean between a man who spends 10 years in one district and a man who spends 10 years in another?

32478. No; supposing a man has gained his experience as a pony driver, or a jigger, or wagoner, or collier, or otherwise, do you draw any distinction?—I do not think it is likely for any man to remain a pony driver for 10 years. I think he would have gone through all the grades by then. I had done so long before then.

32479. At any rate I want to know the nature of this experience, because many of the witnesses are strongly of opinion that he should be a collier—that a pit experience can only be the experience of a collier?—I do not think a man who remains a pony driver or a haulier would be able to pass such an examination as I should suggest. The examination would test whether he was fit to be an inspector.

32480. (*Chairman.*) You think that even although he had only been a haulier all the time, he ought to be allowed to sit for the examination?—Yes, I should not bar him.

32481. (*Mr. Enoch Edwards.*) Mr. Ellis's suggestion was that it was open to working-men only, and you said it was open to everybody. You do not close it to anybody if you accept the qualification that he must be a practical man?—He must be a practical miner and have 10 years' experience.

32482. (*Mr. Ratcliffe Ellis.*) That is, 10 years' experience as a workman in a mine?—Yes.

32483. (*Mr. Enoch Edwards.*) So that you do not close it, but that must be a condition, so that he should know something about what he is going to do?—Exactly. If you will permit me to say so, you insist that the manager before you employ him, should know something about the matter. Why not an inspector?

32484. (*Mr. Ratcliffe Ellis.*) But not 10 years' experience?—That is a question of the length of time, but you insist that he must know something about it before you employ him.

32485. (*Mr. Enoch Edwards.*) What you suggest is that he should have practical knowledge?—Yes.

32486. And you think it will take him 10 years before he can acquire such practical knowledge as he ought to have?—I do.

32487. With regard to the inspection by the men under the General Rule, do I understand you to say you do not have much of it in your district?—We do not.

32488. I think you said you got it where the employer was favourable?—I mean where we know the employer will not punish a man for speaking his mind. We have some of those cases, happily.

32489. Have your men had much difficulty in carrying out this rule?—They are diffident in carrying it out. They have fears, whether well-grounded or otherwise I do not know, but they have great fears about it. Where it is possible they employ other persons; they send me sometimes to some collieries, and I go and make inspections on their behalf where the employer will allow me to. In cases where they can do that they always make those examinations, but at other collieries they do not.

32490. Do you suggest that if workmen, carrying out their powers under this section, found any breach of rules, such as airways too small, falls of roof not cleared up, or ventilation defective, if they reported them they would go in fear and trembling that something might happen?—We have had cases of that kind.

32491. If anything happened to one of your pits in Somerset, what would become of the man?—What do you mean.

32492. If a man was discharged for making such a report, how would he fare at all the other pits in Somerset?—They would not employ him, because we have the "character-note" system in vogue in our district.

32493. Then he would be shut out of employment, and he would have to leave his berth, or leave the district, and his trade there?—Yes, or the Union would keep him.

32494. The Union does very generously keep a lot of those men?—Yes.

32495. It is rather a useful institution in Somerset now?—Yes, we find it so.

32496. Have you many checkweighmen at your collieries?—Yes, at every pit.

32497. Have the checkweighmen been called upon to examine at all?—They are not allowed to; the owners would not allow them.

32498. Is it the opinion of your people and of yourself that the law should be so drawn that the embargo should be taken off the checkweighman and he should examine, if he liked?—Yes.

32499. That is assuming he is a practical man?—Assuming he is a practical man—and they are all. They have appointed the checkweighers out of the pit as a rule.

32500. There have been such appointments?—Yes, there have been.

32501. You were asked as to what was a practical man. If he had been out of a pit for 30 years would he be a practical miner? You do not wish to suggest that he would be, do you?—I do not.

32502. A man who has left the occupation for 30 years is not a practical miner in the same sense as he would be if he was working to-day?—No.

32503. I have heard one man suggest 10 years: I think you suggested 30 years?—No, I do not think I did. My recollection of what I said is this, that if there was no limit to their choice, the good sense of the men would urge them to look to that point.

32504. Yes, you said that afterwards, I know; that is to say, that if the men had the power they would appoint a man who was more up-to-date?—Yes—a proper man.

32505. Therefore they would have a wide field to select from if the law was altered and checkweighmen were eligible?—Yes.

32506. With reference to discipline, are there many fines imposed at the colliery offices in Somerset?—They often try it on, but we do not allow it.

32507. Would those fines be for breaches of the rules affecting the safety of the men, or any mere matter of contract or discipline, or as to sending out dirt with coal, or something of that sort?—They try to impose fines for all sorts of things—breaches of General Rules, breaches of Special Rules, and breaches of a local law that we have, and for dirty coal and all sorts of things—but we do not allow fining. We stop it; we do not believe in it.

32508. What are your reasons for that: I should like you to put it before us in your own way: if a man has committed an offence at a pit which is not a serious offence, but a minor one, why do you object to the employer and the man arranging a fine rather than force him before the court? What is the object of it?—I will tell you: supposing a lad is found riding upon a load in defiance of the rules, and they fine him 1s. or 2s. 6d., he may do it again because he knows that he will only be fined, whereas if it is known all over the district that it is a penal offence, it has a salutary effect. I prefer prosecution to fining for that, and many other reasons of the same kind.

32509. It is raised here as an objection to withdrawing this power to fine that you withdraw the colliery officials so often from the colliery to the police courts. I should like to put it to you that if the power is abolished which they seem to have now to impose a fine, and if they had to go before the court in every case, would it not be likely that there would be less cases going before the court?—I think it would be, but still the colliery officials would have the power of discharging, and they would still have the power of selecting competent men, men who understand the rules and who are fit to carry them out.

32510. But in practice you think the whole thing would be reduced, because of the fact that the men would know that they would have to go before the court?—I do. I think the discipline would be maintained very much better under this system than by fines. I think fines contribute to breaches of discipline, and laxity.

32511. It is on those grounds that you suggest the men ought not to be able to settle by means of a fine at the colliery office?—It is.

Digitized by Google

32512. And it is because you believe it would add to the safety and strengthen the discipline of the pit that you suggest all cases of breaches should go before the court?—I do; that is the reason why I suggest it.

32513. Upon this question of Special Rules have the workmen in Somerset been taken into confidence by the Government inspector and the colliery people with regard to the establishment of Special Rules?—Not long ago we had a very long job at trying to make one uniform set of rules for the whole of the Western District. Now what happened was this: both on that occasion and when the 1887 Act was passed; the rules were sent to the inspector—which is the Home Office, of course—and they were being discussed by owners and the inspector for a good many months, and the workmen saw nothing of them until they were posted at the pit top. That caused another delay, and I think it took away from the workmen all power of making the rules in anything like the shape they wanted them. I think if the workmen are to be consulted at all with regard to the making of the Special Rules they should be consulted at the beginning, from the very commencement, and not after they are posted at the pit, because it is a very objectionable thing for a workman to object to what his employer is putting up.

32514. When the Home Office inspectors, on behalf of the Home Office, and the colliery owners agreed to a sort of codification of all these rules, did they consult your Society at all?—Not until they were in print.

32515. After that they consulted your society?—Yes, and they made up their minds to have no alteration. We spent a lot of time with no effect.

32516. (*Chairman.*) You tried to make alterations, and you did not get any alterations accepted. Is that so?—No.

32517. You did not try?—Yes, we did try; we tried our best.

32518. But none of the alterations were accepted?—That is so.

32519. (*Mr. Enoch Edwards.*) Were there features in those rules to which the men objected?—Yes, strongly.

32520. What happened?—We had a good many meetings and lost our temper at some of them, and the rules remained as they were. The owners and inspector would not accept any suggestion.

32521. (*Mr. Cunynghame.*) In what year was this?—It was very recently. That was the codification of the various rules.

32522. Can you say in about what year, or what month?—It was about two years ago.

32523. (*Mr. Enoch Edwards.*) It was in order to bring a more general set of rules into use over a big area, I suppose?—That is so.

32524. Were the parts upon which you differed as to questions of safety?—Safety and discipline.

32525. So that we may take it that so far as the preparation and the arrangement of those rules were concerned, whatever representation your society and the men generally made with regard to them, it was unheeded?—It was unheeded.

32526. Nothing you could say had any effect upon the rules?—No.

32527. But still the men were all expected to obey those rules?—That is so.

32528. I observe that with regard to falls of roof and sides you suggest systematic timbering. By that do you mean one system of timbering?—I mean a system suitable to the district in which it is in force. I do not think it is possible to establish any system that will suit all districts.

32529. But it may be possible in a pit, or a number of pits, to have one system of timbering?—I think so.

32530. Do the colliers do their own timbering in your district?—Yes.

32531. Is it part of their contract?—Yes.

32532. Are they responsible for any other part of the roadway except the working face?—Just to the brow of the road.

32533. How many yards will that give the collier to attend to?—About two or three yards.

32534. He is responsible for the setting of timber?—Yes; to the edge of the ripping,

32535. After that the company is responsible?—Yes.

32536. Do you think that is a good system?—I think it suits Somerset.

32537. Have you many accidents from falls of roof and sides?—No. The number is very low indeed, comparatively.

32538. Of course they are very lean or thin seams?—Yes.

32539. In Somerset you think there is not much fault to be found with the present method of colliers setting their own timber at the face?—I do not think there is.

32540. Do they get fairly well supplied with timber?—In most cases. There are complaints sometimes in some collieries.

32541. I think you said in answer to Mr. Ellis that you used lamps partly in your district, and partly naked lights?—Yes.

32542. Have you much gas?—In the collieries where the gas is found it gives off very largely—they are very fiery.

32543. Of course you have had two or three explosions?—We have had two or three explosions, but not in the gassy part of the coalfield.

32544. With regard to inspection by the firemen, would you mind telling the Commission what is the condition of things in Somerset? Can a fireman discharge his duties and make an inspection of the roof and sides of the working face over the area for which he is appointed?—Generally, no.

32545. Does that mean because his area is too large for him?—It means because he is found other work, and in many cases he is incompetent. He is appointed not because he is a competent person, but for some other reasons.

32546. Perhaps because he is a relation of someone?—Yes, perhaps—or because he goes to the same chapel, or something of that sort.

32547. I am afraid the Commission will have a difficulty in curing relationship?—Yes.

32548. What do you mean he has to do? Is it to see that timber is got in and coal got out?—That timber is got in and coal got out, or to see that the roads are clean, and if they are not so to fill the rubbish himself. It very often occurs that he has to do manual labour between his inspections.

32549. So that you think it is not possible for him to make a thorough examination as an official under the Act?—I do.

32550. Because of other duties?—That is so.

32551. And not so much because of the size of his district?—No.

32552. In discussing the question of the certificates you suggested two examinations—one for a fiery district, and one for a non-fiery district?—Yes.

32553. Do you not think it is desirable that all candidates should have a knowledge of fiery districts as well as non-fiery?—My difficulty there is that if a man is in a non-fiery district and he has to have knowledge of fiery mines, he has to leave that district on purpose to get it.

32554. We will take your district. A portion of your district is non-fiery, I understand, and a portion of it is fiery?—Yes.

32555. So that a man can get his experience in your own district?—A small number can. Supposing there are two firemen in a pit, well, you can only put two there. I will say this for the owners of the colliery I am thinking of, that the colliery is always open to students in mining classes to visit for the purpose of getting such knowledge, and we do frequently visit that colliery for the purpose of getting that knowledge.

32556. Could you suggest any big district anywhere that is non-fiery?—No, I am afraid I cannot. What occurred to me was just the little district which I know best, where there are non-fiery mines. But I should not be strong upon the non-fiery mine certificate.

32557. It is necessary that a man who holds such a position should have a full knowledge of fiery mines, gas being one of the elements of danger?—Yes. He should know how to deal with it, and with regard to lamps, and everything of that kind.

32558. With regard to the question of accidents in mines and coroners' inquests, would you mind telling the Commission how, in your opinion, we, as representing a trade, are to get our position recognised before the coroner? What is in the minds of the miners upon that question? In what direction would they like to have that law altered?

Digitized by Google

Mr. S. H. Whitehouse.

5 Dec., 1907.

—I think they would like the power of the coroner to keep them out and to generally order them as to which way they are to put questions, and what they are to do, abolished; I think the miners want to be represented at coroner's courts as a matter of right, so that they should have a right to be there and to appoint who they like to be there as a matter of right.

32559. In some way, of course, the coroner always will have to direct his court?—Exactly, but he can direct a man to go outside now if he thinks fit, and he does so sometimes.

32560. You think he ought not to have such a power?—I do.

32561. I understand you to suggest that the person so appointed should have the right of inspecting the place of the accident?—The same class of person.

32562. Of course he must be a practical pitman?—He must be a practical pitman.

32563. (*Mr. Cunynghame.*) If fines were abolished what would take the place of them——prosecution?—Prosecution or dismissal.

32564. Do you not think it would be rather hard, perhaps, on a young fellow who was careless, assuming that he did something that endangered the safety of people, but still only carelessness, to dismiss him right away?—I would warn him first and if he did it again I would prosecute him.

32565. If dismissed his career would be at an end —A good thing too, if he is dangerous in the pit.

32566. You think it would be better to give him a warning instead of a fine, and then dismiss him peremptorily?—If a man did something that endangered the safety of himself or his fellow men more than once I would not have him if I were a manager of a colliery. I would either prosecute him or dismiss him.

32567. Do you not think if that rule were rigorously carried out a quarter of the men in the mine might possibly in the course of their lives be dismissed?—There are two things you missed in what I said. I said the colliery owners had it very largely in their own hands themselves. If they would cease to employ unskilled persons there would be less need for fines or prosecution. I also said in my judgment that fines conduced to laxity. If you fine a young man 1s. or half-a-crown he does the thing again and risks the fine, but if you prosecute him he does not do it again.

32568. I want to know what the effect of dismissal will be. We understand a good many fines are levied in some districts. If you had dismissal instead of a fine in every case there would be a tremendous dismissal and the unemployed ranks would be considerably added to?—I think one or two dismissals would have a salutary effect on the others.

32569. Would you never take him on again for the rest of his life?—No, I do not say that.

32570. Your plan would be a kind of suspension?—Yes.

32571. Is not the drawback of suspension this: I am looking at the young men who are being gradually drilled into becoming good miners; if they were suspended that would mean perhaps a week of idleness, going about outside to some entertainments on the surface and loafing about, and that would not be very good for them?—What I want to convey to the Commission is this——

32572. Will you meet my objection. You have told us your view, but I want to see the value of your evidence when you come to meet objections. Will you fasten your mind on the objection?—If fines make men less careful rather than more careful they cannot be of any avail. If a week's suspension makes a man more careful I say it is better than fines.

32573. Your view is that a fine by an owner makes a man less careful, and a fine by a magistrate makes a man more careful?—No, the publicity of the thing. It not only affects the man before the magistrate but the whole district, and people know that they cannot do this kind of thing.

32574. You think that a man who is fined 5s. by an owner will become less careful, but if he is fined 5s. by a magistrate, with publicity, he will become more careful?—And make other men more careful.

32575. It seems to me an astonishing proposition; I should have thought that both would have the same effect?—Well, I only give you my experience.

32576. I am not doubting your word for a moment in giving evidence. There is another point I want to put to you. You have not answered the question as to suspensions not being a good thing on account of a man idling about. It is a drawback to suspension. If you admit it is so much counting against you I have no more to say about it, but if you say it is not, will you tell me why?—I do not think it is a drawback. I think it is the best thing to do.

32577. When a man has committed an offence give him a couple of weeks with nothing to do?—No, I do not say that; I would warn him first.

32578. Then if that fails, give him a couple of weeks with nothing to do?—No, some time; I would not say a couple of weeks.

32579. Well, give him four days with nothing to do?—Yes, that is better than a fortnight.

32580. You do not think he is likely to fall into bad habits in four days?—I think he is likely to go to the mine and say: "If you re-instate me I will not do it again."

32581. If married, what will his wife do in the four days without any earnings? I am putting the other side to you. There are drawbacks?—What would she do if he is careless and gets killed.

32582. We are on the question of what is the best deterrent. There are these points on the other side, are there not, to be considered?—I cannot do any more than tell the Commission that in my judgment fines tend to laxity rather than to carefulness.

32583. You are not able very well specifically to answer the objections I have brought forward, but I do not say they are fatal.—I say that is my experience.

32584. Now will you come to prosecutions. That you think a good method of stopping offences of carelessness?—It is a matter of degree. It is better than fines.

32585. Dismissal you consider to be best of all. You like suspension better than prosecution?—Yes.

32586. Suspension is your first remedy and the best one?—I think so.

32587. Then prosecutions, and lastly fines which act the other way, and make people more careless?—I think so.

32588. Now I come to prosecutions. Is there not some danger, if there were no fines and prosecution were adopted as the method of enforcing rules that owners would be lax in putting it in force, because of the inconvenience it would give in the mine?—Then the inspector would prosecute them.

32589. It will come to this, whenever a sprag is not properly set—do you know what I mean by the word "sprag"?—Yes, I have set a good many.

32590. Whenever one of those is not properly set and the man not prosecuted forthwith, down comes the inspector and prosecutes the owner?—I think you are stretching it a bit.

32591. I only want to know how far you are going, that is all. It is for you I am cutting the coat. I want to see what you say. Do you not think there would be dismay in many mines in your district if the inspector were to say, "There are 45 cases that have come to my knowledge of men not setting sprags and you have not prosecuted any one of them; I shall prosecute you. Take care in the next six months you prosecute 45 men." Do you not think that that position would be created?—No, an ounce of fact is worth a ton of theory, and I will tell you what has happened. The inspectors have gone through the place, or the manager has gone through the place with the inspector, and has found a man with a sprag not properly set and the inspector has said, "If you do not prosecute that man, I will prosecute you." That is what actually happened.

32592. Very proper?—Yes, very proper.

32593. You would have that happen not once, but going on every day all through England?—I think if more rigorous discipline were maintained and if we were to do that rather than fine——

32594. You are representing that is what the men would like to see come in. That is the system they would like to see come in?—I was going to say that the necessity for either fines or prosecution would be diminished by ceasing to fine, in my judgment. Our men, the more thoughtful of them, the Executive, I consider would prefer a man was taken before the magistrates as an example, rather than be fined.

32595. That system has no terrors for them?—Fining has not.

Digitized by Google

32596. Prosecution has no terrors for them ?—Oh dear no. May I say this: if a man is prosecuted for a breach of the law after having been warned, our Society does not defend him, or have anything to do with him: our Trades Union does not defend him.

32597. And consequently there would be this large number of men prosecuted and your Society refusing to defend, alternated with a great many suspensions, and you come here to say that is what the men you represent desire as a mode of putting an end to fines. I only want to know what you want ?—My Society would prefer that prosecutions for breaches of discipline should take the place of fines.

32598. Even though those prosecutions—— ?—That is my answer.

32599. I want to go on: even though those prosecutions had to be pretty numerous ?—Those are your words, not mine.

32600. Do you agree with them ?—I do not think they would be numerous.

32601. I think we have as much as we can get out of that. I should like to ask you about these rules which were altered two years ago ?—Yes.

32602. After they were in print your men had every opportunity of discussing them and making their wishes known with regard to them ?—We had opportunities of discussing them.

32603. You wanted to see them apparently before they were in print ?—We wanted to help make them.

32604. I thought they were only a consolidation of the rules that existed already ?—They were materially altered in the consolidation.

32605. They were probably partly in print before, and some alterations were made ?—Yes.

32606. Mr. Martin, the inspector, started the whole thing ?—Yes.

32607. He got those rules out and I suppose printed some alterations in the rules ?—Yes.

32608. And marked the places where the alterations were proposed ?—Yes.

32609. Do you think that ought to have been done in pen and ink instead of in print ?—No, that is not my complaint.

32610. What is the complaint ?—The alterations which affected the discipline and the safety of the men were discussed and settled so far as the inspector and the owners were concerned before we heard of them.

32611. Your complaint is that he went to the owners first instead of coming to you first ?—No, coming to us at the same time.

32612. When he was thinking of what proposals he should make, do you mean he ought to have no right to consult privately with one or other to see what they think ?—That is not what I mean. I mean when he called meetings of the owners in the districts, in order to give the workmen an equal opportunity, he should have called meetings of the workmen at the same time.

32613. Do you mean when rules are being negotiated between the owners, the workmen, and the Home Office, the owners on the one side and the workmen on the other, that there should never be any verbal communication between the Home Office and one party without at the same time the other being present ? Is that not rather awkward for the men occasionally ?—I do not mean that.

32614. I want to know what you mean ?—I will try and tell you. Let me state what really happened. The inspector, Mr. Martin, no doubt saw and corresponded, verbally and otherwise, with individual managers. To that I have no objection. When they had got so far as to have individual suggestions a meeting of the owners of the district was called. There were several meetings, a number of meetings, and the owners and the inspector came to an agreement as to what should go in the rules.

32615. I see your point.—It was not until then, when all the amendments, suggestions and discussions and meetings had taken place that we came in and we had to object to what was done.

32616. Your objection was that Mr. Martin came to the agreement and bound himself so far as he could before he heard your side ?—Exactly.

32617. I have these rules here. You say there are several important ones in consequence of this, which were not as good for safety as they ought to be. Have you a copy before you ?—Yes.

32618-22. Will you give me an instance: I do not want you to go through them all ?—No. 20. *Mr. S. H. Whitehouse.* 5 Dec., 1907.

(*Mr. Ratcliffe Ellis.*) Rule 20 is: "They shall see that there is a sufficient supply of suitable timber provided and kept at each man's working place where mineral is ordinarily being loaded into the tram or tub for the pit shaft, or at the nearest point thereto that is reasonably practicable."

32623. (*Mr. Cunynghame.*) What are the words you would have liked put in this rule that are not here ? Put that in first.—We wanted to insert if a man had to withdraw in consequence of the neglect of the employer to provide timber that they should pay him for his withdrawal.

32624. If there is not suitable timber at the working place the workman should withdraw, and you wanted the words put in "and the owner should pay him compensation" ?—Pay him his wages.

32625. Pay him his wages as if he had not withdrawn ?—Yes.

32626. Do you think that would have been possible under rules that are only made for safety. That would have been a rule affecting wages. Are you sure there is power to make such a rule ?—Is it not provided that the owner shall see that the timber is at the working place ?

32627. There is provision that the owner shall see, and shall be prosecuted if he does not do it. The punishment as I understand it, is to be prosecution; it is not to be paying you wages when you withdraw ?—He neglects his duty, and as a consequence the workman who has a wife and family to keep loses his wages.

32628. There may be hardship in it. If those words had been proposed to be put in I am inclined to think they would have been useless and *ultra vires*. I think we should have had to take them out again. Do you not see the difficulty. You may have statutes to provide anything, but at present the rules can only be made for procuring safety. There is no provision so far as I know, in a rule if the owner does not do something he has to pay the workman.—I see the objection.

32629. You see the difficulty ?—Yes, I quite see the difficulty.

32630. You brought that forward at the conference and it was decided against you ?—Yes.

32631. Did you appeal to the Home Office in any way ?—No.

32632. Why not ? It would have been very natural, would it not ? I am sure you would have a sympathetic office to deal with ?—I think so.

32633. You had that remedy, but you did not take it ?—We did not.

32634. There is not much to complain of in this case ?—I do not think there is.

32635-6. I do not think so either. Now I come to Section 45, under which inquiries can be held ?—Yes.

32637. You are aware that has been very rarely put in force, and complaints have been made on that score ?—Yes.

32638. No complaint of that kind exists in your district ?—No, when we have had serious accidents, we have had no trouble in having special inquiries. We had the Timsbury explosion and the Camerton explosion.

32639. You have not had a special inquiry, but counsel to attend the coroner's inquest and a report from him ?—Yes.

32640. In those cases it was apparently satisfactory ?—Quite satisfactory.

32641. Now as to the question of inspection by the men. I have been rather under the impression that the object of the inspection by the men granted by the statute was to re-assure the minds of the miners working in the pit more than anything else ?—That is the intention.

32642. You would not be giving them a power of inspection to render them responsible for the due working of the mine in any way ?—I think you are right.

32643. And that they did it or not as they liked, and if they did not do it you could say that they had been guilty of dereliction of duty. That is my feeling about it ?—Yes.

32644. If that is the case, does that not point to an inspection by the men in the particular pit, because the object is to re-assure their minds and to see that things

Digitized by Google

Mr. S. H. Whitehouse.

5 Dec., 1907.

are going on to their satisfaction, rather than they are to undertake the work that is thrown properly on the State?—The difficulty is this, when men know there is a deficient airway, or something going wrong in the pit, they fear, if they state baldly and plainly in the report-book, that they will suffer.

32645. Again, they have the power of anonymously writing without revealing their names to the inspector?—That I discountenance always. If I were an inspector I would not act upon an anonymous letter.

32646. They belong to a Union; a large number of them at all events?—Yes.

32647. Could not they go to the Union and complain, and would not the Union be strong enough to protect them from being wrongfully treated or dismissed?—Given a strong Union anxious to protect the men I should like to know the procedure that I should take. I get frequent complaints from men. Any course I take means giving up the name of my informant, does it not?

32648. With regard to that your own view is it ought to be so. You do not like it to be anonymous?—Exactly; I do not like it to be anonymous. I am pointing out how weak this provision is. It cannot be put in force without the men being punished. I get frequent complaints, and I never hesitate to have a conversation with the inspector when I see him, and there are a good many upon which he has acted.

32649. Supposing a certain number of inspectors were appointed of a practical character, and of less theoretical knowledge than those existing already—I do not like to use the phrase working-men inspectors, because everybody in the mine is a working man, really, but I mean men who did not pass an examination of such a high standard as that of the present inspectors, practical miners with a lower degree of examination, would that meet your approval?—I differ with my colleagues on that point. I do not think there ought to be more than one class of Government inspector.

(*Mr. Cunynghame.*) I will not ask you any more upon that, because I understand it has already been dealt with.

32650. (*Mr. Ratcliffe Ellis.*) You suggest there should be only one class of inspectors, all equally qualified, and all qualified up to the highest point?—Yes.

32651. That their qualifications should be ascertained by a Board of Examiners?—Yes.

32652. Who would appoint that Board?—The Home Office, of course.

32653. Have you any suggestion to make as to its constitution?—Yes. I think it should be a small Board. I think it should be a Board consisting of somebody nominated by the Home Office, an expert mining engineer, and a workman who holds a first-class certificate.

32654. Two men?—No, three men—a Board of three.

32655. An expert mining engineer, a representative of the Home Office and a certificated manager?—Certificated miner, a working miner who holds a first-class certificate.

32656. A man working in the mine who has a first-class certificate?—Yes, that is my suggestion.

32657. I understood you to say that any person could offer himself for examination?—If he had the qualification, 10 years' experience.

32658. A man must have had 10 years' experience as a workman in a mine. Is that so?—I did not say that.

32659. Will you tell me your view about the qualification to sit for the examination?—Say, 10 years or five years. If you do not mind, say five years.

32660. You have no option?—I have no objection to five; five years' practical knowledge of the working of mines.

32661. Not a workman, necessarily?—No.

32662. Not necessarily a workman, but a person who has had five years' practical knowledge of the working of mines?—In the district to which he is appointed.

32663. A person cannot sit for a certificate unless he has had five years' practical experience in a mine or a diploma and three years?—I would abolish a diploma. I do not think it is worth anything.

32664. He must have had five years' practical experience in a mine, and you would leave it to the Board of Examiners to say upon examination whether he had had that experience or not?—Yes.

32665. This is the next point, that the Board of Examiners having then qualified a number of people as eligible for the appointment of inspectors, should go further and nominate one of those qualified persons to be appointed to any vacancy and the Home Office should be bound to appoint their nominee?—Yes.

32666. From amongst the persons qualified the Home Office would appoint an inspector nominated by the Board?—Yes.

32667. Upon that Board you have nobody representing the owners. I do not know whether you think it worth while?—Yes, the expert mining engineer.

32668. Is he to be nominated by the owners?—Certainly.

32669. You propose this Board should have the nomination?—Yes.

32670. That is the way the inspector should be appointed?—I think so.

32671. You suggest that this examination should take place in each district, that there should be a Board of Examiners for each inspector's district?—Yes.

32672. Would it be the same Board or a Board for every district?—A separate Board for every district.

32673. I suppose they would be paid for their services by the Government?—Yes.

32674. How frequently would they sit to hold these examinations?—Once or twice a year; not more.

32675. It would be no use whatever for a man to pass the examination unless he was also nominated by the Board?—I do not think so.

(*Chairman.*) He would have to take his chance of being nominated by the Board if he had become eligible.

32676. (*Mr. Ratcliffe Ellis.*) Supposing the Board found a number of persons very well qualified indeed, the Home Office are not to have the choice to pick whom they think to be the best man?—It is the same now. The Home Office has a list of persons qualified and they have to decide on one when there is a vacancy. I propose the Board should.

32677. You propose to take the power from the Home Office and place in the Board the power of appointing inspectors?—I think if the Board is fit to certify that any man is qualified, that they ought to be able to say which are the most qualified, which would be the first of the lot.

32678. Your view is to take away from the Home Office the power to appoint inspectors and place the appointment in this Board?—The nomination is practically the appointment.

32679. Not merely the nomination, but the appointment?—Yes.

32680. That is your scheme?—Yes.

32681. You have thought that carefully over?—Yes.

32682. Do you bring that as the view of your district?—I am on the executive.

32683. Of the miners in your district. You think that would be more conducive to safety than the present system?—I do.

32684. The next point you suggest is that these gentlemen when appointed inspectors must submit to an examination every seven years?—Every 10 years.

32685. By this Board, to see if they continue qualified?—Yes.

32686. If found to be disqualified they should retire on a pension?—With or without a pension.

32687. I understood you to say with a pension?—I should not object to it being with a pension.

32688. You think a good many would do their best to pass a second time?—I do, and I think it would do them good.

32689. That is the way you deal with them, every seven years?—Every 10 years.

32690. If there is any complaint against the inspector's capacity, is the same Board to deal with that or another Board?—No.

32691. Then you want another Board?—I do not say necessarily a Board, but some authority.

32692. What is the authority? First of all let us see what will happen. There must be some authority to which a workman can complain if he thinks the inspector is unfair or incompetent?—Yes.

32693. Any workman amongst the 800,000?—He would complain to the Board.

Digitized by Google

32694. And then the Board must examine into this complaint and deal with the inspector ?—Yes.

32695. Either retire him with or without a pension or prosecute him, it may be ?—Yes.

32696. It depends upon what the complaint is ?—Yes.

32697. What is this authority to be ?—They first of all complain to the Board.

32698. What Board ?—The Board that appointed the inspector.

32699. The Examining Board ?—Yes. Probably the Examining Board would not feel competent to do more than inquire into this thing and want somebody else to decide for it. Who that is to be I have not thought out.

32700. Perhaps you would think it out and formulate this scheme properly, if you think it important ?—I do not mind.

32701. I understood you to say you wanted a further alteration with reference to Government inspection, and that is if an inspector found a dangerous practice in a mine that he was to call in two other inspectors from other districts, and if the three agreed that the practice was dangerous that then they might forthwith apply in the ordinary course of law for an injunction to stop that practice ?—Yes.

32702. You think that is preferable to the provision under Section 42 which authorises the inspector to prohibit the practice and leaving the owner to dispute the prohibition if he thinks fit, by going to arbitration ?—Much preferable.

32703. I suppose you know when applications are made for injunctions to the courts of law, the tribunal you favour, that it is a very usual thing to say that if the injunction is granted and it turns out not to be justified after, compensation must be paid to the person who suffers by the injunction ?—Yes.

32704. Would you also make that so ?—Yes, on condition that if the injunction was granted and it turned out to be right, the owners paid.

32705. What are the owners to pay ?—All the costs.

32706. Supposing the judge said: "Very well, I will grant an injunction," but this means stopping this pit ?—Yes.

32707. If it turns out that this is an unreasonable requirement on your part when the matter is further inquired into, you must pay compensation to the owner for what he has lost by this stoppage ?—Yes.

32708. Who is to pay that ?—The authority who appointed the inspector.

32709. The Board ?—The State, of course.

32710. The Government ?—Yes.

32711. The Government are to pay that compensation ?—Yes.

32712. Do you seriously put that forward ?—I have thought it out, and I will tell you why. I am very strong upon the use of safety lamps in a mine where there is any gas. Supposing the inspector says to an owner, "You should put lamps in that mine, because it is dangerous," and the owner says, "I will not put lamps in the mine"—that does happen sometimes—in that case the inspector would go to this court, whichever was the court he had to go to for an injunction, to stop that mine until the lamps were put in.

32713. Stop the working of the mine ?—Until the owner agreed to put lamps in. If the inspector could not justify that position he ought not to be an inspector.

32714. But the mischief has been done when the place is stopped whilst the arbitration is going on as to whether the owner is bound to put lamps, and——?—My objection to the present system is its slowness. If an inspector of mines sees that the pit is dangerous and that the men's lives are in danger, he ought to be able to order safety lamps to be put in at once. The owner may, if he thinks proper, dally that about for six months while the men are in danger. I propose in my system to settle that at once.

32715. I want to know who is to pay this compensation ?—The Government, of course.

32716. The damage done to the employer by having the pit stopped the Government must pay compensation for ?—If the inspector is wrong and it does not want lamps, and the owner is right, the Government pay compensation and deal with the inspector. If the owner is wrong and the inspector is right, the owner pays all the costs.

32717. To whom ?—All the costs of the proceedings.

32718. The Government would also have to pay, if the inspector was wrong, the men's wages during the time of enforced absence from work during the stoppage ?—Not necessarily.

32719. Who is to pay them ?—They give the men the ordinary notice to terminate.

32720. I understood there was to be an instanter injunction to stop work ?—I know sufficient to know if you were threatened with an injunction you would give notice, to protect yourself.

32721. He is to have notice, and be deprived of all compensation because his employment is terminated by an ordinary notice ?—You are taking me into a region into which I cannot follow you.

32722. If you make these suggestions you must see where they take you to ?—I would say even if the Government had to pay the men their wages in consequence of this stoppage, it ought to be done in the interests of safety.

32723. (*Chairman.*) Would it do to make the judge's decision on the injunction final ?—Yes, that would meet it.

(*Mr. Ratcliffe Ellis.*) No court would undertake to make a final injunction without hearing the evidence on both sides. You think it should give an *interim* injunction under terms that the Government should pay all the expenses. If the Government were willing to provide that, there would be no harm done, because the owner would be paid compensation if he succeeded. There would be no loss. How far the Goverment would fall in with a scheme of that kind I do not know.

(*Mr. Cunynghame.*) It would be a wage dispute.

(*Witness.*) I think I am misunderstood. There is no wages question in this.

(*Chairman.*) It is a question of safety. On a question of safety it ought to be decided at once, in order to protect the safety of the men.

32724. (*Mr. Ratcliffe Ellis.*) With reference to inspection under General Rule 4, have you any suggestions to make upon that except as to the competency of the inspector ? I will deal with that directly.—Nothing, except that a man appointed to be a fireman or examiner should perform that duty alone.

32725. A competent man I will come to. There is an inspection before the shift, and one inspection during the shift ?—Yes.

32726. The first inspection has to be reported ?—Yes.

32727. Do you think one inspection is sufficient during the shift ?—I do not.

32728. You have an observation to make upon that; you think there ought to be a second inspection during the shift ?—Yes, and reported.

32729. That is as to General Rule 4. It is no use providing that there should be an inspection either before the shift or during the shift unless it is done by a competent man ?—Certainly.

32730. The Act of Parliament provides it is to be done by a competent man ?—Yes.

32731. You think there are cases in which the men are not competent ?—Yes.

32732. Are those cases frequent in your district ?—I think they are frequent everywhere; that is my observation.

32733. In your district ?—Everywhere.

32734. It is rather a strong thing to say that throughout the country these men, upon whom you suggest, and I agree, a great responsibility depends for the safety of the men employed in the mines, are not competent ?—I may say a large number of them are not. That is, in my judgment. Observation leads me to make that remark.

32735. On what ground do you form that opinion, from the accidents, or some other reason ?—My chief ground for saying it is that I have observed these men at inquests in different parts of the country when they have given evidence about accidents. I have heard reports from men and I have conversed with those men, and on those grounds I have come to the conclusion that they were not as competent as they ought to be.

32736. How many of these officials are there in your district ?—Whatever is provided by the law and the Special Rules.

Digitized by Google

Mr. S. H. Whitehouse.

5 Dec., 1907.

32737. What number do you suppose there would be in your district?—There are some at every pit—according to the size of the pit.

32738. How many pits are there?—20 or 30 collieries.

32739. Not more?—No.

32740. Not more than 20 or 30 in the Bristol, Somerset and Monmouth district?—I only represent Somerset: I am not speaking of Bristol or Monmouthshire.

32741. You say in your judgment throughout the country there is incompetency amongst these examiners. What is your reason for that? You say you have conversed with a certain number of these officials at inquests, and from that and from your observation of their conduct at inquests you come to the conclusion that those particular persons are incompetent?—Yes.

32742. You blame the whole class. Will you give me the number of persons you have conversed with upon which you form this general opinion?—Hundreds in different districts and at odd times.

32743. Over what period does that extend?—Five or six years.

32744. You have conversed with hundreds of these people?—Yes.

32745. What particular thing is it that has satisfied you they are incompetent?—It is not only incompetency, but it is being over-burdened with work. I put the two together.

32746. Do you withdraw the suggestion you made, that in your view the great majority of the examiners through out the country are incompetent?—I do not say the majority: I said great numbers.

32747. Do you withdraw that statement, that a number are incompetent men?—No, I will not withdraw that: I believe it.

32748. I want to know why you come to that conclusion?—I have told you. I cannot add to it.

32749. You have come to that conclusion by conversing with men?—By their conduct at inquests, and from reports.

32750. From whom do you get reports?—From the workmen.

32751. You come to that conclusion through the conduct of the men at inquests, conversation, and reports from workmen?—Yes.

32752. Dealing with the last first of all, what is the nature of the incompetency the workmen complain of?—That men who do not know the full operations of mining are appointed as examiners.

32753. Have you had any particular complaint made against a particular man?—I will not ask for names.—I cannot give names.

32754. Do they give you a reason why they think this man is not competent?—Put it like this, hypothetically. If a haulier, or a man of that kind, was appointed to be an examiner, he would be thought to be incompetent because he had not been a practical coal miner.

32755. Your men complain, and you agree, that no man who is appointed to one of these posts, unless he has worked at the face, is fit to do the work?—Yes.

32756. Therefore on that ground you say a large number are incompetent?—Yes.

32757. The work these men have to do is the work of examination?—Yes.

32758. Do you consider a man who has worked at the face and has been five or six years at the face and had no experience in examining for gases, except in his own particular place, or in any other way of managing the mine, is a proper man to be put in this position?—He would be a better man than a man who had not that experience.

32759. You think whatever position a man has in a mine, unless he has worked as a collier he is not fit for those appointments? He could not tell whether the roof is safe if he has not been a practical collier.

32760. Does it follow that because a man has not worked at the face he cannot examine a roof?—He cannot tell whether it is safe or not.

32761. That is your view?—I am positive about it.

32762. That is why you say many of the present examiners are not qualified to do their work?—Yes.

32763. Not that you know whether they have made any mistakes or not?—I have seen mistakes.

32764. But because they have not worked at the face?—I know of cases in which men have made mistakes: I have come across them. Of course I have.

32765. Because a man makes a mistake does that absolutely disqualify him altogether?—Oh dear no.

32766. That is the reason you say a great number of these men are not competent?—Yes.

32767. The other point is that you say they have too much to do?—Yes.

32768 If they have too much to do that ought to be remedied: everybody would agree to that: and they ought to have sufficient time to make the inspection they have to make?—Yes.

32769. Do you think the owner of a mine ought to have anything to do with it?—Do you mean with the appointment of examiners?

32770. With the management of the mine.—He ought to manage it absolutely.

32771. If the manager is to be restricted so that he can only appoint a person who meets with the favour of the Miners' Federation, and only appoint from a limited class, is it fair to leave with him the responsibility for the mine?—You are putting into my mouth something I have not said.

32772. I am putting a supposition?—I do not agree with it at all. I would not consider for a moment any such dictation.

32773. If the owner and the management are to be responsible, should he not have a free hand in the appointment of his officials?—So long as he appoints persons who can keep workmen safe, and himself.

32774. Is he not the person to judge of that?—No.

32775. Who is to judge of it?—I think a man should show he is competent by passing a suitable examination. The man who holds the lives of other men in his hands and is supposed to know the place is safe, should show he is capable of doing the work.

32776. Amongst the managers in your district do you know any competent men?—Amongst the managers.

32777. Yes, the general managers of the colliery, the men who have the responsibility.—Will you tell me what you mean.

32778. Do you know anybody who is competent?—I know a man who started as a pit boy, and who has gone through all the grades, and is a first-class manager of a colliery.

32779. Unless it is the desire of the Managers to cause danger, what object should they have in appointing other than people they consider competent to do the work?—Some men like cheap labour, whether it is good or not.

32780. That is the only answer you have to give?—No, it is not the only answer. I think we are getting away from the point. My point is this, that the law requires that a competent person shall examine the mine. I want to ascertain in the cheapest, quickest and most effective way whether that man is competent or not. I object to the lives of men being in the hands of incompetent men. I want a competent man to examine the mines, and I think the only way to find out whether a man is a competent man is that he should be examined and hold a certificate.

32781. Do you know any colliery manager who does not want what you want, that the persons who are to examine these places should be competent?—I know lots of managers who prefer cheap men. They may think they are good, but they like them cheap.

32782. Do you know a colliery manager who would not wish to do what you wish to do, that is, to secure that the men who make these examinations are fully qualified?—I have no allegations to make against managers.

32783. (*Chairman.*) It is often the case that a person has a considerable interest in selecting the best men for a particular post, but at the same time he is by law often restricted in his choice. The Lord Chancellor is supposed to be the man who is responsible for the appointment of county court judges, and it might reasonably be supposed that he would be the man who would appoint the best men he could get, but we do not entirely trust the Lord Chancellor to appoint the best men as county court judges. We insist that a man who is appointed shall have seven years at the bar first, although the Lord Chancellor may think a man who has had two years at the bar is a better man.—Your Lordship has put my view better than I can put it myself.

Digitized by Google

32784. (*Mr. Ratcliffe Ellis.*) With reference to discipline, after what Mr. Cunynghame has put before you as to what would be the result of your view, do you still say that discipline should be maintained only by prosecution?—I still say I am not in favour of fines being imposed by the management for breaches of discipline. One conviction on prosecution has a more salutary effect than 100 petty fines. That is what I said in my statement, and I still say that.

32785. Notwithstanding what Mr. Cunynghame has shown you would be the result you still think the same notwithstanding all the chaos which it would bring about?—I put my experience against Mr. Cunynghame's theory, and hold to my experience.

32786. You know a man cannot be fined against his will?—If you go to a man with a family and say, "There is the fine, or the prosecution, or the sack," and he has not much money, he is apt to choose the least evil to him, the fine, on purpose to keep his job, and pay the fine against his own convictions.

32787. You are inclined to choose the greater evil?—Let me put it again as shortly as I can. It is because I believe fines have the contrary effect to what is wanted, that they tend to laxity of discipline and not higher discipline, that I am opposed to them.

32788. Do you know that the men very frequently ask to be fined rather than prosecuted?—I have heard it said, but I have not met any of them.

32789. What is this employment of unskilled labour which you say conduces to danger?—I know instances where farm labourers are taken in the pit.

32790. To do what?—To work on inclines and roadways.

32791. To do repairs?—Yes.

32792. Is that extensive? Are there many cases where farm labourers are taken down the pits?—It is rather extensive in some districts where they cannot understand the language.

32793. We are not talking about the Poles, but about your own district. Is it largely in your district that agricultural labourers are taken down the pit?—Not very largely, but it ought to be prevented, I think.

32794. Is that the unskilled labour you complain of?—That is some of it.

32795. Have you had an opportunity of seeing whether accidents have resulted from the employment of the agricultural labourer?—No, I could not say I have.

32796. In your view do the majority of accidents happen down a pit from the unskilfulness of the workmen, or from the negligence and carelessness of the workmen?—That I could not say.

32797. You have no opinion upon it?—No.

32798. If a man is an unskilful man and commits an offence from want of skill, a mere suspension of a day or two would be no use there?—I would not employ him.

32799. You would dismiss that man, and if it was not safe to employ him at your pit it would not be safe to employ him anywhere else?—Yes.

32800. That man, notwithstanding he might have a wife and family, would lose his occupation of that character once and for all?—He may work on the land.

32801. So far as he is concerned he would not have another chance. The careless man—the manager is responsible for his carelessness, it may be—may be responsible, as you are aware?—He may be.

32802. Have you a right to dictate to the manager and say in what way he shall maintain discipline? Should you have a right to say "You must suspend this man for a couple of days" and still leave the manager responsible?—I do not want to dictate. I tell him that in my opinion the system of fining is wrong and foolish, and I have a right to do that.

32803. You think that he ought not to have a great amount of discretion as to how he is to maintain discipline, but only to suspend a man two or three days, and he is still to remain responsible for this man's carelessness when he comes back? Do you not think it is fair that if you are going to hold the manager responsible for the competency of the men under his charge, and for their carelessness, that you should give him a free hand as to the way he enforces discipline?—Up to a certain point. If I think his way of trying to maintain discipline has failed——

32804. And you think it has failed. You think fining has failed?—Yes.

32805. Now I want to ask you about the Special Rules. When you met together in Somerset to consider those rules, they were not established?—They were practically established.

32806. They were not legally established?—No, but practically.

32807. How do you mean "practically established"?—If the inspector had got to the point he wanted to get with the owners (that is the Home Office: the inspector is the Home Office for the time being in the matter of Special Rules) I put it to anybody it is not likely that a deputation of workmen is going to shift him.

32808. He had got the views of the owners?—And his own views.

32809. The inspector's own views?—Yes.

32810. Do you say he is not entitled individually or collectively to get the views of the owner without at the same time getting the views of the men?—I say if the workmen's intervention in making Special Rules is to be of any assistance or any good, they ought to be called in at the commencement instead of at the finish. That is all I say.

(*Mr. Cunynghame.*) The Witness said in this particular instance that Mr. Martin had pledged himself to agree with the owners before he heard the men's side. If that was so, I agree with him he should not pledge himself absolutely and I do not think he intended to do it. The Witness said he really had not much ground of complaint with regard to this.

32811. (*Mr. Ratcliffe Ellis.*) That was a suggestion from the Home Office?—Yes.

32812. Supposing the owner desires to propose a rule for safety, is he not to be allowed to propose the rule until he has consulted the workmen and ascertained that they agree to it?—I do not mean that. I will tell you what I mean. If an owner suggests a rule to an inspector——

32813. Or to the Home Office?—Yes, it is the same thing, practically. If there is a meeting between the owner and the inspector, if the men are to come in, they should come in at the first meeting.

32814. That is to say, the owner is not bound before he proposes a rule to call the men in?—Not at all.

32815. Then I think we agree. Then he proposes his rule and goes to the Home Office?—Yes.

32816. Then the Home Office must take care that every man is heard who has anything to say about it, before it is established?—That is what I mean.

32817. Now with regard to timbering, you have nothing to say upon that. In your district the collier does it, and does it satisfactorily?—Yes.

32818. And generally there is sufficient timber there?—Yes, generally.

32819. With regard to lamps, all you want to secure is that there shall be a proper lamp?—Yes.

32820. You gave an opinion that you did not think any lamp perfect. Do you not think it would be an advantage if there was a Government testing station established where lamps could be tested, the character of the lamp, so to speak, and they could give a certificate that certain lamps were sound and suitable, leaving persons who wish to take the opportunity of buying a good lamp as authenticated by them?—I think it is a good idea. They test explosives, and give permission to use them. I think the same thing ought to be done with lamps. ✓

32821. That would meet your view?—Yes.

32822. Upon the point of investigating after an accident, and the coroner's inquiry, a coroner has to inquire into the cause of death of a person. What do you find to be the difficulty in putting anything before the coroner at those inquiries, I mean pertinent to the object of the inquest?—I find none, personally. The coroner we have is most anxious to assist us, and gives us every opportunity.

32823. The only interest you have in a coroner's inquiry, I suppose, is to see that all the facts in connection with the accident come out so far as they are necessary to see how it can be remedied in future, if there is a mistake or a mishap of any kind. That is all your object is?—Yes.

32824. Supposing you find at a coroner's inquiry that all those facts have not come out, do you not think the provisions of Section 45 are sufficient to bring them out?

Digitized by Google

Mr. S. H. Whitehouse.

5 Dec., 1907.

The coroner's verdict as it is is not material to your point. It does not make much difference to you whether the coroner says there was nobody to blame or somebody to blame, if the facts all come out. It is information you want, and not punishment.

32825. If you are of opinion that all the facts have not come out at the coroner's inquest as it is now, you can ask for that inquiry?—Yes.

32826. Is that sufficient?—I do not suggest anything else.

32827. You are satisfied with things as they are?—Yes, from that point of view.

32828. What else do you want at the coroner's inquiry?—The coroner may, if he thinks fit, decline to allow me in the court—I will not put it that way.

32829. Supposing he does?—I want that power taken away.

32830. Supposing he says that, have you not all the power you want under Section 45?—No. In the Act it says the persons named may be represented at the coroner's inquiry, subject to the order of the coroner. I want those words taken out of the Act, and workmen's representatives to have a perfect right in the court. I also want the coroner to have no right to hold a closed inquiry.

32831. You mean that there should be an alteration of the general law?—Yes.

32832. And not merely an alteration for miners' inquests?—I am only dealing with the mines. I mean that an alteration in the Mines Act would suit us.

32833. If it is of sufficient importance to alter it at all, it would have to be an alteration in favour of the general public?—I should not object to that. It would be all the better. I also want persons who are entitled to be at the coroner's court to be represented at the coroner's court, and I want them to have the power of viewing and to inspect the scene of the accident as soon after it has happened as possible.

32834. Who are the persons?—Relatives of the deceased, fellow-workmen and several others.

32835. I understood you to say it was a long time before the inspector visited the scene of the accident?—Yes, on account of the distance and that sort of thing.

32836. What is the longest time you have known?—I have known two or three days.

32837. Do yon not know it is the practice that matters are left exactly as they are until the inspector does come?—Nominally so. That is the letter of the law.

32838. I hope we all carry out the law to some extent. You understand that is the rule?—That is the letter of the law.

32839. (*Mr. Smillie.*) You are a member of the Executive of the Miners' Federation of Great Britain?—Yes.

32840. In giving evidence before this Commission to-day do you want to confine the opinions you give to the Somerset district, or do you speak to some extent also on behalf of the general body of the miners of this country?—I do not think I am entitled to speak on behalf of the Executive; I am not instructed so.

32841. Some of the views you have put forward to-day are not held by your colleagues on the Executive?—That is so.

32842. They are not held by a very large percentage of the miners of Great Britain?—That is so.

32843. With regard to the Special Rules, was that the amendment you mentioned the only one your workmen would have proposed?—No, if we had had an opportunity of discussing them when they were being framed, we should very likely have put more amendments. In the codification of these rules there were very few alterations from those framed when the 1887 Act came into force, so that it was not a very big matter. I am talking about the principle.

32844. You said you would have proposed in the event of the miners requiring to leave their places for want of timber, and because of the fact that the employer was responsible, that he should put in their pay for loss of time?—Yes.

32845. Mr. Cunynghame said the Home Office, if that had gone in, would have objected to it as *ultra vires*.

(*Mr. Cunynghame.*) You had better not take that; we should have to consider it. It might have been objected to.

(*Mr. Smillie.*) Is it not a fact that a mines inspector at one time did put that into one of your Special Rules and was very anxious to have it in, and that the mine owners would not have it?

(*Witness.*) That is so.

32846. You say the mines inspector may be taken to be the same as the Home Office?—Yes.

32847. It is a fact that the mines inspector, probably with the consent of the Home Office——

(*Mr. Cunynghame.*) Really you are putting a little more than the Witness knows. How can he know that the Home Office consented to the action of the inspector?—I should like to know the name of the inspector.

(*Mr. Smillie.*) You will hear in a moment. I suppose a mines inspector when he puts anything into a rule he is anxious to become a Special Rule, keeps the Home Office in touch.

(*Mr. Cunynghame.*) We will see when you give your instance. I asked the Witness whether he had communicated with the Home Office and he said "No," and he had no more complaint to make.

(*Mr. Smillie.*) Your view was not so much to penalise the employer, but you think that if the employer was responsible for the payment of the workmen he would make sure there was always a supply of timber?

(*Witness.*) That is my point.

32848. You felt that payment of wages for loss of time would very seldom arise?—Yes.

32849. It would secure a supply of timber and very often they have not that?—Yes.

32850. A mines inspector did really put this into a rule and fought very hard for it, but the mine owners refused?—I saw it in the draft Special Rules.

32851. (*Mr. Cunynghame.*) Who was the mines inspector?—It was the North Staffordshire district in 1887.

32852. (*Mr. Smillie.*) Will you give the name of the inspector?—I forget the name of the inspector. He is dead now.

32853. Was it in the printed draft of the rules?—Yes.

32854. That print may be in the Home Office?—I expect that print could be found.

32855. That was really the purpose of it. The inspector felt that would make sure that there would always be a supply of suitable timber, if the employer was held responsible for the loss of time?—Whatever his motive for putting it in was, he put it in and fought for it.

32856. Is it not rather a cruel system to put the responsibility on the workmen to withdraw if there is not a supply of timber?—I think so.

32857. Is it not very likely that they undertake very serious risk for want of timber, because they know that they must get their wages to live?—I think so.

32858. It may be for days they may work under dangerous conditions rather than lose the time?—I think so.

32859. Mr. Cunynghame put it to you that after all there was very little in this objection of yours about the codification of those Special Rules and the alteration of them, and you said there is very little in it. You meant very little in this particular thing, but not in the principle for which you contend?—I am very strong on the principle for which I contend. When I said "Very little," I meant there was very little about this recent business. If a new Mines Act is passed and Special Rules established as they were in 1887, I am strongly of opinion that the course I suggest ought to be carried out, and it ought to be provided for.

32860. (*Mr. Cunynghame.*) The men ought to have an ample opportunity of making their wishes felt before a decision is come to. I am sure you may take it that we agree with you?—Yes.

32861. (*Mr. Smillie.*) Supposing an employer desires to establish new Special Rules, at the present time you agree with Mr. Ellis that he should be entitled to propose those and send them to the Home Office?—Yes.

32862. Are you aware that the Miners' Federation of Great Britain is very strongly against that; that they have discussed the matter and are very strongly against it?—No; I was not aware of it.

32863. Who has the right to object; is it not the persons employed in a mine?—I should like to amplify what I said to Mr. Ellis. What I mean is this: it would be very wrong in my opinion to say that an owner of a

Digitized by Google

mine should not be allowed to make suggestions as to a new Special Rule. I think an owner of a mine should be allowed, if he thinks fit, to make a suggestion as to a Special Rule, but if the Home Office accept that suggestion and it goes any further, I think that the Home Office should see that the workmen have as great an opportunity of discussing that rule they have to observe as the owner has after he has made the suggestion.

32864. (*Mr. Cunynghame.*) It would be very wrong if they have not. I should like to say that ?—Under the present system we have not. That is why I am talking about it.

32865. (*Mr. Smillie.*) Who do you think should be the most interested in Special Rules for safety underground ?—I think at all times, when the Special Rules have to be overhauled, the Home Office should be the authority to suggest Special Rules. I am talking now about rather an individual colliery owner who thinks he wants the rules as to timbering altered. I think he ought to be able to make a snggestion, but if a new Mines Act comes into force, I think the Home Office should be the persons to suggest the rules.

32866. Who do you think should be most deeply interested in the Special Rules for safety underground ?—The workmen themselves.

32867. Those who risk their lives ?—Certainly, the workmen themselves.

32868. Do you think the men should have power to initiate Special Rules for their own safety and send them to the Home Office ?—I think it would be desirable that they should.

32869. If you give the employer the right to do so would it not be fair and just to give the workmen the same right ?—I certainly would.

32870. Or, in the event of Special Rules being required for safety, I think your idea was that there should be a joint meeting ?—A joint committee.

32871. With the mines inspector who may be present ?—Yes.

32872. If possible, agreement on the Rules ?—That is my suggestion.

32873. There would be very little likelihood of the Home Office objecting to rules mutually agreed to between the employers and the workmen with the inspector there ?—None, I should think.

32874. Rules initiated and agreed to by that means would be more likely to be carried out than they are if the workmen have no voice in the making of them ?—If the inception of the Special Rules is part and parcel of the business of the men as well as the employers, they will endeavour to make workable rules, and after having made them will carry them out.

32875. There have been Special Rules which were barely workable. Some of those it is almost impossible to carry out ?—I think so.

32876. Sometimes timbering and spragging rules are impossible to carry out ?—I think so.

32877. Would it be possible at the present time for a wealthy colliery owner who may open up a mine in some part of the country with his own money, to appoint any person he thought fit as manager of that mine ?—Certainly, so long as the manager had a certificate.

32878. It is his own property ?—Certainly.

32879. Mr. Ellis suggested a person should be entitled to appoint any person he thought fit to look after his own property. You do not admit he could do that. The person he appointed must hold a qualified certificate ?—Certainly.

32880. Consequently, that owner is interfered with to the extent that he must appoint a person holding a certain certificate ?—Which the Board of Examiners have declared to be competent.

32881. And the manager of a mine, you think, should be no more entitled to appoint an examiner or a fireman who did not hold a certificate than an owner should be entitled to appoint a person to manage a mine ?—I hold that view very strongly.

32882. Are you of opinion that the safety of men underground depends to a greater extent on the competence and knowledge of the fireman than that of the general manager ?—Much greater.

32883. From the point of view of safety you think the examiners who examine every morning are of more importance than the manager ?—Much more importance.

32884. While you have not given individual cases, you are strongly of opinion that some persons are appointed for that purpose who are not fully qualified ?—I am fully of that opinion.

32885. I do not know whether you have gone the length of saying what qualification would be necessary. You put in practical knowledge as one of the first things necessary for a person to be appointed an examiner. Would a person holding a second-class certificate be sufficient ?—I think so. I happen to know that the examinations for under-managers are somewhat stiff, formal and catchy. I think some examination of that class would qualify.

32886. Are those Special Rules, so far as you know, carried out by the management at your mines ?—So far as really practicable they are.

32887. What about Rule 20. You have told us that the place mutually agreed upon where the timber is to be found is at the pit bank with you ?—Yes.

32888. Is that carrying out Rule 20 ?—We think it is.

32889. Is that a place as near a working place as is reasonably practicable ?—It is interpreted to mean that. My reply is that the system in force seems to me to be quite satisfactory.

32890. The men are quite satisfied with it ?—Yes.

32891. Do you really think it is carrying out that rule ?—I do not think it is literally.

32892. You are strongly against fining, because you believe it does not lead to discipline ?—Yes.

32893. It is put here that a workman himself would prefer being fined if he has committed any fault rather than going to Court. I think that is so ?—Yes.

32894. The majority of your men at the present time are of opinion that fines should not be inflicted but prosecution or dismissal should take place ?—That is so.

32895. I suppose you think in the eye of the law at least the workmen and the employer or owner should be placed on an equal footing ?—I do.

32896. If fining for an offence against the Act or the Special Rules is right and proper so far as the workmen is concerned, would it not be right and proper so far as the manager is concerned ?—Yes, but it is not provided for.

32897. Nobody would suggest putting it into the hands of the mines inspector to fine a manager for the breach of the Mines Act ?—I would not : I would like him prosecuted after warning.

32898. If it is wrong in the case of a manager, it must for the same reasons be wrong in the case of workmen ?—That is right.

32899. There are a considerable number of breaches of the Mines Act and the Special Rules at the present time ?—Yes.

32900. In many parts fines are imposed and prosecutions do not take place ?—Yes.

32901. Do you think the discipline is better (perhaps you cannot give us your experience in the matter) maintained where hundreds of fines are imposed rather than where there are a few prosecutions ?—I think it is much worse.

32902. Is the absence of prosecutions where no fines are in force a proof of the discipline of a mine ?—I take it so.

32903. That is your experience ?—That is my experience.

32904. Where there are no fines, but prosecution, the discipline is best ?—Yes, it is not because the breach is overlooked, but because the discipline is best.

32905. (*Mr. Cunynghame.*) Your objection to fines is a very general one ?—Very general.

32906. On all occasions ?—On all occasions.

32907. By anybody ?—By anybody.

32908. We have got it in evidence that one of the rules of the St. Helen Association of Colliery Enginemen says a member who teaches anyone the business of an engineman unless he is his son, or his brother-in-law or the son of another member of the Association, will be fined not more than 40s. Do you approve of that action in fining by that body ?—Probably if I were an engineman in Lancashire I should know more about it. I do not know anything about it. I do not approve of the principle of fining.

32909. Would your condemnation of the system induce you to condemn that rule ?—I do not approve of the principle of fining for breaches of discipline.

Digitized by Google

Mr. S. H. Whitehouse.

5 Dec., 1907.

32910 Therefore *prima facie* you think that a bad and undesirable rule ?—I do not know sufficient of the circumstances to be able to give an answer.

32911. (*Mr. F. L. Davis.*) Are you working in the mine now ?—No.

32912. How long is it since you worked ?—20 years since I worked continuously. I frequently go into the mine now.

32913. You told us that you made inspections ?—I frequently go into the mines now.

32914. Are you in favour of Rule 38 as to workmen's inspections ? Are you in favour of a workman from another colliery being appointed to examine for the workmen ?—I think an occasional examination of the kind would be good.

32915. You understand my question ?—Quite.

32916. Not one of the workmen, but somebody from another colliery ?—I think it would do good if it could be accomplished easily, but my view is if that kind of inspection is to be of any service it must be conducted by a man who is not working in any mine.

32917. You think it would be a good thing for a stranger to occasionally examine ?—Yes.

32918. Do you think as a matter of fairness that a man should be under certain restrictions if he did make an inspection, similar restrictions to what the inspectors are at the present time under as to keeping everything confidential ?—He has to sign the report book if he makes an inspection. He cannot keep it confidential if he signs the report book.

32919. The report would be put in the book. I agree as to that, but I mean that he should not use any information he gets during his examination in that particular colliery to the detriment of the owner or for the purposes of the workmen ?—Do you mean about the system of work ?

32920. I do not mean anything in connection with his inspection, but anything that comes before him outside that ?—I think if a man was allowed into a mine to make an inspection in the interests of safety, that is all he ought to do.

32921. He ought to make his inspection under certain restrictions ?—Certainly.

32922. I see you are very much in favour of discipline in your district ?—Yes.

32923. Do you do anything yourself personally to impress on the men the necessity for observing all the rules and regulations and looking after their own safety ?—All I can do, and I go so far as to refuse to help a man who persistently breaks the rules.

32924. How do you do it ?—I tell them at meetings, and every opportunity I have I take of preaching that it is in the interest of everybody that men should obey and carry out the rules for the purpose of preserving discipline.

32925. Do other officials of the Federation do the same in your district ?—Generally, I think.

32926. (*Dr. Haldane.*) Are there any arrangements in your district by which the men are enabled to clean themselves up before they leave the pit ?—No.

32927. You have heard of such arrangements ?—I have seen them in Belgium and other places.

32928. Have you ever considered whether it would be desirable or not to have them in this country ?—I do not think it would in my district.

32929. Why not ?—The men in my district are a cleanly lot of people. They live close to the pits, and as soon as they get home they wash. I do not think the advantage to be gained would be worth the expense of putting up and the maintenance of these wash-houses. I may be wrong, but that is my view.

32930. Are there facilities for washing in their own houses ?—Yes.

32931. You think they have plenty of room ?—Yes.

32932. A man coming home from work brings a lot of coal dust with him, and that is apt to get about a house and cause a great deal of disorder and inconvenience in the house ?—In a great many of our modern cottages we have bathrooms.

32933. Are they used ?—Yes, our colliers wash all over every day.

32934. You think that is so ?—I know it is so, I often see it.

32935. Are there districts where that is not so in Great Britain ?—Ours are very cleanly. As soon as they come home they get a wash all over every day. That is the general rule. If a man lives in a small cottage, he gets into the smallest part of the lower part of the house, and the others go into another room, and he gets a good tub.

32936. You think every man gets a good wash ?—A good tub every day.

32937. In that case you consider that there would be no very great advantage is having washing arrangements at the pit-head ?—I do not think so.

32938. Are there any sanitary conveniences underground you know of in your district ? Would you think there is any need for anything of the sort ?—There are such arrangements as the Children of Israel had in the Desert.

32939. That is no arrangements ?—Yes, they make a hole. Really I do not think there is any need for them. I suppose you put the question with regard to this worm disease.

32940. Yes. I do not think there is much bother with it in your district, because the pits are cool ?— I think the temperature would not produce those things.

32941. As a rule, I quite agree, but still there are other diseases propagated in the same way, occasionally typhoid fever is spread from want of such things. From your observation, do you think there is any need for arrangements of that sort in your district ?—Not very long ago we had a man I thought might be suffering from the worm disease, and we had him thoroughly examined, but there was no trace of it at all.

32942. You have not observed any nuisance such as a bad smell or that kind of thing underground ?—No.

32943. You think the men are careful to cover up the excrement ?—They put it back in the gob.

32944. If that is done it is a very satisfactory plan ?—I think so.

32945. I only wanted to know whether you have observed that nuisance arose from the want of conveniences. —I do not think so. If there was any necessity for those things I should be very strongly in favour of them. I am very strongly in favour of it in mines where the temperature is high and moist, and likely to produce these conditions, but I do not think there is any necessity for it with us.

32946. You think the men can always use the gob or some place where the material can be buried ?—Yes.

32947. Have you heard many complaints of bad ventilation in your district ?—No, not generally. When the airways get a long distance occasionally we get temporary complaints, but we get very good natural ventilation, and if it is not enough we put in a fan. There are no complaints at all as a rule.

32948. Some mines I have heard of have a good deal of black damp in your district ?—Somerset.

32949. Yes.—We do not have it now. The mines are fairly well ventilated, quite up to the average of the district.

(*Dr. Haldane.*) I do not know them myself, and so I am putting the question.

32950. (*Chairman.*) How far do the men have to go home ? What is the furthest distance from the pit-mouth ?—In some cases two or three miles, but generally speaking not far.

32951. Then if it was wet they would have to go in their dirty clothes two or three miles before they got home to wash ?—Yes.

32952. (*Dr. Haldane.*) They are not usually wet through from sweat ?—No, our pits are dry and they have a low temperature. Some are hot when we get down lower and further out.

32953. (*Chairman.*) Is there anything more you would like to say ?—No, I do not think so.

Digitized by Google

Mr. WILLIAM LATHAM, called and examined.

32954. (*Chairman.*) You are a miners' agent in Shropshire ?—Yes.

32955. You come here to speak on behalf of the miners in your district ?—Yes.

32956. Have they deputed you to come here ?—Yes.

32957. What steps have you taken to ascertain their views ?—From time to time we have discussed these mining questions in the form of the new Mines Bill.

32958. You have had a new Mines Bill before you ?—In conjunction with the Miners' Federation.

32959. The Miners' Federation have placed before you a draft Bill ?—Yes.

32960. Which they would like introduced into Parliament, and you have discussed this draft ?—Yes.

32961. The points upon which you are going to give evidence are points which have been freely discussed between you and the other miners in the district ?—That is so, by our executive.

32962. First of all you wish to speak as to the insufficiency of Government inspection: what is your view as to that ?—I have worked in a colliery myself about 37 years, and I think I have seen the inspector three times in that time. If I may speak from experience I could not say to my knowledge that it is usual to make an inspection only when a fatal accident or an accident in a very bad way takes place, but then he comes into the district.

32963. It must be clear that he comes sometimes into the district not for the purpose of investigating an accident, because I think you will find that all the inspectors visit all the pits in their district once every year ?—Yes.

32964. Either the inspector or the assistant inspector. They do not necessarily go all through the pits, but they go down ?—Yes.

32965. That is so, I suppose ?—That is so. We think they should go through the pit. It is not probable that they go into the worst places where they are required.

32966. You think they should go all through the pit when they make an inspection ?—Yes. We think it should be an inspection like that, and we have been in favour of working-men inspectors.

32967. That is another matter. First of all I am on the sufficiency of inspection. How often do you think the mine ought to be inspected in the course of the year if it is thoroughly inspected ?—A good many things may happen in three months.

32968. Do you say four times a year would be a reasonable number of times for every pit to be thoroughly inspected ?—I should say so.

32969. Every pit ought to be reasonably inspected every three months. How many officials would be necessary in your district ?—We are joined on with our Shropshire district, which is many miles from North Staffordshire.

32970. You and North Staffordshire are one district ?—Yes, and there was a time when a portion of Scotland was added on to it.

32971. Taking the whole of your district as it stands at present, how many inspectors would it be desirable to have to go through the pits four times a year ?—In our county there are not more than 3,000 men employed.

32972. You only speak for your own county ?—Yes.

32973. How may men would be required to go down all the pits four times a year in your county ?—Not more than one.

32974. Would one do ? It would take the whole time of one man ?—Yes. By the time he had made special visits and in any case of accident, fill up his time in that way.

32975. You think that one man to about 3,000 miners underground is the proportion you would suggest, or 3,000 employed over-ground and underground ?—I do not know that we have taken it in that way of computation.

32976. What is your way of computation ?—We have thought being a long distance away from Staffordshire perhaps that has something to do with there not being many inspections taking place.

32977. Would you be in favour of re-arranging the district, so as to make a district of at least 5,000 men employed in the mines ?—Yes, or that in the present districts there should be workmen inspectors subject to the control of the present Government inspectors.

32978. That is a different point. How big a district do you think one inspector can visit four times a year in the way you think mines ought to be visited ?—I should think if two or three inspectors were added to, say, what now seems to us to be a big district, that would meet the case.

32979. There are an inspector and two assistant inspectors ?—Yes.

32980. You think three men would do it. Six for the whole district would be enough ?—Yes.

32981. Supposing the districts were arranged in such a way that they would not have so much travelling to do as at present ?—We think that would be much better.

32982. You would divide the district into six separate districts, and put one man at the head of each district ?—Yes.

32983. Would you have the same class at the head of every district, or the chief inspector at the head of the five or six ?—We think we ought to have what we have said, working-men inspectors, because they are more accustomed to get round a mine.

32984. One chief inspector and five working-men inspectors or assistant inspectors, as you have now. Do you mean three classes, or two ?—We favour three classes.

32985. You would like to have for your district one chief inspector and two inspectors as there are now, and three working-men inspectors ?—Yes.

32986. These working-men inspectors would have to be at the head of the three districts ?—For the purpose of periodically visiting the district other than when fatal accidents occur.

32987. You would make this distinction between your working-class inspectors and the present chief inspector and assistant inspectors, that it should be the duty of the chief inspector and the assistant inspectors chiefly to examine into causes of accidents ?—Yes.

32988. But as regards mere inspection underground apart from accident inquiries, you would have that done mostly by working-men inspectors ?—Yes.

32989. If the chief inspector and the assistant inspector had time to spare after they had done their duties as regards accidents, they probably would, in their districts, go underground ?—Yes.

32990. Would you not have a difficulty: you would have three districts and the inspectors of each would be principally engaged, or to a great extent engaged, in looking after accidents, and another three districts where there were a different class of inspectors employed who would not be empowered to inquire into accidents at all, but whose only duty would be to go down the mine—you would have three districts, consequently where apparently the inspectors would have very much less to do than in the other three districts ?—We are told now that the chief inspector's time is taken up with clerical work and attention to accidents, and that there is no time for them to make these periodical inspections, say, more than once a year, and that is why we suggest that there should be more working-men inspectors who would go thoroughly through the mine when it was inspected.

32991. You also said the whole of the district should be divided into six. I do not understand how you manage that. The three districts that were assigned to the chief inspector and the two assistant inspectors would have to be very much smaller than the other three districts, because the chief inspector and the assistant inspectors would have other work to do besides going down the mines inspecting ?—Did we not rather set out that we should have the present chief inspectors and the other staff to work under them ?

32992. I thought you said you would have three classes—the chief inspector, two assistant inspectors and the working-men inspectors. I understood you to further say that it should be the exclusive duty of the chief inspector and the assistant inspectors to inquire into accidents ?—Yes.

32993. That should be their primary duty, and if they had time they might go down the mines also, but the other three working-men inspectors should have absolutely nothing to do but go down the mines and report to their chief inspectors ?—Yes.

Digitized by Google

Mr. W. Latham.

5 Dec., 1907.

32994. If the inspector and the two assistant inspectors had work to do that is not done by the other three inspectors, it is impossible to suppose that they can look after such large districts as the working-men inspectors in the way of going down the mines?—That part of their work with additional inspectors would be helped materially.

32995. I do not understand your saying your district ought to be divided into six water-tight compartments, as I may call them, and that as regards inspection, each inspector should have one-sixth of the district to inspect. It seems to me that will not work, according to your theory, because the chief inspector will have a great deal of work to do, and his two assistant inspectors, which you do not throw on the working-men inspectors, consequently it is impossible that they can have the same size districts as the working-men inspectors?—We think they would work in conjunction with the assistant inspectors and thus give better supervision of the mines.

32996. I do not understand. You propose to divide your district into six. If you do that and divide it into six equal parts, it is impossible to suppose the parts looked after by the chief inspector and the assistant inspector can be as well inspected as regards underground inspections as the other three divisions. I suggest if you throw upon the working-class inspectors' less work than you put on the other two classes, the other two classes cannot inspect such a large district as the other three?—We think if they gave these periodical visits of once a quarter that that would find them work to do that is not done at present.

32997. You do not see what I am driving at. I think probably you have not thought it out. You tell me you want to divide your district into six more or less equal parts?—Six districts.

32998. Are they equal in size?—Yes.

32999. Then, as I understand it, each of these six inspectors, whether working-men inspectors or a different class of inspector, would be responsible for underground inspection of all the mines in that particular one-sixth part of the district?—Yes.

33000. If that is so it seems to me that the districts under the chief inspector and the two assistant inspectors ought to be very much smaller than the three districts under the working-men inspectors. Do you follow that?—Because they would have to make more visits.

33001. Because the working-men inspectors have nothing to do except visit the mine and report to their superiors, whereas the other inspectors would have a different class of work to do, very important work, which would take up their time inquiring into accidents. Therefore, the persons who have cast upon them not only the duty of inspecting underground mines under ordinary circumstances, but of investigating the causes of accidents, would have very much more to do if their district was equally large than the working-men inspectors who have only to inspect?—We thought if the district was divided and these men put to work, that an easy solution by arrangement would be found, and we should have a much better inspection than at present.

33002. You want to divide the district into small portions so that no inspector shall have occasion, except in the case of serious accident, when the chief inspector would probably have to inspect not only his own district but the other five districts wherever there was an accident—except in that case you would divide the district into six equal parts, so that no inspector should have far to travel when he had to go down the mine?—That has been our thought.

33003. That is your idea?—Yes.

33004. I still do not understand how you would work six equal districts if you give the mines inspectors different duties from the others—much more varied duties than the others. The chief inspector and the assistant inspectors would not only have to inspect the mines in their own district, but for investigating accidents the whole district would be thrown into one, and the chief inspector would go over the whole district to inquire into a very serious accident, so that the chief inspector of the district would have an enormous amount of work cast upon him which is not cast upon the other three working-men inspectors?—We do not take it that there are so many fatal accidents to be inquired into at present.

33005. You think it would not make much difference to the power of an inspector to inspect underground whether he also had cast upon him the duty of inquiring into accidents. You think that takes up so little time that it need not be taken into account. Is that your idea?—I could not say that we belittle the question of inquiring, but we think at present there is room for more visits at the collieries than we have at this time.

33006. You think it is desirable that districts should be divided up so that no man engaged in the inspection of mines should have far to travel to visit his mine?—That has been held as a real difficulty in taking the time of the people who are to make these inspections.

33007. With regard to the inspection of mines by the men, you say it has not yet taken place in your county to your knowledge, but has been discussed many a time. Has there been no inspection under Rule 38 in your mines?—No. I have been acting secretary for something like 20 years and agent within a few months, but I have never known an inspection made by the workmen, but many a time when things have been in very bad form it has come up at our meetings and we have discussed it. Things have changed somewhat in that respect. Our county at one time was laregly worked by the butty system, that is, you understand, by contractors. Then we had very great difficulty, that is happily changed and very much for the better. Now the companies work it themselves and are wholly responsible.

33008. Do you mean to say there is no mine in your district where you are not afraid that the mine-owner or manager would discharge a man who gave an unfavourable and true account of the condition of the mine?—When it has come up to freezing point many men have found lots of ways of getting out of the difficulty, and have been afraid.

33009. The men have almost agreed to go down under Rule 38, and at the last moment hung back and said they were afraid to do it because they might get into trouble with the owner or manager?—When a meeting has been called and it has been discussed and the facts laid before it, and we have selected our deputation of men, we have found the men have not felt that they could take their bread and cheese and pursue that course. In fact, we have never had an examination.

33010. If you have never had an examination, what makes you think that the men would be treated badly or suffer for it in some manner if they gave an unfavourable account of the mine?—I have known in several cases where it has been supposed that anonymous letters have been sent to the inspector of mines, and that whether right or wrong some men have had to pay the penalty; that is, there has been suspicion laid.

33011. That they were the persons who wrote the anonymous letters?—Yes; because they were making a big noise at miners' meetings they have had to suffer.

33012. Perhaps they were sent away not because they were supposed to write the anonymous letters, but because of the noise they were making at the miners' meetings?—No. The inspector came after, say, what we would suppose was the information given. Men have been very timid in that respect, so that we have never had an examination under that rule.

33013. They have been very timid, and the reason for the timidity is that——?—Somebody would be spotted out.

33014. The reason they give is that they think they have noticed that persons who are supposed by the management to have written anonymous letters complaining of the mine have had their livelihood taken away from them?—Yes.

33015. They have been dismissed?—Yes.

33016. That is your view, at all events?—Yes.

33017. With regard to inspection by officials, you say that officials are too much engaged in looking after the output and not safety, and that they should not be responsible for the output. You agree with most of the other witnesses on behalf of the men who have come before us, that the firemen's duties ought to be confined entirely to looking after the safety of the men, and they ought not to be concerned in looking after the output of the mine?—Simply on the ground I just stated, that when the contractor had it the firemen and under-manager were solely set aside for that purpose, but in the change these men are rather pushed to increase the output and to cheapen it. We think they should be responsible, and that the safety of life and limb should be their sole business.

33018. Supposing it was their sole business, do you think they have too large districts? Supposing that other duties were taken away and your suggestion acted upon, do you think they would then be able to go through their districts properly?—Of course it is already understood our district or county is not composed of very big collieries.

Digitized by Google

33019. You complain that they have too far to travel. How could that be avoided? You mean the districts are in some cases so large they cannot get through the gates and airways in the course of their inspection?—The time is largely taken up in seeing to the moving of the coal to the pit-bottom.

33020. If their time was not taken up in that way you think they could get round?—Yes.

33021. And visit the airways and do what they ought to do?—Yes.

33022. With regard to the question of discipline, you favour prosecution rather than fines. Men, you say, do not like police courts, but although the men themselves might be in favour of the system of fines rather than being taken always before the police court, your executive have come to the conclusion in the interests of safety, whether the men like it or not they ought to be taken before the police court, and not have the option of agreeing to a fine?—We have always supported that, and when we have had people come before us objecting to fines and wanting to get out of them, of course they have to agree to it themselves, and then they think if they do not agree, there is the other course of dismissal. We rather think that the colliery management should take them into the police court.

33023. Do you think the fear of being taken into the police court would improve the discipline so that it would not be necessary to have a great many prosecutions?—I think so.

33024. That is your view, at all events?—Yes.

33025. As regards Special Rules, men should have a voice in establishing the rules. What do you mean by "establishing the rules"?—When Special Rules are made, and I am thinking now of our own Special Rules, we have had no part in them, and have found some things which have been studiously left outside. If I might express one, we found at a colliery the mealtime of boys had never been recognised underground. They had to take their food whenever they could. The horses were never put in the stables and that kind of thing, and we appealed against it, and took the Special Rules——

33026. You suggested certain Special Rules to deal with the point?—When we took the Special Rules for the county we found that while they applied under the Factory Act to boys, it was not intended that it should apply to boys underground. I only point that out as one thing; there may be others.

33027. Mr. Ellis has pointed out to me in Subsection 7 of Section 7, the Coal Mines Act of 1887, the principal Act, there is a provision: "No boy, girl, or woman shall be employed continuously for more than five hours, without an interval of at least half an hour for a meal, nor for more than eight hours on any one day, without an interval or intervals for meals amounting altogether to not less than one hour and a half." Is that satisfactory, or would you have a Special Rule making that stronger?—I should have the word inserted "underground."

33028. It is no man shall be employed; that is above ground and underground?—It was pointed out to us that it did not apply to underground.

(*Mr. Smillie.*) It is with regard to the employment above ground.

(*Chairman.*) That seems extraordinary.

(*Mr. Ratcliffe Ellis.*) I was under the impression it was about the mine.

33029. (*Chairman.*) That is your point; you wanted Special Rules to deal with that objection to the Act of Parliament?—We thought if we had been there when these Special Rules were made we should have had some voice, and have thought the boys underground should have the same treatment as boys on the surface.

33030. Did you point that out to the mine-owners?—Yes, the mine-owners agreed, and the boys. In the last century they did not have it.

33031. What do you mean by that?—It has never been in that colliery. The boys never had a mealtime underground until 18 months ago, after this thing was established. They have mealtime underground now.

33032. Eighteen months ago you got your way. For a long time you tried to get the Special Rule altered so as to ensure the boys working underground getting the same protection afforded them as when working above ground, and you were not able to do it?—This was the colliery, and they conceded our request and established a mealtime.

33033. What have you to complain of if they acceded to your request?—We were only pointing out that in making Special Rules men should have a voice.

33034. (*Mr. Smillie.*) Is it incorporated within the rules or is it a mutual agreement?—No.

33035. (*Chairman.*) Is it a special arrangement, or is it incorporated in the Special Rules?

(*Mr. Smillie.*) It can be taken away at any time. It in a mutual agreement.

(*Witness.*) Yes.

33036. (*Chairman.*) The Special Rules say nothing about it?—No.

33037. When did you first suggest that the Special Rule should say something about it?—When I found it out.

33038. When was that?—2½ years ago.

33039. About a year after that a special arrangement was come to?—Yes.

33040. The rules were not altered, but a special arrangement was come to?—Yes.

33041. You want now that the rule should be altered?—We point out when Special Rules are made that the men should have some voice in them.

33042. What do you mean by "have some voice?" Before they are printed and promulgated by the mine owners, that there should be some preliminary conference between the mine owners and the men as to the kind of rules that would be desirable?—That is so.

33043. Before the owners had pledged themselves to a course of action, they should meet the men in conference. That is your idea?—Yes.

33044. With regard to accidents, you favour systematic timbering. What do you understand by "systematic timbering?"—I do not know how it prevails in other counties, but if it does not look dangerous, you see winding going on.

33045. You mean to say there ought to be some definite rule that timber should be placed on the ground a certain distance apart even though the roof may not look dangerous. That is your point?—Yes.

33046. "After a fall, winding should be suspended until properly set."

(*Mr. Smillie.*) After a fall in a roadway no further work should go on underneath that place until that is properly set and arranged.

(*Witness.*) It is the custom to get out the debris or rock or whatever it is, and make shift. We have known lads travelling under them meet with very ugly accidents.

33047. The management have not thought it necessary the instant a fall takes place to prop up the roof?—That is right.

33048. You think they ought to suspend the haulage until the roof is propped. They put the stone on one side and go on with the haulage and do not prop up the roof at once. That is it?—Yes.

33049. For accidents of this kind unskilled workmen are largely responsible for. Then the management sometimes put men to work at the face where they naturally would have to set timbers to protect themselves, who do not know their duties?—We think in these later years that men have been put in charge of stalls, and so on, who have at least not had any experience, and we have thought that this kind of thing has led to a good many accidents, because we have taken the skilled men, as we call them, and with the skilled men the accidents are materially depreciated.

33050. (*Chairman.*) I should like to have some statistics about that, if you have any, with regard to the men. You divide the stallmen into two classes, in your opinion, unskilled and skilled, and then take out the accidents in stalls where skilled men are in charge, and the accidents in stalls where unskilled men are in charge, and you find the rate is higher when unskilled men are in charge?—We have not been able to get a definite arrangement of selection.

33051. I thought you had divided them?—No, we have made observation of unskilled men largely by our Friendly Societies. Those on the accident fund come from a class of people who have not had a proper training and are not what we call skilled men.

Digitized by Google

Mr. W. Latham.

5 Dec., 1907.

33052. You find in your provident societies men come for money owing to accidents having happened, and your experience is that the greater part of these men who come upon your fund are men who are not skilled?—Yes, we think men who have served other trades and callings and get into the colliery late in life should be excluded, or that there should be some age limit as to when a man should not come into the pit. Anyway, we think unskilled workmen largely add to the danger of themselves and other people.

33053. You believe that the statistics of friendly societies bear it out. When you inquire into the class of men who come on the society in respect of accidents underground your experience is that the greater part are unskilled?—Yes, and it is the same class of people from time to time.

33054. With regard to the haulage it is not very much in vogue in your mines?—In hauling we take it with mechanical apparatus.

33055. It is all horse haulage with you?—Yes.

33056. Have you anything to say about the danger of horse haulage?—We do not know whether it may come in with that question. You will soon tell us if it does not. We have thought with the horses travelling, the boys, the dust, and that kind of thing, that a better system of watering in the mines may assist the haulage. That is not a question of safety of life or limb so far as the roof is concerned, but it is very necessary.

33057. Would you have the coal sprayed?—Yes.

33058. As it goes along?—Have the roads sprayed to lay the dust as it goes along the haulage roads.

33059. You do that, not on account of the safety of the miners, but merely because it is pleasanter not to have dust in the mine?—We think it is injurious to the men travelling.

33060. Injurious to health?—Yes.

33061. You do not suggest that it is a cause of explosions?—No.

33062. With regard to shaft accidents, you say that men should not be allowed to ride on two decks. Why not, if there are two decks to the cage?—I am speaking now for our county, but we have had one or two accidents. In October, I think, we had this second deck business. We have always come down on one deck and the men always object to it.

33063. The men object to the two decks?—Yes.

33064. Why do they object?—I do not think anybody likes it, only you get hardened to it.

33065. Is not one deck the same as the other?—In raising and lowering men to the pit bottom and top with two decks we think it is susceptible to too many difficulties.

33066. What difficulties?—I have been in the sump myself.

33067. The cage is too heavy?—No, you take it to the pit bottom when one deck has got off and that has to go down into the sump and the other to get off. I am speaking from experience.

33068. You got a ducking on one occasion?—Yes.

33069. Owing to there being two decks?—Yes; men in our county have not been accustomed to it, and possibly they must get hardened to it. I know they do have it in other counties.

33070. (*Mr. Smillie.*) Do they load both decks at the same bottom?—Yes.

33071. They have not two bottoms for loading the decks?—No.

33072. If men are on the top deck and both decks go down the lower deck is in the sump?—Yes.

(*Mr. Smillie.*) In some mines they load at different places.

33073. (*Chairman.*) With regard to the safety catches and detaching hooks, do you approve of safety catches and think that they ought to be in use?—Yes.

33074. Have you had any experience with safety catches in your mine. Are they used?—No. We have one or two pits where, owing to certain regulations, we have had detaching hooks.

33075. Safety catches is a different matter altogether. Do you know anything about safety catches? Have you seen any catches in action?—Several, as an experiment.

33076. You have seen experiments?—Yes.

33077. That has convinced you it would be a good thing to have safety catches?—Yes; I am of opinion that it is the only place in mining where a man is not under his own control. If he is down the pit he can timber, but when solely on the end of the rope he is in the hands of somebody else, and the very best thing should be done.

33078. The safety catches do not act through the miner: they are automatic?—He cannot put them into operation himself. We say that, but if there is anything that can add to the safety it should be provided.

33079. However, you have had no personal experience so that I will not ask you any more questions about them. The detaching hooks are to prevent overwinding?—Yes.

33080. You have detaching hooks in your mine?—Yes.

33081. They work all right?—Yes.

33082. You have nothing to complain of?—No; in one or two instances it has saved the cage going over the top.

33083. Therefore, you think they ought to be made compulsory?—Where the men are raised and lowered by mechanical means.

33084. You think they ought to be made compulsory?—Yes.

33085. With regard to investigation into mining accidents, you ask for an immediate inquiry after accidents, and you complain that the inspector does not come quickly enough?—We think if a day or two passes, as we have known it, that many things can be re-arranged, and we think that the inspector should see it immediately it takes place.

33086. You have some suspicions of the management in those cases, although it is clear that the scene of the accident ought to be left exactly as it was until the inspector comes down. You think that is not always the case?—It is beyond thinking.

33087. You know it is not always the case?—Yes, I have seen timber sent down.

33088. After an accident?—Yes.

33089. How would you deal with that?—We think that these people may do it for certain purposes but if found out there is the word "prosecution."

33090. How would you make the inquiry more immediate. How would you insist on the mines inspector coming down within two days if he could not get there in less time?—It is suggested by a better system of inspection.

33091. You would make the districts very much smaller so that the inspector might be much nearer his district?—Yes.

33092. At the same time you have told me you would not allow the working miner in the third class to investigate an accident. Would you allow them to go down and perhaps remain in the pit for some time until the assistant inspector or the chief inspector came to see fair play? Would you suggest that?—Yes.

33093. With regard to the coroner's jury, juries you say should consist so far as possible of practical miners. "In our district miners are studiously avoided—get shopkeepers, etc., who have no knowledge of mining or mining terms." How is that? I understand juries are generally got together by a policeman?—Yes.

33094. Do you think the policeman has instructions from the mine-owners that he is to carefully avoid anybody who knows anything about mining?—I have been asked to serve on a good many inquiries myself, but in the long years I have been in our district nobody has asked me to serve on a coroner's jury.

33095. You are very much obliged to the constable?—No.

33096. You think it would be your duty to serve on a coroner's jury?—It is not my opinion, but the common opinion of the pitmen that because they know too much, or may make too many inquiries, they are studiously avoided.

33097. Do you think it results in these inquests being scamped in many cases? The coroner's jury not being practical miners results, you think, in the inquiry not getting out the full facts of the case?—I could not express that determined opinion, but from my knowledge of what has taken place, the people concerned have not had a thorough knowledge of what they are inquiring into, say farmers, or that class of people.

Digitized by Google

33098. How would you proceed to remedy that state of things? What do you suggest should be done?—We rather suggest that they should get miners there so far as possible.

33099. How are you going to ensure that miners should be asked to be on the jury? Who should be the person to get the jury together, for instance? Who should go round and ask the persons to serve on the jury? Ought it to be the constable, or some other person, say a fireman, or somebody in that position?—A fireman.

33100. A minor official of the mine, like a fireman, who is responsible.—It is very probable that he would be even worse than a constable.

33101. (*Mr. Smillie.*) He would not call a miner?—No.

33102. (*Chairman.*) Of course not, if his conduct was impugned. Who would you have to select the jury?—Have you thought about it at all?—No, I should not care for my part to select the jury.

33103. It is a difficulty?—We think that if all the facts of the case had been brought out it might have led to greater care being taken in the future.

33104. Do you suggest that a provision should be put in the Act of Parliament to say that in case of a fatal accident underground in a coal mine that the coroner's jury should be composed exclusively of practical miners?—Not exclusively.

33105. Only some proportion, say a half. Would you say that half the coroner's jury should be miners, and have that put into the Act of Parliament?—We think that something should be done in this respect, because it is studiously avoided not only in our district, but in others, I believe, and we call attention to it.

33106. You have not thought the matter out as to what should be done, but you say that something should be done?—Yes.

33107. With regard to the examination for managers' certificates of competency, you say that a man having failed in his own district to get a certificate ought not to be allowed to sit for examination in another district. Does that not seem hard, because there may be another district where he might pass. In the first place a man may fail in his examination in a particular district because in that particular district certain special qualifications are wanted which are not wanted in another district, so that he may be perfectly fit to be a manager in one district and not in another. It has been suggested to us by the witnesses?—It is suggested that there should be a uniform system.

33108. Some people say that a manager ought not to be allowed to go from one district to another without passing a fresh examination, and that his certificate should be only good for the particular district in which he gets it?—Our observation has been that there is a very much harder theoretical examination in some districts than others, and that the people concerned soon find out and will not enter.

33109. Supposing a man works hard and just fails to pass his examination, perhaps only fails in one subject. If he gets up that subject in three months, is it not hard that he should not be allowed to go in in another part of the country, although he could not pass three months before?—It would not be long to wait for his own district.

33110. He could always wait six months in his district, you think?—If there was a possible uniform system.

33111. He would have to wait a year, I am told. Your suggestion is that he should always wait a year if he does not pass an examination?—We suggest that there should be a uniform system and if he failed in one place he could not possibly pass in another.

33112. Would you suggest that the manager's certificate as at present should continue to be a certificate all over the United Kingdom, and that a man who had a certificate in one district should be allowed without any further examination to go into any other district. That is so at present. Do you think that is a good state of things? Apparently you do?—I think if he can pass in one district and is a qualified certificated manager and can get a position in another district, he ought to be able to get it. I would not insist on an exclusive county and keep a man, but if you had a uniform system he could go anywhere. We think an open market should be maintained.

33113. You would insist on a man passing an examination that would fit him to be a manager anywhere. You think whether they were fiery mines or not in the district, that he ought to know about fiery mines and that the certificate should be a certificate which would show that a man was competent to deal with any other class of mines whatever in the whole United Kingdom?—I do not think a man who could not deal with a fiery mine, whether he was in a non-fiery mine or not, should be made a manager.

33114. We are told in some districts that a man need not qualify in all the papers, but only get a certain aggregate of marks. A man may do well in every other subject except subjects connected with a fiery mine. He may know nothing theoretical or practical about fiery mines and yet get a manager's certificate which would take him all over the kingdom. You do not suggest that is a good thing?—No, because I think that any man who sits for an examination must know all about gases, whether a fiery district or a non-fiery district, and that forms the greatest portin of his merit. No one would get a certificate who could not say something as to gases in fiery mines.

33115. As to ankylostomiasis, you say men should be warned against polluting airways. Have you had any scare of ankylostomiasis in your mines?—We had it with other people. We have not had it as a district, but we were alarmed as other miners were and made every investigation by calling the attention of the medical officer of health for the country who made sundry inspections, and so on. We came together as a body of workmen from one firm in particular. and arranged amongst other things that men should be warned against polluting the airways and so on.

33116. Do you think there ought to be sanitary conveniences underground?—No, I have thought over the question and read about it, and I think it should be confined to the goaf at least, or the gob as we call it.

33117. With regard to ventilation in mines when a working is full of gas the men are withdrawn but from foul air there seems no protection if lights will burn.

(*Mr. F. L. Davis.*) Foul air apart from gas, I suppose he means?

(*Witness.*) Yes.

33118. (*Chairman.*) Do you think the ventilation is insufficiently attended to at present?—Yes.

33119. Do you think that Rule 1 as to ventilation ought to be amended?—It is rather indefinite. It says: "An adequate amount of ventilation shall be constantly produced in every mine to dilute and render harmless noxious gases." Do you think that should be amended?—Our experience is that places are worked so very hot. You see men stripped to the waist and men cannot even work in their ordinary moleskin trousers, but they simply take calico and so on, and we know where there is a lot of blasting obnoxious fumes come from the high explosives, now, worse than with the old gunpowder, and you see, the fireman is not responsible so long as a man will work. A man has to determine himself and come out of it. A fireman would withdraw him if there was gas, but there it is, hot and injurious, as we know. We see men come out of the pit in a bad state. There is no gas and there is no law broken.

33120. If they come from shot-firing?—Yes.

(*Mr. Ratcliffe Ellis.*) Under General Rule 1 there must be an adequate amount of ventilation to render harmless noxious gases. General Rule 7, which is the provision for withdrawing the men, says this: I do not think it is confined to gases—"If at any time it is found by the person for the time being in charge of the mine, or any part thereof, that by reason of inflammable gases prevailing in the mine, or that part thereof, or of any cause whatever."

33121. (*Chairman.*) Your point is it is not dangerous, only disagreeable?—And injurious.

33122. Injurious to health?—Yes.

33123. It is not likely to cause an explosion or an accident?—Not an explosion, but we have seen men made ill when there has been severe blasting. We have seen the fumes, but if there had been sufficient ventilation it would not act on them. They have been carried home ill.

33124. That would be noxious gases, gases from blasting.

(*Mr. Ratcliffe Ellis.*) I should think it is dangerous if a man worked in that and he is rendered helpless.

(*Dr. Haldane.*) That would clearly come under the Act.

(*Mr. Smillie.*) The Witness's point is that it is not so understood. It is only explosive gas.

Digitized by Google

Mr. W. Latham.

5 Dec., 1907.

(*Witness.*) The fireman fires the shots and there is no gas. He has made his examination and if it is too hot he has no remedy. There is no gas; he could not withdraw the men.

(*Chairman.*) Too hot to be comfortable; not necessarily to be dangerous to health, but too hot to be comfortable.

33125. (*Mr. Smillie.*) By "too hot" you mean more than too hot in temperature. You mean that it might be full of smoke?—Yes, breathing and re-breathing it.

33126. (*Chairman.*) That would be dangerous, I should think. Too much smoke might induce disease?—But people in the colliery have no remedy. Of course if there is gas the officials withdraw the men instantly.

33127. (*Mr. F. L. Davis.*) Do you consider that there is not sufficient ventilation at these times?—Yes.

33128. Not a sufficient current of air moving to move these fumes and gases?—Yes. We think that the firemen should at least be responsible if the place was above or below such a temperature, and that there should be some more determining factor for withdrawing the men than the question of gas.

33129. If there were gas there, there is no doubt the men would be removed?—Yes.

33130. As there is no gas, you still think the amount of ventilation passing is not sufficient to clear?—Yes.

33131. (*Mr. Cunynghame.*) With regard to temperature, the mines are getting deeper, and as the coal gets exhausted the mines will have to be deeper and deeper in the future?—Yes.

33132. If so, the temperature will probably go on increasing?—Naturally so.

33133. You could not very well have a rule that when the temperature was exceeding a certain amount the men would be withdrawn. Would not that put out of work a great deal of deep mining?—No, I do not think it would put out of work these people, but I think they would find better methods of ventilating the pit.

33134. With these deep mines they could be ventilated and made cooler?—Yes.

33135. Have you formed any estimate as to the temperature? Perhaps you are not able to answer that question; it is a difficult one. What is the maximum temperature do you think a man ought to work in?—I am not sufficiently up in that.

33136. It is a very difficult point. Dr. Haldane will know about it better than you. Now with regard to coroners' juries, what do you think is the primary reason a coroner's jury is ever got together for. What is its chief business in the case of a fatal accident?—To inquire as to whether the man has met with his death in a legitimate way, or say it has been an accident, or neglect.

33137. It is chiefly to inquire into the neglect of certain persons?—Yes.

33138. If it is found they have been guilty of gross neglect, to put them on their trial for manslaughter?—Yes.

33139. If very difficult questions of engineering arise connected with an accident, would you agree those would be better inquired into, not with the object of finding this or that man guilty, but with the object of finding out the scientific defects at the bottom of it, by an inquiry under an expert under Section 45 of the Coal Mines Act?—That is in the second instance, after the first inquiry.

33140. It would be generally after the second inquiry. Would you not rather rely on a regular inquiry by an expert who would have full power of examining everybody, rather than a coroner's jury at all if it came to a question of the scientific aspects of it, to find out whether some practice had been done which was generally dangerous?—Yes.

33141. If you agree that the chief object of a coroner's jury is to fix blame to someone, would it not be better to have that jury composed of the generality of citizens rather than a jury of a particular class of men? Perhaps you will allow me, before you answer it, to put it in another way. Might not the doctors say, when there is a doctor killed, that we ought to have half the jury of doctors, and might not a cabman say, when a cabman is killed, "We ought to have half the jury of cabmen," and might not a seaman say, when a seaman is killed, "We ought to have half the jury of seamen"; in other words, might it not go on to such an extent as to be impracticable? On the whole, when you put a man on trial for his life is it not better, after all, to leave it to the generality of the citizens always remembering you have Section 45 in the background, to inquire afterwards, supposing that section to be properly worked? Do you follow the view I am putting before you?—Yes.

33142. It is one view of it, and I should like to have your opinion upon that?—You are rather leaving it that the independent composition of the jury now would be preferable to having miners who may be so one-sided.

33143. I am not giving an opinion: I am rather putting the other side before you. There is something to be said on the general ground of leaving coroners' juries in the case of deaths in mines much as they are in the case of general inquiries in the country.

(*Mr. Smillie.*) The Witness's complaint was that they were being kept out altogether.

(*Mr. Cunynghame.*) Assuming a fair proportion of miners in the ordinary course, on the whole you would agree with me?

(*Witness.*) If we had not made our observations that for a series of years miners had been kept out, we should not have presented this.

33144. (*Chairman.*) Do you mean miners are entirely kept out of it? Is there a jury which does not contain one practical miner?—I think I can remember one jury where they selected two miners.

(*Mr. Smillie.*) He only remembers one in which there were two.

33145. (*Mr. Cunynghame.*) It would be wrong if they regularly went round and purposely left them out?—I unhesitatingly say that is so.

(*Chairman.*) You have known coroners' juries on which there has not been sometimes one practical miner?

(*Mr. Smillie.*) He says on one occasion he knew there were two practical miners, but that is the only occasion he knows.

33146. (*Chairman.*) In all your experience of coroners' juries you have only known two practical miners called on to serve?—Yes.

33147. (*Mr. Cunynghame.*) Where are coroners' inquests generally held in the district you speak of?—Our present coroner objects to holding them in public-houses, but they are held nearest to the place to where the person is lying dead, say in a school-room, or something of that kind.

33148. From what place are the jury summoned, generally?—From that place.

33149. That may be or may not be near a mine?—It could not possibly be where there are no miners living.

33150. Your point is that for some reason or other the proper proportion of miners has not been called together in coroners' juries?—And if there had been special features that the accident brought out, it would not only have been a warning to the men at the colliery, but to the management sitting there listening to the thing.

33151. On the whole I gather it is your opinion that it is hardly worth while disturbing the law on general principles throughout the country. In your opinion when any particular case is being tried affecting a trade, a man in that trade must necessarily be on that jury, or six of them?—We suggest, in what we have put forward that as far as practicable some miners should be selected.

(*Mr. Smillie.*) Sub-section 7 of Clause 48 prohibits the selection of any miner employed in the colliery.

33152. (*Mr. Cunynghame.*) Mr. Smillie calls attention to this important provision of the Act Section 48, Sub-section 7: "Any person having a personal interest in or employed in or in the management of the mine in which the explosion or accident occurred shall not be qualified to serve on the jury empannelled on the inquest." You would agree with that?—I should not agree any man who worked in the colliery where that man was killed because he worked in that colliery should be exempted from sitting at the inquest.

33153. Or that it should disqualify him?—Should disqualify him. That has been put in operation in our district.

(*Mr. Smillie.*) That is the law.

33154. (*Mr. Cunynghame.*) Would you let the coal owner, the man who owned the colliery, serve on the jury?

(*Mr. Ratcliffe Ellis.*) Or his manager.

(*Witness.*) No.

33155. (*Mr. Cunynghame.*) I agree with you. That is the present law. Would you allow a person who had a personal interest in the matter to serve on the jury?—Not if he was a relative.

Digitized by Google

33156. Anybody who had a personal interest in the colliery ?—If I am working at a colliery and I am away from anywhere where that man was killed, why should I not serve on the jury ?

33157. If you would not allow the owner to serve on the jury is it not better not to allow the men either, and have an impartial jury ? It says, " in that particular colliery." Do you not think it is better in fairness to have no one connected with it when a man's life possibly is at stake ? It is not merely to inquire into the cause of death, but possibly to put a man on his trial for his life, miner or manager. You appreciate he may be a miner or a manager ? —If he is a miner at that colliery and is not in that stall, but away at another extreme end of the pit, and has nothing to do with it, and could put some question or phase of it that these people know nothing about, I should think it was a good thing for him to be present.

33158. He could ask questions : that is another point. I am speaking of serving on the jury.—We think that that should not exempt a man from serving on the jury because he works for the colliery company under which this said accident is concerned.

33159. I can imagine also a case in which the proprietor of the colliery knows nothing about it : he may be far away from the accident and know nothing about the accident, and yet you think it fair not to let him serve, as to which I agree with you.—I seem to have no case. The position is summed up in that. We have no district where the miners are intermingled. They are all one firm. One spot there, that is all one firm. You could have no miners serving on that inquiry or inquest beside a man out of that colliery.

33160. It says no one shall serve who is in the management of the mine in which the accident occurred. It is only the mine in which the accident occurs : they do not let the man be chosen from that.—Here is a colliery company which has 10 pits, (only once in my lifetime have I known, as I have said, two men) and because they worked for that colliery company (they worked at other collieries, but of course that is in the same district, in which we may term a nest) they have not been allowed to serve.

33161. Do you not think if it is fair and proper to exclude the owner of the mine in which the accident occurred, the better plan is to take the thing generally and exclude everybody working therein ? If one is likely to be unfair is it not possible the other would be unfair ?—Then we shall never have miners serving.

33162. A man can be got from another mine ?—He would have to come, in one or two cases, 12 or 14 miles.

33163. Possibly.—And in other cases 5 to 10 miles.

(*Mr. Cunynghame.*) Possibly.

33164. (*Mr. Smillie.*) Are those 10 pits in that locality one mine ? They may belong to one owner, but they are not one mine ?—No, 10 mines.

33165. This only means the particular mine at which the accident takes place ?—The particular shaft.

33166. (*Mr. Cunynghame.*) The law is you may have a man from the other mine, but not from the particular mine in which the accident occurred.—I am saying that does not operate.

33167. You are telling us as if it has not been satisfactorily carried out, but I am asking as to the law. You would be satisfied with the law as it exists if it was carried out, would you not ?—I have made reference to this. I should be satisfied when the police are forming the jury, if it is understood from that particular pit they could not have that man, but from the next pit, perhaps a quarter of a mile away, they could have a man.

33168. Taking the jury impartially from the neighbourhood round. There would be a butcher or two, a miner or two, one or the other ?—Yes : that is what we are asking.

33169. According to that, if the jury was properly assembled, the law at present is sufficient ?—We say that the people who have been carrying it out have not carried it out properly.

33170. I see. If they carry it out properly the law seems sufficient, does it not ?—Yes, but that has not been the construction put upon it.

33171. I only wanted to get to your point whether it was a point of law that required alteration, or practice. According to you it is the practice that requires alteration ?—Yes. In my opinion it prevails not only in my own particular district, but there is a complaint generally throughout the country.

33172. That we will certainly remember and take notice of.—I think I am correct in saying it not only applies to us, but having miners on inquests is studiously avoided.

33173. That is the impression you have got, at all events ? —Yes.

33174. You are acquainted with Section 45, which provides that inquiries may be made in addition to the coroner's inquest, an inquiry by the Secretary of State ?—Yes.

33175. Is there any complaint in your district that those sections have not been put into effect where they might have been put into effect ?—Of course we have accepted the ruling of the people concerned.

33176. Can you mention any case ? I do not think you can, if you ask me.—No, I could not suggest that any verdict at an inquest had not been brought in according to the facts of the case.

33177. And that the facts had been pretty well brought out as the inquest, at much as they could probably be got out ?—No, we do not think that.

33178. Can you mention any case in which an inquiry would have carried it further than the coroner's inquest ? —We think some people would have been censured.

33179. I am coming to that. The object of the inquiry is not to censure people : that you leave to the coroner : the object is to find out the cause of the accident.—We say that by a jury who have not a general knowledge of mining there are many things which have not been brought out.

33180. (*Mr. Ratcliffe Ellis.*) I did not know that there was such a scramble to get on juries. I have generally found people anxious to keep off them. Do you find men are anxious to be on coroner's juries ?—I have never felt that way.

33181. Particularly anxious to be on or off ?—If the police have come and have asked me I have made every sacrifice, but it is well known they never come when there is an accident.

33182. I believe it is about 1s. they get for attendance ? —I have never had 1s. I have been foreman of the jury when selected and I have never had a shilling.

33183. Do you think a miner would care to lose a day by attending on a jury ?—We do not think they would lose a day.

33184. Would somebody pay them ?—No. We think in a colliery district there are men on the night shift who are at home and who would serve if they had been asked.

33185. They are at work in the night, and would serve on the coroner's jury in the day-time. Why do you want them on the jury ? You can call them as witnesses. You can call any man who has some special knowledge as a witness, or he can give information to persons to put questions. Why do you want them on the jury ? I am assuming the object of the coroner's jury is to find out the cause of death, secondly, whether anybody is to blame for it ?—Yes.

33186. Why do you want the men on the jury ?—To find out when and whether there has been any dilatory method in the management.

33187. If they have any information they can give it as witnesses ?—These people can intentionally do that ?

33188. Any person in a mine. A miner who knows something special about it can give evidence ?—He is not called.

33189. He may be called ?—Who would call him ?

33190. If the coroner got information that there was a man who knew something about it, he would be called ?—That does not take place. The people who give evidence are left with the colliery people.

33191. You say they are left with the colliery people, but my experience is that the policeman who helps the coroner and his warrant officer gets all the evidence he can from everybody, and brings it before the coroner to be called, not the colliery people ?—I am afraid that is not so.

33192. Have you found that coroners refuse to call people who might volunteer as witnesses ?—No. The coroner simply comes on the scene and the officer has, of course, the nearest relative and the man nearest to him when he was killed, or the men who have helped to get him out, and the fireman.

33193. They are all called ?—Yes.

33194. Will you explain why you want the miners to be on the jury ?—That there may be a closer investigation.

33195. Do you think there would be ?—Yes.

Digitized by Google

Mr. W. Latham.

5 Dec., 1907.

33196. Do you think the investigations are not sufficiently complete for the purpose of ascertaining the cause of death and whether anybody is to blame? Those are the only two things the coroner has to do?—We think that there have been instances where at least you could have lodged a case of manslaughter and so on. There have been many lax things in connection with the whole circumstances, and it would have been of very great value if men who had known the work had been at the place.

33197. Mr. Cunynghame has pointed out the object of the coroner's inquiry is limited, first of all to ascertaining how the man came to his death, and secondly, is anybody to blame for it?—Yes.

33198. Those are the only two things the coroner has to inquire about. Do you think upon those two points that there is not sufficient investigation before coroners' juries?—It comes to our knowledge that there has been a juror who has had to ask what a prop is. The jury have not known what is meant by a tree, they have asked, when you say you set a tree, what you mean. They had an idea it was like a tree for apples to grow on, and if the soil that fell on him was the soil of the ground. They show absolute ignorance.

33199. In a colliery district is it not rather exceptional to find anybody so absolutely ignorant of colliery matters as that? Many of the shopkeepers have probably worked in a mine in their earlier days?—There may be some instances, but not many.

33200. In your district it is not so?—Yes.

33201. With regard to inspection after an accident, you think things should be left as they are?—Yes.

33202. That is the law now. Have you the Act of Parliament before you? Section 35, Sub-section 2, says: Where loss of life or serious personal injury has immediately resulted from an explosion or accident, the place where the explosion or accident occurred shall be left as it was immediately after the explosion or accident, until the expiration of at least three days after the sending of such notice as aforesaid of such explosion or accident, or until the visit of the place by an inspector, whichever first happens." That is to say, the law requires matters to be left exactly as they are until the inspector comes?—We say they are not left.

33203. That is a violation of the Act of Parliament.

(*Mr. Smillie.*) Is there not "unless" something?

(*Mr. Ratcliffe Ellis.*) Unless compliance with this enactment would tend to increase or continue a danger or would impede the working of the mine." It could not be left under those circumstances.

(*Mr. Smillie.*) It is easy to say it should not be left.

(*Mr. Ratcliffe Ellis.*) That is an evasion. At present that is the law of the land. You would not ask that things should be left exactly as they were if it was going to cause danger of fire?

(*Witness.*) No.

33204. You do not want it to go on burning?—No, but if there was an absence of timber and men had been calling out for timber for three weeks and there had not been any timber sent down, I do not think as soon as ever this accident occurred that loads of timber should be taken to the pit and sawn up and sent down and got ready by the time the inspector comes. In two or three days the whole thing is changed. I am bound to say that is so.

33205. Supposing that the place was dangerous and there was a danger of a further fall, would you wish that it should remain as it is, the danger increasing and the place coming down?—That is not what I am asking.

33206. Assuming this rule was honestly carried out, is there anything more that you want?—No, only that if it was known the management did that and the people who did it were prosecuted, then they would not do it.

33207. Then it goes on to say: "Every owner, agent or manager who fails to act in compliance with this section shall be guilty of an offence against this Act." That is to say, he is liable to be prosecuted if he alters the conditions unless it should be necessary to prevent any further danger. I do not understand you to wish anything further than this enactment, but you say it is not carried out?—Yes.

33208. And there are cases where the rule has been violated and nobody has been prosecuted?—Yes.

33209. Do you think the inspector has been deceived in those cases?—I think so.

33210. Do you not know that in practice the first question the inspector asks is: Is this now in the condition it was when the accident happened?" Do you know that?—Yes.

33211. Do you think he is deceived?—I am sure he has been.

33212. It is unfortunate?—I have known the timber sent down and have seen it sent down.

(*Mr. Smillie.*) He is sure it has been done.

33213. (*Mr. Ratcliffe Ellis.*) I should not think that they were so innocent as to be so imposed upon. With regard to the safety catches, have you heard that at times the safety catches come into action when they are not wanted and cause accidents?—I could not say that I have.

33214. Have you heard of an appliance by which the engine can be stopped in case the speed is not diminished when it comes to a certain point in the pit to prevent over-winding?—To stop the engine instead of cutting off at the top.

33215. By which the engine is stopped. You have not heard of that?—No.

33216. Do you think safety catches can be applied satisfactorily to steel conducting guides?—I am afraid I am not an expert in that.

33217. I suppose that when you say you wish safety catches should be made compulsory, that is subject to their not causing a greater danger than they are intended to prevent?—Quite right.

33218. You have said nothing about the rope. Do you not think the tension of the rope is more important than safety catches?—Is that a suggestion there should be a stronger rope?

33219. No, that the rope should be carefully taken care of, the capping and the rope itself?—I am not complaining that is not so.

33220. If the rope is satisfactory and the capping is satisfactory, you do not want safety catches. It is only in case of the failure of the rope?—Yes, when the rope is broken.

33221. Do you know people of considerable eminence say that they would prefer the rope should be properly looked after rather than have safety catches, because they are apt to come into action when not wanted and so cause danger? You have not heard that view?—No. We have advocated it, because it is about the only place where a man cannot take care of himself, and if there is anything in the ingenuity of man the question of cost should not come into it.

33222. I agree every care should be taken to prevent accidents in the shaft, but the question is whether safety catches are the proper way to do it?—All I have heard against it has always been the question of cost, and we think that life should be more important, not, as you suggest, that they would act when it was unnecessary.

33223. If they did come into action when they were not wanted, the effect might be very disastrous?—That is so, but I have never heard that argument offered against it. The argument offered against it is the question of cost.

33224. With regard to unskilled labour in the mine, what is the sort of labour you refer to? What does the person do who is unskilled?—That is what we find. He is set on to load, perhaps he has been on a farm all his life or at some other industry, and knows nothing about mining. He comes into the pit to load. That is unskilled work.

33225. The rule is that a man must not get coal unless he has been working two years at the face?—That is not the application of it. I will tell you the practical application of it is this. If he is put with some more people and there is one among that number who has had two years' training it is all right.

33226. I want to know when is a man going to learn to become a coal-getter except by working at the coal face with a coal-getter as a loader or a drawer?—We suggest that there are many things in a pit, that there is a natural training. A man who has not gone into the pit until half way through his life is not a proper person to be employed.

33227. A man must learn somehow or other in the pits You say he is too old to learn if over 18?—Over 21. I would make it 21.

33228. You would provide that no man should be allowed to work in a pit who was not in a pit before 21 years of age?—I think so.

Digitized by Google

33229. Does the collier employ his own drawer or loader ?—No, he could not take him to the pit.

33230. Does he pay his drawer ?—Yes.

33231. This unskilled labourer is the servant of the collier ?—Yes.

33232. What has the management to do with that ?—The management has this to do with it: as soon as that man has been in the pit a month or two we say that he is set to work, and that he is as least incompetent.

33233. The collier takes this unskilled man in as a drawer ?—Yes, in many instances. The collier is not favourable to taking an agricultural labourer in.

33234. Who does take him in ? The drawer is paid by the collier and this is a drawer and loader, who is the collier's servant ?—Yes. What usually takes place, if there is labour wanted, is the manager at the pit top puts one on and tells him that next morning so-and-so wants a loader.

33235. The loader is not employed by the management at all, but by the collier, and paid by the collier ?—So much per ton for loading.

33236. He is the collier's servant ?—Yes.

33237. Therefore, the collier takes in these unskilled people ?—Occasionally.

33238. It must be the collier, because they are his servants. Does he take them because there is no skilled labour available ?—He does not want skilled labour. He wants to use them until moved up from the class of loader to another.

33239. Why does he not take one of them ?—He would.

33240. If there was one ?—Perhaps so.

33241. If there was not one, would you deprive the collier of his work because he must have a drawer to help him in his work ? Would you make the collier idle because you would not allow him to take a man to help him as a loader ?—It is not necessary to take in loaders. They are usually loaders before they come up to 21.

33242. We are talking about unskilled labour. You tell me that it is not the management who take men into the pit, but the collier. I suppose he takes them in because there are no other people available for the purpose ?

(*Mr. Smillie.*) The manager says: "Come out to-morrow; so-and-so wants a loader," and the management engages an unskilled person and sends him down.

(*Mr. Ratcliffe Ellis.*) The witness says the collier could not work unless he had a drawer or a loader and, therefore, if he has not a loader he would not work himself. There is a scarcity of them. If I am not right I want to know what you say. There is a scarcity of loaders amongst the people who work in the pit and, therefore, the collier gets a man who works outside the pit. He may be recommended by the management.

(*Witness.*) He could not get him down unless the management gave him consent.

33243. Is it not this: either the collier must take this man down or not work at all. It is at his own option ?—He must either have a loader or load himself.

33244. He would get less money if he loaded himself ?—There are not many that like loading.

33245. It is not the management that employ the unskilled men, but the colliers, because skilled men are not available, and they employ them rather than be idle themselves ?—I do not think they would be idle.

33246. However, that is the position ?—Yes.

33247. With regard to fines, were there ever fines in your district ?—Yes.

33248. Do you have fines now ?—Yes.

33249. At the request of the men ?—No.

33250. You cannot fine a man unless he is willing to be fined ?—No, and they do not fine them until they have got their consent because of the Truck Act, but they say: "You have done so and so; we shall give you notice, or else you can have a fine," and the man says: "I shall submit to a fine."

33251. Have you not known cases where the man has been threatened with prosecution and dismissal, and he asks to be fined rather than prosecuted or dismissed ?—It may be offered to him, and he selects it.

33252. There may be cases in which he asks to be fined rather than prosecuted ?—Yes. I should think he always would.

33253. In your view it is not a satisfactory way of maintaining discipline. A man ought to be prosecuted or dismissed ?—Yes.

33254. That is your view ?—Yes; we say he ought to be prosecuted. I am not so sure he ought to be dismissed, because that is not the law. I know the employer has the choice of either, but we think prosecution would be more effective to discipline than stopping a man's money.

33255. Fining will cost him more if he is taken before the magistrate ?—It costs more, but besides that there is the publicity of it, which would make it a good while before he commits the offence again, and, further than that, it would be a warning to the other men in the pit.

33256. (*Mr. Smillie.*) Your district is the Staffordshire Inspection District, No 9 District, it is called, I think ?—Yes.

33257. The geographical area is not so large as many other districts ?—No.

33258. It is pretty thickly populated with miners. I mean the Staffordshire Mines Inspection District ?—Yes.

33259. 55,000, nearly 56,000 miners under the inspector there—mine workers, I mean ?—Yes.

33260. A very large proportion of the lads in the mining districts will in all probability go to the pits ?—Yes.

33261. We may put it 70 per cent. or 80 per cent., I daresay ?—Not miners' lads.

33262. Of the lads in a mining district ?—I must say that there is a very strong objection on the part of the miner for his lad to go in the pit.

33263. I am speaking of the lads in the village. 70 per cent. or 80 per cent. of the lads in a mining village go to the pits to work ?—Yes.

33264. You have had experience on the County Council, I think ?—Yes.

33265. And with the Education Board of your district ?—Yes.

33266. Do you think it would be a very reasonable thing to give lads, who in all probability would find their way into the pit, some information in their school days as to the dangers likely to be faced underground ?—Yes, I should think so.

33267. At the present time the lads are sent into the pits absolutely ignorant of the surroundings, of the nature of gases, or the dangers which may be faced underground ?—So far as the schools are concerned in the county.

33268. Except for the information they get from the parents. I mean so far as their education at school is concerned, there is no attempt to give them information of that kind ?—No.

33269. Do you think it might be useful so far as safety and also so far as general information is concerned, if lads were taught in the last two or three years of school life something about the nature of gases, ventilation and geology, or anything to give them a knowledge of the dangers by which a mine is surrounded ?—I should think so from my personal knowledge.

33270. You think it might lead to greater safety underground ?—Yes, and it would prevent what now exists—the boys ignoring mining life and wanting to get away from it.

33271. It may perhaps lead to discipline, too ?—Yes.

33272. A lad who is absolutely ignorant of the great danger of explosive gas or other dangers underground is more likely to play with things than he would if he actually knew the dangers ?—That is so.

33273. Do you remember the time when the Coal Mines Act provided that a lad could go down a pit at 12 years old, but on the surface he could not be employed until he was 13 ?—Yes.

33274. Thousands of lads were working underground at the age of 12, where they would not be employed on the surface ?—That is so.

33275. That was objected to very strongly by the miners ?—Yes.

33276. They thought in view of the greater danger underground the age should be higher than on the surface ?—Yes. What usually takes place is that a lad for a week or a month is employed on the surface, and then graduates into the pit.

Mr. W. Latham.

5 Dec., 1907.

33277. When he is hardened?—When it was like that it was the other way about.

33278. The persons who desired to have the assistance of the lads would have preferred having them on the surface, but they could get them underground earlier under the old Act?—Yes.

33279. Now we have an anomaly of the same kind—where the Act provides for certain hours that lads and girls must work on the surface?—Yes.

33280. A lad of 13 or 14 underground may be employed eight or nine hours without a break at all?—That is so.

33281. There is no provision made in the Act for any care to be taken that he must have a break?—I have pointed that out.

33282. You think some provision should be made for the protection of young persons underground, quite as much as on the surface?—Yes.

33283. Probably more so than on the surface?—Yes, more so.

33284. Are the mines in Staffordshire generally—I know you will be able to speak for the whole district—considered large, to employ a large number of men?—Yes.

33285. Is the average small or large?—I should think it is small for employing.

33286. The average is small as compared with South Wales or other districts?—Yes.

33287. Would it average 120 or 125? Would the average number employed per mine be over 100 or 120?—In our Shropshire coalfield?

33288. Staffordshire as well?—More than that. The Staffordshire collieries are much bigger than ours. They have a bigger output, 1,200 or 1,400 tons a day, where we do not keep up to 100.

33289. That would mean the employment of thousands of persons underground in collieries of that kind?—Yes.

33290. The average number employed in each pit would be less than 100?—Yes.

33291. Based on an average of 100?—Yes, taking the average.

33292. In Staffordshire (you may be able to give the information I have not got), are there about 400 pits in the whole No. 9 district, which is included in the mines inspection—Staffordshire, Wallsall and Hereford—are there 400 mines do you think?—I should think so.

33293. You put it roughly there are 400?—Yes.

33294. Have you ever been appointed examiner, or did you say that in your districts you never had had examinations?—No.

33295. Have you ever examined a mine for any purpose, with regard to an accident or anything of that kind? Have you ever made a thorough examination of a mine itself?—No, not in that sense.

33296. Have you ever been a fireman yourself?—Yes.

33297. You have been employed as a fireman for a period?—A very short period. I was assistant to my father, say, when I was 20 or 21—when he was away I took his place.

33298. In answer to the Chairman you said you thought your present Staffordshire district might be reasonably well served with six inspectors?—Yes.

33299. That is the chief inspector, if you have one district, two of the present assistant inspectors, and an additional three practical miners appointed for that purpose?—Yes.

33300. You would be willing that those practical miners, if they are to be appointed for that purpose, should be qualified to the extent of holding a certificate of competency? Have you thought that part of it out?—I should object to them being appointed unless they had shown some efficiency.

33301. It has been suggested that they may hold a first-class certificate, as many practical miners are studying and have first-class certificates. You have no objection to that being one of the qualifications?—No.

33302. Provided they had sufficient practical experience to prove that they could do the work?—I should not consider they would come under that. Supposing it was a manager who had gained a first-class certificate and had put in for the position, I should think he must have been a man working at the coal face.

33303. Your first qualification would be a number of years practical experience at the coal face?—Yes.

33304. Secondly, you would not object to it being laid down that he must hold a first-class certificate of competency?—No.

33305. He would require sometimes to consult with and advise the colliery manager, who did hold the first-class certificate?—Yes.

33306. Did you really intend to divide this district into six parts, and then confine each of those six men to his own particular district, or would you not be as well pleased if the three practical inspectors, the lower grade inspectors, were put under the charge of the chief inspector?—I think that was rather there I was at sea, inasmuch as what I was aiming at was this. There are now three, and to do the thing efficiently, we want three more.

33307. You want six altogether?—I did not want to confine myself to saying that they should be of the same grade as the chief inspector.

33308. You would be content to put the two assistant inspectors, and three of the third grade inspectors, under the charge of the chief inspector, and he could station them in whatever part of the county he thought fit?—Yes.

33309. You were concerned to have a thorough examination of the mines?—Yes. I complain when the inspector comes in the mine he does not see the worst part of that mine.

33310. I want to call your attention to the fact, supposing you had three additional inspectors, you would still have almost 10,000 miners for each inspector?—Yes, that is about the number.

33311. Do you think one inspector could make a thorough examination of all the mines in which 10,000 men were employed if the mines show an average of 200 men?—Yes.

33312. I mean make the examination which you say would be thorough?—That is a quarterly examination.

33313. Could he once a quarter examine all the mines?—I think he could.

33314. Make the examination which you desire?—Yes.

33315. The examination which you require an inspector should make is really the examination which all the fireman make every morning?—Yes.

33316. Of all the roadways, haulage roads and every road you require to travel, and the working faces?—I have known when the inspector has been coming and there have been bad airways and roadways for horses, that lads have preceded him and the men and horses have been withdrawn, and the places have been fenced off, and when he has gone by he has believed there has been no working, and as soon as he has gone up they have been put back and the thing worked under the old condition of things. I know that personally.

33317. Of your own personal knowledge you have known when an inspector was about to visit a colliery that information was conveyed either before he came, or when he came information was sent down the pit and objectionable portions of the pit were fenced off?—Yes.

33318. To that extent the inspector was deceived really?—Yes. I should desire the inspector should have the plan of the pit and should not be allowed to see only the part that may be in good condition and want to get back of course, but that a thorough inspection should be made as to the whole part of the pit.

33319. You believe that would lead to greater safety underground?—Yes.

33320. I suppose in an ordinary mine the manager may be fairly well satisfied that unless there is an accident he is not likely to have a visit from the inspector from one year's end to the other?—That is so.

33321. That is the general feeling amongst managers?—That he will not come for a long time unless there is an accident.

33322. Or unless sent for by yourself?—If anyone has sent an anonymous letter.

33323. You think six men for your own county, or, roughly, you might put it about an inspector for each 10,000 persons employed, could make the inspection that you want?—Yes.

Digitized by Google

33324. I suppose after the visit of a mines inspector to a colliery it tends to get things put in order for the time being ?—Yes.

33325. And everything brushed up, although it may only last a few days ?—Yes; after there has been an accident that is the tendency and to get it ready for him.

33326. Or any time you may have him there to complain ?—As soon as the accident is fatal everything is prepared. and everybody is sent right and left on all the airways to get the thing in readiness.

33327. As a practical miner working underground up to a very few weeks ago, that has been your experience ? —Yes.

33328. The advent of an inspector was preceded by everything being put into condition ?—Yes.

33329. In every part of the mine he was expected to go ? —Yes.

33330. The law with regard to a place remaining in the state in which it was when an accident took place is perfectly right if carried out ?—Yes.

33331. It is supposed that a place is not to be interfered with after a fatal accident takes place until the visit of the inspector. Most accidents take place at the working face from falls ?—Yes.

33332. Is there any reason why the working face, where a fatal accident has taken place, should not remain exactly in that condition until the inspector came ? Does it stop the working of the mine in any way ?—It shuts off that particular working place.

33333. Unless it was likely to interfere with the ventilation there is no reason why it should be repaired until the inspector comes ?—No.

33334. Often even that particular place is in a different state when the inspector comes from what it had been previously ?—If it has not come into the keeping of the Mines Act in certain ways, that is if there has been any adjusting required to make it up, the mines inspector would not say, "This is not according to the Act" and that there has been an attempt made to set it right.

33335. If there was anything with which fault might be found with the officials of the colliery, that is likely to be put right before the inspector comes ?—I am sure.

33336. There are a great many accidents taking place through falls on the haulage roads also ?—Yes.

33337. Very often falls take place on haulage roads and horse roads by which no injury to workmen or deaths take place ?—Yes.

33338. Numerous falls take place ?—We say it is a good job the lad had gone by or he was out when it came.

33339. Many falls have taken place which the workmen in the pit anticipated were going to take place, and they have simply said it was a good thing the lad or man were through before it took place ?—They say when going in, "If there is not something done here there will be a crash some day."

33340. Under the Act it is the duty of the miners to call the attention of officials to anything of that kind ?— He would get dismissed if he did.

33341. That is the provision, but men do not do it for fear of being thought interfering ?—That is my experience.

33342. What you urge very strongly—I must admit I can see the importance of it—is that where a fall has taken place, not only should the debris be taken away, but that place thoroughly secured so that a pony driver or workman can go under it ?—Yes.

33343. Is that the case at the present time ?—No.

33344. Is not the dirt or the stone from the fall redd away and the shift continued before the repairing is done ? —Yes, if there is room between the roof and the rails, the rails are generally lifted to bury the dirt and they go on again.

33345. You have known cases where the rails were lifted and put over the dirt and the place left unprotected ?— With the intention if all went well to set it right at night.

33346. Taking the risk of a second fall from persons coming over ?—Yes.

33347. You object very strongly to that ?—Yes.

33348. Do you remember any accidents which have arisen in your own experience from that being done. Could you say from memory ?—Yes, I have known of lads with their hands on the tub, and so on, and their heads have got rapped just at that particular spot, and that is why I suggest, before lads go under again, it should be set.

33349. That is a very strong point with you ?—Yes.

33350. I think you stated that firemen should hold a certificate of competency ?—Yes.

33351. You are very strong on that point ?—Yes.

33352. Do you agree with some witnesses in saying that the safety of the workmen depends to a larger extent on the competency of the firemen, than even upon the competency of the manager ?—After my own personal experience I say that is so.

33353. The workmen have to depend for their safety to a greater extent upon the competency and skill and ability of the fireman in the different sections, than even on the manager himself ?—Yes.

33354. Because of that, it should not be left in a haphazard way with the manager to say that a person is competent without any proof of his competency ?—Quite so.

33355. If made compulsory that a certificate must be granted to a fireman, the manager would have some guarantee, so far as passing an examination was concerned, that this person was competent ?—He does not select, to my knowledge, his firemen for competency.

33356. But if he were bound to select a person who held a certificate of competency, there would be a guarantee that the person had some knowledge and had passed an examination ?—Yes.

33357. He would have that guarantee to begin with ? —Yes.

33358. At the present time is it always the case that the best and most skilled persons are appointed to the position of firemen ?—No.

33359. On the whole, I suppose a large number, probably the vast majority, of your men are good men ?— Yes.

33360. You have fault to find that sometimes the best men are not appointed for that position ?—That is so.

33361. Is it the case that sometimes persons are appointed to that position from favouritism, for one thing ? —Yes.

33362. And perhaps sometimes persons are appointed because they are willing to accept a lower wage than a thoroughly competent person would accept ?—Our district rate has fallen in that respect in previous years, and the wage paid to these men is lower, consequently there is a lower grade.

33363. The wages paid to firemen at the present time are not sufficiently high to tempt the best men into that position ?—As were previously paid.

33364. It is not so high as previously ?—No, such has been the competition. I am afraid the thing is worse as far as practiacl men are concerned.

33365. It would be at least some guarantee that good practical men were appointed if they required a certificate of competency, which carried with it that he also had so many years practical experience ?—Yes.

33366. Your district was at one time largely worked on the butty system ?—Yes.

33367. As a matter of fact your Special Rules provide certain guidance for contractors ?—Yes.

33368. 60 and 61 down to 67 deal with the duty of contractors, stallmen, or driftmen ?—Yes.

33369. Those rules were made at a time when a butty man or a contractor might take a section and employ a number of men under him ?—Yes.

33370. At that time the contractor or butty man was responsible for getting out the material ?—Yes.

33371. You say happily you are getting rid rapidly of that system ?—Yes, if we do not get it in a worse form —in the form of the fireman and the under-manager being responsible for other things instead of looking after the lives of the men.

33372. You are getting into a system, as far as the men at the working face are concerned, that they are paid by the colliery owner ?—Yes, direct.

Digitized by Google

Mr. W. Latham.

5 Dec., 1907.

33373. Not by the butty man or contractor? When the butty man or the contractor was there, he was responsible for seeing the material conveyed out, and he usually made himself very active in getting that out?—Yes.

33374. Because it paid him to do so?—Yes.

33375. The more material that went out, the higher the wages?—Yes.

33376. Since you have changed your system, that duty falls largely on the fireman or under-manager?—Yes.

33377. That leaves him less time to look after the safety of the men employed at the coal face?—That is so.

33378. The fireman has statutory duties by law—his morning examination?—Yes.

33379. Within 2½ hours of the men starting work?—Yes.

33380. And he is also supposed to make a second examination of all the working places in his district?—Yes.

33381. I suppose, as a matter of fact, the duty of seeing the material out becomes of more importance than the duty of making a second examination?—Yes.

33382. Should a fall take place which is likely to interfere with the haulage going on, that fall would be attended to rather than his second examination?—He would stop to see it was cleared, or else he would soon have the under-manager or manager on the spot.

33383. He would make sure the traffic was the first thing to receive attention, or he would be found fault with?—Yes, that is my complaint, and under the butty he never did.

33384. The fireman, too?—Yes, he was not under the control of the butty, and was not allowed to interfere in any part of his duty with the production. He was solely confined to examination, and looking after the safety of the men.

33385. You are aware that by far the largest number of accidents arise from falls of roof and sides?—Yes.

33386. And, after that, haulage accidents?—Yes.

33387. This Commission has been appointed to enquire into the whole circumstances, and to endeavour to suggest some method of saving life and limb underground or about mines?—Yes.

33388. You think it would tend greatly to the safety of miners if the firemen were appointed to do no other duties than look after ventilation and the state of the roof, and generally the safety of the workmen?—That is my point.

33389. That is very useful, if that is so. With regard to ventilation, General Rule 1, to which your attention has been called, provides that an adequate amount of ventilation shall be provided to render harmless noxious gases. Your point is that it has become a pretty general understanding, in your experience, if they get rid of explosive gas, that they do not require to deal so much with smoke or other gases, which may be of a bad nature, blackdamp, or anything of that kind?—Yes.

33390. And a fireman, if he finds the working places clear of firedamp in the morning, tells the men the places are all right, although their places may not be in a fit state for them to work in?—Yes.

33391. I suppose you could not give us any words which would strengthen General Rule 1 in the direction of providing for that yourself?—No, I do not think I have any set sentence, save what is in my mind, which is that the fireman should be as responsible for obnoxious fumes as he is for gas; and that it might rest on him to say whether that working place is fit to work in, which he holds now is no part of his duty, if there is not gas, and if it is as hot as——.

33392. If a fireman found a roof in a working place required timbering, and there was no timber to be had, he should advise the workmen not to go in until he had timber?—Yes.

33393. If he found explosive gas there he would advise the workmen he could not go in because it was not clear?—Yes.

33394. If he found smoke or blackdamp, or the place in a foul condition for want of ventilation, he should be bound to advise the person he could not go into the place because it was not safe?—Yes, that is my complaint.

33395. That is what you want to be done, if it could be put in words?—Yes.

33396. (*Mr. F. L. Davis.*) I want to ask you a question with regard to the unskilled labour. Will you tell me whether I am right or not with regard to this. I understood, in answering Mr. Ellis's question, you did not make a point of there being very much unskilled labour employed, but that there were a few cases of men, such as farm labourers. Is that so or not? Your complaint is not that there is a great quantity of unskilled labour at the present time in the district?—We say there are people coming into the mines now, of course owing to the good trade and the ready demand for coal, who I do not think would have been permitted, and there are ways of getting them into work. Our system is the longwall system, which I think everybody understands. In straight work you could not make an agricultural labourer a miner, but in longwall work there are possibilities of linking them on with two or three, and one man a pretty good man. That is why we say unskilled work is coming in.

33397. I understand you to object, and you say there is danger. Your objection is not that there is a great quantity of it at the present time: is it, or is it not?—No, I could not say that there is a great quantity.

33398. You object to it, and say it is dangerous?—Yes, we say it is.

33399. You said the greatest proportion of accidents happened at or about the face?—Yes.

33400. If that is the case, and there is not a great amount of unskilled labour employed, it is the men who are skilled, who have been working all their lives in the face, amongst whom the greatest number of accidents occur?—I think if I could put that in a tabulated form, you would find there were least accidents occurring to men who have worked in the pit, as I have done, from when I was 10. You would find less accidents among that class of people than these people we are talking about, coming in at between the ages of 20 and 25.

33401. It is granted by all of us that the skilled men—such as the fireman, the inspector or the manager—should have experience at the face. You call him a skilled man. They are the most skilled men in the pit working at the face?—Yes.

33402. And by far the largest proportion of accidents happen to these men in or about the face?—There is nobody else working in the pit besides those at the face.

33403. There are a good many men employed in the road, and repairing, and other work. Have you ever heard it suggested that men from being accustomed so many years to danger become more careless?—Yes, that is often suggested.

33404. I do not mean to say that every man is so, but unfortunately a great number of accidents happen at the face to men who have been working there all their lives, and who have got accustomed to the danger, and once too often they have neglected to do something they ought to have done?—Yes, I have found that with men working in a low seam coming to work in a thicker seam; it is as dangerous as though they were going to war. At the same time, men who have been at the work have simply laughed at the danger there may be.

33405. With reference to inspectors, you say that you have seen people after an accident send timber down, and that the place is propped up by the timber when the inspector comes. You do not think that deceives the inspectors, do you? There may be a reason for it. The manager may say, "If I do not do it I shall have a tremendous fall; I must prop that up now." When the inspector comes the first question he asks is, "Is the place in the same condition as it was," and the man says, "No, I have put timber in." Do you not agree with me that the inspector would ask all those questions? "How much of this timber here was up when the fall occurred," and he would ask what exactly was the condition when the fall occurred?—I am to take it that they always speak the truth?

33406. I should suggest yes, certainly. It is a very dangerous thing for a manager if he was not to speak the truth to the inspector. The inspector has other means of finding out than from the manager's own statement. He can call anybody, and does. He questions the officials, and he questions the men?—And they generally tell one story.

33407. The managers are not the only people who do not speak the truth always?—At the same time I have heard men say at a miners' meeting, "We have no timber

Digitized by Google

n our pit, and if anybody is hurt or killed, I shall sit there and you can bring my tea. I will never leave the place. I will stay night and day till he comes." We have often heard expressions like that, because it is generally known the place is doctored up ready for the inspector.

33408. (*Chairman.*) Have you known they do it—threaten to do it, and do it ?—No, not do it.

33409. You have not known them stay night and day, and have their tea ? They only say so ?—That is when we have come to a point of sending men down to inspect. We have had bad ventilation and no timber.

33410. (*Mr. F. L. Davis.*) You have told us when men come to the last point they refuse to make an inspection. The inspector comes down, and it is his business to find out the condition of things before the accident ?—Yes.

33411. He asks these questions, and the manager says, "I have sent in timber, I was afraid that I should have a bigger fall." He does not only question the manager. It is his business to find out from everybody what was the position before. Do you say that still being the case these managers practically invariably tell untruths to the inspector ?—If they say the timber has not gone down, and the timberman has not been ordered to send it down, I say they have told him absolute falsehoods, because I have seen it myself.

33412. You are speaking for your district ?—Yes.

33413. I do not think our district must be tarred with the same brush ?—I will make this admission—that everything is pulling up to a better condition of things. I have told you the abolition of the butty system, where the butty had to pay for the timber, has remedied many of the evils that existed, and the thing is becoming better as the days go by.

33414. I think we all think that. Can you tell me what was your great objection to the carrying of men in the two decks ? I do not understand what was your objection. Is it that you object to two decks having men in them, or the difficulty or danger at the loading point ?—We say that there is a loading point and an unloading point.

33415. You do not object to it at the top of the pit ?—For instance, they have to get to the first deck, and then be pulled up for the next lot to get in.

33416. That is one objection. Where that has to be done you object. Would you object where you have, as in many cases, two stages—two decks and two places for the men to get on at the same time ? The men get a little underneath on the lower deck, while the men get on the top deck. Do you object to that ?—What alarms me is this : I am speaking for a district, as is said, in North Staffordshire, where there are 64 men in a shaft—32 men going down, and 32 men coming up. I am thinking of what would occur if an accident happened, and the shaft was full of men.

33417. Your point is not very much the full decks, if you have two stages ?—I do not want them all in the shaft.

33418. You do not want too many men in the shaft at the same time ?—No.

(*Chairman.*) In the cages.

33419. (*Mr. Ratcliffe Ellis.*) You would have more frequent windings if you wound fewer men at a time ?—Not if we had some of our ideals neared by great pits where there are all these men, where there is simply a shaft set apart for them.

33420. That is a long way off. Take things as they are now. If you have fewer men in the cage you have more windings ?—I could not deny that, but it is all a question of danger.

33421. (*Mr. F. L. Davis.*) On the other point, you do not want too many men in the cage at the same time ?—No.

33422. Your objection to the two decks is only if they have to load and move the cage from the same stage. If they could load without moving the cage from two stages, either top or bottom, your objection would not be so great—I say there would not be so much chance of accident, but still it s ems with all these men in the shaft there is a very serious danger.

33423. As Mr. Ellis says, it is a question. You have to put the same number of men down, and you can put them down in double the number of windings by letting fewer down at a time, but it is a question whether there is more danger in the number of windings, than from having a large number of men on the cage at the same time ?—Yes.

33424. (*Mr. Smillie.*) 38 men you say ?—32 on a cage, and 32 coming up.

33425. That is 64 may be in the shaft at the same time ?—Yes.

33426. If anything went wrong with the engine-winder, if he were suddenly taken ill, your fear is that those 64 men might be killed ?—Yes.

33427. That is one of your fears ?—Yes.

33428. The other fear with regard to the double-deck cages and men going on at both decks, is because of the method of loading. You have to raise or lower, as the case may be ?—Yes.

33429. On one occasion you were put into the sump with other men because of lowering down ?—I was picked up myself, and thrown up the inset. I can show you my elbow where it was smashed. Three had got off, and I was the fourth, we were up on this landing.

33430. The top landing ?—Yes. It picked me straight up and threw me, and I can show you my elbow, if you like. There was a difficulty with the engine-winder and that is why he put us in the sump. He said he thought it was the top deck, and he put us right down.

33431. (*Mr. F. L. Davis.*) You were waiting to get on, waiting for the thing to be lifted, and the thing knocked you ?—Yes. We were waiting to go. Instead of that he put us down in the sump.

33432. (*Mr. Smillie.*) You have the two objections, at least ?—Yes.

33433. (*Chairman.*) I understood you to take two objections to unskilled workmen—first, that every now and then you got thoroughly unskilled persons into the pit, and secondly, that you had persons in responsible positions, such as head of a stall, who were not absolutely incompetent, but who were incompetnet to fill that particular position to look after the timbers, and so on ?—We say it works better, I could not say well at all, if you have three or four men—as we have explained there are eight or nine in a working place—capital fellows, and they have the best they can get, skilled or unskilled, then there is somebody all the while calling attention to them, and making them careful, but when you have the whole batch unskilled, you have a very serious conditions of things.

33434. I wanted to know whether I understood you. I understood you to say that there was not only a danger from employing thoroughly unskilled persons underground, but that there was also a danger that in some working places you had no man sufficiently skilled to look to the timber properly. Do you say that, too ? Sometimes in a working place you may have 9 or 10 men fairly competent miners, still, at the same time, you have no one of those 10 sufficiently competent to be head of a stall or a working place and look after the timber ?—Yes, and the employers will find it so if they will inquire into it, and those are the stalls where they have to be continually finding them wages. If they had a place as good as gold and good men could get a living, and you put them in, you would find the whole thing broken down.

33435. You do not understand the question. There are two ways in which unskilled labour may be detrimental to the safety of the miner. One where you have an absolutely unskilled man working at the face at all, whether with other people or not. That is dangerous if he is very unskilled. Another source of danger was, in every working place you ought to have one or two men thoroughly conversant with systematic timbering, and consequently able to advise those working with them as to how they ought to put up props and sprags ?—I say it mitigates the danger, and is not so apparent as if all were unskilled.

33436. My point is that there may be 9 or 10 men working at a particular place, all of them fairly skilled, but none particularly skilled—that is to say, no man among the 10 who will be capable of giving expert advice to the other 9 to set up timber, and that is a danger ?—Yes.

33437. You ought to have one man, at all events, in every working place more expert than an average miner, to teach the others what they have to do with regard to putting up timber. I understood you to say it was a source of danger because that was not always the case. Sometimes you find 9 or 10 men, and not one specially skilled, as it were ?—Yes.

Mr. W. Latham.

5 Dec., 1907.

33438. (*Mr. Ratcliffe Ellis.*) A collier with two years' experience at the face—do you think he is not a skilled timberer? Does he not know how to keep himself safe? —I should not say a man who had been on a farm——.

33439. A collier?—If he had been working up at least till 21.

33440 A man who has been working two years at a face to qualify as a coal-getter, according to the Act of Parliament—do you find many men of that sort not able to do their timber?

(*Mr. Smillie.*) He says unskilled.

(*Mr. Ratcliffe Ellis.*) What is that?

(*Mr. Smillie.*) An unskilled person coming from a farm and getting two years at the face he would say is not a skilled person, but if working in the pit with two years experience in the face, he would be a skilled person.

(*Witness.*) Yes.

33441. (*Mr. Ratcliffe Ellis.*) There is no man working as a collier skilled enough to put up his timber unless he has worked in the pit before the age of 21. It comes to that, really?—Yes. You could not find a man who has come from agricultural work and had two years in a pit, and is what I would call a full-fledged collier and could take his turn at anything in the pit—coal-cutting, blasting, or anything of that kind. I should say two years is insufficient.

(*Chairman.*) In time he would become as skilled as other people who have begun early in life. It would take longer to do it.

33442. (*Mr. F. L. Davis.*) Does it not depend upon the intelligence of the particular man?—Yes.

FORTY-SEVENTH DAY.

Thursday, 12th December, 1907.

PRESENT:

LORD MONKSWELL (*Chairman*).

H. H. S. CUNYNGHAME, Esq., C.B.
WM. ABRAHAM, Esq., M.P. (Rhondda).
F. L. DAVIS, Esq.
THOMAS RATCLIFFE ELLIS, Esq.
JOHN SCOTT HALDANE, Esq., F.R.S.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. WILLIAM HENRY PICKERING, called and examined.

Mr. W. H. Pickering.

12 Dec., 1907

33443. (*Chairman.*) You are the Inspector of Mines for the Yorkshire and Lincolnshire district?—Yes.

33444. I understand you have lately returned from India?—Yes, I have been back about three months.

33445. With regard to inspection, you put in certain diagrams?—Yes. They are diagrams showing irregularities in the present system, showing that the inspection staff is not in proportion to the size of the districts. (*Diagrams handed in.*)

33446. Then you give instances, and you say that there are three inspectors in the Yorkshire district, where 125,407 persons are employed, so that there would be only one inspector for 41,800 persons?—Yes.

33447. Then you say that in the two neighbouring districts there are seven inspectors for 137,102 persons, or one inspector for 19,586 persons?—Yes.

33448. You go on to say that if seven inspectors are necessary in Lancashire, it may be assumed that Yorkshire should have the same number also, instead of only three as at present. But I do not know that that quite follows, does it, because the districts may be different; some kinds of mines require more inspection than others, do they not? —That is so; but the Yorkshire and the Lancashire mines are not essentially different. I should say that the Lancashire mines are perhaps more difficult to travel, taking them all round, than the Yorkshire mines. But this diagram shows that in the Lancashire district a large number of persons are employed in the metalliferous mines and quarries. If you take the persons in the coal mines the difference is still more striking.

33449. Do you say that not so much inspection is desirable in metalliferous mines?—No, I do not say that. The difference in the number of people employed in coal mines is even more striking; there are 115,000 employed in Yorkshire, in round figures, and 60,000 odd employed in Lancashire in coal mines.

33450. So that on the whole you say that if anything you would require rather more inspectors in proportion to the number of men employed than you would in Lancashire?—I should take it all round about the same, if we take everything into consideration.

33451. You say that if seven inspectors are necessary in Lancashire, it may be assumed that Yorkshire should have the same number also, instead of only three as at present? —Yes.

33452. Then you go on to say that it does not appear that there is a redundancy of inspectors in any of the districts?—I think that is so. ✓

33453. You say that the irregularities can be remedied, if the present system is retained, by the appointment of additional assistants?—Yes. ✓

33454. But you are of opinion that greater efficiency of inspection would be obtained by a drastic reorganisation? —That is my opinion.

33455. Then you give certain objections to the present system. The first objection you take is that inspectors occupying high official positions of great responsibility are jaded and worried by details of clerical work, which could be much more efficiently performed by clerks?— Yes. ✓

33456. To what extent do you think they should be relieved of their clerical work?—I think the recording, keeping of all the papers, drafting the letters, and keeping all the records up to date, might be done by an office staff. ✓

Digitized by Google

33457. They have an allowance, I think of £25 a year for clerical assistance ?—That is so.

33458. But that is not sufficient ?—It is not sufficient. You must have a man giving his full time to the work.

33459. And even so you consider that there ought to be more inspectors or assistant inspectors ?—Even so I think there ought to be more assistant inspectors.

33460. Then the next objection you take is to the artificial division of coalfields to form inspection districts. What have you to say upon that ?—At present some of the coalfields are divided between two inspectors, and the counties also. Lancashire, for instance, is in three inspection districts, the parish boundaries forming the boundaries between some of the districts. I think that complicates the statistics, and also complicates the administration of the Act.

33461. Do you suggest that instead of the present system there should be seven what you call natural districts ?—That is my view; and I have prepared a map. Further on in my evidence I have gone on to point out the remedies.

33462. Yes, and I was going to deal with that, and I was going to take you to your second remedy by way of explaining the objection that you take to the artificial division of coalfields. Your remedy for the artificial division of coalfields is that you should have seven natural districts, as you call them ?—That is so.

33463. Those natural districts you think should be: (1) Scotland (Glasgow centre); (2) North of England (Newcastle centre); (3) Yorkshire, Derbyshire, Nottinghamshire, &c. (Sheffield centre); (4) Lancashire, Cheshire, North Wales (Manchester centre); (5) Midland (Birmingham centre); (6) South Wales (Cardiff centre); and, (7) Southern (London centre) ?—Yes.

33464. You think that an inspector should be placed in charge of one district, that he should have an office and an adequate clerical staff in the town selected as the centre or headquarters of his district, and that his official title might be "Chief Inspector of Mines of a District" ?—Yes.

33465. Then you would only have, instead of the present 12 chief inspectors of mines, seven ?—I would have seven, and deputy chiefs.

33466. You would also have deputy chief inspectors ?—Yes.

33467. Therefore you would only have seven of the first class instead of 12, as at present ?—Yes.

33468. You would have, first of all, an inspector at the head of each of these seven districts, and then you would have a deputy chief inspector, and then you would have a third class of assistant inspectors ?—That is so. In some of the large districts which I have mapped out I should have two deputy chief inspectors.

33469. How many assistants would you have ? Do you go into detail as to the number of assistants ?—I have a statement here which I have drafted; of course it is only a rough draft. I estimate seven chief inspectors, 10 deputy chief inspectors, and 37 assistants.

33470. (*Mr. F. L. Davis.*) How many more would that be than at present ?—About 14 more.

33471. (*Chairman.*) What sort of men would you have as the third-class inspectors ?—I should have them quite of the same class as at present.

33472. The same class as the assistants ?—I would have men who could rise to the very top.

33473. And I suppose pay them a fair commencing salary ?—I should pay them a salary quite equivalent to what they get now.

33474. Equivalent to what the assistants get now ?—Yes; I should pay the lowest grade that salary at least.

33475. Then you would pay the intermediate grade something which would be between the amount paid to the assistants and that paid to the chief inspectors now ?—That is so. I have not really gone into the question of salaries. I think personally the salaries are too low all round to get in the future the best class of men. Wages and salaries have gone up enormously in the last few years.

33476. So that, although at present you think that the chief inspectors and assistant inspectors are good men and quite capable of doing the work properly, still, at the same time you are rather apprehensive that if salaries are not raised an inferior class of men may come in in the future ?—That is my fear. I will hand in a statement of the districts. It is a statistical statement showing the number of persons employed in the different counties, and the number of persons in each district.

33477-80. Then you draw attention to the want of uniformity in the policy of the administration of the Acts in the various inspection districts; and you say that the remedy for that would be the constitution of a Mines Department as a branch of the Home Office, under an official entitled "The Director of the Mines Department ?" —Yes.

33481. What you now wish to do is to suggest that the want of uniformity in the mining policy throughout the country ought to be dealt with by the constitution of a Mines Department, at the head of which should be a director of the Mines Department ?—Yes.

33482. Then you say that you object to there being no central office where records can be kept, and where coal owners, managers and miners can go for information ? —Yes.

33483. That would be rectified by the establishment of a Mines Department where all these documents could be got at ?—That is so. There was a great difficulty found, I believe, in the last Commission on Coal Supplies in finding records and getting information; and there are other reasons.

33484. You say now that the issue of 12 administrative reports of inspectors, and the complication and confusion of mineral statistics which that entails, is objectionable ? —Yes. I think there are too many administrative reports and too many statistics, and they are too complicated. The statistics are artificially divided and artificially split up. I think that would be avoided by having natural districts.

33485-8. You would still have your seven administrative reports ?—Yes; I think that is very important. I would not lower it in any way, I would raise the standard of reporting.

33489-92. You say it is not desirable, in your opinion, that mines should be frequently inspected in detail by Government officials. Such a practice would, you think, relieve managers and owners of their legitimate responsibility and throw it upon the Government. Why do you say that ?—I think if you have a Government official constantly going to the mines, the managers and owners will at once not take so much responsibility on themselves, they think that the supervision as regards safety is coming from the Government, and they will more concern themselves with the economical questions. At present we try to make the managers and owners as responsible as we can.

33493. Then you say that it is sufficient if Government inspection ensures a uniform observance of the regulations and the punishment of officials who neglect their duty. That is rather a vague statement, because there is much virtue in an "if" there. When you say that it is sufficient if Government ensures a uniform observance of the regulations and the punishment of officials who neglect their duty, I suppose that is all that could be desired of any sort of inspection, whether it was twice a week or whether it was once a year ?—That is so.

33494. How often do you consider the mine ought to be inspected, and what kind of inspection do you consider sufficient ?—I think every year is enough.

33495. You think that a mine should be thoroughly inspected once a year ?—Yes.

33496. Do you mean that all the working places and the whole mine should be gone through once a year or only that the mines should be sampled ?—I am afraid it would have to be only sampled to a great extent.

33497. As it is at present ?—Yes.

33498. You consider on the whole that in some inspection districts, at all events, the inspection is sufficiently carried into effect—that in some of these 12 districts present at existing the mines are sufficiently well inspected? —They are fairly well inspected.

33499. And you do not think it is desirable that they should be more inspected ?—No, I do not at present.

33500. Then as regards the qualification and appointment of inspectors and assistant inspectors, you say it

Digitized by Google

Mr. W. H. Pickering.

12 Dec., 1907

is essential that the inspectors and assistant inspectors should have the highest possible practical and scientific mining knowledge and should be men of all-round general education?—Yes.

33501. You think that where zeal is equal a good class man will do more effective work than two with second-class qualifications?—Yes.

33502. You say that no person should be eligible for the appointment of inspector or assistant inspector of mines unless he held a first-class certificate under the Act and had held charge as a manager or under-manager of a mine?—Yes.

33503. Therefore, you would not leave it as at present with the Home Office to decide what the qualifications of a mining inspector should be; you would have it laid down in the Act of Parliament that he must hold, at all events, the equivalent of a first-class certificate?—I would.

33504. And not only must he be a thoroughly qualified and experienced person but he must have held charge of a mine as manager or under-manager of a mine?—I think so. He gets a better practical experience if he has to go through the whole mill.

33505. How long should he be the manager of a mine and qualified, do you think?—A comparatively short time. A year would be sufficient, if he was a thoroughly practical man to begin with and had a good training or had trained himself.

33506. Then you go on to say that this would inflict no hardship upon anyone, for if a man wishes to fill a high official position, he should qualify for it by climbing through the lower grades?—Yes.

33507. He would begin in every case as one of these assistant inspectors at the third grade?—No; I would not appoint him an inspector of the third grade unless he was qualified by a first-class certificate.

33508. He would first of all have to be a manager or an under-manager, and besides that he must pass a certain examination at least equivalent to a first-class certificate?—He would have to hold a first-class certificate and then he would have to pass the Government examination for an inspectorship.

33509. You say that the area of selection should be made as wide as possible and the system designed to cover the men of all classes of training?—Yes.

33510. Then you say that working miners who have supplemented their practical knowledge by self-education and attendance at the excellent mining and scientific classes held in the colliery districts, should be given equal opportunities as University men who have put the pitman's hall mark on their degrees by thorough practical work in the mines?—Yes.

33511. You add that candidates might be nominated by the Secretary of State as at present, but not less than 10 for each appointment?—Yes.

33512. Why do you think it should be necessary that as many as 10 should be appointed?—I think it would be as well if a number were fixed so that you would have a competition and get the best men. I think they ought to be nominated so as to make sure that you are getting the right class of man, to begin with—not simply competition men who can pass the examinations; you want them sound, practical pitmen as well as theorists.

33513. The Secretary of State would have the nomination, I understand?—The Secretary of State would have the nomination.

33514. But it would be rather difficult for the Secretary of State to refuse to nominate a man who had qualified as a manager and under-manager, and who had passed all the requisite tests under the Government examination?—He refuses at present: he does not nominate everyone who applies.

33515. He now refuses to allow some persons who are qualified to stand for this examination for an inspector?—All who apply are not nominated; I know that.

33516. Then that only carries into effect the present procedure?—Except that you have a number nominated.

33517. You say at least 10 for every appointment?—Yes; I would have a number nominated.

33518. You say that the candidates should be examined and the *viva voce* examination should be very searching?—Yes.

33519. And you say that marks should be given for experience and alertness, mental and physical?—Yes.

33520. And that the theoretical and scientific knowledge of the candidates should be tested by ordinary written examination, but a thesis on a mining subject and a plan of a mine on which to show a system of ventilation should be included?—Yes.

33521. Is there anything you would like to add to your statement with regard to the examinations?—No; I think you have asked me all the questions which are essential.

33522. I will go to the next question, which is inspection by officials under General Rule 4. You say that General Rule 4 is in Yorkshire supplemented by Special Rule 13, which reads as follows: "The under-manager or deputies, or other competent persons duly appointed for the purpose, within three hours immediately before the commencement of each shift, shall make the inspections and reports required by the first part of General Rule 4. The persons making such inspections shall leave a mark at each working place, showing the date of such inspection. The undermanager or deputies, or such other competent person, shall make the inspection during shifts required by the second part of General Rule 4."—Yes.

33523. With regard to that point, you say that these rules are not satisfactory: the interval of three hours is too long; the rules should be altered to provide for the inspection before the commencement of the shift to be made within two hours of the time at which the men should arrive at their working places, and for at least two inspections during the shift?—Yes.

33524. I believe there are Special Rules to that effect in other parts of the country?—That is so.

33525. You add that shifts, even when following each other without an interval, should be deemed to be separate shifts?—Yes.

33526. And a report should be made specifying the condition of the mine or district during every inspection?—Yes.

33527. You are of opinion that the reports of the inspections before the commencement of the shift should be immediately recorded in a book kept at the station for the purpose, and that the reports of the intermediate inspections should be recorded at the end of each shift?—Yes.

33528. That is a very important matter under Rule 4. You first of all say that the interval ought to be only two hours instead of three hours, and that the shifts even when following each other should be deemed to be separate shifts?—Yes.

(*Mr. Wm. Abraham.*) That would give an extra examination.

(*Chairman.*) What is the rule now about separate shifts?

(*Mr. Ratcliffe Ellis.*) There is one examination during the shift and one preceding it. It is suggested that there should be two during the shift. The time before the shift in Special Rules is "Not exceeding three hours."

33529. (*Chairman.*) Then you say that a report should be made specifying the condition of the mine or district during every inspection?—Yes.

33530. (*Mr. Ratcliffe Ellis.*) I suppose you would not allow the last inspection of No. 1 shift to count for the first inspection of No. 2?—No, I would not allow that unless made within two hours.

33531. You suggest that there must be an inspection before the shift?—That is so.

33532. And you think two hours is quite long enough?—I think two hours is quite long enough.

33533. Then do you suggest one or more inspections during the shift?—I suggest two inspections during the shift.

33534. Then as to the next shift, would you take the last inspection of the first shift for the inspection within two hours at the beginning of the second shift?—I think if there were continuous shifts and the last inspection were made within two hours before the other shift followed on I would take that as good.

33535. (*Chairman.*) Then you say that a report should be made specifying the condition of the mine or district during every inspection. It is not necessary for the

Digitized by Google

second inspection to be reported, is it ?—No; the intermediate inspection is not reported at present. It is in some places, but it is not compulsory, and I think it ought to be compulsory.

33536. Yes, that is my point. You go on to say that the reports of the inspections before the commencement of the shift should be immediately recorded in a book kept at the station for the purpose. You say, "immediately recorded." They are recorded, are they not, but they are not recorded at once; is that your point ?—Well that is a little vague. I think as a rule they are recorded at once, but I would have the man make his report as soon as he has finished his inspection.

33537. But that is not always so ?—No. At most places it is so.

33538. (*Mr. Ratcliffe Ellis.*) What you mean is that the report should be available for the people who are going to work; is that it ?—Yes, exactly.

33539. (*Chairman.*) So that the people before they go to work may see it ?—So that they may if they wish see the report of the fireman.

33540. The reports of the intermediate inspection should be recorded at the end of each shift. They are not recorded at all now ?—They are in lots of cases, but it is not compulsory and is not always done.

33541. Then you go on to deal with another important matter, and you say that firemen's or deputies districts are often too large ?—Yes.

33542. You say "often"—not "always" ?—No, not always by any means.

33543. You say that much depends upon local conditions, and it would be difficult to frame a rule restricting the size of the districts ?—Yes.

33544. Then you make a suggestion that when a fireman cannot comfortably travel and thoroughly examine his district in less than two hours, you consider it is too large ?—I do.

33545 Would that be often the case in your district ?—It would at some places, but at others it would not. At some of the large places they examine within the two hours and they make an examination twice during the shift by their deputies.

33546. But if you altered the rule to make it compulsory that this examination should not be held more than two hours before the shift, it would follow that any district must be too large which a deputy could not go through in two hours ?—That is so.

33547. (*Mr. Ratcliffe Ellis.*) That is quite so, but from the fact that he must make an examination within two hours of course it must be assumed that the district which he has to examine is not too large for him to make it within two hours ?—That is so.

33548. (*Chairman.*) Yes, that would follow. Then you go on to the question of the inspection of mines by workmen under General Rule 38, and you say that in a few instances in Yorkshire the workmen take advantage of the powers given under this rule. What do you mean by "a few instances ?"—I should rather modify that. At a good many of the large mines they do; I should think with regard to probably a third of the people employed the mines are inspected by the workmen.

33549. Then you say you have found the reports received of such examinations most useful and informing, and you would be glad if the inspections were universal. Do you think from your knowledge of the mines in your district that these reports are fair, or do you think that they err on the side of giving too rosy a view of the mines ?—I think they are very fair. They often point out dangers or occasionally point out dangers. But I do not get all the reports; I only get those which report danger. The Act does not require that they should be sent if there is nothing reported.

33550. So that you only get the class of reports in which there is some fault found with the management or some danger dealt with ?—In some cases they forward them even where there is no fault found, but that is not universally so, because the Act does not require it, and the people do not go beyond the Act.

33551. Should you say from your knowledge of the mines and of these reports of inspections which are put before you that the men feel they are at liberty to give an absolutely truthful report even although it is unfavourable to the management of the mine ?—I think so. They report what they see in Yorkshire. I am sure of it.

33552. And do you not think they are afraid of the management objecting ?—No; there is no reason why they should be. If a manager discharged a man he could get a job anywhere in Yorkshire—that is, a good man. They are very short of good men there; good colliers are not too plentiful.

33553. So that you do not think it would be against a man if a manager was to let it be generally known in the neighbourhood that a man was in the habit of making objectionable reports with regard to the management of a mine ?—I do not think so; it might be so—I cannot enter into the men's minds.

33554. But it has not occurred to you as being a thing that is likely to happen ?—I do not think it is a thing that is likely to happen at all.

33555. Then you say that copies of reports of examinations made under this rule should be forwarded to the inspector even where nothing of which to complain has been noticed ?—Yes.

33556. An inspector should have an opportunity of sampling the whole of these reports ?—Yes, I think so. He would then be in a better position to answer the question which you ask, as to whether they reported all they saw.

33557. What proportion of reports do you suppose comes before you ?—I do not suppose half, but I do not know, I have no means of telling, and I have really scarcely had time since I came back to go into questions of that sort.

33558. Then with regard to discipline and supervision, you say discipline or the want of it begins at the top, with the chief in command, and that if a manager is a thoroughly qualified man and a tactful disciplinarian and is given proper power by the owner or agent, it will be found that the subordinate officials and workmen are, as a rule, attentive to their duties, and that those who are guilty of neglect do not escape punishment ?—Yes.

33559. Then you object to a man being able to be appointed manager of any number of mines; you say that the Act permits a manager to undertake the management of any number of mines, and that this leads to cases where a manager takes so much work that he exercises very little underground supervision ?—Yes.

33560. You say that he relieves himself of responsibility by the appointment of under-managers, and thus the actual general supervision is done by men with qualifications presumably inferior to those intended by the Act ?—Yes.

33561. (*Mr. Ratcliffe Ellis.*) I suppose you mean the certificated manager ?—The certificated manager.

33562-5. You would limit the number of mines that the certificate should apply to ?—No, I would not limit it if they could show that they had a proper subordinate supervising staff.

33566. (*Chairman.*) But do you say that in many cases an under-manager with only a second-class certificate will frequently have charge of a mine ?—That is so. The manager will not go down; he has got other things to do. of course, those are only exceptional cases; but it can be abused in that way.

33567. (*Mr. Wm. Abraham.*) Do you know of certain cases where that abuse takes place ?—I have a case rather in point in hand now.

33568-9. So that there are occasional abuses on that side ?—Yes, on that side there are.

33570. (*Chairman.*) Then you say there are other cases where the owner or agent, without mining knowledge, unduly limits the power of the manager, but gives him more work than he can properly do, without an adequate subordinate supervising staff ?—Yes.

33571. You say this also leads to the employment of inferior men, for no self-respecting man with good marketable qualifications will take service under such conditions ?—Yes.

33572. Then you say that to provide against these evils the following rules are included in the rules relating to managers and their certificates, which recently came into force under the Indian Mines Act: regulations giving effect to the same principle might be embodied in the English Coal Mines Regulation Act ?—Yes.

33573. Then you quote from the Indian Mines Act, Rule 27 ?—Those are the rules relating to management.

33574. "For the purpose of Rules 28 to 54, every system of underground workings interconnected in such a manner that communication is practicable from any one part of the

Digitized by Google

Mr. W. H. Pickering.

12 Dec., 1907.

system to any other part by means of underground channels shall be deemed to constitute a mine. If access from one system of underground workings to another system is not practicable without coming to the surface of the ground, each system shall be deemed to constitute a separate mine?"—Yes.

33575. Then Rule 51: "Save as provided in Rule 52, no person shall act as manager of more than one mine?"—Yes.

33576. That is, there must always be a separate manager where there is separate communication?—Yes, except as provided afterwards, which is a very important proviso.

33577. The proviso is in Rule 52: "Managers holding first or second-class certificates may, at the discretion of the chief inspector of mines, be allowed to manage more than one mine, if the chief inspector is of opinion that the mines supervised by them are near enough to one another to permit of effective supervision being exercised, and that an adequate subordinate supervising staff is maintained at such mines." That would be your idea of what ought to be the law in England?—I would not put it in those words, but I should embody that principle. It would require very serious discussion from all points of view. I should embody that principle so as to prevent these abuses. It is only what is carried out in practice at the best-managed places at present. The Government have no power to stop a man managing any number of mines at present.

33578. (*Mr. Wm. Abraham.*) Notwithstanding that there may be 100 miles between them?—That is so.

33579. (*Chairman.*) Then you say that at many of the large mines in Yorkshire the following system of management is adopted: An agent or managing director is appointed for the mine or group of mines. He is a highly-qualified mining engineer in all branches of the profession. He appoints the managers and gives them reasonable latitude and power, and allots them under-managers and other officials. At such mines the discipline and supervision are generally satisfactory, the only weak point being that at some of them the deputies appear to have too large districts?—Yes.

33580. But that we have already discussed. Then you consider on the whole that the system adopted in the best of the large mines in Yorkshire is a satisfactory system?—I think so, distinctly satisfactory.

33581. And you wish that that system was general all over the district?—I do.

33582. You think there are some parts of your district where there are not sufficient managers, and where the owner interferes too much, and where the managers are not given a sufficient number of under-officials?—I think that is so.

33583. Then as regards the Special Rules, you say that the present methods of establishing Special Rules are clumsy and confusing, and give unnecessary trouble?—Yes.

33584. You say: "For the purpose of drawing up the Special Rules, a Mining Board might be constituted for each of the seven districts into which in my previous evidence I have suggested the kingdom should be divided. Each Board might consist of: (1) The chief inspector in charge of the district (*ex officio* chairman); (2) three representatives of the Coal Owners' Association; (3) three representatives of the Miners' Union?"—Yes.

33585. You add that when new rules are necessary they should be drafted by the Director of the Mines Department in consultation with the chief inspector in charge of the district to which they were intended to apply; this draft, put into a debatable form, should be sent to the Coal Owners' Association, to the Miners' Union, and to the owners of all the collieries in the district concerned, with the intimation that the rules would be considered by the Mining Board on or after a specified date, and that any objections or suggested amendments would be considered by the Board if received before that date?—Yes.

33586. Then you go on to say that when the rules were approved by the Board, the code should be forwarded to the Director of the Mines Department for submission to the Secretary of State for approval, and that when rules were approved by the Secretary of State, they should be published under his signature in the Official Gazette, and an official copy forwarded by the Director of the Mines Department to all the parties concerned?—Yes.

33587. You say the code should then have effect for the particular area or class of mines for which it was framed. All new mines commencing in the area should automatically fall under the rules?—Yes.

33588. You add that this method of establishing the Special Rules should take the place of both the present methods of establishment. What does that mean?—There are two ways of establishment: one on a proposition by the owner, and the other from the Home Office.

33589. You say that many of the present Special Rules could be included in the General Rules of the Coal Mines Regulation Act, which would be revised and simplified so as to make the present jumble of Rules, Orders and Amending Acts intelligible?—Yes.

33590. You add a rather important opinion. You say that provisions regarding arbitration, in case the parties establishing Special Rules disagreed, might be retained. Is not the dilatoriness of arbitration one of the principal objections taken to the present mode of establishment of the General Rules?—I think perhaps I have not clearly expressed what I mean on that point. I mean the principle of arbitration. There ought to be some means of settling it. I think I go on to say in my statement that it should be made simple, if it is possible in legal matters to make a thing simple. I believe there is a system now that is working rather well under the Factory Acts.

33591. Yes, you go on to say that the conditions regarding arbitration in case the parties establishing Special Rules disagreed, might be retained; but if such a thing is possible in legal matters, the procedure might be made simple and less costly?—Yes.

33592. What is your suggestion as to making the procedure more simple and less costly?—I think as a rule there would not be arbitration in a case of that sort. If you get seven practical men sitting round a table, I think they would settle what rules were necessary. At present I think we have far too many rules. If we could get the present rules properly carried out we should do very well, and they ought to be simplified. I believe that under the Factory Act when objections are made an inquiry is held. I have not read up the point, as I have not had time, but I believe it is working rather well, and that might be embodied in this.

33593. The Factory Act procedure is practically that a competent person is appointed by the Secretary of State to look into the matter, and to hear all the objections and all that can be said on both sides with regard to the rules; and when that competent person reports to the Secretary of State, the Secretary of State, without any arbitration at all, at his own will and pleasure, can decide what rules ought or ought not to be established?—Yes. I think probably the Secretary of State could decide as to a rule in that case where the Mining Board disagreed, but it would have to be a very serious disagreement. I think as a rule they would come to an agreement. Supposing you had from a district three members of the Coal Owners' Association and three of the Miners' Union men, and they talked the matter out with the inspector as chairman, I think they would come to an agreement on a question of Special Rules. At all events, it would let the fresh air of publicity blow over the matter.

33594. Then you are not prepared to say whether you would stand by your opinion that in case of difference arbitration should be resorted to?—No.

33595. Or whether the procedure under the Factory Act should be adopted?—There must be some means of deciding when they disagree, and that means ought to be as simple as possible.

33596. You would not leave it to the Secretary of State to decide?—I should be rather inclined to do so.

33597. (*Mr. Wm. Abraham.*) After it had been thoroughly ventilated by the Mining Board?—After it had been thoroughly ventilated by the Mining Board.

33598. With an independent chairman sitting there?—That is so.

33599. (*Chairman.*) The independent chairman would be the chief inspector of the district?—The chief inspector of the district.

33600. You now go on to the investigation of accidents. You say that in some districts practically all the reported accidents appear to be investigated by Government inspectors. This is impossible in districts where the number of inspectors is small and the number of accidents great?—Yes.

33601. You add that you are of opinion that all accidents which are not obviously trivial should be so investigated?—Yes.

Digitized by Google

33602. You say that the public inquiry into fatal accidents takes place in the coroners' courts. These are often held where the accommodation is unsatisfactory, and the short notice required by the Act is an inconvenience so far as the inspectors are concerned. If the inquest is delayed, the relatives of the deceased are pained and cannot complete the funeral arrangements ?—That is so.

33603. Then do you, or do you not, suggest that the notices where possible should be longer ?—I think if the bodies could either be viewed and the case adjourned, or the viewing of the bodies could be done away with altogether and an order for burial given, then the coroner's inquiry might be made more deliberate and more latitude might be given for asking questions.

33604. You do not see any reason why the inquiry should necessarily take place before the funeral at all ?—I do not. It is very distressing sometimes where the funeral is delayed.

33605. Then you say that in that case, supposing there was more notice, the proceedings could be made more deliberate and formal, and probably a hint from the Secretary of State would be sufficient to induce the coroners to make a complete inquiry ?—That is my opinion.

33606. That is a suggestion that the coroners do not make a complete inquiry at the present time ?—That is so. In some cases they take very wide views and do make a complete inquiry, and they allow any question to be asked with the object of preventing a repetition of the accident, for instance. But there are other coroners who take a different view. They say they are there to find out whether anyone is to blame, and what was the cause of death ; and having found that out, they leave it to the inspector to go into the other questions. That is not the case with most coroners in Yorkshire. They are very good. They allow us every latitude, most of them.

33607. So that you are satisfied with what takes place in Yorkshire ?—In some cases—not in all.

33608. Then you know of some cases where you consider the proceedings at the coroner's inquest have not brought out all the facts of the case which you consider ought to have been brought out ?—That is so, from our point of view—not all we would like to see discussed and decided.

33609. Then you say that Section 45 of the Coal Mines Act, which provides for the formal investigation of accidents, is, for practical purposes, a dead letter ?—Yes.

33610. During your 24 years' service as an inspector of mines you have taken part in only one such inquiry ?—Yes.

33611. Then do you suggest that the provisions of Section 45 for a second inquiry should be made use of more than they are at present ?—If you could have the matter properly threshed out before the coroner, I am satisfied with one inquiry ; but I think that those provisions might be retained for cases where there has been no death, for instance. Serious cases in which there has been no death ought to be inquired into formally.

33612. Would you suggest that the Secretary of State should remain, as at present, the sole authority to order such an inquiry, or do you think that persons, for instance, who are damnified by the report of the inquest should be entitled to ask as of right for a second inquiry, or do you think that the realtives of the person who is dead ought to have the right ?—I think I should leave it to the Secretary of State.

33613. You would leave it to the Secretary of State entirely, as at present ?—Yes.

33614. Do you know of any case where a second inquiry has been asked for, and, in your opinion improperly refused ?—None have come under my immediate notice.

33615. Then you go on to deal with the Board of Examination ?—Yes.

33616. You say that first and second-class certificates for managers and under-managers of mines are freely granted at present and that some of the successful candidates have no thorough practical knowledge and others are deficient in the scientific part of their profession ?—That is so.

33617. Do you think that the examination is unduly lax ?—I think in some cases it is, both from the practical and scientific point of view.

33618. Then you add that owners of mines for the most part select good men, but there is a distinct tendency in some quarters to be pennywise and to appoint inferior men, who, though they fulfil the requirements of the Acts, have very poor qualifications. You have known that to be the fact in your district ?—I have known that to be the fact.

33619. Consequently you think it extremely desirable that the qualifications for passing this examination should be somewhat screwed up ?—Yes, by the formation of a Central Board of Examination.

33620. You say that the time has now arrived when the scheme for the examination for Managers' certificates should be thoroughly revised with the object of establishing uniformity and the better testing of the practical as well as the theoretical knowledge of the candidates ?—Yes.

33621. Then you suggest a Board of Examination which should be constituted for the whole of the United Kingdom and appointed by the Secretary of State, and which should consist of "(*a*) The Director of the Mines Department (*ex officio* President). (*b*) Three persons nominated by the Coal Owners' Association. (*c*) Three persons nominated by the Miners' Union. (*d*) One person nominated by the Institution of Mining Engineers. (*e*) One person nominated by the Colliery Managers' Association. (*f*) One University Professor of Mining." That is ten persons ?—Ten persons.

33622. Then you say that the Board should be a controlling rather than an examining body : they would draw up the regulations for the conduct of the examinations, and appoint the examiners ?—Yes.

33623. They should not be examiners themselves ?—No, I would not let them be examiners themselves.

33624. And they should take steps to insure that the standard of examination was the same in each district ?—Yes.

33625. They would consider the examiners' reports and grant certificates to such candidates as had, in their opinion, qualified ?—Yes.

33626. You add that the examinations might be held at Glasgow, Newcastle-on-Tyne, Sheffield, Birmingham, Manchester, Cardiff and London once a year, at times convenient for each centre ?—Yes.

33627. (*Mr. Ratcliffe Ellis.*) You have had considerable experience in England as an inspector, and you have also been out to India ?—That is so.

33628. So that you have the advantage not only of knowing the condition of things in England, but in the Indian coal-field ?—That is so.

33629. With reference to Government inspection, what do you consider is the object which should be sought for by Government inspection ?—I think first of all that there ought to be enough to ensure that the Act is fairly uniformly observed, and that any serious irregularities will be detected. I also think that an inspector ought to have at least as good qualifications as a manager.

33630. I want to understand what the object is : it is to see that the Act is carried out ?—Yes, and that the mines are properly managed.

33631. In your view for the inspector to do that, it is not necessary that he should be at the mine every week ?—I do not think it is desirable.

33632. Do you think that by a sample inspection of a mine you can form an opinion as to how the Mines Act is being carried out generally throughout that mine ?—I think by repeated samples you can. I would not say that by going and just seeing a district to-day I could pass an opinion upon a mine, but I should have a very good idea of what was going on even then.

33633. But by repeated sampling of a mine you would have sufficient idea as to whether the Mines Act was being carried out or not ?—You would have a very good idea after two or three visits. Then probably if you were not thoroughly satisfied you would have a more extensive inspection made of the mine. That has been my practice.

33634. That is, to see that the Mines Act is being carried out. But is there not another duty of an inspector namely, that if he finds any dangerous practice to which there is no specific provision of the Mines Act applicable his duty is to call attention to that and take means to have it stopped ?—Yes. He has power of giving notice if the manager will not remedy it. In practice as a rule the managers remedy it.

33635. In order to carry out this inspection, your view is that the man who is to do it must be a highly-qualified man ?—I think it is essential.

33636. What assistance do you expect to get from assistant inspectors ?—I expect that the inspection which

Digitized by Google

Mr. W. H. Pickering.

12 Dec., 1907

they would make should be in all respects as good as I should make myself.

33637. And you think that to be of use they ought to be as qualified for the work (except with regard to experience, which they would not have immediately upon employment) as the chief inspector?—I think so.

33638. In the suggestion which you make for the future you would have these additional inspectors?—Deputy chief inspectors.

33639. That is all: would the assistant inspector do the same work as the inspector?—Yes, the same that the assistant inspectors do now.

33640. Therefore it would not be merely some man who could examine to see whether a place was free from gas, or whether the timbering was right, but it would be some man who was sufficiently competent to pronounce an opinion as to the general condition of the mine?—Yes, or who would go and investigate an accident and be able at an inquest to answer any mining engineering questions which might be put to him, which crop up at inquests.

33641. And also to afford any advice which might be necessary to the management?—Yes.

33642. Also that he should be able to notice whether there was any dangerous practice, which, although not expressly provided for in the Act of Parliament, ought to be stopped?—Yes, or indications of danger.

33643. That he ought to be qualified to do all that?—I think so.

33644. If he is not qualified to do that, do you think inspection would be of any use?—From my point of view it would not be. I would not say that it would be of no use but it would not be so valuable.

33645. With reference to the persons who should be appointed inspectors, do you see any objection to the appointments being open to anybody having a first-class certificate and passing the Home Office examination?—The only objection I see to that is in regard to difficulty as to character and physique; you may get a man who is not strong enough either in character or body for the position. There are also other qualifications that occur to one, if a man was coming into a public service, which are desirable. I think I should not throw the thing absolutely open and give it to a man who came out with the top marks, because he may not be the best candidate. He may be a man who can pass an examination and nothing else.

33646. But, of course, so far as the physique is concerned, that might be ascertained by medical examination?—Yes, that can be ascertained by medical examination to a large extent.

33647. What I want to see is whether it is possible to get rid of the nomination altogether, and to have an examination open to every person who should have the necessary qualifications?—The only objection that I see to that is that you might not get the best man if you took the man who comes out top and is good at examinations.

33648. That is your view?—That is my view.

33649. Subject to that, you would see no objection to it being thrown open?—I would not, subject to that.

33650. Then, of course, it would relieve somebody from the difficulty of making a selection?—That is so.

33651. I suppose a man to be an inspector must have had some practical experience?—I think that is essential.

33652. Then what is your view as to that practical experience?—It is a little difficult to give a definition on the spur of the moment, but I should say he ought to have had experience in some form or another of most of the work in a pit; for instance, he ought to know all about the work in the face, but it ought not to end there; he ought also to know how to arrange brattice to keep gas off; he ought to know how to build dams to keep fire back, and he ought to know how to timber very difficult ground, as through a heavy fall in a road; in fact, he ought to know how to do, and to do with his own hands, when necessary, any operation of that sort.

33653. You must not consider me rude in putting this question to you: in what way did you acquire that experience?—I began by being down the pit all day and doing all sorts of things—working about the pits. I used to go down at two o'clock in the morning when I first started.

33654. And you saw all that was going on?—I saw all that was going on, and did a good deal of it too.

33655. Is it necessary, in your view, that a man should qualify himself by actually working as a collier at the coal face?—I do not think it is absolutely essential. I may give you a case where I had three inspectors acting as stonemasons about six months ago; one of them had been a working man, but the others had not. They were building dams with their own hands.

33656. (*Mr. Wm. Abraham.*) But how is the inspector to possess the experience which you think necessary unless he is to have the opportunity of working with his own hands?—He can work with his own hands if he likes in a pit. You will find that the more energetic young men do help; they help in digging gob-fires out, and they help in building, and they take up the pick when they are going round.

33657. Then what you mean is this: it is not necessary for him to be engaged as a collier, but it is necessary that he should have an opportunity of practising that kind of work?—I think so.

33658. Would a man who has never done anything of that kind, but who has simply done the work of measuring the air as a surveyor, be qualified?—I do not think as a rule he would be, but he may be. If he had simply gone round measuring the air I do not think he would be qualified.

33659. (*Mr. Ratcliffe Ellis.*) I do not suggest that he would be. It is suggested here that before a man is qualified he should have five or six years actual working as a collier at the face?—I beg your pardon, is that for all appointments?

33660. For under-manager, inspector, fireman or any other person connected with the management or supervision of a mine. Supposing that was the case, you see a man begins in the mine, and it is a considerable time before he begins to work at the face. He cannot work at the face until he is 20 or 21?—That is so.

33661. Then five or six years working at the face would bring him to the age of 26 or 27, I suppose?—Yes.

33662. When is this man to learn the measurement of the air and other duties which are necessary to be discharged by a manager or to be supervised by an inspector in a mine?—I think if a man, say, had only begun as a driver and then worked as a loader, and then in a stall, he would not be what I should call a practical pitman altogether. He would have a knowledge of the working of the face and of his own place, but he might be in that place for years and never see another place.

33663. Do you think a man with a qualification of that sort is a man to whom the lives of the men in the mine ought to be entrusted?—Not unless he has other qualifications as well.

33664. And other qualifications probably of more importance than that?—Yes—of equal importance, at all events.

33665. Therefore, in your view, the training which you yourself had down the pit, although you never worked as a collier, is sufficient to give you that practical experience to enable you to supervise the management of the mine?—I think so.

(*Mr. Wm. Abraham.*) And it is necessary?

33666. (*Mr. Ratcliffe Ellis.*) That is to say, you think that is the experience which would be necessary to qualify, and sufficient to qualify a man for that post?—Yes; it would not disqualify a man who had worked at the face. A lot of our best managers have been colliers and they come on later in life. I would not for a moment say anything against the experience which a man gets at the face; I think it is very valuable.

33667. I would not say anything against it for a moment, but although it would not disqualify him, it would not necessarily be the only qualification?—No; it would not necessarily be the only qualification.

33668. You say you would have all the inspectors equally qualified?—That is so.

33669. You suggested that there should be a Mines Department at the Home Office?—Yes. I think that is practically decided from what I see in the papers.

33670. Then would the head of that department be the chief inspector, or would he be a different official?—I think that would have to be left to the Secretary of State. I do not know that I have any right to pass an opinion upon that. I do not think he ought to do anything that would interfere with the authority of the district inspectors.

33671. Do you think that that official, whoever he is should interfere with the work of the present chief inspectors?—Not except as regards uniformity and proper

Digitized by Google

discharge of duties. I do not see how you could prevent him interfering to a certain extent, but I would not lessen the authority of a chief inspector in charge of a district.

33672. Do you think that if there were anything done which lessened the authority or interfered with the position of the chief inspector that would be undesirable ?—I think that would be a great mistake. I would raise his status rather than lower it.

33673. With regard to remuneration, in your view everything has risen except the inspector's remuneration, which has stopped very much where it was years ago ?—That is so.

33674. In your opinion there ought to be such remuneration as would attract the best men ?—Yes, I think that is desirable.

33675. And that should go through all the classes of inspectors ?—Yes, all.

33676. You think their work might be relieved to a certain extent by the clerical work being taken away ?—Yes.

33677. But do you not think it is very desirable that all the statistics of the district should pass through the hands of the chief inspector ?—Yes. In India I had them all compiled by clerks, but I checked all the figures ; I went through them myself.

33678. Although he should be responsible for them, and they should pass through his hands, because it gives him a very important view as to the condition of the district ?—Yes.

33679. Yet he should be relieved from part of that duty ?—Yes ; for instance, he might be relieved from writing all the names in the book and writing the figures after them. He can check them afterwards and go through them, but with regard to all the detailed clerical work, I do not see that a man with those qualifications should have to do it. No other man in such a position has to do such work.

33680. With reference to the establishment of Special Rules, would you disestablish the existing rules ?—I think the best plan would be to make a clean sweep and revise them altogether. It strikes one now that we have a tremendous jumble of Special Rules and Orders, so that a good many of the managers cannot understand where they are.

33681. But of course the men and the managers know these rules pretty well ?—Yes.

33682. And that might cause rather a danger ; if you were to disestablish these and start afresh it would take some time to learn the new ones ?—A good many of the rules are in a sense superfluous, I think ; they are not observed. You find most of the prosecutions for breaches of the rules are under two heads ; one is that the men shall not do an act which is calculated to endanger life or property, and the other is for not obeying orders.

33683. You say the Board should be three representatives of the coal-owners—the employers—and three representatives of the Miners' Union : that is six. Then the Chief Inspector of Mines : that is seven ?—Yes.

33684. And who else ?—That is all for the Mining Board which is to frame rules.

33685. What is to become of the men who may not be in the Union ?—I have provided for the rules being sent round and published.

33686. But so far as the Board is concerned, who is to represent the men who have no representative on the Board ?—They are not represented.

33687. They would have no *locus standi* on this Board ?—No. The same would apply to the coal-owners, too ; but the inspector, who is an independent man, would listen to any representations.

33688. I see that in your rules in Yorkshire you have rules applying to the under-managers and deputies, underhewer, enginewright, enginemen, banksmen and hangers-on, brakesmen, incline-men and a number of others ; and then you come to a limited number of rules for miners, workmen and others ?—That is so.

33689. Is there to be anybody on the Board representing the various classes of employment, managers and men, who are not usually in the Miners' Federation ?—I think the Coal Owners' Association and the Miners' Union are so strong now that they represent everyone, and those they do not represent, the inspector would represent. I have considered it from that point of view, but there are so few now outside either the Union or the Association that I think they would be represented by the inspector, who would listen to any representation they made.

33690. Supposing that on this Board which establishes Special Rules there should be a difference of opinion between the three representatives of the owners and the three representatives of the workmen, then would you place the sole decision in the hands of the inspector ?—I would give the other side the right to appeal to the Secretary of State or to an arbitrator.

33691. Then if the inspector decides either on one side or the other, you would give the dissenting party the right of appeal ?—I would.

33692. With regard to that appeal, you say you have not quite thought out the authority yet ?—No.

33693-5. But you rather favour the provisions of the Factory Act ?—Yes, I rather favour them ; I believe they are working well. I should like to know more about the working of it, first of all.

33696. Here you have got representatives of the owners, who are supposed to be competent men and who understand mining as well as the inspector ?—That is so.

33697. At any rate, they think so ?—Yes, they do.

33698. And then you have the three representatives of the workmen, and you have the inspector. Now, supposing there is a division of opinion, and the matter comes before the Secretary of State ?—Yes.

33699. Of course, he would be helpless, in all probability ?—Yes.

33700. Then he is to be guided by the advice given to him by the officials at the Home Office ?—That is so.

33701. So that really you do place in their hands the fixing of those rules ?—It is putting rather into form what is now the practice, except that you make it more definite, and you have a little more publicity. As a rule, if we are establishing Special Rules, we let the owners and the miners know. Supposing they want to revise a Special Rule, they have a meeting ; but it is not quite so formal as what I propose they should have.

33702. This suggestion of yours is to simplify the present procedure ?—That is so.

33703. Now I want to suggest to you another scheme, and that is this : that it should be left as it is at present, that the owners may propose a rule, or the Home Office may propose a rule ?—Yes.

33704. But that if it is proposed by the owner, then, before it is established it should be advertised, as in the Factory Rules ?—Yes.

33705. And everybody interested, whether it is a collier or the Miners' Federation, or some owner who is not in the Coalowners' Association, should be able to object to it ?—Yes.

33706. And if that objection is not removed, that he should be entitled to go to arbitration, but instead of having two arbitrators and an umpire as now proposed, it should be an arbitrator appointed by a judge of the High Court, who should decide the question finally. You see what I suggest is this, that there is no harm in proposing a rule ?—No.

33707. But before it is established as a rule to bind anybody, anyone interested should have an opportunity of expressing their objection to it ?—I quite agree.

33708. Then you think a system of that sort would meet your views ?—It depends upon how it worked. I have not really considered that carefully enough.

33709. But I want to draw the distinction between these : it is suggested that before the rule is even proposed, the coal-owner, if he wishes to propose a rule, must invite the men to discuss it with him ?—Yes.

33710. I do not quite know what men he is to invite, but he is to invite some of the men—I suppose the men at his colliery—to discuss that rule with him. But whether they agree to it or not he may propose the rule ?—Yes.

33711. I suggest that that is an unnecessary and useless formality : that he should be allowed to propose his rule, and that before it is established anybody interested should have a right to object, and that if there is a division of opinion amongst them which cannot be removed by meetings, if they choose to meet together afterwards, then it should go to an arbitrator appointed, in case of difference, by a judge of the High Court ?—I think the men ought to know that a rule is to be proposed, and what the nature of it is.

Mr. W. H. Pickering.

12 Dec., 1907

33712. Why?—Because I think they ought to have an idea of what is expected, and they may have views on the subject.

33713. They have an opportunity before it is established. Take the case of the Home Office. Suppose they wish to propose a rule, are they not to be allowed to propose the rule until they have communicated with the men and said "We want to propose this rule?" Is it not sufficient if they propose the rule, that anyone interested, owner or employee, shall have a right to object to it?—So long as everybody concerned in the rule knows that it is going to come on and be discussed, I am satisfied: but I want to make the process afterwards as simple as possible. I want everyone to know that a certain rule is going to be proposed and put into force.

33714. That a certain rule is going to be established?—Yes.

33715. I agree, and I go further and say that it should not be established until everybody has had an opportunity of having their say about it?—Yes, I agree.

33716. Then the only thing upon which we differ is the way in which any differences should be settled afterwards?—That is so. I thought this would be a sort of Conciliation Board of men and owners who should agree on what the rule should be.

33717. You know, and it is a fact, is it not, that from the men's point of view many questions that arise upon these rules are not questions of safety, but questions of wages?—It would often arise.

33718. If that should be the question to be discussed by this Board, it would not be likely that the Board should come to any conclusion about it?—If they discussed the wages question, I think you might rely upon it that they would not agree.

33719. If the rule which is going to be proposed was a rule which might affect wages, I suppose it would be a mere formality having this Board to consider it?—No, I do not think it would. The rules would be put in a debatable form.

33720. It is a new Conciliation Board, really?—Yes.

33721. However, you would agree with me that if the men, or rather, if anyone interested—I do not wish to talk about the men as apart from the employers—have a full opportunity, before the rule is established, of knowing what it is, you are satisfied?—Yes.

33722. The only thing is that you want the method of dealing with differences to be simplified?—Yes.

33723. (*Chairman.*) But are you satisfied? I ask you that, because Mr. Ellis puts it to you that you are satisfied if, before the rule is established, everybody has an opportunity of having their say. I put it to you, is it not desirable that everybody should have an opportunity of saying their say, not only before the rule is established, but before the mine owners have gone to the length of putting it forward? Is it not desirable that the men should be consulted at a previous stage of the proceedings, because when once the mine-owners have met together and consulted among themselves and consulted no one else and have put forward a rule, is it not rather a matter of pride with them that they should stick to the rule in the form in which they put it forward, and would it not be desirable, before they have absolutely decided to ask for the establishment of a particular rule, that the drafting of it should be considered both by masters and men?—That is my view. I rather understood Mr. Ellis to say that.

(*Chairman.*) That is exactly what Mr. Ellis does not understand, and does not wish.

33724. (*Mr. Wm. Abraham.*) In all your experience where employers and their workmen have been engaged in discussing these matters, has a wages question been allowed to be raised?—No, it has not been raised.

33725. (*Mr. Ratcliffe Ellis.*) With regard to the duties of firemen and inspection under General Rule 4, do you think that the districts are too large?—I think in some cases they are. I think a man is hard pressed.

33726. You have suggested that where a man cannot get round in two hours that that should be taken as a measure of his district?—I think that is a rough way of measuring it.

33727. It would depend upon the man a good deal?—Yes, and the local conditions.

33728. Is there any way by which it could be put into a rule. Can you suggest any words to provide for his district not being too large?—No, it is very difficult to put it into a rule.

33729. It would have to be left to the management?—Yes.

33730. Have you had any reason to suppose that where the districts are not too large the firemen have had to do other work than examining?—I think that there are cases where they have to do.

33731. That should not be allowed you think?—No.

33732. Is there any rule you can suggest to secure better supervision?—I do not think so, except making the management itself of a higher class. I think it has to be largely brought about by public opinion.

33733. You think that the districts should not be too large and that the men should have nothing to do but the work of inspection?—I think they ought to confine themselves to that work.

33734. Do you think in your district it is the case that the firemen have other duties to perform than mere inspection?—No, not very largely; only in a few cases.

33735. In the best managed collieries?—They do nothing else but examine.

33736. Your suggestion would be merely bringing up collieries to the standard of the best?—Yes, that is so.

33737. With reference to General Rule 38 and the examination do you think that is a useful provision?—Yes, I think it is a useful provision.

33738. What is the object of that examination. May I suggest that it is the same as that of the Government inspection, but it is to assure the men working in the mine that they are working under conditions that are safe?—Yes.

33739. That is the object of it. I put it to you whether that object would not be more likely to be better attained by the examination being made by some of their own number under the same conditions than by outsiders?—I think as a rule it would be better attained.

33740. Do you think that there is anything in the suggestion that the men do not examine for fear of the consequences?—I think there is certainly not in Yorkshire.

33741. The Miners' Federation exists in Yorkshire and other parts of the country?—Yes.

33742. I daresay you have heard that they have taken up cases where a man is said to have been victimised or where he has been unjustly discharged?—I have heard of cases of that sort.

33743. They would be interested in a case where a man was discharged in consequence of making a bad report?—Yes.

33744. You do not think in Yorkshire that there is any reasonable ground for such a fear?—No.

33745. It is suggested that this right of examination of coal owners' premises should be extended not only to men who are employed in his mine, as is the case now, but to anybody who has been a practical miner at any time in his life. Do you think that is a desirable alteration?—No, I do not think that is very desirable.

33746. You would not do that?—No.

33747. It is suggested that check weighers should be eligible for this work of examining?—In Yorkshire most of the check weighers are not practical miners.

33748. (*Mr. Smillie.*) Do you say that from your own knowledge?—Not by asking the men but it is a sort of general impression I have.

33749. We know that it is not the case?—I think it has been said in evidence by the miners' representatives that most of them are not. I give that for what it is worth. At all events a number of them are not.

33750. 80 per cent. of them?—In Yorkshire.

33751. Yes.—I did not know that.

33752. (*Mr. Ratcliffe Ellis.*) The value of this inspection to you would be quite as much if made by men who have to work under the same conditions, they report upon as if made by check weighers?—Yes.

33753. With reference to the supervision by the management, you think that a manager should have rather fewer duties: that is, that the area of his supervision should be restricted?—Not in all cases—in fact not in most cases. In some cases it is satisfactory.

Digitized by Google

33754. You suggest for consideration something on the Indian method ?—Yes, I suggest for consideration something on that method.

33755. You think in some of the best collieries in Yorkshire the practice does not differ very much from that ?—No, the practice is very satisfactory.

33756. (*Mr. Cunynghame.*) You are aware, of course, that a very large proportion of the accidents in mines are due to falls of roof and sides ?—Yes.

33757. You are also aware that Special Rules were made for timbering at stated distances, the distances to be named by the manager of the mine ?—Yes, that is so.

33758. What is your opinion as to the cause of this number of accidents and how it could be prevented ?—I think stricter supervision would help.

33759. It comes to this, there is a certain amount of carelessness in the men at work ?—Both in the supervision and the men at work.

33760. There should be greater supervision, and you think greater care, too, in the setting of timber ?—There are a lot of cases of accident that ought not to happen from drawing timber.

33761. How can that greater care be brought about: how can people be made to take greater care ? Would it be necessary to have prosecutions or fines, or anything else ?—I am more in favour of prosecutions than fines.

33762. Would it mean a large number of prosecutions to get rid of this carelessness ?—I think you can only get rid of it by educating public opinion against bad methods.

33763. You do not think that prosecutions would do much ?—I think they would help very much.

33764. Do you mean that there should be more of them ?—I think in lots of cases that there should be more, but the practice varies enormously in my district. Some managers always prosecute: others never do. They fine a man or take some other means of punishing him, or none.

33765. (*Chairman.*) Do you find that there is much difference in the maintenance of discipline in those mines where they prosecute and where they fine ?—I think the discipline as a rule is stronger where they prosecute.

33766. You have gone into that ?—Yes. It is not always stronger.

33767. You have gone into that question carefully ?—Yes.

33768. You do not think that is so always, that there is a difference always in favour of prosecutions ?—I am in favour in a serious case of having a prosecution.

33769. (*Mr. Cunynghame.*) Are you in favour of the abolition of fines altogether ?—No, I do not think I would go quite that far, but I would restrict them.

33770. In the future do you look forward to a considerable reduction of loss of life from those falls of roof ?—I think we may hope for that.

33771. For the last 8 or 10 years the reduction has not gone on fast enough really to content you ?—No, not at all. The industry has been expanding so enormously. I do not think you will get any great reduction until it settles down again.

33772. This great expansion is due to the opening of a number of new mines ?—Yes, the extraordinary influx of men into the mines is due to that.

33773. Will that expansion go on or not ?—I think it will go on for some time. It certainly will in Yorkshire.

33774. I should not like to forecast, because it is dangerous, but can you give us an idea of the output in 10 years time ?—For the whole Kingdom ?

33775. Yes.—I would not like to propheoy that.

33776. Do you think there will be a considerable extension ?—I think there will be quite 25,000,000.

33777. Of extension ?—Yes.

33778. That is extended by one-eighth more in 10 years ?—Yes.

33779. That very extension itself will be a cause, to a certain extent, of more accidents from falls ?—I think it will, owing to the influx of new men into the pits. My own view is that it takes two generations to make a really first-class miner. Although a man may enter the mine as a boy, if he is not of a mining family and mining people, he seldom becomes as skilled and as careful a miner as those who are really brought up in it and whose fathers are miners.

33780. Your view with regard to accidents from falls is to a large extent in the circumstances that they are inevitable. Is that so or not ?—I think that is so. I am afraid it is.

33781. But you suggest more prosecutions and more supervision ?—I have suggested more supervision in my previous evidence by reducing the hours of the deputies. I think that would help largely.

33782. (*Mr. Wm. Abraham.*) I think, without basing your opinion upon your knowledge of employers and workmen, you are still of opinion that it would be better, as the Chairman put it, for the employers and workmen to meet in the first instance to discuss new rules ?—That is my view.

33783. It would do away with any unnecessary loss of time ?—It takes a long time to get through necessary rules now.

33784. I think you told us you would have the same qualifications for each class of inspector ?—I would.

33785. Do you think that to be essential ?—I think that ought to be essential, for one reason you would widen the number of men from whom you would choose the chief inspectors.

33786. You are of opinion that in each case a man should have a practical knowledge and experience of work in a mine ?—I think he ought to have a thorough practical knowledge and be a good practical pitman.

33787. A good practical pitman ?—Yes, I do think so.

33788. Are you aware that some of our present assistant inspectors have never done any practical work in the mine ?—I have not gone into the question of the qualifications of my colleagues, and I think it is a question I would rather not answer if you do not mind. If the Chairman will allow me, I will not answer that question. I do not think it is a question I ought to answer even if I have the knowledge of it. I should be obliged if Mr. Abraham would not press it.

33789. No, I will not. You have given your own view ?—Yes. I would rather not express any opinion on my colleagues.

33790. Your view is that men of high technical knowledge have a great advantage in partaking in examinations over the practical men who have not that technical knowledge ?—Yes, that would be so.

33791. You would not be surprised to find that some of those men, because of their high technical knowledge, in the absence of practical knowledge, have been selected ?—It is quite possible a man might get selected.

33792. You have stated that a sample inspection once a year is satisfactory ?—A large mine, of course, would be visited in the ordinary course of things a great deal oftener than once a year, but I think every mine ought to be visited at least once a year.

33793. That is a different view from what I understood you to say. A sample examination of all mines once a year is not satisfactory ?—No, because you are visiting the mine for the purpose of investigating accidents as well. Nothing may happen at the mine during the year to call the inspector there, and then I think it ought to be visited during the year.

33794. I have not in my mind visiting or examining in case of accidents, but the real examination. Assume that no accident has happened, I think, in answer to Mr. Ellis, you modified that opinion and said that repeated sampling would be necessary ?—Yes.

33795. In what kind of collieries do you consider repeated sampling necessary ?—A large dangerous colliery where there were several seams working. You ought to have a knowledge of each seam.

33796. Do you know that in several collieries the character of certain sections has changed during 12 months ?—Yes, that is so.

33797. So that the sample of one part of that mine could not be satisfactorily taken to represent the condition of the whole mine ?—It is quite possible there might be differences.

33798. If the general character had thoroughly changed, of course that would be so ?—Yes, but it would not alter the character of the management. That is my most important point of view. How are these mines being supervised and managed ? That is the most important duty of the inspector, to see that is carried out properly.

33799. If his duties are reduced down to that, is it sufficient to see he does his duties once a year ?—No. He does not know when that mine may be inspected. It may be inspected at any moment. If you went to a mine and found a district not properly ventilated, the

Mr. W. H. Pickering.

12 Dec, 1908

manager would be absolutely responsible, and if he knew that the inspector was coming the day before, he could not make that right—he could not make a drastic alteration of his ventilation.

33800. That is doing away with the idea created in my mind that visiting these mines once a year would be satisfactory?—Yes. If you are not satisfied with your sample then you go further into the matter.

33801. You would not put it down as a rule that once a year is sufficient?—No; I would make no rule.

33802. Do you know any reason why so few of the workmen's examinations are made in Yorkshire?—There are about one-third made. I think there are as many as in other districts. I think it is about one-third. I should say that collieries employing 40,000 people are inspected by the workmen. I do not know the reason for not expanding it.

33803. Do you know that they are not putting that rule into force as a fact?—It is not put into universal force. That is a fact.

33804. Have you seen workmen's reports brought as evidence of the character of mines at the coroner's inquests?—No, I do not remember that being done; not in Yorkshire or in Staffordshire.

33805. Do you think, holding the view you do about the character of inspection, that anything turns upon the opinion of those men when an explosion takes place?—I think it is valuable to have all the evidence you can, when an explosion takes place, from anyone.

33806. The evidence of these men would be valuable?—Yes, they would be valuable witnesses.

33807. Because they have made a thorough inspection?—That is so.

33808. And because they are capable of doing it?—Yes.

33809. Do you not think it is in that direction, real examination of the working places, that we mostly require additional inspection?—No. I think you require additional supervision in the working places, which I have stated with regard to the firemen's districts; but I do not think that the Government ought to be responsible for inspection by men who are not as qualified as the managers. A man inspects under Rule 38 and he is responsible to the men, but the Government take no responsibility for his inspection as to whether it is thorough or not, or whether he makes a true report, but if a man is under the Government he has to make his report and examination, and he is officially responsible to the Government, and the Government are morally responsible for his appointment.

33810. Supposing a practical miner by examination possessed a certificate of competency, would that not be a qualification high enough for this grade of inspector?—No; I think he ought also to go through another examination before he comes into the Government service.

33811. What for?—To see that he is thoroughly competent to discharge those duties.

33812. Of simply seeing that the law is carried out?—No, simply seeing you are getting the best men into the service. I do not mind how it is done.

33813. You add to his duties, you are to have the best men?—I want to see the best men in the service.

33814. Not to see simply, as Mr. Ellis puts it, that the law is carried out?—I think that is one of his duties.

33815. No doubt?—His principle duty.

(*Mr. Ratcliffe Ellis.*) I put another duty which he has to perform: to call attention to any dangerous practice which may not be provided for in the Coal Mines Regulation Act.

33816. (*Mr. Wm. Abraham.*) Has he a power of advising?—No, the Act gives him no power, but in practice he talks things over.

33817. If he did advise, he has no power to order his advice to be carried out?—No; but if there is a really serious danger that the manager will not remedy, and the inspector thinks he has power to give notice for that danger to be remedied, there is a section which provides for that.

33818. Supposing that in the interim, between his asking or advising or recommending the manager to take a certain course—improve the ventilation or change the lamps, put in safety-lamps instead of naked light—an explosion takes place?—Then the manager is in a very serious position, but in a case of that sort it would be probably a violation of the Coal Mines Act, to begin with—insufficient ventilation. It would not, perhaps, be strong enough in the first instance to justify a prosecution, but the inspector would write and draw the managers attention to this defect. He follows that up by a second visit, and if not put right then, he prosecutes.

33819. Supposing that second letter goes and nothing is done and an explosion takes place?—Then the manager is in a very serious position.

33820. Do you think that a manager ought to be placed on his trial in any way?—He would probably be prosecuted, but every case would have to be judged on its merits. I would not lay down a definite axiom.

33821. I think you give it as your opinion that all the coroner's examinations have not proved to be satisfactory to you?—That is so.

33822. And that in some cases within your knowledge some other kind, or a more direct inquiry, would be advisable?—Yes, that is so.

33823. What in your opinion would be the circumstances justifying the Home Secretary putting in force Rule 45 that provides for a second inquiry?—I think if you had the coroner's inquests made more efficient than they are now, it would be very seldom necessary to put it into force. I do not see the object of having more than one inquiry if you can avoid it, and, as a rule, the coroner's court is satisfactory if the coroner takes enlightened views of things, because the jury are usually men of all kinds, practical miners and different classes of men. There would be two or three practical miners on the jury or, perhaps, four or five practical miners, and there would be different men as well.

33824. (*Chairman.*) We were told the other day by a representative of the miners that there was the greatest possible difficulty in getting practical miners on to the jury?—We often have practical miners on in Yorkshire, or men who have been practical miners.

33825. (*Mr. Ratcliffe Ellis.*) Men who have been at work in the pit?—Yes, very often men who have retired come on the jury and make very good jurymen as a rule. It depends where the inquest is held. It is sometimes held where the police can only get shopkeepers. We usually have one or two miners, at all events, on our juries, and often more.

33826. (*Chairman.*) You are satisfied with the composition of the jury?—As a rule I am satisfied with the composition of the jury.

33827. (*Mr. Wm. Abraham.*) You know of some cases that have not been satisfactory?—Yes, where the coroner does not allow what I consider proper latitude. From his point of view he allows plenty; I suppose he thinks so.

33828. Where all the facts from your point of view were not ascertained?—They do not become public. We ascertain them of course ourselves, but they do not become public and it leads to rumours and misunderstandings even where there is no serious matter.

33829. Would you lay down as a rule that where one shift is worked three examinations should be made, two hours between each?—In my scheme they examine for that one shift within two hours at the beginning and two other examinations would be made during the shift.

33830. At different intervals?—Yes.

33831. The new point you have given us to-day, which I think is very valuable, is that these examinations should be made within two hours of each other?—Within two hours of the men beginning work, that is the first thing, and my next point was that the man should be able to get round his district in two hours.

33832. That would be the second?—Yes, the second examination.

33833. Then another examination?—Yes, another examination still. I would not put the interval between those two second examinations; I would not lay it down definitely. A man goes through his district, begins again, and would make his examination of some places within less than the time, but I want every man to be seen twice when at work by the deputy, in addition to the manager or under-manager coming round.

33834. That, according to your opinion, could be easily done in a shift of eight hours?—It is done in some very large collieries.

33835. It is done?—Yes, in Yorkshire in very large collieries, although the rule does not require it.

Digitized by Google

33836. Where it is not done how many hours are there where the men are working before the end of their shift without that kind of examination taking place ?—He may be there seven hours.

33837. That you object to ?—Yes.

33838. That you think dangerous ?—I think it is dangerous.

33839. Highly dangerous ?—Yes.

33840. Where two shifts are being worked you want an examination to be made the last two hours of the first shift to do for the morning examination of the first shift ?—Yes, I think that would be satisfactory.

33841. And then to follow on ?—Then you come on with two examinations again.

33842. So that in two shifts of eight hours you would have six examinations ?—Yes, two intermediates. One examination of course would fill two purposes.

33843. (*Chairman.*) There would not be six examinations, but there would be five.—Yes, but one examination would fill two purposes.

33844. Would that not give you too large a number of hours in the closing of the second shift ?—No, it would be the same as the first shift. Suppose the first shift began at 6 o'clock and the man examined from 4 to 6, and then the shift—say it was an eight-hour shift—finished at 2, between 6 and 2 there would have been two inspections by the deputy, but from 12 to 2 one of these inspectors would have been doing duty for the examination before the other men came in. There would be five examinations.

33845. Five examinations would carry out your view ?—Five examinations would carry it out.

33846. You would have it laid down as a rule of some kind that the fireman's district would be of such a size that this could be done ?—Yes, I think if you made a rule that the districts must be examined within two hours of the men beginning work and that there must be two examinations during the shift, you would get it, or as near as may be.

33847. With regard to timbering, I think Mr. Cunynghame put a question to you. What is your opinion with regard to systematic timbering. Is it necessary for safe working of our mines or not ?—I think systematic timbering is necessary and desirable and I always have thought so. It has been carried out for 50 years in some mines.

33848. You would be favourable to have rules directing how timber is to be put and the distance it should be put on the roads to the working places and roads of the same character, and not the same length ?—I think that the roads ought to be systematically and properly timbered.

33849. All roads ?—Yes. Where the road is in rock and will stand it would be foolish to put timber up.

33850. You would put timber on all roads where it is necessary ?—Yes, and I think it ought to be systematically and properly set, but do not take it from me as a practical man that I advocate timber in every place.

33851. I agree with you; I do not want it in every place. In weak cases it would be advisable ?—Yes, it would be most desirable.

33852. (*Mr. F. L. Davis.*) You say you would like to see this state of things, that one manager shall not have charge of more than one mine, with exceptions ?—Yes, with exceptions.

33853. I did not understand how you meant to put that into force. Do you suggest that should be stated in the Coal Mines Regulation Act ?—I think there should be some power given to the inspector to object to a man having that sort of management.

33854. You would leave things as they are at present ?—Yes, it is satisfactory in most cases, but I would give the inspector power to intervene where it is not satisfactory.

33855. Where he found it was not satisfactory to be able to stop it ?—Yes.

33856. Do you consider that you have not got that power now ?—No, I do not think we have got it now.

33857. What about rule 42 ?—I do not think that would come under Section 42.

33858. Not sufficiently definitely ?—Yes. I do not think you would get a case under that.

33859. You would like to have the power to do that, but generally speaking where there are a number of mines under one manager he is generally capable of taking charge of them ?—Generally speaking, he appoints an efficient man to carry out the proper management of them.

33860. With regard to the Special Rules and the new Conciliation Board, you suggest—I am not quite clear about this—everybody who wants a Special Rule established would have to propose it to that Board ?—He would have to communicate with the inspector of the district, who would then take steps to bring it before the Board.

33861. If the Home Office want to propose any rule they would have to propose it to that Board ?—I think they ought to be discussed by that Board.

33862. And the owners and the men all alike ?—Owners and men and everyone who knows about it.

33863. With regard to the examination question, you gave us the constitution of the Board of Examiners. It is to consist of a director of mining as chairman, three owners, three men, one manager and one engineer, I think you said ?—One representative of the Institution of Mining Engineers.

33864. Who are the others?—One member of the Colliery Managers' Association.

33865. And a professor ?—Yes, a Professor of Mining.

33866. Do you suggest that that Board should set the papers for the examinations ?—I think they first of all would have to consider that. That is a question that they would consider in making the regulations, but I think in practice the best thing would be for them to appoint examiners who would submit the papers they proposed to set to the Board for approval. In appointing local examiners for each centre one of the principal duties of that Board would be to see that the standard was equal throughout the Kingdom.

33867. These examinations would be held in different districts ?—Yes.

33868. You do not propose in that case that all the papers should be the same ?—Practically the same.

33869. The local examiners who set the papers might ask the approval of the other Board of the questions ?—That is so.

33870. Your reason for that is you wish to take into consideration the differences that may obtain in different districts ?—For the purposes of examination the differences are very slight. A man ought to have a thorough knowledge of mining. The certificate applies to the whole of the Kingdom, and I think he ought to be qualified to take the management of any mine in the Kingdom.

33871. You suggest that the differences are so slight that uniformity would be attained ?—I think so. I think it could be attained. I would appoint the examinations in local districts really for the convenience of the candidates, or you might have a central examination so far as that goes.

33872. Who would mark the papers, the local men ?—I think the examiners would mark the papers and report to the Board of Examination, who would grant the certificates.

33873. What is your view on the question of marks generally. Would you have a proportion or a maximum ?—I would have a proportion. We formed the Board in India during the time I was there and I went out to organise the thing, and we had proportionate marks.

33874. In every subject ?—In every subject. That is the schedule of marks on the right-hand page (*producing book*). There are regulations there drawn up.

33875. These are the necessary marks to pass ?—Yes, those are in the regulations which we drew up for the Board of Examination.

33876. Is your view that you would carry out that in this country ?—I would carry out that principle in this country.

33877. In every subject the candidates ought to pass, and not necessarily pass on the whole amount of marks, but they must pass in each subject ?—The candidate must pass in each subject—in essential subjects. The two excepted are handwriting and arithmetic. In mining and engineering they ought to pass or they ought not to pass at all.

33878. If you had different sets of examiners marking in the different districts do you not think that they might mark rather differently ?—It would be for the Board of Examination to consider that. There would be only seven districts where they were examined, and I think that the Board of Examination would be strong enough

Mr. W. H. Pickering.

12 Dec., 1907

to ensure that there was uniformity in that respect. You cannot allow for every human variation, I agree.

33879. Your opinion at any rate is that you would not have one paper set by this Board of Examination to operate in every district, but you think that the differences are so slight, I mean the different kinds of questions, that uniformity would be attained?—I think it could be attained, and I think it would be the duty of the Board of Examination to see that it was attained.

33880. (*Mr. Ratcliffe Ellis.*) Would it be possible to have one examiner on each Board nominated by the Central Board?—Yes, it would be. The examiners ought all to be appointed by the controlling Board.

33881. Each Board should have one examiner?—On the controlling Board.

33882. Yes, that would be possible?—That would be possible.

33883. (*Mr. F. L. Davis.*) The same man going round each district?—Yes, that would be a good thing.

33884. Two in the district and one central?—One outsider.

33885-8. That would do something to secure uniformity?—Yes.

33889. (*Mr. Smillie.*) Do you think that the district inspectors have sufficient power at the present time to enforce what they believe are conditions of safety for underground workmen?—I think in a great many cases they have, but not as regards the management always. I think their powers generally are sufficient.

33890. They have not power at the present time to enforce the introduction of safety lamps if the management refuses to put them in?—Yes, they can go to arbitration.

33891. They have no power without going to arbitration?—If it is a place where they have gas I should prosecute if they would not put safety lamps in.

33892. Would you succeed?—I think so. I might not. It all depends how it went. I think where there is a serious amount of gas that safety lamps ought to be used. I have no sympathy with naked lights.

33893. Supposing you were working under the sea and the inspector, from the nature and appearance of the roof and sides, was of opinion that it was dangerous, would he have power to stop a mine?—He could give notice under the section.

33894. You require to go to arbitration?—Yes.

33895. A prosecution would be of no service in a case of that kind?—He could not prosecute in that case because it is not provided for in the Act. He could give notice and go to arbitration.

33896. Do you think that it would be advantageous to give the chief inspectors more power than they possess at the present time?—No, I think their general powers are quite enough.

33897. You think they are strong enough?—Yes. It depends a great deal how they are exercised.

33898. You propose reducing the number of districts from 12 to 7?—Yes.

33899. Is it the case that a very large part of the time of the inspectors is taken up with travelling?—That is so, and that is why I want to reduce the number of the districts.

33900. Would not you increase the travelling if you reduced the districts?—No, I would station in the scheme I suggest the assistant inspectors and the deputy chief inspectors at suitable places in the districts to avoid the unprofitable time spent in travelling.

33901. You would so arrange your chiefs, sub-chiefs and assistants as to give them the least possible travelling?—Yes, and if possible have them in telephonic communication with each other so that you could get at a man at a minute's notice and cut out your work much better. There is often a difficulty when you have sent a man to a certain part of a district and another man probably has to cross him, because you have not been able to cut out your work better. Of course you can telegraph, but I think that telephones are more convenient.

33902. In answer to Mr. Abraham, you said in the event of an explosion taking place during the time that an inspector was waiting for the result of an arbitration where he had advised that lamps should be put in, the manager would find himself in a serious position?—Yes, I think he would.

33903. In what way?—What the inspector prophesied would have happened, and he would be liable to prosecution in any case for not using lamps where there was danger from gas. In a case where an explosion happens through the use of naked lights the manager is liable to prosecution because he has not used safety lamps, *prima facie*.

33904. Supposing an explosion happened because of insufficient ventilation, and it could be proved and was proved at the inquest that the attention of the manager had been called repeatedly by the inspector to the condition of matters, do you think the manager in a case of that kind would find himself in a very serious position?—Yes.

33905. Do you think a prosecution would follow?—Yes.

33906. Have you read the Report of the inqury into the McLaren explosion?—Yes; but I have not the facts quite in my mind at the present moment.

33907. Do you remember that the assistant inspector of mines had on two occasions visited that mine and found a cap on the safety lamp for 500 yards in a return airway?—I believe that was so.

33908. Are you aware that the inspector wrote on two occasions to the general manager calling attention to the dangerous state of the mine?—I remember that was so.

33909. Do you remember that the assistant inspector found a cap on the lamp in several of the working places?—I believe that was so, too.

33910. Taking it for granted that an inspector of mines had called the attention of the manager to the state of the ventilation, and pointed out that it was dangerous, and an explosion of gas took place, would you expect the manager would find himself in a serious position?—I certainly think he would.

33911. Would you expect a prosecution to follow in a case of that kind?—Yes, I would as a rule, but it depends upon circumstances. I should judge each individual case on its own merits.

33912. You certainly had it in your mind, when you answered Mr. Abraham, that in a case of that kind you would expect a prosecution to follow?—Yes, it would be a very likely case. There might be circumstances connected with it that prevented it being desirable to prosecute.

33913. Would you be in favour of a manager or an inspector of mines being appointed to his position who did not hold a certificate of competency?—I do not quite gather what you mean.

33914. Are you in favour of managers or mines inspectors being appointed who do not hold certificates of competency?—No. I think they ought to have certificates.

33915. There is no necessity at present, in the Coal Mines Regulation Act, for a mines inspector to hold a certificate?—No, but as a matter of fact they all do.

33916. Why should they hold certificates?—Because we want to have men who are equally qualified. If it is necessary for a manager of a mine to be a certificated man I say it is necessary for an inspector, who is presumably over him.

33917. Is it really necessary—it is according to law—that a manager of a mine should hold a certificate of competency?—I think it has had a very good effect in practice.

33918. Supposing he was quite competent to hold a certificate, would you say it was unnecessary?—It makes no difference to a man's qualifications, except it finds out his qualification in examining him for it.

33919. The Home Secretary at the present time has power under the Mines Act to appoint fit persons, which may be taken to mean competent for the position of inspectors of mines?—Yes.

33920. You think that should be strengthened by saying that they must hold certificates?—I do.

33921. And have passed a certain examination in addition to that?—I do.

33922. Why hold a certificate?—Because the only object of examination is to weed out the weaklings.

33923. Why hold a certificate? Is it because it is a proof of competency?—That is a proof that he has certain qualifications, at all events.

33924. If it is necessary, and you think it is highly necessary, that colliery managers and inspectors should hold a certificate proving their competency so far as examination can prove it——?—Yes, I do.

Digitized by Google

33925. Would you say the same thing should apply to a colliery fireman?—No, I would not go to a lower grade than that.

33926. Is the colliery fireman, so far as safety is concerned, not the most important man in the mine?—No; the manager is the most important man.

33927. The man who examines the places in the mines who is responsible for the safety of perhaps 50 or 60 men by his examination, is he not more important than the manager?—No; the manager is like the general; he is responsible for the strategy. The fireman is for the minor tactics.

33928. It is necessary, however, that the fireman should be a competent person?—Yes.

33929. What do you mean by a competent person in the case of a fireman?—A man who has good practical knowledge of mining, who can arrange for detail of ventilation, and who knows all about timbering and getting coal and so forth.

33930. He should have a knowledge of explosive gases?—Yes, and he ought to be able to examine for gases.

33931. Is there anything to prove that the persons who are appointed by managers have that knowledge to-day?—There is nothing to prove it, except that the manager is held responsible by law for the appointment—that the man is competent.

33932. Where is the manager held by law responsible? Have you ever known a case where a manager was held by law responsible for having appointed a person who was not competent?—Not directly. It would be a difficult thing to prove. There are cases where a man is prosecuted because a district is not in a fit condition.

33933. Is not the fireman responsible for his own acts?—Yes.

33934. (*Mr. Ratcliffe Ellis.*) And the manager, too?—Yes, and the manager is responsible for the fireman's acts.

(*Mr. Smillie*) A manager is responsible under the law to appoint a competent person.

33935. (*Mr. Ratcliffe Ellis.*) More than that, he is responsible for the acts of the fireman unless he can show that he has taken proper steps to carry out the regulations?—That is so.

33936. (*Mr. Smillie.*) The real point is, he has put it plainly, he does not think it necessary that firemen should hold a certificate of competency?—No, I do not.

33937. You have expressed the opinion that inspection by workmen under Rule 38 is good?—Yes.

33938. And has assisted probably in preventing accidents?—I think it has.

33939. You think really it should be more largely taken advantage of?—Yes, I should like to see that.

33940. You would not think that a monthly examination in some mines would be too often?—No.

33941. Does the examination by a workman under Rule 38 not lead to laxity in the management?—I do not think it does.

33942. If that does not lead to laxity in the management, why do you hazard the opinion that more inspection by Government officials would lead to laxity?—Because the inspection by inspectors is under Government authority, and ought to be more thorough. A man is appointed by the workmen and there is nothing to show what his qualifications are and whether he is able to give a general opinion. It may be very valuable for certain details, but not what I call inspection of anticipation of what may happen in the future in the particular district.

33943. Government inspection is more required in badly-managed collieries than in the best governed collieries?—Yes.

33944. There are many mines in which there is very little occasion for visits of the Government inspector?—Yes: you can rely on the management to bring anything to your notice that is happening at the colliery which is a serious matter.

33945. It is really to endeavour to keep the worst up to pretty near the position of the best?—I would like to see the worst raised to the best standard.

33946. Do you think it possible for the present staff of inspectors, or the number you propose, to thoroughly inspect the mines?—I think that a re-arrangement of districts and a relief from the clerical work would keep up a pretty good standard.

33947. You define what a sample inspection of a mine is. Would you define thorough examination by a mines inspector in a mine?—That would be examining all the faces and all the airways, and all the machinery, and everything connected with the mine.

33948. It would be to arrange that the examination which is provided for now must be made daily by the firemen and the other officials about the colliery?—Which is distributed amongst a large body of officials.

33949. Do you think four times the present staff of inspectors could make a thorough examination of the mines in this country once a year?—No, they could not do it.

33950. As a matter of fact there is not one mine in 20 at the present time which is thoroughly examined by a mines inspector each year?—No, not thoroughly examined.

33951. I suppose we may take it you would not think that a fair sample of the examination of a mine was that a mines inspector should go down to the pit bottom and measure the air and ask the manager, "Is all the rest of the mine in the same condition as this?" That would not be a fair method of sampling?—It would depend upon the extent of the mine. In a large mine it would not be.

33952. Take a mine employing 300 men, and extending two miles: you do not think it would be a fair method of sampling a mine of that kind?—You could not sample from the bottom.

33953. Supposing you were told that a mines inspector had sampled from the bottom?—He might be there for a special purpose or duty. I myself have gone to several collieries in a day to measure the air for a special purpose.

33954. If you were told that it went into his report as one of his examinations of the mine for the year, and that the Government had had that report, do you think that is a fair method of sampling?—It would depend so much on the circumstances. I do not think that I ought to answer that question.

33955. Would that be your method of sampling a mine?—It would depend what I was going for. If I was going to see how much air was going into that mine, I would have sampled the volume of ventilation, but if I were going to see what the workings were like, it would not be.

33956. Do you think that the workmen should be as deeply interested in Special Rules for their safety as the management?—I would like to see them interested in it.

33957. Do you think, in view of the fact that they have to risk their lives every day, that it should be of much interest to them?—Yes, I think so.

33958. Would you be prepared to give them the same rights? I think that you suggest that they should be there, or rather that they should have the same rights to a voice in the making of Special Rules?—To object when making them.

33959. It is really a question of objecting. I think that Mr. Ellis rather endeavoured to change your own view upon that matter. You sketched out a plan by which new rules for safety should be mutually agreed to?—Yes, if possible. I sketched out a scheme which I thought might be done. I am not particularly enamoured of that scheme if you can get a better one, but I would rather see the people agree on a rule. That is my view.

33960. Your opinion is that if the workmen were jointly consulted in the framing and drawing up and adopting of the Special Rules for safety they would be more likely to carry them out?—Yes, I daresay they would. At all events there would not be so much friction. There would be no friction in the first putting into force of the rules.

33961. Mr. Ellis suggested you would not take away the right of the employer to suggest a rule and send it on to the Home Office?—No.

33962. Would you give the workmen the same right?—Yes. I do not see any objection to them proposing a rule.

33963. If the employers have that right you would give the workmen the same right?—No. If it is a good rule it should go on.

(*Mr. Ratcliffe Ellis.*) We have no objection to the workmen proposing rules.

33964. (*Mr. Smillie.*) Mr. Ellis put it an employer might suggest a rule and send it to the Home Office, but that before it was established any person interested might have the right to object?—Yes.

33965. And instead of going to arbitration you would be willing that it should go before a judge of the High Court?—Yes.

Digitized by Google

Mr. W. H. Pickering.

12 Dec., 1907

33966. Could you conceive it possible for a working miner to go to the High Court in a case of that kind if he objected to the rule?—He would have to be represented: my view is that before anything of that sort takes place it ought to be considered by this Mining Board consisting of three men representing the coal-owners, three the miners, and a chief inspector.

33967. Mr. Ellis put it that you would not object, aside from that altogether, to an owner suggesting a rule and sending it to the Home Office, but that before it was established you should give every person who had a right the right to object?—Before it was established or went to arbitration I would like to see it considered by the Board I suggested.

33968. We will take it your own course you think is the best?—I think so at the present moment, but I have not an inner knowledge of how the factory system is working from the point of view of the men and the owners.

33969. (*Mr. Ratcliffe Ellis.*) Under the Factory Act the rule must emanate from the Home Office?—Yes.

33970. Under the Coal Mines Act there is an obligation put upon the owner that he must establish these rules?—Yes, that is the difference. As long as you get good rules easily established and not too many of them, that is the great thing.

33971. (*Mr. Smillie.*) Has it been your experience that there have been more fatal and serious accidents from falls where the roof was considered good, than where the roof was considered really a bad one?—That is often the case.

33972. I suppose that would arise out of trusting too much?—Yes. That is the value of systematic timbering.

33973. You pointed out in answer to Mr. Abraham where you have a rock roof?—That is in a roadway.

33974. Very often where there is a rock roof on one seam and the seam underneath that has been worked out, that tends to injure that rock roof?—Yes; I would not exempt every rock roof, but there are places in the pit which every practical miner knows do not require timbering. They stand for ever. I do not think any practical man would advocate timbering them. In fact the miners would be apt to smile if they saw it. You ought to put timbering in any road that is unsafe, either from working a seam underneath it, or any other reason. It ought to be timbered. The Act requires it at present.

33975. Have you had any experience in Yorkshire or anywhere of the coal-cutting machinery?—Yes, we have a lot of coal-cutting machinery in Yorkshire.

33976. Electrical and compressed air?—Yes.

33977. We may take it, I suppose, that the chief way by which a miner looks after his safety from falls at the face is by sound?—Yes.

33978. Either by sounding the roof or being warned through certain noises which he hears?—Yes.

33979. Where there is coal-cutting machinery and conveying machinery, which is largely being used now, it is impossible for a miner to hear?—That is so.

33980. The roof working, as we call it?—No.

33981. In a case of that kind it would be more than ever necessary that there should be systematic timbering to protect the workmen?—Yes, and it is much easier in a coal-cutting face than an ordinary face—systematic timbering—because you have your straight line or run. I am speaking of a longwall face. It ought to go in a straight line. Some places in Yorkshire have every prop absolutely straight all the way down the face.

33982. Do you believe in the miners setting their own timber?—Yes, I do, in a great many cases.

33983. Does it not become more difficult when machines are working to know who is the best person to set the timber?—I think it is a matter for the decision of the manager who is going to set the timber. It has to be stated, and it depends on the arrangement with the manager who is to set it. In the north of England the deputies set the timber for the men. In Yorkshire the men set their own, and in most other districts, That entirely depends upon the contract of the men.

33984. With regard to Rule 38, the miners are very anxious that "who are working miners" should be taken out and the words "who are or have been practical working miners" should be put in, and that persons who have been practical working miners should be allowed to make this examination. Mr. Ellis put it would you be in favour of a person who had been a practical working miner many years ago being entitled to make that examination, and you said no?—I prefer the man who is in active service at the time.

33985. A practical working miner at the time of the appointment?—Yes.

33986. Can you give any good reason for that?—Yes; where a man has been out of the pit for some time, his knowledge is apt to get a little rusty, for one thing, and he is not qualified, or is not so likely to be so qualified as a man absolutely working at that time, for inspection purposes. He may be better for other purposes.

33987. Supposing a limit of 10 years was put in, would you be willing to have them then?—I think it is better to leave it as it is. It seems to work well. I have no fault to find with the way it has worked.

33988. A person working in a particular colliery which is to be examined, is best suited to make the examination, because he is working there?—He knows the pit, to begin with. He does not go to the pit without knowing what to look for and where to look. He has a better chance.

33989. Does he not only know the part of the pit in which he is employed?—Yes, but he has a general knowledge of the geography of the pit, and he will make a good inspection in much less time than a stranger would.

33990. As far as Yorkshire is concerned there is no difficulty through fear of victimization?—No, I do not think there is.

33991. You prefer seeing greater advantage taken of that particular rule?—I do. I think it is a valuable thing.

33992. (*Dr. Haldane.*) Do you think it is desirable to have any more definite standards of ventilation than exist at present? Suppose there is black-damp in the air and nobody knows exactly how much is to be tolerated?—I think for all practical purposes it is sufficient to say that the ventilation should be adequate. I would rather not put any definition beyond that ventilation should be adequate, because you would have a great difficulty. Supposing you had a percentage of black-damp in the air, you would have to say where: is it in the current or in a crevice, where you often get it. I think you would have a great difficulty in defining. In the same way with firedamp.

33993. What is your standard of adequacy going to be?—I think that must be left to the judgment of a man.

33994. Supposing a case of that sort were to come into court?—Then there will be evidence. We have constantly cases of that sort of inadequate ventilation. You bring evidence into court, and the court decides whether it is adequate or not for that particular instance. All of us have thought it is possible, but I cannot say how you would frame a rule.

33995. Roughly you can frame a rule so as to exclude such cases as crevices, fenced-up workings, or out-of-the-way places in the mine?—You would have to say whether it was in the air. You might get a bit coming in an airway put to clear off gas, and there was gas in that. I do not know you can call that inadequate ventilation. If the main current was not sufficient to enable them to dilute it I should say it was not adequate.

33996. That is the case I am thinking of. For instance, if the last working place contained a very noticeable percentage of gas, and the return airway from it?—I should say that was not adequately ventilated from my point of view.

33997. Have you any standard in your own mind of what is adequate ventilation? When you see a cap on the flame, for instance?—If I saw a cap on a flame in a ventilating current, and that was passing over men, I should certainly say there was not enough air going to dilute that gas.

33998. Is it not rather a frequent occurrence to find a visible cap, I do not say a very large cap, but a very visible cap in the last working place in a split of air?—It ought not to be. It is not with us. The men are withdrawn as a rule if there is any gas in the current.

33999. You would in that case withdraw the men if you found it so?—I should withdraw the men if I were the manager.

34000. If you found it so on inspection you would ask that the men should be withdrawn?—Yes, and I would go again to find out what they were doing to better ventilate this place. I should write to the manager about it. So much depends upon each individual case. I have not been able to frame in my mind a rule which you can lay down in an Act of Parliament to cover those things in a pit of that kind as regards ventilation.

Digitized by Google

34001. The difficulty is it is so vague just now, and one would like to get something more satisfactory. You are aware that a cap on the lamp, for instance, is a very indefinite thing?—A very indefinite thing. Some lamps show it easier than others.

34002. Some persons will see it?—Some persons will see it where another does not. Some persons will see it where it does not exist.

34003. (*Mr. Smillie.*) Some persons fail to see it where it does exist?—Yes.

34004. (*Dr. Haldane.*) That is one difficulty?—It is a great difficulty, I admit. You want a more exact definition, but I do not see how you can give it.

34005. You are aware that they have a definite standard in some places, for instance, in Westphalia, in the mining districts?—I have heard so, but, unfortunately, I have had no experience of what they do.

34006. There it is obligatory on the management to have the air analysed at stated intervals, the air in the main return?—Yes, but that does not show what is going in the workings at all from the practical point of view. You might have air in the return absolutely pure and the whole of the workings foul with gas. I have known cases. Supposing you have not the stoppings and separation doors in proper working order, you have a big current of air going down one pit and up another and ventilating very little.

34007. We have had instances of that?—I would not attach much importance to a sample of air taken in the return.

34008. These are not merely in the main returns, but in the branch returns. They have to be taken according to the German regulations?—Even then I would not, because there might be accumulations of gas not swept out by the air current.

34009. Supposing you found there was habitually 3 per cent. of firedamp in a main return or a branch return, you would know the ventilation of that district could not be adequate?—I should expect to find a lot of gas about the place when I went into it.

34010. The regulation would be of some use?—It would be of service in that way.

34011. Supposing the standard were a reasonable one, I mean?—Yes.

34012. There is no standard?—There is no standard at all now except what public opinion demands in the various districts, and that varies.

34013. You are aware it does vary. It is one of the things that has struck me most?—It varies in different districts. In some places public opinion seems more advanced than others.

34014. Very much, I should say. Do you not think some attempt ought to be made to standardise public opinion?—I think the only way is by raising the standard of education all round. That is what we are trying to do now. What I rather advocate is a point in view of making the managers' certificates due evidence of practical and theoretical mining.

34015. Do you think there would be any use in, for instance, fixing a standard of say 2 per cent. of firedamp in the air, and saying anything more than that constitutes a distinct cap, or that any larger proportion than that would be held as an air giving a distinct cap on the flame? —You mean by analysis supposing you found you had 2 per cent.

34016. Yes?—Yes, I think you might take it.

34017. Two per cent. will give a cap which the blindest man on earth could see I should say?—I would not go quite that far.

34018. I mean the most mentally blind person ought to be able to see it?—He ought to be able to see a cap with 2 per cent. on a good safety lamp. He ought to see that; that would define what might constitute a cap.

34019. Do you think it would be some use to have some sort of standard?—Yes, if you can make one suitable. I am rather against hard and fast rules which cannot be made a practical success. I think they do more harm than good. It becomes still more indefinite, and it gives loopholes for escape, too.

34020. Any rule to be good would appy to the working places?—Yes. There are lots of cases where you cannot avoid getting a cap. The gas is coming out of the coal; you cannot stop it; you can only dilute it; by putting your lamp right against the coal you will get gas right enough.

34021. At the roof?—Or even jetting out of the coal into your lamp, coming out under pressure.

34022. I should think it was possible to frame rules to avoid these cases?—Of course it might. I have no objection to a rule, if it can be framed, to cover these things. I have no objection to the principle, but I am not prepared to say that I can define a rule or frame a rule to cover such things.

34023. Have you formed any opinion as to the desirability of providing arrangements for washing and cleaning men at the pit-head at the end of a shift?—I think it would be a great comfort to the men in many cases if that were done.

34024. Have you had any cases where you have seen the system carried out?—They have had it to a limited extent in one of the Yorkshire collieries, and I believe it is appreciated. I have not seen the men using them, but I believe they are appreciated.

34025. The result would be to prevent a good deal of dirt and discomfort at home, would it not?—Yes. I doubt whether the men in many cases really desire it. They would rather go home and wash.

34026. Provided they have accommodation at home? —It is very awkward. A man cannot get a comfortable wash at home very often.

34027. It is for these cases you think it is desirable?— I think it is desirable if it can be done.

34028. Are you aware whether there are any one-room miner's houses in England? We have heard that they exist in Scotland in some districts?—No, I do not think I know of any cases of that sort.

34029. You think that is extremely unlikely?—Yes. I think it is very wrong that men should live under such conditions.

34030. There are apparently some old miner's houses in Scotland?—Are they provided as part of their wages? Are they provided by the owners or does the man select his house?

(*Dr. Haldane.*) I do not know.

34031. (*Mr. Smillie.*) They pay rent for them, but they belong to the colliery?—A man could get another house if he liked, or would there be none available?

(*Mr. Smillie.*) None available only miles and miles away.

34032. (*Dr. Haldane.*) In any case of that sort the absence of washing accommodation would be a serious matter?—They are building a model village in connection with one of the new collieries in Yorkshire, which I hope to describe some day. In that they are making provision for bathrooms.

34033. In each house?—Yes. The scheme is only sketched out at present.

34034. As yet, at any rate, it is exceptional rather than otherwise, to find bathrooms in a collier's house?—Quite exceptional.

34035. In many houses the men can get some room where they could go to?—Of course it is very crowded and insufficient for a man to have a thorough wash after the pit shift.

34036. You think on the whole it would be a great boon? —I think it would be a boon to the men.

34037. To have accommodation of this kind?—Yes.

34038. Have you formed any opinion as to the desirability of providing sanitary conveniences underground? —I think they might be provided in many cases. If the men could go safely into the goaf and bury the stuff up, it is the best thing.

34039. There are a good many men working in the mine who are a long way from the goaf?—Yes. I think there ought to be places provided where they can go. It is no use providing places like that unless they are properly attended to and cleaned.

34040. Are any arrangements of that sort made in the Indian mines?—In the Indian mines sweepers go round the mine—people go anywhere they like, and these men sweep it up. There is a particular caste in India, a sweeper caste.

34041. They work in the mines, too?—They work in the mines, too. It is only the low caste men who do it. The miner will not do that work. That is the case in all the towns, and so forth. The sweepers do that.

Digitized by Google

Mr. W. H. Pickering.

12 Dec., 1907

34042. Do you know whether they have any trouble with ankylostomiasis in collieries in India?—I have heard of a case which I think probably is so, but not in the Bengal coal mines to any serious extent as yet.

34043. There is very much on the surface?—In the gold mines it is the case.

34044. Constantly Europeans get affected in gold mines?—I think in some of the thin seams in the Punjaub they do. Before I came away I was beginning an inquiry about that.

34045. (*Mr. Ratcliffe Ellis.*) With reference to General Rule 1 there are other gases which have to be diluted besides inflammable gases?—Yes.

34046. The suggested standard for fire-damp would only apply to one sort of gas?—Yes, that is the case.

34047. The rule as it is now requires all kinds of gases, whether inflammable or not, to be diluted?—Yes.

34048. And the ventilation must be adequate?—Yes.

34049. You have no fault to find with General Rule 1?—No: it has worked very well in practice. It has been embodied in rules all over the Empire.

34050. You think the General Rule which provides for the men being withdrawn under certain conditions might be improved?—It is possible that might be strengthened.

34051. Do you think it desirable instead of leaving it to the discretion of the manager when the men should come out, that there should be a state of things prescribed when they must come out?—If it can be prescribed I see no objection to that at all.

34052. It has been suggested that the visits of the inspectors to the mines are anticipated, and that preparations are made for their coming. Is it the custom of inspectors to give notice when they attend mines?—Not always.

34053. You make surprise visits?—Yes, at times.

34054. Take an accident, for instance, where the state of things must be left until you come, unless it is necessary to do something for safety. You would not be very easily deceived as to whether the state of things was left as it was or not?—No. You get witnesses of the accident.

34055. They know whether any alteration has been made?—Yes.

34056. Immediately after an accident it is not necessary for some member of the Federation to be put on guard to see that nothing is moved?—I do not see any necessity to guard it.

34057. (*Mr. Cunynghame.*) You spoke of some form of Board in each district to consider rules, which was to have members of the coal owners and also miners represented upon it in some way?—Yes.

34058. You do not suggest that the opinion of that Board should be final and binding upon the Secretary of State?—No.

34059. The chief object is to secure that before Special Rules, which may be Special Rules for all places and not merely a district, are brought into operation, that there should be a full opportunity of everyone consulting upon the matter and forming the most deliberate opinion they can, and reporting it to the Secretary of State?—Yes, that is my view.

Mr. EVAN THOMAS, called and examined.

Mr. Evan Thomas.

34060. (*Chairman.*) You appear, I understand, on behalf of the Rhymney Valley District, and you have been deputed to give evidence before this Commission by them?—I have been deputed by the South Wales Miners' Federation, but Rhymney Valley is the district I immediately represent.

34061. You appear on behalf of the South Wales Miners' Federation?—Yes.

34062. What steps have you taken to ascertain their views on the various questions you wish to put before us?—I have met the men at their committee meetings and also at general meetings, and my own observations.

34063. You have had a conversation recently with your Federation, and you believe what you are going to tell us may be taken to be not only your opinion but the opinion, at all events, of the great majority of the men in the Federation?—Yes.

34064. With regard to inspection of mines, you say that the present number of Government inspectors is inadequate and that it is impossible for them to make many inspections of the same collieries, and also that the areas are too extensive. How far deficient do you think it is. How many more inspectors would you like to see in the South Wales District?—I think that they could be practically doubled.

34065. You think if you double the number of inspectors that would be sufficient?—It would meet the situation certainly to a better extent than at present. I could not say definitely whether it would be sufficient or not.

34066. How often do you think mines ought to be inspected in the course of a year?—If two or three thorough inspections are made during the year I think that would be fairly adequate.

34067-8. For each mine?—Yes.

34069. You consider if you double the number of inspectors you could inspect every mine in the district two or three times a year?—Yes.

34070. Would you do anything by way of relieving the inspectors of some of the duties they have now so that they might have more time for inspection. They perhaps have more clerical work to do than they should. Perhaps you do not know much about that?—I do not know much about the work they have to do in their own offices.

34071. In a general way you think that about double the number of inspectors would be sufficient?—Yes.

34072. Then you want to have workmen inspectors. You want a third class of inspector who would, generally speaking, remain third class inspectors. They would not become assistant inspectors or chief inspectors as a rule, but they might?—Yes.

34073. How much do you think they ought to be paid for that sort of inspection. What could you get good men for to do that work?—£3 10s. or £4 a week and their travelling expenses.

34074. They should be under the control of the chief inspector and should have smaller districts allotted to them. Each one to take a particular district?—Yes.

34075. Under a chief inspector and be responsible for that district only?—Yes.

34076. The inspector would have power to send them to other parts of his inspectorate if he so desired?—Certainly, they would be under his control.

34077. With reference to inspection by workmen under Rule 38 you say this is almost a failure, some of the causes of this failure would be the fact that the workmen are apprehensive of unpleasant consequences following upon making a report that would be considered by the management as being an unfavourable report. What experience have you had of that. Have you known cases where a man has suffered from having made what the manager considered an unfavourable report, but which the man considered was a true report?—I am in the habit of attending the Colliery Committees when the examiners are appointed, and also when examiners make their reports, and I attend the committees in the course of a month or two or three afterwards and I generally hear complaints from the men. Perhaps there is nothing direct and distinct, but the men are under the impression that so and so has suffered. It may not be directly as the result of the report, but that is the impression upon the men.

34078. Do you think that impression causes them in many cases to give reports that are unduly favourable to the management?—No, I believe the men give the reports as they find the conditions in the colliery.

34079. Notwithstanding they are afraid that they may suffer from it?—I believe they give true reports.

34080. You go on to say also the cost such examinations involve is against the rule being carried into effect. How do you think the cost ought to be borne?—The colliery committees have to pay the examiners out of their own funds and to examine some of the large collieries it means the appointment of sometimes six or eight men, and it

Digitized by Google

will take them perhaps two or three days to do the whole of the colliery, and for six or eight men to be paid full wages comes rather heavy upon the funds of the committee.

34081. Do you think that the funds of the committee ought to be helped out in any way. Do you think that the owners ought to subscribe or that the Government ought to pay?—Some of the cost, pay half the expense. My opinion is that it is not very satisfactory, because if some of the men were paid by the companies and others were by the workmen, there would be some kind of distinction between them.

34082. A man is disposed to be perhaps rather biased or less independent?—Yes.

34083. If he accepts money from the owner he is not quite so independent?—Yes.

34084. There is a difficulty in getting the best and most experienced workmen to undertake these examinations owing to the inconvenience it causes them because, as a rule, such men have boys working with them. That is because the boys have nobody to work with in that case and their work has to be distributed differently?—Yes.

34085. You add as a reason why this inspection is not more frequent that a large section of the workmen are indifferent.

(*Mr. Ratcliffe Ellis.*) "The usual indifference."

(*Chairman.*) "The usual indifference that prevails." You think the majority of the workmen are not very keen on this inspection?

(*Witness.*) No.

34086. You wish they were more keen?—Yes.

34087. You think it is a very useful thing?—I think so.

34088. With regard to the firemen's examination, you say that the districts are too large and the hours too many. Their working shift ought to be limited to eight hours out of the 24. Their work ought to be confined to and their attention concentrated upon examination of the workings and roadways. Do they, as a rule, work more than eight hours?—Yes, they work, as a rule, about 10 or 12.

34089. Longer than the hewers do?—Yes.

34090. Do you think in your district that a great deal of time is taken up by duties otherwise than those connected with the safety of miners?—No doubt there is a great deal of that.

34091. You say their duties now extend to time-keeping, superintending wage-men and the underground traffic, and are made responsible for the output of coal from their respective districts. Also they have, as a rule, to take part in the "measuring" of colliers' and repairers' work. Those duties, no doubt, take up a considerable portion of their time?—Yes.

34092. Then as to the standard and maintenance of discipline, you say fines arranged between man and manager should be discouraged. Breaches of the rules should be dealt with by the magistrates. Would you have any exception, or would you have every breach of rules, whether it concerns safety or not, dealt with by the magistrates?—Personally, I may express the opinion that there may be some minor offences that could be dealt with at home, but as a general principle I would say that offences that would mean endangering the lives of those in the colliery should be dealt with by the magistrates.

34093. How would it be if a list of fines was put up in a conspicuous place in the mine. Would that have a deterrent effect?—That is done at present.

34094. You do not think that is sufficiently a deterrent. You rather trust to prosecution even though the fines are put up and everybody knows who has been fined?—Yes, there is a fine and also an apology and the man's name placed to it. It is placed up in a conspicuous place at the top of the colliery. That is done at present.

34095. Notwithstanding that you still think in most cases or, perhaps in all cases of breaches of rules affecting the safety of miners' lives, that they should be had up before the magistrates?—I think so.

34096. With regard to the establishment of Special Rules, you say that the workmen, through their representatives, should have a voice in the framing of Special Rules—they are the people that have to live under them, carry them out and suffer their penalties. What do you mean by having a voice in the settlement of Special Rules?—Have a voice in the initiative stage of framing the rules. The present positon is that the owners and the management frame the rules and then they are published and put up in a conspicuous place. There is an opportunity given to the workmen to object or oppose any of them. I think the best thing would be for the workmen to have a share in the actual initiative stage.

34097. Also, perhaps, you think that the Union, or persons representing the miners, should be allowed to promulgate rules themselves for discussion?—Yes.

34098. Your complaint is that the workmen are not called in until the rules have got to such a stage that the, mine-owners are practically committed to them?—Yes.

34099-101. As to accidents from falls of roof and sides, do you think timbering ought to be more systematic on the roads? What do you understand by systematic timbering?—I believe the general idea is that timbering should be erected whether it is actually wanted at the time or not.

34102. You also add that the workmen ought to have more liberty and a great deal more discretion regarding the standing or erecting of timber than at present in their possession. What is the state of things in your mines as regards that?—There is a certain class of timber the workmen are allowed to put up only when and where ordered by the management.

34103. That is to say, they do not get paid for it unless they are ordered to put up this timber. It is not a breach of rule for a workman to put up timber, but he cannot claim payment unless he is told to put it up?—It would be a breach of instructions.

34104. His instructions are not to put them up, whether paid for them or not?—Yes.

34105. The management would not object to it if the man did not claim to be paid for his time in putting up timber. It is simply a question of money?—No, it is a question of discipline. It is a question of giving instructions. We have it in our price list. We have been forced to include that in the price list opposite the item, say cog or road posts to be paid at such a price, but it is stated when and where ordered by the management.

34106. Your theory is that the management would at all events have the right to prosecute a man for breach of duty, for putting up what a man considered necessary timber, even though he was content to put the timber up and not get paid for it?—I did not catch your question.

34107. I rather understood from other witnesses in South Wales that the management would not prosecute a man or consider it a breach of duty to put up timber, but they would say "Such and such timber is not required, and we will not pay you for it." That is the only way the man would suffer?—They would not prosecute for not putting up this timber, but they are prosecuting the men for not putting up other timbers for which there is no payment.

34108. Not putting up timbers: but I understood you to say a man could be prosecuted for putting up timber which you say is unnecessary?—They are prohibited from putting up a certain kind of timber, only when ordered.

34109. What objection would the management have to the man putting up any timber he pleased if he did not ask to be paid for it?—They say they are using timber unnecessarily, and timber is a very large item in the cost of production.

34110. The men themselves ought to be the judges of what timber is necessary, and ought to be entitled to be paid for putting up any timber they in their discretion consider necessary?—Yes.

34111. As to accidents on haulage, main roads and headings, you say that accidents of this description are very frequent. Having looked up the record of fatal cases in the district you immediately represent, namely, the Rhymney Valley, for the years 1903, 1904, 1905, and 1906, you found that of a total of 60, 24 took place on roads, headings and haulages, namely, 40 per cent. What do you mean: out of a total of 60 fatal accidents from all causes?—Yes.

34112. Explosions and everything?—No, I did not include explosions.

34113. What did you deal with in the total of 60?—60 fatal accidents from all causes during those years, except explosions.

34114. From every cause except explosions?—Yes.

34115. Haulage accidents and falls of roof and sides included?—Yes.

Mr. Evan Thomas.

12 Dec., 1907

34116. The remedy for this, you say, is that separate travelling roads ought to be provided. The suggestion you would venture to make in this connection would be to make the return airway the travelling road. A dual or double benefit would result, decrease of accidents, and an improved ventilation. Boys have to go out for light during the working shift very often, and it is most dangerous for them to travel over roads where ropes are in operation. In all cases you could not make the return airway into a travelling road in an old mine?—Yes, the principal return airway. I have seen it in one colliery, and I thought it was an excellent thing.

34117. (*Mr. W. Abraham.*) What colliery is that?—Llanhilleth, in Monmouthshire.

34118. What is the system there?—The main return airway is in a position that you can travel right through from very near the pit into the workings.

34119. Can you take a horse and tram through it?—Yes.

34120. (*Chairman.*) Would that be the case in other mines, that the main return airway would be capable of being made into a travelling road?—Yes.

34121. Then you say that when accidents do happen it is most important that the unfortunate victim should be taken out with all speed, and without any delay. Sometimes injured persons are kept a long time on the main roads where the incoming current is strong and cold, with the result that the injured man becomes a victim to a severe cold as well as an accident, and I have known one case where pneumonia set in and proved fatal. Do you know any cases of unnecessary delay in taking a man away under those circumstances?—We have had upon several occasions to take a complaint to the management.

34122. What have they said?—They say that they are doing everything possible to clear the road, but it is very difficult sometimes.

34123. In your opinion they might do more?—If they had these main return airways to travel along they could take them that way instead of waiting for the haulage, and so on, to be cleared.

34124. You do not suggest that the management are at fault, but that the system is at fault?—Yes.

34125. They do the best they can to get them out at once?—Yes.

34126. Then you say that headings ought to be wide enough for hauliers to be able to walk by the side of their horses and not in front of them, nor behind the tram. Accidents of this nature are pretty frequent. Hauliers, while walking in front of the horse, slipping and falling, and before recovering themselves the horse is upon them and the tram following crushing them to death. A foot-path by the side of the rails would obviate this danger. Supposing you had a foot-path by the side of the rails which was wide enough for a man to go on with safety would it be necessary to have any other provision for locomotion for the men?—Not so far as the hauliers are concerned.

34127. If there was a gangway by the side of this haulage could not the ordinary miner go up and down those haulage roads in safety if he was going to and from his work, or from one place in the mine to another?—If there is a gangway, but that would involve some separation between the gangway and the rails.

34128. Not only a gangway, but props and some separation, a partition or props, at short intervals?—Then the hauliers could not utilise that.

34129. With regard to the winding apparatus, you say these should be minutely examined immediately before the lowering and raising of the men. You do not think they are sufficiently examined now?—They are not examined immediately before the lowering or raising of the men. We had a case of this kind at New Tredegar on one of the Elliot pits a week or two ago. A bond of men were coming up and something went wrong with the ropes. There is a balance rope attached to the cage, and they were kept in the pit for about 40 minutes.

34130. (*Mr. W. Abraham.*) In the shaft?—In the shaft, and they had to be lowered to the bottom of the pit afterwards, and not taken up to the surface, and brought up through the other pit.

34131. (*Chairman.*) What was that due to?—Some derangement in connection with the ropes.

34132. Would an examination of the ropes have prevented that happening?—There would be a possibility of that being discovered before raising the men.

34133. What would have been discovered? I do not understand what was wrong. What caused the accident?—I could not tell you minutely and exactly what was the matter with the ropes, but there was something wrong with the ropes, and the men had to be kept in the pit for 40 minutes, or three-quarters of an hour.

34134. The present rule is that the mechanical engineer "shall every day carefully examine and report, or appoint a competent person to carefully examine and report, the state of the external part of the guides and conductors in the shafts, and the state of the head-gear, ropes, chains, and other similar appliances of the mine which are in actual use both above ground and below ground." You do not think that is sufficient?—It does not specify any particular time. It may be done the first thing in the morning, or during the dinner-time, or some other time.

34135. As regards safety lamps, any appearance of gas ought to be a sufficient reason for introducing safety lamps into a mine. What do you mean by "any appearance of gas"—just a pocket of gas?—Yes, any slight appearance.

34136. When they are introduced ought there to be any provision for taking safety lamps out again, or would you always have them used?—Once introduced I think they ought to stay there for ever.

34137. For ever?—As long as the colliery is worked.

34138. With regard to coroners' inquests, you say coroners should possess to some degree an acquaintance with collieries and underground work, and the daily dialect or terms used by the underground workers, so as to enable them to have a clear conception of the evidence given at their court. Do you say there are coroners in South Wales who are not acquainted with mining and mining terms, and who are consequently not able to do their duties properly?—They have no practical acquaintance with the collieries.

34139. They have sufficient acquaintance to conduct these inquiries?—They have to ask the inspectors now and again to explain to them what are the various terms, and so on.

34140. The inspector is always there to explain. Do you know any case in which you think justice has not been done owing to the coroner being ignorant of the practical working of mines?—No, I do not think I know of any case where justice was not done, but I know this, that some difficulty was experienced for the coroner in clearly understanding the situation now and again.

34141. Although there has been a difficulty, it has not resulted, you think, in any failure of justice at these inquiries?—No, I could not go to that extent.

34142. You say that workmen should have the right or power to call evidence and witnesses at these inquiries? The men, I understand, have a right to have a representative at these inquiries?—Yes, they have a right to have a representative, but he is entirely at the mercy of the coroner.

34143. Any workman is equally at the mercy of the coroner. It would not mend matters to say any workman may give evidence. You say any workmen should have the right or power to call evidence and witnesses. Now there is a man deputed by the workmen more or less to conduct their case for them. Your complaint is that the coroner does not pay attention to what he says?—No; I do not go to that extent, only I think that the workmen should have a right by law to call any evidence that they wish.

34144. Any workman?—No, the workmen as a body.

34145. That is to say, somebody representing the workmen?—Yes.

34146. The man who represents the workmen should have power to call any evidence he likes, or any evidence he considers material?—Yes.

34147. Naturally he must consider it material?—Yes.

34148. And any witnesses that he likes?—Yes.

34149. Then as regards Rule 45, as to a second inquiry you say that the Home Office should be somewhat more ready than you have found it to be to grant a special inquiry into the causes and circumstances of certain serious accidents, and especially explosions, if the majority of the workmen employed at the colliery affected expressed a desire for such an investigation to take place. You put it in the power of the majority of the workmen to absolutely compel the Home Office to have an inquiry?—I think if the majority of the workmen express that desire that practical response should be forthcoming from the Home Office.

Digitized by Google

34150. Do you or do you not mean that the workmen should be supreme, or that the Secretary of State should be supreme in this matter?—My idea is this: when the workmen express that desire, that the thing should take place.

34151. You say if the majority of the workmen in any particular mine consider a second inquiry ought to be instituted, it should be in their power to compel it to be instituted. Have you known cases where you think a failure of justice has taken place owing to the second investigation being withheld?—You are putting it rather extreme to me when you ask me about the failure of justice. I do not wish to go to that extreme, but I know one case where I am fully convinced a second inquiry should have taken place.

34152. Will you give us the name of the accident?—The McLaren explosion, or the Abertysswg explosion.

34153. With regard to shot-firing, this should be carried out only under the strictest regulation and supervision. I imagine we should all agree to that. I suppose the rules are not sufficiently stringent, you think?—I believe there is one thing lacking in the rules. I think a limit ought to be put to the charge.

34154. You say shot-firing should only take place between shifts?—Yes.

34155. Would you apply that to shot-firing in the face, or only to ripping, shot-firing in the roads?—To all shot-firing.

34156. Would that be practicable in South Wales, to limit shot-firing to between the shifts?—Where it is necessary to blast in the coal it would be rather difficult.

34157. Therefore you are not quite sure, as regards blasting in the coal, whether you would not suggest that it should be invariably carried out between shifts?—Where blasting in the coal is required I am afraid that it must be done during the shift. Where the heavy charges are put in the roadways and the rippings, that ought to be between shifts.

34158. You say the caps and explosives should be supplied free, by the employers, and kept and used by competent shot-men and not distributed indiscriminately among the workmen. Is that the case now, that caps and explosives are distributed indiscriminately amongst the workmen? Is that in accordance with your rules? Would it not be a breach of a rule for that to be done?—A certain quantity. The explosive is limited to a certain quantity.

34159. Have you any suggestion to make as to the alteration of either General Rule 12 or any of the Special Rules?—The suggestion I am making is that the explosive and the caps should be kept by shot-men and not handed to the men. Now the men go to the magazine in the morning and get their allowance of explosives. Then the shot-man goes round and hands them the cap.

34160. Who drills the hole?—The workman.

34161. The shot-man stems it?—Yes.

34162. (*Mr. Ratcliffe Ellis.*) The detonator or the cap and the explosive are not given out to the same man?—The shot-man goes round the colliery and hands the cap to the workman.

34163. The explosive is given to the workmen, and the detonator or the cap are given to the shot-firer?—Yes, but the shot-firer goes round the colliery and enquires of everyone whether he requires a shot or not, and then he gives him the cap, and the cap is left in the working place.

34164. (*Mr. Wm. Abraham.*) In his charge?—Yes.

34165. (*Chairman.*) The detonator?—Yes.

34166. Surely only an authorised person or shot-firer can have any detonator in his possession at all under the Explosives Order? Sub-section B of Clause 4 of the Explosives Order says: "Shot-firers and other authorised persons shall keep all detonators issued to them until about to be used in a securely locked case or box, separate from any other explosive." You say that is not carried into effect?—It is carried into effect in this way: the shot-man goes to the working place and asks the man whether he has a hole ready or not. Perhaps the hole would not be quite ready then. Then he leaves the detonator there in the possession of the workman.

34167. He had no business to do that?—That is what is done.

34168. That is contrary to the law. If the law was carried into effect and the shot-firer and other authorised persons always kept all detonators until about to be used in a securely locked case or box, you would say that was all that was necessary?—I suppose the shot-man would be under the impression that he is fulfilling the law by giving the detonator to the workman say 10 minutes or a quarter of an hour before it was actually necessary, and then he would go on to another place.

34169. (*Mr. Wm. Abraham.*) In that case who rams the hole?—The shot-man rams the hole, but I think, as a rule, the man himself puts the detonator in the last pellet.

34170. That is what you object to?—Yes.

34171. You think the shot-man ought to have the handling of the detonator, and the man have nothing to do with it at all?—Yes.

34172. (*Mr. Cunynghame.*) You are in favour of the greater use of Section 45 of the Act, which gives the Secretary of State power to order inquiries?—Yes.

34173. Supposing that was done, and I should be inclined to agree with you to a certain extent, it would be less reason, I suppose, to have greater powers at the coroner's court. If you had a good inquiry under Section 45 in doubtful and difficult cases it would be less necessary to go into detail at the coroner's court?—Not of necessity. I believe the coroner's court certainly should execute its duty to the furthest possibility.

34174. That is plain, but we are discussing what their duty ought to be?—Yes.

34175. I will show you what I am tending to. A coroner's court is in some sense a court of criminal jurisdiction, and it is part of the criminal machinery of the country?—I am not an expert in law.

34176. That is a very fair answer. I will give you a notion of what I mean. The duties of coroner's courts is sometimes to attach blame to particular men and send them for trial for manslaughter?—Yes.

34177. If you were in the position of being likely to be committed for manslaughter, you would hardly like all sorts of people to intervene and ask all sorts of questions as of right. You would think it rather hard?—I daresay I would, if I was in that position.

34178. There was a case which occurred the other day, in which it seems doubtful whether there was not negligence on the part of two miners with regard to a cage accident. It would be rather hard if all sorts of people besides the coroner and the regular officials were to claim the right to intervene and ask all sorts of questions. It might be very hard on the men, because they are going to be possibly tried for manslaughter. I want to put the other side before you. Do you see what I mean?—All sorts of questions by all sorts of men are not allowed by the coroner.

34179. Apparently you would allow the miners to intervene and ask as of right any questions they liked. You said so just now.

(*Mr. F. L. Davis.*) Call any witness.

(*Mr. Cunynghame.*) Yes, call any witness and ask any questions. That is what you said.

(*Witness.*) By properly appointed representatives.

34180. I want to show you the difficulties?—I meant this, that the workmen as a body, through their properly appointed representatives, should have the right to call any witnesses that they thought could give evidence having some direct bearing upon the case, but that is not asking all sorts of questions by all sorts of men.

34181. I take your answer. I am not endeavouring to put upon you what you do not wish to say. If you allowed, in proceedings that might end criminally, any person to tender any evidence he liked, the person who might be committed for manslaughter might regard that as rather hard?—I daresay he would.

34182. Would it not be sufficient for your purpose that there should be a thoroughly effective inquiry under Section 45, at which all that evidence could be brought forward and gone into, and where you could ask more freely, where you had not a man likely to be tried for manslaughter. Would it not be a better way of doing it? That is what I am coming to?—Yes.

34183. Could not any defects that exist be remedied by strengthening Section 45 and using it, rather than tampering with the general law of coroners? That is what I want to ask you?—Yes, I quite agree with that.

34184. If you begin interfering with the coroners' law with respect to mines, you would have to interfere in the case of shipwrecks, where coroners have to sit, and the case of factory accidents and coach accidents, and accidents

Digitized by Google

Mr. Evan Thomas.

12 Dec., 1907

all over the place where anybody is employed. It would be rather a big thing, would it not?—Yes; but this section is in the Mines Act.

34185. Section 45?—Yes.

34186. Is it not better to rely on the greater use and strengthening, if necessary, of Section 45, rather than interfere with the general law affecting coroners?—Yes; but there is no use made of Section 45.

34187. You want a good, clear and effective inquiry, to make known all the causes of the accident and let everybody have their say. That is what you want?—Yes.

34188. With regard to ambulance, do you think it would be of use that in the mines there should be more ambulances than exist already for men?—I think so.

34189. In the case you gave of a man who caught cold, if you had had thoroughly good blankets ready you could have wrapped him up, so that he might have remained without any fear of catching consumption?—Yes.

34190. I mean in the case you mentioned of an accident?—That was a full journey running back and he was injured, and the main road was blocked through that; he had to be kept there some hours.

34191. Blankets would have kept him from catching cold?—Yes. It would be better if he could be taken out.

34192. Sometimes, you have said, timbering is not put up as much as it might be?—Yes.

34193. And that is done even where the men would be willing to put up timber without extra pay?—I did not say that.

34194. Are there not some employers who would rather grudge the putting up of the timber?—Yes.

34195. That is what I am driving at. I mean employers who would grudge the expenditure on the timber even though the men were willing to put it up for nothing?—Yes.

34196. That will not be in the large and thoroughly well-conducted mines?—They are all using timber as economically as they possibly can.

34197. In well-conducted mines the owners would not grudge the necessary amount of timber, whatever it might be?—They have that provision in the price list, and I think that the large collieries in the Valley that I represent are well conducted, I will say that; but after all, they have that provision in their price lists that no timber, that is a certain kind of timber, cogs and road-posts, is to be put up only when and where ordered by the management.

34198. Do you object to that rule?—Yes.

34199. Who would you give the right to decide when they ought to be put up?—The man himself.

34200. In some cases the men have only been there a week or two working. They would be rather bad judges?—Yes, if only working a week in the colliery. If they had only left the farm a week they would be bad judges.

34201. Ought not some man of a superior type to be the ultimate judge, say a fireman, or somebody. I do not know who is the right person?—A man that has a working place himself, as a rule, is an experienced man, not a man with a week's experience, certainly a man who is given a place is looked upon by the management as an experienced man, and certainly that man ought to be able to judge.

34202. Would that man have other men working under him or with him?—Yes, a boy very likely.

34203. How many as a rule?

(*Mr. Wm. Abraham.*) One man or one boy?

(*Witness.*) Yes.

34204. (*Mr. Cunynghame.*) One man and one boy?—Yes: in some places he would have more.

34205. Although in the big and well-managed mines it may not be so, in some of the worst managed mines there would be a danger of unduly economising the timber?—Yes.

34206. Have you known of chains holding the cage being annealed? Do you know anything about the annealing of chains?—I cannot say anything from my own personal knowledge.

34207. (*Mr. Ratcliffe Ellis.*) With regard to examinations under General Rule 38, you speak of the cost such examinations involve, and also say that there is a difficulty in getting the best and most experienced workmen to undertake these examinations owing to the inconvenience it causes them, because as a rule such men have boys working with them. If that is one of the reasons why this inspection under Rule 38 is not more frequent, how do you propose to remedy that?—By appointing workmen inspectors. Then I think that Rule 38 to a very large extent, if not entirely, could be done away with.

34208. You wish to rely upon more Government inspection?—Yes.

34209. So that if the Government inspection were sufficient, Rule 38 would not be necessary?—No.

34210. If Government inspection is not sufficient then Rule 38 you consider should be amended?—Yes.

34211. The safety of the mine you think should depend so far as the inspection goes, upon Government inspection?—Yes.

34212. Is not inspection under Rule 38 rather to assure the men that the place is safe. It is for their satisfaction?—It gives them an opportunity of ascertaining for themselves the state of the mine.

34213. The object of this rule is that the men may satisfy themselves that the place is safe?—Yes.

34214. If that is all, why should anybody else pay the cost of it but the men themselves?—I do not know whether I had better not answer that by asking you another question: why should that obligation be placed on the men?

34215. They can please themselves whether they do it or not. My point is this, supposing they choose to do it, who else should pay the expense but them?—I agree they should pay the expense, but I say the expense is a barrier to carrying out the rule.

34216. They would not pay the expense even to assure themselves that the place was safe?—They are doing it, but I say that it is a burden upon them.

34217. Why should it not be a burden upon them. If they avail themselves of this opportunity why should they not pay the expense of doing it. I want to know what the complaint is?—The expense.

34218. They do not think they ought to pay the expense of assuring themselves that the place is safe?—No, because the expense is heavy. In the large collieries it requires a large number of men to make examinations, and before that rule is effective the examinations ought to be made pretty frequently, and to carry them out frequently involves a large amount of expense.

34219. They are not disposed to incur that expense; they would rather leave it to Government inspection than go to the expense of assuring themselves that the place is safe?—Yes.

34220. Another reason you say is the usual indifference?—Yes.

34221. Do you find the men are indifferent as to this?—The bulk of them.

34222. They are satisfied with the Government inspection and the managers?—I do not say they are satisfied.

34223. What is the meaning of the usual indifference?—The indifference to the——.

34224. I am quoting your own words?—Yes, I know. The large number of workmen would not take the same interest in the matter as a few.

34225. They are satisfied. The great bulk are satisfied with the Government inspection?—I do not say that. You may draw that inference. I do not say it.

34226. With your permission I will draw that inference. Now with regard to the examination by the fireman, the fireman's districts are too large and their hours too many. How do you know this?—I have been doing it myself.

34227. How long ago?—Many years ago now: in my younger days.

34228. How many years since?—20 years ago.

34229. Do you think there has been no improvement in South Wales since then?—Yes, a lot of improvement.

34230. Still you think there is ground for complaint?—Yes.

34231. Can you suggest any rule which would prescribe the areas of the fireman's duties—his district?—It is very difficult for me to put it on paper or tell it here; that depends a good deal on the conditions and circumstances of the mine.

Digitized by Google

34232. That really must be left to the management ?—Yes.

34233. Do you find generally in South Wales from information given to you—I suppose you are speaking from information given to you, not from your own personal knowledge ?—Yes.

34234. Do you find generally in South Wales that the firemen have other things to do besides inspection ?—Yes,

34235-7. Is that generally the case throughout South Wales ?—Yes.

34238. In a paragraph headed "Standard and maintenance of discipline," you say "Fines arranged between man and manager should be discouraged. Breaches of the rules should be dealt with by the magistrates. This would be much more effective as a check against the tendency on the part of some to violate rules than fines at home. One case before the Bench would be more salutary in its effect than a dozen home fines." This is all as to maintenance. What do you mean by "the standard of discipline" ?—It is a general term with regard to the conduct of the men at the mine.

34239. You do not seem to make any observations upon it in your notes ?—No. I am simply linking together the standard and maintenance.

34240. Do you think the standard of discipline is not sufficiently maintained in collieries in your district ?—In some collieries perhaps not.

34241. In what way is it not sufficiently maintained. What class of labour in the mine is deficient in discipline ?—I am simply speaking of it in a general way.

34242. What is the use of that ?—You can have a general idea of the discipline of the mine and the standard of that discipline.

34243. Are there mines in your district where there is some particular class of workman who is not disciplined?—What I mean in this paragraph is this, that there is more tendency perhaps in some colliery for the management to agree with the workmen when anything is done, when any rule is violated, there is perhaps more tendency existing at some collieries to arrange matters at home, and not to take them before the Bench.

34244. The foundation of the whole thing is that some men or man has been guilty of negligence ?—Yes.

34245. And then you object to that negligence being condoned by a fine instead of bringing him before the magistrates ?—Yes.

34246. It costs a good deal of money to take men before the magistrates ?—I daresay it does.

34247. Do you think there is any danger, if you say that breaches of discipline must be punished by taking the men before the magistrates, that they will not be punished at all ?—There is very little punishment in a fine at home.

34248. In answer to my question do you think that there is any danger if you say the only way in which you must maintain discipline is by taking people before the magistrates ? You suggest there is a danger now, but is there not a risk of that danger being greater by no punishment being inflicted ?—No, I do not think so.

34249. You think even for a trivial offence that they should go to the expense of taking a man before the magistrate ?—As I stated before, I would not include trivial offences in what I am speaking about here.

34250. What would be done with trivial offences ? shall he be let off altogether and no notice taken, or if he to be taken before the magistrates, or what is to be done with him ?—There is a vast difference between a trivial offence and an offence that involves perhaps a risk to the lives of the men in the pit.

34251. What is to be done with the trivial offences. I know there is a great difference between the two ?—I have said that could be treated at home.

34252. How—fined ?—Yes.

34253. Of course you know under the Truck Act a man has to consent to be fined ?—Yes.

34254. You think fines for trivial offences could be dealt with in that way ?—Yes.

(*Mr. Ratcliffe Ellis.*) My Lord, I do not propose to ask the Witness any question with regard to the establishment of Special Rules not because I am satisfied with the views given, but I think it is no use going over the same thing over and over again. I wish that statement to appear on the notes.

(*Chairman.*) Very well.

34255. (*Mr. Ratcliffe Ellis.*) With reference to timbering in the working places, the timbering is done by the collier in your district.—Yes.

34256. Working at the face gives a man considerable skill as a timberer, I suppose ?—Yes.

34257. You would expect to find skilful timberers at the working face ?—Yes.

34258. In the haulage road the timbering is done by expert timberers whose business is to do nothing but timbering and looking after the roads ?—Yes.

34259. You say that the great majority of accidents are in the roads from timbering ?—Not the majority.

34260. I thought you said the majority.

(*Chairman.*) 40 per cent. of the whole accidents except explosions.

(*Mr. Ratcliffe Ellis.*) 40 per cent. of the whole accidents arise from deficient timbering in the haulage roads ?

(*Witness.*) No.

34261. What do they arise from in the haulage roads ?—I do not say deficient timbering.

34262. What is it ?—Most of them by the trams and the ropes and so on.

34263. The timbering has nothing to do with it ?—No, but there are some cases by falls.

34264. So far as the timbering is concerned in the haulage roads if that were done by men appointed for the purpose you would have no complaint ?—Only I think it ought to be more uniform.

34265. It ought to be systematic ?—Yes.

34266. 40 per cent. is accidents from all causes on the haulage roads, not merely deficient timbering ?—Yes.

34267. (*Mr. Wm. Abraham.*) There are two kinds of roads: you mean the haulage roads and the roads leading from the main roads to the faces ?—Yes.

34268. On the main haulage road timber is made by special men ?—Yes.

34269. On the road leading to the faces it is done by the workman himself ?—Yes.

(*Mr. Ratcliffe Ellis.*) The most skilful men in the pit.

(*Mr. Wm. Abraham.*) I think you misunderstood him.

(*Mr. Ratcliffe Ellis.*) The most skilful man ?

34270. (*Mr. Wm. Abraham.*) The most skilful timberers are required round the main haulage roads ?—Yes.

34271. There are other classes of roads, the road leading from the main haulage road into the face, and that the man himself timbers ?—Yes.

(*Mr. Ratcliffe Ellis.*) He is the expert timberer.

(*Mr. Wm. Abraham.*) That is not an expert timberer.

(*Mr. Ratcliffe Ellis.*) The Witness agrees with me. The man getting coal at the face becomes an expert timberer. This is the man who has to do this timbering at the gate.

(*Mr. Wm. Abraham.*) Yes.

(*Mr. Ratcliffe Ellis.*) That is done by an expert timberer.

(*Mr. Wm. Abraham.*) By the collier.

(*Mr. Ratcliffe Ellis.*) He is an expert timberer.

(*Mr. Wm. Abraham.*) That is not the expert timberer you mention.

(*Chairman.*) The face and gates are timbered by one man, and the main haulage roads by another man.

34272. (*Mr. Ratcliffe Ellis.*) Now with regard to the winding apparatus, you say it ought to be examined before the men go to work. Is it your custom at present to examine it during meal-times when the pit stops for a short time during the shift ? Is that opportunity taken to examine the rope and the guides ?—I think it is as a general rule.

34273. If there were no meal-times allowed there would not be that opportunity of examining these ropes and guides ?—No.

34274. You know the rule, that they have to be examined by competent persons once in 24 hours ?—Yes.

34275. Is that insufficient ?—Yes, I think so.

34276. Do you work double shifts in your county ?—Not winding.

34277. You have no continuous shifts worked ?—No.

Digitized by Google

Mr. Evan Thomas.

12 Dec., 1907

34278. You know there are districts where there are continuous shifts worked?—So I understand.

34279. How would you carry out your suggestions in those cases?—Stop the pit.

34280. You would give up having continuous shifts?—No, you simply stop the pit for the purpose of examining.

34281. You suggest the pit should be stopped where there are continuous shifts in order that the ropes might be examined before the next shift begins, and the guides?—Yes.

34282. Have you any case in mind in which an accident has happened because there has not been a sufficient examination of the ropes and guides?—I have no case where men were injured, but if you look upon the case I gave as an accident——

34283. You have no case where men are injured.

(*Chairman.*) He has known cases.

(*Mr. Ratcliffe Ellis.*) Have you known cases.

(*Witness.*) I gave a case to the Chairman which happened about three weeks ago, I believe. The men were kept in the shaft for about 40 minutes or three-quarters of an hour.

34284. I did not understand you to say that was because of some insufficient examination of the ropes or guides?—Something the matter with the ropes.

34285. Do you know what was the matter?—No.

34286. You do not know whether that could have been ascertained by inspection or not?—I received a letter from the colliery, from the checkweigher, pointing this out, and he was suggesting that an examination immediately before winding the men might have possibly discovered what was wrong.

34287. Is that the only ground you have for making these suggestions? Is the ground for making all these alterations the suggestion of the checkweigher that they should be carried out?—No, for the sake of the thing itself.

34288. You do not know in that case it was a defect which could be discovered by an examination. In fact you do not know what the defect was?—I have told you I am not acquainted with the details, but I am acquainted with the fact.

34289. With regard to coroners you say that the coroners should possess to some degree an acquaintance with collieries and underground work, and the daily dialect or terms used by underground workers, so as to enable them to have a clear conception of the evidence given at their court. You are aware that coroners have to inquire into deaths from a great variety of causes?—Yes.

34290. Do you think that they should be specially qualified in this way for colliery accidents only or in every other case?—So far as South Wales is concerned, colliery accidents are by far the most numerous they have to inquire into.

34291. You told Mr. Cunynghame with a more liberal use of Section 45 you would leave coroners' courts as they are?—Yes.

34292. Do you complain of the fact that all the facts do not come out before the coroners, or is it because the decisions of the jury are not approved of by you?—All the principal facts come out, but some particular phases of those facts are not properly cleared up.

34293. All the facts connected with the accident as a rule come out?—I think, as a rule, yes.

34294. What more do you want?—According to Section 45 there are other circumstances sometimes that ought to be dealt with further, which are not dealt with by the coroner's court.

34295. It is rather to Section 45 that you would look than to any alteration of the coroners' courts?—Yes.

34296. With regard to the shot-firing, you suggest that the weight of a shot that is fired should be under some supervision?—Yes.

34297. In shot-firing in haulage roads would your view be met if there should be no shot-firing in the roads as distinguished from the face, unless under the direct instructions of some superior official who should prescribe the weight and the other conditions to be observed in firing the shot?—Yes.

34298. He would decide the weight of the shot that was to be fired and the conditions under which it should be fired?—Yes.

34299. With reference to the shot-firing in the coal, you could hardly have a regulation of that sort?—It would be very difficult.

34300. With that exception, can you suggest any amendment with reference to shot-firing?—Only what I have already suggested. I think the detonators and the explosives ought to be kept in the possession of practical shot-men.

34301. It was pointed out to you that is the law at the present time. It wants carrying out, you think?—The explosives are handed to the workmen themselves.

34302. The explosives, but not the detonators?—The explosives are.

34303. There is no harm if the shot-firer keeps possession of the detonator?—They are exploded without the detonator sometimes.

34304. Not very often?—We had a fatal accident in Rhymney last week. The detonator had been found and taken out. There was a missed shot and afterwards a portion of the explosive exploded, and the result was fatal to the man who was working.

34305. How did it explode?—That is the mystery. It was not through the detonator.

34306. Can you suggest how it exploded? Was there a fatal accident?—Yes.

34307. I suppose that will be inquired into?—Yes.

34308. Has there been an inquest?—Yes.

34309. What was the result?—The result was a verdict that the man lost his life by accident, but there was not sufficient evidence to prove how the explosive was exploded.

34310. You say in shot-firing that these explosives should be supplied free?—Yes. ✓

34311. Why?—For the purpose of the employer having entire control of them.

34312. There is no need to supply them free for that purpose. He can have control of them and be paid for them?—A man would not know exactly what he was paying for then.

34313. In cases in your county where the men have the explosives supplied to them they pay for them?—Yes.

34314. Why should they not pay for them?—For the purpose of the employer having full control. ✓

34315. He has full control. He supplies the explosive and he is paid for it?—Yes; but if the employer kept everything in his own hands the workmen would not receive the explosives.

34316. Do you suggest something should be taken off, or a less price should be paid for the work if he gets the explosive for nothing?

(*Mr. F. L. Davis.*) It is not likely.

(*Mr. Wm. Abraham.*) I have crossed the word "free" out of my copy. ✓+

34317. With regard to explosives altogether, I think it is your opinion that it would be best for the workmen to have nothing to do with either of the materials, the dynamite or the detonator?—Yes.

34318. As the employer now provides the lamp and pays for it in order to get control, you think a similar rule adopted with regard to explosives would be the means of creating further safety?—Yes, I think so. +

34319. In speaking of roads, you spoke of two classes of roads, the main haulage roads, for which there are special men provided for the timbering, and the roads leading from those into the faces, which are two different roads. You are speaking in fact of the second-class of roads where the timbering is done by the workmen themselves?—By the collier?

34320. Yes.—Yes.

34321. Independent of the question of payment at all (of course we like to be paid for things), but independent of that, you think if there was a law specifying a certain distance for timber to be put up in those roads it would be better than to leave it even to the discretion of the manager?—Yes.

34322. In the face the law prescribes props are to be put up at a certain distance?—Yes, and sprags.

34323. All necessary timber there?—Yes.

34324. In consequence, there are men to see that it is put?—Yes.

Digitized by Google

34325. In consequence of that in South Wales the accidents in these certain places have been reduced ?—Yes.

34326. The contention you want to put before us is this, if a specific distance made by law was enforced, the timber would be put up ?—Yes.

34327. Whereas now a question of payment for timber may interfere in the minds of the management as well as the men, assuming you carry out what you suggest, it would disappear altogether ?—Yes.

34328. That really is the reason why you are advocating this systematic timbering ?—Yes.

34329. There was a time when we were against systematic timbering in South Wales ?—Yes.

34330. Our experience of late years has convinced us that systematic timbering would reduce a certain number of accidents ?—No doubt. I have been against it myself; I did not think it was necessary.

34331. It is well known we were against it. With regard to the return airway, will you give us your opinion with regard to that. Do you think that it would cause any discomfort to the workmen to travel out of the mine through the return airways if they were kept clear ?—Not in the slightest.

34332. You consider it would be much safer than it is now ?—Much safer.

34333. Would you not gain a double purpose, that is, increased safety and also increased ventilation by keeping the return airways of a sufficient size ?—Yes.

34334. You have no hesitation about advocating that as an improvement ?—Not the slightest.

34335. It would not cause any inconvenience to the workmen ?—No.

34336. You know a certain colliery where this is done ?—Yes.

34337. Have you ever had any complaints made from the men because they have to travel out through these ?—No, I think they much prefer travelling that way than the main haulage roads.

34338. It is known that we have a certain very large company in South Wales that has adopted that plan for 20 years and more ?—Yes; I think the Ocean Company has done it.

34339. It is a fact that they have never had an explosion?—Yes, it is a fact.

34340. We have something to go by in forming this opinion. Do you find by the reports at the monthly meetings in your district that complaints are often made that, with even the most competent firemen that we have, it is impossible for them to do their duties properly because of the size of the districts they have to travel through and examine ?—Yes, we hear that very often.

34341. Is it a complaint also that some accidents are happening when the men are going in in the morning. If the men travelling the roads who are supposed to examine them had time to do it at their leisure, they must have seen the cause of the accident ?—Yes.

34342. Have you had any experience of this kind? Have you seen accidents in the morning, I mean in your district ?—I can only say what I have heard.

34343. Occurring in the district you are agent of: that is what I mean ?—Yes.

34344. You have these kind of things reported to you there ?—Yes, and I have known of something like this: the men go in and find a fall in their own roads and they have to turn back. They have received no intimation from the fireman before going in.

34345. Do you put that down to the carelessness of the fireman ?—No.

34346. But because he has not time to do the work ?—He has no time to go in and out over the roads of the stalls. His principal object in the morning is to examine the faces and see they are clear of gas.

34347. Because of the distance he has to travel he has not time to go in through one road and back through another ?—No, he has not.

34348. That is my point. Have you in your district any instances of the best of your men refusing to become examiners of collieries under Rule 38 ?—Yes.

34349. It is difficult to put your finger on the reason why perhaps, but a little quarrel takes place and the next day or so you find the man is there no more ?—That is so.

34350. We do not bring this as a charge against the owners of the collieries, but a deputy has his district to attend to, and there is a complaint that the colliery man has found fault with him, and the deputy we find causes him to be discharged ?—No doubt, because he is coming into daily contact with the men.

34351. That is what I want your lordship to understand. We do not make any complaint against the owners. We know we have as good a body of general managers and owners as in any other part, but you know this to be the fact and you want to have it cleared off ?—Yes; I have no hesitation in saying the general managers, I think, are doing everything they can with regard to safety.

34352. They would invite this examination ?—They are doing it.

34353. But the man who reports defects is supposed to be the man who takes offence ?—Yes.

34354. Do you think if a new class of inspectorate were formed with a sufficient number to make the minute examination these men make, that the workmen would not require to do that ?—No.

34355. Do you know instances where the reports made by the workmen are brought in evidence by the managers to show the excellency of the condition of the mine after an accident has taken place ?—It is always the case.

34356. That may be one reason why our men have become indifferent ?—No doubt, because almost after every unfortunate explosion the last report of the men is always brought forth.

34357. With regard to coroner's inquests, you agree that the main object of a coroner's inquest is to find out the cause of the death of the men who have lost their lives ?—Yes.

34358. And not specially to inquire into the cause of the accident that caused that death ?—That is so.

34359. More than a desire to prosecute any man, it is your desire to have a more perfect court to inquire into the cause of the accident that caused the death ?—I should have thought it was made quite plain that we have no desire to criminally punish any manager or anybody else. That is not our desire.

34360. Your desire is to find out some means to reduce these accidents ?—That is so.

34361. You think in your district you have a special case where the second inquiry would have been of great value ?—I think so.

34362. (*Mr. F. L. Davis.*) You are in favour of a third class of inspector, as I understand ?—Yes.

34363. Government inspectors ?—Yes.

34364. What sort of position would you suggest he should have? Is he to be on the same footing as the present Government inspector or do you suggest a lower grade ?—My suggestion is that he should be under the control of the chief inspector, whether you call it a lower grade or not. He should be a practical examiner of the colliery.

34365. Should he have the same qualifications as the present Government inspector, or do you propose that he should pass a lower standard of qualification ?—I do not think that he should be expected to have actually the same qualifications as the chief inspector, but I think that preference should be given to workmen who possess a first-class certificate. There are a number about.

34366. He should have the qualification of possessing a first-class certificate ?—I should not put that down as an actual qualification.

34367. Something similar to the first-class certificate ?—Yes.

34368. Do you not think that possibly that might be a disadvantage. If the third-class of inspector has not the same qualifications as the present Government inspector, he could not take the present position of chief inspector ?—No, unless he was qualified. There would be nothing to prevent him qualifying, would there, in time ?

34369. No. By qualifying, I suppose you mean he would do that in his own time or after his work or something of that kind; not that he would cease his duties ?—No.

Digitized by Google

Mr. Evan Thomas.

12 Dec., 1907

34370. I put it to you that anybody who has had practical experience in a mine would be eligible for the post of a third-class inspector?—Yes.

34371. Do you think it necessary that he should have had charge of a mine for some time or have been in the position of a manager or under-manager?—No. I think that the best qualification for an examiner of a mine would be experience as a fireman.

34372. It has been put to us by other witnesses that the only experience worth having at all is experience at the face?—Most firemen have had that—all of them.

34373. I do not know that is so. I should have thought many men at the face have become firemen, but I do not know that firemen always become colliers. I should have thought it was the reverse, that a collier who has worked at the face may become a fireman?—That is what I am saying.

34374. Not always the fireman goes back to work at the face?—No, I do not say that.

34375. That is what I understood you to say. I will put it in this way: you would give this man who is to be inspector the same powers as the present Government inspectors?—Yes.

34376. Do you think that a man who has been a fireman and who has never had charge of managing a pit would be the man to instruct a manager when he is in the position of being an inspector. Do you think he would have the same weight in telling a manager what he should do as the present Government inspector?—Perhaps he would not, so far as the manager is concerned, but the question would be what would be the condition of the place.

34377. The present Government inspector makes his inspection and says to the managers, "I am not satisfied with the ventilation," or with something else, "you must alter this." Would a man who has only been a fireman have the same weight as the present Government inspector in telling a manager that things were not as they should be and should be put right?—As I understand it, the present inspectors can only recommend the manager. They have no authority to compel him to do it.

34378. But the inspector is a man who has passed a very high qualification?—Yes.

34379. He has passed a good examination?—Yes.

34380. Whereas you are suggesting a man in the position of a fireman should have the same authority as the present Government inspector?—Yes, or else what would be the good of him?

34381. I suggest he would not be as good, because his qualifications are not so high. However, I will leave it there. Mr. Abraham put to you that the best men in your district will not make these examinations under Rule 38, and you said that was so?—Yes, as a rule.

34382. What rate do you pay the men who examine the mines?—According to the resolutions of their committees.

34383. It may vary of course at different times. May not this have something to do with it, that the best workmen can earn more as colliers than you pay for examining for the safety of the mine?—That is quite possible.

34384. That may be a reason why the best men do not like to take it up?—Yes.

34385. I think you have been very fair in giving evidence on this point?—I have tried to be.

34386. You say that the complaints are rather general that the men suffer when they make these reports. There is nothing very definite that has come before us?—No.

34387. Can you give me a case where you have known a man who has suffered?—No, I cannot put my finger on an actual case, only when I attend the various committees I hear a lot of things at the committees, and you hear the real things at the committees. That is the general impression and, of course, no one can say directly and distinctly that that is the actual case.

34388. At your committees when there is anything wrong you, as an agent, are made acquainted as a rule?—Yes.

34389. The probability is if there had been any man who had suffered in your district, you would have heard of it?—Yes.

34390. You suggest that the fireman should only work eight hours a day?—Yes.

34391. If his shift were only eight hours, do you think he could make the two thorough inspections during the shift, having had to make one already before the men get down?—His district ought to be made to suit that.

34392. I take it a fireman's inspection of his district is not made exactly to the minute, the same every day. It is altogether affected by what he has to do during his examination?—Yes.

34393. He may have to put up brattice-cloth or move a bit of a fall, or do many things. You cannot name any specified time within which the fireman will make his inspection. Even during a shift it may not be simply a matter of going straight round: he may have to help put things right?—There may be some special difficulty that would detain him for some time.

32394. My point is generally that you consider the hours of the firemen are too long?—Yes, I have no doubt about that.

34395. (*Chairman.*) Do you now have two continuous shifts in the Welsh coal mines?—No.

34396. Your shifts sometimes last 10 hours?—Yes.

(*Mr. F. L. Davis.*) The firemen's shifts.

(*Chairman.*) The working hours do not last more than eight hours.

(*Mr. F. L. Davis.*) More than eight, but not necessarily more than 10.

(*Chairman.*) I understand it is desirable that the firemen should make the third examination, and not very long before the shift comes to an end. Therefore if he begins, he must begin two hours before the shift begins, and if it lasts 10 hours, it would be impossible, unless they were reduced to eight hours, for the firemen to work eight hours. If the shifts were reduced from 10 hours to eight hours the firemen might work a little more than eight hours probably a little more, because it is desirable that the end of the second examination should take place not long before the end of the shift.

(*Mr. Wm. Abraham.*) He would have six hours to make the two in.

(*Mr. F. L. Davis.*) You have not followed the Chairman's point.

34397. (*Chairman.*) My point is that the last examination ought to take place not more than three hours, and probably not more than two hours before the end of the shift?—Yes.

34398. Therefore if he begins two hours before the shift, and the third examination takes place two hours before the end of the shift he would have to work more than eight hours. He could not begin his third examination until he had been at work something like eight hours. He would have to work nine or 9½ hours frequently?—Another fireman could be employed to come in at the end of the eight hours.

34399. (*Mr. F. L. Davis.*) Would that be a practicable thing?—Why not?

34400. Would it be practicable, to have another fireman to examine when there is no shift following on afterwards. You would not suggest that was reasonable?—There is no work on the coal, but there is work about the roads, and you have firemen by night as well as by day.

34401. Your firemen at night would come on a little later on?—Yes.

34402. The shifts do not work. There is an interval between the two. They do not work directly after one another.

(*Chairman.*) Nearly one after the other?

(*Witness.*) The firemen practically work 24 hours.

34403. (*Mr. F. L. Davis.*) I really wanted to know what your scheme was. You say the firemen examine the main haulage roads, but not from the main haulage roads to the faces. Do you make that as a general statement, or do you mean that sometimes they do examine all the roads. You do not suggest that they never examine the roads?—No. You are referring to the morning examination?

34404. Yes.—The morning examination is practically confined to the faces.

34405. And the roads between the face and the main haulage roads they have not time to do?—No.

34406. You are not saying that they never examine the roads?—No.

34407. Sometimes they are not able to go over all those roads?—Yes, in the morning.

Digitized by Google

34408. With regard to fines: you think only for light offences, not for serious offences, fines should be enforced?—Yes.

34409. Do you not agree that all the serious cases at the present time are prosecuted?—I am afraid not.

34410. Not all?—I think taking matches into the mine would be a very serious offence. I was on top of a mine two or three days ago, and saw an apology stuck up and signed by a certain person saying that he agreed to pay so much, and to pay for the cost of printing that apology for having matches in the mine.

34411. You think that was a case that should have been prosecuted?—I think so.

34412. I entirely agree with you. We are of the same way of thinking here. You may take it that the Commission agree that a person committing an offence which is at all serious should be prosecuted. You have said for trivial offences fines may meet the case?—Some small cases between the man and the overman.

34413. You are in favour of systematic timbering?—Yes.

34414. There will be some system you would like to see adopted, possibly not the same in every district, but the management would be the people to put that system into force and not the men I presume?—I should think systematic timbering would mean a certain distance would be fixed by law. Anything under that distance I daresay would be under the control of the management.

34415. It is a difficult thing to put by law certain fixed distances which would apply fairly and be equal for all parts of the country?—Then it would not be systematic timbering.

34416. (*Mr. Cunynghame.*) Do you mean one distance for every mine in the country?—Yes.

34417. (*Mr. F. L. Davis.*) Do you think that could be worked, because the conditions are different in different districts?—Certainly. It would be workable if you wished to enforce it.

34418. At a cost?—Yes.

34419. What distance would you suggest? I suppose you have thought it out?—Perhaps there could be some difference between rock top and cliff top. The distance could be extended under rock top, and less under cliff top. I believe those are the two general divisions of top.

34420. What distances do you think are obtained under the different classes of top?—I saw a notice on top of one of the collieries the other day that under cliff top—I may not be quite correct in my figures—the distance was not to be more than 10 ft. rock top 15 ft. What is the use of standing timber over 15 ft. You might as well stand a post in the middle of a field.

34421. Although you have not worked many years yourself, you understand the conditions of working in your district, and you know that the conditions vary very considerably?—Yes, they do.

34422. In different districts and different collieries in the same district?—Yes; I have known conditions under which you have had to put double timbering, practically one against the other.

34423. Would there not be danger in some of those places if you had a fixed distance for the whole country, where you had an exceptionally bad place? The manager might say "We are only to do so-and-so"?—But the conditions there would compel them to do it; they could not help it.

34424. Do you think it would be fair to the places that have excellent tops (parts of the country that are not troubled as we are) to fix certain distances all through the country—the same distance?—I was fully convinced that was not workable a few years ago, but I have observed during the last 10 years that accidents took place where the men themselves thought the roof was perfectly safe, and the fireman thought the roof was perfectly safe, yet a stone comes down as if it comes from the blue sky and kills the man on the spot. If timber had been put up there the accident would not have occurred. That is the position.

34425. I only put it to you as a practical matter. You know the timber used in a colliery is a very important part of the cost of working?—Undoubtedly.

34426. Nobody, I presume, wants to save timber at the risk of safety, but they do not want to use more timber than is necessary. There would be many collieries, if a fixed distance were made throughout the country as you suggest, where the cost would go up undoubtedly, and possibly with no object attained?—I do not think we can say that in the face of the past.

34427. You said the man in his place was the person to decide whether he should put up certain timber or not, and one particular colliery you mentioned where he may not put up timber except when and where ordered by the manager?—Certain timber.

34428. Do you seriously suggest the man is the man to put up that timber, I mean, to decide whether he should put up the timber or not?—Yes.

34429. And as much as ever he likes?—Within certain limits.

34430. Who is to decide on the limits. The man is to decide whether he is to put it up or not and the management cannot say anything?—Yes, I say that the man who is working the place is responsible for the safety of the place, and he ought to have the discretion to decide when and where the timber is required.

34431. He can put up any timber he likes, ignoring the management altogether?—It is not a question of ignoring the management if that is the arrangement.

34432. Have you known any man increasing his earnings a little bit when he has a difficult place, by putting up extra timber and getting paid for it. We had better come to the real position?—I daresay that has taken place, and the man tries to arrange for his work to be done without one part of it interfering with the other, that is filling the coal, timbering the place, and ripping the top.

34433. If your suggestion were adopted, the men could do that whenever they liked?—They would not do that; what pays the collier is the filling of coal, and he concentrates his efforts, as much as he possibly can, on the filling of coal. He would not leave a heap of coal in the face I daresay, to go back and stand timber for the fun of it.

34434. You have told me you have known it done, and that will do for me?—Very likely the man has stood a pair of timber or a post when he had no trams to fill, or something like that.

34435. With regard to travelling roads, you suggest that there should be separate travelling roads?—Yes.

34436. I see that you suggest you would utilise the return airways?—Yes.

34437. Not that you would make a separate travelling road along the ordinary haulage road, but utilise that as a separate road?—Yes.

34438. You know one colliery that does that in your district?—Not in my district, but I happened to visit it.

34439. Llanhilleth?—Yes.

34440. It is not very far from you?—No.

34441. That is a comparatively new district?—Yes.

34442. That is a comparatively new colliery?—Yes.

34443. Do you know whether they have always done that?—I could not say that for certain.

34444. Does it occur to you it might be difficult for older collieries, collieries not accustomed to use that as a travelling road, to begin now and use it?—There would be a difficulty, but it is a difficulty that can be got over.

34445. Would not the alteration of the size of the return airway in many cases interfere with the whole ventilation of the colliery?—It would interfere with it in the right way—by increasing it.

34446. Would it?—Decidedly.

34447. You have the machinery at the top of the pit capable of drawing up a certain amount of air?—Machinery will not draw the atmosphere from small places. It must have place.

34448. Take a colliery with a comparatively small area in the return airway, a colliery that never uses it for a travelling road: if you increase the size of that do you mean to tell me that does not interfere with your ventilation arrangements in the colliery. I am not dealing with a new colliery which you can arrange as you wish, but one you suggest altering?—It interferes, but I say in the right way. If you enlarge your return, you enlarge your current.

34449. Not unless the machinery is sufficiently strong?—Even with that.

34450. Not unless the machinery is sufficiently strong to deal with the bigger area?—Yes.

Digitized by Google

Mr. Evan Thomas.

12 Dec., 1907

34451. If you have a lot of air forced through a big aperture and it comes out through a small one, the ventilation must be good. The draught is good. If you enlarge the place out of which it comes it does not come so quickly.

(*Mr. Smillie.*) Your fan will go.

34452. (*Mr. F. L. Davis.*) With regard to winding apparatus, the ropes and guides are examined, you agree. You would like them to be examined before the men are let down in the morning?—Yes.

34453. Immediately before I mean?—Yes.

34455. When did this accident happen when the men were 40 minutes in the shaft? What time of day was it?—It was New Tredegar, when they were winding up in the evening.

34456. If they had been examined just before the men went down you suggest that they might have seen there was something wrong?—I am suggesting that it should be done at both ends, before lowering and before raising.

34457. Before they begin to raise them as well as before they begin to lower them?—Yes.

34458. With regard to shot-firing, you think it should be done between shifts?—Yes.

34459. Is it not generally done between shifts?—It is done between shifts in some of the largest collieries in our districts, but in others it is not.

34460. In most of them, is it not, in nearly every one, if not in every one?—This shot I referred to which happened in Rhymney was done during a shift.

34461. Was that a large colliery?—No, the New Duffryn Rhymney Colliery.

34462. Generally speaking the shots are fired between shifts in South Wales?—I believe they are.

34463. In the roads?—Yes, I believe that is the rule under the Powell Duffryn Elliott Collieries.

34464. You said it would affect places where the shots had to be fired in the coal?—No doubt. Take the anthracite district in South Wales.

34465. Outside the anthracite district, there is very little shot-firing in the coal in your experience?—Very little.

34466. Practically none in the coal?—Practically none in the steam coal.

34467. (*Mr. Cunynghame.*) You say there should be one distance of systematic timbering through the whole country. Is that systematic timbering on roadways and also working places?—Yes.

34468. What should those distances be?—That is a question to be decided.

34469. What is your opinion in regard to that. Supposing you were asked to name a distance for the whole Kingdom, what would it be for roadways and working places respectively?—Nothing more than 6 ft.

34470. 6 ft. as a maximum?—Yes.

34471. 6 ft. would not be enough in some places?—No, it would not be close enough.

34472. Then you could not have one distance for all England. If you had 6 ft. for England and 4 ft. for other places, it would not be the same?—I am suggesting that anything below that would depend upon the condition of the mine, and in many places certainly the distance would be bound to be reduced according to the conditions of the place.

34473. You are aware that 6 ft. is already the law for spragging?—Yes.

34474. You would make it also for the roadways?—Yes.

34475. Are there not many roadways where there are no props for some distances?—Yes.

34476. Would you prop all those?—Certainly.

34477. Would that not be a source of danger preventing you seeing the condition of the roof if timbered right across?—If they were timbered you would not want to see the roof.

34478. If you have a quantity of beams close together across, I mean?—Then it would be safe.

34479. I have seen roadways where there are long spaces without timber. Do you mean that the whole of those are unsafe?—No. You suggested in your question that if the roof was timbered you could not see the roof, and I said there was no necessity to see it.

34480. There are places down the stretches of roadway where there is no timber?—Yes.

34481. Would you timber all those?—Yes.

34482. Every one?—Every one.

34483. Not every place at present untimbered is unsafe?—I do not go to that extent.

34484. Why timber it if not unsafe?—Because we have seen this in our experience: places that we thought were perfectly safe become dangerous, and fatal accidents have occurred. Those safe places to-day may be unsafe to-morrow.

34485. Still, although you think those places safe you would timber them?—Yes.

34486. You said also you would give the man at the working place absolute discretion to, decide how much timber to put up?—In his working place.

34487. Supposing he put too little, would you then say he would have the right to put too little timber even though the manager thought he was not putting enough?—He could not put too little if a certain maximum distance was fixed.

34488. If the maximum distance was 6 ft. and the seam was rather crumbly it might be right to put it up much closer in certain places?—Yes.

34489. Supposing he did not put it close enough, would you give him entire responsibility and exempt the manager altogether?—No, if the manager told him to stand timber closer than 6 ft. certainly he should do it.

34490. Then you would not be giving him the entire responsibility and discretion to decide?—I said that a workman should have full discretion to stand timber where he thought it was necessary.

34491. If he does not do it you cannot get rid of the fact you are making the man the judge and not the management. Do you not think that is a difficulty? Would you not be relieving the management of their proper responsibility in other words?—In what way?

34492. By making the man the sole judge?—I do not say that the man should be the sole judge.

34493. You said he should have absolute discretion to decide?—I said he should have absolute discretion to decide to stand timbers where he thought they were necessary. At present he has not.

34494. (*Mr. Smillie.*) And be bound in addition to put them up where the manager or a competent person says he must put them?—Yes.

34495. It is only giving the workman the right to put up timbers when he thinks necessary?—Yes.

FORTY-EIGHTH DAY.

Friday, 13th December, 1907.

PRESENT:

LORD MONKSWELL (*Chairman.*)

SIR LINDSAY WOOD, Bart.
H. H. S. CUNYNGHAME, Esq., C.B.
WM. ABRAHAM, Esq., M.P. (Rhondda.)
F. L. DAVIS, Esq.
THOMAS RATCLIFFE ELLIS, Esq.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

MR. EVAN THOMAS, re-called and further examined.

34496. (*Mr. Smillie.*) Before we finished yesterday you were dealing with the question of systematic timbering?—Yes.

34497. And you were of opinion very strongly that there should be something like uniformity throughout the country as to the distances between props or supports?—Yes.

34498. You recognised fully, however, that it might perhaps be necessary to make certain rules according to the nature of the strata?—Certainly; I took all that in.

34499. What you have in your mind is that after long experience there is no roof which should be left without timbering; you think that all roofs should be timbered, no matter how good they are?—That is so.

34500. You are fully conversant with the spragging rule, the rule which makes it compulsory that spragging should be done where there is six feet on the cutting?—Yes.

34501. That is compulsory all over the coalfields, independently of the nature of the coal?—Yes.

34502. Sometimes spragging in done in coal where there is not the slightest likelihood of the coal falling down?—That is so.

34503. But it is thought to be safest to make sure, and to make the spragging universal?—Yes.

34504. You would apply the same principle to roofs?—I should apply the same principle to roofs.

34505. In all mines?—Yes.

34506. There is a very large proportion of accidents from falls taking place in collieries where the roof is considered to be very good?—Yes.

34507. And that to some extent may arise from the fact that the roof is thought to be so good that there is no timbering done?—That is so.

34508. In collieries working on the longwall system there is always what is known to miners as a creep or crush continually going on.

34509. And what may be considered a very strong roof and a very good roof to-day might be in a dangerous condition to-morrow?—That is so.

34510. If the principle which you aim at was carried out, you would perhaps leave the details to be thought out by some joint committee of workmen and employers as to the distances between props—if the principle of systematic timbering were carried out?—Yes, if the principle is adopted.

34511. You know the Section of the Act of Parliament dealing with the employment of boys and women above ground. Sections 4, 5 and 6 of the Act deal with the employment of young persons and women about the surface, and provide that there must be an interval for rest and food allowed during the shift?—Yes.

34512. You are aware that the same provision does not apply to the employment of young persons underground?—That is so.

34513. There is no provision made in the Act of Parliament?—That is so.

34514. So that lads of tender years may be employed continuously for a whole eight hours' shift underground without any rest for food, and so on?—That is possible, so far as the law is concerned.

34515. Is there anything in the nature of the employment underground which should enable young boys to go on without food any more than on the surface?—No. It would be the other way about, I should think.

34516. You would think that if there is any need for the protection of lads above ground there should be some provision made for the protection of lads underground, too?—Most decidedly.

34517. And if an Act of Parliament providing for an eight-hour day was carried out, there would be more necessity than ever that protection should be given to young persons?—Yes.

34518. Would you suggest to the Commission that some provision should be made in any new legislation to provide for a rest for lads underground during the shift?—I should think so.

34519. You are very strong on the point that one of the qualifications necessary for colliery managers and mines inspectors is practical experience?—Yes.

34520. And so far as practicable a part of that practical experience should be gained at the working face?—Yes.

34521. You think that that, perhaps, is the best part of the education of a mining engineer or a mines inspector—experience which would be gained at the working face?—Yes; no doubt that would be the base of all his experience.

34522. Would you tell us at what age lads are allowed to start at the coal face in Wales? Is there anything to prohibit them starting at 14 years of age?—Nothing. There is nothing to prevent them starting after 13 years of age if they have passed their standards.

34523. So far as the Mines Act is concerned there is nothing to prevent them?—No.

34524. And it is a pretty common thing perhaps for them to start with their father at the working face?—Yes.

34525. It was suggested yesterday that in view of the fact that lads did not start at the coal face until they were 18 year old, they would not have so much time then to get experience at the coal face, if we were to insist upon that. It is not the case that they do not start until they are 18 years old; thousands of lads start at 13 and 14 years of age to work at the coal face?—Yes, the majority of them.

34526. The majority of them, so far as South Wales is concerned, start at that age?—Yes.

34527. So that that need not be taken as a difficulty, that there would not be time afterwards for them to get their experience?—Not at all.

Digitized by Google

Mr Evan Thomas.

13 Dec. 1907

34528. Do you think that some provision should be made in the Education Act for giving some knowledge of mining, mine gases, and the danger of mines, to lads in a mining district before they go underground at all?—I think some instruction ought to be given to lads at the elementary schools in colliery districts, especially with reference to the use of the lamp and the nature of gas, and how to test it.

34529. I suppose we may take it that 75 per cent. to 80 per cent. of the lads in a mining district are likely to find their way underground?—Yes.

34530. In view of that, it would be a wise precaution to give them some knowledge at the elementary school as to the use of a safety lamp, the nature of gases, and generally the dangers by which they are surrounded?—Yes, no doubt.

34531. And it would not be at all a bad thing if they were instructed in the Mines Act and the Special Rules before they went down, would it?—No, not at all.

34532. I suppose that it is a fact not one half of the miners understand fully all the Rules that they are supposed to obey?—I am afraid that is the fact.

34533. I suppose we might take it that a very large proportion of the officials of collieries do not understand at all times fully all the Rules they are supposed to?—Very likely.

34534. And it might tend, and probably would tend, to greater safety and greater discipline if the lads had some knowledge of mining in the way which you indicate before they went underground at all?—Yes. It would awaken an interest in their minds with regard to the calling that they were going to be engaged in.

34535. Would you, or your miners, be in favour of provisions being made at the collieries for enabling workmen to wash and change their clothes before going home after coming up from the shift?—Well, I think in time the miners would adapt themselves to that system if the system was established. Perhaps they would have some little prejudice at the beginning, but in time I believe they would come round to it.

34536. Perhaps I might put it in this way: would you yourself from your own experience in an important mining district be in favour of such a course being taken?—Yes.

34537. It would rather encourage the workmen in that direction?—Certainly.

34538. I suppose we may take it that all the Welsh miners have not bath-rooms at home?—No, unfortunately, they have not.

34539. A very small proportion of them have bath-rooms?—Yes.

34540. And in most cases the houses, while fairly good for miners' houses, are rather limited with regard to giving them very much opportunity of washing thoroughly at home: there is not very much provision for thorough cleansing at home?—There is not.

34541. It must be done under rather restricted conditions where it is done?—Yes.

34542. And from the health point of view it would be just as well that provision should be made for leaving pit clothes at the pit, to be dried there?—Yes, no doubt.

34543. There would certainly be less trouble at home? Yes.

34544. You are of opinion that in time the miners of this country would adapt themselves to that?—I think they would.

34545. And if once established you do not think there is any likelihood of their going back to the old state of things?—I do not think so.

34546. You gave us some information yesterday about coroners' inquests. You are not altogether satisfied with the present system, I think?—No, not altogether satisfied.

34547. It is left largely in the power of the coroner at the present time to make an inquest either a thorough examination or to stultify it very largely?—Yes: I believe he has absolute power in his own court.

34548. And while I suppose in your experience some coroners have done everything in their power to bring out all the facts and to give all opportunities for bringing out the facts, yet in other cases they do not act in the same way?—No.

34549. Do you know any coroners in South Wales who set themselves pretty much against giving opportunities to the representatives of the men of taking part in the court?—I should not like to mention any particular name.

34550. We do not want you to mention any names, but if it is true that some of the coroners in South Wales are not so ready to give opportunities as others, I should like to know, without asking you to specify any particular coroner.—No doubt that is the fact.

34551. You know of that of your own knowledge?—Yes.

34552. You have taken part in a considerable number of coroners' inquests yourself?—Yes. I think that I have had an opportunity of appearing before most of the coroners in South Wales from time to time.

34553. I think you were appointed as one of two representatives on behalf of the South Wales miners, to attend the McLaren inquest?—Yes.

34554. It occurred in your district—Yes, in my own immediate district.

34555. That was at Abertysswg?—Yes.

34556. I think on that occasion there was a fairly full enquiry made, at least?—Yes.

34557. You had an opportunity of going down the pit to make an examination of the place where the explosion was supposed to have originated?—Yes.

34558. You went down with the manager?—With the manager, and with you.

34559. The workings were supposed to be free from danger, and clear of explosive gas on the day that we went down: they had been examined that morning, I think it was said?—Yes, I think so: it was supposed to be so.

34560. Did you reach the point at Amos's Barry heading at which the explosion was supposed to have taken place?—You did not reach the point which was your objective, I think?—No; we failed to reach the furthest point, the actual point that we were in search of.

34561. What was the cause of your failure to reach that?—An accumulation of gas.

34562. I suppose you did not discover the extent of it. You turned out of it immediately you found that there was any gas?—Yes: only we could gather from the point at which we entered into it what the extent would be by looking at the map of the workings, and there was bound to be a very considerable body there.

34563. You considered that there was almost 60 yards of roadway full of gas there?—Yes.

34564. You remember, I suppose, what was thought to be the cause of the original accumulation of gas there. A very large fall had taken place?—A very large fall had taken place in the part called Amos's Barry.

34565. Amos's Barry, along the working face?—Yes.

34566. Now, men were engaged, instead of clearing away the fall, in going along the coal face to reopen the coal face?—Yes, to work round the fall.

34567. And at Amos's Barry that was the intake of the air course?—That was the intake part.

34568. And round on what is called Death's Heading, on the other side, was the outake from that side?—Yes, and Morgan's Heading.

34569. And Morgan's Heading, as a matter of fact, and Talybont Heading?—Yes.

34570. I suppose there would be less danger in men working on the coal in the intake than at Talybont—at the outlet?—Yes.

34571. Was it not believed that there was a very large accumulation of gas where that fall had taken place, and it was known that gas was being given off every day from there?—Yes.

34572. The workmen were started at the return end of that fall where the gas had been given off—they started to work through?—Yes: men were working there the night the explosion took place.

34573. You formed the opinion that in all probability that was the cause of the explosion?—Yes, in all likelihood.

34574. I think it was proved in court that the Inspector of Mines had called the attention of the manager on more than one occasion in writing to the state of the ventilation in that mine prior to the explosion?—Yes, on several occasions.

34575. The Assistant Inspector of Mines had been there on two occasions at least, and had examined the workings and the return airway?—Yes.

34576. And at some of the working faces he found a cap on the lamp?—Yes: that was on the actual morning before the explosion—the last visit.

Digitized by Google

34577. On the day on which the explosion really took place ?—He was there in the morning, and the explosion took place that night, about 11.30.

34578. And he found gas in some of the working places on that morning ?—He found a cap there in the actual working face, from one-eighth of an inch to half an inch.

34579. And for some hundreds of yards a cap was shown continuously along the whole of the return airway ? —Yes.

34580. And the air going from that pit, McLaren No. 1, went up an upcast shaft and aired another pit up to the upcast—it ventilated the other pit where the upcast shaft was ?—Yes.

34581. The air going from that return airway went into another seam and ventilated it ?—Yes: the air that ventilated the No. 1 went into the No. 2 pit, and ventilated that, and No. 2 was the upcast.

34582. The fan was on No. 2 pit, and it was the upcast shaft ?—Yes.

34583. Was it not admitted that on the night of the explosion the revolutions of the fan at No. 2 pit had been reduced, and the speed of the fan had been reduced for 20 minutes before the explosion took place ?—Yes: that was the fact stated at the inquest.

34584. That was admitted. There were 15 men fatally injured, and about 16 more or less seriously injured ?—Sixteen men lost their lives.

34585. There were about the same number injured ?—Yes.

(*Chairman.*) I do not quite understand what your object is, Mr. Smillie, because the whole of this matter was gone into, and a report has been issued in the form of a Blue-book. What is the object in taking the witness through this; do you propose to bring out any new facts or to show that the inquiry was not properly conducted ?

(*Mr. Smillie.*) On two or three occasions the miners have requested the Home Secretary to order a second inquiry.

(*Chairman.*) You wish to show that the inquiry was not exhaustive ?

(*Mr. Smillie.*) I want to give at least our reasons here for asking the Home Office to do that.

(*Chairman.*) Your object is to show that you are not satisfied with the report in the Blue-book; and you suggest that the report in the Blue-book ought to have been supplemented, as I understand ?

34586. (*Mr. Smillie.*) I suppose you formed the opinion that there had been gross carelessness in connection with the management of this colliery ?—That would be the natural inference to be drawn from the facts ascertained, especially with regard to putting men to work at the out-take end of the accumulation of gas.

34587. You being present at the inquest, heard the evidence of some mining engineers who stated that in their opinion the men should be allowed to work under the conditions that they were working there ?—Yes: they stated that there was no danger in one-eighth of an inch of a cap.

34588. You were fireman yourself for some years ?—Yes.

34589. Do you think that it is safe for workmen to work in an atmosphere which shows a cap on a lamp of one-eighth of an inch ?—No, I do not think it is safe, for this reason: when one-eighth of an inch of a cap appears on the flame that is a clear indication that you are within the range of danger, and should anything at that moment happen to the ventilating apparatus, then the danger immediately increases; you have no margin there between the line of safety and the line of danger.

34590. You think that in all cases where a cap of that nature is shown on a safety-lamp it is time for the men to be withdrawn until the ventilation is improved ?—Most decidedly.

34591. In this case the men were allowed to work away in face of the warning of the Mines Inspector that the ventilation was not as it should be ?—Yes, the men were allowed to work in No. 2 after the inspector recommended their withdrawal.

34592. There was no prosecution of any person in connection with that, so far as you ever heard ?—No.

34593. From the information which you and the other miners' representatives secured at that inquest, and your desire that the matter should be gone into more fully again with an independent tribunal, you were a party to approaching the Home Secretary to ask for a new inquiry ?—Yes

34594. You think in a case of this kind a coroner's jury, and even a coroner himself, may not be in the most independent position to go thoroughly into a question of an explosion of this nature: I will put it that generally the local circumstances make it impossible for them to be as independent as a court appointed or a person appointed by the Home Secretary would be ?—No doubt that is so.

34595. That was one of your reasons for asking that a further inquiry should take place ?—Yes: and we felt very strongly that the Home Office should have taken steps to further consider the opinion given by the mining experts with regard to gas and that that should be refuted.

34596. One thing which made it more than ever necessary that there should have been another inquiry was the conflicting evidence of mining experts, some of whom said that a cap on the lamp was not dangerous and others said it was dangerous ?—Yes.

34597. In view of the opinion expressed by mining experts of very high standing, could you tell us whether or not any of the mines in Wales at the present time are being worked under circumstances such as were found in the McLaren colliery ?—I do not think they are. The slightest indication of gas is looked upon as a sufficient reason not to allow the men to work there.

34598. So that it is generally considered to be necessary to withdraw the men where a cap is shown on the lamp ?—Yes: and I think these experts themselves do not carry out in practice what they stated in evidence.

34599. You do not think that they themselves would have allowed the state of things which was there present to continue ?—No.

34600. Then it must have been that that opinion as given by them in that case was given in order to screen or save some person.—That is a conclusion which we must arrive at.

34601. Have you a very large proportion of unskilled workmen in the mines in Wales ?—Yes, no doubt.

34602. Persons who have not previously had any experience of undergrcund working ?—Yes.

34603. Do you think that the employment of such labourers is a source of danger to themselves and generally to the other workmen ?—Yes, there is no doubt about it.

34604. Even when it is under proper supervision it is still a danger ?—Yes.

34605. But it becomes more so when it is not properly supervised by skilled persons ?—Yes.

34606. Is it the case that sometimes unskilled persons who may not have been many weeks in the pit are sent into some of the roads to put away rubbish in old goafs, and bye-roads ?—That is generally the work that they are put to do.

34607. And that is really a dangerous work to perform, is it not ?—The work is performed in dangerous places; the work itself would not be dangerous.

34608. That is what I mean. I mean sometimes the very fact that they are putting this debris or stuff away into old ends and by-places might form a danger of itself ?—Yes.

34609. Because that is where you are likely to have an accumulation of gas if there is gas about ?—Yes.

34610. And an unskilled person who has no knowledge of gas or lamps might be working under most unsafe conditions not only for himself but for the whole of the men in the mine ?—That is quite possible.

34611. And have no knowledge of it himself ?—Yes.

34612. So that you think it should be necessary under circumstances such as those that such persons if employed at all should be continually under the supervision of a skilled person ?—Yes, I should think so.

34613. (*Chairman.*) There are one or two questions which I should like to ask you with regard to this McLaren explosion. What I understand you to say is this; that you find fault with the verdict of the jury. You do not suggest that all the circumstances were not fully gone into, but what you say is that the jury did not properly appreciate the expert evidence, or, at all events, they were deceived by the expert evidence that was brought before them, and, consequently, did not bring in a verdict which would have resulted in a prosecution, as they ought to have done ?—I do not think I ought to go to the extent of finding fault with the coroner's jury's verdict, but what we felt about it was this, that a further inquiry ought to have been made by the Home Office with regard to the circumstances attending the explosion itself, and also the

Mr. Evan Thomas.

13 Dec., 1907

coroner's inquiry: that something should be done to turn back the expressed opinions of the experts at the coroner's inquiry.

34614. You think there ought to have been a further inquiry with a view of getting further expert evidence to contradict the expert evidence which was given before the coroner?—Yes.

34615. But the Home Office has at its disposal any amount of expert evidence which could be given to them without any official inquiry of any sort or kind: the Home Office might, upon reading this expert evidence always ask the mine inspectors for their evidence, and ask for mining engineers' evidence, and they might go into the evidence themselves perfectly well without having any further inquiry. Therefore as I understand it, the objection which you bring with regard to the McLaren accident is this, that the Home Office ought, having regard to the facts of the case, all of which were brought out before a coroner's jury, to have come to the conclusion that someone was to blame, and to have ordered a prosecution. That is, as I understand, the objection which you raise. The Home Office had before them, according to Mr. Martin's report, the whole of the evidence with regard to this matter, they had every single fact before them on which they could form an opinion as to whether or not a prosecution of the officials, or of any official, was desirable. They had all the facts; there is no dispute about that?—Yes, I believe they had all the facts.

34616. What you object to is that the evidence was brought forward, as you think, with a view to shielding the officials, and you think, that if you had further expert evidence it would have contradicted the expert evidence which was brought before the coroner, as I understand?—Yes, the expert evidence gave a certain interpretation to the facts which were ascertained, and certainly we should say that that interpretation was not the correct interpretation to be placed upon those facts.

(*Mr. Smillie.*) Our chief point was this, that if it could be taken for granted that the conditions under which this colliery was being worked previous to the explosion were satisfactory, then all other colliery managers in Wales and elsewhere would be entitled to work their collieries when it was clearly proved that air in the return airways and the working faces shewed a cap on the safety lamp. We felt that we could not allow a state of things of that kind to continue.

34617. (*Chairman.*) But I ask the witness whether he does not acknowledge, so far as I understand—certainly Mr. Martin acknowledged it in the fullest manner—that all the circumstances of the case were fully brought out before the coroner. Would it have furthered your case to have had a second inquiry? What more could have come out at the second inquiry than came out at the first inquiry; what facts could have been brought out?—I have admitted that I think all the facts were brought out, but then there was a certain interpretation placed upon those facts at the coroner's inquiry, and certainly we thought it was the duty of the Home Office to make a further inquiry especially into that interpretation.

34618. That is, I daresay, where the Home Office may have felt a difficulty, because their own inspector said to them, "I have all the facts before me." That inspector was not in the least bound by the opinion of any expert witness: he could form his own opinion on the evidence and advise the Home Office. So that I understand the quarrel which you have with the Home Office is not so much that they did not have a second inquiry as that they were badly advised by Mr. Martin, the inspector, and that he ought to have told them that on the evidence which was brought before the coroner they ought to have come to the conclusion that the mine was not properly worked, and that in future men should always be withdrawn on the appearance of any cap such as was shewn?

(*Mr. Wm. Abraham.*) But the matter is much more serious than that, in our view. This is a case where the inspector himself had recommended that the men should be withdrawn.

(*Chairman.*) I quite understand that, but then my point is that the whole of the facts were before the inspector and the Home Office.

(*Mr. Wm. Abraham.*) Yes, so far as the cause of death was concerned. We say it is laid down, as Mr. Pickering pointed out yesterday, that the coroner finds out the cause of death, and when he is satisfied as to the cause of death his business ends, and he makes no inquiry into the matter which caused the death. In this case one of the most important points was the incompetency of the man who managed the mine and his refusal to carry out the recommendation of the inspector, and the fact that there was a man under whom he was trained—a great mining engineer—giving it as his expert opinion that a cap of so much height on a lamp was not dangerous. There was a further fact proving that part of our case which has been brought out for the first time publicly here this morning, which could not be brought out at the coroner's inquest.

(*Chairman.*) What fact?

(*Mr. Wm. Abraham.*) The fact that these two men with this manager in his own colliery after the explosion went into a body of at least 60 yards of gas.

(*Mr. Ratcliffe Ellis.*) That was after the accident.

(*Mr. Wm. Abraham.*) Yes, after the explosion.

(*Chairman.*) That might be a reason for a further investigation.

(*Mr. Wm. Abraham.*) Certainly, it is a very strong reason. It is a question of the incompetency of the manager, and there is no reprimand of that manager to-day or anything done with regard to his certificate so far as we know. We went to the Home Office and proved to them from their own Blue-books of the Report of a Commission of some years' standing, that any cap on a lamp was to be considered dangerous. We wanted them to refute that at once—to bring it to the knowledge of the mining world that the opinion was a wrong one, and that it was not safe for any manager to be allowed to manage a colliery when that was the state of things.

(*Chairman.*) Yes, but then the Home Secretary or the Mines Inspector always have done that without a second inquiry. How would a second inquiry have further elucidated the fact that a cap on a lamp was dangerous?

(*Mr. Wm. Abraham.*) The second inquiry would be held by different men who would condemn that opinion.

(*Mr. Ratcliffe Ellis.*) If it did not, I suppose it would be no use.

(*Chairman.*) I quite understand the strong feeling that there is on the subject, but my only point is what good could you have got out of a second inquiry, because every one of these facts was before the Home Secretary and before the Inspector, and it was perfectly open to the Home Secretary or the inspector to make any report they pleased upon the proceedings at the coroner's inquiry, or, if the Home Secretary had thought it desirable, he might, notwithstanding the verdict of the coroner's jury, have ordered a prosecution.

(*Mr. Wm. Abraham.*) It is not a question of prosecution with us.

(*Chairman.*) This is a very important matter, and I do not want it to be considered that the matter is being shirked in any way. You are rather in the position of a man giving evidence on behalf of your side.

(*Mr. Wm. Abraham.*) We feel it very strongly that the Home Office did not do what we considered they ought to have done.

(*Chairman.*) The reply of the Home Office was as follows: "Sir, I am directed by the Secretary of State to say that he has considered carefully the representations made to him by the deputation from the Miners' Federation which he received on the 12th instant, and has in the light of them reviewed the whole case of the explosion in September last at the McLaren colliery, Abertysswg. He has also transmitted the important statements which were laid before him to Mr. Martin, H.M. Inspector of Mines for the district, who has recently visited the colliery and is giving the case special attention. Having regard to the fact that the inquiry before the coroner was very careful and thorough, and in view of the detailed discussion of the evidence given thereat, to be found in the reports made to the Secretary of State by Mr. S. T. Evans, K.C., M.P., and Mr. Martin, which will be published, Mr. Akers-Douglas is satisfied that no re-opening of this case would lead to different conclusions or to any substantial addition to the knowledge available for future guidance." I suppose "different conclusions" would be the words which you would object to; you would say that possibly if there was a second inquiry a different conclusion might have been arrived at?

(*Mr. Wm. Abraham.*) Yes, distinctly.

(*Chairman.*) But you would hardly suggest that a second inquiry would have added to the knowledge available for future guidance, because all that knowledge was already in the possession of the Home Office and the Mines Inspector, surely?

Digitized by Google

(*Mr. Wm. Abraham.*) It would add to the knowledge of the Home Office, at any rate, this, that here was a man who, after the explosion had occurred, led these two men to a body of gas 60 yards long.

(*Chairman.*) That is a somewhat different point.

(*Mr. Wm. Abraham.*) That is why we feel so strongly that the men are allowed to be managed by incompetent persons.

(*Chairman.*) Then your point would be that independently of investigation into the cause of the explosion, you would suggest that a further investigation ought to be held with a view of showing, from a state of facts which occurred subsequently to the explosion, that the manager was an incompetent person?

(*Mr. Wm. Abraham.*) Yes.

34619. (*Mr. Ratcliffe Ellis.*) I should like to ask the witness a question upon that. Of course, you know that the object of this Commission is to make any recommendation which occurs to the Commissioners as reasonable for the more safe working of mines; that is the great object of this Commission?—Yes.

34620. You suggest, as I understand, that it ought to be obligatory upon the Home Office to appoint an inquiry under Section 45 whenever they are asked to do so by the workmen?—Yes.

34621. And that, you say, would be conducive to safety. The main reason which you give for that, as I understand, is that with regard to this accident to which you refer in South Wales the coroner's jury did not come to the conclusion which you think it ought to have come to. Is that so, or did you agree with the verdict of the jury?—So far as the verdict goes, I do agree with it, although it might go a little further. I do not exactly remember the terms of it now.

34622. You do not suggest, as I understand, that all the facts connected with the explosion, that is to say, preceding the explosion (I will deal with those which, happened afterwards) were not brought out; I am speaking first of the facts; the expert opinion we will come to in a moment?—I have admitted that all the facts were brought out.

34623. What you complain of, I suppose, is that the owners, who are generally the persons who do these dreadful things, misled the jury by bringing expert evidence, and drew improper conclusions upon those facts?—Yes, we complain of that expert evidence.

34624. I suppose they are entitled to have expert evidence; an owner or a manager who is put in peril is entitled to be heard at these coroner's inquests; you would not object to that?—Not in the slightest; certainly not.

34625. And he is entitled to bring such evidence as he may think will justify his position?—Yes.

34626. Do you suppose that this expert evidence misled the inspector as well as the jury?—No, it did not mislead the inspector in the slightest degree.

34627. He knew all about it?—Yes.

34628. You are aware that it is quite competent for an inspector to prosecute a manager whether the jury exculpate or whether they do not exculpate him, if in the view of the inspector he has committed any offence?—Yes.

34629. So that I do not see, so far as the coroner's jury is concerned, that there is anything to complain of with reference to that. Your complaint is that the inspector did not prosecute the manager?—No.

34630. Then what is your objection?—Prosecution is not my end in view: I am not pleading for prosecution; what I am pleading for is that the proper interpretation should be placed upon the facts ascertained, and not the interpretation given at the coroner's inquest.

34631. But I understood Mr. Abraham to say just now that this incompetent manager was still managing mines?—Yes.

34632. It was your complaint that his certificate was not cancelled.

(*Mr. Wm. Abraham.*) We have not said that.

(*Mr. Ratcliffe Ellis.*) You said a short time ago that this man who led these men into the gas is still manager of a mine.

(*Mr. Wm. Abraham.*) Yes.

34633.—(*Mr. Ratcliffe Ellis.*) Then you do not complain that he was not prosecuted?—That is not my complaint at all; I have nothing to do with prosecution.

34634. I want to get it in the Notes that so far as the prosecution was concerned, the inspector was quite at liberty to do that without any further inquiry at all?—I suppose that he was.

34635. Well, you know that he was, under the Act of Parliament. Then it is suggested that after the explosion this manager took men into gas. You say that he did that?—Yes.

34636. That was nothing to do with the deaths of the persons, but that was another offence or indiscretion, whatever it may be, on the part of the manager?

(*Mr. Smillie.*) I do not think he was to blame for that.

(*Mr. Ratcliffe Ellis.*) But Mr. Abraham said a short time ago that this man after the deaths took these men into gas.

(*Mr. Wm. Abraham.*) Yes.

(*Mr. Ratcliffe Ellis.*) Now Mr. Smillie says he does not think he was to blame for it.

(*Mr. Smillie.*) We do not say he was incompetent because he did that, but we put that in in order to prove the state of the mine even after the accident.

(*Mr. Wm. Abraham.*) It does not prove that he was competent, at any rate.

(*Mr. Ratcliffe Ellis.*) We want to see where the present administrative powers of the Home Office are defective.

(*Mr. Wm. Abraham.*) Quite so.

(*Mr. Ratcliffe Ellis.*) Then he did not do anything wrong in taking them into gas. It was probably necessary?

(*Witness.*) I think it was under the impression that the place was clear, and he simply walked into it.

34637. How long after the accident was it?—A few days afterwards: I could not tell exactly how many days.

34638. It was in the course of the exploring?—Two days after the explosion.

34639. But he was exploring the pit and trying to get it right again?—Yes.

34640. So far as the manager was concerned in this offence which he committed, it was an offence which you committed and Mr. Smillie committed at the same time?—Quite so.

34641. So that you do not blame him for that?

(*Mr. Smillie.*) But we were not responsible for the management.

(*Mr. Wm. Abraham.*) They were being taken down to see a safe pit, and yet they went into a body of 60 yards of gas.

(*Mr. Ratcliffe Ellis.*) You do not blame the manager for going into the gas?

(*Witness.*) No; I believe he did it quite accidentally.

34642. What facts, for instance, do you expect would come out if you had an inquiry; more than came out before the coroner's jury?—That fact could be brought out. It could not be brought out at the coroner's inquiry.

34643. But that fact would be this, I suppose, that after the accident there was a considerable amount of gas in this pit?—Yes.

34644. Was the inspector with you at the time you made this inspection?—Not that day.

34645. But did he know about this; did you communicate this fact to Mr. Martin?—I did not.

34646. Why not?—It was not my business.

34647. Whose business is it, then?—The manager's.

34648. Have you no responsibility? You went down in the interests of the men, I suppose?—Yes.

34649. And have you no responsibility, if you find things which you consider dangerous, to communicate that fact?—Responsibility to the men. I reported the fact to the men.

34650. But is it not your duty to communicate that fact to the inspector if you consider it very material?—Well, no. If I were simply down the mine, examining on my own responsibility, I would, but the manager and Mr. Smillie were there.

34651. But, surely, when you go down there representing a large body of men it is a much more serious responsibility than if you go simply to represent yourself?—I reported the matter to the men because they were investigating the pit with a view of satisfying themselves with regard to the state of the pit before restarting work.

Digitized by Google

Mr. Evan Thomas.

13 Dec., 1907

34652. Did you make a report to the men?—Yes.

34653. That would be sent to the inspector, inasmuch as you had a complaint to make under Rule 38?—Not of necessity.

34654. Absolutely of necessity?—But I was not examining under Rule 38.

34655. Was anybody examining under Rule 38?—Yes, I believe the men did.

34656. And they saw as much as you did?—I do not know.

(*Mr. Ratcliffe Ellis.*) I understood Mr. Smillie to say a moment ago that whilst they were in this gas the men came round who were examining for the men.

(*Mr. Smillie.*) No; when we came back out of that part we met them.

34657. (*Mr. Ratcliffe Ellis.*) If you had thought fit you could have communicated to the inspector this state of things?—I could, certainly.

34658. And you did not think it worth while to do so?—No; that is not the proper interpretation to be placed upon my act.

34659. Well, you did not do so?—I did not do so.

34660. That being so, what more could you have got out of the inquiry. Supposing the Home Office had given an inquiry, what more do you expect would come out of it than the knowledge which you had, and which you could have communicated to the inspector if you had wished to do so?—Shall I put it in my own way?

34661. Certainly.—There is certain evidence given at the coroner's inquiry; that evidence is on record, and so far as the public is concerned, that evidence is accepted, that one-eighth or a quarter, or even half an inch, of a cap is not dangerous. What we wished to see was that certain evidence should be given at an inquiry by the Home Office that would refute that evidence. There is another fact: Mr. S. T. Evans himself in his report states that he is not satisfied with regard to the wisdom or otherwise of allowing men to work at the return end of that accumulation of gas. They knew there was accumulation of gas there, and they placed men to work at the return end of that accumulation of gas, and anything that would occur to disturb that accumulation would inevitably bring the gas down upon these men—it could not be helped. Mr. Evans in his report says that he is far from being satisfied on that point.

34662. I think in South Wales you have some confidence in Mr. S. T. Evans?—Yes.

34663. He represented the Home Office?—Yes.

34664. Do you think he allowed matters to pass that should not have been allowed: do you think the jury were allowed to come to conclusions without having the case fairly put before them, Mr. Evans representing the Home Office?—What Mr. S. T. Evans says is that under the circumstances he does not recommend a prosecution. We do not want a prosecution, and you are very desirous of pressing us to admit that. We do not want a prosecution; that is not our object.

34665. I am desirous of ascertaining from you what more could have been gained if a second inquiry had been ordered in this particular case than was brought out by the coroner's inquest and the information given to the Home Office. What further information could have been obtained?—Another set of interpretations given by experts equal in experience and knowledge to those gentlemen who have given their interpretation at the coroner's inquiry.

34666. (*Mr. F. L. Davis.*) Is this the fact, that your reason for wishing for a second inquiry was not that you wished the manager to be prosecuted, but that you wished a second inquiry for the purpose of drawing the attention of the public again to all those facts as to the explosion so as to be a warning to other managers not to allow their men to work under such conditions?—Yes.

34667. (*Chairman.*) And, as I understand, your further object was to produce expert evidence which might have convinced the public that it was dangerous to work when a cap was shewn on a lamp?—Yes. There are two prominent facts in the case, and I think proper observation in the future ought to prevent the same thing occurring again: those facts are, putting men to work at the return end of an accumulation of gas, and allowing men to work where a cap appears on the flame.

33668. But then Mr. Evans himself had commented against the setting of men to work in the return airways under the circumstances, and all the questions with regard to a cap of gas were questions which were perfectly well known to Mr. Martin, and he was an expert in the matter, and he would not be guided by expert opinion that was contrary to his own view. Therefore, as regards the view which Mr. Martin took, you could not imagine that his view would be for a moment altered in any particular by holding another inquiry.—No, not at all: but may I be allowed to say this. The reports of Mr. Martin and of Mr. S. T. Evans, so far as the public is concerned, are absolutely out of sight—the public knows nothing at all about their reports.

34669. Would it have known anything more about the second inquiry?—Yes, certainly. The second inquiry would give local publicity to the whole concern.

34670. I understand, at all events, the view of the men is that it is desirable to bring in public opinion in these cases in order to strengthen the hands of the inspectors against the management, I suppose that is the view?—Well, the men themselves do not know anything at all about them.

34671. Well, not against the management but with a view to strengthening the hands of inspectors in any suggestions that they may make with regard to the safe working of the mine.—Yes.

34672. You think the opinion of the public might very well be an important factor in your view of the case?—What I meant by the public opinion was more especially the opinion and the knowledge of the workmen themselves. So far as the body of workmen in South Wales are concerned, they are not acquainted with the contents of the reports of Mr. S. T. Evans and Mr. Martin.

34673. But do you suggest that any amount of public opinion expressed on the part of the miners would influence Mr. Martin one way or the other? Would he not as a mine inspector have formed his own opinion, being an expert himself, and would he be influenced by the miners' opinion or by the manager's opinion?—No, not at all, I think.

34674. (*Mr. Smillie.*) The full finding of this jury appeared in the South Wales papers?—Yes.

34675. And the evidence which led to that finding also appeared?—Yes.

34676. The miners would read it?—Yes.

34677. And all the colliery managers would read it?—Yes.

34678. And in the face of the evidence given the jury came to the conclusion that all persons interested believed those places to be safe for working. That was the finding of the jury?—Yes.

34679. And that the ventilation at the outlet, where we believe the explosion took place, was satisfactory: that was the finding of the jury?—Yes.

34680. Was it not your fear that this might be taken by colliery managers, colliery owners and workmen to be the normal state in which the ventilation might be, according to this finding?—That is so.

34681. Then I suppose your view on behalf of the men is this, that you should have a second inquiry, not only to ascertain the facts, but in order to show up any mistake that may have been made by the coroner or by the jury in the first inquiry.

(*Mr. Ratcliffe Ellis.*) Or the Home Office.

(*Chairman.*) Or the Home Office or anybody.

(*Mr. Wm. Abraham.*) But that is the object of this part of the law—that a different court should inquire.

(*Chairman.*) But the point, as I understand, is this: the position of the Home Office, as I understand it, is "We want to have all the facts out on which we think that an opinion ought to be based with regard to the safety of the working of a mine, but we do not consider it necessary to review the finding of a jury if all the facts are brought out; we set aside the finding of the jury altogether and we base our opinion upon the facts brought out before the coroner, and if the whole of those facts are brought out we do not consider that there is any necessity to have any further inquiry." That, I understand, is the Home Office view.

(*Mr. Cunynghame.*) I hope what I am going to say now will end this matter: I understand from Mr. Abraham, and I believe also Mr. Smillie, that no attack is made upon the Home Office as to their conduct taking this case. That is clear. They did the best they could under the circumstances, and they had not only the coroner's inquiry but they had a report from Mr. Evans and a report from Mr. Martin. (*To the Witness.*) I understand the position of the Federation is this—and you will explain whether you agree in this—that really what is wanted is greater and wider publicity than a report of this kind can give, and it would have been a good thing, as the Federation think, if Section

Digitized by Google

45 had been put in force so as to give that greater publicity. If I may say so, on behalf of the Home Office, there is a great deal in that; we have not perhaps fully appreciated the wider publicity that would be given by means of an inquiry. So far, I am quite prepared to admit that, and I understand that is really the whole point between us. I should be prepared to join with anyone who would say that reports and inquiries under Section 45 are very desirable in the case of important accidents. Such inquiries have not usually been held before, and, although I do not think they would have added to our knowledge at all upon this particular case or in any of the others, yet, looking to the strong feeling and widespread feeling that there was on behalf of the miners, I think it would be judicious now and then to hold them in cases where there are very big explosions. That is the position which I should take up in considering the matter at the Home Office. As that question has been raised, I think it is better to make that statement at once; it may be a better method, as it seems to be, in some cases —I do not say in every case—than to turn a coroner's court into a sort of court of inquiry.

(*Chairman.*) I may perhaps mention that this letter from the Home Office, part of which I have read, goes on to say this, which I think meets some part of the objection you raise to the action of the Home Office in refusing an inquiry: "Mr. Akers-Douglas proposes, however, to take the occasion to consult Mr. Martin as to the possibility of any special action with regard to mines working the Rhas Las seam, and further to refer to the inspectors generally at their next meeting the question whether it is possible to propose any fixed rule as to the size of the 'cap' upon a lamp which should be considered indicative of danger, and to determine the moment when the withdrawal of workmen should be made compulsory.

(*Mr. Cunynghame.*) That was done.

(*Mr. Wm. Abraham.*) I find that one of the reasons which were given to us at the deputation is not stated there. One of the reasons was that the whole question was coming before this Commission; he had made up his mind that there was to be a Commission, and the whole of this question was coming up before it.

(*Mr. Cunynghame.*) I can say positively that that was one of the reasons for not holding an inquiry in this McLaren case.

34682. (*Mr. Smillie.*) Was the general opinion held that the fan was too small for the ventilation of those two large collieries?—Yes.

34683. Was it understood amongst the workmen that for six months there had been talk of a new fan and a larger fan being placed there?—Yes; and the management stated at the coroner's inquiry that the fan had been ordered six months before then.

34684. Was it the general opinion amongst the workmen that that fan was being kept back because of the expense?—No doubt that would be the impression of the workmen.

34685. That was your impression, I think, which was indicated at the time?—Yes.

34686. And that is one fact which could have been brought out, whether or not it was the case that the question of expense was keeping the larger fan from being erected there to ventilate those collieries?—Yes.

34687. (*Chairman.*) There are one or two general questions which I should like to put to you: I think you mentioned that something ought to be done towards widening the haulage roads in some cases, and that there ought in every case to be a gangway at the side of the haulage road which would be broad enough for a man to walk along in safety. Was that not one of your suggestions?—Yes. My expression was not "gangway" but "a pathway." *Mr. Evan Thomas.* 13 Dec., 1907

34688. A side-walk or pathway?—Yes—by the side of the rails.

34689. But did you not further suggest that that ought to be in some way screened off from the rails—that there ought to be something in the nature of a screen?—No; my suggestion was this, that a gangway would involve that and the haulers could not utilise that.

34690. But why should a gangway necessitate any separation between the gangway and the rails. Why should you not have a gangway wide enought without any separation at all, so that the haulier could jump off if there was any danger?—That would meet my views entirely.

34691. You suggest that there ought not to be a fence?—Yes.

34692. Some people suggest that there ought to be a fence between the rails and the sides; but I should have thought it would be better not to have a fence, because then the hauliers could jump off?—Yes.

34693. With regard to the two examinations, you say that in every shift there ought to be two examinations by the fireman in the course of a shift instead of one, which is now the law. Would you have two examinations in the case of a repairing shift, or would it not be sufficient in the case of a repairing shift to have one examination during the shift?—I think that if a three shift of firemen could be instituted that might be done easily, whether it was a repairing shift or a coal cutting shift.

34694. But would it be necessary to have two examinations during the course of the repairing shift? Of course in the working shift the face is constantly being brought further on and you may have a blower of gas, and all kinds of things may happen during the working; but in the case of a repairing shift probably very little would happen. Would it not be sufficient in the case of a repairing shift to have one examination during the shift?—So far as the faces are concerned, yes. There would be no necessity for examining the coal working faces during the repairing shift.

34695. But why should you have more than one examination of any kind during the repairing shift? There is so little that can go on to alter the state of the mine during the repairing shift that I should have thought one examination would be sufficient during that shift?—I think that would be the best opportunity for the fireman to examine the roads.

34696. That there might be two examinations, but that the second examination might be with a view really to finishing off the work which he perhaps hardly had time to do during the working shifts?—Yes. As I stated before, the first examination in the morning is more particularly confined to the faces, and under the longwall system, and especially the Barry system, they can travel along the faces without going out over the roads. Then during the repairing shift, when no work is carried on at the coal faces, it would be an opportunity for them to examine the roads more minutely.

34697. So that you think on the whole that it would be desirable that there should be two examinations held in the course of the repairing shift?—Yes, I think so.

MR. JAMES WINSTONE, called and examined.

34698. (*Mr. Wm. Abraham.*) You have been present all through Mr. Thomas's examination?—Yes. *Mr. J. Winstone.*

34699. Generally speaking, do you agree with his evidence?—With the exception that as to the McLaren affair I do not know anything of the details, and I had not the same experience of that case as Mr. Thomas.

34700. You understand we have had so much of this evidence that if we can shorten the inquiry we should like to do so?—Yes.

34701. Is there any point which you would like to emphasise in your evidence. Will you kindly tell us what you wish to say in addition to what Mr. Thomas has told us already?—I should like to emphasise the necessity of the colliery examiners or firemen testing the top as well as making the examination.

34702. That would mean that they would have a tool, either a mandril or a drill, or something of that kind to test the top?—That is so.

34703. We have had it called before "sounding the top"; that would be the same thing. By that method a miner would understand whether there is a danger lurking there which he cannot see?—Yes.

34704. Do you think that is of special importance?—I do.

34705. That again would mean that the examinations would be made leisurely so as to have more time if necessary?—Yes.

34706. I notice that you are not satisfied with the present mode of examinations?—That is so.

Digitized by Google

Mr. J. Winstone.
13 Dec., 1901

34707. Will you kindly suggest to us what improvement you think is necessary?—I think shorter hours for the examiners and more time: they should not be engaged in any other work but examination.

34708. With regard to improved haulage roads what do you suggest?—I should like to suggest, as Mr. Thomas has already suggested, that there should be a pathway alongside of the haulage road, and that the signal wires should be on the same side as the pathway, so that the rider may know and have an opportunity of getting out of the way of the trams, and into communication with the engine driver. They are now, I might say, generally speaking, put alongside the haulage road where the tail rope is running—the sheave wheels are there. I have had some little experience and have found great difficulty in getting at them.

34709. It is a source of danger and accident that the haulier should be walking or running, as he is sometimes, before the horse?—It is.

34710. And this pathway would do away with that source of danger?—Yes.

34711. That is your point with regard to it?—Yes. We have had one or two cases recently where workmen have been killed through the timber on the haulage road being so close to the rail that they have actually been knocked off the journeys.

34712–14. One instance of fact would be of more value to this Commission than half a dozen hearsays. You know that to be the case in your own district?—Yes.

34715. With regard to the examination of winding ropes have you anything to suggest there?—I think that to be an important matter, and I think they should be examined immediately before the men descend the shaft and immediately before they ascend the shaft. I can give you a reason if you desire it.

34716. If you please?—We had a very serious accident in 1902. There were eight men who lost their lives at one of the collieries in my district, and I have no hesitation in saying that had an examination been made it would have been prevented.

34717. This is a very natural question to ask: have you any reason to know if an examination had been made in that case that that accident would have been prevented?—By inference.

34718. Very well: tell us what the case was?—The case was this. The men were ascending after the completion of their shift, and a piece of wood on top of what was acting as a framing on the upcast shaft, the wires in the rope caught in that piece of wood and carried it into the sheave wheel, threw the rope off the sheave wheel, and the men were sent down the pit, eight of them.

34719. (*Chairman.*) The rope was quite good. An examination of the rope would not have prevented that accident?—My experience leads me to believe in this case that there were certain wires in the rope broken, and they caught in the piece of wood.

34720. (*Mr. Wm. Abraham.*) Was there an inquiry?—No.

34721. (*Mr. Ratcliffe Ellis.*) There was a coroner's inquest?—Yes.

34722. Did that come out there?—Not as clear as we should have liked it to come out. It was very difficult to bring it out, because the rope was badly damaged.

34723. Where was it?—We should like to refer to the inspector's report on the subject?—It was in October, 1902, and was at Tirpentwys Colliery, near Pontypool.

34724. (*Mr. Wm. Abraham.*) You agree with Mr. Thomas with regard to systematic timbering?—Yes.

34725. You think that is desirable?—Yes.

34726. And it would be effective, in your opinion, to reduce accidents on roads, and so forth?—Yes.

34727. Have you any special evidence you would like to give upon that point?—Yes, we have one or two cases.

34728. I think they will be important.—We have a case where a man was killed a very short time after the fireman had passed through. He had made an examination and stated the top was all right, but a very short time after the top came down and killed the man.

34729. You said "a very short time": about what length of time was it after the fireman passed that way?—The fireman passed there five minutes before.

34730. He saw no danger?—No.

34731 To what do you attribute that state of things?—A sudden squeeze may bring it on.

34732. The examiner did not see that anything was wrong. You think that he had no time, that he was pressing on?—Yes: there was not a satisfactory testing of the top.

34733. Do you think that systematic timbering in cases like those would have prevented such accidents?—Certainly.

34734. How far apart was the timbering in that particular place?—In width about 7 or 8 ft., but there was no timber for a goodish length, because the top was supposed to be very safe there: it was a strong top.

34735. In common with your colleagues you hold the opinion that where the top is apparently safe and good a great number of accidents happen?—I think so.

34736. It would reduce them considerably were timbering placed at stated intervals?—Yes.

34737. Have you anything more to say on coroners' inquests?—I think that we ought to have a right to be represented there.

34738. Will you just explain what you mean?—The men are allowed to be represented there at the present time, but it seems to me that we are on sufferance. We are there at the will and the dictation of the coroner. I think we ought to be allowed to be there.

34739. You think that the workmen or the workmen's representatives ought to be there as of right, by law?—That is so.

34740. And they ought to be allowed to put questions that are material to the inquiry?—Yes.

34741. Without having to ask the permission of the coroner?—Yes, and without having to feel that we are there on sufferance.

34742. Is there anything more you would like to say? Will you deal with shot-firing?—I agree *in toto* with Mr. Thomas as to shot-firing, that one man should have charge of the shot-firing: he should charge and fire the holes and the company should supply the explosives free of charge.

34743. With regard to "free of charge," let that bide. You think that there should be another system, that the explosive and the detonator should be under the care of an official entirely?—Yes.

34744. And until the moment it is wanted to be used?—Yes.

34745. That the official and the man should be there together when the hole is rammed?—Yes, and the man in charge should connect the wire.

(*Mr. Ratcliffe Ellis.*) Are you familiar with the Explosives Order, which requires that until about to be used the explosive and the detonator are to be kept in a securely locked case?

34746. (*Mr. Wm. Abraham.*) You were here, I think, when that point was raised. Are you cognisant of the fact that it is a breach of the Explosives Order that the explosive and the detonator should be in the hands of the miner at the same time?—Yes, but I fancy——

34747. (*Mr. Ratcliffe Ellis.*) Not the miner at all.—In the hands of the shot-firer—should not be given to the miner. I am afraid there may be some misunderstanding. I think the words are "about to be used."

34748. (*Mr. Wm. Abraham.*) And because about to be used, then the workman may have had the detonator in his charge 10 or 15 minutes, or half-an-hour?—That is so. I am afraid there is a misunderstanding about those words "about to be used."

34749. "Detonators shall be under the control of the owner, agent, or manager of the mine, or some person or persons specially appointed in writing by the owner, agent, or manager for the purpose, and shall be issued only to shot-firers or other persons specially authorised by the agent, owner, or manager, in writing. Shot-firers and other authorised persons shall keep all detonators issued to them until about to be used." The practice is that the men have both in their charge for some time?—Yes, that is so.

34750. What would really meet your requirements would be the enforcement of that Order?—Yes: but I should like to add——

34751. With the alteration of "about"?—I think it is not unfair to say in some instances the men are given the explosives in the morning, and that is hours before they have to use them.

34752. (*Mr. Ratcliffe Ellis.*) But not the detonator?—No.

Digitized by Google

34753. That is the point. I am not a miner, but there is no harm in the man having the explosive if he has not the detonator ?—I would not like to say that. I think it would be better if the explosive was under the supervision of a responsible person—a competent person. I think that they are not able to ram the hole, or stem it before they have the detonator.

(*Mr. Smillie.*) A detonator must be attached.

(*Mr. Ratcliffe Ellis.*) What length of time has the collier possession of the detonator ?

34754. (*Mr. Smillie.*) This may be widely interpreted to give them one hour or two hours.—Yes. A shot-firer may pass through the face, and, it may be, take one or two hours to go his round. He will give one man a detonator and go his round, and come back in two hours' time.

34755. (*Mr. Wm. Abraham.*) To meet your case even this Order will want to be altered ?—Yes.

34756. With regard to the word "about."——I am afraid there is too wide an interpretation put on the words "about to be used."

34757. Is there anything else upon that point you wish to say ?—Nothing else.

34758. Is there anything else in the evidence given yesterday and to-day you would like to speak about ?—Nothing.

34759. (*Sir Lindsay Wood.*) You said it would be better that the examiner should have shorter hours ?—Yes.

34760. What hours have they now ?—In some instances 10, 11, 12 and 13.

34761. The men who go in to examine the places for the safety of the men ?—Yes.

34762. (*Chairman.*) Would a man have 13 hours as a general rule, or would that only be once a week, or once a fortnight ?—He has 13 hours as a general rule in many collieries.

34763. The firemen have 13 hours as a general rule ?—Yes.

34764. (*Sir Lindsay Wood.*) You said you thought it would be better to have a travelling way on one side of the haulage roads ?—Yes.

34765. You have not that now ?—No.

34766. The men walk in the middle of the road ?—Yes.

34767. There is no space between the rail and the side of the road for them to travel ?—There is not sufficient space.

34768. What do you call sufficient ?—4 to 5 ft., I think, from the rail.

34769. What width would that make the whole place ?—It might make it 9 or 10 ft.

34770. Would that be excessive for the safety of the roof ?—I think not.

34771. About 10 ft. ?—Yes.

34772. Depending upon the state of the roof ?—In many instances.

34773. In some cases it would be rather dangerous even if the timber was close ?—No, I think it could easily be made 9 ft. at the top and 10, 12 or 13 ft. at the bottom.

34774. (*Mr. Wm. Abraham.*) Have you the same opinion as Mr. Thomas with regard to the return airway being used as a place for workmen to come out ?—It would be a great advantage in more ways than one.

34775 It would create no unpleasantness for the men ?—I think not.

34776. Rather otherwise ?—I think so.

34777. It would increase the ventilation as well ?—It ought to.

34778. It would improve the ventilation ?—Yes.

34779. You are of the same opinion distinctly on that point as Mr. Thomas was ?—Yes.

34780. (*Chairman.*) That is to say, if the return airways were used for men to travel along, it would be impossible that the air could be as foul as it is sometimes in the return airways. When you speak about increased ventilation you mean it would be unpleasant for the men to go through the airways as they are now sometimes, and it would lead to better ventilation of the mine ?—Yes, it would lead to better ventilation of the mine.

34781. (*Mr. Ratcliffe Ellis.*) You only suggest that where there is not a separate travelling road or accommodation for travelling alongside the haulage free from the motion——?—The other would suit me.

34782. A separate travelling road is the best of all ?—It all depends.

34783. But what is the disadvantage of a separate travelling road ?—There is no particular disadvantage. I should think it would be an advantage.

34784. I suggest in a new colliery if you can manage it a separate travelling road might be the best of all ?—For that particular purpose.

34785. If you cannot get that you would like to have room to travel safely along the haulage road. People would like to pass in and out there ?—I beg your pardon.

34786. If you cannot have a separate travelling road you want room on the side of the motion so that people may travel safely ?—Yes, on the engine plane. Not only that they may travel safely backwards and forwards, but that the rider——

34787. Where you have the return airways made big enough for the men to travel do you still want this accommodation on the haulage road for the persons who are working the haulage ?—Yes. I have had two instances recently where men were killed.

34788. Even supposing the return airways were big enough for men to travel in, you still want them to be able to travel along the haulage roads without being in danger of being damaged by the passing machinery ?—Yes.

34789. With reference to this winding rope you know that the winding rope and the guides have to be examined once at least in every 24 hours ?—Yes.

34790. When in the collieries in your district, does the examination take place now ?—Generally in the morning.

34791. What time in the morning ?—Perhaps between four and six o'clock.

34792. That is before the men go down ?—Yes.

34793. That is all you want so far as that is concerned ?—Well, yes.

34794. This accident you refer to was when the men were coming out ?—Yes.

34795. Do you want another examination before the men go down, or is the examination in the morning sufficient for the day ?—I want another examination.

34796. You want, instead of it being provided in the Act of Parliament to be examined once in every 24 hours, for it to be twice in every 24 hours ?—Yes.

34797 Supposing two or three shifts are working, do you want an examination before every time they are used for lowering or raising men ?—I think that could be obviated, because if they examined the ropes prior to the men ascending the shaft that would also suit for the men to descend the shaft on the night shift. One shift comes up and the other goes down practically at the same time.

34798. At the collieries you are acquainted with do they have an interval of any sort during the time of work for a meal, 20 minutes or half an hour from the time they begin to work up to the time the men come out of the pit ?—No.

34799. There is no stoppage ?—No.

34800. (*Mr. F. L. Davis.*) You mean no stoppage at any particular time for all the men ?—There is no stoppage of winding.

34801. (*Mr. Ratcliffe Ellis.*) Is there any stoppage of winding ?—No.

34802. Do you know that there are many places where, during the stoppage from the winding, the examination is made of the ropes and the guides ?—I think that is so.

34803. You think that it is necessary for safety that this examination should be immediately before the men go down, and immediately before the men come up ?—Of course they have been winding coal the greater part of the day—the whole of the day—and naturally the ropes are affected thereby.

34804. What would you expect to find by an examination ? What sort of defect would there be ?—I should expect to find the wires broken in some instances and probably the strands in some instances. We should expect to find the rope partially pulled out of the clasp.

34805. Do you think there would be a change between the condition of things shown in the morning and the afternoon when you examined it eight or nine hours afterwards ?—Yes.

Digitized by Google

Mr. J. Winstone.

13 Dec., 1907

34806. In the inspector's report on the Tirpentwys accident the inspector says, "The rope which broke had been in use two years and four months and although it showed wear on the outer wires there do not appear to have been any broken wires observable." Your suggestion was that a broken wire caused this trouble?—Yes.

34807. Then he goes on to say: "Directly after the accident a length of the rope, taken as near the place of breakage as possible, was sent to Lloyds Bute proving house at Cardiff, where the breaking strain was found to be 36½ tons, while as a result of testing each wire separately the aggregate breaking strain was found to be 37½ tons. The rope when cut showed the inside wires to be in good condition, bright and clean, without indications of rusting or decay. It was, in fact, in a thoroughly satisfactory condition, having a safety factor of nine times with the working load and of eighteen times with men, which seems very ample under ordinary conditions at the expiration of 2½ years work, and approaching the time limit or use for this purpose." That is the inspector's report as to this rope. You still think a broken wire caused the mischief?—Yes.

34808. If it was a broken wire an examination by passing it through the man's hand would discover it?—Yes.

34809. That is the way the ropes are examined, by the rope being passed through a man's hand?—I think in some instances they have a tong, an iron implement for the purpose.

34810. While on the question of ropes have you any suggestion to make beyond that they should be examined not merely before the men descend but before they come up?—Have you any other suggestions making for safety?—Not so far as the rope is concerned, but I think the bridle chains should be annealed every now and then and examined, passed through a fire for the purpose of examination.

34811. You mean where the rope is attached to the cage?—The bridle chain, we call them. There are four or six chains on each carriage.

34812. That is where the rope is attached?—Yes, attached to the bridle chain.

34813. Those chains are examined from time to time?—Yes.

34814. You think they are not examined sufficiently frequently?—Yes.

34815. You have no suggestion to make beyond that?—No.

(*Mr. Wm. Abraham.*) He said yesterday they should be annealed.

34816. (*Mr. Ratcliffe Ellis.*) Passed through the fire. I gather from you the general condition provided in General Rule 5 that there must be this examination and that they must be kept in good order, is not in sufficient detail to satisfy you. You think it ought to be more in detail as to what is to be done with the winding rope and the annealing of these chains?—Yes.

34817. Is there anything else you would suggest?—Yes. I do not want to reflect in any way upon the management of this particular colliery where this accident occurred, because I think it is one of the best ordered collieries in the coalfield.

34818. Do you want to make any suggestion with reference to this winding rope or the appliances for raising and lowering men beyond what is required now. Have you any other suggestions to make with regard to anything which is not provided for now?—No, except the examination of the guide ropes.

34819. Going back for a moment to this inspector's report, he says: "The indications clearly prove that the rope was thrown off the pulley by a piece of timber having been carried up by the rope, and it is evident that there was no other wood except the 14 inch (so-called floating) board which could have got there. In what manner it was carried up, whether by a broken wire or by its having been suspended by the rope through its swaying or vibration and floated up in that way, as may be demonstrated by a stick and a ring, or by its having been canted and been thus drawn up, will never be known, but either of the three would account for it, as the distance is only 12 feet to where it would catch." That is what you found your view on, that it might be a broken wire?—I had an opportunity of going to examine; they gave us every facility, and that was my opinion. I have had a good deal of experience of pit ropes and engine plane ropes.

34820. You heard the evidence I put to the last witness upon the various matters affecting the special rules and inspection. Do you adopt his answers to my questions?—Yes.

34821. (*Mr. Smillie.*) The inspector in that report says no broken wires were apparent, but the outside wire seemed to be worn. I suppose he means were apparent when the examination was made in the morning, because you say the rope was badly damaged after the accident?—Yes; very badly damaged.

34822. He has in his mind, I suppose, "apparent" previous to the accident?—I really think it is after the accident.

34823. There were many broken wires after the accident.?—Yes. For yards and yards the rope was curled up and broken off.

34824. Do the provisions of the Coal Mines Act with regard to the employment of boys on the surface provide an interval of at least half an hour for meals? Is that carried out at your mines where the winding continues for eight hours?—I am afraid not.

34825. You could not give a definite opinion as to whether it is carried out at all your mines in your district?—From observation I think it is not carried out.

34826. If it is carried out, then the lads under 16, and women, if there were any employed, would require, even while the winding was going on, to get half an hour for meals?—Yes.

34827. There are no women employed on the surface in your mines?—Yes, at two of them.

34828. Are they employed more than eight hours in 24?—Yes.

34829. More than eight hours continuously?—Yes.

34830. Do you know whether or not they have one-and-a-half hours off if employed ten hours?—No, I think not.

34831. You know that the Act provides that they should have that?—Yes.

34832. You are aware that the Act does not provide for any interval for lads who may be employed underground and where there is eight hours continuous winding. Is it possible that the lads may work the whole of those eight hours without an interval?—Yes, it is possible, but I think they do arrange to have a bit of food; but still there is no stipulated time.

34833. You have to arrange it in the wrong way. There is no statutory provision made for them to have an interval?—No.

34834. Do you not think it would be as well that there should be an interval provided for?—I think so.

34835. What is your view of the position of a colliery fireman? Is it a position of importance?—Very.

34836. Of considerable importance?—Yes, it is one of the most important positions in the mining industry.

34837. Is it your opinion that so far as the safety of the men is concerned that position is more important even than the manager's?—I should say so.

34838. I suppose you have no fault to find in a general way with the men who act at present as firemen: I mean with their qualifications in a general way. I suppose generally they are very efficient and competent men?—Generally speaking.

34839. But there is a feeling that sometimes men may be appointed who are not thoroughly competent?—Yes.

34840. Is that your own feeling?—Yes.

34841. Do you think it would be wise to have provisions made that they should hold a certificate of competency to prove, so far as a certificate could, at least, that they were competent for that work?—I think that would be useful, but I should lay emphasis upon their practical knowledge.

34842. I was going to lead up to that. Thorough practical knowledge of underground working would be one of the qualifications necessary in order to secure that certificate of competency?—Yes.

34843. There is, as you are aware, nothing at the present time to prove whether or not a person is a competent person. The Coal Mines Act provides that the manager must appoint a competent person?—Yes.

34844. But he has nothing to guide him but his own knowledge or a statement made by a person to him?—That is so—his own observation, of course.

Digitized by Google

34845. You think it would be wise if there was an examination and a certificate of competency ?—Yes.

34846. One of the qualifications necessary to gain that being practical knowledge ?—Certainly.

34847. Would the same thing apply to the competent person who at present employs a shot-firer ?—Yes.

34848. You are aware that a manager may appoint a person to be a shot-firer and handle explosives who had really no previous knowledge ?—Yes; I have had experience of that.

34849. He might appoint a person who had been receiving compensation in order to give him what is called a light job as a shot-firer, to handle explosives. There is nothing to prevent that, so far as you know ?—No.

34850. You do not know any cases of that kind which have occurred in your own district ?—No.

34851. It would be wise to make sure that a person is a competent person to handle explosives, and that could only be proved by his holding a certificate of competency ?—Undoubtedly.

34852. I suppose you are also in favour of engine-winders holding certificates of competency ?—Yes.

34853. The same thing applies to them at the present time. They may be appointed either through favour or for some other reason, and may not be as competent as we would like them to be, holding, as they do, the lives of the men in their hands ?—Yes, I agree.

34854. (*Mr. F. L. Davis.*) When is shot-firing in the roads done in your district generally ?—Where they are not allowed to fire in the coal, or where it is unnecessary they should fire in the coal, it is, generally speaking, done between the shifts.

34855. Practically that is universal ?—I am not able to say it is universal in my district.

34856. In your district it is practically always done. You have hardly ever known it done during the shift ?—That is all.

34857. Are there any places in your district where they fire shots in the coal ?—Yes, there are some.

34858. What proportion would that be; places where it is done ?—I should think perhaps one-third.

34859. As much as one-third ?—About one-third.

34860. When they fire shots they fire during the shift ?—Yes.

34861. Do they fire shots in your district in the coal more than other districts, so far as you know ?—I think they do, as far as Monmouthshire is concerned.

34862. I do not know whether I am right, but it is really in your district that is done. It is practically the only place in South Wales where firing in the coal is done to any extent ?—I think it is done more so in the western districts—the anthracite districts.

34863. The western district and that portion of Monmouthshire where you come from are really the only places where firing is done to any extent in South Wales ?—As far as I know, to any extent.

34864. (*Chairman.*) Is there anything you would like to add now ?—Nothing else.

MR. WILLIAM HARRIS, called and examined.

34865. (*Mr. Wm. Abraham.*) You are in favour of reducing the size of the districts of the inspectors ?—Yes.

34866. Have you any special reason in your mind for that opinion ?—Yes. The reason I suggest that the size of the districts should be reduced is because under the present system of inspection there is not what I may call a proper system of inspection being made. It is very rarely we see an inspector at our collieries, and when they come it is about one district they take in the colliery as a sample of the whole colliery, which, in my opinion, is not an efficient way of inspecting.

34867. You disapprove of inspection by samples ?—Yes.

34868. With regard to inspection under Rule 38, what do you want to suggest ?—My experience is that there is not really full advantage being taken for various reasons of inspection under Rule 38.

34869. The workmen do not take advantage ?—The workmen do not take advantage, and in fact I find that there is fear on the part of some workmen that if they make a proper examination they will be punished if their report is sent in. I have a case in mind where the examiner examining under Rule 38 condemned a whole return because of the size of it. It had squeezed to such an extent that as far as the return was concerned it was not in a proper condition; pieces were in good condition, but the return was measured by the size of the smallest part of it. The result was this man was called upon to apologise by the manager because he had condemned the whole of the return.

34870. Your opinion that there is that kind of fear among the men is based upon certain facts you know of ?—Certainly.

34871. Have you found in late years any difficulty in getting what we call the best of our men to make the examination, and men that ought to be the proper men ?—Yes. There is no doubt since the passing of the Workmen's Compensation Act—I am expressing my own personal opinion in this matter—that there is a difficulty for the older men to obtain employment. Those older workmen hesitate to accept positions of responsibility that would bring them in conflict with the management, and it is the older men who are the most experienced examiners, especially on behalf of the workmen.

34872. There is a certain number of young, strong men who are able and practical men ?—Yes.

34873. Do you find that there is a difficulty to get those men to make these examinations ?—There is a difficulty from the cause I stated with regard to that other instance—the fear of having to suffer in some form or other.

34874-5. With regard to inspection by officials, what suggestions have you to make ? You are in favour of the examiners having a certificate ?—Yes.

34876. As a proof of their being qualified for the position ?—Yes.

34877. Have you reason to believe that there are here and there some men appointed to official positions that are not qualified ?—Yes, there are instances which have come under my notice very recently; in fact, there has been an agitation in one instance I know.

34878. Would you have any objection to naming that place ?—I have not the least objection. It is the colliery at which I am employed myself at the present time. It is Messrs. John Lancaster & Co., where a man came to the colliery from the tin-forge who had never worked on the coal-face. He came as a labourer, and he became a timberer's labourer, and then he became a timberman, and from that he came to be fireman, and now he is overman, and he has never worked a day on the coal in his life. For a man to be an important official in a colliery I think he ought to have some knowledge of working in the coal face.

34879. He may be an exceptionally clever and able man ?—Yes, but there are exceptionally clever and able men there at the present time. We have two men on the staff who are holding their second-class certificates. One of them has had his certificate for the last 15 years and has had considerable experience in steam coal collieries in Glamorganshire as well as Monmouthshire. Although holding the certificate and having had considerable experience, he is overlooked in favour of a man who came seven years ago from the tin forge.

34880. How long has he been underground ?—A matter of about seven years from the commencement to the end, up to now, from the time he started first of all as an ordinary labourer.

34881. Until he became an overman ?—Yes.

34882. Then you say with regard to the districts it is desirable that they should be made smaller ?—It is desirable that they should be made smaller, and that other duties should be taken away which the officials now have to perform.

34883. You agree with that view ?—Yes.

34884. With regard to discipline, as between fining and prosecution, which, in your opinion, is the more effective as a deterrent of negligence ?—Of course, I would differ with regard to certain cases. There are cases in which I conceive that there would be certain individuals who, through entire inadvertence, may commit a breach. They are tidy,

Digitized by Google

Mr. W. Harris.

13 Dec., 1907

respectable men who have been in the neighbourhood 40 or 50 years, and the very thought of being taken to a Police Court hurts them so much, apart from the fact of a fine being put on. In cases of that kind I should try to arrange without prosecution, but in ordinary cases of gross negligence I should say prosecution. In no case would I give the power entirely into the hands of the manager of determining whether there should be a fine or a prosecution.

34885. You are in favour of allowing fining in certain cases?—Yes.

34886. Supposing you have a case of a man tampering with his lamp?—Prosecution, at once.

34887. Supposing you had a man found with matches in his pocket?—Prosecution.

34888. What are the cases that you favour fining instead of prosecution?—In the case of a man who had matches, for instance, by accident. We will say a man does not smoke, and it is known that he does not smoke, but by some inadvertence he may be wearing a waistcoat in the garden in his spare time and have taken a match to burn some garden refuse. We know cases of a man who through accident has left matches in his pocket. In that case I should certainly say not prosecution, but only where you have clear evidence that there would be no deliberate attempt on the part of the individual.

34889. In that case you think prosecuting a man would be too extreme a punishment?—I think in a case of that kind it would be an extreme punishment.

34890. You do not agree that magistrates should fine the men when you have reason to believe that the offence is not purposely committed?—I would not say that they should be let off free. What I find is this, that the very fact of taking these men before the magistrates is the biggest punishment you can inflict—much greater than the fine imposed.

34891. Hence, taking a man before the magistrates for any offence, large or small, is more likely to stop him committing breaches of the rules?—Undoubtedly.

34892. With regard to timbering, are you in favour of systematic timbering?—I certainly am.

34893. Had you a complaint of a similar character to the one mentioned by Mr. Thomas, that men are not allowed to use their discretion to put up timber in certain places when they think it is necessary?—Yes, I am afraid that the practice is getting rather too common. Where timbering has to be paid for, then you have to have the permission of an official, but where timbering has not to be paid for you are given full discretion.

34894. (*Chairman.*) It is not a case of wishing to save the timber itself?—It is a question of saving the payment for timbering.

34895. Where there is no payment for putting it up he can always get sufficient timber?—There is no question arising of that kind in my experience.

34896. We were told that even where that was the case managers were very chary in providing enough timber?—I have not had an experience of that kind.

34897. (*Mr. Wm. Abraham.*) Supposing that the man had to put up a pair of timber or a road-post, or a cog, without the permission of the manager, is there no greater evil in consequence than that he would not be paid?—That is the evil, and that is what is being used with a view of entirely preventing the use of timber—what they call an indiscriminate use of timber—and wherever there is a question of payment they refuse to pay for them.

34898. Supposing a man had put up a road-post where he had been ordered to do so: do you know of cases where they have been knocked out?—I know of cases where timber has been knocked out. Certainly I do.

34899. That is not a question of payment, it is a question of using timber?—Yes, I certainly know cases. The only cases I know where timber has been knocked out have been where the question of payment has come in.

(*Mr. Ratcliffe Ellis.*) It is knocked out because they are not going to pay for it.

(*Mr. Wm. Abraham.*) The official knocks it out.

(*Mr. Ratcliffe Ellis.*) It is knocked out to show it is not necessary.

34900. (*Chairman.*) That is the evidence given before by the witnesses. They say that there is a dispute as to the payment for the timber and the official says it is not necessary and proves that by knocking it out?—Yes, and I would like to go further and say that in consequence of having timber knocked out I have known falls which have stopped the place for several days.

34901. (*Chairman.*) Can a man be had up for breach of rules if he puts up timber the management considers unnecessary. Do they knock out the timber and refuse to pay for it, or have him up for a breach of the rules?—They knock the timber out and refuse to pay him.

34902. That is all. He does not get had up for a breach of rule?—No.

34903. (*Mr. Smillie.*) You do not know of timber being knocked out except where a manager had to pay a workman?—I have only known it in cases where payment has been in question.

34904. (*Mr. Wm. Abraham.*) The man's discretion is good enough where there is no payment, but if this must be the view, he has no discretion when there is a question of payment?—That is what I object to. If a man has discretion to use timber for his own safety where there is no question of payment a man ought to have the same right where a question of payment does come in.

34905. By law he is compelled to place timber on the face at stipulated distances?—Yes.

34906. Whether it is necessary or not?—Within eight feet in the seam in the working, whether wanted or not, you must have a stick.

34907. And that for the purpose of safety?—Yes, of course that eight feet applies to the whole line of face, as well.

34908. The reason for that is it is, thought necessary for safety?—Yes.

34909. The application of the same rule to the roads, in your opinion, is a question of safety also?—Certainly, on the roadways I am certain they are required very much closer than eight feet.

34910. In the face where there is no payment for timber the man is allowed to put in an extra prop or an extra sprag if he thinks it is necessary?—Certainly.

34911. But in a road where he thinks there is equal danger he is not allowed to have that discretion?—He has to draw the attention of the fireman, and if he gives permission he can put it up, but if not, he is not allowed to.

34912. You know of cases where a man has exercised his discretion and put up timber and that timber has been knocked out by the official, and a fall has taken place?—I have a case in my mind where a fall took place and it was two days before it was cleared.

34913. Where?—At a colliery in the Western Valleys.

34914. What was the case?—It was a case of timber being put up in the stall road and the official came round and said: "Who ordered you to put this flat here?" The man said: "The top is bad." The official said: "You will not get paid for it. I do not think it is wanted there." The man said: "Will you give permission to take it out," and he did. The man took it out and down came the top. They were two days clearing the fall.

34915. You are also of the same opinion as other witnesses with regard to the roads being made large enough for men to walk by the side of them?—Yes.

34916. To obviate the necessity of hauliers walking before the journeys?—Yes.

34917. Are you of opinion also that the return airways should be made travelling roads and kept large enough for a horse and tram?—Yes, I am of the same opinion.

34918-21. Putting all the things together, those improvements, in your opinion, would reduce the causes of accidents and the number of accidents?—Those would very considerably reduce the causes of accidents, in my opinion.

34922. With regard to inexperienced men, have you something to recommend there?—I think greater care should be taken, especially in the periods of what is known in the coal trade as periods of boom, where possibly a large number of the older collieries may be freshly developed. I think there is too much indiscrimination in taking men on from the farms and anywhere else. They are put on indiscriminately, and in the worst paid collieries you find that there is a large percentage of what you might term unskilled labour being introduced. The better paid collieries generally succeed in getting the better class workmen, but in the lower rated collieries you find th se men coming in from the agricultural districts, and ultimately when the period of depression comes on they are

Digitized by Google

serious competitors. That is not so much the point, it is the question of the serious danger which comes through these men being placed in dry and fiery mines.

34923. You suggest some improvement in testing lamps?—Yes, that to my mind is a point that is very serious. I had an experience, and I should like to let the Commission know the experience I got some three years ago. In the colliery I am engaged at we struck a large fault which was giving off a great quantity of gas. The result was the air became so charged with gas that one or two districts were stopped. I, in conjunction with some others, was appointed to act as examiner. We were using then as a collier's lamp a lamp which burnt a kind of spirit oil called colza oil, and the remarkable thing was that the collier's lamp detected the gas quicker than the fireman's testing lamp did. I made an examination on two or three occasions. I took my ordinary working lamp with me and I also took the ordinary testing lamp as used by the fireman at the colliery, and whereas I would get one-eighth of an inch of cap on the ordinary fireman's testing lamp I would find half-an-inch on the ordinary working lamp. I would also find a cap on the ordinary working lamp when I would not find a trace on the fireman's testing lamp.

34924. That would not be your experience very largely. That is not common?—No, but the point I wish to emphasise is this—if it is possible to get one lamp to be used in a colliery sufficiently sensitive to show the presence of gas in the way the lamp burning colza oil did, I think such a lamp ought to be introduced, so that the examiners should obtain that lamp and have a more sensitive lamp than they have now. That is the point I wish to make. I may say in connection with this matter as well that we had a difficulty with regard to the cap of gas. The point was referred to the Home Office at that time, and I mention this so that Mr. Cunynghame may hear it. I think Sir Neve Foster was adviser of that Department at that time. The point was forwarded as to when a cap of gas became dangerous. We held, and so did Mr. Martin, the inspector, that the cap of gas shown in that particular part of the working was such as to render it unfit for the workman to work in. The manager, on the other hand, held that the cap of gas was not dangerous. The result was we took it to our agent, Mr. Brace, who forwarded it, with a view to having a decision as to when a cap of gas was dangerous or to what extent. That point was raised at Abertysswg and is still left undecided.

34925. (*Mr. Wm. Abraham.*) You are of opinion also that the ropes and winding gear should be examined oftener than they are?—Putting it briefly, I should put it in the same way as Mr. Winstone. I agree with his evidence upon that point.

34926. With regard to the second inquiry, are you in favour of that?—Yes, I am in favour of that, because the first inquiry, or the coroner's inquiry is merely an inquiry appointed to inquire into the cause of death, and in the course of the evidence highly technical points may arise upon which the case may turn, and as the jury is only empannelled to ascertain the cause of death, the jury often are not of such a class of men as to be able to arrive at a conclusion upon any conflict of evidence there may be, as between the parties at the coroner's inquiry. For instance, sometimes you have cobblers, shopkeepers, and different classes of people at a coroner's inquiry, and if a highly technical point is raised, such as was raised at Abertysswg, I think it should not be left to a body of men of that sort to decide.

34927-29. (*Mr. Cunynghame.*) When you said in one case a man was taken on as a timber man's labourer, and then became a timberman, and then a fireman, I think you told us before a man became a fireman you desired that he should work at the face?—Certainly.

34930. May it not be that men who would make good firemen are not so physically strong as working at the face. Would you not give them a chance? Could a man become a good fireman who was not in possession of the strength required at the face?—I am afraid too many firemen have been made because they are not physically strong I think that a man who takes on such an important position as that of a fireman does not require to be a man suffering from ill-health. It requires the best of the men.

34931. I do not mean ill-health, but not such physical health as would be required. You can imagine a small man has not such physical strength. You know more of mining than I do, but I should have thought a man might make a good fireman who was not a particularly good man at the face?—You find small men who are particularly good at the face.

34932. There is nothing in the duties of a firemen that renders it imperative that a man should be a good hand at holing coal?—No; it is necessary he should have had experience of the roof of the working place.

34933. It is perhaps from a feeling of fairness of employment that you were putting that?—No. If I was a manager I would not appoint a man unless he had had experience of working in the coal face.

34934. With regard to fines, I understand your chief objection is you do not like the manager being the sole determining man in the case?—I have a strong objection to that.

34935. The difficulty I see and which I should like your opinion upon is this: if you had nothing but prosecution you would either have considerable laxity, or you might find a very large number of men being prosecuted and losing a day's work by going before the magistrates. What have you to say to that?—In the exceptions I have mentioned I say the representative of the working men with the manager should deal with the case, subject to the approval of the mines inspector.

34936. You would not object to fines so much in a case where the man admitted he was wrong if there was some authority which arranged the fine, independent of the manager. Is that the point?—In those particular instances I have mentioned, that is so.

34937. With regard to the discretion of the men in setting up timber you want more timber set up in certain cases than is set at present?—We think it is not fair nor right, nor does it conduce to safety that men should be prevented from putting up timber where their own judgment says it is necessary.

34938. Would it not be too much to claim that men should be allowed to put up timber and pay for it, without any appeal to a third party to say whether it was reasonable? If you had no limited power to putting up timber, and the men paid for it, is it not open to the remark that men might go on being paid and put up an unnecessary quantity of timber?—My experience is not in that direction, and I have been working underground for some years. You may have individual cases where men would rush to do the kind of thing you mention, but my experience has taught me at any rate that when complaint of that kind is being made, that the workmen take due regard to that complaint, I mean when the management complain and say it is used indiscrimately and unnecessarily.

34939. You are not suggesting for a moment the putting up of unnecessary quantities of timber, or anything that would lead to that?—Certainly not.

34940. (*Sir Lindsay Wood.*) You said you found men in your district objected to make the examinations under Rule 38 on account of the fear of being marked men?—Yes.

34941. You gave an instance of one who had reported the return airway being inefficient?—Yes.

34942. You used the words "He had been brought before the managers to apologise?"—Yes.

34943. I did not know what that meant.—It meant that the management took exception to that part of the report in which he said such and such a return was in a very bad condition. The manager pointed out that there were only about 16 or 17 to 20 yards which were in the bad condition he had named. I say the man was justified in making the report, inasmuch as the whole of the return, or the capacity of the return, was judged by the size of the smallest portion of it.

34944. That is a matter of science?—No, it is a matter of fact.

34945. You mean the apology was rather to explain the reason why he had made the report.—Certainly: he claimed to have that report altered.

34946. He asked him to alter his report?—He said he would insist upon his altering his report. He insisted he should do so.

34947. If it remained on the report he could not alter it?—The books were produced.

34948. Do I understand you to mean that he is brought before the manager to explain the reasons of his report?—The manager took exception to his report. I might explain the manager took exception to his report and demanded that part of the report should be altered.

34949. There was a difference of opinion between the two?—It does not tend to give confidence to the workmen to go round making a proper examination according to their judgment, when the manager demands an apology for making reports.

Digitized by Google

Mr. W. Harris.

13 Dec., 1907

34950. Is it your opinion than 10 or 12 yards of the return airway being narrower than the remaining part would seriously affect the remaining length, a mile or more long —I do not know how many miles it was ?—It was not a question of miles.

34951. What was the distance ?—500 or 600 yards, possibly.

34952. Was the whole of the return airway only 700 yards ?—500 or 600 yards, and about 15 or 20 yards were very narrow. I do not say the whole of the other portion was strictly right: there were certain portions that were good, but the other portion was so very poor that the capacity of the whole return was only to be measured by the size of the smallest part of it.

34953. What was done to the man; was he discharged ?—No; but he has not undertaken an examination since, I think.

34954. What did the owners do to him ?—Of course they had exactly what they wanted. They brought the necessary pressure to bear, and they had the alteration of the report, and the man has not made an examination since, I think.

34955. Surely the owners have the right to ask the man to explain his report ?—When you demand an apology it does not tend to give men confidence in making an examination on a second occasion, nor does it tend to have truthful reports so far as other examinations are concerned.

34956. (*Mr. Wm. Abraham.*) Let us understand this for the benefit of all. Did the man alter his report ?—Yes.

34957. He did that because the manager demanded it ?—Yes.

34958. (*Mr. Ratcliffe Ellis.*) I suggest he altered the report because it was wrong, not because the manager requested him ?—I should say that the man was intimidated into that position.

34959. Now you said that the most experienced men, the older men, were diffident about making these examinations for fear of consequences ?—Yes.

34960. Those, I gather from you, are the men who can make them best and most satisfactorily—the older and more experienced men ?—Not all of them, but you would get some of the best men among those.

34961. A man who can make an examination of that kind most satisfactorily would be the most satisfactory man for a fireman ?—Certainly.

34962. Are there many of these old and experienced men who can pass an examination for a second-class certificate ?—No. I am not suggesting the second-class certificate. What I have suggested has been a special examination for firemen.

34963. These are the men whom experience has made the most competent to make a satisfactory inspection or examination ?—Yes.

34964. These are men who could not pass a second-class certificate ?—No.

34965. What examination is in your mind to qualify a fireman ?—A knowledge of ventilation chiefly.

34966. Do these men know anything about ventilation —these old and experienced men ?—They certainly know about ventilation.

34967. Is it your idea to set such an examination which these men can pass ?—Such an examination as a practical man could pass, or one which an impractical man could not pass, so hat he would not be appointed to the position.

34968. People who have never really worked at the face may know something about that ?—Yes.

34969. A man who had experience on the roads as a timberman may know something about timbering ?—Yes, and ventilation, but there are other things he would not know.

34970. What are those ?—The experience of dealing with the roof in the coal face. There is a vast difference between treating the top as you take the coal out, and when you are back perhaps five hundred or six hundred yards from the coal face where the thing has settled.

34971. You want the firemen to watch particularly the dangers at the coal face ?—Yes.

34972. The men who work at the coal face do the timbering there ?—Yes.

34973. They are the most competent men in the pit for timbering ?—I would not say that. So far as the face work is concerned, I have known plenty of workmen who are excellent workmen so far as timbering in the face is concerned, but possibly you would find men who had not been near the face who would be better in timbering on roadways in certain positions.

34974. It is not necessary to work as the face to become a good pitman ?—Not to be a good timberman.

34975. Is it necessary to be capable of examining for gas without working at the face ?—Possibly he may find gas on the roadways, but so far as having an experience of blowers, or anything of that kind, he would only get that at the coal face.

34976. He can get that without working at the coal face ?—No. You get your blowers as you are working near the coal.

34977. He does not need to be working in the coal face to get experience of a blower ?—He would not get any experience so far as working in the coal face. He would get experience when it occurs, but unless he has been working in the coal face before he would not be capable of dealing with it.

34978. Have you in your mind the examination yon would suggest for these examiners ?—Yes, the examinatiou would have to be an all-round practical knowledge of the working of the colliery, not taking in much of the theory. For a second-class certificate you require knowledge of mining, arithmetic, and a knowledge of surveying. That, I think, is not dispensable to a colliery manager.

34979. Do you think it important for an examiner to know something about the constitution of air, and what percentage of gas would be safe ?—He would require a smattering of theoretical knowledge. As far as that is concerned I think if he has a sound knowledge of ventilation there are sufficient officials over him to take charge of that work.

34980. They would have to teach him ?—No.

34981. You have not any definite system in your mind as to what the examination is to be ?—No, other than what I stipulate, that they must have practical knowledge.

34982. Who should conduct the examination ?—I should suggest it should be formed under the Home Office.

34983. And a certificate granted of a still lower degree than the second class ?—Yes.

34984. You would leave the manager to appoint anybody he thought fit who had a certificate ?—Yes.

34985. But he should not be able to appoint one of the old and most experienced men, even if very competent, unless he had a certificate ?—The same thing would apply there as applied when the second-class certificates became compulsory.

34986. He would be excluded from appointing these men because they had not the certificate, although they might be more competent for the work ?—My opinion is that the more experienced men would be able to pass the examination.

34987. With regard to fines you agree it would be a very hard case where a man who had never been before the magistrates at all and had lived a respectable life and was proud of it, because of some unintentional breach, should be brought before the magistrates ?—I agree with that.

34988. You would approve in that case of it being dealt with by a fine ?—Yes.

34989. Are you familiar with the provisions of the Truck Act as to fines ?—Yes.

34990. Do you know it must be with the man's consent to begin with ?—Yes.

34991. And it must be reasonable ?—Yes.

34992. There must be an agreement in writing ?—Yes.

34993. And if it is unreasonable the excess can be recovered from the employer ?—Yes.

34994. You know all that ?—Yes.

34995. Can you suggest any other provision that might be necessary to secure a workman from oppression on the part of a manager imposing a fine ?—You have in this case the proper protection. Instead of leaving it to the manager to decide absolutely and take full control as to the amount of the fine, say a representative of the working men should be there with the manager in deciding the point.

34996. The representative of the workman is not necessary. You could go to the county court if a fine is excessive. First of all the man who imposes the fine is

Digitized by Google

liable for committing a breach of the Truck Act, and to penalties. In addition to that the excess could be recovered from him in the county court. What more protection could he have than that?—It is a very awkward thing, once a manager has fined a man, for him to take action and say "You fined me too heavily." We know what the result would be if he took the manager into the county court and recovered what he considered the excess. Very few workmen would care to do so.

34997. In what respect do you propose to alter the law?—I think there ought to be a mutual arrangement between the manager and the workmen at the collieries with regard to this. I have had experience of certain cases.

34998. What sort of arrangement do you propose? That is what I want to understand?—I do not know that I could define it. If you want me to define it in a legal form I could not, because I am a collier and not a lawyer.

34999. Would you have a list put up to show that men are liable to such a fine?—I would not agree to a list of fines. I would take every case on its merits.

35000. That is what the Truck Act does, and the agreement must be come to between the employer and workman as to whether he would pay a fine or not, and there are various provisions to guard him from any oppression. Do you not think that is enough?—So long as the workman has a friend, you mean to say, who would have a voice in deciding the matter.

35001. That means a trial in each case?—It is a mutual trial. I have an objection to taking a respectable man before the police court in particular cases.

35002. You do not think the protection given by the Truck Act is sufficient?—I believe so far as the Truck Act is concerned that there is protection, but I do not think that the protection given by the Truck Act would be available, or that the man would avail himself of that protection except in a few instances.

35003. You can give a man facilities, but you cannot make him exercise them?—It is very difficult for a man to avail himself of the provisions of the Truck Act against a colliery manager.

35004. If a man says, "I ought to have fined you so much," and the workman says, "I will not pay it," there is an end of the thing?—There is prosecution.

35005. Or dismissal. If he says, "I agree to pay a fine," notwithstanding he agrees to it, if it is excessive he can recover it back.—I think if he has the right to say he will agree to a fine, he ought to have some right in saying how much that fine will be.

35006. He says, "I will not pay it."—You have a cumbersome form to go through to go to the County Court to recover what is excessive.

35007. You must go to somebody.—Why not recognise the workmen's representatives in the matter, and finish with it?

(*Sir Lindsay Wood.*) If a man commits a fault he is called to the colliery to explain, and the manager says, "I fine you 5s.," and the man says, "I will not pay." "Very well," says the manager, "I will prosecute you," and there is an end of it. If he says "I will pay 5s.," he pays it.

(*Mr. Ratcliffe Ellis.*) You do not want to discuss the question with the workmen's representatives. The man says, "I will not pay," and then the manager says, "I will prosecute you."

35008. (*Mr. Smillie.*) You agree that the law should be the same for miners as for managers?—Certainly.

35009. You admit that there might be offences which would be met provided that the fine was mutually agreed upon without any threat or friction on either side?—Certainly.

35010. Would you be prepared to go the same length with regard to an offence by the manager. Would you be prepared to go the length of putting power into the hands of the mines inspector to fine a manager for a breach of the Act?—No: it would not be in exactly the same position.

35011. Do you not think a manager would gladly pay a fine rather than go to Court about a breach of the Mines Act?—Yes, but the position is this in the one case I am suggesting that there should be a joint Court of workmen and management, and in the other case you are suggesting that the workmen should be excluded altogether from the tribunal.

35012. The prosecutions and fines you have been dealing with are for breaches of a special rule, or some clause in the Mines Act, which may endanger the lives of the workmen?—Yes.

35013. Do you think any fine at all is adequate in a case of that kind where a person deliberately commits an act of danger?—I would not agree to a fine under those circumstances. It is only under exceptional circumstances that I would be prepared to consider a fine.

35014. Take the case of a person who may innocently take down matches in his vest or jacket without knowing it, and it could be clearly proved that he was a non-smoker and took them down accidently, would not a warning from the manager be sufficient without a fine at all?—I would agree to a warning rather than a prosecution.

35015. If the principle of fines is admitted at all you do not know where it is going to stop.—You want to be very careful with them, I agree.

35016. Had you colza oil in the firemen's examining lamp as well as the ordinary workmen's lamp?—In the ordinary lamp there was colza, but in the fireman's testing lamp it was a vegetable oil. One was a spirit and the other a vegetable oil.

35017. That is rather a scientific question which it is as well should be decided by scientists?—Yes.

35018. That is the reason you mention it?—Yes: I mention it to bring it before you.

35019. You think the examiner should have the best oil and the best possible lamp?—I think he should have the most sensitive lamp possible.

35020. Do you think it is a common thing in your own district of South Wales to appoint the least competent men to the position of foremen or overmen?—I would not say it is a common thing. In justice to some of our managers I must say there are some of them who are training young men and bringing them up in the collieries who have attended the mining classes and have taken certificates, and there are some managers who have given them every encouragement, whereas there are others who take the opposite view.

35021. Is not that the best way to get efficiency?—Yes.

35022. To train them under the eye of the company themselves, and if possible give them the highest scientific knowledge and also practical knowledge?—Certainly.

35023. The question of remuneration sometimes has to do with it?—Sometimes. It is difficult to get colliery examiners to take on the position because the pay is too low and the hours too long.

35024. Mr. Abraham and myself are very glad to have our own witnesses to give praise and admit honour where honour is due in every case. In your case many employers you know are doing their very best to obtain the highest efficiency?—There are several, I may say, who are doing their best.

35025. There have been cases in which the best men have not been appointed?—Yes; there are two instances now close to our district, the one I have just given, and the other instance is where the conditions under which the firemen have to work are such that they would prefer what I call the better class of workmen not applying for the position. The result is that they have to take inferior men for the position.

35026. With regard to hours?—With regard to hours and with regard to wages.

35027. Taking the hours into consideration, and the low wages, you think that the best class of workmen are not likely to take the position?—Yes.

35028. (*Mr. Cunynghame.*) You agree that working miners ought to get help in bettering their knowledge by lectures or anything else to improve them?—Yes.

35029. What sort of help do you get in South Wales towards bettering yourselves? What is there to enable young men to know more about the dangers and the work and everything?—We have technical classes instituted under the County Council Secondary Education Committee.

35030. How far is the place from where you work where the class is held?—It is a matter of about a mile.

35031. How often do they hold a class of this kind?—The classes are held through the winter, say once or twice a week.

35032. Do you know what pay is given to the teacher at those classes?—I could not tell you exactly.

35033. What is his position and rank?—His position and rank is in one case the holding of a second-class manager's certificate, and having passed through the same classes, and the other one in another class has had three years experience of teaching at the University College at Cardiff in the Mining Schools there.

Mr. W. Harris.

13 Dec., 1907

35034. Has he apparatus to show experiments?—That is a difficulty, I understand, from members of the classes at Abertillery, which they are all suffering from.

35035. He has not money enough to spend on lamps and things that might be useful?—That is so.

35036. I am not asking you to criticise any particular man, but would it be better for you if you had a man of greater skill and knowledge as a lecturer? I do not ask you to condemn that man, because I am sure he is doing his best and is as good a man as can be?—If we had what I may call a thoroughly good man for the County, he would be able to assist those others at the various classes and get around—say pay periodical visits and assist the local teachers. I think greater care should be given to the question. Glamorganshire, for instance, has been fortunate in getting an excellent Director of Mining Instruction, but I do not think that we have been so fortunate in Monmouthshire. I think there is a weakness there.

35037. Do you think that the County Council is doing all they can to promote the miners' education, or do you think that they might spend more money than they do now?—I think they might spend more money on that purpose. I think there is a wrong spirit prevailing at the County Technical Committee. I will give you an instance. The last two or three years the classes in Abertillery have not been so successful in mining as hitherto. We say owing to certain facts that there is no encouragement given to the young men to attend the classes, because after years of study they find somebody who has not troubled to acquire knowledge is promoted over their heads. The result is the classes have gone down, and the County Council Committee in allocating grants to the various centres have taken last year's grants or the last year's percentage of earnings as a basis for this year. The result is that where a district is really on the down-grade so far as technical instruction is concerned, instead of assisting the County Council Committee are really bringing pressure to press lower instead of assisting to raise them.

35038. In your opinion some steps would be more useful that would promote the education further, purchase of apparatus, and so on?—I certainly think so.

35039. (*Mr. F. L. Davis.*) With regard to Rule 38, you have told us in this case you mentioned here to-day where a man had to apologise?—Yes.

35040. Do you know any cases where the men have had to suffer? You say the general complaint is that men are afraid of making these examinations because they may suffer?—It is most difficult to trace. The men contend, of course, that they know—in fact I have had an experience of my own, where men have said they would not come with me again because I gave too bald reports, and they say "You are sure to be marked one of these days." That is the general impression.

35041. In this case you mentioned the man did not suffer. He was not discharged. Things were not made unpleasant for him?—It is made that unpleasant he is afraid to take on an examination since.

35042. I understand that the men do not care about making these examinations?—The result is we cannot get the best class of man to make these examinations.

35043. You were the agent in the district?—I have been connected with it for the last ten or fifteen years.

35044. You are one of the officials in the district?—Yes.

35045. If any of these men had suffered it would have come to your knowledge?—Things come to our knowledge that very often we know are true but we cannot prove them. The difficulty is to prove the case up to the hilt.

35046. Any cases of injustice in your opinion in your district are brought before you to investigate and try and put them right?—Very often the punishment is not meted out by the manager in the form of dismissal, but possibly by the under-manager or fireman, or overman of that particular district. The only instance I know where a manager has taken action is the instance I have given. That is as to the pressure brought by under officials. I believe there are quite a number.

35047. Is not one of the reasons that the men do not care about these examinations that it is rather hard work and the pay allowed them by the Federation is not very good? What do you pay?—We pay 8s. a day, and in the neighbouring colliery to us they pay 10s. a day.

35048. Is it not a fact at the present time that with wages at the maximum a pretty good collier can earn a good deal more than 8s. a day?—That is a maximum and it is a minimum with us. It is the same all through.

35049. Is not that one reason why the best men who earn good wages as colliers will not make the examination?—If the refusal had been during the last few months that might be so, but it has been during the last few years, so that the refusal was made when wages were low.

35050. On the question of fining I suppose you thoroughly approve of discipline in the colliery?—Certainly.

35051. Discipline can only be good if the manager has a free hand to deal with his own officials and the men?—I believe this, that the manager can succeed in obtaining discipline very often more by taking the Workmen's Committee into consideration than ignoring them. That has been my experience.

35052. He may do it in several ways?—That is the most efficient I have seen.

35053. It depends on the manager?—It depends on the co-operation of the manager and the Workmen's Committee.

35054. It depends certainly on the co-operation of the men, but the manager is the man who is responsible, at any rate?—Yes.

35055. There is one thing I could not undersatnd with regard to the fines. You do not approve of the manager being the determining factor?—Not the sole determining factor.

35056. Who do you suggest the other man should be? Is it the checkweighman?—No, the chairman of the Works Committee, or a deputy of the workmen.

35057. Do you think that would tend to discipline?—Yes.

35058. If a manager wanted to fine a man for a breach, and the chairman of the Works Committee said "You shall not," and they could not agree, what then?—The manager has the alternative then of prosecution.

35059. Do you not think the result of your suggestion would be that there would be no fines at all to speak of, but all prosecutions?—No. I am hoping to find that there would be some reasonable managers.

35060. I suppose that there are never any unreasonable chairmen of Works Committees?—Sometimes there are, of course.

35061. My point is the manager is responsible and has to maintain discipline and if he says this fine shall be inflicted, unless the man likes to be prosecuted, and another man says "You shall not fine him," he cannot have discipline if he is to be dictated to?—I cannot conceive a chairman of a Works Committee who is anxious that a certain man should not be prosecuted, being unreasonable in deciding the amount of the fine, because he knows the manager has the alternative of imposing prosecution, which is a greater punishment than a £1 fine.

35062. I understand you agree that for the less serious offences fines would be better?—Yes.

35063. How often have you acted under Rule 38 as a mines inspector yourself?—I have acted more or less for the last 15 years.

35064. As an inspector under Rule 38 how often have you been down the mine inspecting on behalf of the men and reporting to the management?—30 or 40 times.

35065. You have sometimes made an unfavourable report?—Certainly.

35066. Have you ever suffered from making an unfavourable report?—No, but it so happens I am in that position, and I would be less likely to suffer than most men.

35067. Why?—Because I am a district official.

35068. And always have been?—I have been for the last 10 or 15 years.

35069. During the whole time you have made these inspections you have been a district official, and consequently a man of some importance, whom it would be rather a difficult matter to punish?—That is so.

35070. (*Chairman.*) Do you wish to say anything more?—No.

Digitized by Google

Mr. MICHAEL ROACH, called and examined.

35071. (*Chairman.*) You appear on behalf of the South Wales Miners' Federation, Monmouth Western Valleys District ?—Yes.

35072. Does that mean you are only empowered to speak on behalf of the miners in the Monmouth Western Valleys District, or on behalf of the whole of the South Wales Miners' Federation ?—I speak for the whole as well as the district.

35073. We have had a good deal of evidence on behalf of the miners which pretty well agrees with what you say: "That additional inspectors be appointed of a different class, with wages in accordance of about £156 to £175 a year salary with travelling expenses. The number of men reduced over which such inspection made." It has been suggested to us that these additional inspectors should have their work apportioned out, that the district should be divided up, that there should be a chief inspector and one or two or three assistant inspectors, and perhaps three or four third-class inspectors for each district, and these third-class inspectors should have a separate district assigned to them ?—That is so.

33074. So that each of these third-class inspectors would only have a comparatively small district. They would have over them an assistant inspector, who would have general supervision, I suppose, over three or four, or two or three, at all events, of these third-class inspectors, and both the assistant inspectors, and the third-class inspectors would be under the chief inspector, who, in case of necessity, could tell these third-class inspectors to go where he pleased, even outside their district ?—They should be under the entire control of the chief inspector.

35075. That is to say, under the immediate control of an assistant inspector and the ultimate control of the chief inspector of the district ?—That is so.

35076. How many would you require of these men in order that the mines might be inspected in accordance with what you consider sufficient inspection ?—I think there should be a sufficient number appointed to make a thorough inspection at least once in every three months.

35077. Not a sample inspection, but to go through every mine thoroughly once in three months ?—That is so.

33078. Have you formed an opinion as to how many you would require ?—No. I think they should be appointed to meet circumstances, and so as to be able to thoroughly examine every mine once in three months.

35079. With regard to the examination for the men who would be inspectors, you would have them pass a qualifying examination ?—Yes, but they should be practical and competent as well. There ought to be a qualification such as you suggest—that they ought to hold a second-class certificate.

35080. They need not be so fully qualified as the other two classes of inspectors ?—No, only to have the practical knowledge.

35081. You would not, as a rule, suggest that they should be promoted to be assistant inspectors or chief inspectors; but if a man showed great ability, he might pass the examination for chief inspector and become a chief inspector or an assistant inspector ?—That is so.

35082. With regard to General Rule 38 you say, "The examination be taken without any limitations by the workmen." That is, taken as often as the workmen desired ?—Yes.

35083. You do not think at least once a month is sufficient ?—There is a colliery in our district where it has been obvious we ought to make the inspection on two or three occasions in the month.

35084. Occasions may arise where it would be necessary to make two or three inspections a month, but as a rule once a month would be enough ?—Yes.

35085. Do you agree with what has been said by the other witnesses, that the men who make these inspections are afraid of giving a truthful report of the mine if it is unfavourable ?—I agree that to a certain extent that is so, but there are exceptions. Of course I have a case in my mind where the workman made an inspection of a certain colliery in my district where there are 1,500 men employed, and through the truthfulness of his report the men laid idle for two days. Without offence to the manager of that colliery, I do not think any advantage has been taken of the man who made the inspection. I have made careful inquiries.

35086. You have known where men have made unfavourable reports, and where the management have taken it in a proper spirit ?—Up to now that is the only case I have in my mind. In the majority of cases the men are somewhat afraid to make a truthful report. If they do, they know there is a penalty attached to it.

35087. With regard to inspection by officials under General Rule 4, you are prepared to say very much the same thing as the other witnesses have said. You say, "The places of inspection should be limited." That is to say, the districts ought to be less than they are at present ?—Yes.

35088. "That the examination be done leisurely by the officials—a different method of selecting firemen other than by the management." What other method do you suggest ?—I think in accordance with the recommendation of the management to the chief inspector of mines.

35089. That the chief inspector of mines should be given power either to accept or reject the recommendation of the management ?—Yes.

35090. What would he act upon in rejecting or accepting his selection ? Would the workmen make representations ?—The management could give the qualification of the individual.

35091. Supposing a workman objected to a person being appointed fireman, it would be open to them to communicate with the manager and say they do not think he is an efficient person for the reasons set forth ?—Yes.

35092. "The hours be reduced to eight—the duties should be confined to firemen alone." We have had a great deal of evidence upon that point. I do not know whether you care to add anything ?—There is one matter with regard to the appointment of the firemen I would like to call attention to in my district. In June 1906 one of the firemen at a large colliery, where there are 1,700 men and three pits which are in direct communication and ventilated by the same ventilating apparatus, permitted the men in June to go in the working place when charged with gas, with the result that he was dismissed. It is essential in such cases that the man should be thoroughly practical, and have a proper knowledge of the work with which he is entrusted.

35093. Do you suggest that there should be an examination, oral or written, to qualify a man to act as a fireman?—I do not suggest that there should be an examination. I do not know that a certificate in accordance with the second-class certificate would be necessary in these cases. I can give the name of the colliery privately to the Secretary if you desire it. This man held a first-class certificate.

35094. He would be eligible so far as examination was concerned ?—He was incompetent, and they dismissed him. They did not dismiss him on this occasion, but he permitted them to go into the same place afterwards, and the day fireman found him out,

35095. Then with regard to the standard of discipline by fining or prosecution you say, "The method of prosecution under rule remains unaltered." I do not know what you mean by that.—I think in all cases of breaches of rules by the men they should be prosecuted.

35096. There should be no distinction between trivial offences and more serious offences, or offences that merely affect the efficient working of the mine and offences that imperil the lives of the workmen. You think in all cases there should be prosecution ?—That is my opinion, because I think the desired effect would only be obtained by prosecution. If it was left between the management and the workmen's officials to agree upon a fine, I do not think an agreement would often be come to. I think the salutary effect on the body of workmen would only be obtained if men were prosecuted instead of being fined.

35097. With regard to establishing Special rules, you say the workmen should be represented in the establishing of rules, as they are expected to observe them. We have had a great deal of evidence upon that point. I do not know whether you care to elaborate that ?—No. I agree with what Mr. Watts Morgan said when his evidence was taken. If special rules have to be established, I think men should be represented in the establishment of those rules.

35098. With regard to falls of roof and sides, you say, "There should be systematic timbering on all roadways,

Digitized by Google

Mr. M. Roach.

13 Dec., 1907

the workmen given the right as to the use of such." You have heard the evidence that has been given by Mr. Harris. Do you agree with that?—Yes, to a certain extent.

35099. You have nothing to add to what he said?—I think it should be so. I have gone into this matter very carefully throughout my district since 1906, and I find out of a total of 95 accidents for that period, there were 31 from falls of roof and sides, or about 33 per cent.

35100. As to haulage. You say, "The same be suspended while men are travelling, or that all return-ways be made so that the men could travel to and from their work through the return; that the haulage road be wider to permit rider to jump off journey in case of accident by falls of roof or sides or breakage." That, I think, has been sufficiently covered?—Yes, that has been covered. I have also gone into that matter very carefully, and taking the period in which I stated the accidents from falls of roof and sides, from 1900 to 1906, the accidents in haulage main roads and headings in my district have been 19 out of 95—about 20 per cent. of fatal accidents.

35101. What do you mean by a separate code of signals?—I mean where a haulage engine is bringing coal from two separate districts that there should be a separate code of signalling from each district.

35102. The signals are somewhat jumbled up. You do not know where they come from?—That is so.

35103. Is there a separate code of signals in many mines you know of in South Wales?—Yes, some.

35104. In some there are, and in others there are not?—Yes.

35105. With regard to safety lamps you say, "Should be extended to all mines where the slightest detection of gas may be found." You mean where there is a cap found?—Yes.

35106. As to investigation into mine accidents you say, "In fatal accidents that men or men's representatives be permitted to visit place of accident." Would you suppose any manager of a mine would prevent properly accredited representatives going down to see the place of accident if desired?—I do not suggest they would prevent it at all, but if it was compulsory, of course, there could be no objection, could there?—I believe it should be compulsory.

35107. You do not know of any instances where such permission has been refused if it has been applied for. Is it often applied for?—Yes, in a number of cases.

35108. It is generally granted?—Yes.

35109. You do not know a case where it has not been granted?—No.

35110. As to the importance of tram loading, you say, "The trams be loaded to their level to prevent coal being strewn on main haulage roads." That is, loaded not above their level?—Yes. I have nothing to add.

35111. "The danger of breaking of trams when loaded with coal." That means the trams ought to be kept in a proper state of repair?—Yes. The short point is that the trams in operation in South Wales now are such that men have to load 2ft or 3 ft. above their level, with the result on the main haulage roads they have a great tendency of breaking down, and coal is dropped about until it accumulates seriously.

35112. Not only loaded so that the coal falls off the top, but also sometimes to break down the wagons altogether?—Yes.

35113. (*Mr. Ratcliffe Ellis.*) With reference to the firemen, should not the manager have the appointment of his own firemen. Do you think the inspector should appoint his firemen?—I do not think I suggested that. I suggested, I think, that if the management is desirous of selecting a fireman, he should state the qualifications of the person selected to the inspector for his approval.

35114. That is to say, the inspector would decide whether the fireman should be appointed or not?—He would have that power.

35115. Do you think if that were done it is right to leave the responsibility upon the manager if he has not the right to appoint his own fireman?—He would have the right to appoint him.

35116. The inspector decides who is to be appointed. Supposing he is a good man he wishes to appoint, and the inspector said, "You must not appoint that man," and mischief happens. Is he to be held responsible?—I think you beg the question with regard to the inspector. I do not mean to say that he should be the decisive factor in appointing the man, but that the man's qualifications should be submitted to him. The management should have the control of selecting the fireman.

35117. What is the object of putting his qualifications, before the chief inspector?—To secure better men, of course.

35118. Is he entitled to appoint a man after putting his qualifications before the chief inspector, whether he approves or not?—To my mind, under those circumstances, if the manager had to state the qualifications of any particular individual whom he desired to be a fireman he would not select the man that is selected at the present time.

35119. What control is the manager to have in appointing his firemen? Anyone he thinks a proper person he submits to the inspector?—That is so.

35120. But the inspector could not say, "You shall not appoint this man." He is simply to have his qualifications?—That is all.

35121. With reference to the falls of roof and sides, where do they generally happen—in the roadways or at the face?—In the roadways. Out of that number I gave you there were four which happened in the face. The remainder of them happened in the roadways, headings and haulage.

35122. How many on the roadways, headings and haulage from falls of roof and sides?—About 25.

35123. Out of 30?—25 out of a total of 31.

35124. A great proportion of the accidents do not happen at the face but on the roads?—Yes.

35125. To what do you attribute that?—I could not say what I attribute it to. I have known cases where, through the restriction of the workmen in putting up timber, an accident has happened in that direction, but I would not like to say that the whole of them happened in that way.

35126. Can you suggest how that large percentage of accidents can be avoided?—I have known last year where two men met with fatal accidents in my district, and that was, in my opinion, through the roof not being properly timbered. That was on a main haulage road. One was a timberman and the other an overman.

35127. Do you think it is because the timbermen are not qualfied?—I think if that place had been timbered, the accident would not have happened when the men were sent to work there.

35128. In the haulage roads there is no question of paying for this timber. The men who look after the haulage roads can put up what timber they like. They are not like the collier who is only paid for what timber he puts up?—There is in the headings. I am speaking about the headings now.

35129. Have you any statistics to show what proportion happens in the headings and what proportion in the haulage roads?—No: I am giving you a case which happened.

35130. Have you any statistics to show the proportion?—No.

35131. You say a great many of these accidents happen in the haulage roads?—Yes.

35132. It is important to see how many happen in the headings?—I said haulage, main roads, and headings.

35133. I want to know a little more that that. At the face where the collier is answerable for the timber there are comparatively few out of the total number, but on the roads there are a great many. These roads are partly timbered by men who are paid for it, and who have no reason for not putting as much timber as they wish. Then there is the gate, the entrace to the working face, where the collier has to do the timbering. Have you any statistics to show the proportion that happen in the haulage roads when the timbering is done by the timberman, to compare with those which happen in the gates when the timbering is done by the collier?—No.

35134. Could that be obtained, do you think?—I could not obtain it, so far as I am concerned, because if a claim is made for the accidents of which I have given statistics, it is a fatal accident in the roadway or the face, and I should not know whether it was a haulage main road or a heading.

35135. What are the character of the haulage accidents in your own district for which you have returns?—The character of those accidents would be through a shackle

Digitized by Google

breaking or a rope breaking, or, as I said, by the trams being loaded and the coal being in the middle of the roadway so that it would throw the trams off the road and cause an accident in that direction.

35136. I want to see if in your statistics you can point to any particular class of accident which has caused loss of life or serious accident to any persons employed ?—No, the notice of this comes to me in a general way.

35137. You cannot point to any particular matter in connection with haulage where further safety should be secured or where you think some improvement might be made ?—I think the roads ought to be kept cleaner and ought to be made wider.

35138. Are these accidents attributable to the roads not being kept clean ?—I could not tell.

35139. (*Mr. Wm. Abraham.*) In the face, timber paid for or not paid for has to be put up at stipulated distances ?—Yes.

35140. Whether it is necessary or not ?—That is so.

35141. In the roadway there is no such stipulation ?—No.

35142. Independent of any payment at all, it is your opinion that if there was a stipulated distance, according to the necessity of the mine, for the timber to be put up, that would be the means of reducing these accidents to which you have referred ?—I believe it would.

35143. If the stipulation, which has proved to be a safe one for the men in the pit, was also made for the men in the roads, that would bring about the same result, the lessening of accidents ?—I think so.

35144. This is a very important point. You are clear upon that point in your own mind ?—I am profoundly convinced as to that. I do not suggest men should use timber where it is not necessary, but I think if there was a stipulation, such as you suggest, it would minimise the fatal accidents.

35145. What class of men are injured on the roads in the accidents you have spoken of ?—They are hauliers and riders and timbermen.

35146. What was the position of the haulier when he was injured ?—I have one case in my mind which I know fully about. It was because of insufficient room. One went to lift the tram on with the horse and if he had had a place to jump to on one side, there is no doubt his life would have been saved.

35147. One case is worth a thousand opinions. Have you another case of a timberman getting killed. If so, what was his position and what was it attributed to ?—I referred to the case in answer to Mr. Ellis of a timberman and an overman. If the place which they were sent to secure had been timbered they would not have been killed.

35148. That is systematic timbering again ?—Yes.

35149. You have mentioned 31. Could you give us other instances of other men that were killed. Will you tell us, if you remember, what they were doing at the time ?—I could not bring them all to mind now.

35150. Is your opinion based upon your own knowledge of these facts. If the roads were wider and there were places for the men to turn into the instant they saw danger, do you think that would be a means of reducing these accidents ?—That is so. I have one case in my mind where a man was killed after the fireman passed through his place. It was mentioned by the previous witness. The fireman thought the place was absolutely safe, but in a short period of time, 20 minutes or half an hour, a man was crushed to death. At the inquiry Mr. Martin almost went so far as to say that the man's death lay at the fireman's door. If systematic timbering had been insisted on in that case, that man would not have been killed.

35151. What is your opinion with regard to using the return airways as travelling roads ?—I think it would be very much safer to the men, particularly coming from their working place. In the majority of cases I think, going to their working places the haulage is not in motion, but in coming from their working places in the majority of cases it is in motion. If the return airway was kept in that condition I believe it would be conducive to the safety of the men.

35152. You have been a practical miner ?—Yes, I have had 22 years' experience.

35153. Do you think there is any special difficulty beyond what we all know, that there would be an extra first cost in doing it ? Do you think there is any practical difficulty in doing that ?—I do not think so. I quite agree with you so far as the first cost is concerned there would be that difficulty, but after that I do not think so.

35154. If that was done, making the return airway a travelling road, would be better than the widening of the intake where the trams are travelling ?—That is so.

(*Mr. Ratcliffe Ellis.*) The witness said he had also to consider the safety of the men on the trams.

35155. (*Mr. Wm. Abraham.*) Having extra travelling roads would reduce a certain number of accidents which are not actually caused by trams ?—Yes, there is no doubt it would. I think the return airway should be kept in that position, so that a tram could pass through it at all times.

35156. That would increase the ventilation of the colliery as well as increase the safety ?—Yes, and furthermore it would be the means, where a serious accident happens in mines which are three-quarters or a mile, of facilitating the removal of the injured workman or workmen by being able to bring them that way instead of through the main intake where they are exposed to the cold.

35157. (*Mr. F. L. Davis.*) On the question of trams I think you stated that the trams are very often loaded in South Wales between two and three feet above the top of the tram ?—Up to two feet, I think I said.

35158. I think you said two to three feet ?—Very well if I said so I did, but I think there is some exaggeration. I would say up to two feet. I do not think they are three feet.

35159. Would it not be more correct to say from 1 ft. to 18 ins. That would be more like the state of things ?—Yes, I agree with you in that, although I do not think I should be exaggerating very greatly. I think I have a colliery in my district where they are loaded very nearly a yard.

35160. I suggest if it were as high as 3 ft. he must be a very good loader ?—They are good loaders.

35161. We do not say we have not good loaders, but he would be an especially good one. What about on an average do the trams hold as they are loaded on ordinary work at present time ?—It would be very difficult to give the average of the various collieries, but in the top colliery, 22 cwt. to 23 cwt., and in the next 23 cwt. to 24 cwt., and the next above that 26 cwt., and the one below that I think I would not be exaggerating to any extent in saying a yard, 27 cwt. or 28 cwt.

35162. On an average from 20 cwt. to 25 cwt. ?—Yes, on an average.

35163. The haulage roads and the stall roads must be kept fairly high and in pretty good condition ?—Yes, the height could be kept, but the width may not be there after all.

35164. It has not come before me personally before that they are loaded so well that sometimes the trams break down. Do you really mean that ?—Yes, I do mean that.

35165. You mean the tram itself, which is an iron tram, breaks down because of the weight of the coal in it ?—No, I do not say it breaks down because of the weight of the coal in it, but if a little stone out of the side tumbled on the rail in the course of that journey, going up and down the road, it would throw the tram off, with the result that they would go into one another and knock them about.

35166. You said it was because they were heavily loaded that the trams broke down. This is another position you put now, that the trams occasionally go off the rails. That I can understand ?—You could understand the other point, too, that there are occasions where they break down.

35167. Do you not really mean when the trams go off the line and the coal is spilt about, that it interferes with the haulage ?—And there are occasions where they do not go off and they break down.

35168. Can you give one instance of a tram that has broken down from the load of coal on it ?—I have been from underground 9 or 10 years, but I have seen it in my own experience. I could name the colliery if you desire it.

35169. Did the bottom fall out, or the side ?—The side, and I have seen the front and the end falling out.

Digitized by Google

Mr. M. Roach.

13 Dec., 1907

35170. What is your chief reason for suggesting that the trams should not be loaded so high ?—To prevent this—you have requested me to give my opinion upon it —to prevent the breakages.

35171. Is that the only one ?—No, because the coal after it has broken down, creates confusion if it remains there too long.

35172. Do you think the men in the stall roads should put up timber whenever they think proper without the sanction of the management ?—I think inasmuch as they have to use their discretion as to safety in the working place, that they should use the same discretion in the roads. I do not suggest that the men should put up unnecessary timber.

35173. A man in his place puts up the timber to keep himself safe ?—He has to do the same thing in the roads.

35174. But he is paid for it ?—Yes.

35175. Do you think it is reasonable that the man there should be allowed to put up as much timber as he likes and get paid for it without the sanction of the management ?—I think it is reasonable he should put up sufficient timber to meet his own safety and that there should be a maximum in the road the same as there is in the working face.

35176. There are very few accidents at the face ?—Yes.

35177. Has there ever come before you at all a man who has a hard place or a man possibly—there are some occasionally—who may be rather a lazy workman, and who likes to put up extra timber because he gets paid for it, instead of going on with his work at the face. I suggest that to you. If the management is not to decide that man can put up as much timber as he likes and eke out his wages ?—Not if there was a maximum distance.

35178. We are not talking about systematic timbering ? —I say if there is a maximum distance he could do so, and I do not think any man who has any common sense whatever would use timber that was not necessary.

35179. Not the great bulk of the men, but you can conceive it ?—I can conceive an exception, certainly.

35180. It is better for them to work at the coal face as a rule. With regard to systematic timbering you think there ought to be fixed distances in every colliery all over the country ?—I do.

35181. In the stall roads and in the faces, everywhere ? —Yes.

35182. You know from your experience that the conditions in certain collieries differ very much from the conditions in others ?—Yes, I know that.

35183. Do you think it would be a wise thing to state certain distances which timber would have to be put up all over the country ?—I think so. For instance, I gave the case to Mr. Abraham where the fireman thought the place was safe and the maximum distance was not observed. The workman thought the place was safe and down comes the top and kills him.

35184. Do you not think it would be a hardship to other collieries which have good roof, and where very few accidents happen from falls of roof and sides, and whose timbering cost generally is small, that they should put up just as much timber in their place as a colliery which has a bad roof and is difficult to keep up ?—Yes, I think they should.

35185. Do you not think that would be a hardship ?— It may be a hardship, but after all the safety of the men is to be considered in the first place.

35186. Do you know many districts besides South Wales in England ?—Yes, I do. I never worked in any English district. I have worked in several districts in South Wales.

35187. You would say, I suppose, or you know, possibly from general report that there is hardly any other district in the country that uses more timber than we do in Wales ? —I do not think there is.

35188. Do you not think there is a difficulty in laying down a fixed law that timbering, in the same way as many other points, should apply to the whole of the country where the conditions are very different ?—There may be a difficulty, but after all the safety of the workmen is the first consideration I believe.

35189. That is your opinion ?—That is my opinion.

35190. (*Mr. Wm. Abraham.*) He has not suggested the same distance should be marked all over the country ?— I said a maximum.

(*Mr. Wm. Abraham.*) A maximum, according to the circumstances.

35191. (*Mr. F. L. Davis.*) There should be a maximum ? —Yes.

35192. Who is to decide in each particular colliery, according to the circumstances, what the distances in that colliery are to be ?—I think the Home Office should decide that.

35193. The Home Office ?—Yes, through the inspector's report of the colliery.

35194. That really means the inspector ?—Yes.

35195. He should decide in each colliery what the distance should be ?—Yes, the Home Office through the inspector.

35196. Do you not think, if the inspector had to decide for each colliery what the distance should be that would take the whole responsibility off the management ?— I do not think so.

35197. I suggest that it would. Do you think it is wise to do anything to give the inspectors more power than they have at the present time in such a way as to take the responsibility off the management ?—I am giving you my opinion that the Home Office should decide as to what the distances should be at the various collieries, taking all the circumstances into consideration. That will not take away the responsibility of the management in my opinion.

35198. You do not want to see the responsibility of the management lessened ?—It would not be lessened then.

35199. Whether it is that or any other case, you do not want to see the responsibility of the management lessened ? —No, certainly not.

35200. (*Mr. Smillie.*) May I take it you agree with some of the other witnesses that it would be a good and useful thing to have provision made for washing at the collieries and drying pit clothes ?—Yes, I agree, and I believe the workmen would be only too delighted.

35201. Do you think it is necessary that there should be full ambulance provision at all collieries, including an ambulance wagon to take home men who are injured ?— Yes, I do.

35202. It is not done universally just now ?—No. I do not think I can point to a colliery in my district where there is an ambulance wagon. There are ambulance appliances, but they are hand or shoulder appliances. There is no ambulance wagon.

35203. The old method of taking injured workmen home was by taking them in a cart, or carrying them ?—Yes.

35204. In some cases they may bleed to death in taking a long journey in an old jolting cart ?—That is true. I have a case in my mind where we had to take one of our injured workmen in the doctor's conveyance, which was a trap—a simple trap. We had to take him to his home, which was by road about six miles, whereas if there had been a proper conveyance the man could have been taken from the pit-top at once after the examination, and no doubt it would lessen his suffering to a great extent, because he was no sooner home than he died.

35205. A simple fracture of the limb might turn into something serious before a person was taken three or four miles home ?—Yes.

35206. You have ambulance wagons at some collieries in Wales, partly provided by the contribution of the workmen and partly by the employers ?—I think there are. There are none in my district.

35207. Setting aside how it should be paid for, do you think that there should be an ambulance wagon at every colliery, or group of collieries, which may be called upon in the event of an accident ?—I think it is absolutely necessary.

(*Mr. F. L. Davis.*) You mean a wagon at the surface, after the man is brought up ?

35208. (*Mr. Smillie.*) Yes. Do you think it would be a wise arrangement to have telephonic communication between every district in the mine and the surface ?—I think so.

35209. And that could be done at very small cost ?—Yes.

35210. It should be possible for people on the surface to have information within two or three minutes either of an accident or any danger arising in any section of the mine underground ?—It is in two collieries in my district now.

35211. Do you think it would be wise to make that a universal provision ?—I think it would be.

Digitized by Google

35212. With regard to the qualification of firemen. I was listening carefully to your answers to Mr. Ellis, but unfortunately I was not able to fully grasp the position. Do you say that the manager who is about to engage a fireman, a competent person under the Act, has to get from that person what his qualifications and practical experience are, and send that to the inspector ?—Yes.

35213. Is the inspector merely to keep a record of that ? —Keep a record of the qualifications as sent to him.

35214. Does that in any way get us out of the difficulty ? It does not improve the qualifications and competency of that person, does it ?—I think it would remove the difficulty to a certain extent. The practical and competent man who is not selected would have an opportunity then, whereas now he has not.

35215. You do not propose to give the mines inspector any power to prevent the appointment by the manager of that person ?—No, I would not give him power.

35216. Supposing a manager sent word to the inspector that he had employed John Jones, No. 4 district in a certain mine, and that Mr. Jones had been nine months in the pit, and had previously been an agricultural labourer, had only been in the pit nine months, and was working at the pit-bottom, and had appointed him as a competent person under the Act, is the mines inspector to accept that information and keep it to himself till something goes wrong with the colliery ?—That would be an exception, I think. I do not believe any manager would do that.

35217. Your provision does not give the inspector any power to interfere. Mr. Ellis put it to you, would you prevent a manager, who was held responsible for the management of the mine, appointing a person he thought fit, and would you put that power into the hands of the mines inspector, and you said no ?—No.

35218. Do you not at the present time prevent a mine-owner from appointing any person whom he may think fit or competent unless he has a certificate proving he has stood an examination ?—I do not quite grasp your question.

35219. Would the law to-day permit a mine-owner to appoint a competent person to manage his mine unless that person held a certificate ?—No.

35220. Do you think we have any right to interfere with the right of a mine-owner to appoint a person he may think competent to manage his mine ?—Providing he is qualified. That is how the law stands at present.

35221. The law lays down not only must the mine-owner be satisfied that he is competent, but also that he holds a certificate of competency ?—That is so.

35222. Would the same thing not apply to the appointment of a fireman ?—Yes, it should apply, I think.

35223. There should be, in addition to his proof that he had practical experience, proof that he had passed some examination, whatever it might be ?—Well, yes, put it at that. There should be a different method. I do not know that I could locate the method of selecting firemen ; it is a question for you. I believe there should be a different method of selection, or a different method of qualification of those men other than there is now.

35224. Mining legislation and Miners' Associations, so far as the safety of workmen is concerned, are always endeavouring to bring up the worst-managed mines to the position of the best ?—That is so.

35225. That is the position to-day ?—Yes.

35226. Consequently, we are entitled to take every precaution to make sure that in the worst-managed mines competent persons will be appointed ?—Yes.

35227. Supposing we admit 80 per cent. or 90 per cent. of the firemen appointed to-day all over the country are thoroughly competent, we do know there are persons appointed from time to time who are not thoroughly competent ?—Yes. I have given you two cases in point, one six months ago and another twelve months ago, which, were it not for the practicability of the workmen in the district those men went into, would have been blown up.

35228. Did one of those persons hold a first-class certificate ?—Yes.

35229. You said immediately afterwards that he was not a competent person ?—He was not a competent person.

35230. Might it not be he was rather a careless person ? It was not so much for want of being competent as for want of being as careful as he might have been ?—That may be so. I think he was too young for the position.

35231. Want of experience may have been the cause of the thing ?—That is so.

35232. Mr. Ellis put it to you that most of the accidents for which you gave statistics had taken place on haulage roads and headings. I think you admitted six out of 31 had taken place at the working face, and 29 on headings, haulage roads, and other drawing roads ?—Yes.

35233. Mr. Ellis pointed out to you that repairers and timbermen are not restricted to putting up timber. They are not paid by the sets of props, but by shift wages. Is it not a fact that timbermen take their orders as to where they are to go to repair from the manager or overman, or some person in charge ?—Yes, from the fireman.

35234. They do not go about indiscriminately putting up timber here and there ?—Certainly not.

35235. To that extent that falls to the ground. They are told to go to a certain place to repair ?—Yes.

35236. And are supplied with timber to put in the road ?—Yes.

35237. Supposing they passed a place in the drawing road where there was no timber for 10 yards, they would not begin to put up timber there unless instructed to do so ?—Certainly not.

35238. As a matter of fact they are not expected to repair at any part of the roadway unless instructed to do those repairs ?—Unless instructed by the fireman or overman.

(*Mr. Ratcliffe Ellis.*) It is suggested as a source of danger that the men are not entitled to put up timber where they think fit because questions may arise as to payment. That applies to the face and the entries to the face. At the face there are very few accidents and the system does not seem to be bad. I want to know what proportion of accidents happen in this gateway.

35239. (*Mr. Smillie.*) Where the miners are paid for putting up what I will call a pair of timber those are put up in the road head generally ?—Yes.

35240. They are not put up along the face in the long-wall ?—No.

35241. Consequently a miner does not get paid for setting a prop here and there along his face to keep himself safe ?—No.

35242. You have never heard of firemen coming in and knocking out those props he might have placed over the face ?—No.

35243. Where they set a pair of timber for which they are paid is in the road head ?—The road end.

35244. Sometimes they load tubs there ?—They are loaded there.

35245. It is turned out from the face to the road head and they load the tubs there ?—Yes.

35246. Consequently the loaders spend a considerable part of time right at the road head ?—Where the boys are working with men the boys are always there. They generally take on the loading.

35247. Does your reply as to where 25 accidents take place include that part from the road head down into the drawing road and the main haulage road ?—It includes that part.

35248. Consequently if miners were prevented from setting timber there where they thought it wise to do so, or if the timber was knocked out on the ground it was not required, those 25 accidents would come within that part of the roadway.

(*Mr. Ratcliffe Ellis.*) No, not the whole of them.

(*Mr. Smillie.*) A portion of the 25 ?

(*Witness.*) Yes.

(*Mr. Ratcliffe Ellis.*) What portion ?

35249. (*Mr. Smillie.*) That is a part of the road you included ?—That is part of the stall road right out to the main haulage road.

35250. A certain proportion of the accidents might take place right here where the filling went on, and the tubs too ?—Yes, certainly. I could not tell you they have done, but I can only give you them as they were sent to me ; I made claims for them. They would be falling of roof on heading or side or something like that.

35251. Is it not the case that falls are most likely to take place from the end of the heading road where the filling takes place, back 40 or 50 yards, than further out in the road because of the creep that is there ?—Yes.

Digitized by Google

Mr. M. Roach.

13 Dec., 1907

35252. Consequently there is more need for systematic timbering there than further out in the road where it is settled?—Yes, because the place is not settled as you suggest. I have had that experience myself.

35253. There is always a creep and little bits falling off?—There is always a crush until it is properly settled.

35254. Is there any ripping done in your seams, or are they sufficiently high to prevent ripping at the heads?—There is ripping in some collieries.

35255. Do the workmen themselves do that ripping?—Yes.

35256. In cases of that kind where they rip would the fireman or under-manager prevent them putting up whatever timber they thought necessary for their safety?—Yes, in some cases they prevent them. In cases I have investigated myself where they have put them up without orders the trouble is they will not pay.

35257. Even in cases where they do their own ripping?—Even in cases where they do their own ripping.

35258. You have expressed an opinion as to who was the best judge of where timber should be put in the working face, whether it should be a man who has taken out the coal or a person specially appointed for that purpose by the employer. In some parts of the country the employer appoints a special timbering man for timbering at the working place. That is so in a limited part of Great Britain. In other parts it is included in the ton rate to do their own timbering. Do you say that the men at the coal face are the best judges of when and where timbering should be put up?—I certainly think so. That is my own expereince. I had 22 years at the coal face and I think that the man who is working, no matter what the colliery or seam is, should be the determining factor as to what timber is required.

35259. He would be a better judge as to the danger than a fireman who comes round the face twice a day?—I think so.

35260. A person specially appointed for that purpose and devoting his whole time to timbering at the face would ultimately come to be as good a man as the man taking out the coal, if he devoted his whole time to the work?—No doubt.

35261. He would have the same danger as the person taking out coal?—Yes. I think the workman should be allowed to have discretion.

35262. That has been put once or twice, If that is so, and the person at the working face, because of his long experience at the face and seeing the dangers round him, is the best judge, then you do not think it fair or right that some person outside the fireman, or someone else, should tell him to take out timber set for his own safety?—I do not think they should tell a man he should take it out. If they say a stick was necessary they should have some right to instruct the man to put it up, but I do not think they should tell a man to knock it out or that it should be taken out.

35263. If there is no limitation on the miners at the face to set timber so far as the face is concerned for their own safety?—Not in the least.

35264. They are expected to do so?—If they do not do so they are prosecuted.

35265. In addition to that they are expected to stand a prop at any point which the fireman may instruct them?—In addition to that they have to do so.

35266. (*Chairman.*) Do you wish to add anything more?—No, I do not wish to say anything more.

MR. HUBERT JENKINS, called and examined.

Mr. H. Jenkins.

35267. (*Mr. Wm. Abraham.*) Do you agree with the former witnesses generally with regard to their statements as to what they consider necessary to strengthen the law to reduce accidents?—Yes, generally speaking, I do.

35268. It is no good taking it again line by line, but probably you have something from your own districts you would like to emphasise. Will you kindly state that to us?

(*Mr. Ratcliffe Ellis.*) What is his district?

35269. (*Mr. Wm. Abraham.*) You are miners' agent for the East Glamorgan District?—Yes.

35270. How many years have you been a practical miner?—I have had 22 years of underground work.

35271. Were you appointed agent a few years ago?—I was a checkweigher for two years and three months, and I have been appointed a miners' agent for nearly three years.

35272. Will you state to the Commission in your own way anything you want to add as emphasis to the evidence given? Is there anything you want to enlarge upon, or is there any new point you want to make? We are under a disadvantage through not having had your proof.—I understand that. To begin with, I would like to say I agree with those who have tendered evidence as regards the abolition of fines inflicted by the managers for breaches of the Coal Mines Act. I certainly think if in every case the offender was prosecuted it would have a strong moral effect on the rest of the workmen.

35273. With regard to the inspection of the mine by the workmen, what is your opinion?—My experience has taught me that there is a general reluctance on the part of a large number of the workmen. They feel somewhat reluctant in accepting that duty because of a fear of consequences, whether they are justified or not is questionable in many cases, but still they have that fear of consequences in case they should have to present an unfavourable report.

35274. With regard to the third class of inspectors suggested, what do you say to that?—I think that there certainly should be a third class of inspectors appointed—what we may term workmen-inspectors—and that they should possess a practical and thorough knowledge of working in the mines, and that this may be supplemented with a certificate of competency, preference to be given to those, of course, who would obtain such a certificate.

35275. In your opinion, in addition to a man being a thoroughly practical, experienced miner, if he possesses a certificate of competency, that would add to his qualifications?—Yes.

35276. Is it within your knowledge that you have a certain number of men in all the districts in South Wales who hold certificates?—Yes, that is so.

35277. With regard to systematic timbering, what is your opinion about that as a practical miner?—My experience has taught me that a large number of accidents which now happen could be avoided if a systematic method of timbering was adopted.

35278. You do not mean that the same distance should be stipulated in every colliery and every district throughout the country?—Certainly not.

35279. But that a manager or some of his experienced workmen, after careful observation, should state a certain distance to be the rule for that place?—Yes, that is my view entirely.

35280. You believe if that were done that a certain number of accidents which now happen because of want of timbering would not occur?—Yes.

35281. That is your honest opinion?—That is so.

35282. You believe that it will strengthen the Act and reduce the number of accidents if a similar stipulation is placed upon the putting of timber in the roadways and the travelling roads, such as there is now in the face?—Yes.

35283. Do you know as a fact that, notwithstanding we were at one time opposed to it, the stipulation made by law in the face has been the means of reducing the number of accidents?—I believe it has.

35284. There again you have no hesitation about giving your opinion?—Not the least.

35285. You believe if a similar stipulation is made according to the necessities of the strata and so forth—if it is made compulsory that timber should be placed at that distance—that would have the same result, and reduce accidents as it has already done in the face?—I agree.

35286. (*Chairman.*) I see that you object to General Rule 22. You say General Rule 22 should be amended so that there should be provided at the working place more than the amount of suitable timber required for the one day's use. I do not understand that Rule 22 limits the timber to be provided to the timber which might be reasonably required for one day's use. The Rule is "Where the timbering of the working places is done by the workmen employed therein suitable timber should be provided." It does not say anything about only for one day's use. Your point is that every now and then there may be a special

Digitized by Google

call for timber beyond what is likely to be required for one day and to meet that there ought to be a special reserve of timber?—Yes.

(*Mr. Ratcliffe Ellis.*) May I refer to the Special Rule in the South Wales District, 10 and 11: "A supply of suitable timber reasonably sufficient for the work that is being done shall be kept either at each man's working place where mineral is being gotten or at the nearest point thereto that is reasonably practicable."

35287. (*Chairman.*) You think that rule which has been read out is not strong enough?—Yes. You explain my view exactly. You have taken a right conception of what I mean.

35288. There should not only be enough wood reasonably supposed to be sufficient for the day, but also a reserve of wood in case of an emergency?—Yes.

35289. There is also another suggestion which you make. You say, "If a double means of coupling were adopted in all kinds of haulage where more than one tram or tub is drawn at the same time a large number of accidents would be prevented." What do you mean by "a double means of coupling?" Do you mean they should not be dependent upon one coupling, but that there should be a double coupling to every tub?—That is what I mean. If one broke, the other would prevent the trams running backwards.

35290. A side chain or an over chain or something of that kind?—Yes.

35291. (*Sir Lindsay Wood.*) You say that the fines should in all cases be abolished, and that every offender should be prosecuted?—Yes.

35292. However trivial the cause might be?—Yes, I believe in prosecution.

35293. Is that the opinion of the workmen generally in your district?—It may not be the opinion of the workmen, because certainly they have a feeling of reluctance to appear in a police court; but for the purpose of maintaining discipline I think that there should not be too much weight given to the feelings of the workmen. I believe if prosecution was insisted upon it would exercise such an influence on the other workmen that these breaches of the Act would be a rarity—not so common.

35294. (*Mr. Smillie.*) You mean it may not be the opinion of the particular workman who was found guilty of a breach, but that is the general feeling of the miners in South Wales?—I believe that the general opinion of the workmen, taken as a whole, is in favour of the abolition of fines.

35295. (*Sir Lindsay Wood.*) Those are rather strong measures?—That is my honest belief.

35296. There may be faults committed of a slight character by no means tending to the unsafety of the mine or the workmen which may be small breaches of the rules, or anything of that sort, which must be checked, but prosecution means both a heavy fine and a heavy loss of work?—Yes, and the dread of such would influence the men so that they would be more keen to avoid committing breaches of the Act.

35297. You said, in your opinion, that there should be third-class workmen inspectors?—Yes.

35298. Are those to be under the charge of the Government?—Certainly.

35299. Appointed by the Government?—Yes.

35300. How many would you propose should be appointed?—It is somewhat difficult to suggest the actual number required, because due regard would have to be given to the circumstances of different districts. In some districts the collieries are situated closely together and in other districts they are large distances apart; and, again, there are some collieries which are very large and others which are very small. All these circumstances would have to be taken into consideration, and by experience we would have to find out the exact number required. I think a sufficient number should be appointed by which these inspections could be taken at least three or four times a year.

35301. Inspection by these workmen?—By these workmen inspectors.

35302. Of each colliery?—Yes.

35303. You mean the entire colliery?—The whole of the workings in each colliery.

35304. Two or three times a year?—Three or four times a year.

35305. That would entail a large number?—Undoubtedly it would.

35306. I assume you mean that these inspectors would be under the chief inspector?—Certainly, I agree with what has been suggested.

35307. Did you mean three or four inspections should be made in addition to the inspections by the general inspector?—Yes.

35308. There would be considerably more than three or four inspections?—These workmen inspectors, we may term them should inspect the whole colliery workings at least three or four times in the year.

35309. And report to the head inspector?—Yes.

35310. In addition to any inspection he might think proper to make himself?—Yes.

35311. (*Chairman.*) Or the assistant inspector?—Yes.

35312. (*Mr. Ratcliffe Ellis.*) I do not understand your view about systematic timbering. Is it that there should be a maximum distance prescribed in the mine by the manager?—Yes, I think the workmen should be consulted as well.

35313. That is the point. The rule at present in your district is this: "Where timber is used to support the roof, the owner, agent, or manager, shall keep posted up at the mine a notice specifying for each seam or district of a seam the maximum distance apart at which props or other roof supports at the working faces where persons are employed in getting and filling minerals are to be set." That obliges the manager now to prescribe the distances at the working face?—Yes.

35314. That is systematic timbering?—Yes.

35315. You say the manager should not have a right to do that?—No.

35316. You say a manager should not have that right, but that the manager and the workmen should decide that?—Yes.

35317. What workmen?—His own workmen.

35318. Each man working in the face is to prescribe with the management what distance apart these props should be?—I should say he should consult the workmen's committee. That would be representative of the whole body of workmen.

35319. There might be differences in these working places?—Certainly.

35320. The same distance would not do throughout the pit. How is it going to be carried out and worked? When this consultation takes place is it to be every day?—Certainly not.

35321. He has to prescribe a notice specifying the maximum distance at the mine?—This should be done before framing special rules.

35322. This rule is framed and has to be carried out. I want to see how it is to be carried out. If the manager is not entitled to please himself he can only do it after the men and he have agreed. If the men and he do not agree what is to happen?—An arbitrator should be called in.

35323. In each of these cases your view is that the manager, before he prescribes the distance in each working place, must consult with some committee of his workmen as to what the distance should be, and if they fail to agree it must be referred to arbitration?—Yes.

35324. Do you think it is possible to carry on the working of a mine with an arrangement of that sort?—Certainly I do, or I would not suggest it.

35325. Whilst this is all being discussed, and you are going to arbitration—a lawyer's experience of arbitration is that it is not done in a few minutes—if an accident happens in the meantime, who is responsible?—The management, certainly.

35326. And still you do not give the manager the right to say where he thinks the props are necessary?—I have maintained that the workman should exercise his discretion as to when timber is necessary.

35327. You would exclude the manager from any voice in it, but still you would leave the management responsible?—I should certainly hold the management responsible if they refused to allow the workman to exercise his discretion.

35328. If the workman is to please himself what timber he puts up and where he puts it, and the manager has nothing to do with it, and an accident happens, would

Digitized by Google

Mr. H. Jenkins.

13 Dec., 1907

you leave the management responsible for the consequences by being liable for penalties under the Act, and the employer liable under the Workmen's Compensation Act?—Yes.

35329. Who is to be responsible whilst this discussion is going on?—The same party that is responsible now.

35330. (*Mr. Smillie.*) Special Rule 50 provides that the overman "shall direct the colliers and other persons employed in the mine properly to stow away all rubbish produced in their stalls and working places, and to remove all loose overhanging stones or coal in the roof and sides, and to put up all necessary sprags, props, walls and gobbing, to make their working places safe." That is, the overman is to have power to order all persons under him to do that. Special Rule 67 gives the fireman the same power, and says that the workmen must be under his charge, and must obey his orders, and put up all sprags and props where he orders them to do so at the working face. Those are the special rules now?—Yes.

(*Mr. Ratcliffe Ellis.*) And there is the timbering rule too.

35331. (*Mr. Smillie.*) The systematic timbering rules are the rules which you were discussing just now?—Yes.

35332. Your point was, before systematic timbering rules as to distance between props or crowns should be fixed that the workmen should be consulted?—Yes.

35333. If management and workmen fail to agree arbitration might be resorted to?—Yes.

35334. In the meantime, if an accident takes place from want of systematic timbering who is to be held, responsible? You answered that the manager was to be, because the fireman or overman may during that time order that person to put up props wherever he cares to.

(*Mr. Ratcliffe Ellis.*) He can go to arbitration whether he may or not.

(*Mr. Smillie.*) Special Rules 50 and 67 are not suspended because you go to arbitration.

35335. (*Mr. Wm. Abraham.*) Is it not a fact that all rules are always in force until new rules are agreed upon?—Yes.

35336. (*Mr. Ratcliffe Ellis.*) The systematic timbering is to be suspended?—No.

35337. (*Mr. Smillie.*) It is just as well to get this out of the witness. While claiming that the workmen should have some voice in the fixing of the distance, and that they should be entitled to go to arbitration if they cannot agree with the owners, you are willing that the present systematic timbering rules should continue in force until new rules are established?—Yes; I have not proposed to suspend any rule in force.

35338. We are anxious to extend what is now systematic timbering at the face to the main roads?—Yes. There is one point I should like to emphasise, and that is with regard to the employment of unskilled labour. I certainly think that something should be done to prevent an unskilled workman being allowed to take charge of a working face by himself, or being allowed to take charge until he has sufficient experience.

35339. (*Mr. Wm. Abraham.*) That is the law now?—But we want to go further and adopt some method in order to prevent an infringement of the law. I am not blaming the colliery manager for the moment, but a case recently came under my notice where a man was employed to fill coal by night. He was one of those men whom in South Wales we call a "sponger," and he met with his death, and I have reason to believe that he was not a collier from what I have heard since the inquest.

35340. (*Chairman.*) And yet he was in charge of a working face?—Yes.

35341. Alone, by himself?—Yes; he was allowed to cut coal by himself.

35342. Why did you not tell the inspector this, and ask him to prosecute?—What I say is this. The evidence I am giving now is hearsay, and it would be somewhat difficult to get to the bottom of it. This man was reputed to be a quarryman some years ago when working in our neighbourhood before. He came to the colliery and represented that he had recently left another colliery.

35343. (*Mr. Wm. Abraham.*) You think there ought to be some system of finding out whether men are colliers or not?—That is what I mean.

35344. (*Mr. Smillie.*) Was there an inquest held in this case?—Yes.

35345. Did you attend?—I did.

35346. Did you bring out whether General Rule 39 had been carried out? Did you endeavour to bring that out?—At this particular inquest it happens that the coroner there has refused me permission to put a question. I have had to stand down when asking permission to put a question to a witness; consequently I have not attempted to obtain that permission since when attending an inquest over which this coroner holds jurisdiction.

35347. Was the Inspector of Mines at that inquest?—Yes.

35348. Did he endeavour to bring out the facts as to whether this person had been previously employed?—No. Of course it was taken for granted that he was a skilled workman.

35349. Had you the information previous to going to the inquest?—No.

35350. Your suspicions regarding the matter had not been aroused previous to that?—No.

35351. This is one case only which you know of?—No. At the same inquest a workman gave evidence who, when questioned as to the nature of the roof, could not answer and say what was the nature of the roof, whether it was cliff, rock, or what it was.

35352. Was there any person working with this man who was killed?—No.

35353. Was he working alone?—Yes. This other one was working in a place, too.

35354. (*Mr. Wm. Abraham.*) That is one case. Do you think during the last few years that the managers in South Wales are keener about the quality of men they engage as a rule?—I want to make that point clear. I do not attribute any blame to any colliery manager. I think they are as careful as we can expect them to be; but it is possible for a workman to misrepresent himself to the manager, and I think something should be done to make the man produce proof that he has worked at the face for two years, in accordance with the law.

35355. (*Mr. Smillie.*) A manager may be misled by a person saying that he has worked two years at the face?—Yes.

35356. From the timbering rule Mr. Ellis quoted down a certain distance. Have there been any alterations in these systematic timbering rules as to distances since they were established in 1902? Has there been any alteration posted in your district since?—I could not say.

35357. It is not likely every second or third day, or every other week, that the manager will post up new distances as to timber?—No.

35358. The last part of Rule (A) says: "Provided that nothing in this rule shall prevent the setting of timber where it is required in the interests of safety at a distance other than that specified in the notice." That is, the miner shall have the right, in addition to systematic timbering, to set his timber where, in the interest of safety, it is required?—Yes.

35359. It says nothing shall prevent him doing it, but in the face of this rule the fireman claims the right to take out his timber where he thinks he has set it for his own safety?—Unfortunately that is so.

35360. You strongly object to that?—Yes.

35361. Who would be responsible, supposing a miner set a pair of timbers which he thought was required at the gate end, and the fireman knocked them out, and a fall took place afterwards by which a boy or a man was killed? Would the fireman be held responsible for the death of the man?—No, the management would be held responsible for it.

35362. In compensation?—Yes.

35363. He would not be charged with manslaughter?—A case like that has not come under my notice. I think that would be a very strong case.

35364. If you had a case of that kind you would be likely to try and get a case raised against the fireman?—Certainly.

35365. (*Chairman.*) Do you wish to say anything more?—Yes. With regard to the stowing of small coal in the gob or waste, I hold the opinion that the coal as gotten should be sent out. I know one particular colliery where there are thousands of tons of small coal being thrown into the gob or waste, and at the same time a huge rubbish heap is to be seen at the colliery. If the small coal was sent out and the rubbish kept in it would tend to prevent accidents, because it would make a firmer gob than small

Digitized by Google

coal. Small coal will not support the roof when a heavy squeeze comes on.

35366. (*Mr. Ratcliffe Ellis.*) If the small coal was sent out they would be paid for it?—They are not paid at that colliery.

35367. They would be paid for it?—Not under the present arrangement.

35368. They are clearly not entitled to be paid for it?—They would not be paid under the present arrangement.

35369. You think that the present arrangement is not quite fair, and that they ought to be paid for it?—Certainly.

35370. There is no question of being paid for the dirt that comes out. This small coal is of very little use when it is brought out?—It is a very valuable commodity on the market to-day. *Mr. H. Jenkins.* 13 Dec., 1907

(*Mr. Ratcliffe Ellis.*) Then it is very extraordinary why it is left inside.

35371. (*Mr. Smillie.*) Was it because of the payment point of view you advocated it should go out?—No, because I believe it would tend to prevent or reduce the possibility, especially in places where the workman has to work in wet places, of spontaneous combustion occurring because of the stowing of the small coal in the gob.

FORTY-NINTH DAY.

Wednesday, 22nd January, 1908.

PRESENT:

Lord MONKSWELL (*Chairman*).

Sir LINDSAY WOOD, Bart.
H. H. S. CUNYNGHAME, Esq., C.B.
WM. ABRAHAM, Esq., M.P. (Rhondda).
ENOCH EDWARDS, Esq., M.P.
THOMAS RATCLIFFE ELLIS, Esq.
JOHN SCOTT HALDANE, Esq., F.R.S.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. JOHN WILSON, M.P., called and examined.

35372. (*Chairman.*) I understand you have not prepared any Statement to put before us, but you desire that we should ask you any questions we think desirable?—That is so. *Mr. J. Wilson, M.P.* 22 Jan., 1908.

35373. Witnesses on behalf of the Miners' representatives have been examined here on the basis of certain questions which have been drawn up to a great extent, I believe, by Mr. Edwards. I propose to take you through those questions drawn up by the Miners' representatives so that you may know on what points we desire to hear evidence. First of all, there is the Government inspection. What are your views as to whether it is desirable there should be more inspectors?—I think it is essential and necessary there should be more Government inspectors.

35374. How many more?—I would not go so far as to say; neither would I like to be understood as making any complaint in any way at all. The county which I represent has 311 collieries, I think, in it, and has underground about 104,000 people. There are, I think, six inspectors in the North of England to cover Durham, Northumberland, Cumberland and North Yorkshire. For proper inspection I think that is too much for six men—if inspection has to be inspection.

35375. What do you consider ought to be the theory of the Government inspection. Do you consider every mine, for instance, ought to be visited all through, say, once a year or once in six months, or once in three months, or do you consider sample inspection is sufficient?—I think they ought to be properly inspected and the men should have a proper round. I would not fix a time or a period when they should inspect I do not think it is proper inspection when men have just to wait until they are sent for, but I think there should be a sort of circuit for each inspector, and he should visit the collieries within proper times.

35376. Is not every colliery visited by either an inspector or an assistant inspector at least once a year?—I cannot say whether he inspects them once a year or not.

35377. We have had statistics about it. They have to give a report in every year to the Home Office showing what inspections are made, and in most of the districts we find that nearly the whole of the mines have been more or less inspected in the course of the year, sometimes only by sample, and in other cases right through the mine?—I do not see how they could inspect mines by sample.

35378. You do not think it is any good for a man to go down a mine and see a bit of it?—No.

35379. You think he ought to see the whole of it?—Yes. Looking to the number of accidents and the classes of them, I think they all want closer scrutiny and inspection of the roofs and sides.

35380. By the fireman?—By whatever inspector it may be. It is not sufficient, I think, for six men to inspect all the collieries in the North of England, taking our part as a type. We have 311 collieries in Durham; one-third of that number, speaking roundly, in Cumberland and the whole of Northumberland and the North Riding of Yorkshire.

35381. Have you considered what number of inspectors would be necessary in your district to carry out your views?—I have not.

35382. Probably twice as many as at present?—I should have, perhaps, a different class of inspector.

35383. Would you have a third class?—Yes.

35384. Would you have a considerable number of them?—I would have a sufficient number to properly and safely inspect the mines. I have not gone into the question of the mathematical number.

35385. What sort of pay do you think you ought to give to them in order to get reasonably good men, competent to do the work?—I think if you had the men paid pretty much like the officials are paid at the collieries, you would get a class of men who would be competent to make it their particular and special work to look after the safety of the mines.

35386. They have very much that class of men in Germany, and they pay them about £3 a week to begin with. Would that be about your idea?—I think that would be a very fair wage, and you would get a good class of man for that.

35387. Would you consider the third class inspector should be a class by itself, or would it be men who have risen and made themselves competent to do that work?

Digitized by Google

Mr. J. Wilson, M.P.

22 Jan., 1908.

—I do not think I would stand in the way of their doing that. If a man in the lower grade showed himself competent and qualified, I do not see why he should not rise to a higher grade.

35388. What sort of examination would you put these men through?—There are hundreds of men in the county of Durham holding first-class certificates working every day, and a number doing deputy work and coal hewing. They are competent to examine a mine.

35389. Would you suggest it should be made a *sine qua non* that only these men holding first or second-class certificates should be appointed?—I think they should be shown to be competent, and I should think for inspecting a mine a second-class certificate would be sufficient.

35390. You think the third class of inspector should be qualified if he had a first or second-class certificate?—Yes. I think men should show their qualification, and it would be an impetus towards the education of men, because they would educate themselves with a greater hope of success.

35391. Would you suggest some sort of special examination?—Is not the present second-class certificate sufficient for a man to manage a mine? It entitles him to an under-manager's place.

35392. (*Mr. Ratcliffe Ellis.*) Of course an under-manager is under the supervision of the manager?—He has the sole charge of the mine while the head manager is not there, and if a second-class certificate is sufficient for that, surely it is sufficient for him to examine a mine.

35393. He does not take charge?—While the head manager is not there, he is the sole responsible person in the mine.

35394. Yes, but the manager is responsible?—But he is not always in the mine, and the under-manager is more frequently in the mine than the head manager. He is the practical over-looker of the mine. My point is this, that whatever qualifies a man to take that responsible position qualifies him for examining a mine.

35395. (*Chairman.*) You consider that these men whom you would like to be appointed as a third class of mining inspector should be qualified by having either an ordinary first or second-class certificate?—Yes. I would not like to say every man should be chosen regardless of his fitness.

35396. Would you insist upon his having five years' experience underground or some such experience?—I think so. I think he should be a practical working man. I would not take a man out of a school and set him to examine a mine.

35397. Need he be a practical man at the time of his appointment. Would it be sufficient if some years ago he had worked underground for a period, say, of five years?—And then left the mine?

35398. Yes. Supposing he had left the mine and set up a shop, for instance, and he was taken back again into the mine?—That, speaking broadly, would not be an objection if the man had had the experience previously. Take myself; I have been out of a mine for more than five years, but I think I could examine a mine.

35399. You say a man to be appointed must have got either a first or second-class certificate, and in addition to that, he must have had considerable experience underground some time in his life?—I think so. I would not say a man could examine a mine by theory, because it means a practical experience of a mine to examine properly.

35400. Let me ask you with regard to other forms of inspection. Take first inspection by the men under General Rule 38. In Durham, according to Mr. Bain's evidence, inspection under General Rule 38 is very much in vogue?—It is not practised as largely as it ought to be.

35401. How often do you suppose inspection takes place on an average?—I think it depends pretty much on the colliery. Sometimes they go round once in three months, and sometimes once in six months.

35402. Sometimes they do not have any inspection at all?—Sometimes, I think, some mines are not inspected.

35403. Do you consider under General Rule 38 the men should inspect once a month as they are allowed to do?—I think they should.

35404. Even in your district, where this inspection under Rule 38 is carried out much more thoroughly than apparently it is in other parts of the kingdom, you think there is room for improvement?—I think the improvement should be within the provisions of the 38th Rule—that men should take advantage of that.

35405. Whom should the men be allowed to appoint? Should the choice be restricted to men working in the same pit?—When this Coal Mines Regulation Act was under discussion, I objected to the words in the 38th Rule. I felt it was restricting it too much, when the present tense was used: "Who are practical miners." I think it ought to be broadened; even if a man was not working in the mine for the time being, but had been a practical working miner.

35406. There is a third point, as to whether the power of the men should be restricted to the power of appointing someone working in the same pit, or whether they should be allowed, if they liked, to choose someone outside?—I could not imagine such a case. It would be a queer thing if we had not a man who was fit and whom the men did not think was competent to examine his own mine.

35407. It is suggested there have been such cases?—I do not know a case. We have men at every pit able enough to inspect the pits and we would never bring in a man from other collieries. I cannot speak for other counties, I am speaking for myself.

35408. We have had a great deal of evidence as to the duties and responsibilities and the appointment of firemen. The general complaint was, in the first place, that the districts were in many cases too large, and it was impossible for the firemen to get round his district and do justice to it—and, in the second place, they complain that the firemen were in the habit of being told off by the management to do other duties than looking after the safety of the men—that they had, for instance, to see the way in which the mine was worked, that there was no waste and so on, and in general that they had the duties of management put upon them in addition to looking after the men's safety, and they thought that was very undesirable. In the third place, there was a good deal of complaint as to the appointment of the firemen, that they were very often appointed not because they were the best men to look after the safety of the men, but because they were, to put it in the language of one witness, good slave drivers, and they could get a good deal of work out of the men?—With us, the latter portion would hardly apply. It might apply where there was a sort of "buttyism"—sub-contracting—but in the North deputies are appointed whose ostensible work is to look after the safety of the men as well as the proper working of the district over which they are set.

35409. Do you think that is a proper thing to do, to combine the functions of safety and the functions of management?—In many cases I think the deputies have too wide an area to look after, too many men and too many places, to carefully examine the places as they ought to do.

35410. Some of the men declared it was perfectly impossible that the fireman could go through all the gates leading up to the working places?—Take the time to be an hour between his going in to examine and the coal hewer going in—I do not think it is possible, speaking on the average of the distance of the station from the face, for a man who might have 13 or 14 or 15 gates or places to properly examine in accordance with the requirements of the Act. He should examine all the sides and roofs and all the places the men have to go through. Speaking now for the North of England, Durham and Northumberland, and what I would call an average number of places, I do not think it is possible for a man in the time to properly examine that distance.

35411. Are all the districts too great, in your opinion?—I would not like to say all. I suggest that, of course, as a means of safety.

35412. You said just now that the deputies have not only to look after the safety of the men, but they have to some extent to have regard to the management of the mine?—In the district over which the deputy is set he is the first man to which an application is made if anything happens. For instance, if a boy's wagon or tub gets off the way and he cannot manage to put it back by himself, the deputy is the man he applies to. Likewise in the case of setting timber and attending to brattices and doors, and looking after the places, he is the first man to be applied to. It is all right with regard to the face examination, but what time has he to give to the sides, according to the wording of the Act?

35413. You think the duties placed upon the deputies are too multifarious. Brattices, no doubt, you would consider he should attend to?—That depends upon the relation of his work to his time—whether he has too many men or too many gates or places. It is possible

Digitized by Google

to keep the number of places within the compass of a man's work and time so that he can look after all of them.

35414. Ought he to be the person to look after the filling of the tubs, to see, for instance, that not too much small coal is put in?—The deputy with us never interferes with that.

35415. You consider in Durham the functions of the deputy are what they ought to be?—Exactly, if you bear in mind what I am saying, that he should not have too many places.

35416. He ought to have a district that he should be thoroughly capable of inspecting from end to end?—Yes.

35417. Complaints have been made to us before now by the Miners' Federation that the deputies have different work to perform to the work they ought to perform?—You see customs differ very much. Speaking now for Durham, with its own peculiarities, and Northumberland, if he had not too many men he might do it properly. The work he has to do so far as we are concerned, is deputies' work, and he has not time to inspect, according to the requirements of this Act, the sides and the roof. I take it one-half of the accidents in the country arise from falls of roof and sides. I would like to say I have no complaint whatever to make against our deputies and the work they do; I am only speaking from my own observation that they have too many men to attend to to carry out the proper safety of the mine in many cases.

35418. As a general rule you consider the deputies are the proper men to perform those duties and that the best men are generally selected for the purpose?—I have known cases where "my cousin" got a place and someone else should have had it. I was never chosen to be a deputy: I was never considered capable enough to be a deputy, but we have all our "cousins," I suppose.

35419. I will now come to discipline and its enforcement by fining or prosecution. Many of the men who gave evidence before us thought that the system of fining was too frequently put in force, and it would be much better if there were more prosecutions?—You mean fining by the manager.

35420. Yes.—I do not know whether it is our peculiarity, but we do not permit that: we fight against that, and we think the magistrates should decide.

35421. You fight against fines altogether?—We object to fines being imposed at the dictum of the manager. But I do say this, that every breach of discipline, every violation of Special Rules or Act of Parliament, should, for the safety of the men as well as the manager and employers, be punished.

35422. Even in the case of a small breach of discipline?—That would depend upon its merit.

35423. In every case where a reprimand is not sufficient you think the man should be sent before a magistrate?—Yes. I think there were nearly 100 prosecutions last year in the southern part of Durham—indeed, I have the list before me.

35424. The men who came before us were certainly more in favour of prosecutions than fining, and I think a great many would agree that fining should be almost totally abolished: but at the same time Mr. Bain, your inspector, holds a different view upon that. He says with regard to that: "Men very much dislike being prosecuted, and it creates friction in other ways: they would accept the punishment of a fine of a larger amount than would be inflicted by the magistrates of the district"—by the manager, he means. You do not agree with that?—I respect Mr. Bain's opinion; but I claim that I know more about the wishes of the men than he does.

35425. Your opinion is that the men would prefer to be prosecuted?—I say this, that they would object to the manager having the magisterial function to fine them as he thought fit.

35426. I suppose there might be very insignificant breaches of discipline that might possibly be met by a small fine?—I need not say that the insignificance of a thing would lie with the observation of the man who had to impose the fine. If you once say he can start to do it, logically you cannot stop.

35427. The men could always object?—Yes, but the law is made to punish. The magistrate is there, and the summary courts are there to punish a man if he breaks the Rules. We had 75 prosecutions in the south part of Durham in 1906, according to Mr. Bain, and the amount of the fines and the number of them are given in Mr. Bain's report.

35428. Will you tell me the number of fines?—There were six contraventions of rules about safety lamps, the amount of the penalty being £2 3s. 6d., and costs £3 12s.

35429. That was prosecutions?—Yes.

35430. Not fines?—I am not speaking of the fines.

35431. Are there no instances of Durham miners being fined by the management?—They are unknown to me.

35432. I will refer you to Mr. Bain's evidence, *Q.* 6,635: "Although your prosecutions of the managers are rare, prosecutions by the managers are fairly frequent in your district?—*A*: That is so. I can give a few figures with regard to some of the larger collieries. At one colliery there were 108 persons fined last year, the aggregate amount of fines being £24 9s. 8d.: at another colliery, 37 persons fined: at another, 63: another, 18: then 11, 11, 45, and 48. One large colliery does not fine at all, it always prosecutes"?—There were 75 prosecutions, according to Mr. Bain, in South Durham in 1906.

35433. Were they fined by the management?—Does he say that 108 persons at one colliery were fined last year by the manager?

35434. He does say that.—When he says "last year" I suppose he means 1905.

35435. At all events there are fines by the management sometimes?—If it is done it is unknown to me. My colleague is here, and I say in his presence I do not know of a single instance. I do not say there would not be such fines, but I do not know of them; and I say now, collectively, the men object to being fined.

35436. What do you say with regard to the system of establishing Special Rules?—I think the system wants altering.

35437. In what respect?—I do not think it should lie with the manager and the owner to establish Special Rules themselves. Here let me observe that what I am now going to say is the practice in the County of Durham.

35438. As regards the County of Durham the system which you explain commends itself to you?—Yes.

35439. You consider if that system was made general that would be sufficient?—Yes. When a Special Rule is to be introduced—I am now speaking in the presence of the chairman of the Durham coal trade—the workmen and the mines inspector and the employers all meet and discuss it. I am safe in saying in 1887, I think, we had a very large number of meetings before the Special Rules were agreed to. Of course the owners drew them up themselves and submitted them to us and to the mines inspector, and we met and discussed them. In my opinion that ought to be the law. I have heard about other counties, but I do not know what the practice is in other counties. I recommend that the men should be taken into a sort of partnership at once, through their representatives.

35440. In Durham do the men ever suggest to the management any Special Rules?—I cannot remember an instance since 1887 where there has been any suggestion from the workmen as to the alteration of Special Rules.

35441. (*Sir Lindsay Wood.*) But during the discussion were there any Rules suggested by the men?—Yes, many alterations.

35442. (*Chairman.*) But the men never take the initiative in suggesting any rules?—We brought forward amendments.

35443. Do the men ever make the suggestion first to the management?—So far as my memory will serve me, in 1887 (I was one of the Committee) the Rules were submitted to us as framed by the owners, and then the mines inspectors and ourselves and the owners met, and amendments were proposed by us and accepted.

35444. Do the men ever take the initiative? It would be competent for them to do so if they liked. Supposing they thought it was desirable that certain Special Rules should be adopted in their district, it would be quite open to them to approach the management with a view to getting those Special Rules adopted?—Yes, and I do not mind going further and saying that if the Association of which we are Secretaries were to say that they want an amendment of Special Rules, if requested a meeting would be convened for that purpose.

35445. Supposing your Association wanted a change in the Special Rules, they would go before the owners?—If I sent in a request to the owners I do not think the owners would object to appoint a meeting to discuss a Special Rule.

Mr. J. Wilson, M.P.

22 Jan., 1908.

35446. With regard to accidents, taking first the falls of roof and sides, in Durham you have, as I understand it, a system by which the deputies set the timbers?—Yes.

35447. You consider that is a good system?—We do.

35448. In some parts of the kingdom the hewers are principally responsible for that?—I guard myself about the deputies with the little objection that I might have as to their having too many men to attend to. Many a time when he has too many he cuts the timber, and puts the right lengths of timber required, and then the men set the timber themselves while he is away. If he had not too many men, and perhaps too much work, he might pay a little more attention to the setting of the timber: I speak from my own experience: I would much sooner set the timber myself than allow the deputy to set it, because I could suit my work—although all men have not that knowledge.

35449. I suppose a deputy would very soon get to know what men could be trusted to set timber, and what men could not?—I do not know. I think sometimes he would have to run more often than he does. I know many times men will run themselves into danger for the desire to make money if they have to set their own timber—there is a possibility of men risking too much, especially towards the end of the shift, or if they have not very much time to do it.

35450. Have you any opinion as to the question of systematic timbering: that there should be certain rules adopted whereby timber should be put up at nor more than certain intervals, even although the roof might appear to be good?—I could not make any objection beyond this; the strata of stone differ very much, and that guards against the danger of the eagerness to make money. There are two things with regard to coal-getters which oftentime lead to accident: first, familiarity—"familiarity breeds contempt," and leads them to look upon things in a casual manner. The second is the man's eagerness to make money, and when it gets towards the end of the shift he will run a risk rather than stop, in order to make money at his work. I would like to read a portion of Mr. Bain's Report, if you will allow me, anent this question, which struck me as being very *a propos*. Dealing with the falls of roofs and sides causing accident, at page 15 of Mr. Bain's 1906 Report, he says: "During the year there were 65 fatal accidents from falls of roof and side causing the deaths of 68 persons. Thirty-five were caused from falls of roof and two from falls of side in the working places; 17 on roads; seven whilst drawing timber, and three when otherwise working or passing, and one in a shaft. Fifty-five of these fatal accidents occurred in the coal mines of Durham, and 10 in the ironstone mines of Cleveland." Now mark the next paragraph: "The number of fatal accidents from falls during the year is very excessive, and I have difficulty in ascribing any cause. It is a fact that now there are many more thin seams being worked than formerly, and it is very probable that—other things being equal—a man has a very much lessened chance of escape from a falling roof in a thin seam than he has in a thick seam. In a thin seam he has to work in a very restricted area—often lying at full length on his side. In such cases any slight warning that may be given is of little avail, as the man in so limited a space is unable to move himself instantly from the threatened danger; whereas in a thick seam he can do so. The difference of the chances of escape may be readily conceived—in the one case a man on his feet nimble and alert in the other a man cramped up lying on his side—alert enough, but anything other than nimble." That strengthens my idea that those who set timber, the deputies in the North of England or elsewhere, ought to have more time in the thinner seams than in the thicker ones. We all know that Mr. Bain is cautious, and does not make a statement wildly. While the seams are getting thinner it is necessary that more time should be given to setting the timber.

35451. How about accidents from haulage?—I would suggest that although there are refuge holes in the engine planes, as endless ropes or endless chains are now being adopted rather more than they have been, there should be a separate travelling way driven parallel with the wagon-way. Endless chains are very dangerous. The men take risks again and again in coming out or going in, and they oft-times get themselves caught in the tubs. It is the same with the refuge holes. According to what we have heard in investigating cases under the Workmen's Compensation Act, it appears that numbers of men get caught in running from one refuge hole to the other; they do not do it wilfully, but they think they can do it safely. If a place were kept as a separate travelling way to get along, apart from the engine plane altogether, I think it would conduce to safety.

35452. You would not consider it sufficient to have a gangway made?—That increases the danger itself in the roof; there would be such a wide expanse.

35453. I suppose in some cases the expense of having a separate travelling road would be almost prohibitive?—If you wanted to make a wagon-way wide enough for men to be safe, there would be just as much expense to keep that up as a separate travelling way.

35454. You think it would be very much the same expense and you could just as well make a separate road?—It would be a great deal safer, in my opinion.

35455. Perhaps you suggest that that should be made compulsory in the case of opening up new collieries?—It could be more easily adapted to new collieries than old ones.

35456. We have had a great many cage accidents lately. Have you anything to say about those?—No.

35457. Is there any other form of accident you would like to speak about?—I think not.

35458. With regard to the use of safety-lamps, do you consider that safety-lamps are sufficiently used in your district?—I think they are. I do not know of any case hardly where candles are used. I think safety-lamps are used generally in Durham.

35459. And the proper class of safety-lamps are used?—I think so.

35460. Do you think that the investigation into mine accidents is sufficient?—I think that the inquiry at coroner's court should be wider, and there should be more room for men to put questions. Here, again, I would like to say that we have never, in the County of Durham, had any objection to any question being put except on one occasion—and then, perhaps, the question was indiscreet. But we do know there are coroners, and not very far from Durham, who would be arbitrary and autocratic and object to a man putting questions. I think if a man with a practical knowledge of a mine was allowed to put proper questions in the coroner's court, the investigation into accidents would be better and closer than it is now.

35461. How should that alteration be effected?—You would have to make an alteration in the Act. If you look at Section 48 of the Mines Regulations Act, the last paragraph, you will see that he can only put questions if the coroner allows him.

35462. You would be in favour of some sort of rule being incorporated into the Act of Parliament to bind down the coroner and tell him what questions he should allow to be put, and what questions he should object to?—I do not know that you could do that. It is not for me to define exactly, but I do think that practical men appointed by the relatives of the deceased ought to have some liberty of asking questions. I have heard loud complaints from southern districts about coroners being very arbitrary, but I do not know a coroner in the County of Durham that has objected, except on one occasion. I could not classify the questions to be put. I am only speaking generally.

35463. Perhaps your objection might be met in this way, by some sort of order from the Home Office suggesting to the coroners that they should be very careful how they objected to any question being put?—So long as questions are proper, you should not be subjected to the arbitrary ruling of a man who is clothed with brief authority, or thinks he is.

35464. You would suggest to them that they should be careful how they vetoed any question?—How do you do in the ordinary Law Court? Does a man not ask questions? True, you may say the question is irrelevant. You may think this is a little bit of humour, but I will tell you seriously a thing I myself heard. I was at an inquest upon a man who was killed by a fall of roof, and I heard an intelligent juryman soberly ask whether the stone fell up or down.

35465. (*Mr. Ratcliffe Ellis.*) I daresay there may be many slip expressions, but you do occasionally talk about a roof falling up?—Heaving up. The stone would not fall up to kill a man.

35466. It is a common expression that a road has fallen up when the roof and the bottom have come together?—Heaving up

Digitized by Google

35467. But what is the object of the coroner's inquiry? It is to find out the cause of death in the first place, and then in the next place to see if anyone is to blame for it?—Yes. You take a representative of the workmen into court, and you have a jury composed of men such as I have in that playful, but true manner described; he would be able to go into it in a simple way and bring out answers as to the mode of timbering, and things of that sort.

35468. I think the difficulty which coroners feel is that there is an attempt made to push the inquiry further than a coroner's inquiry is appointed to go into. You have simply the two questions: What is the cause of the death, and is anyone to blame for it? It does not necessarily follow that you should go into the whole question of the management of the colliery?—No, but you go into the question of the particular case; whether there was sufficient timber or whether it was properly set, and a practical man brings his knowledge to bear upon the circumstances of the case.

35469. If the coroner's inquiry does not succeed in bringing out the whole of the facts, then there is a Home Office inquiry?—That I know.

35470. (*Mr. Wm. Abraham.*) That is our complaint. You lay it down as the duty of the coroner's court to find out the cause of death; but we want to find out whether there has been any neglect?—Yes. Supposing a man were to show that the timber was not properly set and not properly used—we call them "chocks" in the North—and he was to bring out in evidence by putting questions that chocks were preferable to ordinary props, you might prevent a future accident.

35471. (*Mr. Ratcliffe Ellis.*) With great respect, that would be hardly within the province of the coroner's court. There is someone to blame or no one to blame, and there is an end of the coroner's inquiry. You say if there is a further investigation, that might tend to prevent accidents in the future?—That is it.

35472. I think that is beyond the province of the coroner's court?—I think it could be done in the coroner's court. I say by allowing discreet questions such as a man would put in a coroner's court—not to find fault with the manager or anything of that sort—you might prevent accidents of the same kind occurring in the future.

35473. (*Chairman.*) Then you would extend the inquiry in the coroner's court not merely to inquiring into the cause of death and if anyone is to blame, but how such accidents could be prevented in the future?—It would arise inferentially. I may say when an accident arises in Durham we have full permission to send down two of the men to look at the place, and they can go down at any time. There is no prohibition. They say, "We want to see this place," and they go down. I have never heard of their being stopped yet.

35474. (*Mr. Ratcliffe Ellis.*) I do not want to prevent inquiring into accidents, but here you have a coroner's court which is perhaps the oldest court in the kingdom, and you get the jurors brought by the coroner's warrant officer from round about. It is quite within their capacity to say what is the cause of death, and whether anyone is to blame. But if you are going to submit to that tribunal what steps you are to take in the future to prevent such accidents, I am not quite sure that you would have the proper tribunal for that purpose?—Would not this be pertinent? A man is killed, and the inquiry is as to what is the cause of his death—the question arises: Is this timber defective or proper?

35475. They would say whether there was anyone to blame?—I know cases of this kind which have been brought out in consequence of the freedom we have of putting questions to the jury, that a different mode of timbering would have saved the accident, and the jury have recommended it.

35476. With great respect, I think that is going outside the coroner's court province, and I am not quite sure you have a proper tribunal to decide that question?—The coroner's jury make recommendations.

35477. I think if you find the coroner's court has not brought out all the facts sufficient to enable the prevention of similar accidents in the future, that is rather to be ascertained by an inquiry from the Home Office than by enlarging the functions of the coroner's court?—It would only arise out of the inquiry into the cause of the particular death.

35478. Let me call your attention to Section 45: "Where it appears to a Secretary of State that a formal investigation of any explosion or accident and of its causes and circumstances is expedient, the Secretary of State may direct such investigation to be held, and with respect to any such investigation the following provisions shall have effect"?—But you see at the commencement, it is after an accident of a particular kind has taken place; "any explosion or accident"—that is, after.

35479. In that inquiry he would be able to go into much more detail, and it would be before an expert?—Do you mean I could go back to Durham under this, if I thought fit, imagining or knowing that something would cause such an accident, and I could send to the Home Office and ask for an inquiry before the accident.

35480. No. If you want to find out not merely the cause of death, but in addition to that, how you could prevent these accidents in the future, if you do not get the facts sufficiently out before the coroner's jury, this is the method to be adopted?—I quite follow what you mean.

35481. (*Chairman.*) Do you suggest it would be better to have an Act of Parliament giving the coroner's court larger duties and larger powers than they have at present? The Home Office have now the power of ordering a second inquiry?—Yes, that is after an accident takes place, whether life is lost or not.

35482. You say the coroner's jury do not bring out the facts of the case owing to the coroner not allowing certain questions to be asked. That is a good reason for going to the Home Office and asking for a second inquiry?—It is a very cumbersome way to do it, especially when you are on the spot.

35483. You think the coroner's court and its powers should be enlarged in such a way as to allow certain questions to be put, which, as at present advised, he can do as he pleases about?—Yes.

35484. With regard to certificates for manager and under-managers, have you anything to say on that?—I do not think I can say anything on that.

35485. You think the present system is a fairly good one?—I have never heard any objection to it.

35486. Do you know anything about ankylostomiasis?—No, we have not got it yet. I was on the Continent at Liege with a few of my friends, and I went to see the modes of procedure which were being adopted to prevent it. We have nothing of that sort in the North of England that I know of. Might I just state one thing that may be cognate to your inquiry — in relation to ambulances. Although an ambulance could not prevent an accident happening, I believe it is possible if the men were trained in first-aid work, injuries might be prevented from developing seriously, and life saved. I have before me a report which Mr. Bain gave of the Wingate explosion in which he says: "It may fairly be claimed that the saving of some lives was due to the exertions of the ambulance men who were amongst the first to enter the workings after the Wingate explosion. When exploring in the Main Coal and Five Quarter seams, six men were found seriously affected by after-damp. Artificial respiration was resorted to, and the sufferers were so far brought round as to be able to be handed over to the charge of other rescuers who were following in, to be taken to the shaft." In my opinion, that is only a sample of the cases that would very often arise in a mine if men were trained in first-aid. I would have the officials at least in the colliery all first-aid men, and that would save the development of serious accidents, and might save life. I have before me the commendation of a man at one of our collieries where life was saved. I am glad to say in Durham a very large number of men are qualified in first-aid. I think, according to Mr. Bain, there were 1,318 students in the ambulance classes in the year 1906, and he himself gave a shield which cost about 50 guineas, and they give medals every year, and there is a competition.

35487. (*Mr. Ratcliffe Ellis.*) Would you make it a necessary qualification for a certificate?—No; I would rather suggest that the managers and owners should do it. There are one or more collieries in Durham where they will not employ a deputy unless he is a first-aid man.

35488–90. What objection is there to making a qualification for a certificate?—I think it would be a valuable addition to it.

35491. (*Sir Lindsay Wood.*) You think there should be more inspectors. Would you have smaller districts for the district inspector?—No, I do not say that that is necessary.

35492. You would have one inspector for the large district which you represent and more assistant inspectors,

Digitized by Google

Mr. J. Wilson, M.P.

22 Jan., 1908.

and a new class of working-men inspectors?—If you had a new class of what you might call the lower grade, I do not see there is any necessity to have the assistant inspectors multiplied.

35493. You would recommend an increase of a considerable number of the third class of inspectors?—Yes.

35494. Having a smaller area of district for each man?—Yes. There are collieries in Durham which would take up a lot of time. Take large collieries such as the Monkwearmouth or Murton, were there are 2,400 or 2,500 men and boys—it might be a saving economically if a man devoted the whole of his time to them; but there are other collieries much smaller with about 100 or so which might be grouped.

35495. If you had one man at each colliery would that not tend to taking away the responsibility from the management?—I do not think it would do that. I think the managers have more humane feeling than that, and they would not be careless and indifferent because they had a man going round who could point out defects. I would not like to go that far.

35496. It might have the effect of inducing them not to do certain things if they knew another competent man was there to see to it?—If I was an employer and knew a manager would relax his efforts because there was a man going round to look after the cause of accidents he should not be my manager long. I would ask him to seek another place.

35497. Would that not depend upon the amount of inspection that these men would have to give. It would take two men probably to go round the Murton Colliery four times a year. If they were going round in that way, it might have an effect of reducing the responsibility of the under-manager?—I should think Murton Colliery is inspected pretty well in conformity with the Mines Regulation Acts; and I do not think it tends in any way to relax the Manager's carefulness.

35498. Not if you give the responsibility to someone else?—Would this be the logical outcome of your reasoning: in order to make the managers do their duty, we should abolish all inspection?

35499. No; I think inspection, to a certain extent, does good, but if carried to a greater extent it might do harm?—Why should more inspection do harm?

35500. It might.—Well, that is the way in which I look at it.

35501. What number of these working-men inspectors would you appoint?—I was only speaking in a general sense: I have not thought about the number, but that is a matter that could be gone into.

35502. You think they ought to inspect the whole of every mine?—They ought to inspect the sides and roofs of the mine that cannot now be properly inspected.

35503. The new inspectors should?—Yes.

35504. That would take a great amount of time for a man to spend in every colliery?—I do not know that. Take any district or ways, as we call them, in our colliery—if a man took a day to go into one he would have six or seven hours' walking, more or less, in examining the places, and he would do it in a week.

35505. The whole colliery?—Could not they inspect the Hetton Colliery in one week?

35506. Not one man?—Well, suppose he took a fortnight?

35507 There are 26 fortnights in the year, and that would mean a large number of men?—Yes, I admit that, but I think it would pay the country and prevent accidents.

35508. You think wages of about £3 a week would be sufficient for such men?—I think it would be a good wage for a man, in my opinion, and it would be a wage sufficient for the inspection, with the possibility of his rising to the higher grades for which he was educating himself.

35509. Do you think he should hold a first or a second-class certificate?—Yes.

35510. That would mean that he would have had five years' experience underground?—Yes, if he was a trained workman he would have had that—he would start as a boy.

35511. You say the inspection under Rule 38 is to a certain extent carried out now?—Well, the men inspect.

35512. Not to the extent you would like to see it?—It is not.

35513. Is there any reason why it is not carried out?—Perhaps the first reason which strikes my mind is because they have such large trust in the managers, and perhaps another thing may be the point of economy, that they do not want to pay. They think the managers will look after that.

35514. It has been suggested that in some districts it is because the men are punished in some way or discharged who do it?—That, to us, is a foreign matter altogether. In the whole of my experience I have never known of a man who has suffered the least by pit inspection, and any report he might make fairly and truly. What is done in other districts I cannot say, but it is right for me to say what I find in my own.

35515. With respect to the deputies, is their work not chiefly for the safety of the men in the mine?—The safety of the mine and men. They look after the men and the ventilation, the doors and brattices, and such things, and if anything happens to a boy from anything, and if he cannot get help—if a wagon gets off, for instance—he sends for the deputy. But ofttimes, as you are aware, he may have two flats, as we call them, to attend to, and they might be a great distance from one another.

35516. His duties are almost entirely confined to the safety of the men in the mine?—Yes, and firing shots. The deputies generally fire them at their flats. The deputies in many cases with the new explosives and new arrangements stem the holes.

35517. And they have to see to the timber?—Yes, I used to get coals where there was an old deputy, and his last words to me were always "You are all right—now make it half your work to take care of yourself." That was very good philosophy, but he cut the timber and left it for the men to set up.

35518. You think the area they have to look after is too great?—I think so now. The rush they have to undergo to get round and set the timber and cut it is so great to enable them to have true regard to the sides and roofs and places.

35519. You would not make any general Rule as to the number of men they have to look after?—That depends upon the character of the mine. If he did his duty he would have to inspect all the sides and roofs every day from his station into the face in every place; and with a large number of men and shots to fire it is impossible for a man to do it.

35520. You could not draw a hard and fast line as to the area extent?—You could not do it.

35521. To some extent it must be left to the management?—Yes. I know one hears loud complaints both from men and deputies.

35522. I understood you to say you did not know of any fines being inflicted by the managers?—I do not. Perhaps Mr. Johnson, who is coming afterwards, may know, but I do not know of any fine that any man submits to willingly. It may be so, but it is outside my knowledge.

35523. I thought there might be fines agreed to between the men and the manager for trivial offences?—No. I have known cases where men have refused. The manager has said "If you pay 2s. 6d. or 5s. you shall keep your work," but I have known that refused.

35524. You have known such things being agreed to as well, I suppose?—I have not known of it. There may be such things, but they are not sent in to us, and therefore we do not know of them. Mr. Johnson will be able to tell you more about it, perhaps

35525. With respect to the Special Rules, in your district I think the rules have always been originally drafted by the owners?—Yes.

35526. They have not been drafted by the men and then sent in?—No, drafted by the owners, and then we were called in in consultation, and they were discussed, as you know, at five or six meetings.

35527. There must be a draft of some sort?—I have no objection to the employers drafting the rules, but I ask that the men should be brought in right away at once in consultation, because I believe you will get a better set of rules, and rules more agreeably accepted if that is done.

35528. You said you would recommend separate travelling roads?—Yes.

35529. That would be a great advantage in mines where it could be done, but in old mines it would be practically impossible, would it not?—In old mines it would be a great expense. Take, for instance, the term

Digitized by Google

that we use in the north: you have a pair of winnings, heading places, going together—well, the parallel one might simply want opening out.

35530. That would be practically a new part of the mine. Take one of my own mines, for instance, the Eppleton Colliery: to make a travelling way into the face would be practically impossible?—Still, you have the place driven, but it is cut down. The place would be driven at the same time as the main intake would be driven.

35531. There are returns each side of the main airway?—Yes: they could be separate from the returns.

35532. You would have to alter the return airway—that would mean taking it through the goaf?—If you have laid the goaf down so near it would be so.

35533. Is there in Durham generally sufficient space left between the rails and the side of the road?—So far as I am concerned I have only been down lately in connection with explosions, and I have generally found a goodish space between.

35534. You say endless haulage is more dangerous than main and tail rope?—Yes, and I believe the men run a risk in running between the tubs.

35535. Because going slow they go between the tubs thinking that they can get past easily, and they are mistaken?—Yes. You will find in Mr. Bain's Report of 1906 a case where a boy was killed in trying to get a bogey on to the rails.

35536. You have been on the Continent?—Yes.

35537. Have you seen the washing of the men and the place where they all wash themselves?—I have not. I have been on the pit bank at one or two places, but I never went to see the baths.

35538. They are not baths?—I know. They are washing places. I have heard tell of them in Cornwall, but I have never seen them.

35539. Do you think such a system as that shown in these photographs would be useful in the mines of Durham?—I know it would be more useful to put one in the house. If you had what the Americans call a "shanty"—a bath-room—I believe the men would gain in vigour.

35540. These baths are made to hold about 50 men at a time at the sprays?—I do not know. I never went to see them.

35541. It is suggested there should be an ambulance. I think that is now the subject of examination with respect to certificates?—I do not know. I know some collieries where the manager asks, as an indispensable matter, that the deputies, at least, should be all first-aid men, and I think it is very useful.

35542. That is not general?—That is not general. There are a very large number of collieries where we have first-aid corps, but I would have them multiplied. If an accident occurs, the miner is away from the doctor, and he must depend upon the, to a certain extent, rough first-aid given to him. If you look at Mr. Bain's Report for 1906 you will see a reference to a remarkable case. In my opinion if there was a first-aid man there life might often be saved.

35543. I think in the Durham district ambulance work is one of the subjects of examination?—I hope so.

35544. (*Mr. Cunynghame.*) You have been giving some evidence upon the question of fines?—I was asked if the men were fined by the managers.

35545. You understand, of course, that the chief object of the Home Office is naturally to get the Rules obeyed as well as possible, and that we have no predilection one way or the other for or against fines?—Quite so.

35546. I want to put one or two points before you for your opinion with regard to them. In the first place are the men's Associations not influential enough to protect the men from unreasonable fines?—As an Association we object to fines at all by the manager.

35547. Supposing fines existed, may we take it that the Association would be influential enough to protect the men from unreasonable fines or not?—Suppose they existed, that is, suppose any Act of Parliament contained a provision that a manager should fine a man for breaking a Rule?

35548. No: supposing an Act of Parliament did not forbid it, and it was a practice. As a matter of fact, I want to know would the Associations be influential enough to protect the men from unreasonable fines? Before you answer it I will give an instance of what I mean: in the East-end of London, in the sweated industries where the people (women) have no organisation at all, there are very objectionable fines on a wholesale scale inflicted. Would that be impossible or not in the case of miners?—Well, it is a form of fine and punishment we should object to.

35549. Would not your Trades Union Association be sufficiently powerful to protect the men against unreasonable fines?—We think we are "Hackenschmidts"—so far as we are concerned we think we are powerful enough for anything. You have to consider the friction that would arise.

35550. I want your evidence upon it generally?—I think it would cause friction if we had a manager fining a man. We should have to go into the merits and the amount of the fine, and we think that if a man violates the Act of Parliament he should go before the proper tribunal.

35551. I should like to put before you the facts of a case which I have been told of privately, which occurred at a certain colliery. A youth who was a pony driver infringed a Special Rule: he rode down the main plane in an empty tub without permission, and instead of being fined for that he was taken before the magistrate and prosecuted. When he got there he pleaded guilty, and he was fined 2s. 6d. The case took up the time of three men who lost half a day's work to go up to the court, and, in addition to that, the solicitor had to be paid 30s. for costs?—I quite see all that.

35552. I am putting a case, which, I believe, is rather a common one, of the trouble and expense and cost to get this boy fined for doing an act which was decidedly dangerous to his own life. Would it not have been simpler to have some means of fining him the 2s. 6d. in the first instance and have done with it?—Again, I can only just fall back upon my position, that the magistrate's Court is the Court for the punishment of dereliction of duty, so far as the Special Rules, or Act, are concerned. I was on the bench myself recently, where three young men were fined for violating the Special Rules, and I say here again that they ought to go before the magistrate.

35553. Would not the 30s. cost on the employer and the loss of time of three officials lead to the want of prosecutions, or their not prosecuting in proper cases?—Might you not have another aspect of it?

35554. You see my question is, would not that cost lead to the want of prosecutions?—I will answer it in the Scotch fashion, if I may. Might you not have this aspect that if you have a slim sort of fining you might have great danger to the men by a lad knowing he would only be fined say 2s. 6d., and you would have a young man doing something serious because he felt confident that there would only be 2s. 6d. fine.

35555. That might or might not be met by compelling a prosecution with regard to a large number of offences, and making it legal that there should be a prosecution and prosecution only—and only allowing fines in a certain number of trivial cases?—What do you call "trivial cases"? Who is to judge of the triviality of the case?

35556. This rule might lay it down. One rule might say that you could have a fine and another would say that you must prosecute?—You cannot differentiate in the case of violation of a Rule except you know the violation. You cannot sketch it out in the Act of Parliament and say "If you violate Rule so and so."

35557. You might say that such a thing as to run down in an empty tub is a thing in respect of which there might either be prosecution or a fine, and you might say that taking down matches into a mine was a thing which should not be capable of a fine?—It might be more dangerous for a man to ride in an empty tub than even accidentally taking matches down in his pocket. I have got into a cage with another man's jacket on with matches in the pocket. There may be no danger. A man may take down matches into a mine, and he regrets it.

35558. True, but if you are setting out a Code of Rules it may be that riding in an empty tub might be a matter for a fine, and taking matches down a matter to go before the magistrate?—Taking matches down into a mine is oft-times extravagantly used. Take the case of a miner who has a garden or piece of ground, and he is working in his garden in the morning in his waistcoat: he takes a pipe, and he has a couple or three matches in his pocket, and then afterwards goes down the mine quite unconscious of their being there. The man does not intend to take them down.

35559. That is just the point. It seems to me your argument, if I may say so, rather confuses together the

Mr. J. Wilson, M.P.

22 Jan., 1908.

tribunal to try it and the punishment to be inflicted. When I have him before a magistrate for a case like that it would be only a case of reprimand: but would it not be better in a certain number of cases which may be trivial, to allow for the infliction of a fine instead of taking them before a magistrate?—I do not think you can differentiate.

35560. Every day the common law of England has to differentiate. You are aware that there are a number of cases which can be tried before a magistrate, and others must go before a Court of Sessions or to the Assizes?—And so, in these cases, a man might commit an offence as in the case I have just mentioned—a very trivial violation—and the magistrate could differentiate then as to the amount.

35561. But the law differentiates as to the tribunal before which he shall be sent?—Well, every violation of an Act of Parliament, in my opinion, should go before the proper tribunal to be decided, and not be decided by a manager.

35562. What is your objection to a fine for a trivial offence levied by the mine owner?—All I can say is I believe the man who violates the Act ought to go before the magistrate.

35563. Assume it was found that a fine was a deterrent would not that satisfy you?—That is putting to me a hypothetical case which I do not think applies at the present time.

35564. You are aware that a good many societies of different kinds punish their members by fines?—You are speaking of a Trade Union with its constitution and regulations, which says, "If you violate one of these you will be fined." But fined by whom? Fined by the committee of the Trades Union.

35565. Who make the law. You mean the person who makes the law ought to be the person to fine under it?—I do not see that they make the law, because it is made in Parliament.

35566. It seems to me your objections to fines are of a philosophical and theoretical character rather than practical?—I believe if you were to adopt a wholesale arrangement of fining by managers, and leaving it to their dictum and option as to the amount, you would be introducing a very dangerous element. As I have said, in this year I do not know of a case of fining in the County of Durham. I am the general secretary, and I do not know it.

35567. Your argument comes to this that Durham manages to get on without fines?—I understand that Inspector Bain says there are fines. I do not know of them, and they have not been reported to me. I may say this: if we knew of them we should object.

35568. Permit me to say that your objection seems to me to be based upon perhaps rather the theoretical or philosophical principle that the person who makes the law should enforce it. I wanted to find out the practical objection?—Well I will put it there is an ordinary business common-sense objection.

35569. Now about the Coroner's Courts. We have had it stated here frequently that the miners who appear on behalf of Associations or otherwise do not always get all the questions they want put?—As to the County of Durham we have no objection. I never knew but one question refused to be put in the whole round of Coroners' inquiries; but I do know a coroner not very far from us who objected, and I have heard my colleagues in the south speak of coroners being very arbitrary. As a means of closer investigation into an accident I would allow greater latitude in asking questions.

35570. I want to put before you an objection to giving that right by law which possibly has not occurred to you, but which may be a stumbling block in some people's minds. A coroner's court is a court of justice, and a man there may be about to be committed for manslaughter. To give a right to a number of people to intervene and ask all sorts of questions in respect of which a man's very heavy punishment indeed may be impending, would be of doubtful validity, and it would be only justifiable if you made a very strong case. Have you reflected upon that? It is not like a summary court of inquiry?—It is an inquiry into the cause of a man's death.

35571. It is to find the guilt?—Is that not a proper court to find the guilt?

35572. Even in a trial at Assizes, if a man is being tried for his life, the judge would not allow any Association or other tribunal to come in and ask questions?—That would be done by the barristers.

35573. In the coroner's court if you were to give a right to representatives of miners or others to come and ask questions it would be very much as if you were interfering at an Assize court?—If the miners' representatives go to a coroner's inquiry, as I understand they do, and I have gone to a few myself, it only inquires into the cause of the men's death, and if the questions put lead to the fact that there has been insufficient timbering, and the manager or anyone else is the cause of that, and the man has lost his life in consequence, surely they should have a right to ask about it.

35574. In an Assize court no one other than a barrister is allowed to ask questions. Should that not apply to a coroner's court?—For the time being the representative of the workmen is the barrister; and he goes there as their representative.

35575. I can hardly put the case as high as that, because in an Assize court the barrister is the prosecutor?—He is there to get at the facts of the case.

35576. He is there for more than that; he is there to secure a conviction?—My point is that for the time being in the coroner's court, the representative of the workmen is the man to get out the facts of the case and the cause of the man's death.

35577. Would you say he had a right to ask anyone whether he was guilty or not?—No, he would not do that.

35578. So that there should be some limitation?—He would not say to the man who was giving evidence: "Are you responsible for this man's death?"

35579. You would not regard him as a barrister for the prosecution?—The barristers are perhaps too high to compare an ordinary miner's representative with, but I put him in the stead of the relative of the deceased man.

35580. I quite see his position; the only point to my mind is about giving him an absolute right in the place of the coroner in reference to asking questions?—Well, the coroner has to sum up, and he tells the jury what he thinks.

35581. Now a question about these baths as shown in the photographs. I do not know whether that method of bathing would be popular with the men or not; but how do you think the miners could be got gradually to adopt the plan of going to the mine in their own clothes, and going down the mine in a special suit of clothes, and then washing when they come up?—I have not considered the question. I know in Cornwall it has been in vogue for many generations; men go in their every-day clothes, and the ordinary working clothes are kept at the mine, and then if they wish, after a bath, they can go home dressed again.

35582. That is a thing which you think would gradually become popular?—I am in favour of baths being attached to the workmen's houses rather more than that.

35583. What are your reasons for that? I have formed, with not a great knowledge of things, rather a contrary view. It seemed to me for a man to get into a dry suit of clothes to walk home in, for instance, would be a good thing?—It would be.

35584. But it would not be if a man had to get home in that way on a wet day?—He would get wet anyhow.

35585. Might he not come up from the mine and then get wet in going home?—We are arranging for the matter universally, not for exceptional cases. I do not see that the principle should be made compulsory if a man does not like to adopt it—that men should be washed by absolute force. You would not have a man taken home and washed.

35586. No; but I ask you to suppose that facilities were given?—I have no hesitation in expressing to you my profound ignorance of what the workmen in Durham would say on that.

35587. (*Mr. Wm. Abraham.*) Is it not possible for an observance of a Special Rule on the part of a certain class of men to be a kind of prevention to his facilitating the bringing out of coals?—I do not know that I follow that.

35588. Take the case of a haulier as we have them, and between the horses and the tram they have what is called a gun. The practice for years has been for the boy hauling to ride on that gun and to get the horse light. That was made a breach of rules a few years ago?—It is not a breach with us.

35589. Knowing that to be the case, would it not be an improper thing to allow the management to decide?—If it was part of the Special Rules agreed to, as I have said, between the three parties, the employer, the inspector, and the workman, I do not see any objection could be made to it.

Digitized by Google

35590. The observance of that Special Rule would prevent that boy doing it?—It would limit his opportunities for work, and he would not get so much coal out.

35591. That is the point?—And there would have to be more boys employed.

35592. With regard to the fining is not the breach of that rule rather an improper thing for the manager to decide?—I quite agree. I do not think in any class of violation should the manager be allowed to fine any boy at all.

35593. There is a rule also to prevent the haulier going before the horse when the tram is in motion?—I think in those cases the boy should have facilities for getting the coal out as fast as he can, provided he keeps safe. He must go before or behind.

35594. And if he went behind the tram the horse would have no light?—The horse might not care whether he went or not, if he went behind the tram.

35595. You think it is undesirable that that matter should be in the hands of the manager?—That is my opinion.

35596. According to your experience, is it not the fact that the real managers, the best managers of mines, seek to have the mines properly inspected?—I speak now as universally as a man can speak: in the County of Durham I do not know of a single case where a man has suffered for inspecting. Every facility is given for them to go, when an accident takes place, and look at the place, and there is no deterrent placed in their way.

35597. In fact, the principal managers desire that that inspection should take place?—They do. There is every facility given, and an official goes with them every time they go round.

35598. You think that that in no way reduces the responsibility on their part?—I do not see why it should. It is maligning the managers to think so.

35599. Do the deputies put up the timbers?—Yes.

35600. As well as cut them?—Yes.

35601. What class of timber do they cut, and what class of timber do they put up?—They cut the props sent in to make different sizes. They cut a prop to suit the section of the seam, allowing for the plank to go on the top, and, if there is any need for more timber, the man sees the timber and puts it up himself.

35602. What class of timber had you in your mind when you said you would rather put it up yourself?—These ordinary props and planks. I should know where to put the prop to suit myself.

35603. Your opinion is that every hewer of coal should be a practical timberman?—I say he should know how to set timber. I do not say that the deputy should not be there to set timber when required. I was speaking rather of what the deputy has to do, having such a large number of men in many cases to attend to. They go in a hurry, saw the timber, and leave it in convenient places for the men, and if he wants a prop before they come back he puts it up.

35604. You would have no man employed in the working places unless he was able to put up the timber to protect his own life?—That I could not say; but I think every man should be able to look after himself to protect himself in a mine.

35605. You say, I think, that no man should be allowed the charge of a working place unless he was able to do that. I quite agree with that attitude of the men. With regard to firemen, is it in your district part of their work to examine the travelling roads from the station up to the working faces?—That is the deputies' duty. They are supposed by Act of Parliament to do it, but I have indicated that a man having a large number of men, and only having about an hour to examine, and having half a mile to travel to the furthest place, and 13 or 14 places to examine, cannot properly examine the sides and roof.

35606. You think in any new enactment something should be done not with the view of taking the discretion out of the hands of the management, but that the management should have to do something practical to confine those men's work to what it is possible to do?—There is the possibility of another class of officials, what we call master-shifters, or men over the repairers, and it is possible for them to inspect the sides and roofs.

35607. You think there is necessity for a law on that point?—I do.

35608. (*Mr. Ratcliffe Ellis.*) Why do you suggest that the third-grade inspectors should be less qualified than a chief inspector?—Because I think you get more in touch with the practical and ordinary working man, and he is the man who has more practical experience of the working of a mine. Take the present inspectors: very few of them have been really working men. It demands a man with a very high education. But the class of man I have suggested, if he was able to pass for a second-class certificate, would be, in my opinion, competent to examine all that was necessary.

35609. What would you expect such a man to do?—To inspect the sides and the roof as he went—to see it was safe.

35610. The timbering?—Yes, the timbering.

35611. Would he have to do anything with reference to gas?—If he found gas it would be his duty to report it.

35612. Would he be qualified to measure the air?—He would not have a second-class certificate unless he could.

35613. I am not so sure of that. You think he ought to be qualified to do that?—I think every official in the colliery ought to be so qualified. Let me say that the district inspector never comes unless there is a serious calamity.

35614. The qualification of the third-grade inspector would have to be as great as that of the district inspector?—Yes; but the suggestion for a third-grade inspector is to make the inspection more frequent.

35615. We agree that for purposes of inspection, his qualification must be as great as that of the district inspector?—He would have to inspect for gas, and he could not be a second-class fully-qualified man unless he could inspect for gas.

35616. In what respect should this man be less qualified to make the inspection than a district inspector?—I do not know what qualifications a district inspector has to possess.

35617. I ask you in what respect as an inspector a person to inspect the safety of a mine ought to be different to a district inspector?—I cannot say, as I tell you. I say that the man who inspects the mine should have some knowledge of the practical working of a mine.

35618. You want a satisfactory inspection of a mine?—Yes.

35619. Your view is that this third-class inspector should be as capable of inspecting that mine as anyone?—No, I do not say he should be as qualified as a district inspector, and as well educated.

35620. I do not say as well educated, but I ask about inspection?—This I do say: a man who has qualified himself by being a workman from his boyhood upwards and passed a second-class examination knows sufficient to examine a mine.

35621. I suggest there are other people who are as fully qualified who have not worked in a pit as a boy. Have you in your mind any qualifications necessary for inspection less than that which is possessed by a district inspector?—The man I have before my mind to suggest to you is a man who has been a workman in the mine, not a man from school—not a man who has gone in for an apprenticeship so as to become a manager, but a man who has worked in a mine and knows the nature of gases and can measure the air

35622. He must be qualified to measure the air?—Yes.

35623. And must understand when timbers are set?—Yes.

35624. And understand the nature of the gases?—Yes.

35625. Assuming him to be qualified either with a first or second-class certificate, then what has he to do in making the inspection?—Examine the pit as to the sides and roof. I suppose the great essential of your inquiry is accidents from roof and sides.

35626. If he finds it is not set in accordance with his view, what has he to do then with reference to timber?—He would have to make complaint to the manager.

35627. Do you think for that purpose it is desirable to have a less qualified man than a manager?—He makes complaint to the under-manager.

35628. Take it generally. For that purpose is it desirable to have a less qualified man than a manager?—I submit to you the idea in this way: If you think that the qualification of a manager is necessary, you can arrange it in that way. but I do say that for the safety of sides and roof there should be a closer inspection.

Digitized by Google

Mr. J. Wilson, M.P.

22 Jan., 1908.

35629. The only point is whether or not you think he should not be as well qualified a man as the manager of the mine that he has to find fault with?—He will be if he takes a second-class certificate.

35630. You think that he should be as well qualified as the manager of the mine?—I do not say that. I say there are hundreds of men in Durham to-day with first class certificates.

35631. But that is not the question. The question is, Do you think he should be as well qualified as the manager of the mine?—I can only give you the answer I have given you if you ask me ever so many times. If he holds a second-class certificate he would be qualified to inspect the mine.

35632. You do not think there is anything in the suggestion that is made that too close an inspection might tend to relieve the management from their responsibility?—I do not think a man is worthy to be manager of a pit that allows it.

35633. Now, Mr. Pickering, an inspector of considerable experience, gave this answer before us: "I think if you have a Government official constantly going to the mines, the managers and owners will at once not take so much responsibility on themselves, they think that the supervision as regards safety is coming from the Government, and they will more concern themselves with the economical questions. At present we try to make the managers and owners as responsible as we can." Do you approve that?—I do not agree with that. I would not malign the managers and owners in this country by saying that.

35634. You do not desire to place upon the Government Inspector the responsibility for the management of the mine?—No. Each man to take his duty.

35635. He is put there to see the Mines Act is carried out?—Exactly.

35636. With regard to the question of discipline, I understand you say you disapprove of fining?—Yes.

35637. You are familiar with the provisions of the Truck Act—that a man must agree to be fined?—Yes.

35638. And then it must be reasonable?—Yes.

35639. And must be put upon his pay-ticket?—Yes.

35640. And a list kept for the inspection of the inspector?—Yes.

35641. That if the fine is unreasonable or if any of these requirements are not complied with, that the employer is liable to be prosecuted for a breach of the Truck Act, and the workman can get back the excess of the fine?—Yes.

35642. Notwithstanding all those provisions you do not think it is a desirable way to maintain discipline?—How can he enforce it except by putting up the rules?

35643. By fining, I suggest?—That is subsequent.

35644. You say you agree that there is great cost in bringing them before the magistrate?—Yes.

35645. In addition to the cost which Mr. Cunynghame put to you, there is a day spent by the officials going down to obtain the summonses?—Yes.

35646. There is a probability that you cannot get it tried when you get there, because there is not a qualified magistrate?—Just so.

35647. Now, with this responsibility upon the manager, that he must be either responsible himself or shew he has done the best he can to enforce the rule, would you still say you would prosecute?—I say that every breach of the Special Rules and Mines Act should be tried by the tribunal provided by the Mines Act. Would, in your opinion taking all reasonable means include the fine imposed upon this boy, for instance. How could he fine him before he committed an offence?

35648. He has to prevent his committing a similar offence.—He could not fine him before he did it.

35649. The manager brings before the magistrate some person who has committed some act. He says "I have put up the regulations and done what I can—I have appointed my managers—I have inflicted fines"—if that is sufficient, the magistrate would say "I discharge you." But your view is this, that he would not be entitled to an acquittal, although perfectly innocent, except in every offence against the Act he fined?—I say it would be sufficient excuse if he put up the regulations where the men could see them.

35650. (*Chairman.*) I understand there have been cases where the mines inspector has prosecuted the manager for not prosecuting in the case of a breach of rules?—Yes. The question put to me implies this, that it is now competent for the manager under the Act of Parliament to fine men, and he could not excuse himself before the magistrate except he did fine them. I say he has no right to fine them, and I do not think this Section of the Act gives him power.

35651. It enables him to take means to prevent the recurrence of a similar breach of rules; and supposing he was culpably negligent in not prosecuting a person for a breach of the rules then the mines inspector might reasonably have him up for refusing to prosecute?—They could not bring the manager up because he had not fined a person who violated the rules.

35652. He must either prosecute. fine. or do something?—Yes.

35653. He might go to the man and say: "I ought to fine you 10s. for that offence—do you agree to that"—and the man says "No"—and then he takes him before the magistrate?—My answer is that the manager should not have that option to fine; he should take him before the magistrate.

35654. He might very well be had up under that section for not having enforced the rules, even if he had put them up and made them known to the men and had refused to prosecute in a proper case?—If he refused to prosecute in a proper case, and the mines inspector got to know, the mines inspector would prosecute him.

35655. My point is this: I agree with Mr. Ratcliffe Ellis that the mines manager is so far responsible for the enforcement of discipline that he cannot justify it in all cases by simply saying he has done his best to bring these rules to the notice of the men?—But Mr. Ratcliffe Ellis's question as I understood it was this: that it was not sufficient for the manager to show he had posted up rules and regulations and taken all reasonable means, but he must show if there had been violation before, and that he had fined him.

35656. (*Mr. Ratcliffe Ellis.*) He must show he has done something to maintain discipline?—Quite right.

35657. I ask, considering the great expense of prosecuting in every trivial case, is it a fair thing to the manager to leave him subject to this liability and say he shall only maintain discipline in one way and that is by bringing the defaulters before the magistrate?—It is the Act of Parliament and the tribunal is provided by the Act. Any man who contravenes the Act should be tried by the tribunal appointed.

35658. Of course there is another remedy, and that is dismissal?—Yes.

35659. Is it a desirable thing that it should go forth that the manager should be obliged in order to save himself under that 50th Section from getting into difficulty, must either dismiss a man or prosecute him?—You must excuse me from answering that question.

35660. Do you suggest that at this preliminary meeting when the Special Rules are drawn, before they are submitted to the Home Office that the workmen should have the power of vetoing the rules?—I do not put it in that way—I put it to open the discussion.

35661. Suppose they do not agree, the employers would still be entitled to send the rules on?—Yes.

35662. Do you say if the employer sends his rule to the Home Office before the rule is established, that the workmen or anyone should have an opportunity of objecting to it?—Yes. But I think it conduces to concord and harmony if you call the parties interested into mutual discussion of the rules.

35663. Still the employer is to please himself whether he proposes the rules or not?—Under the Act of Parliament; but I am suggesting an amendment.

35664. I want to know your amendment. At this preliminary meeting the employer is still to have a right to propose his rule, notwithstanding what takes place at the preliminary meeting?—But I still think the men should have a right to send up their objection.

35665. The employer says "This is a rule I want to propose whether the men like it or not." He is allowed to propose it. I want to know whether your view is not met supposing he sends that to the Home Office, that the Home Office advertises the rule and then they invite the objection of anyone, and then before it is published they meet together again to get rid of any differences?—I think you had far better anticipate the differences by getting them discussed and settled before you send to the Home Office.

Digitized by Google

35666. Supposing it was "No rule shall be established until it has been submitted to the men"—you would not give the men a right to say that that rule should not be proposed?—They would try to arrive at a mutual understanding, and if they could not the Home Office would be the arbitrators in the matter. The men should have a right to say: "That is what we propose in opposition."

35667. You think that before the owner is entitled to propose a rule, he ought to call the men in conference?—I think it would lead to amicability and good understanding.

35668. Still he is entitled to propose that rule afterwards whether the men agree or not?—That is always his right, I think.

35669. Have you any suggestions to make for additions to the present regulations with reference to shot-firing?—Not that I am aware of.

35670. It has been suggested it might be desirable if no shots were fired in the haulage roads, except under the immediate direction of the manager?—Do you mean that the manager should be there?

35671. That either he should be there or should prescribe the weight of the explosive and be fully acquainted with what the shot has to do and prescribe the conditions under which it is to be fired?—As a practical miner, and I have worked at all these classes of work—I think the workman is the best judge as to the amount of explosive required to bring down any portion of stone. The manager is there and sees what we call the jacks or spring, or whatever it is. Except he saw the shot put in, he could not tell the amount of explosive. It is the practical man who does it; he puts the hole where he thinks best and he knows, by his experience, what quantity of explosive it will take, but a manager should not do it—he would have to be there every time a man starts to drill a hole.

35672. You do not think there is any addition required to the present regulations, if they are carried out?—I think not. I may say as to the haulage way, I think greater attention should be paid to the dust.

35673. That is being made a subject of inquiry. Do you think a shot should be fired at all in the haulage road?—I think the manager and officials should tell men whether they are to be fired in the haulage road.

35674. It should not be done indiscriminately?—No. The official says to him: "You may go into a certain place and do something"—and considering the terrible danger that lies in dust I say the manager or official should tell the man whether he should put a shot in or not—he should not tell him how to put it in, but he should tell him whether he should put it in or not. He would say: "Now you can go and put a shot in that."

35675. You have given two reasons which to your mind are a source of danger, one is that familiarity with danger is apt to breed contempt, and the other is too great a desire to make money?—Yes.

35676. Can you suggest anything by which the first—familiarity—can be dealt with?—I think there is gradually a change taking place.

35677. Can you suggest any legislation or recommendation to be made by this Commission with reference to that?—No; but it is quite a natural thing to me that men's familiarity through being trained up to it from boyhood, will induce in their minds a sort of contempt.

35678. What I want you to answer is whether you think any legislation or recommendation should be made by this Commission to alter that?—I do not know myself how you could do it by legislation.

35679. Then too great a desire to earn money. Do you think we could alter that?—I do not see how you could by legislation; but there is the fact.

35680. Do you suggest how we can find out these dangers and avoid them?—No; but there they are.

35681. There are dangers which no legislation can guard against?—So far as regards making money and the desire of men to make money, that arises in their trade, and I do not see how you can restrict it by legislation—you can by teaching and training.

35682. It follows there are a number of accidents which must happen in a mine which cannot be prevented by legislation?—I am very much afraid that in mine working there will be accidents, which no earthly skill can provide for; but at the same time we can try to lessen them.

35683. (*Sir Lindsay Wood.*) I should like to ask you this with reference to the remarks you made about no fines being made in Durham, was that reply confined only to the fines for breaches of the Act or General Rules?—I am speaking subject to correction, but I do not know myself personally of any fine we have permitted in Durham, but as I say Mr. Johnson will be able to answer that question perhaps more fully.

35684. Not for any offence?—Not any offence—not to my knowledge. If it has come before us in Committee, we have said to a man: "We do not agree to fines."

35685. There are collieries which do fine and collieries which do not fine, Mr. Bain says?—Well, I do not know.

35686. (*Mr. Enoch Edwards.*) I understood you, in answer to his Lordship, to say that you had six inspectors covering the northern districts of Durham, Northumberland and Cumberland?—And North Yorkshire, the ironstone mines. There may be a mine or two in Westmoreland, but that is very small.

35687. Three chiefs and two assistants?—There are two chiefs, and four assistants.

35688. Two assistants under each chief?—Yes.

35689. I suppose they reside some in one portion of the district and some in another?—The three for Durham and North Yorkshire reside in Durham, and of the three for North Durham and Northumberland and Cumberland, one resides at Cleator Moor, in Cumberland, and the other two reside in Newcastle.

35690. For Durham what distance would the inspectors have to travel from their homes to some of your remoter collieries?—Do you mean in Durham?

35691. Yes?—I should think the furthest colliery you would have to travel to would be twenty-one or two miles.

35692. So that some amount of their time would be spent in travelling?—I am not speaking of North Yorkshire.

35693. Of course. Is Cumberland worked from Durham?—From Newcastle—Northumberland.

35694. Of course they have a resident inspector somewhere in the County of Cumberland?—One lives at Cleator Moor, in Cumberland.

35695. Under the present system some amount of time will be taken up in travelling?—Yes.

35696. All the collieries will not be in direct communication with railways, very likely?—No. There are some places where they will have a good bit to travel by road.

35697. So that it will depend upon the size of a man's district as to the amount of personal supervision he can pay to a colliery?—Yes.

35698. Have you thought out what might be saved by making more districts?—No, I have never thought of that. I thought that the districts in the north were pretty nicely arranged, providing there were a number of subordinate inspectors.

35699. Yours would not be so extreme a case as some?—No.

35700. The district inspector will have a considerable amount of clerical work?—I suppose he will.

35701. He will visit collieries largely in cases of accident?—He goes in case of an accident, I should think, but not only in the case of an accident if there should be any complaint from the men. I have no doubt he will go in that case, or send his assistant, as the case may be.

35702. I understand from the opinions you have expressed that there is no complaint to make against the present inspectors?—Not against their doing their duty none whatever.

35703. The same observation would apply to your deputies or overmen, as to the district being too big to give what inspection is necessary?—Yes.

35704. They read out to you the observations of Mr. Pickering, which I think, after my experience here, is largely in harmony with most of the observations of the inspectors, that there is a fear of too much inspection; but you do not take that view?—No. That has always appeared to me as a sort of belittling of the manager, that he would take advantage of any additional inspection and neglect his duty.

35705. I understood from the observation that has been put by several that you resent that interpretation?—I have no special plea for resenting it, but I do not think it would make him any more careless if there were more inspectors.

35706. You said you had hundreds of men?—I think I am right in saying hundreds.

Digitized by Google

Mr. J. Wilson, M.P.

22 Jan., 1908.

35707. Who were qualified with first-class certificates?—Perhaps I may be wrong as to "hundreds," but there is a very large number; you can take that from me without my saying "hundreds." There are a very large number of young men and middle-aged men in Durham who hold first-class certificates.

35708. Who are not managers?—No, they are workmen.

35709. In some cases they would be firemen or overmen, and some of them would be working at the coal face?—Yes.

35710. They would hold such qualifications as to be in your judgment competent to take this other grade of inspectorship?—Yes, that is my idea.

35711. So that at any rate, so far as you are concerned, in Durham already there are competent men here, there, and everywhere, who could be employed as additional inspectors?—Yes, that is my idea.

35712-13. In your judgment, after your length of experience, you agree it is desirable where there are subordinate inspectors that they should hold a qualification equal to the qualification of the men under whom they would have to inspect?—I think so. I think he will come more into contact with the under-manager. If there is anything above, the district inspector would deal with it; but I think he ought to have a certificate equal to that, and also experience as a workman.

35714. You agree that it is desirable there should be more inspection by inspectors?—I think so.

35715. And that the inspection should take the form of complete inspection?—Complete supervision, yes.

35716. It has been suggested that you may inspect by a sample. What is your view with regard to that?—I do not see how you could do it. Collieries differ so much; they differ in strata, in thickness of seams, and in every way.

35717. You would not take it in a large colliery employing 1,000 men, with six miles of roadways, that an inspector would go into a pit and inspect an area in one seam, and that that could be taken as a sample of all the pit?—That would not be inspection.

35718. In your opinion, it would not be satisfactory unless the inspector had made the inspection and reported on the inspection through the mine?—That is my idea of it.

35719. With reference to timbering, I think we have gathered from the observations of other Witnesses that your methods in the north differ largely from the methods in most counties?—Yes.

35720. And you also have a class of men set apart to do the timbering?—Yes.

35721. According to your present view you prefer to set your own timber?—If a timberer came in and could set timber without interfering with my convenience and with the rules, he could put it in; but if it was not necessary I would rather put it in myself.

35722. That is his special work, to set timber?—He is responsible for that work.

35723. I understood you to say if the deputy had left and gone to some other place, he would leave timber with instructions to the man to make himself safe?—Yes.

35724. Do you only refer to setting props with lids on?—That is all.

35725. They do not do at the face any bar timbering?—What do you call that?

35726. Two legs and a bar?—Yes, put up two props; we call them planks, but you call them bars. It is a bar about two or three inches thick.

35727. In setting a prop he would have a small lid at the top?—Yes.

35728. Is that the timbering the deputy would do?—The deputy would do that, and the man sometimes, if necessary, if he found himself unsafe.

35729. In working at a face in ordinary cogging and chocking, that would be the work of the deputies?—The deputies put the chocks in. The man does not do that.

35730. That is the deputies' work?—Yes.

35731. When you suggested a separate travelling road, I think if I followed you rightly, you said in the roads now there have to be manholes laid and kept clear by the Act, of course: but that if there was a separate road some of this expense need not be incurred. In the main haulage roads it would not be necessary even to have manholes?—Not if they had a travelling way, because a man would not have any necessity to come out that way.

35732. In main haulage roads is it not necessary for men to be there?—In the repairing of it, in the usual heaving up of the mine, the natural pressure. Of course there are men going to repair, to put that right, certainly.

35733. An accident may happen, a wagon may go off the line, and someone has to put it on?—Yes.

35734. It would be necessary still to have manholes?—I do not see that it is so necessary, because these men who go in to do repairs go in at night when the wagons are not running.

35735. I will take it apart from repairs, in ordinary drawing shift. I do not know what is the custom with you. When the wagons are off and a man puts them on, he must have some place of refuge?—He is the man employed in doing that. He is what we call the wagon-wayman.

35736. It is necessary to have some place to go to when the wagons are started?—There would be place ends for him to go into, and he would know them.

35737. You have made the position clear that the men are opposed to fines in the colliery office?—Yes.

35738. It has been suggested to us that in the absence of fines you take the officials very much away from the colliery if you prosecute so much in Court. I want to put it to you after your length of experience in this matter, in your judgment and that of your friends, if fines in the colliery office were made illegal and you were compelled to take them before the Court, is it not likely that there would be less cases to go before the Court and less fines?—I believe in the end it would work its own cure. I mean the amount mulcted in fines and costs would work its own cure on the colliery.

35739. You think it does not command respect for the rules and the due observation of them that there would be if publicly punished before a Court?—That is my idea.

35740. Even if a workman favoured a fine you say it is not in the interest of the men themselves that they should be so fined?—I do not think that it is in the interest of safety.

35741. When you refer to a man neglecting his timbering in the rush and eagerness towards the close of his shift, you mean he wants to get another tub or two out?—Yes, that is my idea.

35742. In answer to Mr. Ellis you were both agreed you could hardly suggest a remedy for that sort of thing?—No. It is the natural bias and tendency of a man's mind.

35743. Do you think if all the collieries worked day wage it would remedy it?—If they did, it would do away with the eagerness.

35744. There could be a remedy found?—If you put it on day wage, but I have my own view as to putting piece-workers on day wage.

35745. This Commission has been told by representatives of the workmen that that is the cure for it?—There may be a worse evil than the cure, as far as that is concerned. I believe there is a natural tendency at work which will cure it.

35746. There is a serious loss of life from falls of roof?—Yes. There are a number of men who rush themselves into danger by their eagerness to make money; if their tub was not full they would lose it, and the end of their shift would come. Let me supplement that by saying, speaking for the Durham custom, if there were more deputies, by a closer attendance at every place, that risk of the men would be obviated.

35747. I understood the districts were made bigger than the deputies could attend to in places?—I would not like to give universal condemnation or censure or fault-finding, but there are places where deputies say they have too many men to look after.

35748. That, from the employers' point of view, is the question of cost?—Yes.

35749. Do you consider if districts were made less, or there were more men to attend to them, that much of this loss would be obviated?—I do not think the cost would be much greater, if any.

35750. With reference to workmen's inspection, you make it pretty generally in Durham under the rule?—I am sorry to say, speaking for myself, I do not think the men put it into operation as much as they ought to do. They do not take sufficient advantage of the Act.

35751. In no case have you objection from your colliery people?—Not the slightest.

Digitized by Google

35752. You have said in your judgment, so far as you know, there is no man who would take advantage of it?—No.

35753. At any time your men can put that rule in force and make an inspection?—Yes. I was an inspector myself for a long time under the Act of 1872, and I never knew a man and have never known one since interfered with.

35754. We have had evidence given here that if this Rule was broadened and you were not confined to the men immediately in that pit, you might have more inspection. What is your view?—I speak only from my own experience in Durham. I do not think it would be expedient in every pit. There are always men competent to inspect, and these men would be selected by their fellow men in that colliery. If you brought a man from a neighbouring colliery he would be under the same terror, because the other employers might turn him off.

35755. Supposing you broadened that Rule so that the checkweighman might inspect?—I mentioned if he had been a workman, not "who are."

35756. The checkweighmen usually have been?—Yes.

35757. You could not see any reason why the men should be debarred from appointing their checkweighman?—When we discussed the Mines Regulation Act we asked for men who are or have been miners

35758. They always have regard to a man's up-to-date knowledge, and a checkweighman would have that, because he is in touch with everything?—Yes.

35759. (*Mr. Ratcliffe Ellis.*) The object of this inspection under this General Rule is to satisfy the men that the place is safe?—Yes.

35760. Do you not think that they would be more likely to be satisfied by two of their number who were going to work under the same risks, than by outsiders?—The outsiders generally chosen to do that would be the checkweighmen.

35761. Do you not think a man would be much more likely to be satisfied if the man who made the inspection was one who worked with him under the same conditions?—Are you speaking of the construction of the Act as it is?

35762. The object of this inspection is not the same as Government inspection?—No.

35763. It is to satisfy the men that the places are safe. Do you not think they would be much more likely to be satisfied?—No: I think the men, with very rare exceptions, have perfect confidence in the checkweighman. He has been, except on very rare occasions, a miner, and they look upon him as being a leading man and a man they can trust thoroughly. He has nearly always been a man who has worked in the colliery himself.

35764. Will you look at it from the owners' point of view. The checkweighman has a good deal to do with matters that are not connected with safety?—Certainly.

35765. You ought to have some regard in enforcing an inspection, which is not a Government inspection, upon an owner. Do you think they would be more likely to be satisfied by an inspection by two of their number rather than by a man who has other objects to serve than mere questions of safety?—Of course, when you speak of other objects, human nature is human nature, but I could never see why an employer should have a serious objection to a checkweighman inspecting a pit. I never could see it. Of course workmen, as well as other people have no monopoly of all the virtues or vices, but, generally speaking, I do not think there is any reason for being afraid of them. That was the idea I had when we asked for it to be put in the Act, and that is the idea I have yet.

35766. (*Mr. Smillie.*) You are strongly in favour of taking out those words "who are practical miners," and extending it to those who are or have been practical miners?—Yes.

35767. In a district of 2,000, 3,000 or 4,000 miners with, perhaps, six or seven collieries, and the men closely congregated together, might it not be an advantage if two specially able and well-known men were appointed for the whole district to make periodical examinations, and, perhaps, to do nothing else?—In that case they would be Government employées. They would be the class of men we suggest as inferior inspectors.

35768. Under Rule 38, if you are entitled to appoint persons who were or had been, you could appoint them from one colliery whether or not they were working at a colliery. You could appoint two miners' agents who had been miners to make a periodical examination?—To be only employed in going round the various pits in that ground.

35769. To devote part of their time to that, and part to the work of the Miners' Association?—So far as I am concerned, I would sooner let it lie with the choice of the men who are or have been miners.

35770. To appoint men from their own particular pit or any other pit?—It would lie with them as to the construction they put upon it.

35771. It has been put that men working in a pit have the best chance to know that pit and would make a fuller examination. Under the Act they are not entitled to visit any other part but their own working place in their working time?—You are not speaking of monthly inspection?

35772. No: a person may be employed in a mine in Durham and not know any part of the mine except the particular section in which he works?—In Durham the "caviling" system makes a man go all over the colliery.

35773. Every three months they change a man from one part of the pit to the other, and that gives him a fuller knowledge of the pit?—What would be of use in a case of explosions would be this, and I have had something to do with five or six of them. There should be an arrangement by which every man should travel the whole colliery once in every three months under the guidance of an official, so that if an explosion took place he would not have to depend upon the official, but he would know the mine himself. That is rather apart from the question.

35774. Would it not be a good thing that everybody employed on the ground should be instructed as to the return airways and the escape shaft?—Yes.

35775. Is it not a fact that at the present time many miners in the other counties do not know how to find their way about the mine in the event of anything taking place?—I do not know.

35776. Lives might be lost because of their ignorance?—Taking our own experience, there are very few coal getters who have been a year or two in the colliery who do not know the whole of the colliery. I do not speak of the returns, but I speak of the general working places because the "caviling" system every three months spreads the men about, and gives a man knowledge of the construction of the colliery itself.

35777. That gives them an advantage in Durham that respect which is not acquired in many other parts. In other parts it is the case that a man may work practically all his life in one part of a colliery without changing. That is so in some parts?—They get a general knowledge of the colliery by conversation with their fellow workmen.

35778. In answer to Sir Lindsay Wood you said that there are some mines in Durham, I think it was one of his mines, I do not remember the name, which might take two men a fortnight to inspect?—To inspect it properly.

35779. To make a thorough examination of it?—I speak now of Murton colliery where there are 2,400 or 2,500 workmen.

35780. A fortnight would amount to nearly 96 hours if working eight hours a day?—Yes.

35781. Under your Special Rules the deputy is required to make his examination two hours before the hewers start their work?—Yes.

35782. The deputies are expected to make a full examination in their own particular district of the roof and sides and all the roadways leading to and from—— ?—From the stations.

35783. In addition to all the faces?—Yes.

35784. In a colliery such as this, which would take a fortnight, how may deputies are there employed?—There is a very large number, I could not tell you how many.

35785. There would be 40 or 50 perhaps?—No, far more than that.

35786. Supposing there were 40 or 50 in a colliery of that kind, if it takes two men a fortnight, and I have no doubt it would, to make a thorough examination it would take 48 deputies, devoting their whole time and doing nothing else, to make their morning examination?—Yes.

35787. The Special Rule says two hours?—It must be inspection within two hours, but he may not have two hours.

Digitized by Google

Mr J. Wilson, M.P.

22 Jan., 1908.

35788. Do you think in a fiery district such as Durham is, that it is safe to have an examination made two hours before a workman goes in?—They do not make their examination every two hours.

35789. Under the Special Rules they may make an examination of some places?—Yes.

35790. I want to deal with the Special Rules as they are, because they would allow the thing to be made in two hours. Do you think it safe that a place should be examined two hours before a hewer goes down?—For gas, do you mean?

35791. Yes, for gas or anything else?—I think something must have taken place if the deputy found gas two hours before the men went in, if it accumulated sufficiently to make it dangerous. Something must have taken place with the ventilation, and it must have been a gassy mine to exude so.

35792. I think your system is what is known as pillar and stall?—We have three systems in the virgin coal: we have the longwall, the pillar and stall, the board and wall, which is a peculiarity of Durham. It is a board and a stall pretty much, but rather a narrower place.

35793. The longwall system where it is worked to any extent usually has a continuous creep on?—It is pillared up.

35794. There is creeping?—Yes, in all mines.

35795. Especially in longwall as compared with pillar and stall?—Yes because the coal is all taken out. It is sure to be so.

35796. There might be a serious breakage in the roof within two hours?—Not between the pillar and the face.

35797. Why?—The pillarers put in the pack walls. The cavity is filled by stones taken from the face or brought some distance.

35798. A break usually takes place at the face right at the coal head. Are you not aware of that?—No, not the break. It would be if it broke the timber down. There might be exceptions, but I do not think you will find that very often.

35799. May we take it that 75 per cent. to 80 per cent. of the lads in Durham mining centres will find their way to the pit?—Do you mean the lads employed about the pit?

35800. I mean the lads who live about the pits?—You mean whose fathers are miners?

35801. Yes.—I think you may safely say that there is nothing else for them to do.

35802. I suppose I may take it that it would be well if some knowledge from the dangers from gas in mining, and some knowledge of ventilation were given to the lads before they went down the mine?—I am Chairman of the Durham County Council, and I know this, that there are ining classes wherever they will adopt them, and there would be more if they were adopted to teach boys purely mining.

35803. For lads under 14?—Any lads who like to go.

35804. Lads under 14 who are attending day-school are not likely to attend evening classes?—No.

35805. Do you think it would be time well spent during the last two or three years of a lad's attending school to give him some knowledge of chemistry and mining?—Yes.

35806. And perhaps a knowledge of the Special Rules. He would be expected to know them?—Yes.

35807. So far as you know, the Government or the Education Department have not made any provision for that at present?—I know that. I think if some instruction were given at some period of the day when these young lads are intended for miners, it would be money well spent. There are the technical schools, the secondary schools, and evening classes, but that is after they leave the elementary schools.

35808. There is no doubt that there is a considerable danger to lads who are underground for the first time unless they are closely under the supervision of a skilled person, because of ignorance, they may perhaps go into danger?—They do not go anywhere where a knowledge of chemistry or mining generally is required. They are generally put into some place where they are under supervision, and where they come into connection with some other boys older than themselves. So far as chemistry is concerned and the science of mining, it is unnecessary for them at that particular time, but it is necessary later on.

35809. What do you say with regard to a knowledge of the Special Rules and Coal Mines Regulation Act?—That would be all right. I do not see that it would do any harm.

35810. Your lads do *not* go directly to the coal face in Durham?—No.

35811. They do day-wage or on-cost work first?—Yes. they are knocking about generally, keeping doors or incidental work until they go up for drivers, and other kinds of work.

35812. In large counties, where they go generally directly to the coal face, there is all the more need for them having some knowledge of gases and ventilation?—Yes, I should think so.

35813. You would not have any serious objection to the third grade of inspectors which you propose holding a first-class certificate?—No.

35814. Providing it carries with it practical experience?—Certainly; that implies he would have the second if he had the first. The greater always includes the less. He would be more qualified. I would make it a *sine qua non* that he must have practical experience.

35815. Other things being equal, theoretical knowledge and everything, the miner with the practical experience would be the better man of the two?—Yes, he is bound to be.

35816. I daresay there is sufficient intelligence and push now amongst the miners generally to secure a first-class certificated man to supply a third grade of inspectors?—I know you could supply a corp many times over in Durham, and I am sure you will find the same thing in other counties generally.

35817. On the question of fines, supposing it came to your knowledge now that in Durham there was a systematic and very extensive system of fining, the fact that you are in ignorance of it as Secretary of the Durham Miners would make it all the more necessary that it should not be so?—We should try and stop it.

35818. I find that Mr. Bain put it here. He gives the case of eight collieries, and he is dealing really with fines imposed by the managers; he gives eight collieries in which there were 341 fines in one year?—These are things that neither my colleague nor I, nor any official could have any cognisance of. If a man is caught in anything that is wrong and the manager says, "Instead of turning you off I will fine you," and he accepts the fine without giving us notice of it, we do not know anything about it. I am speaking of our knowledge and supervision of things; we are against fining.

35819. It is rather a serious matter that this is going on, and as a matter of fact it has been kept away from your knowledge?—When a man submits to it without reporting to the officials of the colliery, that is our officials, and makes that arrangement, we cannot know anything about it.

35820. The fact that it has not become public proves that it has not the deterrent effect it would have if there had been a prosecution in court?—There are too many. There would not have been 341 in court.

35821. (*Mr. Ratcliffe Ellis.*) A list of fines has to be kept for the inspector to see?—Yes. I think I understand your question. In your opinion the 341 are not enough to prevent men breaking the Special Rules. Do you ask me if there were 341 in a law court, would that have a better effect? If so, I believe it would.

35822-3. (*Mr. Smillie.*) Yes, that is my point. If those had received the publicity of a law court prosecution you would have known all about it?—Yes. Eight collieries, 341 cases, you say.

35824. (*Mr. Enoch Edwards.*) They may not be breaches of the Rules?—No, they may be something else.

(*Mr. Smillie.*) Mr. Bain put it that they are all breaches.

(*Chairman.*) We do not know how many of those are fines by agreement, and how many are fines inflicted by the management.

(*Mr. Smillie.*) He only gave 95 prosecutions.

(*Chairman.*) It is clear the great majority of fines are fines inflicted voluntarily.

(*Mr. Smillie.*) Yes.

(*Witness.*) That is at the rate of about 45 for a colliery.

35825. At one colliery there were 108, at another 37. at another 63, and then I see 18, 11, 45, 48, and one large colliery he says does not fine at all, but always prosecutes, proving that what he is dealing with is fines at the colliery. I daresay you would not be prepared to pass a law placing it in the hands of a mines inspector to fine a manager for a breach of the Coal Mines Regulation Act?—He is fined now, is he not?

Digitized by Google

35826. You seem in one of your answers to the Chairman and Mr. Ellis to disagree with Mr. Bain, but I think you agree with him. Mr. Bain had stated that the men would prefer being fined by the manager, and you disagreed with that. Mr. Bain meant the individuals who were caught would prefer to be fined by the manager ?—If you speak of the men collectively, they would not.

35827. The Durham miners as a whole do not believe in the fining system ?—Not for violation of Special Rules or the Act of Parliament.

35828. The individual who is caught would naturally prefer to be fined ?—It is in this way: he is told by the manager, "If you will accept a fine you may stop on, but if not I will dismiss you," and he takes the lesser of the two evils in his opinion.

35829. If you are to have discipline, and where the lives of the men are concerned, you ought to have it, you think prosecution before a magistrate is the best method of securing it ?—Yes, I think it is. It has the best deterring effect.

35830. You have not been asked whether you think there should be certificates after an examination for deputies. Do you think it would be wise that deputies should have a certificate ?—I think it would be a benefit all round.

35831. As a general rule you have no fault to find with the class of men who are generally deputies for Durham ?—No.

35832. You have known deputies who are thoroughly skilled practical men who could not have passed a theoretical examination ?—I have known some of the best managers in the mines of Durham who, before the Act came into force, could not have passed an examination in anything.

35833. That did not prevent Parliament passing that law ?—No.

35834. Is the position of a deputy most important so far as the question of safety is concerned ?—Yes.

35835. Would you go the length of saying it is more important from the safety point of view than even that of the general manager of the colliery ?—Yes; the general manager gives general instructions as to what he wants done specially, but the general safety of that flat is under the deputy.

35836. The deputies are generally there in the morning before the manager puts in an appearance ?—He comes in at two o'clock in the morning and the other one comes in about nine.

35837. In view of the fact that we have so many intelligent practical miners who hold first and second-class certificates, there would be no difficulty in getting sufficient deputies with the necessary qualifications who could prove by examination that they were fit ?—They could prove it by a scientific examination.

35838. It might not be required to be so stiff as the first or second class ?—It takes a man with a lot of adaptability to make a deputy.

35839. Upon the deputy depends the safety of that mine ?—Of that flat.

35840. Is your deputy responsible for seeing that the material is got out of his particular district ?—The coals ?

35841. Yes.—No.

35842. He is not in any way responsible ?—No.

35843. Is he responsible for the roads being kept in order ?—Yes, the tram roads.

35844. Supposing a tram or a train of trams, if you have them—— ?—They go single tubs.

35845. Supposing a single tub goes off the road, and he has gone out to assist, he has to repair the road, if required ?—He would have his hammer or axe and nails with him. They generally carry them about with them.

35846. As a matter of fact, under your Special Rules there are 14 rules applicable to his duties ?—Yes.

35847. Those rules apply to looking after ventilation, all the doors and tramroads and other things in his district, in addition to timbering work ?—In his district. He has done with the ventilation after it gets into the return airway. It may be in his district when it has left him.

35848. You could not give any idea as to the number of men which a deputy may have under his charge ?—It varies according to the stone. Some men follow 18 or 20, some 10 or 12. It depends upon a variety of circumstances.

35849. Your deputies generally who are also timbermen, must be skilled timbermen and miners before they know how to put up timber ?—A manager knowing what he has to depend on should pick the best men.

35850. A thoroughly skilled deputy with practical experience and knowledge would be as good a timberman as you yourself would have been ?—Better.

35851. Although sometimes you would have preferred to put up your own prop, because you know where it is convenient ?—Yes.

35852. That is not because the deputy is not a thoroughly skilled man ?—No.

35853. You are favourable to the deputies still being kept responsible for the timbering ?—Yes.

35854. Always leaving the miner responsible when the deputy is not there ?—That is the Special Rule, you will find.

35855. You have no fault to find with your engine-winders in Durham ?—No. I could not tell you of any. I could not even hint at any fault to find with the engine-winders.

35856. You have given as your own personal guarantee from your knowledge of engine-winders as a class that they are a very estimable and intelligent class of men ?—That is my unhesitating opinion.

35857. Have you thought over the question of whether it might be well that there should be certificates to prove their competency ?—Yes.

35858. Are you favourable to that ?—I have thought so much about that that for over 15 years I have tried to get a Bill through the House of Commons, and I am going to ballot next Wednesday for it again.

35859. Your long experience justifies you in saying that engine-winders should hold certificates of competency ?—I think they ought to have them.

35860. Do you say they should be confiend so far as possible to their own particular engine and their own engine-room, and that other duties outside of their engine-room should be taken off them ?—I cannot imagine an engine-winder going out of the engine-room at all when his engine is working.

35861. Well, while it is standing ?—If there is no need for him to be there. Take a week-end when the pit is off. There may be something an engineman could do, and he might be asked by the engineer to do it, but that will be when there is not any demand for the engine to do anything.

35862. You would not think it wise, where there are two adjacent collieries and men underground in both, to leave one engine-winder in charge of both engines ?—It depends upon how far they are off, and whether they go to either engine to come to the bank. There must be an engine-winder there while people are in the mine.

35863. If two engines were so far away from each other there might be a difficulty in distinguishing the sounds of the signal bells ?—It is not left to him; there is a banksman at the bank.

35864. At some mine there is no banksman ?—There is still a man there.

35865. The law does not provide that there must be a banksman ?—I think you will invariably find that there is.

35866. I invariably find that there is not ?—I do not speak of Scotland. I could not understand if an engine is a long way off taking them away and you might expect some raps from the pit he belonged to, especially. I thought your question was put generally; a man having an engine standing and not being required for hours, whether, if required by the engineer to do something out of the engine-house, he should do it. Well, that is a matter of arrangement, and could be taken in hand by the engineer.

35867. That is not the point ?—Taking two engines at distances, I cannot see——

35868. You are not in favour of the engine-winder having charge of his own engine, to wind men and materials, and also a haulage-engine in the same engine-house ?—Not while the winding-engine is at work.

35869. During the time a man might be in the shaft the bell might ring to stop the haulage engine?—If anything happened to the hauling down the pit, and it depended on getting it stopped, and a rap came, he could not leave the winding-engine.

35870. It would be well to have the winding-engine and nothing but the winding-engine ?—Yes.

35871. With regard to coroners' inquests, you have little or nothing to complain of in Durham ?—Nothing.

35872. You have, from your own experience, heard of cases where coroners have not treated you with much

Digitized by Google

Mr. J. Wilson, M.P.

22 Jan., 1908.

courtesy?—I think I could tell you of instances, but not in our own county. I have no personal complaint, but rather appreciation of the freedom they allow.

35873-4. Section 48, Clause 8, gives the power to the majority of the workmen to appoint, by an order in writing, a representative to attend an inquest. Supposing a coroner interprets it that the majority of the workmen individually must sign that authorisation, that might be very difficult to get done sometimes?—It would be difficult at all times if an inquest came on in a hurry.

35875. That construction could be placed upon that clause, and has been placed upon it?—Yes.

35876. A coroner has objected to a person appearing where he has not had the authorisation of the majority of the workmen?—I have never known a single case of a coroner in Durham asking for an order. I was at the Altofts explosion, and I know there that the coroner demanded a certificate from the representatives of the men before he would allow them there. He asked for the certificate.

35877. A certificate signed by the majority of the workmen, did he say?—No, signed by the relatives.

35878. If that is really the construction placed on the present clause, is it not necessary that a change should take place?—Substituting something else for the majority of wo kmen.

35879. An order in writing of the majority of the workmen. It should be sufficient if a coroner had information that at a meeting of the workmen a person was appointed by the majority?—Still, the coroner would require some guarantee in writing, not verbal, that this man was appointed.

35880. Supposing he had a certificate in writing by the person who presided at the meeting, would that do?—Perhaps the meaning is the majority of the meeting. It does not say that.

35881. Coroners have held that it is the majority of the workmen in writing?—Yes.

35882. That might prevent a person getting it. Have you any difficulty in Durham with regard to unskilled persons being employed?—No, we have not any. The only instance I can remember was one we had the other day, but he was working under the care of a skilled workman.

35883. You have not had two unskilled persons working at the face together?—No.

35884. Might I ask your opinion as to whether the employment of an unskilled person is as safe as the employment of a skilled person?—There is only one answer to that question, and that is No, he would not be: he could not.

35885. I suppose being unskilled, a want of knowledge of the English language would be a serious drawback to the safety of a person?—He would have some difficulty in making himself understood, especially to a Scotsman, anyhow.

35886-94. And by any Britisher, I suppose, I might take it?—Yes.

35895. (*Dr. Haldane.*) We have had complaints from other districts that the under-officials in some of the mines are not very capable, and that they are badly paid, and paid less than men working at the face?—I really cannot tell at all.

35896. I wanted to ask you for information about the Durham district. Does such a thing ever happen?—I do not know anything about the payment of the officials. I do not know their wages, neither can I, so far as I am concerned, give any objection to the capability of any official in the Durham coalfield.

35897. You cannot tell whether the deputies are paid badly?—The deputies' wages would be now about 7s. a day, with free house and coal.

35898. They are never less than that, but they may be less than a coal hewer?—No, they are always more.

35899. Do you say that as a general rule?—There is a fixed average wage for deputies, plus percentage, and the deputy's basis wage is 6d. a day higher than a coal getter's wage.

35900. That is the custom?—Yes. My colleague has just handed to me a list of the wages. For the deputies the basis wage is 6½d. above the coal-getter's, plus percentage.

35901. The complaint is they do not get the best men?—I have said sometimes a man has a cousin. To speak of things generally, I have no complaint, and I have not heard of any. There may be cases that do not come within my knowledge.

35902. Do you think, as a general rule, that the men in the Durham district have fair facilities for getting themselves clean when they get home? Have they room in their houses?—They have the facilities their forefathers had, but they were not a dirty class. I believe the bath might be attached to every house with advantage to all.

35903. They are not just now?—Some of the houses are very small, far too small, and against that we make complaint. In Durham there has been a gradual reformation ever since the Local Government Act was brought into operation, and the new houses the owners are building are very much larger, and no fault can be found with them. At one new colliery they have put a bath to every house. I would suggest that, from an employer's point of view, as a matter of economy. The men would be far more vigorous if they could be bathed, but the convenience for washing in a small house is not great. It cannot be—greater facilities should be given.

35904. Would it not be a more expensive thing in general to provide baths in houses than at the pit-head?—In building a new house it would take a very small place to make a bathroom. There is one thing the colliery owners have in Durham: they are not much troubled with ground rent. Under our system, which is a free house and coal for the workmen, with the exception of rent for those who cannot get free houses, with very rare exceptions the owner could attach to his houses some small bathroom. That is my idea from the point of view of cleanliness, vigour and economy, and I believe in it myself.

35905. One difficulty with regard to the baths is the water supply?—Our county is covered with ordinary water companies.

35906. Is it possible to get soft water?—I think so. The water we get for our home consumption is a very soft class of water. There may be collieries where it is pumped out of the mine, from the feeder, and it may be harder in its component parts, but speaking of the general water supply of Durham gathered from the hills into reservoirs it is soft.

35907. (*Sir Lindsay Wood.*) You are speaking of the western part of the county. In the eastern part of the county the water is, generally speaking, hard?—The Sunderland Water Company has supplied at Wingate. When I spoke of the softness of the water I was speaking of the western side. It comes down to Durham and a little on the east side of it.

35908. There is often a scarcity of water in the west of Durham district, more than in the eastern district?—In droughty times, you mean?

35909. Yes?—Scarceness of water would arise anywhere whether there was a bath supplied to everyone or not in droughty times.

35910. (*Mr. Smillie.*) Is there a large proportion of your workmen in Durham who travel any distances by train to their work?—I only know one place, but I should like to reserve the correctness of my answer. That is from South Shields to Marsden.

35911. How many miles, roughly, is that?—About three miles.

35912. If there were any places in Durham or elsewhere where the miner was required to travel 10 or 12 miles to his work, that would make a considerable difference as regards the necessity of washing at the pit?—You are asking me something the workmen in Durham never dream of.

35913. In our district many men travel 10 miles by train, and they are working wet in the pit?—We do not. Our houses are generally congregated about the pit.

35914. Where men have to travel 10 miles in wet pit-clothes, it is very uncomfortable?—You might take half a mile or three-quarters of a mile as the average distance. In the case I have quoted from South Shields to Marsden that is not the ordinary distance. I do not know of any other place.

Mr. JOHN JOHNSON, M.P., called and examined.

Mr. J. Johnson, M.P.

22 Jan., 1908.

35915. (*Chairman.*) I believe you are Member of Parliament for Gateshead ?—Yes.

35916. You have heard what Mr. Wilson has been saying ?—Yes.

35917. If you disagree with him in anything we shall be glad to hear, or if you wish to amplify his evidence or give any other evidence of your own upon the points touched upon, we should like you to ?—I agree with all Mr. Wilson has said. I have listened very closely to all that has been said, and I think I may say "Amen" to all that has been said. If there is any other question you wish to ask me I shall be pleased to answer it.

35918. I do not know whether there are any points which were not dealt with by Mr. Wilson which you would like to mention to the Commission ?—No, there is nothing.

35919. (*Mr. Ratcliffe Ellis.*) You heard my questions to Mr. Wilson and you agree with his answers to them ?—Yes, I do.

35920. Mr. Wilson said with reference to certificates for engine-winders that he had brought in a Bill from time to time in the House of Commons for the purpose of granting these certificates ?—Yes.

35921. You are aware, in connection with the Bill, at one Session it was referred to a Select Committee ?—Yes.

35922. The Committee did not report in favour of the necessity for such a Bill ?—No.

35923. The engine-winders at present, I think everybody agrees, are a very excellent class of men ?—Yes.

35924. There are occasional accidents which happen—but very occasional, fortunately—by the engine-winders ?—Yes.

35925. Are you not aware that those accidents are usually the result, not of incompetence or want of skill, but either from want of care or some temporary loss of memory ?—They arise from various causes.

35926. Do you think that a certificate would cure that ?—I think you would get better trained men, and if you had a man who had a certificate you would know that that man was competent.

35927. Yes, but a certificate would not prevent carelessness or this occasional loss of memory ?—No, certainly it would not prevent accidents altogether, but it would be an indication that you had a competent man. He is, on the face of the certificate, competent.

35928. As a matter of fact now, the fact that there are practically no accidents happening as the result of want of skill does not look as if the absence of a certificate is a matter of much consequence ?—If you have a man who has served his time and who has got a certificate, there is a competent man when you want him. You have not a man coming to the place who may not have served his time. A man may not have had experience, but someone says, "I think he is a good man." If he has a certificate you know that he has had the training and experience.

35929. In case it was made obligatory, would you be prepared to go as far as this, and say that no man should be entitled to wind men who had not a certificate, in case any difficulty arose in getting a man with a certificate to wind, but that it should be competent for the Home Office to permit men to wind who had not got certificates ?—I do not follow that. I think you can find plenty of men.

35930. Supposing there is some difference or dispute, and the men say, "we will not wind except upon certain conditions." Would you provide that the Home Office, on proper inquiry, might prevent access being refused to these mines, except by men who had certificates ?—You put it to me if there happened to be a dispute by the persons who were certificated persons, and the dispute came to a crisis, would I put another man in there. I would be disposed to advise other people not to do it.

35931. Supposing the Home Office were authorised under certain conditions to permit winding by an uncertificated man, do you think that would be reasonable ?—No, because you want the men in the place to have confidence in the man. I went to an inquiry not long ago at one of our places where there had been a little mishap. There was a quick-moving engine which pulled the cage up on pulleys. The man had never had an accident before, and there was a little fear about the matter, but the men said, "We have confidence in this man; it is simply for the moment an accident, a lapse of memory, or some other thing"; but if you were putting an incompetent man without a certificate to wind them, they would demur, because their lives are very valuable commodities.

35932. At the present time all these men are admittedly very competent men. There is not one with a certificate; therefore I do not see it would follow in future that no man could be competent unless he had got that certificate ?—We want to strengthen that competency. If now they are very careful, and we make no complaint with regard to them, we want to make assurance doubly sure by having an attestation of competency expressed in the certificate, saying that the man has sufficient experience, and therefore that he is a competent man. That would give greater confidence to the men.

35933. (*Mr. Smillie.*) Do you agree with Mr. Wilson as to the advisability of having certificates for deputies ?—Yes. Mr. Wilson did not put it to the extent of having a manager's certificate.

35934. A certificate proving that they have the theoretical knowledge which is necessary, you agree with ?—Yes.

35935. You would apply the same thing to competent persons under the Explosives Act as shot-firers and people who handle explosives ?—People who handle explosives are only responsible for the explosives. They are not responsible for the ventilation and general overseership of the mine. They are shot-firers whose only business is to look after the batteries in firing the shots. The deputy has general supervision of the flat or district and the ventilation, and therefore he is responsible. The fireman is only responsible for the efficient manipulation of the shots.

35936. In recent years there has been an increase in the number and nature of the explosives ?—Yes.

35937. The high explosives or permitted explosives are admittedly in many cases more dangerous than the old powder ?—That may be.

35938. They are ignited by detonators which are highly dangerous ?—Yes.

35939. It would not be safe to put into the hands of an incompetent person who had no skill, detonators and explosives ?—No, that would be a matter of experience and management. It would be for the management to find out whether they thought a man could do it, and in that case every man would have to have a training. He would have to have a training before you could find that out. You must have a start, and everybody at the beginning would not be so competent as they would after years of experience.

35940. If you were told that in many cases, in a number of cases at least, persons who were in receipt of compensation had been started as shot-firers and persons to handle explosives as an easy job, not because of any skill they had, would you consider that a competent man ?—No, decidedly not.

35941. Can you tell us whether there are any or many of your collieries in Durham which are specially supplied with safety catches ?—That I could not answer; there are some, but I could not tell you them.

35942. Have you any in your mind just now ?—No.

35943. Do you know whether or not there are any of your engines in which there is any regulator which would stop the engine in the event of anything going wrong with the engine ?—I only know one, but there may be more. I was in an engine-house recently, and they explained to me—it was a new engine—that there was a process by which the engine automatically shut off the steam and applied the brake.

35944. Do you know if that was called Bertram's Visor ?—I do not know the name, but it is one of our latest pits.

35945. If there is anything which could be attached to every engine which would prevent overwinding in the event of anything going wrong with the engine, do you think it would be wise to have it applied ?—Yes, I think it would be very wise indeed. I understand there is one in respect of electrical engines, but I did not understand that it was so with regard to steam engines until this was explained to me a few months ago.

35946. (*Chairman.*) Do you wish to add anything ?—No, there is nothing, except this. I agree with what Mr. Wilson said with respect to ambulance and certificates. I may say that in Durham I happen to be on the Board of

Digitized by Google

Mr. J. Johnson, M.P.

22 Jan., 1908.

Examination, and we had this question up at our Board, and we suggested to the Home Office that men going in for manager's certificates should have some preference, by so many marks, if they were competent in ambulance work, say 10 or 12 marks, as the case may be. I think it would be a very good thing, too, for a deputy as well, because the manager is only at the face sometimes, but the deputy is always there.

35947. It is more important, in your opinion, that the deputy should know about ambulance work than the manager?—Yes, I think it would be important. In my judgment, the deputy should know something about it, at all events. I think it would be a good thing to get them to recommend it.

35948. (*Mr. Cunynghame.*) I have only just heard that you are on the Examination Board, and therefore I should like to ask you a question upon that. It has been suggested in some districts that the certificates are got more easily than in others. If you fail in one place you can go off and get a certificate somewhere else?—So I have heard.

35949. Would you be in favour of a workable scheme for making the certificates as uniform as possible?—I think I should. I am informed that the Newcastle district is a very hard district.

35950. I have heard that some districts are harder than others?—Yes.

35951. Do you think that some improvement might be obtained by the following scheme which I will outline. If a paper were set a certain number of times a year and were uniform through the whole of England, and that were set by a Board of Examiners appointed by all the Boards in the Kingdom, and you took care that there was always somebody on the Examination Board to set the question, who represented the words and customs of the district, so that the paper would be fair for the district, and that were supplemented by a satisfactory oral examination with the object of giving the men who did not express themselves quite so well on paper a chance of showing what they know—do you think a scheme of that sort would work well?—I think it would be well to have some uniformity. I think there is a great deal in the present test of having the man before you.

35952. It is not suggested you should not have the man before you, but only that a part of the examination should be a uniform paper set all over England, so that you could see the thing is uniform for everybody.

(*Mr. Smillie.*) Why leave Scotland out of it?

(*Mr. Cunynghame.*) I mean including Scotland.

(*Witness.*) I think that there should not be different grades of examination in different districts. I think the examination should be as uniform as possible, unless there may be in certain districts certain specialities.

35953. It would be necessary to call a thing by one name in South Wales which you would call by another name in another district, and care would have to be taken not to make an examination unfair from that point of view. Otherwise, as a member of the Examination Board, you do not see any difficulty in the method adopted at South Kensington, where the papers are sent out in sealed envelopes at a certain hour on a certain evening, and the examiners of a certain district could open them, distribute them, and send the answers, which would be sealed up. By doing that at the same hour on the same day no one can communicate with anybody else?—It would be a good thing, because they often get to know the questions.

35954. I do not say I adopt the scheme, but I think there is something in it. There would be a Board of Examiners appointed by the Examining Boards in the district.

(*Mr. Ratcliffe Ellis.*) Would the papers go back to be marked in London?

(*Mr. Cunynghame.*) They would go to the Board of Examiners. There would be a chairman, but certain questions would be answered by certain men. They would be distributed as they distribute them at South Kensington.

(*Witness.*) They would be marked here?

35955. They would come to a central authority?—They would mark the district and take into consideration the candidates and their age. They are really examined, as a matter of fact, by experts, four or five specially appointed to allocate the marks and report to the Board their findings.

(*Mr. Smillie.*) That is the present system.

35956. (*Mr. Cunynghame.*) The papers should go down from London. At present they are made by the examiners in the district?—Yes.

35957. (*Mr. Ratcliffe Ellis.*) These come down to Lancashire and then they are opened. The candidates are there, and these papers are submitted to the candidates, and they write up the answers to the questions?—Yes.

35958. Are those questions sent back with their answers to the Centre, and the value of the answers given? Are the marks given there, or are they marked by the examiners in each particular locality?—Are you speaking of what ought to be done?

35959. Yes.—I say there should be a certain specialist in each district. Newcastle and its district may have differences, and you would fail to have uniformity by having the questions sent from London. There would be no insuperable difficulty to have a central district, such as Newcastle and Darlington. They could frame questions that could be set before the several Boards in that district with great advantage.

35960. (*Mr. Cunynghame.*) I want to make it clear. The essence of the system I am proposing is that one Board of Examiners should act for the whole country, inasmuch as it is impossible to be sure that the marks are allocated upon a uniform system. You may get one Board giving 50 marks for a paper, and another Board may give 90. Unless you get some form of central system it is impossible to be sure that the marks are allocated in the same way in all the districts. I was suggesting a Board of Examiners allocated by the Examining Boards of the whole Kingdom. That would be a sure way of getting a representative one. When five or six men are appointed to make the examination they should examine for the whole Kingdom in the same way as the City Guilds and South Kensington?—I cannot see why there could not be what you suggest.

35961. I am endeavouring to provide that on the Examining Board one examiner should represent Newcastle and another South Wales, and another Scotland, and so on, so that the paper would go before the Board of Examiners and each man representing a particular district would take care the question was right as regards his district. That is the idea.

(*Witness.*) Therefore your questions sent to the several districts would not be uniform.

35962. (*Mr. Cunynghame.*) The different terms could be given; it could be explained, for instance, that in South Wales a holing prop is known as a sprag. The examiners, if you had one representing each district, would take care that the paper was fair for his own district?—There is this objection, which is much more important than the mere technical terms. Take the different work, the board and pillar work, for instance: it would have to be made clear. Suppose a man was told to ventilate that district, you would have to put an ideal district before a candidate of which he had experience and knowledge, or he would know nothing about it. If asked to ventilate a district such as you get in South Wales, he would say "I do not understand it."

35963. The examiners would put "This question is for the Cornwall district." You must trust your examiners to keep that clear, the object being that the system of working should be uniform throughout. You get a scientific side of the examination, at least, which would run uniformly through the whole thing?—I sympathise very much with you.

35964. You have pointed out the necessary qualifications, and one must take care in seeking after an ideal not to lose sight of them?—Yes.

35965. Would you have sufficient confidence in the Home Office of the day or the Secretary of State to empower him to lay down some system of conducting these examinations? It could be made flexible, and errors corrected?—I would be bold to say I had not confidence in him, but there is a great deal in having examiners that understand the nature and qualifications of the district. I sympathise with the central idea of uniformity. I do not think a man should say to Newcastle "If I do not pass I will go to Manchester or Scotland."

(*Mr. Ratcliffe Ellis.*) Do you not think that there might be two parts to the paper, a scientific part which would be applicable all over the Kingdom, and another part more particularly applicable to the different districts?

35966. (*Chairman.*) I would suggest that the paper which was sent round to the various districts should not be identical, but equivalent?—I think so. Then the trouble would be to get a uniform number of marks because your questions would differ.

Digitized by Google

35967. By "equivalent" I mean this. Take the particular case of ventilating a district. There might be a number of questions for each district in this paper dealing with ventilation, and you would deal with ventilation differently in each district, that is to say, you would ask a person to ventilate a district he knew of in each district, and consequently the papers could not be identical? —Yes.

35968. It might be equivalent, or nearly equivalent? (*Mr. Smillie.*) No person should hold a certificate who could not ventilate any of the three systems.

35969. (*Chairman.*) A person in Newcastle has only a knowledge, as I understand it, of a certain kind of district He would not understand the way in which you would ventilate a district down in Cornwall, apparently. That is the suggestion. With regard to questions of ventilation you must make those questions to a certain extent local? —My idea is for the candidate to have it clear to his mind that you want him to ventilate according to a certain system in a certain district. He might know the kind of ventilation theoretically, but he might not know the system in another place, not having a practical knowledge of it.

Mr. J. Johnson, M.P.

22 Jan., 1908.

Mr. ANDREW SHARP, called and examined.

35970. (*Mr. Enoch Edwards.*) I understand you represent the Cumberland miners?—Yes.

35971. You are the Agent and Secretary for the Cumberland miners, which office you have held a great many years?—Thirty-four years.

35972. You are a Cumberland man?—Yes.

35973. You have had many years' experience in the Cumberland mines?—Yes. I worked about 23 years in the mines, about seven years as a boy at all classes of work, and about 16 at coal-getting, drifting, sinking and deputy work.

35974. What have you got to tell the Commission. What is your view with regard to inspection under Rule 38?—That is the inspection by the workmen. That is carried out at several of our collieries almost monthly. Some collieries now do not carry it out so often, and some only carry it out occasionally, when probably an accident of any description happens, or there appears to be any danger or any complaint with regard to ventilation or any other matter in connection with the pit.

35975. Have you ever experienced any difficulty in carrying out this Rule with the colliery people?—No, I do not think there has been anything that could be traced directly against the men for carrying out the Rule. They generally get every facility afforded to them to do so. I do not think we can trace anything directly against them, but a manager can find many ways of dismissing a man without being direct.

35976. Do they usually report the result of their inspection afterwards?—Yes.

35977. Is that report left at the colliery?—Yes, and a report given to the workmen at the lodge meeting, or sent to the workmen, and put in a book which is kept by the Lodge.

35978. What are the views of your people upon the possible inclusion of checkweighmen to inspect mines as a rule; now there is usually a man selected from the pit?—We think that rule ought to be improved so that workmen might either be taken from a neighbouring colliery, or practical workmen who have ceased to work in mines could be employed for that purpose. We think it would be better if practical miners could be taken from any part of the district. They would be more independent.

35979. You still hold the view that they must be practical men?—I do not see how an inspection could very well take place unless he was a practical man.

35980. If he had had practical knowledge of working the pit, but you would not consider a man a practical man who had been in some other business for 20 or 30 years?—I say if he has been a practical pit-man, no matter if he has left the mine and retired.

35981. (*Mr. Ratcliffe Ellis.*) Supposing he has kept a shop?—Yes, as long as he has been a practical miner.

35982. (*Mr. Enoch Edwards.*) The men would rather prefer a man who had up-to-date practical knowledge, a man who understands his business?—I think they would select them. If left, they would select those men. They might probably select a man from some other colliery, but I do not think they would go outside of men actually working in the pits, if it was left to them.

35983. You see no reason why the rule should not be broadened so that they may select their men from other pits?—We have some very good checkweighmen, who would be good practical men. They might appoint them.

35984. Now I want to have your observations with regard to inspection by officials?—I think that the inspection by the officials prior to commencing work in the morning is not done as efficiently as it ought to be. In many cases, with the area that the inspector has to go round, he cannot possibly give attention to matters which he sees in his way, or ought to see in his way, as he could if there was a certain area. If it could be decided upon as to what was a reasonable area for a man to inspect, that ought to be done. Only a few months ago we had a case where a boy was killed, and the fireman admitted that he saw this a few days before, but he had not time to go round the area owing to the quantity of places he had to inspect. He could not do it in two hours.

Mr. A. Sharp.

35985. The area was too big for his inspection?—Yes.

35986. You are referring to the inspection that takes place by the fireman before the commencement of the shift?—Yes.

35987. One of two things have happened: either the area is too big or the deputies are too few?—Yes.

35988. In your judgment some of these accidents happen because of the inefficiency of the inspection that takes place?—No. I think if the area was smaller, if it was judged what he could do, he would see the various things that had happened. If he had time he might be able to find many defects he is not able to find at present, with his speed.

35989. He is too hurried?—Yes.

35990. It could be met by appointing more deputies over an area, or making their district less, so that they could get round it?—Yes. In fact, in certain mines I would recommend it would be better if there were two deputies and a portion of the way they might go together, to be within a reasonable distance of one another, because many things may happen to one man, of which we have had cases. Not so long since we had a man who kindled some gas by himself. They did not know till the men went in in the morning. In a wide area in some of our pits it would be better to have two, and arrange the distances between them, so that they could easily get to one another if anything happened.

35991. Was the man going round with an ordinary safety-lamp?—He had an ordinary safety-lamp, but how he got burned is the question.

35992. You suggest that he lit the gas?—I cannot say.

35993. He was burned?—Yes.

35994. The inspection was being made with an ordinary safety-lamp?—Yes.

35995. He was the ordinary deputy in the early part of a shift?—Yes. He never got out, and when they found him he was burned and had been injured.

35996. Was there any explanation ever got of how it happened?—That is a matter that comes up rather in a question I want to say something about with respect to prosecutions and accidents. Unless a man is killed, we never get any particular details of what happens. You hear vague statements, but if a man is killed there is a coroner's inquest, and then we get the facts.

35997. If there is an accident, and a man gets burned or injured, you get no statement or evidence except you know the fact that the man has been burned. Beyond that you get nothing; it stops there?—It stops there, because the manager will send to the inspector of mines to say that there has been this accident. You never find anything further about it, so far as the general workmen are concerned. Probably a Blue Book may be published, but it is a question whether any of the workmen see it or not. I think only myself in the whole district may get one.

35998. In case a man going round in the morning as a fireman gets burned or injured, or in the case of any injury or accident, what should be done, do you think, if it is not a fatal accident? How would you deal with the matter? —A copy of the report that is sent to the inspector by the manager ought to be given to the workmen or posted up.

Digitized by Google

Mr. A. Sharp.
22 Jan., 1903.

These workmen would see whether that report was an accurate report, as far as their knowledge went, and they would have an opportunity of meeting and discussing it.

35999. You are dealing now with non-fatal accidents, take it?—Yes.

36000. Whether it arises from a man being burned, or an accident, or otherwise, the manager writes to the inspector, but you suggest that the workmen should have some knowledge of the report that is sent?—Yes. The Act appoints the manager to send word, but there is none given to the workmen. I should suggest that there should be some means whereby the workmen could have a knowledge of what was sent.

36001. Would it be reported at all in the report books of the colliery?—It would only be reported in the report book that such a thing had happened.

36002. Would it meet your view if the workmen had access to the report book?—They have access to the report book, but it would be better if a notice could be given to the workmen, because it may not be everyone that would go to the report book.

36003. How would the notice be given to the workmen?—If a copy of the notice that was sent to the inspector was either posted on the pit-top so that the workmen could see it, or given to some official of the workmen, I think that would do.

36004. The notice sent to the inspector you rather suggest would give the particulars of the case and the company's explanation of how it happened?—Yes.

36005. If that was in a report book and seen by the workmen, that would not be sufficient?—I do not think the whole of that can be put in the report book.

36006. It could not?—Well, there would be a considerable amount of it. It would take nearly half of the page, and there does not seem to be that room. It is very curtailed, what is in the report book.

36007. While you get reports of fatal accidents, you think you should equally get reports of non-fatal accidents?—Yes, those of a serious nature.

36008. With regard to the method of timbering, do the colliers themselves timber in your district?—We have two or three systems. In most of them the company have deputies to set the timber, but in their absence the workmen set principally the whole of the timber.

36009. In Durham deputies are appointed whose business it is to set timber?—Yes.

36010. In those cases the colliers are not responsible for setting timber?—They are responsible with the deputy. By the Special Rules we have it is to that effect.

36011. In other cases it is in the man's contract to set his own timber?—We have some pits where the whole is set by them.

36012. That would apply to setting props or sprags or setting timber, or building chocks or packs?—No; the bar timber is generally separate, except that he may have contracted with them at so much a bar, and the chocks are generally separate in longwall. A deputy generally sets them, but the ordinary props and sprags are generally set by the men.

36013. Have you any complaint to make of your present methods of timbering?—Our present method is this: we have always had a voice in making our Special Rules.

36014. We will come to that presently. I am upon your present method of timbering. Have you anything to complain of with regard to that?—I do not know that there has been any complaint particularly. We have complaints with respect sometimes to the method of getting the timber in.

36015. Taking it from the working face?—Yes. Two or three collieries where the men have to take it from the siding or the pass-by, and where long timber is used, say, 5 to 5½ ft., they can only carry it on the tub top, and we have had accidents. There was a case that was tried under the Employers' Liability Act, where the county court judge ruled that it was not a proper method of carrying timber in, and he gave us a verdict upon it. We think that the manager or the employer should be compelled to carry the timber in. The men do not object to carrying in props 2 or 3 feet, in the bottom of the tub, but it is in seams where 5 ft. props have to go that they go on the top of the tub. There is danger of catching the roof and people getting injured.

36016. Do you suggest that your men have a difficulty in getting suitable timber to set?—No, I do not think there has been any difficulty in that. We have no particular complaint about the timber not being in. There is a difficulty where it has to be carried in by the workmen or his trammer or drawer, and carried on the tub top, where it is likely to catch the roof and cause injury.

36017. What do you mean when you speak about the Special Rules? Are you referring to the Timbering Rules?—The supplying of the timber. It should be carried in a tram by the company, and a sufficient quantity laid for the workman at his particular place, within 10 ft. of the face. They should see that he has sufficient. According to the Special Rules they have to see that there is sufficient, and they should see that sufficient was carried by the company where timber will not go inside the tub.

36018. Is it not the business of the company now to see that the timber is brought in?—No, they only see that it is in.

36019. There is an obligation on them to supply suitable timber to a man near his working face, is there not?—Special Rule 116 is this: "Where the coal is put from the face by the hewer, or a putter employed by him, it shall be the duty of such hewer, or his putter, to take the timber from the gate end, pass-bye, siding or other similar place, and to keep at or within 10 yards of his working face a supply of suitable timber, reasonably sufficient for the work that is being done, and where it is the duty of persons, other than the hewer or his putter, to deliver the timber at or within 10 yards of the working face, the hewer shall from time to time inform such persons as to the supply of timber required." In some cases the company put it into this place.

36020. Within 10 yards of the working face?—In most of the cases they do it. The siding or pass-by may be 150, 200 or 300 yards from the face. He has to fetch it, and if it is long timber it has to come on the top of the tub.

36021. How long has that Special Rule been in force?—This is the latest since the systematic propping came in.

36022. Are those Special Rules you raise here those as to the consideration of which your men were not invited?—We have always been invited, but we disagreed upon these, and the inspector was with us, and with regard to any upon which we disagreed it was left to him. These were adopted. There are some probably that we got in where the owners disagreed.

36023. The disagreement was not as to how far the timber should be set, but as to the obligation of bringing this timber within 10 yards of the face?—Yes.

36024. Under that rule the hewer and his drawer have to fetch it 150 yards?—Yes, and some other men more than that, some less.

36025. What have you to say about the haulage roads and the travelling roads?—We have a number of haulage roads, and in fact haulage roads are the rule in our locality. We have very few horses in many of the pits now; where we have big haulage roads nearly every pony is taken out of the pit, it is all rope haulage, and a number of accidents have occurred at the Whitehaven Collieries and at many of the others. We have two or three miles of haulage roads.

36026. What is the nature of the accidents that happen in the haulage roads?—The men get caught with the setts.

36027. The men travelling up and down?—Yes. They have to travel in and out of these roads with the setts running. The setts are fastened to the rope, but there is not any specified distance between the setts, because in the sections and junctions where they are attaching them to the clutch bogey, there may be one sett within 100 yards of another, and then it may be a quarter of a mile. Some would be running on to 30 setts with a very long rope. There is no set rider with the setts, and they are clutched to the bogey coming in and out, and when the sett is travelling a man has to get out of the way, and he may go out of the way of the empties and into the way of the full ones.

36028. In the ordinary way, do the men travel in and out while the machinery is in motion?—In most of them where they have not a special travelling way there are manholes.

36029. Is any effort made to make a travelling road by the side of the main haulage roads?—That is what I want to suggest to this Commission, that a special travelling road ought to be made clear of the engine plane or the haulage road.

Digitized by Google

36030. Are these haulage roads mainly in the coal or the metal ?—They are mainly in the coal at Whitehaven, except passing through a drift where it continues, but the same evil exists all the way.

36031. A separate travelling road can be made in the coal ?—Yes.

36032. Some of your working faces are a long way out ?—Yes, at Whitehaven it is five miles to some of the faces.

36033. At those long places they take the men out by trams or bogies ?—Yes, in some cases. They do them principally in the shift now, but a number of men may occasionally travel on the roads.

36034. In those cases where it is four or five miles, it is under the sea ?—Yes.

36035. From the shaft you are in a direct line some three or four miles under the sea ?—It would be that as the crow flies, three miles odd.

36036. There is no provision made for travelling roads ?—They are all high roads. The only thing is they travel occasionally on the haulage roads, and the danger with the bogey is, they cannot carry lights. Lights were tried for a time. They had a red light on each bogey, but they became more a death trap than anything else, because the lights got knocked out and then the men could not see—they were expecting a red light. They were abandoned.

36037. You suggest where men have to walk in and out that there should be separate travelling roads ?—Yes. If that could not be done, the only thing to be done, I think, is for the end of all clutch bogies to be painted with some illuminating paint—the ends of them—which would cause a reflective light and give men more time to get out of the way.

36038. Is your district a fiery district ?—Yes. I think we use lamps in the whole of the district except one or two small shallow pits.

36039. Do you blast the coal mainly ?—In half of the district the coal would be blasted. In other parts, where long-wall is worked. These little seams are not often blasted. There is no blasting allowed in the Whitehaven Pits except in the drifts. There is no blasting in the coal.

36040. Where the blasting is carried on, are the shots fired by qualified firemen ?—Well, we expect so, but whether they are qualified I could not say. I know some shot-firers who are very qualified men.

36041. Have the shot-firers charge of the explosive ?—No, the men generally put in their own explosives and the shot-firer generally attaches a battery. They set the cap prior to the charge being put in.

36042. The shot-firer will be responsible for the position of the shot before he fires it ?—He ought to be, but in some cases he does not know. That is one of the points in which the greatest care should be taken. He should never fire what would be likely to be a fast shot.

36043. There is a danger, unless he sees it charged, that it may be bored beyond the first shot ?—Yes, if bored on the solid and a charge of powder given, it is sure to be a blown-out shot.

36044. And then the inevitable follows ?—Yes.

36045. Do you think the shot-firer should be made responsible for seeing those shots charged ?—I think he ought to be.

36046. And that no shot should be permitted in the solid ?—He should not fire any, in my opinion, unless he had sufficient, 6 ins. or 8 ins. or 1 ft. if a very thick seam, between the distance it is curved in and the hole end.

36047. If he saw it charged he would have a much clearer knowledge as to whether it was likely to do its work ?—Yes.

36048. It may go a greater depth than he has knowledge of, as to whether it is safe or not ?—Yes, and the cap put on as well and just the wire for him to attach in some cases.

36049. What is your complaint with regard to coroners' inquests ?—Do you yourself attend them ?—I have attended, probably, during the period I have been agent, 200 or 250.

36050. Have you yourself had any difficulty in putting questions ?—I have had no difficulty with our coroners. They have been very fair to me in that way, but there is one thing I complain of. When a person gets killed, the coroner, if he can fall in with the inspector, sometimes meets him and gets his approval; according to the Act he holds his inquest right away. A man may be killed to-day, and the inquest finished to-morrow. Nobody knows anything about it, and it does not give the relatives or fellow workmen an opportunity of getting the agent or a solicitor to represent them. In all cases in a mining accident I think the inquest ought to be adjourned, if the body is viewed for burial purposes. I think it ought to be adjourned for a week to give the relatives or fellow workmen time to get some particulars respecting the cause of the accident.

36051. You complain of the want of time. You say that an inquest may take place and you not know anything about it ?—Yes.

36052. Do you get facilities from your Society for viewing the scene of the accident ?—Yes. I cannot say that any of our employers have refused to let us go to view the scene of the accident. We have viewed several localities where an accident has occurred. There has never been any opposition to my knowledge.

36053. Do you think it proper that the relatives should have an opportunity of seeing the scene of the accident ?—If they choose, or some person they choose to appoint. I think, however, it would be better if the coroner's inquest were adjourned. Our late coroner scarcely ever held one without adjourning it.

36054. What have you to say about the examination for certificates ?—I have been a member of the Newcastle Board since 1872, and I daresay that the Newcastle Board is considered to be very stringent in connection with obtaining certificates. Many, to my knowledge, have gone to other Boards. They have tried at Newcastle and have failed, but they have managed to pass in Scotland or Lancashire or somewhere. With regard to second-class certificates I think it would be of great advantage if more marks were given for practical experience.

36055. For practical men ?—Yes. My experience has been this. I know a few who have obtained second-class certificates at the present time, but they have not obtained situations, because I do not think they can earn their living at any kind of work in a mine. They have obtained a second-class certificate through probably book-reading and arithmetic and being fair scholars. I know some who are simply travelling for insurance companies. I know three or four very good practical men who have not obtained these certificates.

36056. Did the men you know obtain them at Newcastle or elsewhere ?—I do not think they obtained them at Newcastle: I do not remember any. We have some very good practical men who have failed to obtain certificates although they are good men—the very best. Certain technical points may be put to them and they may not be sufficient scholars in arithmetic to answer them. But at the same time there are good practical men who would be able to deal with the whole of mining matters.

36057. They would have a thorough knowledge of mining in general ?—Yes, and that is all that is needed in my opinion for an under-manager.

36058. They could not direct the construction of an engine, but you think that they could manage a pit ?—Yes. I think more weight ought to be given by the examiners to men who have a good practical knowledge.

36059. What do you mean by "practical knowledge"—a man who has spent 10 or 20 years in a pit and got coal ?—A man who has done all kinds of work in a pit, hewed coal and set timber and drifted and helped to sink pits—all kinds of practical pit work.

36060. He will have some knowledge of the danger of gases and how to deal with the n ?—If he has been a coal hewer he will have that knowledge of gases because hewers come into contact with most of the gases. He is there daily with them if there are any.

36061. What is your opinion as to inspection generally ? How far do the inspectors in Cumberland inspect your pits: I mean the Government inspectors ?—The chief lives about 100 miles from the centre of our locality.

36062. Coming and going will take him a good deal of his time ?—Yes. There is an assistant, but the assistant in Cumberland is not for coal mines. He is for the metalliferous mines. We do not recognise him as being a party to the coal mines. He is not appointed to the coal mines.

36063. The inspection of coal mines in Cumberland under the present arrangement must be carried out by a man who lives 80 miles away ?—Yes, or his assistant.

36064. How far away does the assistant live ?—One used to live at Carlisle, which is about 30 miles: I

Mr. A. Sharp.

22 Jan., 1908.

do not know if he lives there now, but if he does he has to get instructions from the district inspector. I think if the assistant inspector could be called upon to go and visit places without receiving orders, it would be a good thing. Letters have been sent to the assistant inspector but they have had to be forwarded to the district inspector. I think there ought to be more inspection, and it would be better if they were appointed more from practical men who have a thorough knowledge, something like the inspectors the men appoint to go round the mine monthly to make a report.

36065. Still, you would have inspectors who would be qualified and capable of taking certificates?—I do not know that I would go that far. You might get men with any amount of theory but who were not very practical.

36066. If you appoint another class of inspectors it would be necessary for them to be equal in knowledge to the present managers and under-managers at the colliery?—They would be subject to the chief, I mean the sub-inspectors appointed, and any complaint the chief inspector would have to inquire into. He is supposed to stand equal to the managers.

36067. In sending an inspector to inspect a pit you would expect he would have knowledge sufficient to carry him through with a man who manages that pit?—If it was a scientific question he had to inquire into it would be so, but a good deal of inspection is as to whether props are set right, or whether the ventilation is going right, and little falls of stones that ought to be propped up that are not propped up. I think a practical man is as good as the manager or as anybody else to find this out. If there could be an inspector of that description who could give a surprise visit, it would be the means of more care and attention being paid to those things which cause accidents.

36068. If this class of inspectors were practical men, and that is the condition, they would be none the worse for having taken a certificate?—I quite admit that. The practical men would be the best men to deal with the question of propping.

36069. At any rate, you agree that they should be practical men?—Yes, practical miners.

36070. If there were more complete inspection it would lead to less accidents?—Yes, they would be able to make surprise visits.

36071. (*Sir Lindsay Wood.*) You said in your district you had not any complaints to make about the inspection under Rule 38. It is generally carried out without any interference by the owners. Is that so?—Yes. I have no complaints to make of any prevention being put in the way.

36072. Do you think it has any beneficial effect?—Yes, they have made reports as to defects and the defects have been at once remedied as soon as convenient.

36073. The reports have been acted upon?—Yes.

36074. Do you think that inspection might be made by practical men not working in mines at the present time?—Yes, I think it would be better if the workmen were left at liberty to appoint men outside of the works.

36075. Is it not better to have the inspection by someone who knows the mine?—A person goes with them, and it would not be any different whether they worked in that mine or not. They would have a practical knowledge of mining.

36076. You said you thought that the deputies—I understand you have the same system as in Durham—should have smaller districts?—In some collieries we do as much as they do in Durham. The deputy sets the timber.

36077. What size is the district appropriated to each man?—I could hardly say exactly. The areas would be a considerable distance and probably some smaller, but he may have something else to do.

36078. What else does he do?—The man who examines the places does work after.

36079. Do you mean timbering?—Timbering, and he sees the pit started, attends probably to the boys, and acts in a general capacity. In some of the small pits there may be one man for that purpose. He sees to the whole of the work being set going.

36080. That would be in the smaller pits?—Yes.

38081. You do not know how many men one deputy looks after. Is it 15 or 20?—Far more than that. They will vary very much in the pits in the different localities, but in some localities the man who examines the pit in the morning will probably do nothing else all day but examine. He makes a visit to the men again during the shift, which takes up all his time. There is inspection, going round, seeing the work is going on all right.

36082. He can only get over a certain distance, because he has to come to the station before the men can go in?—Two hours is allowed.

36083. You cannot say how many men he has under his charge?—Not particularly at any place. I have known where an accident was that the man would probably have 200.

36084. Were they working in longwall?—We have some working in longwall.

36085. Where this man had 200 men to look after?—He had some long-wall. That man was doing nothing else the whole shift but inspecting the places, although nothing came out of it. This place where a boy was killed had been examined about 3½ hours before the men went in to work, which was contrary to the Mines Regulation Act. That was the reason of the complaint.

36086. That was wrong. He would not be able to inspect 200 places in two hours?—The men work double.

36087. Would that be 100 places?—Yes.

36088. Could he do that in two hours?—No, he would be the whole shift, six or eight hours.

36089. How would that be?—Because he did nothing else but inspection. That was where the thing came up at the accident.

36090. He would have to see the men before they go in. They go in in shifts?—Yes.

36091. He would have to see the men before they go in and examine all the places?—He was violating the rule. The company was violating the rule by appointing him for that purpose.

36092. (*Mr. Ratcliffe Ellis.*) That is an instance of a man not carrying out the rule?—The man was not carrying out the rule, but he was set on for this purpose and could not carry out the rule. He had this quantity of places to inspect.

36093. (*Chairman.*) Which he could not do in two hours?—No, it took him five or six hours.

36094. (*Sir Lindsay Wood.*) You say a man was travelling for insurance who had a second-class certificate?—I know one or two at the present time.

36095. Had he had experience in the mine?—He got a certificate; that is all I know.

36096. In your district is there any particular period of time they must have had experience in a mine before they get a certificate?—If a man wants a second-class or a first-class certificate he applies to whichever Board he likes. He is not obliged to go to the Cumberland Board.

36097. The Act says he must have had experience in a mine?—He would probably have had that.

36098. He would?—I cannot say; that rests with what Board he obtained his certificate from, whether they examined his credentials or not.

36099. He might be perfectly well qualified for a manager's certificate, and yet take up insurance travelling if he had not a situation in a mine?—Yes; it is quite possible.

36100. (*Mr. Smillie.*) With regard to the Examination Boards, is it not possible that a person might fail at Newcastle and have three or four months further education and pass at some other examination?—Yes.

36101. Have you heard of any candidate failing at Edinburgh or Glasgow and passing in Newcastle?—Not to my knowledge. I cannot say that I have.

36102. Would you be astonished to know that there have been many cases of that kind?—No; it is quite possible.

36103. Three months' study may make a big difference. A person may fail to-day, and three months afterwards, at the same Board, he might be able to pass?—Yes, but it would have to be 12 months if he came to the same Board.

36104. You would not object to having a general examination paper set for the whole country on the scientific side of the subject as well as the necessary qualification?—I think a uniform system would be the best.

36105. On the scientific side at least a uniform system to apply to all candidates might be best in order to secure a uniform qualification so far as possible?—Yes.

Digitized by Google

36106. There might be then a district examination, if it was thought necessary, to find out whether a person was locally qualified to manage a mine ?—I do not think there is much which comes in locally. We advocated that at the Newcastle Board. Complaints have been made of people going elsewhere.

36107. You have not had any trouble with managers putting obstacles in the way of examiners appointed under Rule 38 carrying out their examination ?—Not any special charges, but I say this: that a manager has a hundred different ways of prosecuting a man for this purpose without exposing him. It may be something indirect he prosecutes him for, or dismisses him, while the examination might be the real cause. It is hard to get at it. We have had men removed and we have thought it was for that, but we could not trace it to any charge or some action might have been taken.

36108. Have you heard a manager protesting against the nature of the examiner's report in the report book, and expressing an anxiety that the report should not be put in as they put it in ?—I believe there has been something of that kind in some of our places. I believe a case did arise of that description once, but we persisted on the report being put in.

36109. You are well acquainted with General Rule 38, which gives power to the workmen ?—Yes.

36110. I do not know whether you have answered Mr. Edwards with regard to this matter. You are in favour of appointing persons who are or who have been practical working miners ?—I think that would be the best thing that could be done.

36111. The last clause of Rule 38 says that "the report shall be recorded in a book to be kept at the mine for the purpose, and shall be signed by the persons who made the inspection; and if the report state the existence or apprehended existence of any danger, the owner, agent or manager shall forthwith cause a true copy of the report to be sent to the inspector of the district." You are aware of that clause ?—Yes.

36112. The presence of firedamp would be a danger or an apprehended cause of danger ?—Yes.

36113. The presence of coal dust in large quantities might also be looked upon by the inspector as a cause of danger ?—I think it ought to.

36114. In the case of examiners reporting in the report-book the existence of quantities of gas in places not fenced off, and dangerous quantities of coal dust, do you think that report should be sent to a mines inspector ?—Yes, I think anything that is likely to lead to an accident ought to be sent to the mines inspector unless it is remedied at once.

36115. If the inspectors in their report call attention to danger or apprehend danger, would it not be carrying out this clause if that was sent on to the mines inspector ?—Yes. I do not see why the full report cannot be sent to the inspector.

36116. There are certain conditions under which it must be sent on. If there is any danger or apprehended danger reported, the clause says it must be sent on. Are reports of that kind sent on as a matter of fact to the mines inspector ?—I cannot say. We expect that they are sent on, but that is a matter that rests between the management and the inspector. That is one of the matters where an inspector ought to give more publicity to the workmen with regard to the report he gets.

36117. Are you aware in the case of the Whitehaven Collieries that you have mentioned that the examiners who examined a few weeks ago did put into the report a complaint as to the accumulation of fire-damp being given off, and the presence of gas in dangerous quantities. Are you aware that that report was put into the report book ?—Yes.

36118. Are you aware that it was not sent to the mines inspector ?—It was given out in evidence that it had not been sent.

36119. Do you consider that in keeping with this clause of the Coal Mines Regulation Act ?—No; the manager ought to have carried that out. It would be better if there were some means or a proof that such was done to the men from the inspector.

36120. When inspectors are appointed by the workmen to report the presence of danger in the report book, do you naturally expect that will be sent on to the inspector, and followed by a visit from the inspector to see whether or not the thing is put right ?—One would expect that would be done, but whether the inspector comes or not I could not say.

36121. Is that not the purpose of sending it to the inspector in order that he may pay a visit to find out whether the danger has been attended to or not ?—That seems to me to be the spirit and meaning of the Act, that the inspector ought to visit the place directly after he gets the report.

36122. I am not sure whether the assistant-inspector at present lives in Newcastle or Carlisle. I understand Mr. J. B. Atkinson is your chief ?—He is the chief.

36123. Is the assistant Mr. Abbott ?—Yes; Mr. Nicholson was.

36124. Mr. Abbott lives in Newcastle ?—Mr. Nicholson did live at Carlisle. Mr. Oswald died at Carlisle. He lived there.

36125. The mines inspector at Cleator Moor is not the inspector under the Coal Mines Regulation Act, but under the Metalliferous Act ?—Yes.

36126. You do not call attention to any complaints in connection with the coal pits ?—No; it is for the metalliferous mines inquiries.

36127. Under your Special Rules there are arrangements made for lamp stations at certain places defined by the manager; lamp stations beyond which the workmen ought not to pass until examination is made ?—Yes.

36128. Those rules apply to the Whitehaven Collieries ?—To the whole of the collieries. Our rules apply to the whole of the county. We have them now all alike.

36129. Is it the fact that the workmen in the Whitehaven Collieries have been accustomed to remain at the lamp station until the examination was made ?—I expected so until evidence was given at the late enquiry that they did not do so.

36130. You found out then it was not customary to do that in all cases ?—No. From the evidence given it was proved that they travelled beyond, and nothing was said to them.

36131. That was a breach of the rules ?—Yes, that is a breach.

36132. If the rule was carried out it would be all right. The rule provides that they are not to go beyond a certain distance ?—Until the fireman returns to report the position from his examination.

36133. Are you favourable to deputies or firemen holding a certificate of competency by examination ?—Yes, I think it would be a step in the right direction, because many deputies are put on, it may be, from favouritism. They may be brothers-in-law or relatives of some manager, and have very little practical knowledge of mining. I think they all ought to have a qualification. They ought to have something set which is not as severe a test as that of the under-manager or manager, but there ought to be some qualification as to practical mining, with respect to propping, setting and securing roofs, and gas, and those things, in connection with the working of a mine.

36134. An examination as to these things, and the granting of a certificate, would let the manager know that they had that knowledge ?—Yes. It would be well if there were local boards for that purpose of qualified parties appointed in localities. I do not mean it would be wise to carry them to big centres, because it would be costly; but local boards in the case of a county like ours, which covers 24 miles. I think there should be a centre where the men could be examined by parties appointed in the district, as to that knowledge which was local.

36135. You would be satisfied with any method which would secure that ?—To prove that the deputy or shot-firer had abilities for the occupation he was put in.

36136. You have been down the William pit ?—Yes.

36137. You have been between three or four miles under the sea in that pit ?—Yes.

36138. Do you know it is a very dry and dusty mine ?—Yes.

36139. Do you know in some cases that there are three or four inches of very fine dust lying at the bottom and on the timbers ? There is a considerable quantity on the timbers ?—Yes, and on the haulage roads. It is the dust from the tubs, which settles in large quantities.

36140. Are precautions taken to water the dust and to keep it damp ?—They have occasionally done so, but I do not think that the watering has been continuous, as it ought to be. Occasionally they may have watered it, but I do not think that watering has been applied continuously.

36141. Is there anything done in that pit to prevent shots being bored in the solid in drifts, and fired in the solid ?—I think there should be something done to prevent them.

Digitized by Google

Mr. A. Sharp.

22 Jan., 1908.

36142. Has anything been done, so far as you know, to prevent it?—No.

36143. Is it the custom in drifts to bore the holes in the solid and fire them?—I think the evil commences in that You are referring to the last explosion.

36144. Yes?—The Company lets a drift by contract, and then they give the man the explosives free. Then he drives the drift with cheap labour, and does not drive it as a practical drift ought to be driven. Here he has a freedom of explosives, and he burns it out. The recent explosion might have had most serious consequences. There were no less than seven holes. That is a plan (*producing plan*). There are the seven holes drilled in a little seam of coal. It was running in the drift 7 inches thick, and there were two holes ready at the top. These holes could not be a foot apart in a 9 ft. drift. They were bored in the coal, and there was the dust taken out of the holes—it was a dry drift—and the two flanking holes were fired, and then the third, and then the fourth hole, which was fired, was a blown-out shot and caused explosion.

36145. Were they holes bored in the solid?—Five feet at least in the solid.

36146. Saxonite was the explosive used?—Yes. I was shocked when I heard the evidence and saw the plan, as a practical drifter. It surprised me.

36147. There was not a large quantity of dust in the drift itself?—No.

36148. The explosion was a gas explosion, so far as the evidence went?—Yes. The fan, no doubt, was stopped, and would have to be stopped. They had to ventilate it with a fan. Within the last 50 yards the fan was stopped by the shot-firer. He fires two shots at first; the fan would have to stand, because the fan-man could not work. There is a sort of refuge against the explosive from the shot, which he gets behind. He fires a shot, and the fan would stand again. The fan would stand when the fourth shot was fired. These, no doubt, accumulated gas, and the vibration of the shot would drive the gas further out from the air, being lighter, and it would mix gases together. This blown-out shot, the explosive having nothing to resist, blew out 200 or 300 yards—the flame—and the explosion occurred.

36149. Two of the men who were killed were 300 yards from the place where the explosion took place?—Yes, between 300 and 400 yards out.

36150. The flame of the explosion must have gone down within 100 yards of the main roads, because one of the heavy sleepers was burning there?—Where the men were found they were singed.

36151. Was there evidence of the mines inspector that, had that explosion continued another 100 yards out on the main road, it would have caught up the dust and probably everybody in the pit would have been killed?—Yes.

36152. Does not that lead one to suggest that something should be done to prevent this accumulation of dust, or that it should be damped in the mine?—Yes. If shot-firing is to be done, the dust ought to be damped. There ought to be great care taken with respect to allowing the firing of these shots in the solid. They ought not to be allowed to be fired in the solid in the coal.

36153. Your county has been particularly unfortunate last year with regard to accidents?—Yes.

36154. You are considerably beyond the proportion of fatal accidents for any other period?—Yes, we have had a lot of shaft accidents, too.

36155. (*Mr. Ratcliffe Ellis.*) The areas are too large for the deputy to examine satisfactorily. Can you suggest any words by which a rule could be framed prescribing the size of areas?—Yes. I think the areas ought to be taken into consideration when appointing the two hours' examination. I think that might be if there was a meeting between the workmen and the manager. I think they could arrive at what was a reasonable area for a deputy to examine in the morning.

36156. Can you suggest what an area should be that could be put into a rule without a meeting? Do you think it could be said that a man could travel within the period of two hours from the time he has to make the examination before commencing work?—I should have to know the examined seams, because the seams vary. We have some from 20 inches.

36157. The conditions are so dis-similar that no general rule could be made to apply?—No, only a rule might be made that the workmen or some inspector ought to specify the area. There ought to be an area specified.

36158. The manager is responsible for the mine. I want to see if you can suggest any general rule which would be applicable. I think you will agree with me that it is impossible, because the conditions are so dis-similar. Do we agree as far as that?—Yes, but a rule might be suggested. I do not mean that you could suggest a specified distance the same as a specified number of hours—you get two hours specified—you could not specify two miles, because in some places it could not be inspected.

36159. Does it not all come to this: These dis-similar conditions make it impossible to suggest a general rule?—Yes, only they might be agreed upon.

36160. The areas which these districts must be, must be dependent upon somebody, somebody must prescribe them?—Yes.

36161. The manager is responsible for the safety of the mine?—Yes.

36162. Is he not the person to prescribe these areas?—Yes, but suppose he places more on to a man than can be done.

36163. The inspector is the person to interfere?—I am coming to that.

36164, He is now?—What is the good of the inspector and the manager after the accident has happened?

36165. To prevent another accident?—No, it still leaves the manager with the same power. That is one of the matters for discipline.

36166. Do you suggest the manager should consult with the men as to what areas these deputies should have charge of?—What would be reasonable areas?

36167. Supposing they did not agree?—Then the inspector could be asked.

36168. Who is to be responsible? The manager is responsible now. Supposing the manager is over-ruled by the men, would you make the men responsible for an accident and relieve the manager from responsibility?—It would not make them responsible.

36169. You would take away the authority of the manager and leave him responsible for the consequences?—That would not take it away from him. The deputy appointed would be responsible for his actions.

36170. With regard to the distance prescribed, the manager is not to have the management of his pit, but there is to be a debating society, consisting of him and his workmen. If that is so, is it fair to leave him responsible for any mischief which happens from that management?—If a manager prescribes an area for the man and that is too large and the man cannot do it, the manager is not responsible.

36171. Yes, he is?—It is the man who failed to do his duty.

36172. The manager is distinctly responsible?—In Section 50 he is responsible for the act.

36173. The owner, agent and manager?—That is one of the clauses that wants most reforming of anything. That is the question of prosecution.

36174. We will go on to another point. Whenever there is a report made by the manager to the inspector in case of a non-fatal accident arising from an explosion or any of the causes which oblige a report to be made in connection with a non-fatal accident, a copy of that report must be made to the men?—Yes.

36175. Why?—So that they shall have them.

36176. To see whether the manager is telling the truth or not in the report he makes to the inspector?—So that the men shall be informed of how the accident occurred.

36177 Do you doubt that the manager's report is a true one?—But the man has not a knowledge.

36178. Why cannot they ask the inspector for it?—How do they know if the inspector has received it?

36179. They know when there is an accident?—They do not know when the report has been sent.

36180. They can find out?—How?

36181. Do you desire that an inspector should be required to give the report to you?—If the men received a knowledge of what had been the cause of that accident—

36182. Why do they want to know it if the inspector has the information? Why give notice to the men?—Why should the men be kept in ignorance of it?

36183. Why should the employers give notice to the men? He gives notice to the inspector?—Because it would then give the men some knowledge of what was taking place.

Digitized by Google

36184. I understood you did not think much of certificates. You preferred practical experience ?—No, I did not say that.

36185. Some of the men, I understood, who were to be eligible for the appointment of inspectors, you thought might not be able to pass an examination ?—I say that the Examiners' Board ought to give more marks to practical miners.

36186. I am talking about the certificates given to deputies and men of that sort. Do you think there should be a rule that no person should be appointed a deputy who has not a certificate of some kind, do you agree if the manager did not prefer his cousin or relatives but honestly wished to select the best men, that he should not be allowed to select a man who has not a certificate ?—If a rule was provided that there was to be an examination for deputies and firemen to know whether they had the qualifications for the job, it would be a good thing.

36187. As a practical man do you think you would exclude a great many very excellent men if you required them to pass a written examination ?—No, I do not think we would, because the examination might be of matters that they were going to follow. I do not mean to give them a scientific examination with regard to something they do not understand.

36188. This is to prevent the mine manager appointing by favouritism ?—It would prevent the mine manager from appointing men who were not capable of their occupations.

36189. It would prevent him appointing a cousin if he was a capable man ?—Not at all.

36190. With reference to this Timbering Rule 116, I understand you had a meeting when these rules were framed ?—Yes.

36191. You objected to Rule 116 ?—Yes: we wanted the whole of the timber carried in.

36192. Does this Rule 116 represent what has been the practice in your district for many years ?—No: it only represents what has been the practice at a part of our district.

36193. In that particular part of your district this has always been the practice ?—Yes.

36194. The men's wages have been fixed upon the assumption that this is work they have to do in addition to getting coal ?—I do not know that there would be any particular fixing on that, because when the wages were fixed at the ton price they would probably be near the shaft, so that there would not be far to carry them.

36195. This is work which had to be done in your district by the collier, and he does not get any special payment for it: it is included in his tonnage rate ?—Yes. *Mr. A. Sharp.* 22 Jan., 1908.

36196. You wanted to remove the obligation from the collier or hewer and put it on to someone else ?—No. I want to take away any system that is likely to tend to accidents, and if timber is being fetched in that manner it is likely to lead to accidents, and did lead to some men being injured through carrying it, and at the same time probably some men might be injured through not having it in.

36197. There are two sorts of injuries, one in carrying it in. Whether carried in by the collier or somebody he pays, or by the employer or somebody he pays, there is an equal liability to accidents ?—No.

36198. Why is he more liable to accidents if it is somebody paid by the employer rather than by the collier ?—Because the employer, when he carries it in, carries it in in a proper timber bogey, and there is not likely to be much accident from that: but when the workman carries it in it is on the top of the tub. If another bogey was coming out and hit it, and the prop projected over lying like that on the top of the glass (*the Witness indicated with a tumbler*), and the man behind it *here*, he may be injured. When it is carried in by the company it is carried in in a bogey of this description, so that there is no danger (*the Witness indicated*). The short props we do not object to, of 2 or 3 ft., which will go inside the tub. A man can carry them, but when it is those which project over, we object to them.

36199. That was your objection to this rule ?—Yes.

36200. The inspector, I understand, decided it was to be in this form ?—It is in the rules. I suppose he gave permission.

36201. You first say that to carry timber of any length on the top of an ordinary tub is dangerous ?—Yes.

36202. That is a matter for consideration, of course ?—Yes, it is.

36203. If you had had your way this rule would not have been in these regulations ?—No, not in the form it is.

36204–5. If you had a veto, that rule would not have been there, although it is a rule which the inspector approves of as necessary for safety ?—The inspector has evidently tried to oblige both sides and put in both at the same time.

FIFTIETH DAY.

Thursday, 23rd January, 1908.

PRESENT:

Lord MONKSWELL (*Chairman*).

Sir LINDSAY WOOD, Bart.
H. H. S. CUNYNGHAME, Esq., C.B.
WM. ABRAHAM, Esq., M.P. (Rhondda).
ENOCH EDWARDS, Esq., M.P.
THOMAS RATCLIFFE ELLIS, Esq.
JOHN SCOTT HALDANE, Esq., F.R.S.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. WILLIAM WHITEFIELD, called and examined.

36206. (*Chairman.*) Do you appear on behalf of the Bristol Miners' Association ?—I do.

36207. What is your claim to represent the Bristol Miners' Association ?—I am their Agent and Corresponding Secretary.

36208. Have you been so for any length of time ?—18 years.

36209. Have they deputed you to give evidence before us ?—Yes.

36210. Have you had any special instructions from your Association as to the views you are to represent, or do you simply give us your views gathered from an experience of 18 years ?—The views I have gathered from an experience of 18 years. *Mr. W. Whitefield.* 23 Jan., 1908.

36211. With regard to Government inspection, you say that more visits would be desirable, but in other respects you have no fault to find with the actions of the inspectors ?—That is so.

Digitized by Google

Mr. W. Whitefield.

28 Jan., 1908.

36212. That is to say, they do as much as they can do, but you do not think there is half enough ?—That is my opinion in the Bristol coal-field.

36213. What is your notion of Government inspection ? How often do you think it would be desirable that the mines should be inspected by a Government inspector ?—It would depend upon the condition of a pit, but I think a mine ought to be examined at least once a month.

36214. All through, or by sample ?—All through—of course, I mean by the Government inspector.

36215. The Government inspector or assistant inspector or some other person appointed by the Government, you would say ?—Yes.

36216. Would you make the districts smaller, or would you meet the difficulty by appointing, say, a third-class of inspector, who should be taken from the working-men class, and have a smaller salary than the present inspectors and assistant inspectors ?—I think it would be in the interest of safety that a large number of working-men inspectors should be appointed under the supervision and guidance of the Government inspectors.

36217. Do you consider there are enough Government inspectors of the class that are at present employed, or would you increase that number ?—I think not.

36218. You would simply have a third class to assist ? —Yes.

36219. That class would be a very numerous class. If a Government inspector of some kind is to go through the whole of every mine once a month, you would have to have a very great many of them ?—Yes.

36220. Perhaps a dozen in each district, or more ?—Do you mean each coal-field ?

36221. No ; I mean there are 12 districts now under district inspectors, and, I suppose, in those districts you would want at least a dozen sub-inspectors ?—I do not know exactly how many it would take, but I should at any rate have sufficient that the pits should be examined by a Government inspector once a month.

36222. All through ?—Yes.

36223. On the question of the inspection by men under General Rule 38, you think that the local inspectors appointed by the workmen of a colliery are dependent on the owner of the colliery for their employment, and that may deter such local examiners from pointing out and giving a report as they otherwise would do were they not so dependent for their future employment on the owner ? —Yes.

36224. Do you think if a number of practical miners were appointed in each district, who would be under the authority of the chief inspector of the district, and paid as Government inspectors, that would be an improvement ?—I do.

36225. I understand you would still leave the workmen of each colliery with the right, as now, to select not merely one of their number at the colliery to examine the mine, but a man who is or has been a miner, and that apart from where he worked or where he lived in the county ?—Yes.

36226. You would alter the Act of Parliament so that a person who has been a miner should be eligible, and you would place no restriction upon the men choosing whom they liked, quite irrespective of the mine at which he worked ?—Yes.

36227. That is the case now ; I do not think there is any restriction : they may appoint anyone they like, whether he belongs to their own pit or not ?—If that is so, I was not conscious of it. I thought the man must be employed under that company.

36228. The men may think it desirable to have a man appointed who was working in their own pit ; and in 99 cases out of 100 they would appoint a man from their own pit, but I believe it is a mistake to assume they have no right to appoint an outsider so long as he is a practical working miner ?—I was not conscious of it.

36229. You say that such examiners in the case of fatal accidents should have the right to appear and give evidence before a coroner, or in and Court where the case might be heard ?—Yes.

36230. If a workman who is employed in these examinations knew anything at all about the circumstances attending an accident, would he not naturally be the person to appear before a coroner's Court, and would anyone object to his appearing before the coroner's Court ?—I am not conscious that any objection has been raised, but I think if he were bound to be there by law, there would be a greater certainty of proper evidence being got.

36231. If he had some means of knowing the cause of the accident, you would compel him to be present and give evidence ?—Yes—if he was conscious of what transpired at the place where the accident occurred.

36232. (*Mr. Ratcliffe Ellis.*) I understand you say he should have a right, but is he to go at his own expense ?—If he was a Government inspector he would be paid by the Government.

36233. (*Chairman.*) This is not applicable to a Government inspector ?—This is the inspector appointed by the workmen. In every case where the workmen have appointed the man, I should expect the workmen to pay him.

36334. That he should be obliged to appear and that the workmen should pay him ?—That is over and above the Government inspector appointed by the Government ; but the workmen should still have a set-off at their own expense if they thought it well to examine the pit, and also to appear and give evidence before the coroner.

36335. Are you confident you represent the opinions of the men on that matter ?—I feel confident I do.

36336. You say in your statement to us that these inspectors appointed by the men should have the right to appear, and you say you think they should be compelled to appear and the men should be compelled to pay them if they do appear ?—Yes, that is what I mean.

36337. As to inspections by officials under General Rule 4 you say to ensure that examiners are efficient they should be examined by the mines inspector of the district before they are appointed as to their knowledge of explosive gas in mines, ventilation, first-aid, ambulance, and how they would act on finding gas in their district ?—Yes.

36338. Would you consider it sufficient if an examiner had a first or second-class certificate ?—Yes.

36339. That would satisfy you ?—I think also it would be wise if in future he should have knowledge of first-aid ambulance.

36340. So that if a man could show he had a knowledge of first-aid ambulance, and that he had also passed a first or second-class certificate examination, you would exempt him from any further examination ?—So far as I at present know, I would.

36341. Would you put it in the power of the mines inspector if he was satisfied from personal knowledge that a man would make a good examiner, to appoint him an examiner notwithstanding that he had not got a first or second-class certificate ?—Well, I do not know.

36342. At all events if he had a first or second-class certificate, and had passed in first-aid ambulance work, you think that would be sufficient to qualify him ?—Yes.

36343. You think the mines inspector should fix the size of the district each examiner is responsible for ?—I do.

36344. Have you much to complain of as to the size of the district ?—I do not want to individually complain, but I think generally the districts are too large, according to my experience.

36345. You will not say all districts are too large ?—I do not say so.

36346. But in many cases the districts are so large that the examiner cannot perform fully the duties assigned to him ?—That is my finding in my mining life. I think in many cases that is so.

36347. You say, as a reason for the Government appointing so many inspectors and there being so much Government inspection, that the inspectors appointed by the men are very much under the power of the managers, and are dependent upon the managers for their future to a great extent and you are afraid that in some cases they do not care to give quite an exact report as to what they have seen if anything goes wrong ?—I do not make complaint of any particular case, but I think the natural trend of things is bound to be that way.

36348. Do you say you have known many cases where the men have had reason to believe that a man has suffered in consequence of giving a true and unfavourable report ? —I hold it as a general opinion that the man feeling his bread and butter is dependent upon the employer whose pit he is examining, it tends in the nature of things to prevent his giving such a report as he otherwise would do.

36349. Could you point out to the Commission, without mentioning names if you like, any instances ?—There is no specific case I can give ; I only give it as the general impression that has been made upon me.

Digitized by Google

36350. With regard to discipline and its enforcement by fining or prosecution, you think the practice of fining is bad?—I decidedly object, from my experience, to a magistrate's office being fixed on the pit bank. It is one of the most pernicious things I know of. In some cases the manager takes to the fining of men, and of course there are managers and managers—but I have a strong objection to a deduction from mens' wages at the caprice of any manager.

36351. Do you think there should be only three ways of dealing with it; either warning him not to do it again, or dismissing him, or sending him before a magistrate?—I do. Take him before the law, dismiss him, or warn him.

36352. In no case would you have fines imposed even by agreement between the manager and the men?—I would not.

36353. You are pretty sure you represent the miners in that opinion?—I am sure I represent the miners in that opinion.

36354. With regard to accidents from falls of roof and side, and haulage accidents, you are strongly of opinion that the primary object for the getting of coal to the pit bank being individual profit, it results in pressure being brought to bear both on the workman and the official, and is adverse to the best forms of safety to the workmen; and, as a means of counteracting that and reducing such accidents to a minimum, you strongly favour the nationalisation of mines, and you think that would exclude the element of private gain and be an important factor for good?—Yes.

36355. How would the nationalisation of mines affect that?—If the pressure on the men was less than it is now, I believe many accidents would be averted. If that measure of pressure that comes naturally without any ill-intention on the part of the owner, and comes from the effort to obtain private gain, were eliminated to that extent, I believe that the accidents would be reduced.

36356. Is not the principal reason why a man wishes, perhaps, to work under conditions that may possibly cause an accident generally due to the fact that the men are paid by the piece and, consequently, that they want to make as much money as possible?—In the coalfield I come from I do not suppose more than one-half are paid by the piece. We have a large number of day men, and even men on coal—a large number, many hundreds of them—are not able to earn more than what we call their day wage. But there is always a pressure put upon the men to get beyond that—that is to say, if a man cannot make from 3s. 1d. to 3s. 4d.—it varies from 2s. 10d. in our coalfield to 3s. 4d. for eight hours—we look to the employer to pay that plus the percentage; but the natural tendency is for the officials to urge the men to get that and more if they can, and it is in that pressure in some degree (I do not say absolutely) accidents may arise therefrom.

36357. The principal pressure taking place in the case of those men who are paid day wages?—It would be principally with men who are on coal.

36358. They are paid by the piece, are they not?—A tonnage price is fixed by the employer, but if a man cannot earn whatever the rate of wages may be in that particular colliery—say, 3s. 1d. for eight hours plus the percentage, or 3s. 4d.—we ask the employer to make it up to that; but there is the pressure on the part of the official and the employer to seek to urge the men to get that and more, and it is in that urging that I think accidents occasionally arise. I do not complain of it, it is natural.

36359. At all events your opinion is that under the present system of payment the owners very naturally, without any evil intentions, are inclined to hustle the men into working rather faster and harder than is consistent with their safety or than they would work if they were not so hustled?—I think so.

36360. As to safety lamps, you say you have always been well satisfied that your mines inspector and those in other districts with whom you have had to deal, give this matter full and due consideration?—Yes.

36361. You have nothing more to say about safety lamps?—Not so far as what I have seen of Government inspectors; they keep a fairly keen eye where they think the use of lamps of any kind is required, and they see they go in—at least, they give that recommendation.

36362. As to investigation into mine accidents, you say that where the workman was not a member of a trade union, then such person as the relatives of the deceased might appoint should by right appear before a coroner and examine witnesses. In your district you have no complaint at all as to the coroner objecting to any witnesses brought forward by the men?—That is so in my own district. I have no complaint to make in relation to the coroner and to the order in which the business is being conducted, but I speak from experience of other parts.

36363. Previous to your coming to this district you have known cases where the relatives of a deceased person have applied to give evidence before the coroner and the coroner has not allowed them to give evidence?—I have not said that; but speaking from what I have heard from leaders of the Miners' Federation of Great Britain, I know complaints are made from various districts that the coroner's court is not carried on in a way that is to them satisfactory.

36364. At all events that is not your experience personally?—No, not in the Bristol coalfield.

36365. As to ankylostomiasis, you would urge the need of increased ventilation, because the general opinion of the medical authorities is that a mine of high temperature is conducive to its propagation?—That is so.

36366. You do consider that there is some danger of ankylostomiasis in your mines?—I do think so in the Bristol coalfield. Such is the temperature of some of the mines that I think they would lend themselves to it.

36367. Do you think the men would be willing to submit to the use of conveniences underground so as to prevent the spread of infection if any danger should appear?—If the owners provided them I presume the men would be compelled to use them.

36368. And you think they would use them?—I do think so.

36369. As to the provision of baths, you say you would urge, as in Germany and Belgium, the great need of baths at each of your pits, and that the miners should, on leaving the mine, don their own clothing and leave at the colliery to be dried their pit clothing. Might that not depend to a great extent on how far their homes were from their work, and might not a man very often prefer to go home, say, a quarter of a mile and have a bath there and change his clothes there, than change with all the other miners at the pit-head?—I was not looking at it from what the men would prefer, but what is best. It seems to me a standard of sanitation is highly important, and they should wash on coming out of the pit. I also think one of the greatest detriments to the miner is his black face. I think if you could get rid of his black face he would appear much better in the eyes of the public.

36370. If his home was close by, very few people would see him with his black face?—Yes, but in some cases they live four or five miles off.

36371. Then would you change your opinion and say where he has to travel by train or go several miles to get home, that conveniences for washing should be afforded which he should be compelled to make use of?—No. I should like to see it made compulsory that there should be a washing place at the pit's mouth, and he should wash.

36372. And that they should change their clothes there?—Yes.

36373. Do you wish to say anything else?—I should like to say, in my judgment, the reductionof the hours of labour would be conducive to a decrease of accidents in some degree. The district from which I come is a long-hour districts, as we say, with the exception of one colliery. We have one colliery where the men work eight hours from bank to bank except a few at the bottom of the pit, and the other collieries work 10 hours a day.

36374. With regard to accidents, how do they compare in a mine where they only work eight hours, with a mine where they work 10 and 12 hours a day?—I have not the means of putting my finger upon a specific case.

36375. We should very much like to know that; it would be a very useful statistic to have if you could prove that in the mines where there were eight hours a day worked the accidents were considerably fewer than in mines where they work 10 hours a day. That would be a circumstance we should like certainly to take into consideration?—I can only reason from my own knowledge of the matter, having been a miner myself, and a deputy in Northumberland, for a number of years. I know when I was in a pit for such a number of hours the impression it made upon myself. I know my own feelings, the dulness of my senses, which I presume would be the same with others.

36376. (*Sir Lindsay Wood.*) You advocate working-miners as inspectors?—I do.

36377. Under Government control I suppose?—Yes.

Digitized by Google

Mr. W. Whitefield.

23 Jan., 1908.

36378. You consider they should pass an examination?—I do.

36379. And hold a first or second-class certificate?—Yes.

36380. They should either have one or the other?—Either one or the other: that is overmen examiners.

36381. You suggest there should be a certain number of working-men inspectors to examine the mine every month?—Yes, under the supervision of the Government inspectors, I mean.

36382. Perfectly independent of the colliery owner, and to be paid by the Government?—Yes, independent of the colliery owner, and to be paid by the Government.

36383. And they should pass an examination?—Yes.

36384. Equal to a first or second-class certificate?—Yes.

36385. You say that under General Rule 4 the men who examine the mine should also hold a certificate?—Do you refer to those appointed by the workmen?

36386. No, those who examine the mine every day before the workmen go in?—I do.

36387. From what class of man are those men appointed in your district now?—From the workmen in the mine.

36388. Before they should be appointed examiner in your district you think they ought to pass an examination?—Yes.

36389. Equal to a second-class certificate?—Well, to such as might be laid down, at least I think a second-class certificate.

36390. Would the men be prepared to do that?—The Bristol miners?

36391. Yes.—I know nothing to the contrary.

36392. Before you appointed him examiner you think he should be made to pass this examination?—I think so.

36393. (*Chairman.*) Have you many miners in your district who have first or second-class certificates?—I am not aware how many—I am afraid too few.

36394. (*Sir Lindsay Wood.*) You advocate there should be no agreement to fine a man, however trivial the offence?—Not by the employers. I think it is pernicious, and in my judgment the tendency is to carry it too far.

36395. Every case should be taken before the magistrate?—Well that is for the employer to decide.

36396. I mean if it is an offence, or he breaks a rule of the conditions of hiring, he must go before a magistrate?—I prefer that to setting up a magistrate's office on the pit bank.

36397. That would cost very much more than an ordinary fine, even if the man agreed to it?—I do not mind that. I would rather we spend our money to defend our men before an impartial tribunal than pay it by way of fine.

36398. Even if he pleads guilty?—Yes.

36399. You would still take him before the magistrate?—If a mutual understanding can be come to, when the man was wrong, between the employer and the man, that would be a matter for consideration, but I would not like to give the employer a free hand where he thinks right.

36400. The employer can only fine with the consent of the man he is going to fine?—The consent of the man may be given because he dare not do any other—he does not want to lose his employment.

36401. He would not lose his employment if he did not agree?—The man is not a free agent in the matter: he depends for his bread and butter upon the man who is going to fine him. I think he should be tried by an impartial tribunal.

36402. Would it be better to take him before the magistrate with the heavy cost involved?—You assume in every case where an employer says "I shall fine you" he has a right to fine the man. I believe he has no such right in a large number of cases.

36403. If the man objects he cannot fine: but he has the alternative of saying "You must leave my employment or go before the magistrate?"—Yes, in case the act was a justifiable one for his doing it.

36404. In no case would you allow any compromise other than prosecution? It is a very large order you know?—Well, I prefer the one to the other. I prefer to go before the magistrate's court whatever the result may be, so pernicious do I consider the pit bank fining.

36405. You think accidents are often due to pressure being put upon the men to work more than their ordinary day's work?—I think in some degree that does apply, and I should think in a large degree.

36406. Is there any limit forced upon the men not working more than their ordinary day's work?—The trend of events in the coalfield from which I come is that a man is asked to stay in and do a little blowing here, or a little cleaning up there, with the result it leads to his stopping in the pit occasionally beyond 10 hours.

36407. You say he gets about 3s. 1d. a day and the percentage?—Yes, up to 3s. 4d.—one colliery pays 3s. 4d. and the percentage. That is the minimum wage that the miner gets. He may get more if his place is good, and he can get more coal, and then he may get 5s. or 6s. or 7s. a day. When I speak of 2s. 10d. up to 3s. 4d. I am speaking of the minimum that we would claim for him, but he may get more.

36408. I thought it was the maximum?—No, that is the minimum.

36409. A man may get up to 5s.?—Yes, or 6s. or 7s.

36410. Would that not really answer what the Chairman put to you, that these men were working and trying to get as much coal as they could do, and rather risking danger than stop working?—Well, in so far as that applies, if the men could get a fairly good wage without the extra pressure, even for themselves it would tend to reduce the accidents. But there is a natural pressure by the employers and officials, I have not the slightest doubt, which results in some cases in accidents—how much I cannot tell—and if that pressure were removed I think the accidents would be less.

36411. It would depend upon the degree of danger?—Yes.

36412. It would be equally dangerous if a man sat in the mine and did nothing for an extra number of hours?—It would depend upon where he was sitting.

36413. It is probably more dangerous sitting doing nothing in some places than doing something?—It is not, according to my experience—I would chance the sitting.

36414. You think the reduction of hours of labour to 8 hours would reduce the number of accidents?—Yes.

36415. You seem to have very excessive hours in your district?—In some collieries—it is not universal. We have some collieries where the men stay in a good deal, but at other collieries they do not.

36416. You said 10 to 15 hours, I understood?—Yes, in some cases—that is where the men stop at night to put the place right for the next day. If we had a universal Eight Hours Day that would all end—and I am living in hopes of that.

36417. Do you think there would be any more pressure put upon the men with an Eight Hours Day to get the quantity out than there is now with the present hours worked in the Bristol coalfield?—I think the pressure of which I spoke will remain as long as private gain is the object which the employer has in view. But in consequence of the man not remaining in the pit that time his senses will be keener and there will be less liability to accident.

36418. Do you assume that there will be as much coal obtained with the eight hours as there is with the long hours?—I am not so sure of that. I have a most decided opinion that the eight hours will not make such a depreciation in the output as is assumed.

36419. You think there will be no more men required?—I hope there will be, but not to the extent that is assumed.

36420. I do not quite know what has been assumed?—That the reduction of output will be in proportion to the reduction of hours. I do not think so, and my experience is to the contrary. As a Northumbrian I knew the days of long hours there, and I know the days of the short hours, and the production of the northern men has not been reduced in proportion to the reduction of hours. I think you will find that the Durham miners now are producing more coal per man than they were in the days when they worked 12 or 14 hours a day.

36421. I think you are wrong?—Well, I would like to compare notes on it—I think I am not.

36422. How long is it since the miners in Durham and Northumberland had such long hours?—40 years ago. I am speaking now of the time when they worked 10 or 12 hours—I mean the men were in the pit long hours. The men of Northumberland now do 7½ hours from bank to

Digitized by Google

bank, and as compared with the days when they worked long hours I say the decrease of output has not at all been in proportion to the reduction of hours, but my impression is that the Northumberland and the Durham miners get as much coal now in the 7½ hours from bank to bank as they did in the days of the long hours.

36423. You mean of 40 years ago ?—Yes.

36424. That is a long time to go back ?—I am sorry I can go back that far as a boy in the pit.

36425. Surely the hewers did not work 14 hours ?—A man had a place to himself, and he remained in as long as he pleased, and he could go in when he chose and come out when he chose.

36426. That is a matter of fact; but my own impression is that it was not so. It was not so in Durham, at any rate ?—Well, I know it was in Northumberland, and I was in a colliery at that time.

36427. At all events you think there would be no more hewers required to get out the same quantity of coal ?—I am not sure of that.

36428. You think there would be some ?—I think there would be some.

36429. To that extent you would have to have a greater number of places in which the men worked ?—I do not know. I would have to know the pit before I could give that opinion.

36430. If you had more men you would naturally require more places to put them in ?—It depends upon the system upon which you work your pit ?—The pit may be put on an extra shift—whereas now one turn of men is worked they might put on two turns of men at eight hours each.

36431. If you work another shift you require a great many more men. You would have to have double the number of men if you had another shift ?—I have not looked into the alterations so closely. The thing I look at is this, that I think eight hours from bank to bank is too long for a man to be in a pit for his living.

36432. All classes of men ?—All classes of men. It has not been with me a question of cost of production, and yet I do not think the cost of production is going to be increased so much as is thought.

36433. If you did require more men you would naturally have more liability to accident ?—I do not know that that would be so, so far as the individual was concerned.

36434. Per man it might not alter, but the total men employed it would. The more men employed the greater the number of accidents, surely ?—Yes, but the accidents would be less man to man than they were before.

36435. They might be less per man, but still greater than they are now. However, that is a matter of opinion ?—Quite so.

36436. (*Mr. Wm. Abraham.*) Setting sentiment aside, with regard to fining, which of the two systems do you think is the greater deterrent against accidents, fining on the pit bank or taking a man to a court ?—I certainly prefer a man going to the court. I know where the rub comes in with regard to it. I prefer the magistrates dealing with the case in preference to the manager's office on the pit bank.

36437. You have an opinion, I am sure, as to which of these systems is best to prevent accidents, and which induces the miner to be more cautious—is it not if he is taken to the court ?—My objection is to the men being fined by the employer. I am not wishful for them to be taken before the magistrates, but if one of the two things has to take place I prefer their going to court and being tried by an impartial tribunal: because, as I have before said, I believe the other leads to abuse in the trend of things.

36438. In your experience it is not the alternative, if a man is to be fined, betweeen the fine and stopping him, but it is the alternative between the fine and getting into court ?—In that case it would be.

36439. That is, the employers are not stopping everyone that they take to Court ?—No, ours do not. We have had few cases, I am glad to say, but when they have been summoned the employer has not stopped them from their work afterwards, but he has given them their employment again.

36440. That is my point. From what class of the workmen do the management select their examiners, as a rule ?—I could not say exactly, to be correct—the the general body of the men—sometimes it might be an off hand man, and sometimes a coal hewer

36441. Surely they take some trouble to know whether the man is qualified for it or not ?—The management are perfectly satisfied that the man they appoint is quite capable of performing the duties. I am not here to throw any reflection upon the owners in the Bristol coalfield.

36442. That is not our desire; we want to get the facts. Is the size of the district these men have to examine in proportion to their ability to inspect it properly ?—Well, the Government inspector generally goes into that question and makes enquiries whether the man can do it. I say that care should be taken that the district is not too large. I do not say they are too large in the Bristol coalfield. I only say it is a matter that requires to be watched.

36443. (*Mr. Ratcliffe Ellis.*) As to the question of inspectors appointed as Government inspectors, why do you suggest any particular class of competent persons should be excluded ?—Have I suggested that ?

36444. Yes; you say that no person should be appointed to one of these offices of sub-inspector except a workingman ?—My opinion in advising that such should be appointed is because he belongs to the practical side of the business and understands mines.

36445. Do the inspectors, with whom you have no fault to find, understand sufficient of the mines to inspect them if they had time to do it ?—Yes.

36446. Why should not they all be of that class, equally well qualified, and have more of them ?—If you take them from the ranks of the workers I have not the slightest objection.

36447. Why select the ranks of the workers ?—Why not, if you get the qualification amongst the workmen ?

36448. Because I do not want to exclude anyone who is competent from one of the appointments. You say the present inspectors are fully competent if they have the time to do it ?—Yes.

36449. What is the objection to saying "We will appoint more competent men and not deprive any particular class from getting the post" ?—If that class has been a miner I have no objection, but if they have not I do not think they understand a mine.

36450. The inspectors have not been miners, and yet they are fully qualified to do the work. Why do you want to exclude them ?—If they have been miners I do not exclude them.

36451. They have not been miners ?—Yes, some of them.

36452. There may be one or two, but not all. Why do you exclude the class from which they are drawn when you find they are fully qualified men ?—I am not wishful to exclude any individual who is or has been a miner.

36453. Do you want to exclude a person of the class from which the inspectors come, although you admit they are very competent men ?—I can scarcely conceive how an inspector who has not been a miner can be considered an efficient man.

36454. The great majority of the inspectors have never been miners ?—I do not mean a miner in the sense of getting coal.

36455. What do you mean ?—A man who has been a colliery manager or such like—a man who has experience of a pit.

36456. You want a man who has had the experience of pit work, not necessarily a miner ?—Quite so.

36457. Before a man gets his certificate, he must have had five years' experience to qualify him for it ?—Yes.

36458. That is what you mean when you say they should be practical miners ?—Yes, practical miners.

36459. As to inspection under General Rule 38, you say you have no case and nothing but your own suspicion, that the workmen might be put at a disadvantage if they made a bad report ?—It is my whole life's experience.

36460. Mr. John Wilson was here yesterday from the district of Durham. Have you had any experience in Durham ?—I have not had experience in Durham but I have in Northumberland.

36461. Do you know that Mr. John Wilson scouted the idea altogether of the men being afraid to make a bad report ?—I am not answering for John Wilson; I answer for myself.

36462. Your suspicion is that these employers might in some way or another do something to the prejudice of a man who made a bad report ?—I have not said that. I do not put that so strongly. I say, although the employer

Digitized by Google

Mr. W. Whitefield.

23 Jan., 1908.

may have the greatest desire that the man should make a clear and true report of what he has found, there is still the chance of it lurking in the man's mind that, inasmuch as his bread and butter is dependent upon that employer, he might have to give a report which he otherwise would not do. I do not want to throw any reflection on the employers in the coalfield from which I come as doing such, but I say that is the natural trend of things.

36463. You think the districts are too large in reference to inspection under Rule 4 ?—I think care ought to be taken to see that they are not too large.

36464. Let me call your attention to Section 42 of the Mines Act: "If in any respect (which is not provided against by any express provision of this Act or by any Special Rule) "—there is no provision in this Act or any Special Rule prescribing the size of these districts—" any inspector finds any mine, or any part thereof, or any matter thing or practice in or connected with any such mine, or with the control, management or direction thereof by the manager to be dangerous or defective, so as in his opinion to threaten or tend to the bodily injury of any person, he may give notice in writing thereof to the owner, agent or manager of the mine, and shall state in the notice the particulars in which he considers the mine or any part thereof, or any matter, thing or practice, to be dangerous or defective, and require the same to be remedied ; and unless the same be forthwith remedied shall also report the same to a Secretary of State." Then there follow provisions which give the owner an opportunity of having that settled by arbitration, or if he does not do that he becomes guilty of an offence against the Act. You say you have not in your mind any cases where the districts are too large, but it is a matter which wants watching ?—Yes.

36465. Is there anything which you can suggest beyond this ?—Not if this is carried out.

36466. So far as this is concerned, it gives the inspector full power to do what he ought to do ?—I would prefer it if the wording were so altered as to give the miles that any examiner ought to travel in the pit.

36467. Is it possible, considering the want of uniformity and the conditions of the various pits, to put it in miles ?—A maximum could be fixed.

36468. What is your idea of a maximum ?—I would not like to say. That would depend upon the nature of the district the man is to travel. In one district a man may have a lot of explosive gas to contend with.

36469. Exactly. In this section it gives the inspector the right to prescribe or to prohibit, at any rate, a district which is too large ?—Yes ; but if the Act also said it shall not be more than so many miles, I think it would be better.

36470. Let me put this to you upon that: Suppose you put the largest number, a maximum, then there might be an excuse, and they could say " Oh, it is not so many miles, we are within the distance " ?—That is so.

36471. Do you not think it is better to leave it as it is here, giving the inspector the power to judge in each particular case what he thinks is a sufficient size, and to tell the manager if he has any districts too big, " I think you have that district too big " ?—No ; I agree to a maximum. I conceive if a maximum was fixed it might be found that many are travelling beyond that now.

36472. At any rate this clause which is in the Act of Parliament meets your view, except you think it might be strengthened by putting some maximum distance?—Yes.

36473. But what the maximum should be you are not prepared to say ?—No ; it depends upon the nature of the district that the man has to travel.

36474. Upon the question of fines I suppose you consider it is important that discipline should be maintained ?—I do.

36475. Do you think that the men have got to that perfection now that they will maintain discipline without some pressure being put upon them, and some punishment for breaches of it ?—I think they are still in common with the employers.

36476. Both guilty ?—Both guilty.

36477. And, therefore, it is necessary that there should be some punishment inflicted in cases of breaches of discipline ?—Naturally.

36478. That is in the interests of safety ?—Quite so.

36479. Now let me call your attention to Section 50 of the Coal Mines Regulation Act: " Every person who contravenes or does not comply with any of the General Rules in this Act, shall be guilty of an offence against this Act ; and in the event of any contravention of or non-compliance with any of the said General Rules in the case of any mine to which this Act applies, by any person whomsoever, the owner, agent and manager shall each be guilty of an offence against this Act, unless he proves that he had taken all reasonable means by publishing and to the best of his power enforcing the said Rules as regulations for the working of the mine, to prevent such contravention or non-compliance." The effect of that section is this—it is peculiar to this Act of Parliament and probably to the Factory Act—that a person who is absolutely and entirely guiltless of any offence may be made answerable for an offence committed by someone else unless he does two things: first of all publishes the regulations ; and, secondly, to the best of his power, enforces them. It is the owner, agent or manager may be responsible for the act of a collier who breaks a regulation behind his back and without his knowledge, unless he can show he has done the best he could to prevent it. At the present time the manager has to do the best he can to preserve the discipline of his pit. Do you say he should be prevented from enforcing that discipline except either by discharging the man or bringing him before the magistrate ?—I am distinctly opposed to any fine being inflicted at the colliery office.

36480. Do you assert it as the opinion of your district that the managers should enforce these regulations either by bringing the man before the magistrate or discharging him ?—What I do say is that I am distinctly opposed to fines being made at the colliery office.

36481. You will not go any further than that ?—No.

36482. You said you did not desire the pit bank to be made a Magistrate's Court ?—That is so.

36483. Are you familiar with the Truck Act ?—Not intimately.

36484. What is the particular character of the Police Court that you wish to exclude from the pit bank ?—The employer taking upon himself to impose fines on men for what he considers breaches of the Act.

36485. As a magistrate does ?—As a magistrate would not do in many cases, in my judgment.

36486. When a magistrate fines a man, the man has no option but to pay or go to prison ?—That is so.

36487. Is it your opinion that the colliery manager has the same right, or exercises the same right ?—So far as the fining of the man is concerned he does it in many cases.

36488. The Truck Act provides that if he fines a man, unless the man consents to be fined, or he fines him an excessive amount, even if he consents, that that has to be recorded, whatever the fine is, and the manager can be brought before the magistrate, and if the fine is excessive the man can recover it, and the manager can be fined for a violation of the Truck Act. There is a great difference between that proceeding and a Police Court proceeding ?—I know there is.

36489. With that information as to the protection given to men against unjust fining, you still think that the manager should be prevented, with the consent of the men, from inflicting a fine, and that he should be obliged to take the men before the Police Court ?—I think he ought not to be allowed to deduct anything by way of fine for any misdemeanour on the part of the workmen.

36490. You say not only must the employer be prevented from fining, but, if the workman wishes to pay a fine rather than be brought before the magistrate, he is not to be allowed to do so ?—I have said, I believe, the system is a pernicious system.

36491. You do go as far as that, do you not ? I do not wish you to go so far as that unless you wish it: if the workman wishes to pay a small fine rather than be brought before the Police Court and pay a larger fine, he is not to be allowed to exercise any discretion in the matter ?—I believe the workman is not in a position at the present time to exercise an opinion.

36492. Do you say what I put to you ?—I have not said it.

36493. Do you say so ?—I cannot go further than I have done.

36494. Do you say the law ought to be so altered as that, under those circumstances, it would make the workman guilty of an offence against the Act if he consents to be fined ?—Believing that that would perpetuate the system I am opposed to, I can only say if he has committed a

Digitized by Google

misdemeanour in the pit I prefer his going before the magistrate and not be fined by the manager at the pit's bank.

36495. Do you say you prefer not to answer the question ?—I think I have answered the question.

36496. No, you have not—whether you would prohibit by law a workman who wishes to be fined ?—I would prohibit by law a fine being made by a colliery employer.

36497. Even although the workman wished it ?—I can say no more than I have said.

36498. You approve of baths like they have in Germany and France ?—I do.

36499. Would you also make it compulsory upon the workman that he must have a bath before he left the mine ?—I would.

36500. And that if he did not have a bath there would be a punishment ?—Yes.

36501. Do you think you have the sanction of your Association for that ?—I would not like to be so sure about that—it is new. The question with me is as to whether it would be wise.

36502. Is the Forest of Dean within your district ?—No.

36503. Are you aware that in the Forest of Dean the miners themselves have now changed their opinion about the eight-hours question, and are objecting to the limitation of eight hours from bank to bank ?—Well, they do some wonderful things there.

36504. Do you know that is one of the things they are doing ?—Well, it does not affect me in the slightest nor my opinions after 20 long years' experience.

36505. They are doing it there ?—They are a world of their own, I think.

36506. You think all these things are going to be removed by the nationalisation of mines ?—I do not—I think a number will.

36507. You think the mines will be worked more safely ?—I think so.

36508. What is the proceeding for nationalising these mines ?—I think the Members of Parliament might answer that.

36509. You are the first witness we have had who has advocated the nationalisation of mines on the ground of safety. How do you go about it ? Do you buy them ?—Well, yes, so far as I know.

36510. Are they to be bought by someone ?—There are certain things which have been nationalised in this country, and I should nationalise them in the same way as the Post Office has been nationalised.

36511. Take the mines: is your idea that the Government should buy up all the mines ?—Yes.

36512. Pay for them, I suppose ?—

(*Chairman.*) I do not think that is a question to come before the Commission.

36513. (*Mr. Ratcliffe Ellis.*) I do not want to pursue it, except, of course, if a witness suggests the nationalisation of mines as one of the means of procuring safety, then, before the Commission could come to a conclusion about it, they ought to know more. However, I will not pursue it. With respect to the number of accidents in connection with long hours you have no statistics ?—I have no particular statistics.

36514. Are you aware that a return has been obtained once or twice by Parliament showing the hours of the shifts in which accidents happened ?—Yes.

36515. Do you know in that it appears that the accidents happen rather in the earlier hours of the shift than the later hours ?—I am not aware of that for the moment.

36516. Would it not be likely to be so, that after the place is at rest the men who come there to work first are more liable to falls of roof than the men who have been working and keeping their eyes on the roof and putting the props up all day ?—I could not say.

36517. You know there was a return ?—There was a return.

36518. And it showed that the larger number of accidents occurred in the earlier hours of the shift, and not in the later hours of the shift ?—I know there was a return but I am not aware of that fact.

36519. (*Mr. Enoch Edwards.*) I understand you to say you have no complaint against the present Government inspectors ?—I have not, so far as their present time will allow.

36520. In your judgment the area they cover and their duties are too great to enable them to give the attention they ought to give ?—That is my opinion.

36521. In answer to Mr. Ratcliffe Ellis about the qualities of these inspectors, you urged that they should be practical men ?—Yes.

36522. Of course you understand now that all of them who take certificates must have had practical experience in a pit as a qualification before they took them ?—Yes.

36523. So that in that sense the present inspectors must have experience of pits ?—Yes, otherwise they could not have the certificates.

36524. Do the men in Bristol avail themselves of the examination under Rule 38 ?—Much more than they used to—at all our pits now save one. We have local examiners going round every month.

36525. Is there a book in the office in which they enter their report ?—Yes.

36526. It is the report of what they find and their experience of the actual condition of things ?—Yes, and they also send on a copy of that report to me which is entered in our minutes.

36527. Have you had any cases of discharging men for making that report ?—No.

36528. You have no complaint to make in that respect ?—No, I have no individual complaints to make at all; in fact, the owners have expressed themselves to me that they are wishful it should be done.

36529. On the strength of those reports, so far as your experience goes, there is no advantage taken of the men ?—Quite so.

36530. As to the class of inspection, that is the inspection of officials and their qualification, I do not know whether my colleagues understood what you meant when you said that these examiners should have the qualification of a second-class certificate. You do not suggest that firemen and deputies who make the examinations in one or two hours in the morning before the workmen go in, should necessarily have a first or second-class certificate ?—I think they should make clear by some method that they are capable of carrying out the duties allotted to them, and I do not know of any other method than their passing some standard of examination.

36531. The first-class certificate involves technical knowledge ?—Yes.

36532. You may have a good examiner of a pit, but he could not construct an engine or tell how to construct it ?—Just so.

36533. Do you mean that the deputy or fireman appointed by the officials should in some way have some sort of examination to test their efficiency ?—I do: I think it is most important.

36534. That either the inspectors or someone should satisfy themselves as to their fitness ?—Yes, especially the inspector I think should.

36535. You have been exceedingly emphatic about your opinion of fines in the office ?—I have.

36536. Mr. Abraham put to you a phase of it, but I do not know whether you satisfied him with your answer. Do you base your objection to the principle generally as a principle, or do you think that fining in a colliery office would be a less effective means for safety than fining before a court ?—I think it is pernicious for an employer to fine—it leads to a pernicious result I think—the man is not in a fair position.

36537. Let me put it in another way. Assuming that the employer has power to fine, if the workman is fined 2s. 6d. or 5s. in the colliery office, is that likely to be as great a deterrent and warning to him to be careful in the future as taking him before the court would be ?—I think it is a deterrent, but I think there are many cases where men are fined, whereas if they went before a magistrate it might be a question whether they would be fined or not.

36538. There may be two opinions about it, of course, and there you would have an opportunity of explaining his view of the matter ?—Yes.

36539. You do not seem inclined to go further than state generally that you are opposed to fines ?—I am opposed to fines. Where a man has deliberately broken a law, if he himself agreed with the employer to pay 2s. 6d. or some other sum, it would be an incidental matter and he might do it; but what I am assuming is this, where a man now pays in many cases, the man is not in a position to refuse, because he is not before an impartial tribunal.

Digitized by Google

Mr. W. Whitefield.

23 Jan., 1908.

36540. Of course the fines in the colliery office may be for other purposes than violation of rules ?—I think it widens with some particular managers. For instance, we have one particular manager who makes it his business to impose fines much more than the other managers of collieries do.

36541. Whatever disadvantage or inconvenience to anyone, you think the proper place is the Court ?—I do.

36542. You expressed an opinion about the hours of work. This is the first time we have had the question of hours raised before this Commission. In reference to your own locality you say you have no statistics, but it is your belief that accidents would be less if they worked shorter hours ?—That is so.

36543. It is suggested the shorter the hours the greater the hurry and pressure. What you are protesting against is the tendency to hurry and pressure. Tell us what your experience is in that respect: are the accidents less or more where they work shorter hours now ?—So far as I know they are less in the short hours district. In our district (Bristol) accidents are very prevalent.

36544. Of course if they strike and cease work for six months there are no accidents at all. People argue that with lesser hours we shall have more accidents, but you do not agree with that ?—No, because the senses of the workmen are keener when they work less hours.

36545. On the question of baths, you used some term about the men having black faces and that being against them?—I believe it is, too.

36546. The Corporation of Bristol do not own their tramways, do they, but it is a private company ?—A private company.

36547. They object to colliers riding in their tramcars, do they not ?—They did object.

36548. I suppose because of the dirty clothes and black faces ?—Yes.

36549. It is not for that reason you suggest colliers should be washed ?—Not for that reason—that is an offside reason and it is a very important one to the collier. I believe without the black face going amongst the multitude his standard would be raised immensely.

36550. You think that for the sake of health generally, baths should be placed at the collieries ?—Yes, from the point of view of sanitation.

36551. Do you prefer that to having baths in the workmen's homes ?—Yes, I do—away from his family. I know there are men in our coal-field who wash from head to foot; but where a man has a family around him it is not always convenient for him to strip himself naked and wash himself in his home. In my part they are amongst the cleanest colliers I know of.

36552. (*Mr. Smillie.*) Does your society defend members who are charged with breach of the Mines Act ?—If we are satisfied that the man has done a wrong we try to exercise a care not to support him; but if it is a doubtful case we do support him for the sake of the man getting justice.

36553. You would not defend a person if you knew he was guilty of a deliberate breach of the Mines Act ?—No; because we should feel we should be in the eyes of the employers placing ourselves in some degree in the position of accessories to such things.

36554. Colliery managers are sometimes charged before the Court with a breach of the Act ?—Not often.

36555. You have known of such cases though of colliery managers being charged by the mines inspectors ?—Yes, we have had a few cases, but they do not often occur—not so often as they would do if they were workmen.

36556. You would not be favourable to giving the mines inspector power to fine a colliery manager £5 rather than take him to Court, would you ? You do not think that would tend to discipline ?—I do not; I think the Court is the proper place.

36557. If it is a proper place for a manager to be tried, it is the proper place for a workman to be tried ?—Yes.

36558 With regard to inspection under Rule 38, the owner of a colliery might be anxious that a true report should be made of the condition of matters, but there might be some under officials who would not be so anxious that a true report should be made—I mean a true report might sometimes reflect upon some under officials in the mine that they were not doing their duty ?—That is so.

36559. Is it not possible for under officials sometimes to make a miner's life miserable and for the owner to know nothing at all about it ?—Oh, quite so.

36560. And the fear of that might deter a person, perhaps, from always giving a true report ?—Yes; the whole trend of the individual gain makes the official and the manager use pressure to keep in darkness sometimes facts that would otherwise come to light. That is my experience as a miner.

36561. You are aware that on the Continent the miners have their pit clothes dried at the mines ?—That is so, and I have seen it at a mine in Belgium.

36562. Are you aware that they must bring a clean suit of pit clothes weekly or fortnightly to the pit ?—I am not aware of that.

36563. Do you not think if the washing took place at the mine, and the drying of the clothes took place there, it would be necessary that some precaution should be taken to keep the clothes clean ?—I do think so.

36564. It might be wise, perhaps, to use compulsion in a case of that kind to ensure it ?—Yes.

36565. In the interests of cleanliness and health it might be sometimes necessary perhaps to compel persons to wash themselves ?—Yes, in the interests of public good.

36566. At the present time the Public Health Act, I think, brings pressure to bear on persons to keep themselves clean ?—Yes, in their own homes.

36567. And if it was necessary by law that baths should be provided and drying stoves also, it might be necessary to force some individuals who did not want to wash to clean themselves in the interest of the whole ?—Quite so.

36568. (*Mr. Cunynghame.*) You are aware, of course, that a large number of the accidents occur by reason of falls of roof and sides ?—Yes.

36569. I know you have made a suggestion in your evidence, but have you any other suggestion to make for diminishing those dangers ?—I think I have said all I have to say upon it; the reduction of hours is one, increased inspection is another.

36570. (*Chairman.*) I want to ask you one question about fines. Supposing a man was to come to you and explain the circumstances under which a manager proposed to fine him, say half-a-crown, and after hearing his story you came to the conclusion that undoubtedly he was guilty of a breach of discipline, would you advise that man not to pay the fine, or would you insist on his going before the magistrate ? Would you say that as a matter of principle you would advise him to go before the magistrate ?—I would not take the responsibility as the leader of the man of advising him not to pay the fine, because I should be afraid of lending myself to cases where men ought to be punished. It is because part of it is pernicious and unfair it makes me lean strongly to a magistrate's court.

36571. Even if a man was to come to you under those circumstances, and you were persuaded in your own mind that it was a perfectly fair and just thing to ask him to pay a fine of half-a-crown, you would refuse to give him any advice one way or the other ?—I should not advise him on the matter. I should say, generally speaking, the fine ought to be made by the lawful authority in the country and not by an individual who might be using his own caprice in the matter.

36572. At the same time you still doubt, as you seem to have doubted when Mr. Ratcliffe Ellis asked you the question, as to whether it would be advisable that the Legislature should absolutely prohibit a man from agreeing to a fine with the management ?—It is because of where it leads to.

36573. Will you answer that question or do you prefer to leave it unanswered, as to whether you would go so far as to say that a man ought to be forbidden by law to make an agreement with a manager as to a fine under any circumstances whatever ?—I would prefer in every case the proper authority should determine as to whether a man should be fined, and if so, what amount—as a means of getting rid of some of the pernicious features of it.

Digitized by Google

Mr. THOMAS MANSELL called and examined.

36574. (*Chairman.*) I understand you have come here to give evidence on behalf of the South Staffordshire and East Worcestershire Miners' Association?—Yes.

36575. What position do you occupy in that Association?—General Secretary of the Miners' Association.

36576. How long have you held that position?—About 13 years now.

36577. Have you had any special instructions from your Association as to the points they wish you to put before this Commission, or do you simply stand upon the general knowledge you have of the miners' wishes owing to the position you have occupied during the last 13 years?—The general knowledge of the miners I represent.

36578. You say with regard to administration you think there is room for an increase in the number of inspectors of mines in your district?—Yes.

36579. I suppose you mean Government inspectors of the district class?—Yes.

36580. Do you consider it is necessary to increase the number of Government inspectors of the present class of inspectors and assistant inspectors, or do you consider that the increase might be made solely by way of adding a third class of inspector, who would be in a different position from the others?—I think there is great need for an increase in the Government inspectors—the present assistant inspectors.

36581. You would like more assistant inspectors and more district inspectors?—Yes.

36582. How many more?—For the Black Country proper I should think one or two would be sufficient.

36583. One or two in your own district, which you know about?—Yes.

36584. How many inspectors have you in the district you are secretary for?—We have Mr. Johnstone, who represents the Staffordshire districts, who visits us occasionally, and Mr. Makepeace, and another assistant.

36585. You only belong to one district?—That is all.

36586. You say you think there is room for an increase in the number of inspectors of mines in the district with which you are acquainted?—Yes.

36587. Do you consider there ought to be more than one district inspector and two assistant inspectors?—I should think more assistant inspectors would do, because we have an admirable man in Mr. Johnstone.

36588. You would have three or four more inspectors besides the two at present?—Speaking from my knowledge of the Black Country I think if there was an additional one for the Black Country alone proper, it would make a big improvement—I think it would minimise accidents.

36589. Would you supplement that by another class of inspector—working-man inspector?—I may say that the inspection under General Rule 38 has never been brought into effect in our district.

36590. It has been suggested before us more than once that it would be extremely desirable to have a great deal more Government inspection than at present obtains, and there should be a new class of inspector appointed who should have, say, £3 a week, or some salary of that kind, and who should be appointed from, mostly at all events, men who have worked in the mines?—Yes, I quite agree with that.

36591. Some of the witnesses have said that the duties under Rule 38 might well be done by these third-class inspectors, and other witnesses have suggested that besides the third class inspectors this inspection by the men under Rule 38 should still go on. As regards Government inspection, to take that first, how often do you think a mine ought to be inspected by a Government inspector of some kind, either the district inspector, assistant inspector, or third-class inspector?—I should think in a dangerous coalfield like ours, once every three months—I mean Government inspection.

36592. The whole of the pit?—Yes.

36593. Not only inspection by sample once every three months, but the whole of the pits in the district should be gone through by some sort of Government inspector?—Yes.

36594. And that, I suppose, would necessitate the appointment of at least half-a-dozen, if not more, of these third class inspectors, besides the three assistant inspectors you want?—Yes.

36595. Therefore, you would have something like a dozen inspectors of some kind in your district?—Yes.

36596. If you had that Government inspection do you still think it would be desirable that the men should continue to have the power of inspection by their own men under Rule 38?—Seeing it has never been brought into effect in the Black Country I do not think that would matter.

36597. It never has?—Not to my knowledge. It is too great a risk for men to volunteer and be appointed to undertake that duty; they would have to do it under pain of being discharged.

36598. If they gave an unfavourable report?—Yes.

36599. That is your belief?—Yes, from practical experience.

36600. Your belief is that the miners in your district would be willing to undertake the duty of examiners if they were not afraid that they would be dismissed if they made a bad report?—Yes.

36601. That is the only reason to prevent inspection under Rule 38 in your district?—Yes.

36602. Could that difficulty be met supposing the men were to appoint two of their number, or more if they liked—any number they pleased of their own members—to be perpetual inspectors, not to work at the pit at all, but spend the remainder of their lives so far as they were engaged in mining pursuits, simply and solely in this kind of inspection?—It would be an improvement on the present system.

36603. Do you think under that system the men would object to going down the mines?—I do not think so.

36604. You think if they were empowered to appoint a certain number of themselves who should do nothing whatever but this inspection, you would find men willing to do it, and the men would be willing to pay them for it—or how should they be paid?—I do not think the men would be willing to pay the independent men like that—men who would not work in the pit.

36605. Then that would not meet the difficulty. If other people were to do it there would be no objection?—No.

36606. And you could easily get men to do it?—Yes.

36607. But you do not think the men would consider it worth their while to pay men to inspect under Rule 38?—I think it would be rather difficult to persuade them to do so.

36608. With regard to the firemen, or examiners, or deputies, or whatever you call them in your district—the under officials who have to look after the safety of the miners under Rule 4—you say they should possess knowledge of the various gases found in mines, and their effect upon human life, together with a good sound practical experience as a miner?—I do.

36609. Do you think it would be necessary that they should pass an examination for a first or second-class certificate?—Second-class certificate.

36610. Do you also think it necessary that they should have knowledge of first-aid ambulance work?—Yes, that is essential in my opinion.

36611. You say nothing about the size of the districts?—The district which I represent covers an area which employs a little over 7,000 men.

36612. I mean the firemen's district. Do you say in your district that the districts assigned to the firemen are too large for them to carry out their duties properly?—I do not think so, because our pits are very small pits compared with the other pits in the British coal-field.

36613. You think the districts you know of are not too large?—Not the firemen's districts; but the competency of the individual is another matter.

36614. As regards the size of the districts, you have nothing to complain of?—No.

36615. As to the competency of these firemen, you say that the best men are not appointed?—I do say so from my own experience.

36616. What reasons would you assign for that?—Under our butty system I think there is more preference given to relations and to those people who come and do bullying about the pit and rush the men into the work.

Digitized by Google

Mr T. Mansell.

23 Jan., 1908.

36617. You consider the firemen are appointed not entirely because they are persons who are capable of looking after the safety of the miners, but also, and perhaps chiefly, because they are able to see that the men do the maximum amount of work?—Yes, they do see that, and at a very high speed too—they do it at a speed which renders it more dangerous for them.

36618. You consider the firemen's duties ought perhaps to be confined to looking after the safety of the miners, and they ought not to have anything to do with the general management of the mine, except as regards the safety of the miners?—Yes.

36619. And having to do other things makes it desirable, from the point of view of the management, that they should be men who possess qualifications which are not always found in conjunction with the knowledge of how to protect the men?—Yes.

36620. You would be in favour, I imagine, of the firemens' duties being more strictly defined, and of their being restricted in their duties to looking after the safety of the men?—Yes.

36621. Then with regard to the establishing of Special Rules, you have nothing to complain of in the way of setting them up?—No, I do not see any ground of complaint.

36622. In your districts are the men consulted at first? Supposing an owner wishes to set up rules, does he consult the men before he sends them to the Home Office for consideration?—Well, it has not been so done in the past.

36623. They first of all send them to the Home Office, and after they send them to the Home Office the men have an opportunity of considering them and not before?—Yes.

36624. Do you not think it would be an advantage that the men should have an opportunity of considering the Special Rules at an earlier period?—Yes.

36625. But that has not been the case in your district?—Not in the past.

36626. Would you rather that the men were taken into the confidence of the master at an earlier period?—I do not say the system in the past is a good system. I think the workmen should be consulted in framing the Special Rules; but, so far as our Special Rules are concerned, I see no objection to them at present.

36627. The Special Rules, you think, are all right?—Yes, for the district.

36628. What you find fault with, if you do find fault with anything, is because under the present system the men are not consulted at as early a period as they ought to be?—If the men were consulted and discussed the question together, there might be some improvement made in the present Special Rules—but they never have been consulted.

36629. You are very well acquainted with the Special Rules?—Yes. The rules are fixed up so that the men may consult them. I think the men ought to be consulted before they are sent up to the Home Office.

36630. At an earlier period than they are?—Yes.

36631. The Home Office see that the opinion of the men is taken before they ratify the rules?—Yes.

(*Mr. Wm. Abraham.*) He says it has never been done in his district.

36632. (*Chairman.*) Have you sent up any sort of petition to the inspector that you would like to consult the men about the rules before they were adopted by the Home Office. Surely the Home Office would see you had some opportunity?—I should think so.

36633. (*Mr. Wm. Abraham.*) The question is this: have you had any opportunities of consulting the employers in making Special Rules for your district?—No, we have never been consulted up to now.

36634. (*Mr. Cunynghame.*) When were the rules made. Was it 20 years ago?—Yes, it was.

36635. (*Chairman.*) What is the date of the most recent rules adopted by the Home Office for the Black Country district?—I could not give you the date; it was before my time.

36636. There are some timbering rules within the last five years—in 1902—and your statement is that the men were not consulted before the establishment of those rules?—That is so.

36637. I understand that is a very unusual circumstance and one not likely to occur again?—The custom in the Black Country coalfield is very much regulated by Lord Dudley's office; he holds the predominant part of the Black Country coalfield, and after the Special Rules have been framed, and after they have been consented to by the office, that is the Mining Department, they have been generally adopted in the Black Country, but I never remember being consulted in my life.

36638. (*Mr. Cunynghame.*) The timbering rules are not in force in your county?—No.

36639. (*Chairman.*) Then you have no complaint, except as to rules which were drawn up a great many years ago, when the Home Office were not so particular about consulting the men as they are now?—That is so.

36640. (*Mr. Ratcliffe Ellis.*) That was before your time?—Yes.

36641. During your time no Special Rules have been set up at all?—No. I may say we should not adopt the system of timbering as suggested in the rules.

36642. (*Chairman.*) Then it comes to this, during the whole of the time you have been the miners' secretary no Special Rules, except the Electrical Rules which were framed by a Committee on which the men were represented, have been established by the Home Office in the Black Country—not since 1888, but you may rest assured that the practice of the Home Office now is, and has been, that if any rules are established the men should have an opportunity of considering them before they are established?—I am glad to hear it.

36643. Then as to accidents, you say that too much care cannot be displayed in timbering roofs and sides, especially in your Black Country thick seams, and you think there could be an improvement in this respect by a more frequent visit of inspectors. Is that the only suggestion you make as regards timbering?—I think if there were more frequent visits of inspectors there would be greater care in fixing the timber up. In our thick seams there is plenty of room for improvement provided there was someone to constantly overlook it.

36644. Is it done by special men or ordinary hewers?—I think there is too much carelessness in that respect, they do not put the highly skilled men as often as they should to timbering.

36645. You say that in difficult places the men should be constantly supervised by experts in timbering, and should not be allowed to set their own timber?—That is my view.

36646. In addition to that, even although there are expert timberers looking after the timbering in the thick seams, you still think it is desirable there should be an inspection by Government inspectors at least once in three months?—Yes, I suggest once in three months.

36647. As to haulage, you say where it is favourable you would extend the principle of mechanical haulage, as it would be less dangerous than the old system of horse haulage. Horse haulage is going out now very much, is it not?—We cannot do very well without it in some of our smaller pits.

36648. But where you can do without it you do do without it?—Yes.

36649. I do not think you have anything to complain of in that respect, as to there being too much horse haulage?—No, but I should extend the principle of mechanical haulage where I could.

36650. You would extend the use of the safety-lamp?—Yes.

36651. Do you not think the safety-lamp is sufficiently used in your district?—Where necessary, I think the safety lamp is sufficiently used in the Black Country district, because we are not so much subject to inflammable gases as they are in other parts of the British coalfield.

36652. You have no complaint to make with regard to the non-introduction of safety-lamps in your district?—No.

36653. You have nothing to say on the system of examination for certificates for managers and under-managers, and you think the district is satisfactory?—That is the first and second-class certificates.

36654. You consider the system of examination for certificates for managers and under-managers in your district to be perfectly satisfactory?—Yes.

Digitized by Google

36655. As regards ankylostomiasis, you say the seams are so shallow and vary so much in temperature, and are so much subject to water passing through the workings, that you do not think it possible for the disease to prevail ?—Yes.

36656. You have no fear of ankylostomiasis ?—No.

36657. (*Mr. Cunynghame.*) In your district the charter master system largely prevails, does it not ?—Yes.

36658. I am not sure I thoroughly understand the whole of that system. It seems to me to result in a man acting practically as manager of the mine who has had no certificate at all ?—Yes, in a good many instances.

36659. I am not sure whether the letter of the Act is not broken, but certainly the spirit seems to be broken, if you have a man directing operations who has never had any proper certificate ?—That is so.

36660. Just tell us a little about your views of that charter master system generally ?—I have had the pleasure of going through the report of our late inspector of mines, Mr. Atkinson.

36661. I would rather you would give us your views ; we have his views. The value of the evidence is your view. Do not take it from him ; contradict him or anyone, if you like, but give us your view ?—My view is this : first of all, I must endorse the view of Mr. Atkinson, because we have discussed this matter together in years gone by. I think the principle of the butty system tends to increase the number of accidents, which is fairly demonstrated by the record for the year ending 30th June, 1907. I have had the opportunity of getting out statistics which are not generally available. We have been working under a compensation scheme fund in the Black Country, and for years I have been auditor, the consequence being I am able to give you statistics that the inspector could not possibly get at.

36662. Will you let us have them in evidence ?—First of all our death rate in the Black Country proper from falls of roof is 2·342 per 1,000. If you compare that with falls of roof in the whole of the British coalfield, which works out at ·78 it is practically equivalent to three times the average of the whole of the Kingdom, and it is a clear indication that there is something imperfect in the butty system, so far as the protection of the life and limb of the collier is concerned.

36663. You must compare things which are like one with another. Is the 2·34 falls from roofs and sides only ?—Yes, only.

36664. How do you get at the figure of 2·34 ?—From Mr. Johnstone's, the Government inspector's report.

36665. (*Mr. Cunynghame.*) Have you ever had any practical experience of this butty system ?—I have worked under the butties.

36666. In what capacity ? Were you a doggy ?—No. I have worked filling, and what we call pike work and picking-in. I have worked under the butty system, I was going to say, practically all my life.

36667. Give us an impression without mentioning names, of the mining capacity of the men conducting the operations practically in the pit ?—I have had the experience of working under the butty system, and I have had the experience of working under the system of what we call general management, and I find you have not got the time allowed to fix up your timber and do your work properly under the butty system as you have under other systems. We have other employers in the Black Country apart from those under the butty system. The man engaged to overlook the other man, in most instances is some distant relative of the butty, and he is one of those who keeps worrying you all the time of the work, and the consequence is you are being bullied and there are a good many men certainly who rush into dangers which they would not otherwise do if there was decent management.

36668. What I wanted to ask you was as to the capacity of the management, and your knowledge of mining under the butty system, as compared with mining under the system such as it is in other districts ?—Do you refer to the general manager or his subordinates ?

36669. I refer to both ; I want to hear them separately ?—In so far as the capacity of the general manager is concerned it is second to none in the Kingdom, but, owing to the great number of pits and the great distance they are from each other, it is impossible for him to give the supervision he otherwise would do if there were more managers.

36670. You mean that really the general manager is general manager only in name, and there is not a manager strictly for that pit at all ? He covers the whole coalfield, and the consequence is that he cannot do it properly.

36671. Still, even although they are very small pits and necessarily worked, perhaps, by small people, would it be, in your opinion, advantageous that some test of qualification should be required of a man who may be left the whole day entirely in charge of a pit ?—Yes.

36672. (*Mr. Wm. Abraham.*) Who may be the gentleman you call the charter master ?—It is the man who has got the pit. Strictly speaking, he takes a pit under his lordship and he works that pit at so much per ton. In some cases he has to find his own timber ; in other cases he does not. However, he takes the whole responsibility and the more he gets out the more he gets for himself.

36673. He is there in the position of a contractor ?—Yes.

36674. Does he, as a rule, know anything about it ?—As a rule, he has sprung from a collier and saved sufficient money to take on the charter master system.

36675. He might be a good man, but is it necessary do you think for him to possess a certificate of management either of the first or second-class ?—If he is going to take on any part of the management of the mine he should possess a second-class certificate.

36676. As a charter master he is not compelled to do it ?—No.

36677. Then he has to engage someone else ?—Yes.

36678. Who is the general manager of the pit ?—It is rather difficult to answer that question, because the general manager of one pit is perhaps general manager of a dozen or fourteen.

36679. Who is the active manager ?—The one selected by the butty.

36680. The one selected by the charter-master himself ?—Yes.

36681. What is his qualification ?—In some instances there is no qualification at all.

36682. This is a most important statement you are making. From what you have said it appears you might work in a pit without any practical manager, only someone named by the charter-master ?—That is so.

36683. Then how is it supposed to be working under the Mines Act ?—I was going to suggest that I do not think the Act of Parliament is so much contravened and ignored in any other part of the Kingdom as in ours.

36684. What is the class of men who are doing the timbering as a rule ?—They are men who have had practical experience.

36685. Are they men appointed for that work specifically ?—No. In addition to timbering they have to do the picking-in as we call it, that is opening the wastes out and dropping the different sections of the coal.

36686. What is the thickness of the seams you are working ?—Ten yards generally.

36687. That in itself is a serious danger ?—Yes ; it is the most dangerous seam of coal we have in the Kingdom.

36688. And requires the best class of man possible to be the timberer ?—Yes.

36689. And calls for very high-class supervision ?—Yes.

36690. In the absence of those qualifications you find the great reason why there are so many accidents ?—That is so.

36691. (*Sir Lindsay Wood.*) I think you said you would advocate that the mines should be inspected every three months ?—By a Government inspector.

36692. Either by the head inspector or assistant inspector or the third class inspector—the workman inspector ?—I do not object to the latter ; but over all the others, apart from the inspection that now takes place, I would suggest that an independent Government inspector should make his visit about once every three months.

36693. You think there should be three classes of inspectors, the head inspector, the assistant inspector, and a third class inspector, paid by the Government ?—Yes.

36694. And one of those three should inspect the mine every three months ?—Yes. They may do so oftener than that. but at least once in three months.

Digitized by Google

Mr. T. Mansell.

23 Jan., 1908.

36695. Would that not do away with the necessity of the inspection under Rule 38?—It has never been in operation in our district.

36696. But would it?—It would.

36697. If the mine is inspected every three months there would be hardly any necessity for the men to inspect it, if it is done by the Government?—Quite so.

36698. You say the reason this is not carried out in your district is that the men who would have to make the inspection might be discharged or punished in some way by the management?—That is so.

36699. That you said you found from practical experience?—Yes.

36700. Have you had any cases of the owners punishing anybody for inspecting the mine in that way?—No inspection has taken place; we have always been afraid to do that.

36701. How do you get the practical experience?—Working in the thick coal seam from a boy of 12 years of age until I was appointed to the Miners' Association; I say we have been afraid to put that into operation.

36702. You have found it difficult. You could not have practical experience without doing it?—I mean practical experience in the coal working, not in reference to inspection.

36703. You said you had practical experience, or rather you formed your opinion from practical experience, that the men would be punished by the owners?—That is a wrong impression. I meant from practical experience of the mine it would be inadvisable, where there was a risk of being victimised, to put that Rule into operation in the Black Country when I worked in the pits, and the same would apply to-day, no doubt, in our district. They are not large pits. The difficulty is this: out of 20 or 40 men where are you going to get two to volunteer and run a risk of being discharged.

36704. Are you aware that the witnesses we had yesterday said there was no evidence in their district of any men being victimised in consequence of it?—Perhaps they are placed differently to us.

36705. Yours is rather a particular district altogether?—Yes.

36706. You thought horse haulage was more dangerous than mechanical haulage; that also must be applicable to your district only?—Yes, more so than anywhere else, I should think. We have a great number of accidents from horse haulage.

36707. (*Mr. Enoch Edwards.*) How far does the butty system obtain in South Staffordshire now? Does it extend anywhere beyond Earl Dudley's mines?—Principally under his lordship. I may say there is very little coalfield beyond his lordship's area in the Black Country.

36708. Thirty years ago all coal mines in Staffordshire, north and south, were worked by butties. Do you remember that?—I daresay I do remember it. That would be just when I started, but I did not know it was all worked by butties.

36709. The northern end of it at one time had nothing but butties, and they were all butty collieries all the way through. I want to be sure whether the butty, the contractor, has anything to do with the appointing of officials under the Act. You will find that according to the present Rules the firemen shall be appointed by the owner, manager or agent, but shall not be a contractor. The law is pretty clear now?—Yes, but I say that law is contravened under our butty system, as will be found if it is investigated.

36710. Do you suggest that the butty himself, the contractor, has the appointment of these officials?—Yes.

36711. Are you clear that the contractor, the butty, does appoint officials?—Yes. Let me be clear that you do not refer to the general manager?

36712. The men who are in daily charge of the pit?—Yes, he appoints them and pays them, and he goes to the same office as the men for his money.

36713. You are clear the butty, whoever he is, who contracts, does that?—He can set on his own doggy, as we call him.

36714. And his own fireman?—Yes; there is very little pay for that.

36715. And in some cases they buy their own timber—I mean the contractor does?—Yes, in some instances they do, and in others they do not; because we have two kinds of butty systems, one is what they call a royalty system, where a man goes to the office and takes to a certain area of coal, say an acre of it, and he gets the coal and pays so much per ton royalty into the office, and he takes all risk of buying timber and everything else.

36716. So that the contractor himself purchases his own timber and pays for his own timber?—I do not know you would take him to be a contractor for that. I meant the last kind of buttyship.

36717. The old notion of a butty colliery in Staffordshire was that he had either two or three men, according to the size of the pit, that he contracted to get the coal out, and did everything, paid for the timber and rails, and bought his own horses and everything. He was the employer and got it out for so much a ton. I want to put to you whether there is still the practice for the butty collier being responsible for the purchase of his own timber?—There is.

36718. While the obligation of the company is to find the timber, and see that the man has suitable and sufficient timber, still, with you, the butty collier has to find it?—Yes. But there are two kinds of butties—the one butty where the office (that is his lordship) finds all the timber and everything, apart from the horses. That butty gets his coal out at so much per ton. The other provides everything you name, but instead of getting so much per ton he gives the office so much per ton for getting it—so much royalty they call it. These men have saved sufficient money to start these little places, and they work on their own and take all responsibility.

36719. You suggest that in these very important thick seams there is not that supervision there ought to be under the Act?—There is not.

36720. When you were quoting the figures of Mr. Johnstone were you comparing the same figures that Mr. Johnstone used for purely the Black Country?—Yes. That was a statement made by Mr. Johnstone, our Chief Government Inspector of the Staffordshire District, and he regretted to have to call attention to the fact that our death-rate from the falls in the Black Country was 2·34 and the general rate in the country was ·78.

36721. You deal with inspectors over a particular area, and when you say "my district" you mean this particular Black Country?—Yes.

36722. Would you call Sandwell the Black Country?—It is connected with all our undertakings.

36723. Do you call Hamstead the Black Country?—No.

36724. Pelsall and Blakely?—No, nor Cannock Chase. The area I speak of is an area which employs a little over 7,000 men, and that is in the Black Country proper.

36725. The figures are quoted for that particular area?—Yes.

36726. And that is covered by an arrangement under the Workmen's Compensation Act?—Yes.

36727. On those figures, apart from the rest of Staffordshire, you are able to form an idea of the number of accidents?—Yes; for your information, I may say that up to the end of the year ending 30th June, 1907, in a district covering a little over 7,000 men, there were 1,680 accidents took place. Unfortunately, in Staffordshire as a whole, the number of accidents is much higher than one feels happy under.

36728. I suppose we may take it there is no other coalfield in the Kingdom like the distinguished Black Country seam of 10 yards thick—30 ft. of coal—worked in sections?—That is so.

36729. Do the colliers in the seam do their own timbering?—Yes.

36730. It would be part of the contract?—Yes.

36731. It would be difficult to go and get the coal unless he did set timber?—It would be.

36732. You could not apply the system they have in Durham of setting timber?—I do not know. But in a thick coal opening—it would be rather difficult to make you understand it—it is far better for the man to commence and finish it because he understands it better than a stranger coming in. These are special men, what we call pickers-in. I am afraid we are a little difficult in that respect, and that brings about more accidents. Sufficient attention is not given to the highly skilled men, and it is absolutely necessary there should be very highly skilled men employed.

Digitized by Google

36733. So much depends upon the timbering ?—Yes.

36734. Generally the colliers do their own timbering ?—They do.

36735. The expression of your opinion with reference to this question of the examination by the workmen is not from any experience you have had of examinations made ?—No.

36736. You have not had any ?—I have never seen it put into operation.

36737. Nor is it a question much discussed amongst the men ?—We have chatted it over, but we have never felt ourselves sufficiently strong enough to take on the position, there is too much risk in it.

36738. If the law had been a little wider, and you could have appointed two pitmen from Cannock Chase or Pelsall, would there have been the same objection ?—There would certainly not have been on the part of the men, but there would be on the part of the butty.

36739. You have no checkweighers there ?—No.

36740. The Rule is a dead letter in your district ?—Yes.

36741. The men work by day wage ?—Principally.

36742. So that when it is suggested that if they worked by day wage that would minimise accidents it does not do so in your case ?—No.

36743. They do not work by ton ?—At very few places indeed ; it is more stint work. The way they work is by number.

36744. It is day work after all ?—Yes.

36745. That is piece work ?—Yes.

36746. It is hardly working day wage ?—I should like to explain our standard rate of wages is 5s. 4d. for fillers, we get that 5s. 4d. for loading say 32 tubs a day, and 32 is a day's stint, and no more. However difficult the place is we are expected to send that number out, even if we are kept overtime—and they give us 5s. 4d. for it.

36747. The old butty system was always carried on with a stint ?—Yes.

36748. (*Mr. Ratcliffe Ellis.*) Mr. Johnstone is the inspector in your district now ?—Yes.

36749. You give him a very good character ?—Yes.

36750. He is a very excellent man ?—Yes.

36751. For all the requirements of an inspector ?—Yes.

36752. If he was in two or three pieces, so to speak ?—If he could give us more time.

36753-4. With regard to the general manager, you said he was second to none ?—There are good general managers, I will say that, only the number of pits they have to manage is too many.

36755. He is a good man ?—Yes.

36756. The charter master is a man who has worked as a collier generally ?—In most circumstances.

36757. He is a practical working miner ?—Yes.

36758. Then the men you give a good character to, Mr. Johnstone and the general manager, are not men who have worked at the face ?—No. Well, I do not know with regard to the general manager ; he would have some experience to obtain his first-class certificate.

36759. He has not worked as a miner at the face, nor has Mr. Johnstone ?—Mr. Johnstone hails from Scotland.

36760. A colliery engineer and mining manager is his description ?—Yes.

36761. You want to exclude men like Mr. Johnstone and this excellent general manager from being appointed as inspectors ?—No.

36762. And the charter master is the man who is to be eligible ?—No, I object to that.

36763. I think that is the conclusion I have come to from your evidence. You give the highest possible character to Mr. Johnstone as an inspector for everything an inspector has to do, and the general manager whose name you gave is also excellent for his job. If these working-men inspectors are to be appointed only from men who have worked at the face as miners, you will exclude Mr. Johnstone and the general manager you mentioned, and you would only have to select from men like the charter master ?—No.

36764. You think that would be undesirable ?—Yes.

36765. If I am right in what I am saying, that would not be a method conducive to safety ?—Mr. Johnstone is our District Inspector of Mines ; it never entered into my mind to suggest doing away with his excellent services.

36766. Is he a competent man ?—Yes. I suggested—I do not know whether I have conveyed a wrong impression in answering the question—that there should be additional inspectors.

36767. I want to see whether you would be satisfied if they could be drawn from the same class as Mr. Johnstone belongs to ?—I think from the working miners is much preferable, if there are going to be additional inspectors.

36768. You mentioned three classes of men : There is Mr. Johnstone, an inspector of mines, excellent for the purpose ; there is another gentleman you named, who is excellent as a general manager ; but neither of those have been working miners. The charter master you do not approve of, who has been a practical working miner. If, as has been suggested here, these sub-inspectors are to be selected from the working miners, the class you select from excludes Mr. Johnstone and the other gentleman, and includes the charter master ?—You may construe it to mean that, but I do not mean that. My suggestion is not to exclude the manager as an inspector of mines.

36769. You would be satisfied if these additional inspectors were all like the present Inspectors of Mines, all equally qualified ?—Yes, all qualified men.

36770. If all equally qualified, that would satisfy you. You would not mind what class they were drawn from, if qualified ?—Preferably from the miners.

36771. I want to know why. You say preferably from the working miners ?—I should exclude the charter master.

36772. He is a practical working miner ?—Not always.

36773. I understood generally he is a man who has worked at the face and saved money ?—In several instances they are working miners, or have been at least for a few years.

36774. What do you think these inspectors should do when they go to inspect the pit ?—Give special attention to the openings. A man trained in a thin seam would be absolutely useless to act as an inspector in a thick coal seam. The only man to have a thorough knowledge of it is a man of practical experience, and that is the most dangerous part of our work.

36775. Mr. Johnstone is a thoroughly satisfactory man, and a man of the class from which the inspectors appointed by the Government are drawn. Do you propose that they should do more than see that the Coal Mines Regulations Act is carried out ?—He is His Majesty's Inspector of Mines, but additional inspectors would certainly give more time for the general supervision of the pits.

36776. Are they to do more, in your view ? Is your view that they should do more than see that the management is carrying out the Coal Mines Regulations Act ?—I do not see anything more. With regard to timbering, the Act is fairly stringent in that respect, if they carry it out.

36777. They have to see that the Coal Mines Act is carried out ?—That is the inspector's duty.

36778. You do not contemplate that they should make any suggestions ?—If they can make any suggestions for improvement, by all means let them do it.

36779. Is your idea that they should make suggestions ?—Yes, which will increase safety.

36780-3. The man who makes suggestions to the manager would have to be as well qualified a man as the manager ?—Yes, certainly.

36784-5. With regard to the percentage of accidents you have mentioned in your district, I do not know whether you have satisfied yourself that percentage was for all accidents ?—May I read the statement made by Mr. Johnstone as Chief Inspector of Mines at a meeting last night : "Taking the whole of Britain, the death-rate from falls for 1906 was ·78 per thousand of persons employed. For the Staffordshire inspection district it was 1·01 per thousand—more than a third above the average for the whole country. For South Staffordshire the figures were 1·14. North Staffordshire came out better than South Staffordshire in this matter. For the Black Country the figures were 2·342 deaths per thousand persons employed —equivalent to three times the average for the whole country."

36786. That is some speech he has been giving ?—Yes.

36787. Does he give any reason for it ?—Mr. Johnstone only expresses regret at the serious rate.

36788. Does he give any reason why ?—No. He thought that there would be a decided improvement in the future.

Digitized by Google

Mr. T. Mansell.

23 Jan., 1908.

36789. (*Dr. Haldane.*) Does not he attribute it to the thick coal workings ?—Yes.

36790. (*Mr. Ratcliffe Ellis.*) He attributes it to the different physical conditions in this district from other districts in the Kingdom ?—He is bound to when he has seen the thick coal workings.

36791. It is much more dangerous ?—Yes.

36792. It is not fair to compare the death-rate from falls of roof in your district with the rest of the Kingdom ?—When there is such a difference ? It is fair to quote the figures.

36793-4. There are conditions in connection with working which are more dangerous ?—Yes. We are not subject to the striking explosions which take place in other parts of the British coalfield. This is simply falls of roof and sides.

36795. (*Mr. Smillie.*) What proportion of the miners in the Black Country will be presently under the butty system ? I think you referred to Lord Dudley's ?—I could not give you the correct figures, but I should think about one-fourth or one-fifth.

36796. One-fourth or one-fifth ?—Yes. I think that is near enough. I have not gone to the trouble of getting the figures out.

36797. These men were largely paid day's wage for stint work ?—You may term it stint work ; they always work stint work. What we call the brushers and blowers and fillers are allowed so many tubs for the day's work—32 for the day's work, and so much a day for that.

36798. Although they are not paid by the ton as men are generally, there is still a certain amount which they must produce ?—That is so.

36799. The pressure is quite as much on them as where men are paid by the ton ?—Yes, or more.

36800. The butty man will make sure that there is some person in charge to see that these men do their work ?—That is so.

36801. That does not prove that if miners were paid day's wage instead of by the ton, or stint work, that their employment would not be safer than it is now ? I mean, do you think pressure, either by having stint, or a certain amount put out, or paid by the ton, makes men run more risk than they otherwise would ?—I do, and it increases the number of accidents, undoubtedly, from my experience.

36802. Day's wage men, such as roadsmen and firemen, are paid by the shift ?—Yes.

36803. There is not always the rush on them that there is on men working at the coal face, or ripping ?—No.

36804. You gave Mr. Johnstone a very high character as a mines inspector. You have no fault to find with him ?—No, the only thing is, he cannot give sufficient time to the Black Country.

36805. You do not know whether he has or has not been a practical working miner ? You are not aware of that yourself ?—No.

36806. I suppose you are aware that he has been a colliery manager ?—No, I have never known him till this last few months, till he came into our district, but he has left no stone unturned in fishing out all the information he can with regard to our dangerous thick coal seam.

36807. Mr. Johnstone, as far as you are aware, has high qualifications, and is desirous of doing right, but is it your opinion that it would have added to his usefulness if he had had his present qualifications with the addition of a few years' practical experience at the coal ?—Yes.

36808. That is really what we mean ?—That is what we are suffering from.

36809. No fault is found generally with the present mines inspectors in the country ?—No.

36810. The feeling amongst your men is that if they had an additional qualification, having had practical experience would improve—— ?—Improve and reduce the vast number of accidents. I am certain of that.

36811. Do you think a practical miner, a man who had a long practical experience in all classes of mining work, face work and other work, and also scientific attainments and education, would be the best class of man for an inspector ?—I do, especially in the thick coal. If you put a thin coal man into a thick coal pit he is absolutely useless ; he knows nothing at all about it.

36812. Sometimes a man who has had his whole experience in a thick coal seam would not be as useful in a thin coal seam ?—A thick coal man can work in any coal seam in the country, because he has the knowledge of cutting and ripping and holing the same as a thin coal man would.

36813. The nature of the roof, whether a thick or a thin seam, will, to a very great extent, increase or lessen the number of accidents ?—Yes.

36814. Most of the roof is very treacherous, as miners call it ?—Yes.

36815. It does not give much warning ? There may be some accidents then if the roof is good ?—Yes. In a thick coal seam we have no strictly permanent roof. We have to keep climbing up till we have the coal out. Sometimes we cannot get the top section. That comes all together, the rock comes in hundreds and thousands of tons at a time and buries it.

36816. If you are correct in saying that the butty men at your collieries, where the butty system is still in force, appoint competent persons under this Act to be firemen, you are aware that that is not according to the Act of Parliament ?—I say it is in contravention of the Act, and has been for years.

36817. Is Mr. Johnstone aware of that ?—I should think he is, but I have not discussed it with him. His predecessor was aware of it. I do not now how you would construe it yourself. I considered it was a contravention, but no action has been taken in the matter.

36818. If the butty man has the appointment and the payment and the right to dismiss those men, he will have a considerable power over them ?—Yes, certainly, and that is where the evil comes in.

36819. They are not as likely to pay the same close attention to danger as they would if, instead of the butty man, the appointment was by the manager of the mine ?—I may say that the men look up to the butty man as their master ; they do not look upon the chief of the firm as their master. They look up to the butty man because the butty man pays their wages.

36820. He really is their master ?—Yes, he has the power to set them on, discharge them, and he pays them.

36821. Have you many unskilled persons going into the mines ? I mean those who have grown up unskilled ?—Yes.

36822. In the mines of Staffordshire ?—Yes. The butty system tends to that ; it tends to encourage them in preference to practical men.

36823. Cheap labour is one of the things they are anxious to have ?—Yes, and it is very dangerous in a thick coal pit.

36824. A large number of unskilled persons going into your specially dangerous seams is a danger to themselves ?—And to those around them.

36825. Do you know whether or not the high death rate from accidents is in any way due to the employment of unskilled persons ? Have you any figures with regard to that ? Is the proportion of persons injured or killed larger among unskilled workers ?—The proportion of deaths and permanent accidents is considerably greater under the butty system than under the ordinary system of working, and has been for a considerable number of years.

36826. That, in itself, is very important ?—Yes.

36827. (*Dr. Haldane.*) In the same seams ?—In the same seams, working under the same conditions.

36828. (*Mr. Smillie.*) That is very important. Can you give any information on the other question ? Have you given it sufficiently close study to enable you to say whether the proportion of accidents is greater with unskilled persons than with skilled miners ? In a general way you would say it must be so, but you do not know from figures ?—No, I have no direct evidence to prove that. From interviews with our men and constant meetings they are always attributing certain accidents to the introduction of unskilled labour. Men are put into positions who have had no practical experience, and they are put over those who have had experience.

36829. If I put it to you that there was more danger arising from an unskilled man driving a new Great Western engine to Carlisle than a skilled man, you would agree with me that that was so ?—Yes.

36830. But you have no statistics to prove that it is so ?—No.

36831. What class of unskilled labour is it that goes into the mines ? Are they agricultural labourers ?—No, practically all classes, more or less, from various industries, especially when wages are high.

Digitized by Google

36832. There is a larger increase then than at other times ?—Yes.

36833. Do your boys, on leaving school and entering the mine, start at the coal face or on day work ?—They all start on day work. The boys commence first of all minding doors and different things like that. They do not get to the coal face sometimes till they are 25 or 26.

36834. You have no lads allowed to work at the coal face ?—No.

36835. Do you think it would be an advantage, so far as safety is concerned, to give lads likely to go into the mines to work some knowledge of mine gas ?—I do.

36836. And the dangers of mining, and the Special Rules and the Coal Mines Regulation Act, before they go in ?—Yes.

36837. That might be done at school ?—Yes.

36838. Nothing of that kind is done so far as you know at the present time ?—No.

36839. You think it would be an advantage ?—It would be, but we have no mining village; we are interwoven with other industries. We have not a village what I call a mining village. There is none of that taught. We have mining classes for young men from 18 to 30.

36840. For grown-up persons ?—Yes, and very useful they are.

36841. What class of houses have your men ? Do they live usually in the employers' houses or are they owned by private individuals ?—They are owned by private individuals, particularly.

36842. You have not a very large proportion of workmen living in houses belonging to the colliery ?—No; there may be a few, but very few indeed.

36843. Generally the houses are good, roomy houses ?—Yes, nice cottages. It is not like being in Scotland. You would not find a row of houses for colliers in our Black Country. They are mixed with various kinds of tradespeople.

36844. Have you given any consideration to the question of washing at the collieries ? Would it be an advantage if the miners could have an opportunity for washing at the collieries and leaving their pit clothes there and going home in their ordinary clothes ?—I do not think it is necessary in our district.

36845. There is plenty of convenience at home for washing ?—Yes, and they do not have to walk great distances; most live fairly close to the pit.

36846. You have not any great number who travel by train or who travel a considerable distance ?—No.

36847. Have you very much wet work ?—Yes, there is a lot of wet work in the Black Country.

36848. Where the men are working wet and come out of the pit drenched with water is there any arrangement for changing their clothes ?—No; they have to go home.

36849. Is it not a very considerable disadvantage to them, especially in cold weather, to walk a mile or so in that condition ?—Yes, it is; but it has been in existence ever since I can remember. I have had to do it for years myself.

36850. The miners get so well used to it that they do not take any notice of it ?—No.

36851. (*Mr. Enoch Edwards.*) I should like to be clear about one statement you have made here. When Mr. Smillie asked you what proportion of these men were working under butties, you said one-fourth. Do you mean one-fourth of South Staffordshire or the Black Country itself ?—Not South Staffordshire.

36852. You said there are about 7,000 in the Black Country ?—I am talking about the men who are covered with the compensation scheme. We cover 7,000 or a little over. The butty system prevails in one-fourth of the whole.

36853. There are less than 2,000 men and boys employed by butties ?—Yes; it would be running on to 2,000. I am not sure about the figures. I have not troubled to bring the exact figures.

36854. (*Chairman.*) Is the number going up or down ?—It varies. Some months there is an increase and others a decrease. It ebbs and flows. There may be 100 men at this pit in January, and in December it may be reduced to 75.

36855. It applies to certain pits. How long will those pits continue to work under the butty system ? Are they leased under the butty system for a number of years ?—No.

36856. Or till the amount of coal has been got out ?—Till the seams have been extracted.

36857. It will go on till the seams have been extracted ?—Yes.

36858. How long do you suppose it will go on ? Will there be fresh butty leases made ?—They transfer them. As they work one place out they go to another.

(*Mr. Enoch Edwards.*) A particular firm prefers to work their coal by contract butties. That is what I take it.

36859. (*Chairman.*) A particular firm does it ?—Yes. I cannot see that it is any advantage to the firm. I think it is a loss myself. It is a dear-beloved system they have had, and they stick to it.

36860. If things go on as they have gone on, the butty system will be very much in the same position in 10 years time as it is now. There will not be much decrease ?—No.

36861. Nor, perhaps, for the next 20 years. Do you think it will last 20 years ?—I do. They keep working the different seams. Most of our pits are broken mines. One butty will work in its maiden state, and 20 years after another butty in its broken state.

36862. You do not see a prospect of it coming to an end until 20 years or more ?—No.

36863. Or it being seriously diminished ?—No.

36864. (*Dr. Haldane.*) Is not the broken coal getting exhausted—that is, the thick coal ?—No.

36865. Is not the broken coal near the surface ?—No. It will not be exhausted for a great number of years.

36866. (*Mr. Ratcliffe Ellis.*) In the case where the owner of the mine and the owner of the plant chooses to let both mines and plant to a lessee, reserving a royalty by way of rent calculated upon the quantity of mineral gotten, do you see any objection to that ?—The only objection is that it introduces very much unskilled labour, because this arises from colliers as well. They save a few pounds and they take these places on, and are the very people where most accidents take place.

36867. That is no fault of the system. Usually a man who works a colliery takes a lease from the mine or the colliery owner, and spends his money in sinking the pit and establishing the plant, and makes his profit. If a man is in that position and is tired of working it himself, and wants to let it to somebody else, he finds somebody else to work it, and they give him, by way of rent, a certain sum calculated on the coal he gets, to remunerate the owner for the royalty and interest on the plant and depreciation. I understand that is one part of the butty system.

36868. (*Chairman.*) You include that system of working under the butty system ?—Yes.

36869. (*Mr. Ratcliffe Ellis.*) Do you see any objection to that ? A lessee who is working this mine is the owner, and is bound to carry out the regulations of the Coal Mines Act. If he does not, he ought to be made to do it. The system does not seem to me to me prejudicial ?—I see no objection to the system you have quoted; it does obtain in various parts. More attention is wanted with regard to the supervision of the mines but that does not alter the principle.

36870. The second system is this: Where the man who is working, and is the responsible man, says to some person, "You take this district and get the coal, and find your timber, or do not find your timber, either give me so much and make what profit you can, or I will give you so much and take the balance for my profit ?"—That is the butty system.

36871. The objection to that is the person who is the contractor is made responsible for the mine by the arrangement, and does not take his responsibility sufficiently seriously, because he is too anxious to get coal ?—That is so.

36872. Why should not he be made to do that ?—It is brought about through the want of periodical inspection by somebody in authority.

36873. What is wanted is a greater supervision of somebody to see that the Coal Mines Regulation Act is carried out ?—That is so. If you do that you will reduce accidents.

36874. It is not the system which is wrong so much ?

(*Mr. Wm. Abraham.*) The system itself is rotten altogether.

(*Witness.*) Yes.

36875. (*Dr. Haldane.*) You say, I think, that most of the mines are shallow and pretty cool ?—Yes.

Digitized by Google

Mr. T. Mansell.

23 Jan., 1906.

36876. There are very deep mines also in your district?—Only two, Hamstead and Sandwell. We are not including those on the butty system.

36877. I am not thinking of the butty system. I was thinking of it in connection with the worm disease. There are deep mines?—Yes. Sandwell and Hamstead are the only two.

36878. There are more going down to the thick coal where it is deep beyond the boundary fault?—Yes.

36879. In these mines, at any rate, there is a temperature which might be dangerous so far as the worm disease is concerned?—Yes

36880. Have you had much complaint about bad ventilation in your district?—We suffer constantly from that.

36881. Black damp?—Yes. That is the principal gas found in our mines. That is due to bad ventilation in most instances.

36882. There is a great deal of black damp?—Yes.

36883. And a great deal of danger from heating of the coal?—Yes.

36884. And poisoning?—Gob fires.

36885. Gob stink?—Yes.

36886. Great attention is required to be given to the ventilation in the interests of safety?—Yes.

36887. Is it a common thing for men to be working in air which will scarcely keep a light burning in it?—I have worked in it hundreds of hours myself—black damp. There are very few of our small pits that are free from it any day of the year.

36888. Do you think it is necessary to have a standard of ventilation to prevent such things?—It is rather difficult; if you raise the ventilation you are going to create gob fires on account of the broken state of the mine. You cannot get ventilation too high, because it creates gob fires.

36889. I think that is a matter that is very doubtful. It is the practice in your district to stop the ventilation on Sundays often?—No, where there are gob fires.

36890. With the idea of stopping gob fires?—Yes.

36891. Is there any evidence that it did stop the gob fires, or do any good whatever?—The experience I have had is it has damped it down. It has allowed us to get into the workings again.

36892. You stop the ventilation?—For three days or a week.

36893. Are you sure it was not due to other causes? You are aware the amount of gas and smoke in the mine depends largely on changes in the barometer?—Yes.

36894. If you stop a day or two the barometer may have gone the other way?—Yes.

36895. And the whole place be clear?—The idea we have in damping places is to introduce black damp to kill the fire.

36896. To prevent any air getting at it?—Yes.

36897. Black damp is caused by the chemical change in the coal itself. You are aware a good deal of trouble arises from men working in black damp?—Yes, and that increases the danger, especially in the thick coal opening. They have no chance to test the roof 5 or 6 yards high, where the damp is prevalent, to see whether it is safe or not. They run a risk in filling up the coal that is down. Many accidents are caused like that.

36898. Why cannot they get at the roof—because of the damp?—Perhaps you cannot understand it.

36899. I know them?—Our place is as big as this 10 yards square and 10 yards high. Suppose our section was 5 yards high. If you have black damp all the way round it is impossible to take your light to test this coal.

36900. The black damp is at the roof?—Yes.

36901. And not on the floor when it is full?—When the place is full of black damp.

36902. You cannot get in at all with a light?—No, very often we cannot. In the more shallow mines I have had experience of having to run out with my clothes under my arm, and also my comrades. The black damp has driven us out quick through a change in the atmosphere.

36903. Through a change in the barometric pressure?—Yes.

36904. Although naked lights are used in all the mines in your district there is still a great need for looking after the ventilation?—Yes; it is a very difficult thing to do.

36905. There is no trouble from fire-damp, but a great deal of trouble from black damp and gob stinks?—Yes. That is owing to the broken state of the mines.

36906. (*Mr. Ratcliffe Ellis.*) Is not the difficulty about the butty system that the places are so small, they are very little collieries, very small places indeed, and placed in the hands of the men who have risen from the ranks and have not capital to carry the thing out?—Yes. They vary in area and the coal they get.

36907. The practical working miner does not shine as a manager?—No.

36908. (*Chairman.*) There are these two systems of butty working. What proportion are worked under the first system, which seems not to be so dangerous as the second system, shall we say?—I have hardly got the question you have submitted.

36909. Mr. Ellis has put it to you that there are two ways of working under the butty system?—Yes.

36910. I do not think I need repeat what he said upon that point?—No.

36911. What proportion of mines in the Black Country worked under the butty system are worked under one system, and what proportion are worked under the other, under the system that is more dangerous, or the system which is comparatively speaking less dangerous?—I should think it would be quite eight-tenths.

36912. Under the second system?—Under the butty system.

36913. Under the real butty system?—Yes.

36914. The unmitigated butty system, we may call it?—Yes.

36915. About that?—I am not certain about the figures; I simply give that from my present knowledge of the area.

36916. It is to the best of your knowledge and belief?—Yes.

Digitized by Google

FIFTY-FIRST DAY.

Wednesday, 5th February, 1908.

PRESENT:

H. H. S. CUNYNGHAME, Esq., C.B. (*in the Chair*).

JOHN SCOTT HALDANE, Esq., F.R.S.
ENOCH EDWARDS, Esq., M.P.
ROBERT SMILLIE, Esq.
S. W. HARRIS, Esq. (*Secretary*).

Mr. LEVI LOVETT, called and examined.

Mr. L. Lovett.

5 Feb., 1908.

36917. (*Mr. Cunynghame.*) You are deputed by the Leicestershire Miners' Association to come here and give evidence?—Yes.

36918. I will take you shortly, because we have heard at very great length a number of the points already on which you are going to give evidence. You think that the inspecting staff should be enlarged so that there should be two thorough examinations made each year instead of one, which is the average at present?—Yes, at least two.

36919. I suppose you would concede that it would be impossible for the State to undertake such an inspection of mines as to guarantee them to be completely safe, in other words, to take the question of safety out of the hands of the management?—I do not think they could possibly do it.

36920. Still, you want more inspection than exists at the present?—Yes.

36921. What would you desire as to inspection by men under Rule 38?—I think they should be appointed by the Government and paid by the Government.

36922. That means you would have some practical men as Government inspectors?—That is so.

36923 I suppose your practical men would not be inspectors capable of doing the very most difficult task, such as advising on the whole ventilation of the mine?—No, but practical men so far as concerns examining the roof and side places.

36924. That would be with a limited function?—Yes.

36925. I suppose if they were appointed they could not aspire to be inspectors of the higher orders, unless they were able to pass an engineering examination?—Of course, if they were able to pass such an examination they would be able to aspire to be inspectors.

36926. I think you have something to say about inspection under Rule 4?—Yes. When there are two shifts working consecutively without the men leaving the shift there is no inspection, and I think the inspection ought to be made between the shifts.

36927. What do you say as to the fining of men?—In our district it is found to work very well indeed. Unless there has been a gross breach of the rules they fine a man, and that is with the man's consent in writing, and in some places they post his name up in a conspicuous place about the colliery to show he has been fined. We think that much better than taking him before a magistrate for small matters.

36928. You would not allow that to be done in the grosser or grave cases?—Quite so.

36929. It is only done in the trivial cases?—Yes, in the trivial cases.

36930. What are your reasons for thinking a fine is best?—We think it is quite as effective to fine him; besides, we do not care to take him before a magistrate and get him convicted if it is a very trivial offence.

36931. You think the disgrace, so to speak, of being brought before the magistrate is more than the character of the case warrants?—Yes.

36932. And there is also the loss of time in getting the conviction?—Yes; but it is not the loss of time, it is simply the question of the man being brought before the magistrate.

36933. You think the punishment rather exceeds the crime in that respect?—Yes.

36934. You are of opinion that discipline can be maintained by fines as well as by prosecution?—So far as my experience goes, I think it is quite as effective for small offences as taking him before the magistrate. I may say these matters have been brought before the executive of our Association, and they quite agree with what I am saying here.

36935. I think you have something to say about Special Rules?—Under the Special Rules as framed now, I do not think the men or the managers have a fair chance. We had some experience with reference to that some years ago when they were framed. The managers submitted them to the Home Secretary and there is a deal of trouble to get them to alter them sometimes.

36936. What rules are you referring to?—The rules which belong to Mr. Stokes' district (No. 8), Leicestershire, Warwickshire, Nottingham and Derby.

36937. Were they rules about timbering or a general set of rules?—A general set. They are the same in those four counties.

36938. They are a sort of revision of the Special Rules affecting the county?—I think it was a general alteration of the Special Rules.

36939. All the way through?—Yes.

36940. A sort of consolidation and revision of them all?—Yes.

36941. Did not the men get an opportunity of making their views known before those Special Rules were finally adopted?—Yes, but the opportunity was so small. If it had been left to the men themselves, there would be scarcely any objection raised. They have to be posted up so long and unless the check-weighman had an opportunity of looking at those rules there would probably not be sufficient notice taken of them.

36942. Still they were posted up for some time?—Yes.

36943. Could he not see them and discuss them and make representations and call a meeting if necessary?—It is very rarely the men call meetings unless they are fairly well organised, and the check-weighman going to look at those rules and reporting to the men would be exceeding his duties as check-weigher.

36944. What system do you then suggest?—I suggest that a Board should be formed in different districts consisting of inspectors, managers and workmen, and workmen's representatives.

Digitized by Google

Mr. L. Lovett.
5 Feb., 1908.

36945. What would you propose to do supposing there was some rule that it was proposed to bring into force for the whole of Great Britain? You could not deal with it locally, very well, because the rule would be different in every district?—I think rules brought in for the whole of Great Britain would be wrong, so far as Special Rules are concerned.

36946. Let me take an instance of some rules brought in applicable for the whole of Great Britain, and I think you will agree rightly so; I mean the rules for electricity in mines. A large code consisting of more than 50 articles was brought in about three years ago for the whole of England, and is quite uniform. Do you not think it would be a very good thing that those electricity rules should be applicable to all mines?—Those are different to the Special Rules. I do not think Special Rules should be framed the same all the way through for Great Britain. I think there are some districts where they should be different.

36947. Still, there should be some rules of a desirable character framed which might be uniform throughout Great Britain?—Yes.

36948. Is it not a fact, if you look at your own code of Special Rules, that nine-tenths are applicable really to every mine in the county?—It may be so, but I can only speak for the four counties I have named, Leicestershire, Warwickshire, Nottingham and Derby.

36949. They are applicable to all those counties?—Yes.

36950. If you extended them to Yorkshire and perhaps to Durham, nine-tenths of the rules would be applicable to Yorkshire and Durham, would they not?—Well, I could not answer as to that.

36951. Let me take one perfectly at random: "The under-manager or some other competent person shall at least once in every week measure the quantity of air in each split and enter it in a book to be kept for the purpose in the mine." That is a rule that might be applied to every mine in the kingdom with advantage, might it not?—Yes, that one might.

36952. I will not go through them all. I know a great deal about these rules, and my conviction is that if I put my finger upon any other one, perfectly at random, you would answer the same, would you not?—No; I do not think you should make Special Rules for the whole of Great Britain

36953. Is it not a fact that these rules which would apply to Leicestershire alone and not be applicable to some other district are exceedingly few?—If they make the rules and give some latitude to the men and management, it might be so.

36954. Well, let me take Rule 47: "Every person about to fire a shot shall, before firing, see that all other persons are out of reach of danger from the probable effects of such shot"; surely that is applicable to the whole kingdom?—Yes.

36955. Now will you pick out for me from the whole of your district (No. 8) any rule which is only applicable to Leicestershire, and not applicable elsewhere?—I do not know that I can for the moment. I was thinking about the Board being formed and not about the rules being framed; and I should not object so long as there are some practical men on the Board to draw them up.

36956. The drawing up of the Electricity Rules was founded on the labours of a committee on which the working men had representatives?—Quite so.

36957. You think the working men should be consulted in some way as to these rules, and have their full say before the rules are brought into operation?—Yes.

36958. (*Dr. Haldane.*) Before they are settled?—Yes, before the form of them is settled and they are brought into operation.

36959. Do you not mean before they are drawn up?—Yes, I mean in the drawing up of the rules.

36960. (*Mr. Cunynghame.*) How can it be possibly shown to anyone before it is drawn up?—I think the men should know when it was being drawn up.

36961. How can you have the working men come in to discuss it, even before a scheme is drawn up?—They might discuss the scheme.

36962. There must be a scheme proposed by someone before they can discuss it?—Quite so.

36963. (*Dr. Haldane.*) You rather object to the rules being drawn and posted up for any objections to be made to them before the workmen are consulted in any way. You say they should be consulted at an earlier stage?—Yes.

36964. The important case is, where rules are proposed by the Home Office—they must in such a case be framed by the Home Office before suggested?—Yes.

36965. And when sent down means must be taken to make them known?—Yes.

36966. One of which would be, at all events, by posting them at the pit?—Yes.

36967. Your great point is that the workmen should have in each district a thorough opportunity of making their feelings and opinions with regard to these rules thoroughly known?—That is so.

36968. (*Mr. Cunynghame.*) Now as to accidents, what do you say with regard to systematic timbering?—With regard to systematic timbering I think the stallman should be allowed to set advanced timber in the stall. In our district we had some difficulty not long since. You will find I am following Mr. Stokes somewhat, the Government Inspector of No. 8 district. His duties lead him into our district and with all due respect to Mr. Stokes, we have sometimes to come into conflict with him as Government Inspector. With regard to systematic timbering, so far as I am informed, Mr. Stokes is even going beyond that in the stalls. In some of our seams there is a system of timbering, called a leading prop, or advanced prop, or safety prop, that has been set in some of the seams—what is called the old main seam—for 30 years; but in the lower seam it is not at all required in many places. Now we have had great difficulty, and Mr. Stokes has been trying to make the men set this prop, whether required or not as a system. We have very nearly had a strike about it. We met the owners at Leicester and they agreed not to enforce it unless where necessary. Just recently we have had a dispute at one colliery, and there the matter came forward very acutely.

36969. Your point is that there has been a tendency (I will not say by whom) to insist upon what I suppose one would call the pedantic setting of props, whether they are required or not?—That is so.

36970. You say they only ought to be set where required?—That is so, I think, under Special Rule 70.

36971. This is the rule: "Stallman in each stall shall build efficient packs and set a sufficient quantity of props, bars or timber for safely supporting the roof and sides in their working places, and shall remove and renew the same when necessary"?—Sometimes a man thinks it is unnecessary.

36972. Apparently Mr. Stokes, out of anxiety for the safety of the men (for it must be that) is going rather further than you think he ought to go?—That is so.

36973. What is the prescribed distance at the present time?—Not more than 6 ft. under our agreement (*Producing.*)

36974. Under your agreement would that occasionally involve the setting of the props at a greater distance than 6 ft.?—No, a lesser distance.

36975. You mean to obey the 6 ft. rule, notwithstanding that agreement?—Yes.

36976. Supposing it was unnecessary to have props at a nearer distance at some particular place, than 12 ft., does that agreement mean you are not to set them nearer than 6 ft.?—Yes, not to go beyond 6 ft.

36977. You are to obey the 6 ft. rule, notwithstanding the agreement?—Yes.

36978. You say there has been a tendency to want you to timber systematically, at a great deal less than 6 ft., whether necessary or not?—Yes It is what the men themselves call a man-trap, because it is likely to be knocked down and injure a man.

36979. At all events the error, if it is an error, is rather due to an excess of care for your safety than a want of care for safety on the part of the inspector?—Yes; but the men think if it is set when it is not needed for the roof it is a source of danger.

36980. At all events it is done out of an excess of care for your safety by Mr. Stokes?—That is all.

36981. Now about the explosives in the Coal Mines Order of 1896. Will you call attention to the portion which you think wants modification?—So far as I am concerned, I do not know that it wants any modification in our district. In our district, on May 12th, 1897, we came before the then Home Secretary, Sir Matthew White

Digitized by Google

Ridley, when the Order was first made, and we asked to ge an exemption for our county, if possible, or a modification.

36982. Of what part did you want a modification?—Of that part where it is said in the Order: "Where inflammable gas has been found in a mine." When the Order was framed it was said: "When such inflammable gas was found in such quantity as to be indicative of danger." The words "in such quantity" when it first came out were not there. The first point we made was this, that no fatal accident had resulted from using blasting powder in this district, during the last 25 years, nor previously to our knowledge. That was on May 12th, 1897—it is more than 10 years since then, and no fatal accident has occurred since that time.

36983. What do you want done that is not done?—Mr. Stokes wants and says that those words ought not to be in that Order and they ought to be taken out.

36984. Do you mean the words: "In such quantity as to be indicative of danger"?—Yes; we want those words retained in the Order.

36985. He says it ought to be "Wherever gas has been found, whether in such quantity as to be indicative of danger or not"?—Yes.

36986. You think those words "as to be indicative of danger" ought to remain in the Order?—Yes. The Home Secretary indicated that he was disposed to modify the Order.

36987. Well, you seem in that instance to have been consulted, at all events?—Quite so.

36988. (*Mr. Smillie.*) Because they protested?—Yes, we protested. The Home Secretary intimated that he was disposed to modify the Order and extend the date of application, and he also stated that he would be pleased to receive suggested modifications of the Order, but that a total exemption for any district could not be entertained. Upon his making that suggestion that he would be pleased to receive any modifications, Mr. Maclaren, now Sir Charles Maclaren, suggested these words for us, and they were introduced into the Order.

36989. (*Mr. Cunynghame.*) Those are the words also that exist in the main Act?—Now.

36990. They did at that time exist in the Coal Mines Act, but not in the Order?—I could not say.

36991. At all events you think those words ought to remain?—We do. In our districts we have pits and seams which have been going for more than 100 years, and I do not know of any explosion of gas that has ever taken place in those seams. We have just one pit now, where they are working by lamps the whole of the pit; and there is part of another pit worked by lamps—but there is no trouble. If the managers find gas in the pit that is in any wise dangerous, lamps are introduced (although they pay 2d. per ton extra for lamps) and have been for many years now.

36992. I should like to put one point to you as a practical miner. It was suggested that if we put in the words "wherever gas has been found," and do not indicate the quantity at all, to some extent it might be but a thimbleful, then there is no mine in the country where you could say that gas has not been found, if you chose microscopically to look for it. Is that so or not?—I should think there is hardly any pit where you could not find gas at some time.

36993. If you went so far as that it would be said you might as well prescribe safety lamps and have done with the difficulty?—Yes, where gas was found. At most pits I think you would find a little gas, but not dangerous.

36994. Now as to safety lamps, do you consider the present Rule 8 enough at present?—I do.

36995. I suppose you would be in favour of a Government inspection and test of safety lamps to prevent any being used that are not safe. Would you have any objection to that?—I do not quite understand the question.

36996. Would you have any objection, or would you support the Government asking for a lamp testing station at which lamps used by miners should be tested to see they were safe?—I should have no objection to that. I think if lamps are used they should be as safe as they possibly could be.

36997. And you would approve the Government taking steps to test them?—Yes.

36998. (*Dr. Haldane.*) I think I am right in supposing there is very little trouble, either from explosive gas or black damp in your district?—Very little indeed.

36999. The mines are well ventilated and there is plenty of air as a rule?—Yes.

37000. Have you ever considered whether it would be a desirable thing to provide accommodation for washing and changing at the pithead for men after their work?—I have not.

37001. In your district is there fairly good accommodation at home for washing and changing?—Yes.

37002. The housing is good, you say, on the whole?—Yes, very good.

37003. On an average how many rooms would there be in a miner's house?—In most of the houses there are three rooms down, and three up.

37004. Six rooms?—Six rooms.

37005. That is plenty of accommodation?—Sufficient, I should think.

37006. So that there is no difficulty in a man getting a tub when he comes home from his work?—Not the least, if he requires it. In our district there are many of the men who get houses of their own, and there is a lot of freehold property, but there are very few colliery company's houses. The houses are being built of a very good class indeed, and the rents are from 4s. to 5s. and 5s. 6d. a week.

37007. Those houses are built by private persons?—Yes.

37008. Not by the company?—No.

37009 Do you mean it is possible to provide six rooms at a rent of 5s. a week?—Yes, they are doing it in some parts of the district. When you get into the urban district the rents are more; but in the rural districts 5s. and 5s. 6d. is the top price. There are plenty of houses with six rooms to be had at 5s.

37010. Are those prices inclusive of rates?—Yes, the landlord pays the rates.

37011. Are there bathrooms in many of the houses?—No; very few have bathrooms. There are three bedrooms and three rooms downstairs, and each room as a rule is separate from the others.

37012. (*Mr. Enoch Edwards.*) At what hour does your deputy make his examination?—I could not tell you, speaking straight off. The deputy makes an examination before the men go in.

37013. Does he examine the road and working-place and faces?—Yes.

37014. Did I understand you to say that was the only examination made?—No; there are other examinations made, but between shift and shift they are not to make an examination. If there are men working in the stall, say, at 12 o'clock, and another shift comes on at 12 o'clock, and the first men go away, they are not forced to make another examination.

37015. You do not suggest that the first examination is the only examination?—No; so far as the examinations are concerned, there are five or six every day.

37016. Then what did you mean by saying in answer to Mr. Cunynghame that that was the only examination?—I did not say that was the only examination.

37017. I thought you complained that it was the only examination?—No. One of the Special Rules says that those two or three shifts are to be reckoned as one. If they are not reckoned as one there is to be another examination made. If th re is no break, there is no other examination made. I think between the one set of men going out and another coming in there ought to be a separate examination.

37018. I certainly understood you to suggest that was the only examination made. If the shifts are continuous the fireman would be making his examination during the shifts?—Yes.

37019. Yours is not a gassy mine?—No.

37020. Do you use lamps at all the places?—There is only one, and that has just been put in. One pit has been using lamps for a good deal in one district, but that district is stopped now.

37021. Are you subject much to falls from roofs and sides?—No, not much—it is a strong stone roof in the upper seam.

37022. Do your workmen make any examinations at all under General Rule 38?—Not now.

Digitized by Google

Mr. L. Lovett.

5 Feb., 1908.

37023. Is that because they do not think it necessary ?—If I was to give my opinion, I should say it is because they were afraid to report years ago, before there were associations.

37024. What is the reason now ?—Well, it has not been attempted recently.

37025. I understand you to say that your men agree to the principle of fines at the office ?—Yes.

37026. Would you be surprised to learn that you are the only representative of the men who has said so ?—It does not matter whether I am surprised or not, it is what I have been told to say here, and what I believe in.

37027. What you believe in ?—Yes. I have not only a mandate to say that, but I believe in it too.

37028. You suggest first of all there is not the natural element of danger there from gas as in many other collieries ?—There is not.

37029. Your death rate from falls of roofs and sides is not so big as in other districts ?—I could not say that, but there are not many accidents occur in our district.

37030. Now coming to the question of fines for a small offence, what would you call a small offence ?—Well, I should not like to define a small offence. If a man was unramming a shot hole I should not consider that would be a small offence, but an offence with regard to shot-firing would be another matter.

37031. That would be a breach of the rules ?—Yes.

37032. You have many offences where a small fine would be imposed, but it is not a breach of the rules ?—Yes, for instance, smoking where you are using naked lights.

37033. Do they prohibit smoking where you use naked lights ?—Yes.

37034. You use naked lights and blast openly and they prohibit smoking ?—Yes.

37035. Do you know why that is done ?—To keep the pit safe.

37036. (*Mr. Smillie.*) What rule is that under ?—Under no rule. They post it up and it becomes law.

37037. (*Mr. Cunynghame.*) Why prohibit smoking ?

(*Dr. Haldane.*) Because of the danger of fire, I suppose.

(*Witness.*) One of the reasons, when we met the owners, for fining for smoking in the mines was this. We have never agreed for the fine to be put on, but they put up a notice that a man caught smoking would be fined so-and-so. They said so much about the lads smoking cigarettes on the roads, and that if they let the men smoke the lads would smoke.

37038. (*Mr. Enoch Edwards.*) You have had rather a serious fire or two at Leicester ?—We had one serious gob fire—not a gob fire, it was a fire in the main intake.

37039. It might arise out of a desire to prevent the men setting the timber on fire if they do not take matches in ?—The desire arose from this, if I remember rightly—I was at the meeting. The then secretary of the Owners' Association said that they could not detect the fire stink so well if cigarettes were smoked.

37040. They could not detect the gob stinks ?—No.

37041. That is an explanation, at any rate ?—Yes, whether it is a reason or not.

37042. Have you any agreed scale for fines ?—No.

37043. How do they proceed to fine a man. Who would fine him ?—The manager. There is a notice put up that after such a date a man will be fined for smoking. If the man is caught with a shovel, which is against Contract Rules, he is fined. They could not summon him, but they could dismiss him.

37044. Having a shovel instead of a fork ?—Yes.

37045. Those breaches of rules would be reported by somebody else to the manager ?—Yes.

37046. It would be possible for a man who was a neighbour to report a breach of rules, a man living near another man, when there was not much in the case at all ?—It might be so ; it is possible.

37047. He would agree to a fine where it would not result in a fine if he was taken before the Court ?—I could not say that.

37048. Your men have agreed that they prefer to be fined at the Court instead of at the colliery office ?—In cases. I will give you a case. Since the shot-firers were put on by the owners sometimes the men have to wait, whereas they ought not to. They ram and charge their own holes, and they have been firing shots for years until this Order came out. They sometimes fire a shot themselves, and they have been fined for that instead of being summoned.

37049. At the back of it the men and management realise that there is no danger from an explosion if you use all sorts of explosives when you use naked lights ?—Yes.

37050. The same stringency of rules in a fiery district has not the same force in your district ?—No.

37051. (*Mr. Smillie.*) I think you said having posted up a notice prohibiting smoking and stating that there will be a fine for so doing, that notice has all the power of an Act of Parliament ?—I do not know that they put a fine on to the notice. They prohibit smoking, and I think if it is so long posted up and no objection is raised to it it becomes law.

37052. Whether or not the Home Office has cognizance of it ?—I could not say. I am speaking off-hand.

37053. Will you tell us whether, if the manager at any time posts up Special Rules at that colliery without consulting the Home Office or the workers, and those rules stand for a certain time, they become law ?—I think so.

37054. Without consulting anybody outside ?—Yes, I think so.

(*Mr. Cunynghame.*) They could not, without serving them on the Home Office.

(*Mr. Smillie.*) I was astonished to hear it, but it evidently is so there.

(*Mr. Cunynghame.*) The owners can say "We will dismiss a man who does so-and-so," but not take him before the magistrates on those Special Rules.

(*Mr. Smillie.*) They can fine him.

(*Witness.*) That is what I mean.

(*Mr. Cunynghame.*) They can fine him certainly by law.

37055. (*Mr. Smillie.*) I recognise that the magistrate would not condemn a person under those rules, but it gives the management evidently power to fine a person. He might post up notices with regard to 150 different things of which a miner might be guilty which are not provided for in the Special Rules, and he would be justified in fining for any of those offences ?—I do not say "justified."

37056. He has power ?—We have objected to the fining for smoking.

37057. How have you succeeded in your objection ?—There are very few pits where it is finable. There are some pits where it is.

37058. If you believe in fining for offences against Special Rules why should you object to fines for other offences for which the employers post a notice ? If you are willing that fines between the manager and workmen should be legalised for breaches of those Special Rules which are for safety, why should you object to fines such as fines for smoking, when the management post up those ?—Because we think there is no occasion for fining for smoking when naked lights are used.

37059. Your protest has not borne any fruit ?—It has borne fruit.

37060. If a workman objected to be fined under this smoking notice, he is likely to be dismissed ?—Yes, that is so.

37061. Your Association then would be in a position, if it cared, to defend him ?—Yes. I know of no occasion yet where a man has been dismissed for smoking.

37062. You have known the men fined ?—Yes.

37063. Have you known them refuse to allow the fine to take place ?—Yes.

37064. And having it returned to them ?—Yes, but it has not been stopped.

37065. There has been a protest against it, consequently it is not strictly carried out where the protest is allowed ?—It is not strictly carried out.

37066. Your stallmen, underground workmen and boys generally, apart from the deputies and others, have about 20 Special Rules which they are expected to observe. They are the Special Rules from No. 63 to No. 82. The Special Rules apply to the stallmen, underground workmen and boys aside from those having special duties ?—Yes.

37067. Almost every one of those 20 rules would carry with it either a fine for breach or a prosecution ?—Yes.

Digitized by Google

37068. Almost every one of those rules lays down some particular thing which a person is not to do or that he is to do ?—Yes.

37069. If he is guilty of a sin of commission or omission he would be liable to be either prosecuted or fined under almost every one of those rules. Can you tell us which of those rules you say a fine would be justifiable for ? They are all dealing with the safety of the individual himself, or the general safety of the men ?—I have never looked specially at those. Something occurs in the management of the pit and the men and the manager think it is sufficient to keep discipline in that pit to fix a fine. They ought to pay that fine if they think proper, instead of being summoned, unless there is a gross breach of the rules.

37070. A person is not entitled to go on the cage without the consent of the on-setter, and must come off the cage when the on-setter orders him to come off the cage. That is Special Rule 63 ?—Yes.

37071. If he refuses to come off the cage when the on-setter tells him, because there is an excessive number of men on it, do you think that a fine would be justified ?—I do not think that they would attempt to fine. I think they would summon him.

37072. You think it would be correct in a case of that kind ?—Yes.

37073. Because it is a danger to himself and perhaps to the other men. Rule 64 says: "No person, without authority, shall give any signal, or improperly use, or without authority remove or interfere with any signal, signal wire, or signal apparatus." If a person disobeys that rule, do you say that a fine of 1s. 6d. or 2s. 6d. by the manager would be sufficient ?—I cannot give my opinion upon every one of these rules.

37074. These rules are for the safety of the individual workman and the general body of the workmen. Which of those do you think would be justified by a fine ? They are all dealing with safety, and a breach of them may lead to danger. Is it really breaches of the Special Rules that you and your men were thinking about when they spoke of it being placed in the hands of the manager, and asked to have a fine ?—Yes, in some cases breaches of Special Rules.

37075. Danger to life arising from a breach ?—No, not if dangerous to life.

37076. Do you know any of those rules which forbids anything or lays down anything ?—Take 76, just that one

37077. "Any person passing through a door or cloth must instantly close it" ?—Supposing he did not do it ?

37078. Supposing he did not do it, what might be the result in a fiery mine ?—I am speaking of mines which are not fiery.

37079. Some are fiery ?—We have only one with lamps in.

37080. You have two ?—One, and a few in the other pit, I said.

37081. Those lamps are there, I suppose, because of gas ?—Yes.

37082. Those Special Rules apply to all the mines ?—Yes.

37083. You cannot differentiate between where a person shall be fined in one part of your district and where he should not be fined in another part ?—Yes, you could, if I were manager.

37084. If a person leaves a door unscreened with cloth, it is for the purpose of regulating the ventilation of the mine, and where a person leaves a door open for a short time or a screen not down properly it might interfere with the ventilation ?—If left open a couple of minutes it would not interfere with the ventilation of the mine much.

37085. You do not think that a person would be fined for leaving a door open two minutes. It takes some time to accumulate a quantity of gas. Do you think a fine would be insufficient where a person leaves a door open ?—Not to leave it open for long.

37086. Where you justify fines will you fix the time it should be left open before a prosecution ?—No, I am not going to fix anything about a fine. I was thinking of things that pertain to the Contract Rules.

37087. Do you know any Special Rules which deal with anything but the safety of the workmen ?—No.

37088. Do you and your workmen justify a fine between the workman and the manager where the life of the individual himself or his fellow men is at stake ? Do you not think a prosecution would be the greatest deterrent ?—It might be a greater deterrent than fines.

37089. I will put it straight to you whether or not a prosecution is likely to be a greater deterrent than a fine ?—Yes, I think it would be.

37090. I put that in view of your answer to the Chairman. You said because of the shame and publicity you object to go to Court ?—Yes, in some things.

37091. Is not the cause of that shame and publicity likely to be a greater deterrent than the present fine ?—It might be a greater deterrent than fining a man.

37092. Could you go beyond "might" ? Do you know yourself whether it would or not ? Let us have it would or it would not, if you think it would or it would not ?—I think in some cases it would and in some cases it would not.

37093. In some cases a public Court trial would not be a greater deterrent than a fine of 2s. 6d. ?—No not with some men.

37094. Take it you are still in favour of fines being continued; I want to put a further question. There are sections in the Coal Mines Act of which a manager may be guilty of a breach, such as Section 1, which says a proper amount of ventilation shall continue round the mine. It would be a breach of that if it is found that a manager does not see that sufficient ventilation goes round the mine ?—Yes.

37095. There are probably 40 or 50 other sections of the Coal Mines Act or Special Rules ?—Who is going to say there is no proper ventilation ?

37096. I will come to that in a moment. The manager of the colliery and the deputy are bound to carry out certain sections of the Coal Mines Act, or see that they are carried out ?—Yes.

37097. If they do not do so they are guilty of an offence against the Coal Mines Act ?—Yes.

37098. Would you and the members of your Association be willing to permit a system of things which would allow the mines inspector to fine a manager for a breach of the Coal Mines Act rather than take him into Court ?—I was dealing with men being fined and not dealing with the inspector and the manager.

(*Mr. Cunynghame.*) Do you mean fining with his own consent ?

37099. (*Mr. Smillie.*) Yes. You are in favour of the miners being fined for offences against this Act if they agree to it ?—Yes, if they agree to it in writing.

37100. Would you be willing that there should be legislation to permit the mines inspector and the manager agreeing that the manager should be fined for a breach of the Coal Mines Act rather than take him to Court ?—You are putting that to me personally ?

37101. Yes ?—No, I would not.

37102. You think in every case where the mines inspector is of opinion that the manager has been guilty of a breach of the Coal Mines Act that the manager should be taken to Court ?—You want to make it appear to me that I am in favour of the manager and the men agreeing, but not the manager and the inspector.

37103. Yes ?—I cannot answer that question further than I have. I said, personally, no, I would not.

37104. You are not in favour of a system which would give the inspector and the manager power to agree without going to Court where a breach has taken place ?—No.

37105. You are in favour of a system which will allow the colliery manager and the workman to mutually agree to a fine where a breach of the Coal Mines Act has taken place ?—Yes.

37106. In propping, your leading prop, which the inspector is insisting upon in one of your seams, has been in vogue many years in some of your seams ?—Yes.

37107. Where the roof is specially dangerous ?—Yes.

37108. The men usually, in addition to carrying out those Propping Rules, systematic timbering, put in a leading prop because of the danger which may arise between the tub and the face ?—Yes.

37109. Mr. Stokes is anxious that that leading prop should be introduced and carried out in the other seams where the roof is strong and there is no apparent reason for it ?—Yes.

37110. That you object to ?—Yes.

Digitized by Google

Mr. L. Lovett.

5 Feb., 1908.

37111 You do not object to the systematic timbering, putting props at least 6 ft. apart no matter how bad the roof is ?—Yes.

37112. You are willing that should be done ?—We think it ought to be done.

37113. You object to the leading prop being established wherever the roof is good and there is no real reason for it ?—Yes.

37114. Your reason for that being, in the first place, that it is in the miner's way without there being any necessity for it being there at all ?—Yes.

37115. In the second place it is a source of danger, because falls of coal from the working face 6 ft. high might knock it out and injure the men ?—Yes.

37116. Have you secured that all over your coalfield the leading prop shall not be insisted upon ?—There is only one pit it is insisted on, and that should be only when required. Where I say the leading prop has been set many years, the men have not been forced to it. It is on their own behalf. I think where the timbering is done by the men in charge, the manager should be sure that the men are practical men with plenty of knowledge so far as they can judge.

37117. In the first place something should be done to secure that the person having charge is a thoroughly practical man ?—Yes.

37118. A man who will know reasonably where timber should be set ?—Yes.

37119. In addition to the system of timbering where danger arises from bad roof or anything else, that the man should know and have power to act ?—And will set a prop.

37120. Yes; but a thoroughly practical stallman should not be forced to set props where there is no reason for them being set outside the ordinary limit ?—Yes.

37121. With regard to the examination by the deputy, I want to ask you a question ?—I should like to add about safety lamps where the lamps have been put in the wages of those men there—in one of the pits in that district—they have gone down considerably.

37122. The 2d. a ton they receive, you mean ?—It is not made up to the amount.

37123. You, yourself, are a practical working miner of many years' standing ?—Yes.

37124. You have worked with close lamps and candles ?—Yes.

37125. Has your experience been that a person has the same opportunity of protecting himself against falls of roof and sides when working with a close lamp as with an open candle ?—My experience is the other way. A man with a candle can see better and detect the cracks in the roof than with a lamp.

37126. You have no figures to prove that ?—No; that is from personal experience.

37127. From your personal experience a person is able to protect himself better against falls of roof and sides with a naked light than with a close lamp ?—Yes.

37128. In the second place it gives more light ?—Yes.

37129. And is more easily handled ?—Yes, shifted about from places better. I saw in some of the evidence given that there had been less accidents where the lamps were used. I do not think it right to impute less accidents in mines and stalls especially to the use of safety lamps, but to a good supply of suitable timber, and care in making charge-men of stalls, that is, placing men in these responsible positions. I think that has had more effect on accidents.

37130. You ought to take care to put thoroughly practical men in charge of stalls and see that there is a proper supply of timber ?—Yes.

37131. Have you any number of unskilled persons employed in your mines ?—Many lately. They are not put to the stall work. They are on the road chiefly.

37132. Doing labouring work chiefly ?—Yes.

37133. They may be put in under the charge of a thoroughly experienced stallman ?—And some have been, lately.

37134. You think it would be a source of danger to start a number of unskilled persons to work at the face unless each workman was under a skilled practical man ?—Yes, certainly.

37135. Even in stowing, doing labouring work on the haulage roads, or the stowing roads, it might be a danger for an unskilled person to work alone ?—Yes, or two unskilled persons working together.

37136. Your examination in the morning by the deputy may be made within three hours of the workmen going into the place ?—Yes.

37137. In fiery mines are not three hours too long a period to elapse from the time a deputy makes the morning examination till the workmen go in ?—I should think it would be too long before the workman went to his working place.

37138. A considerable accumulation of gas might take place ?—Yes.

37139. The place might be clear when the deputy made the examination, but two hours afterwards there might be a considerable accumulation of gas ?—Yes.

37140. Your workings are longwall ?—Yes.

37141. Is there not continuously a crush and change taking place in longwall workings at all times ?—Yes.

37142. More so than where coal is mined by the pillar and stall system ?—Yes, but as a rule there is a better course of ventilation.

37143. The ventilation sweeping all round the longwall faces makes it less liable to have an accumulation of gas ?—That is so.

37144. Even three hours might be too long, even from the point of view of safety, from the time the deputy makes his examination. Many things might happen at the face within three hours with the crush on. Stones might become bad which were quite good when he was there ?—Yes.

37145. From that point of view you think three hours is too long ?—Yes, it might be three hours. It means it could be three hours, but I do not think that there is any place where it is three hours.

37146. I do not think there is, but it permits of there being three hours ?—Yes. The examination is generally made just before the men go in.

37147. The Special Rules provide that it may be three hours ?—Yes.

37148. You think a Special Rule as wrong which would permit of it being three hours ?—I do not think it ought to permit three hours.

37149. Have you any complaint to make as to the extent of your deputies' districts ?—No.

37150. Are they too large ?—Since this shot-firing Order came into force they have put a lot of men on shot-firing. They act as deputies as well as shot-firing.

37151. Are you satisfied with the status of your deputies, that they are good men with practical experience and theoretical knowledge to justify their appointment ?—I have heard no fault on the part of any of the deputies.

37152. You are well pleased with the present system ?—Yes. I think sometimes they might put shot-firers on too young. The other day I saw a shot-firer, 29 years of age, who has not been working in a stall. I think that is too young. I also think shots should be fired during the turning shift not between shifts, it would take less shots and not expose the roof for such a long time.

37153. Some precaution should be taken that a person is thoroughly acquainted from practical experience and age to justify his appointment ?—He should have practical knowledge of the stall and the roof where he goes to fire a shot.

37154. (*Mr. Cunynghame.*) I find that I omitted to ask you one question. With regard to inquests you wanted to say something. I will read it, because it is practically what you say: "There should be at least three practical working miners on the jury or three men who have been practical miners. An official of the deceased's trade union should be allowed to attend without having to obtain the consent of a majority of the workmen or be subject to an Order by the coroner. The trades union official should be allowed to examine witnesses in the interest of the relative of the deceased and the association" ?—Yes. I have a little more here. The trade union official should be allowed to examine witnesses in the interests of the relatives of the deceased, the workmen at the mine, and the association. There are reasons for that which prove conclusively to me why miners should be on these juries. Our coalfield is close to Leicester, and when serious accidents occur they are often conveyed to the Leicester Infirmary, and the jury have been of Leicester townsmen, who had never seen a pit and knew nothing about the working of a mine, and it has been difficult to make them understand the real cause of the accident. I think, wherever a miner gets killed that there ought to be some practical miners on the jury.

Digitized by Google

37155. You would also give to the trades union official a right to examine witnesses ?—Yes.

37156. Would you not give the coroner the right to say "You may put this question," or would you give him an absolute right in spite of the coroner ?—That he should be there and put questions in spite of the coroner.

37157. Supposing there was a witness whom the jury were considering whether to send for his trial for manslaughter, would you give the trades union official a right to say: "Are you guilty of a breach of the rule or not ?" Just think of the question and consider it ?—The coroner might keep the man in certain order in asking questions.

37158. It is a very relevant question, I am sure you will see ?—The trades union leader ought to be allowed to ask questions

37159. Even if that man was on the preliminary stages of trial for possibly an offence which would send him to penal servitude ?—Certainly, the coroner ought to warn the man if he said anything.

37160. Have you not forgotten that this coroner's court is a preliminary criminal court, and in criminal courts it is not usual to allow anybody, however interested, to ask questions at his will ?—Not at his will. I was thinking the man could not ask questions at all if the coroner ordered him not to.

37161. In a Criminal Court is it not better to allow the Judge to be the judge of what questions should be asked ? This is the point. Have you not possibly forgotten that a coroner's inquest is not merely a Court of Enquiry, but a preliminary Criminal Court where perhaps the right of asking questions ought not to be so indiscriminate as you suggest. Have you thought of it from that point of view ?—Yes. We had a case where we thought a man was very nearly sent from Leicester through, I think, a jury of townsmen and there being no one to represent the man at the time.

37162. At all events you have sufficiently considered that a coroner's inquest is a Criminal Court really in this instance ?—Yes.

37163. That might make you pause when you demand for a Trade Union official or anybody else a right to ask questions independent of the coroner, where a man is in the preliminary stage of being tried ?—In that case it would be best left alone asking the questions, anyhow.

37164. You want the truth to come out ?—Yes.

37165. The causes of the accident, and to prevent it in future ?—Yes.

37166. Could that not be done, in cases where it was necessary, by subsequent enquiry, not before a coroner, but before experts, as the Act provides ?—Yes. One reason why I think a Trades' Union official ought to be there is this: under the present law he has to get the appointment in writing by the majority of the men, and it takes him time to get that appointment.

37167. Where it is necessary for the workmen to unite and write an order to attend you think that quite superfluous ?—Yes. *Mr. L. Lovett.*

37168. I have quite understood that point. Again, I suppose it would be rather difficult to secure in coroner's inquests all over the country that where a seaman were killed there should be three practical seamen, and where a doctor was alleged to have illtreated a patient that there should be practical doctors. If you applied your rule universally and had in every coroner's inquest three practical men who knew the thing, it might make inquests difficult ?—I was thinking of a miner's inquest. 5 Feb., 1908

37169. There are other considerations, and I want to put them before you ?—Quite so. I was thinking about fatal accidents in mines when I put that.

37170. I quite see the point of view. In the examination for managers and under-managers there should be some practical workmen on the Board ?—Yes.

37171. To examine them orally, you mean ?—Yes.

37172-3. Do you not think it would be better, when you have the paper part of the examination, to have one paper set for the whole of England, not a local paper for each place, but one paper the same for everybody ?—I think it would be fair.

37174. Have you heard that it is easier to get your pass in some places than at others ?—Yes.

37175-6. Do you not think it is desirable that it should be equally difficult all over the country ?—Yes, and the same test, I think.

37177. Then with regard to sanitation in mines you think that the roadways might be made cleaner ?—I think they might.

37178. That could be done by a good Special Rule ?—I should think it could be done by a Special Rule.

37179. Then men would approve a rule ?—I could not say that they would approve a rule, but it should not be any detriment to them in taking them away from their work.

37180. Are the roadways foul at present from odour. Is that what you mean by sanitation ?—No; I mean by sanitation any cases of ankylostomiasis. I was talking of it in that way. There is not the same convenience on the roads to ease nature as there is on the stalls.

37181. You would have places made at intervals for men to go ?—Yes.

37182. Would that involve the necessity of the men being liable to a breach of the Special Rule if they did not use it. There is not much in it. A man can be fined who does it in a public street in London. Would you go as far as that or not ?—I do not know that I would. In case there was any danger of ankylostomiasis I would go as far as that.

37183. You do not think it is necessary ?—No.

Mr. Edward Hughes, called and examined.

37184. (*Mr. Cunynghame.*) You belong to the North Wales Miners' Association, and come here to represent that Association ?—Yes.

37185. You would like the present staff of inspectors to be so increased as to enable them to examine each colliery at least every two months ?—Yes, or at least every three months.

37186. That would involve multiplying the present number by about four ?—Yes.

37187. Is the country to pay them for this ?—I suppose so.

37188. You would like some working-men inspectors among them. I use the word practical men inspectors, men who have been practical working miners ?—I should suggest that a third-class of inspectors should be appointed.

37189. I suppose that class would not be expected to advise on the more difficult engineering questions ?—No.

37190. In the second place such men as that could not aspire to the highest positions on the inspectorate unless they were able to pass the engineering examinations ?—That was my intention, that they should have first or second-class certificates.

37191. With regard to the deputies and firemen, you think that they have too big districts at the present time ?—I do.

37192. We have heard a good deal of evidence upon the detail of that, and I will leave it to those who are expert to deal with the question more in detail. I will just take the general points. You do not like fines ?—I do not. I think that prosecutions would have far more effect. *Mr. E. Hughes.*

37193. They might have far more effect, but would it not be for a very small offence rather hard on a man to lose a day's work ?—I do not think so.

37194. You think men would rather be prosecuted than fined ?—Yes.

37195. Actually the men themselves ?—I think so, the best of them.

37196. You have never heard of a man who was offered the alternative of a fine who desired to be prosecuted instead ?—I have known of fines being made and returned to the men in the way of consideration, so consequently it has no effect.

37197. What do you mean by "in the way of consideration" ? Is it not an odd thing to do, to fine a man and hand him his money back ?—The manager feels bound to fine him.

Digitized by Google

Mr. E. Hughes.

5 Feb., 1908.

37198. That is for public example?—Yes, but nevertheless he does not like the man to suffer financially, so he fines him with one hand and hands him back the fine with the other hand.

37199. That is wrong?—Yes.

37200. Do you not think that a man who acts so wrongly as that manager, who has such a peculiar view of his duties, would be likely, in a case where he ought to prosecute, to let him off?—I do not know; he may.

37201. Do you think he would feel more delicate in one case than in the other? You see my obvious retort; there is that difficulty?—Yes; but personally I would rather be prosecuted than fined. I always object to fines myself in my district.

37202. Supposing the fine was only made with your own consent; you would have an opportunity of being prosecuted instead, if you liked?—I should rather. I have always advocated it.

37203. At present fines are only inflicted with the consent of the men?—Yes.

37204. You could always be prosecuted, if you wished?—Yes.

37205. Would you take away from those who are fined by their wish the right to be fined, and put them into the same box as yourself?—I would. I think it would be to their interest.

37206. If fines were done away with, should we not see the inspector going round and urging a great many more prosecutions, and a great many more prosecutions taking place?—It may have the effect in the long run of reducing the fatal accidents, or accidents in mines generally.

37207. In regard to Special Rules, you would like there to be a thorough understanding as to any proposed new rule, both by employers and employed, before the rule comes into force?—Yes.

37208. And at as early a stage as possible?—Yes.

37209. Is that generally what you desire?—Yes.

37210. I do not propose to go into the whole detail, because we have heard so much about it; but you are in favour of any scheme which will bring that about?—Yes.

37211. What do you say about systematic timbering?—I suggest that we have systematic timbering not only in the face but in the roadways as well. I have the misfortune to represent a district which has during 1906 suffered very much through falls of roof. Our fatal accidents run from falls of roof and sides alone, 1 in 706 employed or 1 in 500 in all accidents. In my opinion, if we had systematic timbering on the roads as well as in the face it would reduce the accidents very materially.

37212. Are there not, at all events in South Wales—I do not remember that I have seen what I am stating in North Wales—some mines where the roads go on, I believe I may say, for miles without any timbering at all?—Sometimes it may happen.

37213. Where it is said that the roof is quite safe—I am putting what has been said to me—and where the timbering would be really more a source of danger than of safety on account of preventing you seeing the pieces that were coming down, and where it is alleged very few accidents have occurred?—It would not be so in North Wales.

37214. You have not seen such a case as that?—No.

37215. Are your roads pretty well timbered, or not?—Not usually; not generally so.

37216. Do many accidents occur through want of timbering in roads?—Yes, very many; one colliery in particular, where we had six fatal accidents in 1906. Three of them, if I mistake not, were caused by falls of roof. I remember being at the colliery only two months prior, and I called the attention of the manager to it. He objected to timbering unless authorised by the fireman, because they had to pay for it. I said the consequence of it will be some of your men will be killed by this bind coal, and it was the cause within two months.

37217. It is that which leads you to think there ought to be systematic timbering?—Yes.

37218. At all events, you would put it in the mines with which you are acquainted?—Yes.

37219. It might be different in some other parts?—I am talking especially for North Wales.

37220. Travelling on haulage roads, you think, ought to be prohibited while the haulage ropes are in motion?—Yes, or that there should be sufficient space on the roadside, and that such space should be on the same side as the manholes.

37221. In most mines is it not the fact that there is sufficient space to walk along without getting in contact with the haulage ropes?—Very often you have to cross from one side of the haulage road to the other, and I suggest——

37222. A bridge?—No; a man walks right along and wants to cross to the left or to the right. I suggest a space for travelling should be on one side of the road, and that it should be on the same side as the manhole, so that if anything was to happen, the man could easily fall into his manhole.

37223. It may be necessary to cross occasionally under the rope for turning down another turning to the left?—Quite so; that would have to be done.

37224-7. At all events, your view is, speaking of your district, that is a defect which ought to be remedied?—Yes.

37228. You next say wherever gas has been found that safety lamps ought to be enforced?—Yes.

37229. You do not mean—if you do say it—where the minutest thimbleful of gas could be discovered by a chemist that safety lamps should be put in?—Personally I should not object to safety lamps in all coal mines, whether gas is found or not, or especially if gas has ever been seen I should have a safety lamp.

37230. If you said "wherever gas has been found" a magistrate would say, "I suppose that must mean where any gas has been found, ever so little." Would not that be equivalent to saying safety lamps must be employed in every mine in the kingdom?—I would not object to it.

37231. Would you force them against the will of the men in districts where they work with naked lights?—I would. I think it would be to their interest in the long run.

37232. How many naked-light mines are there in your district?—Only one or two, very small ones.

37233. Would you force them to have safety lamps?—If I had my own way they would have safety lamps to-morrow.

37234. Are you prepared to say all over the country that naked lights ought to be put an end to, because that is a big order?—I should, myself.

37235. You are aware some people say you are more likely to have falls of roof from not being able to see well in places? Do you think anything of that?—No.

37236. It is a technical subject, on which you would have a better opinion than myself. Lastly, you say that a court of enquiry should be created in each mining district so that the officials in charge may be cross-examined by a legal representative of the deceased. That is where an accident occurred?—Yes.

37237. Do you mean after each inquest?—No. I should suggest, if you wish, call it a board of equal representatives of both miners and employers, men who have experience in mines. As a rule, the juries at coroners' inquests know very little of miners' terms, and so on.

37238. Is it not a fact that under Section 45 of the Coal Mines Act power exists already in the Secretary of State, if he exercises it, to do all that you wish in that respect, and to have an inquiry at which everybody will be present, and have it put into the hands of the best experts he can get?—I am not aware of it.

37239. Section 45 has never been used, as far as you are aware?—Not as far as I am aware.

37240. Would you be surprised and glad to learn that three inquiries have just been made under Section 45, and that the report is just about to be sent in?—That would not occur in each accident.

37241. You surely do not intend that where a ladder falls upon a man and he is unfortunately killed, that a court of inquiry is to be established to say what everybody must know, how he has been killed—not in every case?—The jury at a coroner's inquest want to know the cause of death. We should like to know what brought it about.

37242. I agree with you, but it surely would be unnecessary in a large number of cases to get, in addition to the coroner's jury, a court of inquiry together?—If it was formed one for each District I do not see why it should not be so.

37243. They would have to meet and inquire into every cause of death?—Yes.

37244. Are they to be paid by the State for doing this, or give their services gratuitously?—Their expenses, I should suggest.

Digitized by Google

37245. Who is to pay for their day's work which they lose ?—Still the Exchequer, I should say.

37246. You think the taxpayer should ?—If it would be the means of saving life.

37247. I agree ?—If it would, they should pay.

37248. Leave for the moment the question of who is to pay. In this country everybody wishes somebody else should pay, and that is not unnatural, but the point is this: is it not a fact that in the large majority of cases of death it is only too clear and evident how it has occurred without wanting a court of inquiry other than the coroner's inquest ?—In such cases there would be no need for the Board to meet.

37249. In giving your answer to this question you were not fully aware of the provisions of Section 45 of the Coal Mines Act. That is the first question one asks ?—I was not.

37250. It deals with the very subject, and it is rather wise to think of what exists before you propose something else. There is power in every case to order an inquiry by the Secretary of State ?—Yes.

37251. If that power was exercised in all cases in which it was likely to throw light upon some question which would be the means of saving life, that would do what you want ?—The trouble is in getting the Secretary of State to order each inquiry.

37252. Do you think it would be very great ?—Yes, undoubtedly. I should suggest that these Boards should be already created and ready for emergency whenever a case occurs.

37253. And that pay should be provided for the members to compensate them for their trouble in assembling ?—Certainly.

37254. (*Mr. Enoch Edwards.*) North Wales is under the Liverpool inspection ?—Yes.

37255. Have you a resident inspector ?—No.

37256. How many mines have you ?—There are somewhere about 40. I am not sure.

37257. Employing how many men ?—Less than 13,000.

37258. 12,000 odd ?—Yes, according to the 1906 Report.

37259. In case of an accident how far would the inspector have to travel to get to your pits ?—12 to 20 miles at the outside. He lives at Chester, of course.

37260. He visits in the case of all accidents ?—Yes.

37261-3. Does the inspector visit your mines at other times than accidents ?—I could not tell. I notice that his visits during 1906 were 170, and his chief, 78 visits. That is for the whole of West Lancashire, Cheshire, Flintshire and Denbighshire.

37264. You suggest a third class of inspectors ?—Yes. I take it there are two now, the chief and the assistant.

37265. In the extension of this principle you suggest that there should be a third class of inspector ?—Yes. I mean by a third class of inspector a practical miner of not less than 10 years' experience at the face.

37266. In that case he should have sufficient theoretical knowledge to pass an examination ?—Quite so.

37267. He would pass such an examination as a second or first class ?—Second or first. We have, as you are aware no doubt, hundreds of miners holding first-class certificates working at the face—not in North Wales.

37268. In the country ?—Yes.

37269. You will have some, likely ?—Yes.

37270. There are more managers than they can find places for ?—Yes.

37271. From this class of men another order of inspectors should be appointed ?—Yes.

37272. Of somewhat lesser importance, but men who can give more time underground ?—Yes, to give the whole of their time to visit and examine collieries.

37273. They should make thorough inspections of mines ?—Yes, efficiently.

37274. By that you mean a thorough inspection ?—Yes.

37275. A good deal of inspection is done by sample, a part of one pit is taken ?—Yes.

37276. You would inspect the whole of a pit and its workings ?—Yes.

37277. By that means the inspector would be able to advise the management on many matters to prevent accidents happening ?—I do believe so.

37278. More constant supervision would prevent many of these accidents happening ?—Yes.

37279. That is an opinion your North Wales men generally agree with ?—Yes.

37280. If you have more examination by men who are employed by the Government many of the fatal and non-fatal accidents would be obviated ?—I had, only four weeks ago—this is rather strong, anyhow it is a fact—a district of men who had to be returned home for want of timber. The previous day they had worked the whole shift where they ought not to work, and the next day they returned home for want of timber. If the mines inspector had visited that colliery at the time, someone would have known about it, and it would not have happened again.

37281. If the colliery owners are negligent in providing timber, that might happen even if you inspect a mine once in three months ?—Yes.

37282. It might happen often ?—Yes.

37283. The law should be made stronger to meet a case like that ?—Quite so.

37284. At present they are expected to find the men suitable timber ?—They are supposed to find sufficient timber, but they do not do so. That is what I am aiming at.

37285. In such a case where your men had to go home, would it not be well to report that to the inspector ?—(*Mr. Cunynghame.*) It is difficult to see how the law was broken, because if there was not the timber the men were forbidden to work, and it is like closing the mine.

37286. (*Mr. Enoch Edwards.*) With reference to the firemen, you suggest that they should have a limited number of men to look after ?—Yes.

37287. Is your experience now that they have too many men under their charge ?—Yes. These poor men have not time to look after the men in the way of accidents. There are too many men and too many places, and too much travelling between one place and another, and so on.

37288. Have the deputies and firemen other duties than looking after safety ?—Yes; at most of the pits they are supposed to get the coal out, and most of their time goes in getting the coal out.

37289. When he is not examining, his business is to see that the coal is got out ?—Yes. Whether it is his business or not, that is what he does.

37290. You think his ordinary duties as a fireman are neglected because of the other duties ?—Yes.

37291. Would you prefer to see a rule which made it obligatory on the part of the owner to provide firemen who should be separate and specially for these duties only ?—Yes.

37292. His district should be of such a size that he could get round it ?—Yes.

37293. Who would you make the judge of the size of those districts ?—The Inspector of Mines.

37294. You think the Inspector should say whether a district was large enough or too large for the man to attend to ?—I think he ought to say whether the fireman would be able to examine each place at least three times in eight hours, as it ought to be done.

37295. By such examination, beyond the ventilation you mean the sides and roof ?—Yes.

37296. With reference to fines what is the custom in North Wales ?—Prosecution generally. There are only one or two collieries I am aware of where fines have been made, and I objected very much then to it personally, and really the men. They did not care for it It is only in one instance I know of.

37297. They prefer rather that the law should be clear that if there is a breach of the rule they should be prosecuted ?—If they are guilty they prefer being prosecuted to being fined.

37298. With reference to the Special Rules being considered thoroughly, have you any difficulty as to Special Rules in North Wales ?—There is no doubt about it; they know they are there, and that is all they know about them. My suggestion is that Special Rules, before being adopted, should be thoroughly considered by both parties, and if so, the men would have known or understood them when they came into force.

37299. Your present Special Rules have been in force many years ?—Yes.

37300. You have not recently had cause to complain about any rules being put in force without the men being consulted ?—No.

Digitized by Google

Mr. E. Hughes.

5 Feb., 1908.

37301. If any such rule was proposed in North Wales would your Government Inspector consult your Society ?—I should expect him to.

37302. You think he would ?—I think he would.

37303. In timbering is it not the duty of the collier to do his own timbering in North Wales ?—Generally in the roads and face.

37304. I am dealing rather with the face—in his working place ?—Yes.

37305. His contract includes the obligation to set timber ?—Yes. Sometimes they are paid so much per bar.

37306. It is part of the contract that the collier should do this timbering ?—Yes.

37307. You think he is the proper person to do it ?—Yes.

37308. He is the most likely person to know how to do it ?—He knows the nature of the ground better than anybody else.

37309. What do you mean by systematic timbering ?—On the road what we call bars should be set, say every yard or so along the haulage road.

37310. I am rather dealing with the face, where the man works. The man does not work on the haulage road. It is his duty in his contract to set his timber ?—Yes.

37311. Have you reason to think he does it to the satisfaction of everybody ?—No ; it is not always allowed. I have known instances I referred to just now, where the men were prohibited from setting timber because they would not be paid for it, unless instructed by the fireman.

37312. In setting timber you are not referring to setting props, but to putting bars across ?—Yes.

37313. For that you would have a special schedule rate in your price-list ?—Yes.

37314. If a man sets timber it is so much a bar ?—Yes.

37315. Many want 2s. plus the percentage ?—Yes. Some managers say that the men set the bars when they have nothing else to do, consequently they object and say they are not necessary.

37316. They object to that on the ground of payment, not on any other ground ?—Not on any other ground—well, they say they are not needed, of course.

37317. When you referred to falls of roof I understood you to say three deaths in one pit from falls of roof. You do not mean the roof of the working place ?—Yes, not in the face, but the roadway leading to the face.

37318. (*Mr. Cunynghame.*) I thought he meant the roadways.—Not the haulage roads ; say what we term the jig.

37319. (*Mr. Enoch Edwards.*) Is it his business to timber his jig ?—Yes. That was the question, whether the timber ought to have been set.

37320. That was setting timber where he would be expected to be paid 1s. 6d. or 1s. 2d. for setting bars ?—Yes.

37321. There is a rule which most pits have of paying 1s. 2d. plus a percentage for every 6 ft. bar ?—Yes.

37322. There is something of that sort as a general rule ?—Yes, there is a scale.

37323. In this case the timber was not set because they would claim payment for it ?—Yes. He was told that the timber was not needed there.

37324. That is the workman ?—Yes ; the fireman goes round. The manager's instructions were that the fireman must instruct the man before he is allowed to set the prop ; consequently the man would naturally not set the timber until the fireman instructs him to do so. They say they would not be paid for it, and consequently this bind falls down for want of timber.

37325. Do you want to impress on this Commission that plain fact, that a place in a jig, a roadway leading to a place, requires timbering ?—I do.

37326. And that they have refused to allow the man to timber because they had to pay for it ?—Quite so. They refuse to pay because they consider the timber is not needed.

37327. As the result three men were killed ?—Not exactly. Two men were killed under this bind.

37328. In that particular case ?—Yes, quite so.

37329. That is rather a serious matter, if it is a mere question of paying, to put up bars and it results in deaths ?—Yes.

37330. You suggest this niggardly policy results in the death of a man or two ?—Yes. The collier working on the face ought to know better than anyone else where a prop or bar is required, and he ought not to wait until instructed by another person that a bar is required. He ought to be at liberty to set it.

(*Mr. Cunynghame.*) At the same time it would be reasonable to prevent a man being paid for setting up unnecessary timber and making a mere excuse to set up timber in a useless way.

(*Mr. Enoch Edwards.*) Except this, the setting of timber, except in very rare cases, is a work that is barely covered by the amount of money paid.

(*Mr. Cunynghame.*) That would be a sufficient deterrent against a man setting useless timber.

37331. (*Mr. Enoch Edwards.*) There is considerable labour in preparing the timber itself and setting it in that form. With regard to your travelling rules in North Wales, you suggest travelling on the haulage roads should be prohibited ?—Yes.

37332. That is so now while wagons are in motion ?—Not generally.

37333. You do not refer to mechanical haulage ?—Yes.

37334. Where you have mechanical haulage in a road they do not allow men to travel while the journeys are going ?—They do.

37335. In many places they are prohibited from travelling whilst in motion, because they often come into trouble then. The Commission has been pressed with the view that there should be separate travelling roads. You suggest that there should be a road sufficiently clear on one side only ?—Yes.

37336. And that on the side where the manholes are ?—Yes.

37337. It would depend upon the physical condition of the roof ?—Yes.

37338. Are these haulage roads you are referring to double roads ?—Not always.

37339. If it was a double road and there was a road by the side, that would take a big span and require a strong roof ?—Yes.

37340. In laying out collieries there is no reason they should not be laid out with separate travelling roads ?—No.

37341. In such cases, a road could be made where the roof would stand by the side of the haulage road ?—Yes.

37342. I understand your suggestion about lamps. They are generally used in your district ?—Yes.

37343. You have no complaint to make about the question of lamps ?—No ; no complaint at all.

37344. The court of enquiry you have already answered the Chairman about. Have you much complaint about the coroner's courts in North Wales ?—No, we have no room to complain.

37345. In case of death of any of your members, you would attend the court ?—Generally.

37346. And put any question you like ?—Yes.

37347. You have not any difficulty ?—Not at all ; not any at present.

37348. (*Mr. Smillie.*) Your Special Rules provide that an onlooker or fireman shall make an examination in the morning, but it provides that it shall be made within three hours before the commencement of each shift. Yours is a fiery district where safety lamps are used generally ?—Safety lamps are used generally.

37349. Do you think three hours before persons go to the face is a safe time to make an examination ?—No, it should be as near as possible to the time they commence work.

37350. Are you aware three hours is the longest period that exists in any part of Great Britain ?—I am not sure if three hours are specified in our Special Rules.

37351. I am looking at your Special Rules, and No. 45 says : "The fireman appointed for the purpose shall within three hours before the commencement of each shift, make the inspection required." Many things might take place within three hours ?—Yes.

37352. You think the time should be reasonable, one hour, or an hour and a half ?—One hour, I should suggest.

37353. One hour would be sufficient ?—Yes.

Digitized by Google

37354. Special Rule 53 is a new rule, and says: "The fireman shall see that the maximum distances between the roof supports, as specified in the notice required by Special Rule No. 2A, are not exceeded. He shall also see that a sufficient supply of suitable timber is kept at or within 20 yards of every working place where mineral is being worked." That puts the onus on the fireman or on-looker to see that a supp'y of timber is kept within 20 yards of the working place?—I say it ought to, but it does not.

37355. Take Rule 111, where it puts the onus on the miner to see that the wood is conveyed. "The miner shall secure the roof and sides of his own working place." Does not that put the responsibility on him for securing his working face and also his road-head where those dangers arise you speak of?—It is his duty to do so. but they say the timber is not needed.

37356. If a miner did not secure what seemed to be a dangerous part of the roof, he is li ble to be charged with a breach of this rule?—Yes.

37357. And if he does take precautions to put up bars, the fireman may come in and say: "You have no business to put that up; it was not required"?—Yes. "And I will not pay you for it."

37358. And force him to take it out?—Yes. Only last week I was at a colliery and the remark was made unless the timbering was required the fireman should strike it out.

37359. If the fireman knocked them out——?—If the firemen consider that they are not necessary after the collier had set them, they will knock them out. My opinion is that the collier is entitled to secure his working place. If he thinks a bar is wanted he ought to be able to put it up.

37360. He is responsible under this rule for doing so?—Yes.

37361. If you think a set of timbers is required and you put them, and the fireman knocks them out, you would not think it was safe to work there, and you might run a risk of losing your life?—Yes.

37362. It is ridiculous to say the miner is to be responsible for putting timber where he believes there is danger, and that some other person who is not in that danger is to say you are not to put them up. You want that put right?—Yes.

37363. Mr. Cunynghame wisely put it to you that it would not do where miners are paid a fixed allowance of 1s. to let them put up indiscriminately whether required or not what timber they liked, but, as a matter of fact, in systematic timbering, that is done. It is provided you must put up every 6 ft.?—Yes, whether necessary or not.

37364. Every 6 ft.?—It varies; 6 ft., 4 ft., and 5 ft.

37365. Whether required or not, no matter how strong the roof is, you must under the systematic timbering rules put up the timbering there?—Yes.

37366. No fireman would dare to tell you you were not to do it or take them out, because you were carrying out the rules?—Yes. I want the same rule on the roads.

37367. In many cases under systematic timbering, timbering is put where there is no apparent reason for it, only systematic timbering?—Quite so.

37368. In these main roads and headings you think that the miner should be entitled every 3 ft. at least to put up his bar or some specified distance that is considered safe?—Yes; 4 ft.

37369. You believe that would lead to greater safety?—There is no doubt about it. I have no doubt in my mind.

37370. Have you any fault to find with your present class of firemen?—Yes.

37371. Are they the best class of men?—No, I am sorry to say not. I have been expecting that question. I believe that deputies or firemen should go under an examination. They ought to have some third-class certificate or a second-class certificate.

37372. They should hold a certificate to prove their competency for that work?—Yes. I am sorry to say now several of our remen are such, because they are well in with the official of the colliery.

37373. Several firemen are such through favour?—Yes, there is no doubt about it, we should have the most experienced men for this position. I believe firemen ought to be of such experience that they are capable to instruct the collier where and how a prop or a pair of timber or a sprag ought to be set. It is not so now, the best men will not have a deputy's job. The colliers are far better paid than the firemen.

37374. (*Mr. Enoch Edwards.*) It is a question of wages, largely?—Yes, I think it is wrong. If these men were well paid you would have the best men in the position of firemen.

37375. (*Mr. Smillie.*) If there was an examination to prove a person was competent for the work, there would be no dearth of firemen. You would still be able to get plenty of skilled persons to do the work?—Yes.

37376. It would not mean any great difference in wages either in order to secure good men, I mean on the staff of a colliery it would not mean much, supposing 20 or 30 men were paid an extra 1s. a day for extra competency or skill?—No.

37377. It would not mean the ruin of the colliery or stopping it?—No.

37378. Rule 111 (*b*) is a new rule which lays down that "The miner shall take a sufficient supply of timber to his working place, or within 20 yards thereof, ready for use, from the place where he or his filler gets his empty tub." Is it a common custom for the wor men to draw their own material?—In one or two collieries I believe it is. They take their materials as near as they can to the face, but generally the timber is supplied within the specified distance, that is 20 yards or so. There is, I believe, a colliery or two—I have heard the complaint—where they have to take their material in.

37379. In that case they are responsible for taking it from the place where they take the empty tub from?—Yes.

37380. You put a serious aspect where a number of men were required to go home for want of a proper supply of timber after they had worked in a dangerous place. They went home because there was no timber. Under the Mines Act and Special Rules they are bound to withdraw from a place if there is not a supply of timber?—Yes. Our experience is that once a man is down a mine and commences to work he does not believe in leaving without earning a day's wage.

37381. It is a breach for firemen to allow men to go in if there is no timber. May I suggest to you a cure for this kind of thing. Supposing the workmen come down the mine in the morning and proceed to the lamp station and are told that the place is all ready, and they go into the working face and find no timber, and it would be risking their life to work, if the manager was held responsible for the day's wages when they went home that would cure the evil largely?—I think it would.

37382. Do you not think it fair if the workmen are sent home through the fault of the management from not having a supply of timber, that they should be entitled to be indemnified?—I do think so.

37383. If they were so indemnified do you think there would be many cases of workmen going home through want of timber?—I do not think so.

37384. Not so many as now?—No.

37385. You can imagine some case arising from a lack of timbering where it had been ordered but had not come in, but a want of timbering at the face does not arise from a want of timber at the surface?—No.

37386. But because some person responsible has not done his duty?—Yes.

37387. By holding the employer responsible for paying the wages it would not happen so often?—I think it would not.

(*Mr. Cunynghame.*) That would be an ingenious fining system brought in.

APPENDIX I.

(Handed in by Mr. W. B. Charlton—see Question 25819.)

Regulations of the Durham County Colliery Enginemen's and Boiler-Minders Associations relating to Apprentices.

SECTION 1.—Any person wishing to become a member of this Association, to be taught the art of winding, must obtain the consent of some competent financial member or members who will undertake to teach him, and be proposed and seconded by two financial members at least one month previous to his admission; he must have served at least three years in the capacity of some kindred employment as firing, boiler-minding, or attending engines, and be of good moral character, steady habits, and possessed of good ability. Having first obtained the consent of the management of the colliery, he shall be subject to an examination by the Committee of the Lodge in which he is proposed, after such examination, if he be found to possess the above qualifications, the Lodge Committee shall make out a report to the above effect, signed by each member of the Lodge Committee, and stamped with the Lodge stamp. The Lodge Secretary shall transmit the same to the General Secretary, who shall lay the same before the Executive Committee for their approval, and if approved, the General Secretary shall make out a certificate, duly signed by the Executive Committee, and stamped with the Association stamp, and return the same to the Lodge Secretary, who shall admit the person as a member.

SECTION 2.—The learning fee of apprentices shall be five pounds, to be paid into the general fund, three pounds to be paid before the commencement of learning, and the remainder to be paid in two instalments of one pound each within three months after being admitted a member.

The fee for member's sons to be two pounds ten shillings, to be paid into the general fund, twenty shillings before commencing to learn, and the remainder to be paid in two instalments of fifteen shillings each, within three months after being admitted a member.

After he obtains his certificate from the Executive Council, and signed by the resident manager or engineer by whom he is employed, he will then be at liberty to learn.

Any apprentice paying the stipulated sum according to rule as learning fee to be taught the art of winding shall be at liberty to receive instructions from any member who is working a colliery engine.

SECTION 3.—Any member incompetent to wind who has been three years in the Association, desiring to be instructed to a state of competency, shall pay the sum of two pounds ten shillings to the Association, provided he has the stipulated time in preliminary training, viz., three years. Any member who has not the specified time in preliminary training as per Section 1 of this rule, or who has not been a member of this Association for a period of six years, shall pay the learning fee of five pounds.

SECTION 4.—(*a*) Any person who has had the necessary preliminary training as per Section 1 of this rule wishing to learn the duties of underground hauling or bank hauling or any other class where tuition is imperative (except winding) must pay a fee of two pounds ten shillings. Having learned such duties, and wishing to learn to wind, within three years after having paid his first fee, must pay a further fee of two pounds ten shillings; but if over three years from the time of paying his first fee of two pounds ten shillings, then he must pay a fee of one pound five shillings; members' sons will be charged half fees.

(*b*) Any member wishing to learn the duties of hauling or any other class of engines where tuition is imperative, who has not paid an apprentice fee, but who has been a member of this Association for a period of three years, and has had the stipulated time in preliminary training, as per Section 1 of this rule, shall pay a fee of one pound five shillings. Any member who has not the stipulated time in preliminary training, and who has not been a member of this Association for a period of six years, shall pay a fee of two pounds ten shillings.

(*c*) Any member wishing to learn the duties of winding after paying the fees and otherwise complying with the terms specified in this section, shall pay a further fee of one pound five shillings; members' sons half fees.

Any apprentice having received instructions for twelve months and found to be competent, the enginemen whom he is under, and the manager or engineer, shall sign a certificate of competence, prepared by the General Secretary, and stamped with the Association stamp, which shall enable him to procure a situation as colliery engineman.

Should any prejudice or ill-feeling arise against any apprentice by the men he is under, or any member of the Association, his case shall be submitted to the Local Committee or Executive Committee, who shall investigate the same, and give their award as they may determine.

Any member or members violating this rule shall, for the first offence, be fined five pounds; for the second, ten pounds; and for the third expelled the Association.

APPENDIX II.

Appeal for legislation, drafted by Mr. Thomas Watson, and approved by the National Federation of Enginemen's and Boilermen's Protective Associations of Great Britain.

(Handed in by Mr. T. Watson—see Question 26143.)

Your assistance and support are earnestly solicited in favour of the following amendments to the Mines Regulation Acts, which all men deserving of their country's reputation must admit are of the most vital importance, as additional safeguards, to prevent those deplorable pit accidents which from time to time thrill with horror and apprehension the mind of those who have to descend into the bowels of the earth for a livelihood. Such amendments have been discussed and approved of by the National Enginemen's Protective Association, the Trades Union Congress, and the Miners' Federation of Great Britain. The latter have generously inserted them in their Mines Act Amendment Bill, and should, in consequence, meet with impartial consideration at the hands of our Country's law-makers, and merit a place upon the Statute Book the first convenient opportunity.

Appended to each clause you have a few out of an abundance of reasons justifying the enactment of such provisions.

1st.—That there be added to General Rule 24, of Mines Act, 1887, after the words below ground in the mine :—

> "*And no such person to be employed for more than eight hours in any twenty-four hours.*"

"Our claims for an Eight-Hours' Day are fully justified owing to the tedious and fatiguing nature of our work, such as being confined in a close and stifling atmosphere, with nerves strung to the highest possible tension by clatter and confusion of signals, the rumbling of machinery, which has to be manipulated by us with the greatest possible precision and judgment, with variable loads and steam pressure, always expected to get the best possible results out of machinery, necessitating a high rate of speed, which makes it all the more difficult to control, and finally, at the close of these long and exciting days, each engineman has from 300 to 600 men and boys to wind up, necessitating extra caution and judgment at the very time the enginemen are exhausted and weary by the tedious nature and long hours of their occupation; and should receive Parliamentary attention at once, as a vast majority of fatal accidents attributed to engine-winders' oversight have occurred at the latter end of the long and unreasonable turns enginemen have to work; which coroners' juries investigating such fatalities can most emphatically affirm."

2nd.—That there be a General Rule inserted in the Mines Act Amendment Bill :—

> "*To enforce Catches or Kepts to be put under the cage while men are getting in and out, and that there be a banksman in attendance during the whole time the men are ascending or descending.*"

"These, we are fully persuaded, are very desirable safeguards, as the engineman could not lower the cage (even if he received a false signal) whilst men were getting in and out of the cage. These features were embodied in the 120th and 128th Special Rules, but were rendered ineffective by the authority given to managers by the 121st Special Rule of the Mines Regulation Act, 1887, which, for the sake of economy, is often abused by officials, at great risk to life and limb. In some instances catches are so constructed that the engineman has to remove them from under the cage from the engine-room. This is also a dangerous practice, because if the engineman received a false signal he would take the catches from under the cage and start the engine, fully impressed that all was right, probably at the sacrifice of someone's life, which, unfortunately, has frequently been the case, in addition to thousands of hair-breadth escapes which take place annually at collieries where no catches are provided, that could and would be avoided if kepts or catches were made compulsory."

3rd.—That there be a General Rule inserted in the Mines Act Amendment Bill :—

> "*That Enginemen be compelled to give return signals to the Hooker-on before starting the engine when men are about to ascend or descend. Also that signals be registered until complied with.*"

"The first is imperatively necessary, because both the browman and engineman are supposed to be ready before the signal is given to the hooker-on for men to get into the cage, but where the browman has charge of the return signal it is frequently given without ascertaining whether the engineman is ready or not. In some instances Enginemen might not be ready, consequently the men in the cage at the bottom might become alarmed at the delay and attempt to get out again just at the moment the engineman was starting, entailing loss of life.

"Self-registering signals are eminently desirable as a check to the over-taxed mind of the engineman, who has to concentrate his attention (under ordinary conditions) to three important objects at once, *i.e.* :—

The signal from the bottom;

The signal from the brow; and

The manipulation of the engines,

which makes it difficult to remember the signals, especially if there should happen to be a little delay with the cage at the surface. Under such circumstances, immediately the browman is ready he gives the signal 'go on' to the engineman (irrespective of any signal from the hooker-on at the bottom) and, as a natural consequence, becomes very tempting for the engineman to start the engine, notwithstanding that no signal has been received from the hooker-on at the bottom, and in some instances with fatal results. There is also a variety of other duties claiming an engineman's attention, such as attending to pumps, ventilating fans, boilers, &c., making it difficult for an engineman to hear distinctly the exact signal given. Under the above circumstances, a registered signalling indicator would enable the engineman to see at a glance the nature of signal given; in other words, he would not have to depend entirely upon acoustics, as he would have the assistance of another sense, namely, his eyesight. Hence the necessity for registered signals such as those used for communicating with enginemen aboard modern steamships."

4th.—That there be a General Rule inserted in the Mines Act Amendment Bill :—

> "*That there be a proper speaking tube erected at all collieries for the purpose of communication between banksman and winders.*"

"The desirability of a speaking tube as a means of communication between browman and engineman has long been manifest at all collieries (1st) owing to the distance apart from the engineman and browman are situated, (2nd) the difficulty of not being able to see each other in consequence of steam, smoke, fog, and in some cases a large stack of coal between the engine-room and pit, leaving the engineman entirely dependent upon the browman's voice, which is extremely difficult to recognise owing to men and boys calling to each other, steam blowing off at boilers, the noise made by locomotives shunting wagons, and coal screening, air compressors, and in some cases other winding engines in the same engine-room. There are also various cases throughout Lancashire where enginemen are actually winding with their backs towards the pit. These various evils make it utterly impossible for an engineman clearly to understand his signal from the browman, which is a crying evil that has cost many a poor fellow his life."

5th.—That General Rule 30 of Mines Act, 1887, be amended as follows :—

> "*There shall be attached to every machine worked by steam, water, or mechanical power, and used for lowering and raising persons, an adequate steam and foot brake, which shall be of sufficient power to hold the cages at rest, when the maximum weight is attached, and a proper indicator (in addition to any mark on the rope) showing to the person who works the machine the position of the load in the shaft.*"

"This principle has been admitted and adopted, to a certain extent, by General Rule 30, Mines Regulation Act, 1887. But the inspectors do not seem to realise what is an adequate brake. Naturally we should expect an adequate brake to mean one that will hold any load an engine will lift. Hence our definition, which states 'that an adequate steam and foot brake, and each shall be of sufficient power to hold the cages at rest when the maximum weight is attached.'"

Digitized by Google

6th.—That there be a General Rule inserted in the Mines Act Amendment Bill:—

> "*That there shall be, in future, only one winding engine in one engine-house, and that partition walls be built between separate winding engines at present in one engine-house. Also that colliery winders be prohibited from doing any work outside of their engine-house while men are down in the mine.*"

"*Re* one winding engine in one engine-house. The necessity of such being placed upon the Statute Book is demonstrated when you peruse the whole evils mentioned, as they are so similar and bound together, that if you are satisfied that one is necessary you must naturally conclude that all are necessary. As regards colliery winders being allowed to leave the engine-room while men are in the mine, Special Rule 102, Mines Regulation Act, 1887, contends that the engineman shall attend during the whole time anyone is below ground in the mine. This does not prohibit managers from insisting upon the winder at any pit (no matter how many men there may happen to be in the mine) going out of the engine-room and attending to the boilers, the ventilating machinery, air compressors, and pumps, in addition to being the ordinary colliery watchman. Under such circumstances we contend that it is impossible for us, as engine-winders, to fulfil our obligations towards our fellow creatures, the miners. Therefore we ask your able assistance in arranging the law in such a manner that it will give satisfaction to us, and protection to them whose lives we, as enginemen, have entrusted to our charge."

7th.—That there be a General Rule inserted in the Mines Act Amendment Bill:—

> "*That detaching hooks and safety catches shall be applied to all pits where persons are lowered into or raised out of mines by machinery.*"

"All practical men must confess that it is almost a crime for Parliament to hesitate in making such compulsory, as there is no chance whatever for those unfortunate persons that happen to be in the cage when overwinding takes place, if there is no detaching and safety appliance to prevent their being hurled over the headgear or thrown down th· shaft, as either means death of the most horrifying description. It might be contended that overwinding fatalities have occurred where safety appliances were provided; but such are invariably owing to detaching appliances being badly erected, or for the want of cleaning, oiling, &c., which some employers have been indifferent about, knowing that such were not compulsory. The result is such unfortunate calamities as that which recently occurred at Westleigh, Lancashire, which makes it imperatively necessary that detaching hooks and safety catches should be made compulsory; also that they should be cleaned, oiled, and examined by a competent person at least once every four weeks."

8th.—That there shall be added to Rule 32 of the Mines Regulation Act, 1887:—

> "*That all boilers be examined (by a competent person appointed by the Government) at least once every twelve months.*"

"The report of the Secretary of the Board of Trade upon the working of the Boiler Explosions Acts, 1882 and 1889, with appendices, tells its own horrible story of the appalling loss of life through boiler explosions, which is not at all surprising when you peruse the Appendix D, which demonstrates the startling facts that out of 27 formal enquiries into the circumstances attending boiler explosions during the year ending June 30th, 1895, causing the death of 39 persons and injury to 56 persons. Not one boiler explosion out of the whole could the court of inquiry attribute to an unavoidable accident. On the contrary, it shows that such explosions were entirely due to ignorance, negligence, and want of inspection. One case, with a boiler 20 years old, because the steam gauge was graduated at 80 lbs. per square inch, additional weights were put upon the safety valve, culminating in an explosion.

"Another case, owner worked boiler 27 years at 60 lbs. pressure to the square inch without any examination, and was somewhat astonished when it exploded, as he thought it should work for an indefinite period without examination.

"Another case, where plates had deteriorated from $\frac{4}{16}$ of an inch in thickness to $\frac{1}{16}$, resulting in an explosion killing five men.

"Another steam user thought his boiler was quite safe so long as his hammer did not go through the plates when tapping them."

These astonishing revelations must convince Parliament that the eloquent appeal of the court investigating the boiler explosion at the Bridgend, Glamorganshire, North's Navigation Collieries, Limited, 1889, ought to be acted upon, as it speaks out plainly, stating that Special Rules for collieries should demand in no uncertain terms that boilers are to be thoroughly inspected, and at what intervals of time they are to be inspected, and by whom this very important duty is to be performed; and unless Parliament does interfere we shall see more of those terrible fatalities, which the enactment of all the foregoing clauses would diminish.

In claiming your support, it cannot be denied that if the above is to be accomplished, the following provisions should be inserted in the Mines Regulation Act:—

> 1st.—"That indicator attached to winding engines at pits where men ascend or descend shall not travel more than once round, minus one inch of each side of the centre, when indicating distance from the surface to bottom of the shaft."

No one knows the necessity of such provisions better than Government inspectors and engine-winders, as it is a well-known fact that if indicators travel more than once round when registering distance from surface to bottom engine-winders are very liable to make mistakes, as it becomes necessary for them to keep count, which is a most dangerous practice, as the slightest omission on engineman's part might lead him to the conclusion that cages were only in the middle of the shaft when such were really approaching the surface—which would mean certain destruction by overwinding and very likely loss of life.

There is an instance on record where the indicator of an engine at a colliery in the Wigan district, some years ago, made exactly one revolution when registering distance from surface to bottom, consequently the finger pointed exactly to one mark for both cages; result was engineman during night-time forgot which cage he had at surface, started wrong way, killing several miners. This would very probably have been avoided had the indicator travelled less than one revolution, as it would have pointed to different marks for each cage; hence the necessity for the foregoing provision.

> 2nd.—"That colliery owners provide all engine-winders with a report book, so as to enable them to give their opinion respecting the state of the engines (in addition to the book provided for machinery inspector under Rule 5 of Mines Regulation Act, 1887)."

Special Rules in West Lancashire compel engineman to examine the state of his engine, &c. (see Rule 96); also to report to his superior officer any defect he may observe. However, such reports are generally given orally to inspector appointed in accordance with General Rule 5, who, in some instances does not attempt to remedy such defects, or even report them. The result is that accidents occur through such defects; and the inspector, on such occasions, is subject to a bad memory, as he really cannot remember the engineman ever having spoken to him about such defect. Therefore, if enginemen are to examine, let the Mines Act demand that enginemen shall make a true report of such examination, and every such report be recorded in writing and signed by engineman.

> 3rd.—"That engine-winders' representatives be allowed to take part in the framing of Special Rules."

This is a question of vast importance, owing to the peculiar nature of the engine-winders' work, which does not seem to be fully comprehended by those who framed Special Rules in connection with the Coal Mines Regulation Act, 1887. For instance, in Lancashire, enginemen are supposed to examine the ropes, which is almost impossible, unless he gets someone to turn the engines round whilst he examines ropes coiling on or off the drum, as he cannot make any adequate examination of the ropes and stand at the handles turning the engines round. He is also held responsible in banksman's absence for persons descending the pit without permission from the proper authority, and has to see that no person goes down the pit in a state of intoxication, and that no intoxicating drinks are taken down the pit without the consent of the manager, in addition to seeing that the safety gates are in a proper position. These duties cannot be fulfilled by engine-winders with anything like satisfaction during night-time, as the enginemen are such a long distance from the fence gates and place where men get into the cage, that it is impossible for him to see whether men are strangers or intoxicated; and if he left his handles to go and see while they were getting into the cage he would be violating Special Rule 102, which places engine-winders in a most objectionable position.

These facts are quite sufficient to demonstrate that engine-winders, by all means, should have a voice in the making of special Rules for mines' regulation.

Your consideration and support in favour of the foregoing will be greatly appreciated both by engine-winders and miners, and will entitle you to the gratitude and thanks of your countrymen.

SCHEDULE.

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

SPECIAL RULES.

1.—(1) There shall be established in every mining district such special rules for the conduct and guidance of the persons acting in the management of mines in the district, or employed in or about such mines, as under the particular circumstances of the district may appear best calculated to prevent dangerous accidents, and to provide for the safety, convenience, and proper discipline of the persons employed in or about the mines in the district.

(2) The special rules shall be observed in and about every mine in the district for which the rules are established in the same manner as if they were enacted in this Act.

(3) If any person who is bound to observe the special rules established in any district acts in contravention of or fails to comply with any of them he shall be deemed to be guilty of an offence against the Coal Mines Regulation Act, 1887 (in this Act referred to as the principal Act), and also the owner, agent, and manager of the mine in or about which the offence occurs shall each be deemed to be guilty of an offence against the principal Act unless he proves that he had taken all reasonable means, by publishing and to the best of his power enforcing the special rules, to prevent such contravention or non-compliance.

(4) The provisions in the principal Act relating to special rules made under that Act shall, so far as they are not hereby repealed, apply to special rules made under this Act.

(5) All special rules made under the provisions of the principal Act and in force in any mine to which special rules made for a district under this Act apply, shall be repealed from the date on which the special rules for the district come into operation.

2.—(1) The Secretary of State shall draw up special rules for each mining district, after ascertaining, in such manner as he thinks fit, the opinions of representatives of owners of mines in the district, and of representatives of workmen employed in such mines, and of the inspector of mines for the district.

(2) *Expenses incurred by the Secretary of State under this section shall be paid out of moneys provided by Parliament.*

(3) The Secretary of State shall lay special rules before Parliament as soon as possible after they are drawn up, and they shall come into operation at the end of three months from the time when they are laid before Parliament.

MISCELLANEOUS.

3. In section sixteen, subsection one, of the principal Act for the paragraphs marked (*a*), (*b*), and (*c*) the following paragraphs shall be substituted, namely:—

(*a*) There must be at least two shafts or outlets with which every seam for the time being at work in the mine shall have a communication:

(*b*) Where a seam extends for more than one mile there shall be at least two shafts or outlets in every mile with which every seam for the time being at work in the mine shall have a communication; provided that the senior inspector for a district shall have power to exempt any mine in his district from this requirement, if in his opinion the mine is either non-fiery, practically worked out, or worked under a mountain or under the sea:

(*c*) Such shafts or outlets must in all cases afford separate means of ingress and egress available to the persons employed in every such seam, whether the shafts or outlets belong to the same mine or to more than one mine:

(*d*) Such shafts or outlets must not at any point be nearer to one another than fifteen yards, and there shall be between such shafts and outlets a communication not less than four feet wide and four feet high, and in the case of communications made after the commencement of this Act between shafts or outlets, not less than five feet high:

(*e*) Proper apparatus for raising and lowering persons at each such shaft or outlet shall be kept on the works belonging to the mine; and such apparatus, if not in actual use at the shafts or outlets, shall be constantly available for use:

(*f*) There shall be placed at convenient situations in the mine, for use in the case of accident, plans or other indications of the easiest means of gaining access to the return airways.

4. Six persons employed, or who have been employed, as workmen in any mine, not being owners, agents, or managers of a mine, shall be members of any board established under section twenty-three of the principal Act for the appointment of examiners for the purpose of granting certificates of competency under that Act.

5.—(1) In section thirty-five of the principal Act, at the end of subsection two, the following words shall be added, namely:—

Where loss of life or personal injury has occurred as aforesaid, the owner, agent, or manager of the mine shall allow a person authorised by the injured person or his representative to visit the place of the explosion or accident at any reasonable time, and to make a plan of the place, and to obtain any reasonable information.

(2) In section thirty-five of the principal Act, after subsection three, the following subsection shall be added, namely:—

Digitized by Google

Every owner, agent, or manager of a mine shall keep a register of accidents, and shall enter therein every accident occurring in or about the mine causing personal injury to any person employed in or about the mine within one week after the occurrence of the accident, and this register shall be at all times open to inspection by the inspector of the district.

6. In section forty-one of the principal Act, at the end, the following words shall be added, namely:—

In every district an inspector shall make a complete examination of every mine, and every part thereof, at least once in every six months;

It shall be the duty of an inspector making any inspection, examination, or inquiry under this section, in any mine or part thereof, within six days, to enter in writing in a book to be kept for the purpose in the mine, a report of such inspection, examination, or inquiry.

7.—(1) In every mining district as defined in this Act a Secretary of State shall appoint assistant inspectors so that there shall be an inspector for every ten thousand persons employed above or below ground in connection with mines in the district.

(2) In the appointment of assistant inspectors preference shall be given to persons having practical knowledge of the working of mines, and especially to persons who hold certificates of competency under the principal Act.

(3) A Secretary of State may remove any assistant inspector, and may grant him such salary as the Treasury may approve.

(4) *The salaries of assistant inspectors, and the expenses incurred by them, shall be paid out of moneys to be provided by Parliament.*

(5) The assistant inspectors shall be generally under the control of the senior inspector of the district, and may perform any of the duties of an inspector which may be delegated to them, either generally or in special cases by the inspector, and shall also perform any duties which may be assigned to them by a Secretary of State.

(6) Any special report made by an inspector or an assistant inspector with respect to an explosion or accident shall be presented to a Secretary of State, and shall also be included in the inspector's annual report.

8. Where an explosion or accident has occurred in any mine, and an application in writing signed by six workmen employed in the mine is made to the Secretary of State, requesting him to direct an investigation to be held of such explosion or accident, and of its causes and circumstances, the Secretary of State shall direct such an investigation to be held, and the provisions of section forty-five of the principal Act shall apply to such an investigation.

9. In section forty-eight of the principal Act, there shall be substituted for subsection seven the following words, namely:—

The jury empanelled on the inquest shall include at least three persons who are or have been practical miners; but any person having a personal interest in, or employed in; or in the management of, the mine in which the explosion or accident occurred shall not be qualified to serve on the jury; and it shall be the duty of the constable or other officer not to summon any person disqualified under this provision, and it shall be the duty of the coroner not to allow any such persons to be sworn or to sit on the jury.

10. At any coroner's inquest on the body of any person whose death may have been caused by any explosions or accidents in or about mines—

(1) The inspector of the district shall be called as a witness by the coroner:

(2) Any person authorised by one or more workmen at the mine at which the explosion or accident has occurred may attend and examine any witness, either in person or by his counsel, solicitor, or agent.

11. The general rules contained in section forty-nine of the principal Act shall be amended as follows:—

(1) In rule one there shall be added after the first paragraph the words following, namely:—

Any air crossing, made after *the passing of this Act*, whether undercast or overcast, shall be driven in the solid.

(2) The following provisions shall be substituted for the first and second paragraphs of that part of rule four which relates to inspection before commencing work:—

(i) One or more competent persons, who have passed an examination of competency, to be held under rules to be made by a Secretary of State, and have had at least five years' practical experience at the working face, and are not contractors for getting minerals in the mine, or in the employ or pay of such contractors, shall be appointed by the owner, agent, or manager for the purpose, and shall within two and a half hours before the commencement of each shift inspect every part of the mine situate beyond the station or each of the stations and in which workmen are to work or pass during that shift, and shall ascertain the condition thereof so far as the presence of gas, ventilation, roof and sides, and general safety are concerned;

(ii) The inspection shall extend to all working places in which work is temporarily stopped within any ventilating district in which the men have to work;

(iii) The person making the inspection shall enter in a book, to be kept in a mine for the purpose, a report of the inspection, and the book shall be kept in a convenient and accessible place, and be open at all times to the inspection of any person employed in the mine.

No workman shall pass beyond any such station until the part of the mine beyond that station has been so inspected, and the report has been entered in the said book.

(3) In rule eight, for paragraph (*a*), the following paragraph shall be substituted:—

(*a*) In any place in a mine in which there is inflammable gas.

(4) The following rule shall be substituted for rule thirteen:—

Rule 13.—Where a place is likely to contain a dangerous accumulation of water, the working approaching that place shall not at any point exceed eight feet in width, and there shall be constantly kept at a sufficient distance, not being less than five yards in advance, at least one bore-hole near the centre of the working, and sufficient flank bore-holes on each side.

(5) The following rule shall be substituted for rule fourteen:—

Rule 14.—Every underground plane on which persons travel, which is self-acting or worked by an engine, windlass, or gin, shall be provided (if exceeding thirty yards in length) with some proper means of communicating distinct and definite signals between the stopping places and the ends of the plane, and shall be provided in every case with sufficient manholes for places of refuge, which shall be placed at intervals of not more than ten yards, and on one side of the road only.

(6) The manholes mentioned in rule fifteen shall be placed at intervals of not more than twenty-five yards apart, and shall be on one side of the travelling road only:

(7) Every engine plane used in any mine shall be provided with proper travelling roads for the safety of workmen passing to and from the face of the working:

(8) The following rule shall be substituted for rule twenty-two:—

Rule 22.—Where the timbering of the working place is done by the workmen employed therein, suitable timber shall be provided at the working place by the owner of the mine, and the distance between the sprags or holing props where they are required shall not exceed six feet, or such less distance as may be ordered by the owner, agent, or manager.

Digitized by Google

(9) The following words shall be added at the end of the first paragraph of rule twenty-four, namely :—

A person shall not be so appointed unless he holds a certificate of competency granted under regulations made by the Secretary of State ;

A person so appointed shall not be employed for more than eight hours during any consecutive twenty-four hours.

(10) The following provisions shall be added at the end of rule twenty-five, namely :—

(i) Enginemen shall give to hookers-on return signals before starting the engine when men are riding ;

(ii) All signals shall be registered until complied with ;

(iii) A speaking tube shall be erected at all collieries for the purpose of communication between the banksmen and winders.

(11) The following rule shall be substituted for rule twenty-six :—

Rule 26.—(i) Detaching and suspending hooks and safety catches shall be applied to all machinery by means of which persons are lowered into or raised out of a mine, and shall be taken to pieces, examined, cleaned, and oiled by a competent person at least once in every four months ;

(ii) There shall be not less than ten feet of clearance between the detaching hooks and the point of detachment when the cages are at the landing ;

(iii) A banksman shall be appointed and shall attend during the whole time that men are in the mine or ascending or descending. Engine keepers must remain in charge of the engines during the whole time that men are in the mine, and must not be withdrawn to perform other duties outside the engine-room. No engine keeper shall have charge of more than one winding or other engine during the whole time that persons are in the mine or in the shaft of the mine ;

(iv) Every engine keeper shall be provided with a report book, and shall once in every twenty-four hours enter in the book a report of the state of the engine.

(12) The following rule shall be substituted for rule thirty :—

Rule 30.—(i) There shall be attached to every winding engine which is used for lowering and raising persons an adequate steam and foot brake, and where other appliances are used for raising and lowering persons, an adequate brake shall be attached to the said appliance, and a proper indicator (in addition to any mark on the rope) showing to the person in charge of the engine the position of the cage or tub in the shaft. If the drum is not on the crank shaft, there shall be an adequate brake on the drum shaft. The indicator shall be so constructed as not to travel more than once round, minus one revolution of the drum, when indicating the distance from the surface to the bottom of the shaft ;

(ii) Not more than one winding engine shall in future be placed in one house, and partition walls shall be built between winding engines at present in one house.

(13) There shall be added at the end of rule thirty-two the following words, namely :—

All boilers shall be examined at least once in every six months, and cleaned at least once in every three months.

(14) The ambulances or stretchers, with splints and bandages, mentioned in rule thirty-four, shall be kept in the mine ready for immediate use in case of accident :

(15) The books mentioned in rule thirty-seven shall be kept in the mine :

(16) The following rule shall be substituted for rule thirty-eight :—

Rule 38.—(i) The workmen employed in any mine may from time to time appoint any persons who are or have been practical working miners to be examiners of the mine on their behalf ;

(ii) Such examiners may at any time examine the mine or any part thereof, or any old workings, shafts, machinery or apparatus connected therewith, and every facility shall be afforded for any such examination by the owner, agent, and manager of the mine, and by all persons in the mine ;

(iii) The examiners shall make a report in writing of every such examination, and shall communicate the same to the workmen, either by placing it in a book to be kept by the workmen for the purpose, or by reading it to a meeting of the workmen, or in such other manner as may be from time to time determined by the workmen ;

(iv) If the examiners on any examination consider that any danger exists or is to be apprehended in the mine, they shall make a report in writing to that effect to the inspector of the district.

(17) There shall be added, at the end of rule thirty-nine, the following words, namely :—

A person not now employed as a coal or ironstone getter shall not be allowed to work at the face of the coal or ironstone in any capacity until he has had three years' experience as a workman in the roadways.

(18) The following rule shall have effect as an additional general rule :—

The owner, agent, or manager of every mine shall provide at or near the mine a workshop at which all cartridges used in the mine shall be prepared and stored under regulations to be made by special rules. One such workshop may, with the approval of a Secretary of State, be provided for several mines.

12. The printed copy of the abstract and special rules mentioned in section fifty-seven of the principal Act shall be supplied to every person employed in or about a mine without the application required in that section.

13. In this Act, unless the context otherwise requires—

The expression "mining district" means a district for which an inspector of mines is for the time being assigned.

14. The Acts mentioned in the schedule to this Act are hereby repealed to the extent specified in the third column of that schedule.

15. This Act may be cited as the Coal Mines Regulation Act, 1907, and shall be construed as one with the principal Act, and the Coal Mines Regulation Acts, 1887 to 1896, and this Act may be cited collectively as the Coal Mines Regulation Acts, 1887 to 1907.

Accidents:
- Causes of, 20756, 20851, 20861:
  - Attendance, irregular, as a cause of, 27191 (*par.* 2), 27227, 27256, 27391, 27421, 27498, 27511 (*par.* 3), 27531, 27581.
  - Charter-master system, accidents due to, 36661, 36720, 36784, 36825.
  - Circular issued by Mr. Davis with questions as to causes, 26856, 26942.
  - Coal-cutting machinery, use of, in relation to, *see title* Coal-cutting Machinery.
  - Competitive system in relation to, 36354, 36405, 36417.
  - Haulage, *see that title.*
  - Hours of work in relation to, *see title* Hours of Work.
  - Plans, inaccurate, as a cause of, *see title* Plans.
  - Temperature of mines, 36875.
- Compensation for, 24985.
- Delay in removal of injured men, 34121, 34188.
- Falls of roof and sides, number of, causes of, and suggestions for prevention of, 19845, 21082, 21502, 21547, 22138, 23588, 23901, 24760, 24832, 24984, 25772, 25773, 27358, 29817, 29971, 30319, 30333, 30387, 30403, 32063, 32537, 33331, 33336, 33399, 33756, 33770, 33971, 34259, 34728, 35099, 35121, 35129, 35232, 35247, 35417, 35450, 36568, 36661, 36720, 36784, 37021, 37029, 37129, 37211, 37216, 37317, 37327:
  - Attendance, irregular, as a cause, 27191 (*par.* 2), 27227, 27391, 27421, 27498, 27511 (*par.* 3), 27531, 27581.
  - Bain, Mr., Report on, 35450.
  - Carelessness, accidents arising from, decrease in number of, 19844.
  - Complaints as to condition of roof and sides rarely made by men, 33340.
  - Coal-cutting machinery, use of, in relation to, 24965, 24977, 24982, 25248, 25272, 33975.
  - Indications that fall is probable, 27702.
    - Occurrence of fall when no indications have been observed, 34506.
  - Knocking out of timber by official when set by men without permission, accidents resulting, 34900, 34912, 35361.
  - Places of occurrence, 27358, 29971, 30403, 32063, 33331, 33336, 33399, 35121, 35129, 35232, 35247.
  - Report on, not always presented, 23903.
  - Safety lamps, use of, in relation to, 31014, 31804, 37125, 37235.
  - Securing of place after, extent desirable and extent practised, 33342.
  - Suspension of winding after, until timber has been set, 33046.
  - Special Rules, number of accidents not appreciably reduced by, 20723, 20849.
  - Thin seams and thick seams, danger compared, 35450.
  - Time of occurrence, 34341.
  - Wages question in relation to, *see title* Timbering, *sub-heading* Wages.
- (*See also title* Timbering.
- Haulage, *see that title.*
- Inspection after:
  - By Home Office Inspector, 21216, 22427, 22947, 23532, 23681, 31373, 31547, 32436, 32835, 32962, 32986, 32992, 33320, 33600, 35701, 37259.
    - Leaving place undisturbed until after inspection, 32837, 33085, 33330, 34054.
      - Violation of this rule, instance alleged, 33201, 33405.

Accidents—*cont.*
- Inspection after—*cont.*
  - By Home Office Inspector—*cont.*
    - Sub-inspector, possible action by, before arrival of chief inspector, 33092.
  - By men's representatives, 32436, 32437, 32561, 35106, 35473, 35596, 36052, 36229.
- Investigation:
  - Board or court of inquiry composed of representatives of owners and employees, suggestions as to, 37236, 37252.
    - Cost of, how to be defrayed, 37244.
  - Coroner's inquests:
    - Adequacy of, views on this point, 19621 (*par.* 15), 19783, 19976, 20210, 20216A (*par.* 21), 20771 (*par.* 10), 27191 (*par.* 4), 27238, 33176, 33605, 33821, 34140, 34292, 34546, 34594, 35460, 35569, 35871, 37344.
    - Inspectors, intimation to, and powers of, to attend and cross-examine, 32238.
    - Juries:
      - Composition of, desirability of inclusion of men having technical knowledge, &c., 29808, 30127, 30355, 32442, 33093, 33141, 33179, 33823, 34926, 35464, 35474, 37154, 37168, 37237.
        - Disqualification of persons having personal interest in mine, 33151.
    - MacLaren Explosion, *see that title.*
    - Manager's certificate, suspension, power non-existent, 20214.
    - Men's representatives, presence at inquests and greater freedom to ask questions, views as to, 31505, 31515, 31854, 32120, 32230, 32440, 32558, 32824, 32823, 33549, 34142, 34177, 34737, 35460, 35481, 35569, 35873, 36229, 36232, 36362, 37154, 37166, 37345.
      - Counsel representing men at inquests on Tinsbury and Camerton explosions, 32638.
    - Notices as to, 20216A (*par.* 21), 20399, 33602.
      - Adjournment of inquests advocated, to give relatives opportunities of collecting evidence, 36050.
    - Object, chief, of, 33136, 34357, 35467, 35474.
    - Powers of coroner, possible effect on, of increased use of Sec. 45, 34173.
    - Prosecution or second inquiry, power to coroner to order, desirability of, proved by Carodoc Vale and Elba Colliery cases, 31132, 31140, 31152.
    - Qualifications desirable for coroners in mining districts, 34138, 34289.
    - Reports of workmen's inspections, use of, at, 20216A (*par.* 6), 20258, 20599, 20623, 33804, 34355.
    - Viewing of body, delay caused by, and suggestion as to abolition, 33603.
  - Fatal Accidents Enquiry (Scotland) Acts, investigation under, 21586, 23339, 23415, 27755, 27959.
  - Non-fatal accidents, investigation, 35996.
    - Reports of, should be accessible to workmen, 35998, 36002, 36005.
    - Suggestion as to enquiry under Sec. 45, 33611.
  - Second inquiry under Sec. 45, provisions for, and desirability of increased use of, &c., 19801, 19976, 20079, 20211, 20216A (*par.* 21), 20771 (*par.* 10), 21180, 21187, 23342, 31155, 31522, 31573, 32635, 32824, 33141, 33174, 34172, 34294, 34359, 34926, 35478, 37166.
    - Bill promoted by Miners' Federation, clause as to, 21182, 21584.

Digitized by Google

Accidents—*cont.*
Investigation—*cont.*
Second inquiry under Sec. 45—*cont.*
Circumstances justifying, 33823.
Comparison with advantages of coroners' courts with juries of experts, 30362.
Constitution of court, method of procedure, &c., 19978.
Extent to which used, 20081, 31527, 33609.
Men's representatives, presence advocated, 31858.
Non-fatal serious accidents, investigation by, advocated, 33611.
Secretary of State, powers of, in relation to, and views as to desirability of compulsory use of these powers, 20413, 20454, 31513, 31574, 33612, 34149, 34620, 37238, 37249.
Verdict of coroner's jury, reversal by, question as to possibility of, 31520.
Ironstone mines, *see that title.*
Legislation, prevention by, difficulty of, 35675, 35742.
Nationalisation of mines, probable effect of, on number of accidents, 36354.
Number of, 20601, 36153, 36661, 36720, 36784, 36825.
Part of mine in which most frequent, 33331, 33399.
Shaft accidents, *see that title.*
Shale mines, *see that title.*
Shot-firing, *see that title.*
Single men (men working alone) in lonely places, difficulty of obtaining help in case of accidents, 22973, 23060, 25355.
Trains, underground, accidents to, 30967, 30972, 30981.
Unskilled labour, employment of, as a cause of accidents, *see title* Unskilled Men.
Wages question in relation to, 22255, 22282, 36356, 36410, 36741, 36797.
(*See also title* Timbering, *sub-heading* Accidents from falls of roof and sides—Wages question in relation to.)
(*See also title* Explosions.)

Age Limit for beginning work in pit, 33227, 33439, 34522.

Agent or managing director, appointment by, of managers, under-managers and officials, 33579.

Airways, Return:
Familiarity of men with, importance of, 35774.
Use of, as travelling roads, advocated, 29976, 30117, 30614, 30784, 30799, 30943, 30945, 30985, 31741, 32100, 34116, 34331, 34437, 34774, 34787, 34917, 35100, 35151, 35154, 35156.
Colliery in which this is practised, 34117, 34336, 34438.
Ventilation would be improved in event of, 34333, 34445, 34778, 35156.

Allerton Colliery, accidents at, 32095, 32269.

Altofts Colliery, explosion at:
Cause of, 32278.
Coroner's inquest, 35876.

Ambulance, *see* Rescue Work.

American Mines:
Baths and change of clothes, facilities for in, 22312, 22635.
Certificates for coal-getters, 27608.

Ankylostomiasis:
Bristol coalfields, danger of in, owing to high temperatures, 34366.
Conciliation Board, preventive measures discussed by, 22314.
Cornish miners, introduction into Scotland by, improbability of, 23758.
Durham, non-existent in, 35486.
Fifeshire mine, condition of, as regards, 21138, 23489.
Foreign workmen, employment of, in relation to, 20771 (*par.* 11), 21137, 21537.
India, existence in, question as to, 34042.
Rats, spreading by, possibility of, 22503.
Sanitary conveniences, provision of, and improvement of sanitary conditions generally, views as to, 19621 (*par.* 16), 19794, 20771 (*par.* 11), 21136, 21524, 21536, 22497, 22503, 22648, 22654, 23491, 23496, 24380, 27794, 32938, 33115, 34038, 36367, 37177, 37182.
Shropshire, non-existent in, preventive measures taken, 33115.
South Staffordshire and East Worcestershire, non-existent in, 36655.
Ankylostomiasis—*cont.*
South Wales and Monmouthshire, non-existent in, 19621 (*par.* 16).
Temperature of mines in relation to, 36366.

Annbank Colliery explosion, 22959.

Apprentices, Engine-winders', *see title* Enginemen (winding enginemen), *sub-heading* Training.

Attendance, irregular, as a cause of accidents in mines, 27191 (*par.* 2), 27227, 27256, 27391, 27421, 27498, 27511 (*par.* 3), 27531, 27581.

Australia:
Managers of metalliferous mines, certificate of competency, 26632.
New South Wales, *see that title.*

Ayrshire Miners' Association: Witnesses representing—Mr. Brown and Mr. Muir. (*For separate indices to their evidence, see Index II.*)

Bamfurlong Collieries, speed of winding in, 29849.

Banksman, employment of, 35863.
Special Rules as to, 25867, 25870, 25906, 25908.

Barrow, shaft accident at, 32079.

Baths and change of clothes, provision of, at pit-head, views as to whether desirable, 20181, 21143, 21514, 21550, 21978, 22026, 22310, 22640, 23149, 23186, 23201, 23750, 24024, 24130, 24376, 32926, 32950, 34023, 34535, 35200, 35536, 35581, 35904, 36369, 36498, 36545, 36561, 36844, 37000.
America, provision in iron and steel works, not in mines, 22636.
Charge to men for use of baths, views as to, 22016, 22038, 22317, 23206.
Compulsory use of, views as to, 36499.
Cornwall, provision in, 23750, 25534, 25581.
Houses of miners, distance from pit, and extent of accommodation in relation to this suggestion, 21550, 21556, 21979, 22027, 22030, 22641, 23153, 23186, 24134, 24143, 26546, 35902.
Number required, 23209.
Shower baths, 23212.
Sinking pits, cabin for drying clothes, 24137.
Tramway companies, attitude of, as to colliers riding in cars, 36546.
Village in which erected, 21148.
Water supply in relation to, 35905.

Bedlinog, shaft accident at, 28629.

Belgium:
Baths and facilities for changing clothes at pit-head, 21144, 36561.
Gates or bars on cages, 20771 (*par.* 8).

Bills, Parliamentary:
Appeal for legislation approved by National Federation of Enginemen's and Boilermen's Protective Associations, Appendix II., *page* 476.
Coal Mines Regulation Bill, promoted by Miners' Federation, 20777, 32957:
Accidents, investigation, clause as to, 21182, 21584.
Certificates for engine-winders, Bill proposing, 21484, 25827, 25840, 25935, 25938, 27713 (*par.* 1) 27832, 27884, 27974, 28124 28160, 28391, 35920.
Text of Bill: Appendix III., *page* 480, *clause* 9.
Hours of work, 26329.
Inspection and number of inspectors, clause as to, 20784, 20902, 20977, 21031, 21157, 21164, 21328, 21397, 21430, 21434, 22270, 30144, 31539.
Text of: Appendix III., *page* 478.
Timbering, suggestion as to, 21086.
Unskilled men, employment of, 21170.

Blackdamp, *see title* Ventilation, *sub-heading* Blackdamp.

Blasting, *see* Shot-firing.

Boilers, *see title* Engines and Boilers.

Book: "Colliery Accidents: Cause and Prevention," 26659.

Boxes, supply of, defects in, 30353.

Boys:
Age for employment in pits and at surface, 25594, 33273, 34522.
Number under sixteen, 25677.

Digitized by Google

Boys—*cont.*
Hours of work, 25595, 25666, 26299, 33279.
Instruction in mining matters, *see title* Schools.
Loitering about main roads at commencement of shift, prohibition, and suggestion that butties should accompany lads to pit bottom from working face, 25377 (*par.* 9), 25515, 25669, 25680, 25682.
Meals, interval for, 33026, 34511, 34824, 34832.
Number becoming miners in mining districts, 30883, 33260, 34529, 35799.
Wagons, employment with, objections to, 20343.
Work in which engaged, 25681, 35810, 36833.

Brattice-men, duties of, 25790, 25815.

Bristol Miners' Association: Witness representing—Mr. Whitefield. (*For separate index to his evidence, see Index II.*)

Butty System, *see title* Charter-Master System.

Cadzow Colliery, appointment of inexperienced man as fireman in, 22402.

Camerton Explosion, Coroner's inquest, representation of Trade Union by counsel at, 32638.

Canada, Manager's certificate of competency in, 26629.

Caradog Vale, accident at, owing to defective plans; failure of prosecution of manager, 31054, 31118, 31130, 31152.
Report on by Sir D. Brynmor Jones, 31224.

"Caviling" System in Durham, 35772.

Charter-Master System:
Accidents, number of, under, 36661, 36720, 36784, 36825.
Definition of "Charter-Master," and description of systems, 36657, 36672, 36866, 36870, 36908.
Extent to which system prevails, 36707, 36795, 36851.
Inspection, increased, reduction of evils of this system in event of, views as to, 36870.
Inspection of mines on behalf of men, possible objection by charter-masters if men were appointed from other collieries for, 36738.
Man appointed by charter-master as overlooker, powers of and qualifications of, 36667, 36679, 36681, 36709, 36816.
Period that this system will probably continue, 36855.
Qualification of charter-master, type of man, &c., 36671, 36674, 36756, 36906.
Unsuitability for appointment as working-class inspectors, 36762, 36768, 36771.
Size of collieries in relation to, 36906.
Timber, purchase by, varying custom as to, 36715.
Unskilled men, employment of, 36822.

Checkweighers:
Danger underground, warning of, question whether given by, 20192.
Extent to which employed, 32496, 36739.
Inspection of mines on behalf of men by, views as to whether desirable, 19903, 20040, 20198, 21032, 21424, 31032, 31213, 31397, 31556, 31677, 32036, 32497, 33747, 35755, 35978.
Prevention of, instances of, 32014, 32036, 32159, 32313.
Qualifications: former regulation as to employment of men in same mine, 20111.
Shelters, erection for, 20187.

Cheshire and Lancashire: Witnesses giving evidence for—Mr. Twist, Mr. Waring and Mr. Watson. (*For separate indices to their evidence, see Index II.*)

Cigarettes, prohibition, 37032, 37051.

Cleveland Miners' and Quarrymen's Association, Witnesses representing—Mr. Braithwaite and Mr. Toyn. (*For separate indices to their evidence, see Index II.*)

Clydach Vale, accident in, 28429, 28583, 28801.

Coal-Cutting Machinery:
Accidents, number of, in relation to, 23502, 24964, 24967, 24982, 25248, 33975.
Danger from sparks, 24964, 25153, 25245. 32274.
Dust, amount produced by, 23507, 24965, 32252.
Extent to which used, 23300, 24970, 24977, 25267, 32246.
Increased use of advocated, 25139, 25253.
Method of use, 24977, 24980, 25272.
Noise of, danger arising from, 24965, 24976, 25148, 32107.
Out-put, effect on, 25254.

Coal-Cutting Machinery—*cont.*
Shot-firing where coal-cutting machinery is used, 32257, 32280.
Stopping machine periodically for examination of roof advocated, 24965, 25141, 25150, 25249, 25253, 25272.
Timbering system in relation to, 23299, 23306, 23313, 32108.

Coal Mines Regulation Act, 1887, provisions of:
Accidents, prevention of, and investigation of, 26816, 28622, 31505, 31513, 31522, 33152, 33202, 35873.
Bills for amendment of, *see title* Bills, Parliamentary.
Danger, withdrawal of men in event of, 32380, 36464.
Discipline and punishments, 20734, 32378, 32701, 36479, 36683.
Engine-men and engine-winders, 25831, 27713 (*par* 4), 27752, 27784.
Hours of work, 26143 (*par.* 2), 26144.
Indian Mines Act, embodiment of certain regulations from, in English Act advocated, 33572.
Inspection of mines:
By Home Office inspector, 21369, 24269, 24272, 24411, 24458, 30697.
By men, 19621 (*par.* 2), 32385.
By mines officials, 25377 (*pars* 4, 5).
Knowledge of by men and boys, importance of, 27191 (*par.* 6), 27247, 27250, 27549, 34531, 36809.
Copies should be supplied to men, whether applied for or not, 28457.
(*See also title* Schools.)
Managers, regulations as to, 22333, 33853.
Meals, interval for, for boys, 33027.
Officials, strengthening of powers under advocated, 27511 (*par.* 6).
Shafts or outlets, 24991.
Sinking shafts, 20176.
Unskilled workmen, employment of, 20889, 20890, 30941.
(*See also title* General Rules.

Coal Mines Regulation Bill, *see title* Bills.

Coegnant explosion, 30921, 30923, 30941.

Colliery Officials' Association, members holding manager's certificate of competency, 27480.

Commissions and Committees:
Of 1886 (Royal Commission), Report of, as to a Permanent Investigating Department, 19749.
Of 1901 (Select Committee), Evidence and Report as to Engine-winders, 21105, 26167, 26206, 26312, 28157, 28164, 28239, 28393.
Coal Supplies, Royal Commission on, difficulty experienced in finding records and getting information, 33483.
Eight Hours Committee, statistics as to employment, of unskilled men, 20885.
Electricity Rules, Committee on, 31904.
Steam Engines (Person in Charge) Bill, Committee on Report of, against Bill proposed by National Federation, 25829.
Safety lamps, standard advocated by Royal Commission, 20078.

Compensation for Accidents, 24985.

Contractors:
Decline of this system, 33371, 33413.
Description of the system, 23721, 23730.
Special Rules for guidance of, 33366.
Unskilled men, employment by, 23716, 31330.
Wages of contracting coal-getters, 24119.
(*See also title* Charter-Masters.)

Conveyors, method of working, 25284.

Cornish Mines, baths and facilities for drying clothes, provision, 23750.

Cornish Miners, employment in Scotland, 21540, 23755.

Coroners' Inquests, *see title* Accidents, *sub-heading* Investigation.

Courrieres Mine: Timbering system; adoption of similar system in England advocated, 30319, 30330.

Cumberland: Witness giving evidence for—Mr. Sharp. (*For separate index to his evidence, see Index II.*)

Cumberland Enginemen's Friendly and Protective Association, rule as to training of enginemen, 25952.

Cwm Gelly Colliery, defective ventilation in, 31081, 31084.

Dangerous Practices: Power to inspectors to apply for an injunction in event of, suggestion as to, 32701, 32704.

Digitized by Google

Deputies, *see title* Inspection of Mines by Mines Officials.

Derbyshire: Witnesses giving evidence for—Mr. Marriot, Mr. Rowarth and Mr. Sewell. (*For separate indices to their evidence, see Index II.*)

Derbyshire and Nottinghamshire Enginemen's and Firemen's Union, membership, 28119, 28125.

Derbyshire Miners' Association, object of, number of members, and rules, 23778.

Detonators, *see title* Shot-firing, *sub-heading* Detonators.

Dirt, filling waste with, advocated, and prohibition of bringing to surface unnecessarily, 20216A (*par.* 17), 20388.

Discharge of Men:
- Justifiable reasons for, no provision as to in Coal Mines Regulation Act, 24591.
- Power to officials to discharge man wilfully misconducting himself advocated, 27627.

Discipline:
- Boys loitering about mine at commencement of shift, 25377 (*par.* 9), 25515, 25682.
- Character of mines as to, 21132, 21297, 21596, 21709, 22050, 22154, 23283, 23286, 23710, 25724 (*pars.* 1 and 2), 26817, 31969, 33765, 34240, 35050, 36475.
- Complaints of miners as to strictness, 21604, 21986.
- Instruction and encouragement of men and boys in, 25377 (*pars.* 8 and 9), 25514, 25712, 25724 (*par.* 2). (*See also sub-heading* Trade Unions.)
- Officials, powers and character and duties of, in relation to, 20771 (*par.* 4), 27511 (*par.* 6), 27550, 27627, 30413 (*par.* 4), 30437, 33558, 36479.
- Punishment by fines or prosecution, *see titles* Fines *and* Prosecution.
- Trade Unions, attitude of, towards, 21603, 21702, 21900, 22126, 22249, 22922, 23294, 23347, 23584, 23711, 23733, 23735, 31974.

Disputes between sections of men and employers, action of Trade Union secretary in event of, 21691.

Durham: Witnesses representing—Mr. Charlton, Mr. Clark and Mr. Johnson. (*For separate indices to their evidence, see Index II.*)

Durham Deputies' Mutual Aid Association:
- Number of members, 24396.
- Secession from Miners' Association, 24505.
- Witness representing, 24507.

Durham Enginemen's Association:
- Membership, regulations as to, 25819 (*par.* 3).
- Number of members, 25992, 26100.
- Qualification, training and examination of enginemen, regulations as to, 25819 (*par.* 3), 25835, 25836, 25847, 25944, 25950, 25956, 25963, 25989, 25993, 26003, 26011, 26024, 26039, 26100, *and* Appendix I., *page* 475.
- Instance of engineer not holding this certificate, 25989.
- Number trained, 25837.
- Witness representing, 25820.

Dust:
- Coal-cutting machinery, dust produced by, 23507, 24965, 32252.
- Explosions, inflammability of dust, &c., 26352 (*par.* 2), 32277.
- Health of men, effect of on, 33059.
- Prevention and removal of, 19621 (*par.* 10), 19745, 20072, 25539, 36140.
- Increased attention to advocated, 35672.
- William Pit, dust in, 36136.

Eastwood Collieries, accident due to absence of partition between engines, 28203.

Elba Explosion:
- Coroner's inquest, 19787.
- Prosecution of manager, failure of, 31140, 31152.

Electric Coal-cutting Machinery, *see title,* Coal-cutting Machinery.

Electric Re-lighting Apparatus for safety lamps, 30638, 30641.

Electrical Signalling advocated, 31343.

Electricity Rules, introduction of, 31904, 36946, 36956.

Employers' Liability Act, responsibility of managers under, 22333.

Engagement of Men, regulations as to, 31329.

Engine Houses or Engine Rooms:
- Admission to, of unauthorised persons, prohibition, 28136, 28138.
- Communication between banksman and engine-house, 28409, 28774, 28787.
- Explosives, storage in, objections to, 27786 *and note.*
- Ingress and egress, two ways of, advocated, accident due to lack of such provision, 28426, 28582, 28746, 28800
- Presence of two men during winding, views as to whether desirable, 20969, 22145, 22150, 22235, 28153, 28353.
- Sanitary condition of, defects in, and suggestions for improvement, 27794, 28139, 28200, 28740, 28791.
- Two or more engines in one room, objections to, and accidents resulting from, 27713 (*par.* 2), 27751, 27754, 28030, 28366, 28371.
- Partition advocated, 28202.

Engine Planes:
- Dimensions, increase advocated, 31249, 31343.
- Man-holes, increased number of, advocated, 31249, 31569.
- Men and boys travelling on, objections to, 30413 (*par.* 8), 30459, 30496, 30614, 30784, 30799.
- Signalling, improved methods advocated, 31343. (*See also title* Haulage Accidents and Haulage Roads.)

Engineers and Enginemen (other than Winding Enginemen):
- Certificate for advocated, 28599.
- Hours of work, 28458, 28461, 28681, 28728.
- Responsibility for machinery, 28063.
- Special Rules as to, 25831, 28663.
- Training of engine-winders by, views as to whether possible, 28065.
- Working alone when mine is otherwise empty, danger of, 25819 (*par.* 7), 25880.
- Boy should accompany engineer or engineman on such occasions, 25886A, 25980, 26060.

Enginemen (Winding Enginemen):
- Absence from engine-room, 28139, 28185, 28206, 28360.
- Act of Parliament: Coal Mines Regulation Act, General Rules as to engine-winding, 27713 (*par.* 4), 28167, 28178, 28185, 28360, 28394, 28435, 28451, 28641, 28771.
- Age limit, 26119, 28435, 28451.
- Appointment of, 28521, 28616, 28641, 28653, 28659, 28662, 28716, 28727.
- Dispute between manager and Trade Union as to, 28499, 28505, 28537, 28619.
- Accidents resulting, questions as to, 28537, 28625.
- Apprentices, *see sub-heading* Training.
- Certificates of competency, views as to whether desirable, 20216A (*par.* 15, 20374, 20880, 21107, 21150, 21286, 21292, 21295, 21341, 21481, 21572, 22144, 25005, 25819 (*par.* 1), 25827, 25837, 25840, 25843, 25849, 25928, 25935, 25956, 25989, 26104, 26167, 26206, 26245, 26268, 26307, 26310, 26313, 26326, 26330, 26336, 27713 (*par.* 1), 27723, 27739, 27784, 27811, 27931, 28018, 28033, 28073, 28085, 28157, 28229, 28293, 28715, 30691, 30695, 31478, 31746, 31762, 34852, 35857.
- Bill suggesting certificate, 21484, 25827, 25840, 25935, 25938, 27713 (*par.* 1), 27832, 27884, 27974, 28124, 28160, 28391, 35920.
- Text of Bill: Appendix III., *page* 480, clause 9.
- Committee, Select, of House of Commons, decision as to, 21105.
- Emergencies, provision for access to mine in event of, 21577, 25929, 27749, 27882, 27974, 27980, 27989, 28246, 28296, 28298, 28303, 28724.
- Limitation of number of enginemen is not aimed at, 27915.
- Responsibility of manager, question as to, in event of, 28656.
- Service certificate, 28087. (*See also sub-heading* Training.)
- Competency of engine-winders, views as to, 20375, 20877, 21107, 21292, 21481, 21572, 22144, 25988, 26312, 26314, 26325, 27713 (*par.* 1), 27735, 27737, 27820, 27926, 31479, 35855, 35923.
- Number of men who could pass Transvaal examination, question as to, 27814.
- Death, illness or accident to, while at work, 20879, 22339, 26131, 26153, 28116, 28351.
- Comparison of health of engine-winders with health of ordinary colliers, 28149.

Enginemen (Winding Enginemen)—*cont.*
Durham Enginemen's Association, regulations as to qualification and training of engine-winders, 25819 (*par.* 3), 25835, 25836, 25847, 25944, 25950, 25957, 25963, 25989, 25993, 26024, 26039, 26100.
Method of training described, 26003, 26011.
Text of rules, 25948, and Appendix I., *page* 475.
Duties of, 20882, 20965, 21101, 21102, 25911, 27713 (*par.* 4), 27783, 28136, 28185, 28206, 28211, 28216, 28270, 28360, 35860.
Hours of work, and suggestions as to reduction, 20875, 20961, 25819 (*par.* 6), 25873, 25908, 25977, 26045, 26048, 26143 (*par.* 2, *et seq.*), 26170, 26178, 26253, 26278, 26293, 26321, 26328, 26333, 26347, 27713 (*pars.* 1 *and* 3), 27730, 27759, 27770, 27779, 27785, 27897, 27943, 28013, 28126, 28129, 28328, 28342, 28458, 28461, 28466, 28470, 28480, 28486, 28683, 28729, 28749, 28781, 28823.
Accidents caused by long hours, 26144, 26147, 26152, 27713 (*pars.* 1 *and* 3), 27759, 27770, 28145, 28150, 28470, 28487.
Agreement as to, when engines wind 300 tons daily, 28478, 28689.
Alternation of 14-hours and 10-hours' shifts, arrangement as to, 28130.
Continuous 24 hours periodically, systems entailing:
Lancashire mines, 26147, 26151, 26161, 26170, 26180, 26280.
Scotch mines, 27713 (*par.* 3), 27730, 27733.
End of shift, work most important and exacting, 26152, 26171, 26191, 26262, 27713 (*par.* 3), 28129, 28222, 28318.
Meals, time allowed for, 26282, 34798, 34824.
Night duty, 26185, 27887, 28076.
Proportion of mines working 12-hours, 10-hours, and 14-hours' shifts, 26348.
Relief man failing to appear, engine-winder continues work, 25918.
Strike as to, threatened in 1899, 26170, 26283.
Wood, Sir Lindsay, speech on, 25819 (*par.* 6), 25872, 25971.
Importance of engine-winders, extent of responsibility, &c., 26130, 26315, 27901, 27935, 27945, 28063, 28330, 28346, 28734.
Increased strain under modern conditions, 20872, 26270.
Prosecution in event of mistakes, 28648.
Medical examination, periodical, views as to whether desirable, 25004, 25156, 28114.
New South Wales, *see that title.*
Number of, 25916, 26209, 26212, 26229, 26250, 26301, 26324, 27914.
Qualifications most desirable, 21108.
Relations with owners and managers generally good, 26274.
Report book system, objection to; dismissal of men making adverse reports, &c., 27993, 27997, 28007, 28039.
St. Helen's Association of Colliery Enginemen, rule as to training engine-winders, 25952, 26042, 32908.
Signal from banksman to engine-house during night shift, provision advocated, 28267.
Signal bells, number of, 27950.
Size of engine in relation to strain upon engine-winder, 27901.
Special Rules as to, 25831, 25911, 25966, 25995.
Strike as to appointment of men, 26272, 26274.
Substitutes in case of illness, 25875.
Training, 25835, 26001, 26033, 26105, 26115, 26212, 26215, 26218, 26226, 26232, 26250, 26272, 26346, 27861, 27866, 27879, 27919, 27985, 28010, 28015, 28065, 28075, 28241, 28373, 28377, 28383, 28390, 28490, 28495, 28499, 28506, 28705.
Durham Engineers' Association, *see that sub-heading.*
Strike in 1889 as to teaching men, 26272.
Trade Unions, rules as to, 21351, 25952, 26042, 32908.
(*See also sub-headings* Durham Enginemen's Association *and* United Engine-keepers' Mutual Protection Association of Scotland.
Wigan Coal and Iron Company, 26006.
(*See also sub-heading* Certificates.)
Tramp winders, 21292, 21481, 21572, 27928.
Transvaal, qualification of engine-winders in, *see title* Transvaal.

Enginemen (Winding Enginemen)—*cont.*
Two men, presence of, in engine-room during winding, views as to whether desirable, 20969, 22145, 22150, 22235, 28153, 28353.
United Engine-keepers' Mutual Protection Association, Scotland:
Action of, in case of man dismissed for reporting defective machinery, 28040.
Classes of employment included in, 27715.
Health certificates, 28057.
Number of members, 27713 (*par.* 1), 27715, 27717, 28084.
Training of engine-winders, rules as to and system of, 27835, 27840, 28061.
Exclusion of non-members, 27837, 27840, 27864, 27872, 28018.
Method of teaching, 27869.
Object of, 27915, 27920.
Payment for training, 27841.
Selection or rejection of men for training, 27836, 27841, 27924, 27984.
Use of engines for training men, probable attitude of Association as to, 27919.
Witness representing, 27713 (*par.* 1), 27786.
Wages, 27938, 27943, 28093.
Wallingford Colliery, Midlothian, employment of unskilled men during engine-winders' dispute, 27713 (*par.* 1), 27742, 27873, 27912.
Working at the face, 27907, 27941.

Engines and Boilers:
Cleaning, more frequent, advocated, 28560, 28566.
Examination and inspection, 28411, 28416, 28557, 28,561, 28663, 28669.
Explosions:
Board of Trade inquiry after, 28574.
Number of, question as to, 28568.
List of engines other than winding engines in use in collieries, 28601.
Packing, defective supply of, 27995, 28006.
Protectors, provision advocated, 28421, 28580.
Injury to man caused by absence of protector, 28425.
Separators, provision advocated, 28760.

Escape Shaft:
Knowledge of by men, importance of, 24735, 24741, 35774.
Number of day-holes and drifts, 24736.

Experiments:
Dust, suggestion as to, 19621 (*par.* 10).
Rescue work and appliances, suggestion as to, 19776, 19778.

Explosions:
Altofts Colliery, 32278, 35876.
Annbank Colliery, 22959.
Camerton, 32638.
Coegnant, 30921, 30923, 30941.
Danger of, as compared with other accidents, 31019.
Discipline, defective, as a cause of, 19969.
Elba explosion, 19787, 31140, 31152.
Fernie explosion, Canada, 26352 (*par.* 2), 26449, 26458.
Genwen, 19787, 20097.
Kembla explosion, *see title* New South Wales, *sub-heading* Kembla.
MacLaren explosion, *see that title.*
Naked lights, occurrence when used, 31006.
Number of, 20600, 20602, 32543.
Ventilation in relation to:
Gas in waste, 30996, 31023, 31025.
Occurrence when gas has not been seen, 31008.
Safety of men in event of, means taken to secure, 19974, 24735, 24741, 25774.
Tymsbury, 32638.
William Pit, 36144.

Explosives:
Amount of charge, 34153, 34297, 35671.
Consultation of men before introduction of new explosives, 22977, 23077, 23169, 23182.
Detonator and explosive, person having charge of: supply of detonators to men, &c., 20216A (*par.* 14), 20366, 20582, 22441, 22548, 22552, 22554, 22588, 22656, 22659, 22661, 30777, 31816, 32264, 34158, 34300, 34317, 34742.
Naked light mines, use of explosives in, 23169, 23182, 37049.
Purchase of explosives from owners, views as to, 20584, 25724 (*par.* 5), 25768, 25801, 27511 (*par.* 2), 30413 (*par.* 10), 34158, 34310, 34742.

Digitized by Google

Explosives—*cont.*
Permitted explosives, use of, 22595, 32261,
Danger of permitted explosives, 35937.
Safety lamp mines, use of explosives in, 22545, 22547, 27541.
Storage of, 25811, 27786 *and note.*
(*See also title* Shot-firing.)

Explosives in Coal Mines Order:
Detonators, provisions as to, 22562, 22659, 22661, 34166, 34745.
Exemptions, modifying of provisions as to, suggestion as to, 36981.
Introduction of new explosives, 23079.
Amendment advocated, 22977, 23077, 23169, 23182.

Factory Act:
Boilers, examination, regulations as to, 28416.
Special Rules, introduction of, application of procedure under Factory Act to, 33592, 33693, 33965.

Falls of Roof and Sides, *see title* Accidents, *sub-heading* Falls of Roof and Sides.

Fatal Accidents Enquiry (Scotland) Acts, investigation under, 21586, 23339, 23415, 27755, 27959.

Fernie Explosion, Canada, watered zone, apparently travelled by, 26352 (*par.* 2), 26449, 26458.

Fife and Kinross Miners' Association: Witnesses representing—Mr. Adamson and Mr. Weir. (*For separate indices to their evidence, see Index II.*)

Fines:
Advantages of prosecution and fining compared, desirability of abolition of fines, &c., 19621 (*par.* 5), 19693, 19817, 19924, 20021, 20026, 20305, 20611, 20742, 20771 (*par.* 4), 21498, 21608, 21714, 22250, 23180, 23291, 23295, 23499, 27667, 29731, 29825, 29956, 30177, 30181, 30413 (*par.* 5), 30439, 30442, 30704, 30720, 30863, 31430, 31436, 31559, 31701, 31957, 32409, 32508, 32563, 32784, 32892, 32901, 33022, 33253, 33761, 33769, 34092, 34238, 34409, 34884, 34935, 34987, 35095, 35272, 35291, 35419, 35551, 35636, 35738, 35829, 36350, 36394, 36436, 36479, 36535, 36570, 36927, 37088, 37192, 37296.
Agreement between men and officials necessary, and consent of man himself, 19919, 20438, 20553, 20664, 21219, 23498, 31704.
Amount of, 20611, 20676, 20693, 20696:
Agreement between employers and men as to, 20438, 20553, 20664.
Fixing by manager, 20676, 20696, 21878, 29957, 37042.
Attitude of men and of Trade Unions as to, 20216A (*par.* 9), 20438, 20553, 20664, 20726, 21893, 23177, 31706, 31960, 32506, 32893, 33249, 35293, 35420, 35424, 35523, 35546, 35549, 35737, 35826, 36353, 36934, 37025, 37048, 37061, 37194, 37296.
Protection of men by Trade Union, extent possible, 22246, 31960, 32506, 35549, 37061.
Refusal to submit to fining, instances of, 35523.
Coal Mines Regulation Act, no provision as to fining in, 20733.
Date from which fining has been practised, 29952.
Decision as to whether punishment shall be by fining or prosecution, 21495, 29957, 34884, 34934, 34995, 35055, 35587, 36395.
Dismissal as an alternative punishment, 21885, 23499, 32563, 32892, 33250, 37060.
Disposal of, method of, 19825.
Extent to which inflicted, 20019, 20700, 20713, 21299, 21608, 21877, 21892, 22245, 23175, 23708, 29833, 30861, 33247, 35420, 35431, 35522, 35683, 35818, 37296.
Home Office, attitude of as to maintenance of discipline, 35545.
Knowledge of men that fine has been inflicted, method of securing, 20674, 34093.
Managers or owners, infliction of fines on, views as to, 20736, 21897, 30879, 32895, 35008, 36556, 37094.
Offences for which fining or prosecution respectively would be suitable, 20025, 20728, 20742, 21300, 29951, 30179, 30183, 32507, 34409, 34884, 35012, 35062, 35555, 36928, 37030, 37032, 37043, 37051, 37056, 37069.
Payment, method of, 20687, 21882, 22248.
Procedure in fining men, 37043.
Report of offences, 20669.
Return of fines to men, 37196.
Truck Act in relation to fining, 19920, 20693, 29953, 34989, 34996, 35002, 35637, 36483, 36488.

Firemen, *see title* Inspection of Mines by Mines Officials.

Fogg's Colliery: Accidents at, 29855, 29892, 30108.

Foreigners, Employment of:
Accidents, number of in relation to, increased risk of accidents, &c., 21274, 21459, 22863A, 22871, 22876.
Ankylostomiasis, possible introduction of, 20771 (*par.* 11), 21137, 21537.
America and Canada, foreigners passing on to from Scotland, 22927.
Compensation, payment to, 22927.
Contractors, employment by, 21335.
Efficiency and discipline, 21449, 21683, 21854, 21970, 22863A, 22322, 22865, 22873, 22906, 23286, 25701.
Source from which most efficient men are drawn, 22342.
English language, knowledge of, 20163, 21125, 21676, 21850, 22323, 22886, 22899, 22927, 23286, 25698, 35885.
Germany, Polish miners going to, 22916, 22920.
Isolation, extent to which practised, 22904.
Liking for the country, 22923.
Manner of introduction, 21269, 21329, 21332, 22321, 22863A, 22868.
Names assumed, 21262.
Nationalities, 21671.
Number of, 21258, 21273, 21460, 21671, 22318, 22348, 23284.
Bothwell Park Colliery, 21273, 22863A, 22887.
Unskilled workmen, foreigners among, 20885, 21114, 21124.
Offences with which charged before Sheriff, 22347.
Period of work in Scottish mines, 22882, 22911, 22927.
Previous experience, 22912, 22922.
Races represented, 22863A, 22890.
Reading and writing their own language, 22872, 22898.
Special Rules, translation, posting up and circulation of, 21129, 22863, 22871, 22889, 22897.
Trade Unions, membership of, 21454.
Wages, 21337, 21456, 22863A, 22864, 22924, 22927.
Welsh mines, 20163, 25694.
Wives and families, 22927.
Witnesses giving evidence, especially as to employment of foreigners in Scotland, 22863A, 22911

Forest of Dean Miners, objection to eight hours' limit, 36503.

France:
Fines, system of, 19826.
Inspectors:
Appointment, method of, 20787.
Engineers, appointment as, objections to after Courrières disaster, 21010.
Number of, in proportion to number employed, 20786.
Inspection of mines by men, cost of, manner in which defrayed, 19892, 21541.
Timbering, method of, 25029, 25286.

Gas, *see title* Ventilation.

General Rules and suggestions as to amendments:
Brakes, Rule 30 as to, 28176.
Detaching hooks and speed of winding, Rule 26 as to, 28171.
Engine-winders, rules as to, 27713 (*par.* 4), 28167, 28178, 28185, 28360, 28394, 28435, 28451, 28641, 28771.
Haulage, rules as to, 19725, 19737, 28167, 28171, 28176, 28185, 28360, 28435, 28451, 28641, 28771, 29783.
Inclusion of many of existing Special Rules in General Rules advocated, 33589.
Indicators, Rule 30 as to, 28771.
Inspection of mines by men, General Rule 38 as to, 19621 (*par.* 2), 19671, 21031, 21164, 24940, 25289, 25293.
Machinery and gearing (winding) examination, General Rule 5 as to, 19737.
Manholes, General Rule 14, 15, 16 as to, 19725, 29783.
Safety catches, rule as to, advocated, 28247.
Signalling, General Rule 25 as to, 28182.
Timbering, General Rules as to, 19707, 19841, 20060, 21086, 22620, 24918, 24928, 25377 (*par.* 1), 25388, 30065, 32420.
Unskilled men, employment of, Rule as to, 20889, 20893, 24946, 25299, 25301, 25305.

Digitized by Google

Genwen Explosion:
Coroner's inquest, prosecution of manager subsequently to, 19787.
Inspection before, inadequacy of, 20097.

Germany:
Brakes, use of, 28828.
Engine-winders:
Number of men wound by, 28357.
Two present in engine-room during winding, 28153.
Inspectors, working-class, salaries of, 35386.
Lamps, relighting, apparatus for, 30633.
Shafts, speed of winding, 29774.
Tours of mining students in, and instruction as to German timbering systems, 26843.

Glamorganshire County Council System of Mining Instruction, 26658 (*par.* 1 *et seq.*).
Authority to visit mines cannot be given by County Councils, 26920.
Certificates, 26658 (*par.* 1), 26842.
Continuation schools and evening classes, mining courses in, 26658 (*pars.* 1, 2 *and* 3), 30887.
Age of boys attending, 26904.
Attendances, 26658 (*par.* 6).
Method of teaching, 26908.
Practical demonstrations in mine, 26898, 26902, 27036.
Number of classes, 26899.
Grant from Government, 27038.
Lectures, 26658 (*par.* 4), 26821, 27037.
Owners and managers, attitude towards, 26769, 26824, 26840, 26892, 26958.
Primary schools, instruction in, 26658 (*par.* 1 *et seq.*), 26884, 26892.
Practical instruction at mine, extent of, 26885, 26892, 27033.
Syllabus, 5th and 6th standards, mining subjects in, 27037.
Scholarships, 26658 (*par.* 5).
Teachers, preference in promotion to those capable of giving instruction in mining, 27037.
Tours for mining students, 26658 (*par.* 5), 26843.

Glamorganshire: Witnesses giving evidence as to—Mr. Jenkins and Mr. W. E. Morgan. (*For separate indices to their evidence, see Index II.*)

Glamorganshire Federation Lodges, lectures and notices at pitheads as to prevention of accidents, 26658 (*par.* 4), 26823.

Gob Fires, *see title* Spontaneous Combustion.

Haulage Accidents and Haulage Roads, 20067, 20771 (*par.* 7), 20953, 20958, 22489, 24063, 25209, 25341, 25355, 27092, 27135, 27181, 27711, 30944, 31018, 31252, 31261, 32095, 34261, 34711, 34787, 35100, 35135, 35145, 35451, 35534, 36025.
Act of Parliament: Coal Mines Regulation Act (General Rules as to haulage), 19725, 19737, 28167, 28171, 28176, 28185, 28360, 28435, 28451, 28641, 28771, 29783.
Distance from haulage roads to working face, 36032.
Electric haulage, reduction in number of accidents from broken shackles since introduction of, 20067.
Endless-rope haulage, 20958, 21685, 23835, 23919, 31259, 35451, 35534, 36025, 36647, 36706.
Gradient of haulage roads, 20216A (*par.* 12), 20334, 20950, 25344, 29792, 30264.
Health of men affected by dust on haulage roads, 32101.
Lights on bogies, discontinuance of, 36036.
Methods of haulage described, 25319.
Number of accidents, 20150, 20953, 21254, 21686, 25318, 25341, 31243, 31462, 34111, 35100, 35135, 35145.
Prevention of accidents, suggestions as to, 20216A (*par.* 12), 20324, 20334, 20771 (*par.* 7), 20861, 21687, 21856, 22142, 22490, 23602, 23820, 24070, 25819 (*par.* 1 *et seq.*), 35289:
Age of hauliers, 20343, 27619, 27622.
Airways, return, use of, as travelling roads advocated, *see title* Airways.
Certificate for hauliers, views as to, 27588, 27616, 31762.
Compulsion as to prevention advocated, 19962, 20066, 20955, 22494, 22577, 22966, 22970, 22143, 22494, 23332, 23842, 25352, 32423.
Coupling, double, 35289.
Duties of haulage engineman should be confined to haulage. 20216A (*par.* 13), 20349.
Guards or handles on wagons, 27092, 27135.

Haulage Accidents and Haulage Roads—*cont.*
Prevention of accidents, suggestions as to—*cont.*
Height of roads, 20771 (*par.* 7), 27092, 27135, 27181.
Inspection of drawbars of trams advocated, 20141.
Manholes, provision, 19725, 20862, 20864, 23603, 25210, 29780, 35731, 36028:
Compulsory use of manholes, suggestions as to, 27511 (*par.* 4), 27535, 27550, 27554, 27626, 27667, 27691, 27705, 27709.
Number of, increase advocated, 25210, 29780, 29888, 29938, 31249, 31291, 31458, 31569.
Present statutory distances apart, 31257.
Position of, 32092.
Rubbish, freedom from, 19725, 21098, 31562, 31976.
Whitewashing, 20216A (*par.* 12), 20330, 20865, 23605, 31293, 31458.
Overman, duties of, as regards repair of roads, 27385.
Painting bogies with illuminating paint, suggestion, 36037.
Position of driver or haulier, 20151, 35593.
Prohibition of travelling when machinery is in motion, or suspension of winding while men are travelling, 25171, 25217, 26658 (*par.* 9), 26691, 26861, 30413 (*par.* 8), 30459, 30496, 30784, 30799, 31276, 35100, 37220, 37331.
Riding on wagons, 27658, 30915, 30966, 31311, 31347, 35588.
Rubbish, freedom of roads from, 19621 (*par.* 9), 19712, 19721, 20327, 21091, 21098, 23821, 23908, 23917, 23991, 24059, 25214, 25569, 25537, 30796, 30800, 30802, 31468, 31562, 31976, 35137.
Runaways, prevention, *see title* Wagons, *sub-heading* Runaways.
Separate travelling roads, or provision of a gangway, suggestions as to, 19621 (*par.* 9), 19711, 19715, 19959, 19962, 20066, 20216A (*par.* 12), 20324, 20579, 20862, 20948, 23603, 25009, 25177, 25209, 26352 (*par.* 2), 26419, 26422, 26492, 26494, 26691, 29775, 29974, 30225, 30943, 31276, 31455, 31565, 31742, 32092, 32102, 32422, 34116, 34126, 34435, 34708, 34711, 34764, 34768, 34781, 34787, 35155, 35451, 35528, 35731, 36028, 37340.
Use of return airways as travelling roads, *see title* Airways.
Watering, improved system advocated in mines where horse haulage is used, 33054.
Width of roads, suggestions as to, 19621 (*par* 9), 19711, 20149, 20216A (*par* 12), 20771 (*par.* 7), 20862, 21089, 23603, 23820, 23908, 23921, 23991, 24062, 25174, 25211, 25323, 26493, 27711, 29779, 29974, 30272, 30413 (*par.* 8), 30456, 30612, 30795, 30914, 31250, 31307, 31343, 31457, 31465, 31565, 32103, 34126, 34769, 34915, 35100, 35137, 35145, 35150, 35154, 35533, 37220, 37335.
Qualifications of persons manipulating appliances, views as to, 32427.
Report to inspector not always made, 24061.
Responsibility for, 20216A (*par.* 13), 20349, 21100.
Safety lamps, use of, in relation to, 30944, 31018, 31805.
Shackles, examination of, importance of, 20067.
Signals, 31343, 34708, 35101.
South Wales, system in, 20143, 20146, 31976.
Specially constructed bogies to take in prop wood advocated, 20771 (*par.* 7).
Wheel braes, accidents caused by, 20771 (*par.* 7), 20953.
Spragging by driver in coming down hill, 20152.
(*See also title* Wagons.)

Hauliers:
Accidents, *see title* Haulage Accidents.
Colliers acting as substitutes for absent hauliers, 26658 (*par* 10), 26705.
Duties performed by, 26974.
Firemen, assistance to, in inspection, 26825, 26959.
"Tipping" of hauliers by colliers, objections to, 26658 (*par.* 10), 26694, 26755, 26788, 26979.
Position of, 20151, 35593.
Wages, 26708.

Hemsworth Collieries, inspection on behalf of men, adverse report, 32023.

Home Secretary, attention given by, to mining industry, views as to, 20184.

Digitized by Google

Hours of Work and views as to desirability of reduction, 24543, 24548, 25421, 25437, 25524, 25550, 25582, 25595, 25603, 25636, 25672, 25769, 25772, 26253, 26293, 26781, 26995, 28466, 30351A, 30556, 34276, 34395, 36373, 36405, 36414, 36422, 36513, 36542, 36568.
Boys, hours for, 25594, 25666.
Enginemen (Winding), *see title* Enginemen (Winding).
Firemen or deputies, *see title* Inspection of Mines by Mines Officials, *sub-heading* Hours of Work.
Forest of Dean miners, objection to eight-hours' day, 36503.
Number of hewers in relation to hours of work, 36419, 36427.
Output, effect on, 36418.
Rhondda Valley, 30556.
Time at which greater number of accidents occur, 36514.
Women employed at surface, hours for, 34828.

Houses inhabited by miners, 23161, 23187, 24134, 36841, 37003:
Baths, washing, and change of clothes, extent of facilities for, in, 21556, 21983, 24134, 32930, 34025, 34538, 35539, 35582, 35902, 36844, 37001.
Model village in Yorkshire, 34032.
Distance from pit-head, 32950, 35910, 36369, 36845.
Double houses for men with large families, 23196, 23200.
Local authorities, medical officers, &c., attitude as to, 23186, 23197.
Sanitation, imperfect, 22641.
Single-roomed houses, 21979, 22030, 22153, 23157, 23192, 24143, 34028.
Date of, 21982.
Division into apartments, question as to, 22031.
Lodgers taken in, 22034.

Hummerbeck Colliery, accident at, 25990.

Indian Mines:
Ankylostomiasis in, 34042.
Managers, 33572, 33754, 33873.
Sanitary arrangements, 34040.
Underground communications, 33574.

Inspection of Mines by Men:
Abolition of, in event of appointment of working miners as additional Home Office inspectors, views as to, 30161, 30429, 30701, 31213, 31411, 31666, 34207, 34354, 36596, 36695.
Accidents, inspection after, 32436, 32437, 32561, 35106, 35473, 35596, 36052, 36229.
Act of Parliament: Coal Mines Regulation Act, 1887, General Rule 38, 19621 (*par.* 2), 19671, 24940, 25289, 25293.
Bill proposed by Miners' Federation, rule to be substituted for General Rule 38, 21031, 21164.
Agent of Miners' Union, inspection of mine by, in event of dispute between owners and men as to condition underground, 23393.
Amount of work involved, 19894, 20815, 21937, 22177.
Appearance of men who have made this inspection, at Coroner's inquests, advocated, 36229.
Appointment of men to give whole of their time to this work, views as to whether desirable, 29688, 30021, 35767, 36602.
Itinerant inspectors, suggestions as to, 21164, 21167, 21220, 21409.
Closing of parts of mine during, possibility of, 30890.
Co-workers, possible attitude towards men making inspection, in event of unfavourable report, 20216A (*par.* 5), 20267.
Cost of:
Borne by the men and by their Trade Unions, 19686, 19891, 20216A (*par.* 4), 20771 (*par.* 2), 20814, 21041, 21224, 21402, 22461, 25746, 25763, 29684, 30413 (*par.* 2), 30611, 31406, 31415, 31549, 32400, 34080, 34214, 35513, 36233, 36604.
Compulsion as to contribution advocated, 31406, 31549.
Government to defray, views as to, 21541, 29684, 29688, 29908, 30304, 31415, 34082, 36921.
Extent of inspection and views as to whether extension is desirable, 20216A (*par.* 6), 20258, 20632, 33809, 33939, 35082.
Extent to which power is exercised in different districts, and general attitude of men as to this inspection, 19621 (*par.* 2), 19680, 19686, 19884, 20014, 20216A (*pars* 4, 6 and 7), 20258, 20261, 20284, 20612, 20616, 20632, 20771 (*par.* 2), 20802, 20909, 20915, 21224, 21399, 21633, 21772, 21909, 21934, 22105, 22177, 22457, 25137, 25724, 25744, 25798, 30413 (*par.* 2), 30428, 30575, 30889, 31412, 31553, 31847, 32007, 32395, 32487, 33007, 33009, 33294, 33548, 33802, 34077, 34085, 34220, 34356, 34868, 35400, 35511, 35750, 35974, 36524, 36589, 36596, 36695, 36700, 36735, 37022.
Ironstone Mines, *see that title.*
Lanarkshire Miners' Union, action as to, 22456.
Notice to management and consequent preparation, 31849, 32011, 32170.
Number of men required, 20280, 20817.
Number of mines under same firm, examination of, 31554.
Object of this inspection, 20590, 21412, 23383, 32641, 33738.
Official accompanying men on inspection, 22024, 24940, 25131, 25289, 25293, 32012, 35597.
Owners and managers, in relation to:
Attitude towards this inspection: possibility of reprisals and its effect on readiness of men to make inspection and on value of reports, 19676, 19680, 19884, 19900, 19907, 20016, 20216A (*par.* 5), 20261, 20263, 20612, 20771 (*par* 2), 20803, 20910, 21019, 21031, 21035, 21164, 21220, 21306, 21313, 21398, 21412, 21633, 21767, 21910, 21936, 21939, 22180, 22291, 22525, 22533, 23271, 23389, 23398, 25295, 25751, 25763, 29685, 30578, 30599, 30608, 31032, 31215, 32167, 32392, 32488, 32644, 33008, 33551, 33740, 33990, 34077, 34084, 34348, 34381, 34386, 34869, 34940, 34959, 35063, 35085, 35273, 35514, 35596, 35751, 35974, 36071, 36107, 36347, 36459, 36527, 36558, 36597, 36698, 36735, 37023.
Character, note system in relation to, 32492.
Resentment of adverse report, or request to men to make another inspection, instances of, 21634, 21769, 30579, 30599, 30608, 32014, 32313, 34869, 34941, 35039, 35041, 36108.
Right reception of adverse report, instance of, 35085.
Trade Union aid to men unjustly kept out of employment as result of adverse report, 32494.
Responsibility, 20216A (*par* 5), 20256, 20483, 33941.
Rights of owners, protection of, 19906, 21429, 21783, 22024, 24940, 25131, 25289, 25293, 31951, 32012, 32918, 35597.
Payment of men making inspection, 25749, 25763, 34381, 35047.
(*See also sub-heading* Cost of.)
Preparation, special, made by officials, 30891.
Qualifications of men making this inspection:
Checkweighers, appointment of, views as to whether desirable, 19903, 20040, 20198, 21032, 21424, 31032, 31213, 31397, 31556, 31677, 32036, 32497, 33747, 35755, 35978.
Prevention of checkweighers from making this inspection, instances of, 32014, 32036, 32159, 32313.
Deficiency of men at present employed, alleged, 20216A (*par.* 6), 20271.
Employment of men in same mine, abolition of this limitation, views as to, 19675, 19899, 20803, 21415, 21767, 22006, 22007, 22011, 22019, 22523, 22529, 25757, 29907, 31416, 31949, 32914, 35406, 35754, 35759, 36738.
Engineers, mining, disqualification, 20596, 20811, 21019, 21780.
Practical miners: inclusion of men who "have been" practical miners, views as to, 19621 (*par.* 2), 19671, 19902, 20106, 21420, 21633, 21637, 21766, 21777, 21917, 22006, 22103, 23267, 23382, 23454, 25290, 29680, 30020, 30184, 30202, 30251, 30301, 31401, 31667, 31676, 31949, 32167, 32322, 32385, 33745, 33984, 35405, 35766, 36074, 36110, 36225.
Disqualification of men after making one inspection as no longer working miners, 20807.
Reports, 21225, 21434, 22462, 36525.
Copies of, forwarded to Home Office inspector, 21314, 22464, 33549, 33555, 36111.
Coroner's inquests, use of, at, 20216A (*par.* 6), 20258, 20599, 20623, 33804, 34355.

Inspection of Mines by Men—*cont.*
Reports—*cont.*
Difference in report sent to secretary of Miners' Association and that entered in colliery book, 21310.
Effect on, of possibility of reprisals on part of owners in event of adverse report, *see sub-heading* Owners and Managers.
Method of dealing with, 35976.
Shale Mines, *see that title.*
Special Rule, bringing pressure upon workmen to make this inspection, suggestion as to, 25745.
Value of this inspection, views as to, 20216A (*par.* 6), 20271, 20910, 20916, 21198, 21203, 21231, 22521, 25237, 25724 (*par.* 4), 25800, 30576, 31848, 32167, 33549, 33737, 33937, 33991, 36072.
(*See also sub-heading* Owners and Managers in relation to.)

Inspection of Mines by Mines Officials:
Accidents to deputies:
Number of, 24659, 24697, 24760, 24832, 35990.
Two deputies to inspect together as precaution in event of accidents, 25377 (*pars.* 4 and 5), 35990.
Act of Parliament and General and Special Rules as to, 21054, 21060, 21240, 21243, 24882.
Adequacy of, views of witnesses on this point, 19910, 20007, 20052, 20116, 20121, 20125, 20216A (*par.* 8), 20287, 20302, 20494, 20531, 20771 (*par.* 3), 20829, 21048, 21242, 21437, 21640, 21789, 22112, 22189, 23566, 23572, 23692, 24334, 26658 (*par.* 7), 26702, 26825, 29691, 30413 (*par.* 3), 30432, 30529, 30570, 30811, 30919, 31819, 32049, 32292, 32303, 32401, 32544, 34340, 34403, 34701, 35409, 35417, 35605, 35703, 35831, 35984, 36344, 37287.
Safeguards against inadequate inspection, 20290, 20751, 20754, 20834.
(*See also sub-headings* Districts, size of, *and* Qualifications of Firemen, &c.)
Age of firemen, 23694, 25629, 27599, 37152.
Appointment of firemen or deputies, 20824, 20925, 21356, 21364, 21654, 21941, 22205, 22208, 22291, 22332, 22405, 22600, 23547, 23581, 23635, 24655, 26677, 32769, 34984, 35088, 35212, 35227.
Arbitration in event of disputes between deputies and managers, 23043, 24793, 24841, 24860.
Attitude of firemen towards owners and towards workmen, 30669, 30831.
(*See also sub-heading* Qualifications of Firemen, Class of men appointed, &c.)
Before shift, time of this inspection, 25457, 25469, 25635, 31790, 32048, 32287, 33522, 35781, 35787, 36082, 36085, 37012, 37136, 37348.
Two shifts working continuously, inspection between, advocated, 36926, 37014.
Certificates for, views as to, *see sub-heading* Qualifications of Firemen.
Charter-master, man appointed by, to supervise work, 36667, 36679, 36709, 36816.
Definition of examiners, firemen and deputies, 25380, 25720, 25783, 25818, 32039.
Dismissal of firemen, 22000, 22115, 22117, 22203, 22291, 22355, 23030, 23034, 23366, 23372, 23512, 23549, 23559, 23620, 23628, 23743, 24592, 24604, 24743, 24793, 24841, 24860.
Districts, size of, and suggestions as to reduction, 20116, 20208, 20528, 20829, 20832, 20838, 21242, 21444, 21639, 21665, 21790, 21800, 22112, 22189, 22192, 22341, 22591, 22596, 23323, 23331, 23468, 23566, 23572, 24327, 24335, 24409, 24453, 24509, 24646, 24696, 24730, 24779, 24782, 24800, 24838, 25308, 25554, 25612, 25644, 25726, 25730, 25742, 26671, 26825, 26959, 27197, 29721, 29820, 29925, 29932, 30059, 30192, 30196, 30242, 30413 (*par.* 3), 30432, 30474, 30529, 30543, 31420, 31425, 31687, 31690, 31789, 32052, 32175, 32292, 32416, 32418, 32545, 32551, 33018, 33541, 33725, 33846, 34226, 34340, 34882, 35087, 35409, 35417, 35518, 35605, 35703, 35746, 35984, 36076, 36081, 36343, 36442, 36463, 36466, 36612, 37149, 37191, 37286.
Decision as to size, suggestions as to, 24591, 36155, 37293.
Duties of deputies or firemen, and suggestions as to limitation to matters connected with safety of mine, &c. 19621 (*par.* 4), 19752, 19917, 20027, 20052, 20201, 20747, 20844, 20847, 20936, 21243, 21245, 21320, 21445, 21581, 21646, 21665, 22003, 22053, 22243, 22341,

Inspection of Mines by Mines Officials—*cont.*
Duties of deputies or firemen—*cont.*
22371, 22391, 22399, 22431, 22444, 23323, 23326, 23515, 23518, 24327, 24331, 24391, 24400, 24412, 24420, 24436, 24515, 24530, 24588, 24626, 24636, 24700, 24714, 24720, 24781, 24784, 24790, 24806, 24810, 24838, 24849, 24856, 25308, 25311, 25314, 25377, (*par.* 2), 25468, 25543, 26658 (*par.* 7), 26661, 26665, 26702, 30243, 30437, 30475, 30534, 30549, 30557, 30857, 31423, 32188, 32299, 32417, 32545, 32548, 32724, 32745, 32767, 33017, 33371, 33388, 33730, 33733, 34088, 34090, 34233, 34707, 35408, 35412, 35417, 35515, 35605, 35839, 36078, 36081, 36618, 37288.
Calling away of firemen from inspection to attend to other duties, objections to, 24714, 24720, 24806, 24850, 25315, 25446, 25449, 25468.
Ventilation, record of, and report of defects, 19621 (*par.* 13), 26860.
Eyesight of firemen, testing advocated, 30919, 30953, 30984.
Gates and roadways, stricter examination advocated, 31446, 31476, 31969.
Hauliers, assistance of firemen by, 26825, 26959, 30545.
Hours of work of deputies or firemen, 20209, 20753, 20840, 24129, 24336, 25377 (*col.* 2), 25405, 25449, 25452, 25455, 25457, 25469, 25524, 25551, 25613, 25622, 25635, 25724 (*par.* 2), 25737, 25769, 25786, 26658 (*par.* 7), 26781, 26856, 27472, 30557, 32298, 34088, 34226, 34390, 34707, 34759, 35092, 35781, 35836, 36082, 36086, 36093.
Reduction granted or contemplated in some collieries, 25770, 26783, 30557.
Three shifts of firemen, suggestion as to, 25769, 25779.
House and coal, free, 24675.
Importance of firemen as regards safety of mine, 20134, 20744, 20819, 21234, 21864, 22108, 22410, 22963, 23282, 23367, 24098, 24618, 24703, 24790, 25704, 27600, 31824, 32306, 32882, 33352, 33926, 34835, 35834.
Ironstone Mines, *see that title.*
Master-shifters, inspection of roof and sides by, possibility of, 35606.
Number of deputies or firemen, 22341, 22592, 22596, 23014, 24760, 25412, 25784, 30543.
Number of inspections desirable, 25377 (*par.* 4), 25445, 25535, 25560, 25769, 29820, 32416, 32421, 32725, 33523, 33533, 33829, 37294.
Overman, duties of, *see title* Overman.
Qualifications of firemen, class of man appointed, &c., and views as to examination and certification, 19621 (*par.* 3), 19670, 19687, 19753, 19911, 19917, 20001, 20044, 20130, 20216A (*par.* 8), 20302, 20746, 20771 (*par.* 3), 20818, 20924, 20935, 21237, 21241, 21319, 21356, 21370, 21439, 21447, 21579, 21582, 21649, 21654, 21665, 21790, 21796, 21808, 21858, 21872, 21940, 22107, 22183, 22197, 22206, 22240, 22268, 22297, 22350, 22369, 22401, 22406, 22565, 22578, 22597, 22950, 22961, 23241, 23273, 23278, 23361, 23458, 23515, 23548, 23559, 23564, 23635, 23694, 23874, 24097, 24109, 24499, 24616, 24634, 24658, 24677, 24705, 24815, 25110, 25112, 25115, 25377 (*par.* 5), 25477, 25624, 25628, 26658 (*par.* 7), 26673, 26786, 26859, 27592, 27602, 27713 (*par.* 4), 27784, 29691, 29707, 29711, 29921, 29962, 30036, 30054, 30187, 30207, 30237, 30690, 30695, 30919, 30953, 30983, 31171, 31819, 32303, 32401, 32446, 32545, 32552, 32729, 32741, 32769, 32775, 32881, 32885, 33350, 33659, 33925, 33931, 34371, 34838, 34874, 34927, 34963, 35025, 35092, 35113, 35212, 35227, 35408, 35417, 35830, 35837, 35901, 35933, 36133, 36184, 36337, 36385, 36440, 36530, 36608, 36613, 36615, 37151, 37370.
Relieving examiner, abolition of, advocated, 25724A, 25737, 25783, 25789, 25818.
Reports, 20652, 22117, 22291, 22298, 22303, 22334, 25445, 25562, 25818, 26828, 26835, 33526, 33529, 33535.
Available for information of men going on next shift, suggestion as to, 33536.
Responsibility of firemen, 24718, 24723.
Safety lamps used by officials in making inspection, 25377 (*par.* 4), 25441, 25534, 26352 (*par.* 2), 26469, 26478, 26687, 34923, 35016.

Inspection of Mines by Mine Officials—*cont.*
Shale Mines, 22845, 22847.
Shifts, continuous, consideration as separate shifts advocated, 33525, 33528.
Special Rules as to, 25377 (*pars.* 4 *and* 5), 33522.
Substitutes for deputies in case of illness, 25787, 25794.
System of inspection, 20750, 20829, 25457, 25647, 25772.
Trade Unions, firemen belonging to, 23704.
Wages of deputies or firemen, 20049, 20825, 20927, 21655, 21816, 21864, 21868, 21870, 21967, 22242, 22353, 22365, 22960, 23275, 23280, 23458, 23460, 23509, 23518, 23702, 24119, 24671, 24673, 24676, 24712, 24748, 24754, 25572, 25631, 30314, 33362, 35895, 37373.

Inspectors of Mines (Home Office Inspectors):
Accidents, inspection after, *see title* Accidents, *sub-heading* Inspection after.
Act of Parliament referring to, Coal Mines Regulation Act, 1887 (secs. 39 and 42), 21369, 36464.
Adequacy of inspection by, views on this point, and as to what constitutes adequate inspection, 19621 (*par.* 1), 19645, 19847, 19996, 20082, 20084, 20216A (*pars.* 1 *and* 3), 20220, 20255, 20465, 20771 (*par.* 1), 20780, 20794, 20905, 20973, 21210, 21213, 21386, 21612, 21752, 21929, 22062, 22064, 22071, 22079, 22085, 22100, 22155, 22158, 22162, 22412, 22934, 22943, 22997, 23002, 23026, 23245, 23248, 23354, 23528, 23676, 23681, 24047, 26658 (*par.* 13), 26710, 26732, 26734, 26736, 26799, 26802, 26830, 29661, 29960, 30413 (*par.* 1), 30653, 30896, 31076, 31373, 31547, 31841, 31994, 31996, 32353, 32458, 32474, 32962, 33309, 33316, 33489, 33498, 33629, 33792, 33947, 33950, 34064, 34866, 35377, 35502, 35702, 35714, 35778, 36061, 36211, 36519, 36587, 36591, 36748, 36763, 36774, 36804, 37273.
Appointment of inspectors, 19645, 20656, 20787, 26658 (*par.* 12), 26710, 30697, 31660, 32652, 32666, 33511. (*See also sub-heading* Qualifications of Inspectors.)
Arbitration between deputies and manager, 24409, 24512, 24591, 24610.
Assistant inspectors:
Instructions from inspector before visiting any place, modification of regulations as to, advocated, 36064.
Metalliferous mines, appointment in Cumberland for, not for coal mines, 36062.
Qualifications and efficiency, 30163.
Residence, place of, 27100.
Working miners holding a certificate, appointment as additional assistant inspectors, views as to whether desirable, 19621 (*par.* 1), 19630, 19639, 19643, 19659, 19663, 19814, 19863, 19995, 20204, 20216A (*par.* 2), 20241, 20248, 20253, 20476, 20502, 20591, 20636, 20788, 20799, 20986, 20999, 21025, 21161, 21192, 21197, 21210, 21218, 21232, 21325, 21371, 21617, 21628, 21928, 22061, 22073, 22087, 22090, 22097, 22170, 22278, 23256, 23419, 23435, 23465, 23543, 26832, 29666, 29672, 29984, 29987, 30003, 30008, 30149, 30151, 30162, 30292, 30311, 30413 (*par.* 1), 30417, 30419, 30429, 30574, 30658, 30675, 30688, 30817, 30827, 30897, 31169, 31213, 31385, 31393, 31629, 31636, 31643, 31654, 31666, 31839, 31924, 32003, 32357, 32360, 32476, 32649, 32983, 33299, 33453, 33459, 33468, 33471, 33500, 33507, 33510, 34072, 34207, 34354, 34362, 35073, 35079, 35274, 35297, 35300, 35382, 35387, 35396, 35492, 35501, 35509, 35608, 35630, 35706, 35813, 36064, 36067, 36216, 36376, 36381, 36443, 36521, 36590, 36594, 36748, 36807, 36921, 36925, 37188, 37190, 37264.
Bill promoted by Miners' Federation, 21031, 21042, 21157.
Number advocated, *see sub-heading* Number.
Owners' interests, protection of, in this event, 21025, 21044, 30003, 30014.
Salaries, *see sub-heading* Salaries.
Authority, *see sub-heading* Duties and Authority.
Chief inspectors, appointment of, views as to, 30415, 30418, 33464.
Deputy chief inspectors, appointment advocated, 33465, 33475.
Clerical work, 32456, 32464, 33455, 33676, 33946, 35700.
Complaints as to incompetence or neglect on part of inspectors, Board of Enquiry advocated to deal with, 32372, 32690.

Inspectors of Mines (Home Office Inspectors)—*cont.*
Complaints made to inspectors by workmen, 21215, 21378, 23534, 23741, 25230, 29958, 30214, 30821, 33010.
Dangerous practices, withdrawal of men in event of, suggestions as to, 20206, 32379, 32701, 32704.
Deputy inspectors, qualifications of and work to be done by, 33636.
Districts, size of, and desirability of reduction in size, views as to, 19631, 19642, 19987, 20216A (*par.* 2), 20244, 20698, 21322, 21760, 21928, 22271, 23261, 23683, 26733, 27098, 29669, 29983, 30146, 30415, 30808, 31076, 31373, 31383, 31541, 31547, 31579, 31591, 32347, 32350, 32354, 32369, 32451, 32465, 32969, 32977, 32981, 33091, 33306, 33308, 33445, 33460, 33898, 33946, 34088, 34865, 35491, 35494, 35698, 36520, 37256.
Diagram illustrating absence of proportion in size of districts and number of inspectors, 33445.
Duties and authority of, 20206, 23784, 23792, 23866, 23882, 23964, 23970, 23975, 24038, 24042, 24049, 24224, 24411, 24458, 32379, 32701, 32704, 33812, 33889, 33896.
Ironstone Mines, *see that title.*
Number of inspections and number desirable, 19849, 20091, 20216A (*par.* 1), 20220, 20464, 20471, 20478, 20499, 20646, 20657, 20782, 20907, 20979, 21013, 21192, 21200, 21388, 21397, 21404, 21727, 21745, 22074, 22943, 22949, 22986, 22995, 23022, 23251, 23353, 23359, 26658 (*par.* 13), 26732, 26741, 26801, 29662, 29677, 30813, 30893, 31377, 31840, 32347, 32351, 32352, 32457, 32962, 33494, 33796, 34066, 35300, 35307, 35375, 35495, 35632, 35704, 36211, 36221, 36591, 36646, 36691, 36694, 36719, 36918, 37185, 37261, 37277.
Bill proposing increased inspection, 21397.
Cases proving necessity for increased inspection, 26732, 26734, 26736, 26799.
Managerial responsibility, possible effect of increased inspection on, 20478, 21013, 21393, 26658 (*par.* 13), 26805, 31622, 31846, 33489, 33942, 35704.
Number of inspectors and assistant inspectors, and number desirable, 19621 (*par.* 1), 19629, 19635, 19639, 19642, 19882, 19986, 20089, 20216A, (*par.* 2), 20223, 20234, 20243, 20248, 20253, 20771 (*par.* 1), 20779, 20783, 20786, 20897, 20900, 20922, 20999, 21160, 21321, 21326, 21592, 21629, 21757, 22061, 22073, 22087, 22167, 22270, 22428, 22949, 22985, 23249, 23255, 23261, 23264, 23356, 23464, 23543, 23676, 23691, 23684, 23740, 26658, (*par.* 13), 26734, 26740, 26832, 29661, 29669, 29980, 30008, 30143, 30413 (*par.* 1), 30414, 30425, 30807, 31165, 31213, 31373, 31380, 31411, 31535, 31585, 31591, 31600, 31997, 32003, 32347, 32349, 32359, 32452, 32467, 32473, 32476, 32969, 33298, 33306, 33312, 33323, 33445, 33468, 33949, 34064, 35300, 35373, 35381, 35491, 35686, 36216, 36578, 36584, 36918, 37185.
Bill promoted by Miners' Federation, number suggested in, 20784, 20902, 20977, 30144, 31535, 31539, 31585, 31600.
Diagram illustrating discrepancies in numbers appointed to different districts, 33445.
Power of Secretary of State to appoint additional inspectors, 30697.
Object of this inspection, 20462, 20493, 20591, 21725, 33629.
One man should examine one pit, 22160.
Owners and workmen, attitude of inspectors towards, 29960.
Qualifications of inspectors, desirability of certificate of competency, &c., 19860, 21381, 21590, 22170, 22273, 23419, 23424, 23435, 32129, 32309, 32332, 32337, 32365, 32369, 32650, 32657, 33300, 33500, 33519, 33629, 33635, 33645, 33655, 33668, 33784, 33810, 33915, 34365, 34519, 36522.
Board of Examiners, suggestions as to, 32332, 32345, 32369, 32650, 32666, 32,676, 32651, 32666, 32671.
Re-examination periodically, suggestions as to, 32365, 32684.
(*See also sub-heading* Assistant Inspectors; Working Miners, Appointment of.)
Quarries, inspection in Wales, 27102.

Digitized by Google

Inspectors of Mines (Home Office Inspectors)—*cont.*
Reports, 20654, 32464, 32466, 33484.
Residence, place of, time spent in travelling, &c., 21619, 21923, 23689, 31544, 32001, 32453, 33006, 33900, 35689, 36061, 36122, 37255, 37259.
Responsibility, extent desirable, and liability to prosecution, views as to, 31612.
Retiring allowance, 32368, 32686.
Safety Lamps, powers as to introduction of, *see title* Safety Lamps, *sub-heading* Inspectors.
Salaries of, and suggestions as to salaries of additional assistant inspectors, if appointed, 20241, 20788, 29672, 30423, 31390, 32362, 33473. 33475, 33673, 34073, 35073, 35386, 35508.
Shale Mines, 22843.
Surprise visits, desirability of, 20103, 20661, 20796, 22947, 23254, 30891, 31841, 31851, 31939, 33317, 33324, 34052.
System of inspection, 20654, 20658.
Telephonic communication, suggestion as to, 33901.
Value of this inspection, 31839.
Welsh language, knowledge of, desirable for inspectors in South Wales, 26658 (*par* 13), 26732, 26875, 27008, 27064, 27103, 36067.
Conference illustrating, 26875, 27008, 27018, 27021.
Separate inspector for North Wales advocated, 27103.
Working miners, appointment of, as assistant inspectors, *see sub-heading* Assistant Inspectors.

Ironstone Mines:
Accidents:
Coroners' inquests, *see that sub-heading.*
Fillers, small number of accidents to, 29011, 29476.
Inspection after, 29505, 29507, 29651.
Number of, 28877, 28900, 28946, 29357.
Pillars, taking out, danger of accidents from, 29226, 29357, 29468.
Definition of "Creep," 29477.
Shot-firing, 28985, 29189.
(*See also sub-heading* Timbering.)
Blasting, *see sub-heading* Shot-firing.
Chargemen, duties and qualifications of, 29011, 29161, 29325, 29461, 29522, 29533, 29574.
Cleveland Miners' and Quarrymen's Association, membership, 29055.
Coal mines and ironstone mines, difference in conditions in, 28913, 28984, 29493, 29534.
Experience in coal mines, extent to which valuable in ironstone mines, 29208.
Coroners' inquests:
Accident in mine when assistant-deputy had been left in charge, inquest after, 28927, 28932, 29132.
Reports on inspection of mines by men, use of, at, 29277.
Depth of ironstone mines, 29227.
Deputies:
Adequate inspection, impossibility of, owing to present size of districts, 29544, 29552, 29562, 29568, 29597, 29614.
Appointment of:
Efficiency or otherwise of men at present appointed as deputies or assistant-deputies, comments on, 28868, 28924, 28942, 28992, 29013, 29018, 29021, 29023, 29031, 29109, 29121, 29285, 29354, 29417, 29544, 29550, 29561, 29571.
Number of incompetent deputies, 29125.
Number of mines in which incompetent deputies are appointed, 29014.
Specific instances of mines in which incompetent men are appointed, questions as to, 29048, 29151.
Unskilled men sent as assistants in timbering, 28902, 29021, 29023, 29035, 29054, 29066, 29091, 29294, 29305, 29309, 29354, 29427, 29435, 29553.
Examination for, advocated, 28861, 29022, 29024, 29030, 29111, 29117, 29137, 29281, 29295, 29378, 29417, 29542, 29563.
Qualifications of candidates, 29214, 29219, 29385, 29542.
Method of appointment, 29017, 29119.
Charge of mine as long as men remain in it, appointment of competent deputy only for, advocated, 28923, 28927, 29291, 29299, 29440.
Accident when inexperienced man was left in charge, 28926, 28927, 29132, 29442.

Ironstone Mines—*cont.*
Deputies—*cont.*
Duties of deputies, 29428, 29432, 29470, 29532, 29533.
(*See also sub-heading* Timbering.)
Number of deputies, 29124, 29616.
Responsibility of, 28867, 29221, 29545.
System of inspection, 29597, 29599.
Timbering, *see that sub-heading.*
Two skilled men working together, 29571.
Drilling machines:
Kinds used, 29336.
Persons in charge of, 28950, 29316, 29516, 29574.
Dust, no difficulty from, in Cleveland mines, 29201.
Eston, "Greenhorns" employed at, 28892.
Fillers:
Accidents to, small number of, 29011, 29476.
Qualifications of, employment of unskilled men, &c., 28965, 29004, 29460, 29470, 29475, 29486, 29515, 29526.
Work done by, 29483.
General Rules:
Timbering, General Rule 21 as to, 29067.
Unskilled men working alone, General Rule 39 as to, 28997, 29488, 29515, 29526.
Health of men in ironstone workings, 29192, 29198.
Inspection of mines by men:
Accidents, inspection after, 29651.
Cost of, defrayed by Miners' Association, 29238, 29271.
Encouragement by Miners' Association, 29272.
Extent to which practised in ironstone mines, 28945, 29238, 29590, 29656.
Frequency with which made, 29267.
Qualifications of men for making inspection, 29239, 29274, 29628, 29639.
Reports, attitude of owners and managers as to, &c., 29244, 29264, 29269, 29277, 29279, 29345, 29499, 29591, 29649.
Value of this inspection, 29244, 29343, 29498, 29626, 29649.
Inspection of mines by mines officials, 29308, 29428, 29532.
Before men begin work, 29567.
(*See also sub-heading* Deputies.)
Inspectors, Home Office:
Accidents, inspection after, 29505, 29507.
Adequate inspection impossible with present size of districts and number of inspectors, 28968, 29256, 29259, 29340, 29418, 29511.
Cost of inspection, in event of appointment of additional inspectors, 29261.
Notification to, of anything wrong in mine, 29510.
Number of inspections advocated yearly, 29169, 29250, 29356, 29588.
Number of inspectors and number required, 28975, 29256.
Qualifications desirable for chief inspectors, 29184.
Surprise visits, 29506.
System of inspection, 29418.
Time occupied in making an inspection, 29258.
Working miners, appointment of, as additional inspectors, advocated, 28970, 29171, 29234. 29246, 29340, 29425, 29502, 29589, 29619.
Manager's certificate of competency might be held by, 29234.
Number required, 28975, 29256.
Salary, amount of, views as to, 28974.
Manager's certificate of competency, miners holding, 29234.
Method of working ironstone mines, 28941, 28988, 29223, 29226, 29515, 29533, 29579.
Miners' nystagmus, no difficulty experienced with, 29200.
Number of ironstone mines, and number of men employed in Cleveland district, 29060, 29250, 29254.
Overman:
Absence of, deputy responsible in event of, 28867.
Back overman, duties and qualifications of, 28869, 28872, 29440.
Duties of, 29440.
Shot-firing in ironstone mines:
Accidents, 28985, 29189.
Amount of powder used, 28948, 28985.
Chargeman, duties and qualifications of, 28951, 29325, 29461, 29522, 29533, 29574.
Efficiency, comments on, 28959.
Drilling machines, 28950, 29316, 29336, 29516.
Examination of place after shots are put in, 29610.
Extent of, 28948.

Digitized by Google

Ironstone Mines—*cont.*
Shot-firing—*cont.*
Health of men, effect of shot-firing on, 29192.
Method of, 29190, 29522.
Persons firing shots, 28950, 29316, 29330, 29574, 29586.
Special Rules, ironstone mines:
Deputies, Special Rules as to, 28861, 28927, 28936, 28940, 29440.
Drilling machines, Rule 65 as to, 28950, 29325, 29339.
Timbering, Special Rules as to, 28867, 29068.
Exemption of Cleveland mines from rules as to distances. 29361. 29392, 29411, 29446, 29455.
Stanghow:
Adequate inspection by deputy, impossible, owing to size of district and appointment of unskilled assistants, 29543, 29558, 29598, 29614.
Timbering in ironstone mines:
Accidents from falls of roof and sides, 28866, 28899, 28941, 28943, 29060, 29367, 29396, 29415, 29447, 29564.
Nature of tops and backs in relation to, 29216, 29312, 29368.
Working places, accidents most frequent in, 29081.
Deputies, duties of, in relation to, 28866, 28871, 28916, 29071, 29472, 29612.
Qualifications required for setting timber, 28914, 29303, 29312.
Time spent in timbering, 29432.
Training of man for setting timber, 28906, 29304, 29313.
Two skilled workers should go together; practice of sending one skilled and one unskilled man in certain mines, 28902, 29021, 29023, 29035, 29054, 29066, 29091, 29294, 29305, 29309, 29354, 29427, 29435, 29553.
Efficiency with which roads are timbered, 29082, 29373.
Examination of working places, 29071, 29075.
General and Special Rules as to, 28867, 29068:
Adequacy of, if carried out, 29075.
Exemption of Cleveland mines from Special Rules as to distances, 29361, 29392, 29411, 29446, 29455.
Responsibility, excessive, 29546.
Slipping lypes, 29451.
Solid work not requiring timbering, 29450.
System of, 29079, 29229, 29366, 29397.
Iron baulks between last pair of timbers not desirable, 29398.
Systematic timbering unnecessary in Cleveland mines, 29364, 29397, 29413, 29453.
Unskilled men, employment of, 28892, 28897, 29460, 29470, 29475, 29515, 29526.
(*See also sub-heading* Timbering—Deputies, duties of.)
Ventilation:
Accidents from, rarity of; adequacy of ventilation, &c., 28947, 28988, 29197.
Deputies, duties and qualifications of, in relation to, 28861, 28875.
Water in ironstone mines, 29202.

Lamps, *see* Safety Lamps.

Lanarkshire: Witnesses giving evidence as to—Mr. Gilmour and Mr. Kelly. (*For separate indices to their evidence, see Index II.*

Lancashire Special Rules:
Airways, travelling periodically, 31447.
Boilers, examination after cleaning, 28561.
Haulage: Trailers or devils, 20336.
Ventilation, 25260.

Lancashire and Cheshire: Witnesses giving evidence for—Mr. Twist, Mr. Waring and Mr. Watson. (*For separate indices to their evidence, see Index II.*)

Lancashire, Cheshire and North Wales Enginemen's and Boilermen's Federation:
Number of members, 26143 (*par.* 1), 26277.

Leasing of Mines and Plant, owner reserving a royalty by way of rent, 36866.

Lectures on Mining, 26821, 26824, 26840, 26958.

Leicestershire: Witness giving evidence for—Mr. Lovett. (*For separate index to his evidence, see Index II.*)

Llanhilleth, use of return airways as travelling ways, 34117, 34335, 34435.

Llwynypia, shaft accident at, 28835.

Lothian, West: Witness giving evidence as to—Mr. J. Wilson. (*For separate index to his evidence, see Index II.*)

MacLaren Explosion:
Inspection by men after, under Rule 38, 34655.
Inspector's warning disregarded, 33908, 34574, 34618.
Investigation:
Coroner's inquest, extent of inquiry at, and desirability of second inquiry under Section 45, 19802, 19805, 34151, 34553, 34585, 34593, 34613, 34660.
Adequacy of, as regards investigation and verdict, views as to, 34585, 34613, 34621.
Letter from Home Office in reply to demand for second inquiry, 34618, 34681.
Publicity would be given by second inquiry, 34666, 34668, 34681.
Report by Mr. Martin and others to Home Office, 34615, 34617, 34618, 34661, 34668, 34672.
(*See also sub-heading* Ventilation.)
Prosecution not entered upon after, 33911, 34592, 34618, 34628, 34664.
Ventilation:
Condition shortly before explosion, 27049, 33907, 34576, 34661, 34679.
Conflicting opinions of experts on this point and as to withdrawal of men, 34595, 34613, 34616, 34623, 34661, 34665, 34924, 34926.
Discovery of gas during inspection after explosion, 34557, 34618, 34635.
Report of, to men, but not to inspector, 34645, 34657.
Fan, 34582, 34682.

Managers:
Act of Parliament relating to, incorporation in, of certain rules in Indian Mines Act advocated, 33572.
Ambulance certificates for, advocated, 35946.
Appointment and dismissal of, 22368, 30248, 32877, 33579.
Certificate of competency:
Advantages of, 31832.
Adequacy of system, 23118, 23214, 23615, 35484, 36653.
Board of Examination, suggestions as to, 26658 (*par.* 11), 26863, 27001, 33615, 33619, 33621, 33863, 33880, 35951, 37170.
Cancellation or suspension of certificate, 19789, 20214, 31136, 31152.
Colliery Officials' Association:
Attitude of, as regards men training for examination, 27904.
Members holding certificates, 37480.
Conditions of, qualifications required in candidates, &c., 19869, 20001, 20044, 22094, 23221, 23449, 32129.
Medical examination of candidates not required, 26598.
Fiery mines, knowledge of, 32552, 33115.
Introduction of, service certificates given to men, 28088.
Ironstone mines, 29234.
Local knowledge, importance of, and suggestions as to local examinations, 26865, 26871, 26992, 27025, 32446, 32449, 33107, 33112, 33626, 33866, 36106.
Marks in examination, 33872.
Metalliferous mines, absence of any certificate for, 23221, 26631.
New South Wales, *see that title.*
New Zealand, separate examination for, question as to, 26627.
Notice should be given some time previously to examination, 26713.
Number of men holding certificates, 22616, 23422, 23440, 24710, 24820, 27482, 27906, 35276, 35388, 35630, 35706, 35816, 36393, 37267.
Annual number of certificates granted, 19674
Second-class certificates, *see title* Under-managers, *sub-heading* Certificates.
Shale mines, 22849.
Uniformity of standard advocated, varying standard under present system, 26658 (*par.* 11), 26865, 26997, 27024, 33107, 33111, 33624, 33866, 33868, 33879, 35948, 36054, 36100, 36104, 37172, 37174.

Managers—*cont.*
Competency of managers, 23115, 23214, 23238, 23344, 36669, 36678, 36753.
Discipline, importance of managers in relation to, 33558, 33796.
Duties of, 30232:
Excessive, alleged, 33570.
Number of pits under control of one manager, *see sub-heading* Number.
Inspection of mines by men, attitude as to, *see title* Inspection of Mines by Men, *sub-heading* Owners and Managers, in relation to.
Number of pits under control of one manager, 20010, 29727, 29934, 30220, 30234, 33559, 33572, 33753, 33852, 36669, 36678.
Powers of, 33570, 33889.
Punishment for neglect of proper precautions and for carelessness:
Fining, views as to, 20736, 21897, 30879, 32895, 35008, 36556, 37094.
Prosecution, 21896, 30878, 32174, 33818, 33889, 33903, 35650, 36554.
Failure of, instances of, 31130, 31140.
Number of prosecutions, 21896.
Responsibility and status of managers, and authority of inspectors in relation to, &c., 21013, 24113, 24115, 24433, 24439, 25361, 31604, 31876, 33817, 33889, 33902, 35325.
Qualifications, 22173, 23091, 23119, 32877, 33616, 33618, 33914, 34519.
Salaries, 21969.
Welsh language, knowledge of, desirable for managers of Welsh mines, 27027.

Manholes, *see title* Haulage Accidents and Haulage Roads, *sub-heading* Prevention of Accidents—Manholes, provision.

Meal-times, regulations as to, 26282, 33025, 34798, 34824, 34832.

Medical Examination before employment, 25781.

Metalliferous Mines, baths and clean and dry clothing, facilities for, 22315, 24140.

Method of Working in various collieries, 24775, 25263, 25646, 25662, 27106, 27161, 27493, 29925, 30395, 35792, 36084, 37140.

Miners' Federation of Great Britain, Bill proposed by, *see title* Bills.

Miners' Federation Lodge: Lectures to miners, 26658 (*par.* 4).

Miners' Nystagmus, use of safety lamps in relation to, 20418, 20451.

Minister of Mines, appointment of, suggestions as to, 20185, 33477, 33585, 33669, 33671.

Monmouthshire County Council Technical Classes, instruction to miners, 35029.

Monmouthshire and Forest of Dean, Special Rules, 25377 (*pars.* 4 *and* 5), 25485, 25501, 28663.

Monmouthshire and South Wales: Witnesses giving evidence as to, *see title* South Wales and Monmouthshire.

Monmouthshire and South Wales Colliery Examiners' Association:
Nature of this Association, 25379.
Witness representing, 25377.

National Federation of Enginemen's Protective Association:
Conference:
President's speech on selection of persons for training as enginemen, 26010.
Responsibility of enginemen for mistakes made by apprentices, statement as to, 26040.
Number of members, and number of engine-winders, 26143 (*par.* 1), 26324.
Witness representing, 26143 (*par.* 1).

National Federation of Enginemen's and Boilermen's Associations of Great Britain:
Appeal for legislation approved by: *Appendix II., page* 476.
Witnesses representing, 25821, 26143.

Nationalisation of Mines, suggestion as to, 36354, 36506.

New South Wales:
Area of mines, 26442, 26556.
Baths and other facilities for washing at pit-head, impossible owing to shortage of water, 26635.

New South Wales—*cont.*
Coal Mines Act, Provisions as to engine-winders, 26585, 26592, 26594, 26600.
Coal production of the Commonwealth practically confined to, 26531.
Development of coal production, 26623.
Depth of Mines, 26445.
Engine-winders:
Certificate of competency required for, objections to, 26585, 26592, 26600.
Metalliferous mines, engine-drivers' requirements, difference in, 26605.
Transvaal, practice as to, 26608.
Medical examination, periodical, views as to, 26594.
Fines:
Objections to fining, 26579.
Offences punished by, 26576, 26578.
Haulage accidents, prevention of, 26419, 26492.
Kembla explosion:
Cause of, uncertainty as to, 26451.
Course traversed by, and point of arrest—damp or watered zone apparently traversed, 26352 (*par.* 2), 26397, 26438, 26446, 26458, 26566.
Naturally or artificially damp zone, question as to, 26447, 26462.
Dust analysis, 26352 (*par.* 2), 26413.
Electric coal-cutters, use of, question as to, 26454.
Inspection and report by Witness after explosion, 26417.
Manager's certificate of competency, examination for:
Ambulance examination, 26517.
Board of examination, 26524.
Efficient managers who could not have passed this examination, question as to, 26601.
Electricity, examination in, 26522.
Machinery, knowledge of, inclusion in, 26522, 26523.
Number of examinations and places at which held, 26525.
Number of men gaining certificates more than equal to demand, 26624.
Oral examination, practical knowledge of mining required in, 26521.
Qualifications required of candidates, 26373, 26378.
Experience in British or foreign mines, acceptance of, question as to, 26369, 26508.
Evidence of such experience, regulations as to, 26375, 26380, 26509, 26612.
Other States of Commonwealth, experience in, not always accepted, 26378, 26385.
Exclusion of candidates from other places not practised, 26533.
Mining engineer, apprenticeship to, as alternative to equivalent period of employment in mine, 26499, 26619.
Surveying, experience in, as equivalent for experience in mines, question as to, 26500.
Technical college and classes, certificates from, not accepted as equivalent to experience in a mine, 26505.
Recognition, mutual, of English certificates, and New South Wales certificates, suggestions as to, 26352 (*par.* 1), 26358, 26389, 26584.
Character of examinations, 26359, 26366, 26393.
Correspondence with English Government as to, in 1903, 26352 (*par.* 1), 26365.
Notification of any cancellation of certificates advocated, 26542.
Other States of Commonwealth not included in this suggestion, 26393, 26628.
Present position as to, 26370, 26376, 26622.
Registration of certificates, 26536.
Method of working mines, 26444.
Mines Inspection Act of 1901, application to metalliferous mines, 26588.
Engine-winders, qualifications under, 26605.
Output in coal mines:
Largest output in New South Wales, question as to, 26554.
Metropolitan Coal Company, Ltd., 26552.
Prosecutions of men for breaches of discipline, 26570:
Admonition for minor offences, 26574.
Prosecution of officials or manager for neglect of duty, practice as to, 26581:
Court of enquiry and cancelling of certificate in case of serious offences, 26583.
Record of such prosecutions, 26582.

New South Wales—*cont.*
Report of Department of Mines for 1906, 26395.
Safety lamps, *see that title.*
Shot-firing:
In coal, not practised, 26559.
Watering in neighbourhood of a shot, 26352 (*par.* 2), 26559.
Special Rules, nature of and number of, 26626.
Ventilation:
Adequate ventilation, rule as to and definition of, 26547.
Blackdamp, 26640.
Carbonic oxide given off naturally from coal, 26640.
Amount with which men may work in safety, 26643, 26646.
Analysis, 26645, 26654.
Effect of, on health, 26650.
Character of mines as to, amount of gas, &c., 26442, 26546, 26648.
Safety lamps in relation to, *see title* Safety Lamps.
Watering in mines:
Compulsory, not advocated, 26352 (*par.* 2).
Danger and difficulty of, 26562.
Nature of roof in relation to, 26564.
Experience of Witness as to, 26496.
Extent of, 26557.
Thorough watering impracticable, 26563.
Kembla explosion, *see that sub-heading.*
Systems of, 26558.

New Tredegar: Accident to winding rope, 34129, 34282, 34455.

New Zealand:
Coal production, small amount of, in, 26531.
Manager's certificate of competency, separate examination for, question as to, 26627.

North Wales: Witnesses giving evidence as to—Mr. Hughes, Mr. Thomas, and Mr. Watson. (*For separate indices to their evidence, see Index II.*)

Northumberland: Witnesses representing—Mr. Coulthard and Mr. English. (*For separate indices to their evidence, see Index II.*)

Northumberland Miners' Mutual Confident Association:
Number of members, 24865.
Object of, 24868.
Witness representing, 24864, 24871.

Nottinghamshire: Witness representing—Mr. Rowarth. (*For separate index to his evidence, see Index II.*)

Orgreaves, shaft accident at, 32079.

Output, increase in, and probable increase in future, 33771.

Overmen:
Districts, 27332, 27338, 27341, 27431.
Duties of, 20034, 20039, 20200, 27200, 27313, 27329, 27383, 27434, 27475, 27479.
Identical character of duties of night overmen and day overmen, 27328.
Special Rules 42 and 43 as to, 27330.
Firemen working with, number of, 27334.
Hours of work, 27315, 27389, 27475.
Ironstone Mines, *see that title.*
Meal times, 27323.
Number of men in charge of, 27429, 27674.
Number of overmen, 27335, 27339, 27676.
Qualifications, class of man appointed, &c., 35020.
Wages, 27485.

Owners, attitude of, as regards inspection of mines by men, *see title* Inspection of Mines by Men, *sub-heading* Owners and Managers in relation to.

Packing, suggestions as to, 27082, 27130, 27140, 27186, 30395, 30407.

Pencoed Colliery, accident at, owing to defective coupling of wagons, 31240.

Pipes, prohibition, 37032, 37051.

Plans:
Accidents caused by defective plans and by working beyond boundaries, 31051, 31107, 31203, 31221, 31350.
Caradog Vale, 31054, 31118, 31123, 31130, 31224.
Glenavon, 31055, 31108.
Ventilation roads, doors, &c., exhibition of plans showing, advocated, 30413 (*par.* 12), 30471.

Prevention of Corruption Act, application of, to prevent tipping of hauliers by colliers, advocated, 26699

Prosecutions:
Managers or owners, prosecution of, 21896, 30878, 32174, 33818, 33889, 33903, 35650, 36554.
Failure of, instance of, 31130, 31140.
Number of prosecutions, 21896.
Men, prosecution of:
Advantages of, as compared with fining, *see title* Fines, *sub-heading* Advantages.
Coal Mines Regulation Act, prosecution is sole form of punishment provided for in, 20733.
Cost of defence, and fines, payment of, by Trade Unions, 21301, 21597, 21696, 21698, 21904, 21907, 22056, 23292, 23585, 23590, 36552.
Decision as to fining or prosecution, 29957, 34884, 34934, 34995, 35055, 35587, 36395.
Decision as to prosecution in Scotland, 21495.
Extent to which practised, 20700, 21895, 23289, 23707, 27662, 29826, 31435, 31959, 35423, 35427.
Offences which would be suitably punished by fining or prosecution respectively, 20025, 20728, 20742, 21300, 29951, 30179, 30183, 32507, 34409, 34884, 35012, 35062, 35555, 36928, 37030, 37032, 37043, 37051, 37056, 37069.
Procedure in, 30708.
Reform of present system advocated, 36173.

Railway Engine Drivers, examinations for, question as to, 21150.

Rats in mines, 22503.

Rescue Work and Appliances:
Act of Parliament: Coal Mines Regulation Act, General Rule 4 as to, 24935.
Adequacy of provision, views on this point and as to necessity for and manner of provision, 19621 (*par.* 14), 19769, 19775, 19963, 20172, 23478, 24935, 25103, 25368, 25377 (*pars.* 10 *and* 11), 25521, 25564, 26849, 30468, 31490, 31771, 31860, 34188, 35201.
Cardiff Conference as to, 26854.
Case proving necessity for provision, 35204.
Compulsory provision advocated, 31490.
Ambulance corps and instruction, 19777, 19780, 25377 (*pars.* 10 *and* 11), 31490, 35486, 35541.
Encouragement of officials and workmen in, 20216A (*par.* 20), 25509.
Mines officials, compulsion as to holding certificates, views as to whether desirable, 24938, 25110, 25115, 35946.
Number of classes, and number of men attending, 25115, 26849.
Appliance for descending mine after accident, provision advocated, 30413 (*par.* 11), 30468.
Breathing apparatus, inadequate provision, 30469.
Central station advocated, 25377 (*par.* 10), 25521.
Cost of provision, 20173, 31778.
Spontaneous fires, mines subject to, provision of life-saving apparatus in, advocated, 23478.
Telephonic communication between various districts and the surface advocated, 31863.
Uniform system, impracticability of, 27191 (*par.* 3), 27238.

Rhymney, shot-firing accident at, 34304.

Royal Commissions, *see title* Commissions and Committees.

Rubbish:
Freedom of roads from, desirability of, 19621 (*par.* 9), 19712, 19721, 20327, 21091, 21098, 23821, 23908, 23917, 23991, 24059, 25214, 25537, 25569, 30796, 30800, 30802, 31468, 31562, 31976, 35137.
Packing into waste, advocated, 30996, 31024.

Safety Lamps:
Act of Parliament: Coal Mines Regulation Act, 1887, Section 49:
General Rule 8, 19621 (*par.* 12), 19836, 36994.
General Rule 9, 24888, 24916.
Compulsory introduction of, views as to, and as to period for which desirable, 19621 (*par.* 12), 19761, 19828, 21179, 23336, 23403, 26352 (*par.* 2), 29806, 30227, 30413 (*par.* 9), 30460, 30939, 30957, 30992, 31003, 31497, 31503, 31780, 31981, 32428, 33818, 33889, 33902, 34135, 35105, 36991, 37228.
(*See also sub-heading* Inspectors, power of.)
Dispute at Dechmont Colliery, as to introduction of, 22466, 22475.
Distribution of: same lamp to be allotted to same man, 27378, 30628, 30876.

Digitized by Google

Safety Lamps—*cont.*
Electric relighting apparatus, 30638, 30641.
Examination before use, 27364, 27425, 36127.
Breach of this rule, 36129.
Extent to which used, 19832, 21235, 21864, 22957, 23167, 24740, 30990, 32244, 32429, 32541, 35458, 36038, 36650, 36651, 36991, 37020, 37342, 37348.
Falls of roof and sides, number of, in relation to, 19829, 31015, 31800, 31984, 36360, 37125, 37235.
Gas, indications as to, furnished by safety lamps, *see title* Ventilation, *sub-heading* Safety Lamps.
Haulage accidents in relation to, 31018.
Inspectors, power of, as regards introduction, 23336, 30413 (*par.* 9), 30460, 30939, 33818, 33889, 33902, 36360.
Coegnant Mine, explosion in, after neglect of inspector's warning as to necessity for safety lamps, 30923, 30927, 30936.
Keys, suggestion as to, 30624, 30865.
Light given by, 29750, 29874, 29887, 30103, 30280, 31012.
Locked lamps, 20216 (*par.* 22), 27541, 30507.
Screw locks, abolition advocated, 30413 (*par.* 9), 30461, 30507.
Naked lights and safety lamps should not be used in same ventilating district, 19761.
Objections to, 19828, 19832, 20216A (*par.* 22), 20418, 21189, 23404, 23413, 31097, 31101, 31780, 31982.
Oil, 19621 (*par.* 11), 19749, 20077, 26352 (*par.* 2), 26426, 26431, 26467, 26478, 26637, 27411, 30103, 30280, 30284, 30287, 30873.
Payment by men for use of lamps, 22480, 23410, 30281.
Relighting, 30413 (*par.* 8), 30617, 30632, 30635.
Testing lamps and types of lamps, suggestions as to, 19748, 20216A (*par.* 22), 27372.
Governmental testing station, provision of, views as to, 23484, 32820, 36995.
Types of lamps, 19621 (*par.* 11), 19750, 19755, 20075, 27191 (*par.* 1), 27210, 27511 (*par.* 1), 27517, 30287, 30413 (*par.* 9), 30732, 32428, 32435, 35459.
Wages in safety-lamp mines, 19831, 21177, 21189, 22474, 23405, 36991, 37121.
(*See also title* Ventilation, *sub-heading* Safety Lamps.)

Sanitary Condition of Mines, 19838, 20180, 20771 (*par.* 11), 22497, 22621, 22852, 23491.

Sanitary Conveniences:
Advisability of provision, views on this point, 19621 (*par.* 16), 19794, 20771 (*par.* 11), 21136, 21524, 22497, 22654, 23491, 24380, 27794, 32938, 33116, 34038, 36367, 37177.
Engine-houses, provision in, advocated, 27794.
Compulsion as to use of, views as to, 37178, 37182.
Extent of provision, 21536, 22503, 22648, 23496.
Shale Mines, 22852.

Schools and Evening Classes in Mining Districts, instruction in mining subjects in, 25712, 26658 (*pars.* 1, 2 *and* 3), 26898, 27039, 27191 (*par.* 6), 27250, 27255, 27511 (*par.* 5), 27549, 30413 (*par.* 6), 30883, 30885, 33266, 34528, 35028, 35032, 35802, 36835, 36839.
Glamorganshire, *see that title.*

Scotland: Witnesses giving evidence as to—Mr. Adamson, Mr. J. Brown, Mr. R. Brown, Mr. Gilmour, Mr. Kelly, Mr. McPhee, Mr. Muir, Mr. Shirkie, Mr. Webb, Mr. Weir, Mr. J. Wilson, Mr. Yorksin. (*For separate indices to evidence of each Witness, see Index II.*)

Shaft Accidents, 23845, 23953, 24078, 24174, 24202, 24339, 24340, 25819 (*par.* 1), 26163, 27713 (*pars.* 1 *and* 3), 27739, 27751, 27754, 27759, 27770, 27783, 27931, 29757, 29904, 31479, 31487, 31762, 32079, 33062, 34176, 34455, 34789, 34806, 34817, 34819:
Amount of coal raised daily in shafts, 28734.
Ashton-under-Lyne, accidents at, 26144.
Back shafts, fitting with winding gear advocated, 24986, 24991, 24994, 25000.
Baulks to prevent cage going down into sump, 24079.
Bebside Colliery, 25819 (*par.* 5), 25881, 26077.
Boldon Colliery, Durham, 25819 (*par.* 4), 25974, 26085.
Brakes, 26089, 26095, 26163, 28176, 28281, 28404, 28754, 28818, 28823, 28833, 28845.
Breaking of winding chain, 34716, 34789, 34806, 34817, 34819.
Annealing of chains, 34206, 34810.
Examination of ropes and chains, &c., 19757, 27997, 28290, 34129, 34134, 34272, 34276, 34452, 34715, 34789, 34795, 34816, 34818, 34925.
Engine-winder, *see title* Engineman, winding.
Friction wheel, 28283.
Re-capping of rope, 33218.

Shaft Accidents—*cont.*
Breaking of winding chain—*cont.*
Safety catches for holding cages, 20216A (*par.* 16), 20380, 25019, 28247, 30108, 33073, 33083, 33213, 35941.
Broomrig, accident at, 27713 (*par.* 1), 27739.
Coal, placing on cage, method of, 24216.
Danger, increased, under present conditions, feeling of men as to, 24171.
Double decks, riding on, prohibition, 33062, 33414.
Engine-winder, *see title* Enginemen (Winding).
Examination of engines and shaft, 27991, 27997.
Father and all his sons riding in same cage, prohibition advocated, 24390.
Fogg's Colliery, 29855, 29892, 30108.
Gates, doors or bars to cages, 20771 (*par.* 8), 23845, 23940, 23953, 24019, 24072, 24078, 24085, 24340, 29757, 29904, 30918, 31487.
Houldsworth, inquiry at, 27759, 27765, 27968.
Hummerbeck Colliery, 25819 (*pars.* 2, 4), 25862.
Indicators, provision, 28771, 28784.
Keeps, provision:
Advisability of provision, views as to, 25819 (*par.* 4), 25852, 25854, 25869, 25900, 26014, 26162.
Attendant in charge of, 25853, 25856, 25864, 25902, 25972, 26016, 26018, 26020, 26076, 26087, 26166.
Landings, number of, 26014, 26071, 27948.
Mid-shaft landings, 26072, 26162.
Sudden lightening or increasing of weight, power to avert accident in case of, question as to, 26089, 26095.
Landings, number of, 26014, 26071, 27948:
Mid-shaft landings, 26072, 26162.
Loading of men should be all at one time when cage has two or three decks, 24281.
Llynpia, brake accident at, 28855.
Number of accidents, 20962, 21350, 24244, 27824, 28408, 36153:
Report on, 27713 (*par.* 3), 27777.
Number of men riding in cage, 20871, 22146, 23866, 23965, 23976, 24038, 24092, 24223, 24255, 24347, 24352, 24385, 26133, 28346.
Board to decide this question, advocated, 24256.
Impression of men that increase is probable, 24278.
Orgreave accident, 24174, 24339.
Overwinding, &c.:
Brakes, *see that sub-heading.*
Detaching hooks (visors) or other mechanical appliances, 20216A (*par.* 16), 20380, 20384, 22149, 23847, 23851, 24082, 24284, 25019, 26152, 26196, 26270, 26322, 27781, 27953, 28169, 28173, 28256, 28259, 28406, 29753, 29837, 29340, 33073, 33083, 35943.
Compulsory use of, views as to, 24289, 24316, 26139, 27958, 33083.
Enginemen, *see that title.*
Number of accidents, 20962, 21350, 27824, 28408.
St. Helen's, 26163.
Shale Mines, *see that title.*
Signalling, 24177, 24206, 25819 (*par.* 5), 25881, 26164.
Telephone or speaking tube, suggestion as to, 28182.
Sinking shafts: distance between shafts, 20176.
Skelmersdale, 26147, 26161.
Speed of winding, 23855, 23956, 23998, 24021, 24088, 24249, 24348, 28171, 29772, 29847, 29855, 29864, 29890, 29892, 30115, 30165, 30262.
Starting engine the wrong way, automatic arrangement for prevention of, 24085.
Stokers, excessive hours of work, accident caused by, 27713 (*par.* 3), 27779.
Swinging cages, danger to men stepping on and off at mouthings, 24208, 24218.
Swinhill Colliery, 27931.
Time at which greater number of accidents takes place, 27895.
Westleigh, 26152.
Winding men against coal, objections to, 30166.
Wooden guides, use of, 25024, 29897.
Working of more than one seam in one shaft, danger of, 24171, 24293, 24337.
Accidents caused by, 24174, 24202, 24339, 32079.
Drift bringing men to one level, suggestion as to, 24192, 24215, 24293.
Cost, question as to, 24200, 24294, 24314.
Instance of, 24201.
Falls from insets, Witness knows of no cases of, 24207, 24214.

Digitized by Google

Shale Mines, Scotland:
Accidents:
Falls of roof and sides, 22705, 22768.
Haulage, 22683, 22739.
Investigation into under Accidents Enquiry Act, 22764.
Procurator-Fiscal, private practice as a lawyer, objections to, 22852.
Report, verbatim, supply of copy of, free, to relatives, advocated, 22852.
Ambulance wagons, desirability of provision, case proving, 22863.
Baths and facilities for changing clothes, desirability of provision, 22861.
Explosions of gas in shale mines, number of, 22676.
Gradient of shale mines, 22726.
Haulage accidents, number of, and suggestions for prevention of, 22683, 22739.
Ingleston, fatal accident from miss-fire shot at, 22823.
Inspection of mines by men:
Compulsory use of powers, advocated, 22843, 22855.
Independent practical workmen advocated for making inspection, 22843.
Owners and managers, attitude towards, 22845.
Inspection of mines by mines officials:
Appointment by employer, objections to, and suggestion as to appointment and dismissal by Government inspector and payment by employer, 22845.
Qualifications of firemen: certificate of competency advocated, 22847.
Inspectors, Home Office, number of, increase advocated, 22843.
Manager's certificate of competency:
Fees, abolition advocated, 22849.
Qualifications of candidates: "Five years' personal experience," loose interpretation of, 22849.
Safety lamps, use of in, no instance of, 22675.
Sanitation, improvement advocated, provision of sanitary conveniences, 22852.
Shaft accidents:
Act of Parliament: Coal Mines Regulation Act, General Rule 20 as to casing, lining, or otherwise securing shafts, 22791.
Breaking of winding ropes, 22701.
Examination and renewal of winding ropes, 22700, 22702.
Cages, bars advocated, 22848.
Examination of shaft, perfunctory character of, and suggestions as to amendment, 22697, 22790, 22792.
Overwinding, compulsory preventive measures advocated, 22849.
Special Rule 48 as to examination of machinery, ropes, &c., amendment advocated, 22792.
Shot-firing in, 22671, 22741:
Act of Parliament: Coal Mines Regulation Act, application also to shale mines, 22742.
Miss-fire shots:
Accidents arising from, 22823.
Period that should elapse before men should revisit spot, 22677, 22680, 22743, 22822.
Number of shots to be fired simultaneously, views as to, 22751, 22755, 22815.
Person firing shots, 22674, 22678.
Powder used chiefly, 22731.
Strum or fuse, shots fired by, 22679, 22751.
Time at which shots are fired, 22682, 22818.
Special Rules, endorsement by Joint Committee representing employers and men, advocated, 22848.
Timbering:
Accidents from falls of roof and sides, 22705, 22768.
Act of Parliament: Coal Mines Regulation Act, General Rule 21, amendment advocated, 22768.
Inspection of roof and sides, inadequacy of, 22705, 22728, 22769.
Perfunctory nature of present timbering, 22712.
Special Rules, 22714, 22842.
Supply of timber, person bringing timber to working face, &c., 22721, 22832.
Compulsion on owner and manager to supply timber at working face advocated, 22693, 22772.
Wages, readjustment in this event, views as to, 22786.
Lengths of timber, 22693, 22774, 22828.

Shale Mines, Scotland—*cont.*
Timbering—*cont.*
Supply of timber—*cont.*
Position to which timber is usually brought by management under present system, 22772.
Systematic timbering (crowns and rances every 3 feet in travelling roads), advocated, 22705, 22756, 22833.
Uniformity of seams in relation to, 22828.
Unskilled men working alone, General Rule 39 as to, loose interpretation of, 22849.
Ventilation:
Act of Parliament: Coal Mines Regulation Act, General Rule 1:
Adequate ventilation, clearer definition advocated, 22731, 22736, 22835.
Examination of air-currents, 22808.
Defect, chief, in, 22835.
Measuring of air-current, 22733, 22804, 22808, 22839.
Frequency of, 22810, 22814.
Water for drinking, provision advocated, 22852, 22857.

Shifts, *see title* Hours of Work.

Shot Firing:
Abolition in dusty and fiery mines, advocated, 25707.
Accidents, 22444, 22556, 22585, 24576, 30465, 32267, 32269.
Acts, Orders, and Regulations, 22429, 27191 (*par.* 2). (*See also title* Explosives in Coal Mines Order).
Between shifts, views as to, 20216A (*par.* 13), 20372, 22545, 22547, 22568, 24569, 25377 (*par.* 3), 25417, 25422, 25425, 25724 (*par.* 5), 25764, 27291, 30773, 34154, 34458, 34854, 37152.
Anthracite districts, South Wales, probable effect in, 34464.
Charge, weight of, 34153, 34297, 35671.
Coal-cutting machinery, shot-firing where used, 32257:
Neglect of rule as to permission from manager, 32280.
Danger of permitted explosives, 35937.
Detonator and explosive, person having charge of; supply of detonators to men, etc., 20216A (*par.* 14), 20366, 20582, 22441, 22548, 22552, 22554, 22588, 22656, 22659, 22661, 30777, 31816, 32264, 34158, 34300, 34317, 34742.
Drilling, stemming and charging, 22438, 22570, 22573, 22575, 27191 (*par.* 2), 27221, 27272, 27274, 27522, 30744, 30767, 30770, 30781, 31814, 32262, 36045, 36141, 36152.
Electricity, shot-firing by, 22443, 22448, 22556, 24765, 24799, 30776.
Explosives, *see that title.*
Explosives in Coal Mines Order, *see that title.*
Extent to which practised, 21811, 21865, 22437, 24795, 25416, 36039.
Gates, inspection by shot-firers, 20216A (*par.* 8), 20288.
In the coal, 27278, 34857.
Ironstone Mines, *see that title.*
Miss-fire shots, 20216A (*par.* 14), 20370.
Naked light mines, use of explosives in, 23169, 23182, 37049.
Notice to manager or under-manager and permission before shots are fired, 22568, 25431, 27282, 27285, 30765, 32280, 34297, 35670, 35673.
Number of shots fired:
One only at a time, interval before another shot is fired, 27292.
Report of number fired daily, 32285.
Person firing shots:
Age of, 37152.
Appointment of special official or man, practice in this respect, and views as to whether desirable, 20216A (*par.* 14), 20366, 21866, 22431, 22444, 22449, 22554, 22575, 22583, 24400, 24406, 24421, 24429, 24431, 24508, 24571, 24574, 24578, 24633, 24795, 24801, 25308, 25724 (*par.* 5), 30413 (*par.* 10), 30462, 30762, 36770, 32267, 34158, 34847, 35516, 35935, 36045, 37150, 37152.
Certificate for shot-firer, views as to whether desirable, 32269, 34847, 35935.
Offences in shot-firing which might be punished by fining, 37030, 37048.
Single individual carrying both explosive and detonator, views as to, and as to issue of detonators to men, 20216A (*par.* 14), 20366, 20582, 22441, 22548, 22552, 22554, 22588, 22656, 22659, 22661, 30777, 31816, 32264, 34158, 34300, 34317, 34742.

Digitized by Google

Shot Firing—*cont.*
Safety lamp mines, shot-firing in, 22545, 22547, 27541.
Shale Mines, *see that title.*
Storage of explosives in mine, contrary to regulations, 25811, 27786 *and note.*
Time allotted to, 25421, 25432.
Ventilation, insufficient to clear away the smoke from powder, 22302.
Watering in neighbourhood of a shot, 26352 (*par.* 2).
Withdrawal of men during, 33119:
Interval before men are allowed to enter place where shot has been fired, 27290.
(*See also title* Explosives.)

Shropshire: Witness giving evidence as to—Mr. Latham. (*For separate index to his evidence, see Index II.*)

Signals:
Improved methods, suggestion as to, 31343.
Separate code, when haulage engine is bringing coal from two separate districts, advocated, 35101.
Shafts, signalling in, 24117, 24206, 25819 (*par.* 5), 25881, 26164.
Telephone or speaking tube, suggestion as to, 28182.

Small Coal, deposit of, in goaf or waste, objections to, 32113, 32225, 32272, 35365.

Smoking, prohibition, 37032, 37051.

Somersetshire Miners' Association: Witness representing —Mr. Whitehouse. (*For separate index to his evidence, see Index II.*)

South Staffordshire and East Worcestershire: Witness giving evidence as to—Mr. Mansell. (*For separate index to his evidence, see Index II.*)

South Wales and Monmouthshire: Witnesses representing —Mr. Davies, Mr. Evans, Mr. Griffiths, Mr. Harris, Mr. Hopkins, Mr. Jenkins, Mr. D. W. Morgan, Mr. J. D. Morgan, Mr. W. G. Morgan, Mr. Powell, Mr. Richards, Mr. Roach, Mr. Thomas, Mr. Williams, Mr. Winstone. (*For separate indices to their evidence, see Index II.*)

South Wales Colliery Officials' Association:
Number of members, 27296:
Officials in Rhondda, Merthyr and Aberdare Valleys, 25712.
Witnesses representing, 27295, 27297, 27512.

Southern District, sub-division advocated, 19631.

Special Rules:
Advertisement of new rules before establishment, views as to, 23663, 25492, 25708, 25710, 30727, 31720, 33703, 33964, 35665.
Application to all new mines subsequently opened in district advocated, 20771 (*par.* 5), 33587.
Arbitration, principle of retention advocated, 19930, 20558, 20570, 20575, 21568, 30723, 33590, 33690.
Banksman, rules as to, 25867, 25870, 25906, 25908.
Board for consideration of, before introduction, 25485, 25501, 25702, 33584, 33683, 33716, 33860, 33959, 33967, 34057, 36944.
Codification and simplification, views as to, 27191 (*par.* 6), 27243, 27511 (*par.* 5), 27539, 30447, 33680.
Communication between men and Home Office, possibility of, 30446.
Copies of rules, supply of, to men, 19621 (*par.* 6), 19698, 19927, 25377 (*par.* 7), 25506, 27242, 27541, 28457, 28607, 28612, 30413 (*par.* 6).
Embodiment in General Rules, views as to, 20216A (*par.* 11), 20317, 33589.
Discussion between men and owners, or between men's representatives and owner's representatives, before introduction, views as to, 19701, 19708, 19929, 20216A (*par.* 10), 20313, 20555, 20561, 20702, 20716, 20771 (*par.* 5), 21279, 21463, 21475, 21659, 21826, 21919, 22014, 22121, 22948, 23582, 23643, 23652, 23665, 23673, 25377 (*par.* 6), 25485, 25702, 27070, 27120, 27330, 29811, 30131, 30198, 30413 (*par.* 6), 30443, 30721, 30907, 31440, 31716, 31870, 32025, 32041, 32077, 32412, 32513, 32601, 32812, 32863, 32870, 33025, 33041, 33709, 33723, 33782, 33956, 34096, 34254, 35097, 35436, 35525, 35526, 35660, 36013, 36022, 36624, 36935, 36957, 37207, 37298.
Leicestershire Warwickshire Nottingham and Derby Special Rules, revision, inadequate opportunity to men to make known their views, 36935.
Shropshire rules proving necessity for, 33025.

Special Rules—*cont.*
Electricity Rules, introduction of, 31904, 36946, 36956.
Engineers, 25831, 28663.
Engineman, winding, Special Rules as to, 25831, 25911, 25966, 25995.
Factory Act, application of similar procedure to introduction of Special Rules, views as to, 33592, 33693, 33965.
Foreign languages, translation into, posting up, and circulation of, 21129, 22863, 22871, 22889, 22897.
Inspection of mines by mines officials, Special Rules as to, 25377 (*pars.* 4 *and* 5), 33522.
Introduction of, general suggestions as to, 19929, 20556, 27191 (*par.* 6), 27241, 31904, 36621.
(*See also sub-headings* Advertisement; Arbitration; Board for; Factory Act; Discussion, Objections, and Suggestion).
Ironstone Mines, *see that title.*
Number of rules to be observed by stallmen, underground workmen and boys, 37066.
Observance of Special Rules, and knowledge and comprehension of rules by men, 20054, 20059, 21469, 23592, 23643, 25377 (*par.* 7), 25508, 27247, 27511 (*par.* 5), 30413 (*par.* 6), 30883, 32886, 35587.
Breach of rules, information as to, punishment of, 20619, 20627, 20669, 21987, 37032, 37043, 37051.
Objections, right of men to raise, before rules are established, 21479, 21567, 21831, 22014, 30898, 31866.
Instances of ignoring of objections and suggestions of men, 32513, 32601, 32805, 32843, 32859.
Veto, views as to, 20565, 20570, 20712, 23653, 30447, 30726.
(*See also sub-heading* Advertisement).
Suggestion of rules, views of witnesses as to:
By miners, 19948, 19950, 20721, 21570, 30140, 32866, 33962, 34097, 35444.
By owners, 25490, 25495, 25499, 30138, 30198, 32812, 32861, 33703, 33961, 33964, 35661.
By Secretary of State, 19621 (*par.* 7), 19700, 19931, 23653, 30134, 32865.
Timbering, *see that title.*
Uniform application, rules for, 36945.

Spontaneous Combustion:
Fife district, 23335, 23473:
Rescue apparatus, provision of, in relation to, 23478.
Small coal throwing into waste, danger increased by, 35365.
(*See also title* Ventilation, *sub-heading* Blackdamp and Gob Fires.)

Spragging, regulations as to, 27078, 27156, 34500.

Staffordshire Mines:
Accidents in, statistics as to, 36661, 36720, 36784.
Size of district and of mining population, 33256.
Proportion of lads becoming miners, 33260.
Size of mines, and average number of men employed in a mine, 33284.

Staffordshire, South: Witness giving evidence for—Mr. Mansell. (*For separate index to his evidence, see Index II.*)

Stallmen:
Definition, 24320.
Number of, 24160, 24167, 24320.
Qualifications, 37116, 37129:
Unskilled men, employment of, accidents caused by, 33049, 33433.
Size of stall (number of men working), 24159, 24168, 24318.
Timbering, undertaken by, 24160, 24164, 24170, 24323, 24330, 33049, 33433.

Stirlingshire: Witness giving evidence for—Mr. Webb. (*For separate index to his evidence, see Index II.*)

Surveyors, *see title* Plans.

Telephonic Communication, suggestions as to, 31863, 35208.

Temperature of Mines, 22621, 33119, 36875.

Thickness of Seams, 36686, 36728, 36789, 36811, 36897.

Timbering:
Accidents from falls of roof and sides, *see title* Accidents, *sub-heading* Falls of Roof and Sides.

Digitized by Google

Timbering—*cont.*
Act of Parliament and General Rules, 19707, 19841, 20060, 21086, 22620, 24918, 24928, 25377 (*par.* 1), 25388, 30065, 32420.
Bill proposed by Miners' Federation, suggestion as to timbering, 21085.
Chartermaster, system in relation to, 36662, 36715.
Chocking, systematic, suggestion as to, 29737.
Coal-cutting machinery, use of, in relation to, 23299, 23306, 23313, 25150, 32108.
Cogs, use of, suggestion as to, 31247.
Compulsory timbering, suggestion as to, 25206, 29737.
Consultation between managers and workmen advocated, 19704, 19708.
Contracts:
For packing roof down, not including timbering, 30407.
Reforms suggested, 23773.
Contractors, system of, 23989, 33413.
(*See also sub-heading* Chartermasters.)
Diagrams showing good and bad systems, exhibition of, for instruction of men, advocated, 26880.
Difficulty with Home Office Inspector as to, 36968, 36978, 37106.
Distances, 20060, 23783, 23792, 23882, 24007, 24049, 25024, 25178, 25198, 29737, 30342, 30405, 30516, 30958, 32420, 33044, 34416, 34905, 34909, 35180, 35192, 35278, 35312, 35332, 36973.
Consultation with inspector as to, advocated, 23792, 23795.
Consultation with workmen as to, before decision by manager, suggestion as to, 34510, 35279, 35312, 35332.
Arbitration in event of disagreement, 35322, 35333.
Responsibility in event of accident, 35325.
(*See also sub-heading* Systematic Timbering.)
Duplicate timbering as at Courrières, suggestion as to, 30319, 30330, 30332, 30344, 30366, 30374, 30378.
Examiner, duties of, in relation to, 25544.
Extent to which practised and extent desirable, 24117, 30341, 30451, 32059, 33848, 33973, 34192, 34499, 36686, 36732, 37212.
(*See also sub-heading* Systematic Timbering.
Inspection in relation to, 20397, 24113, 32421, 33758, 33781, 35746, 36643.
Testing efficiency of long-standing timbering, 27354.
Ironstone Mines, *see that title.*
Lids, suggestions as to, 25392, 26883, 27126, 29745, 29943, 30064, 30319, 30331, 30345, 30351A, 30374, 30388.
Manager, responsibility of, views as to, 24113, 24115, 25361, 35325.
Night work, timbering done by shifters under certain circumstances, 24495.
Person setting and person supervising, and views as to whether appointment of special men is desirable, 20136, 20396, 20771 (*par.* 6), 20849, 20856, 20941, 21068, 21073, 21245, 21250, 21501, 21547, 21662, 21665, 21834, 21839, 21996, 22127, 22218, 22252, 22373, 22536, 22604, 23297, 23309, 23323, 23467, 23608, 23644, 23761, 24114, 24160, 24164, 24170, 24323, 24326, 24330, 24489, 24533, 24694, 24822, 24918, 24946, 25119, 25123, 25195, 25221, 25377 (*par.* 2), 25547, 25724 (*par.* 3), 25741, 25772, 26880, 27203, 27263, 27270, 27299, 27309, 27383, 27489, 29962, 30066, 30081, 30100, 30349, 30407, 30477, 30510, 30960, 32058, 32065, 32108, 32192, 32414, 32421, 32530, 32817, 33049, 33433, 33759, 33781, 33982, 34255, 34268, 35258, 35260, 35517, 35599, 35720, 35849, 36008, 36076, 36079, 36645, 36684, 36729, 36968, 37116, 37129, 37303, 37355.
Advanced timber, setting, 36968.
Greater discretion to man himself as to setting timber, views as to whether desirable, 30413 (*par.* 7), 30453, 30481, 30486, 30513, 30521, 30540, 30834, 34102, 34197, 34427, 34484, 34893, 34937, 35125, 35172, 35233, 35256, 35262, 35326, 35358, 35446, 37311, 37330.
Knocking out of timber by deputy if set by miner without permission, possibility of, 30853, 34900, 34912, 35361.
Wages question in relation to, *see sub-heading* Wages.
Ripping in relation to, 30400.
Timbering—*cont.*
Shale Mines, *see that title.*
Sleepers, use of, 29948.
Special Rules:
Accidents, number of, not apparently reduced by, 21283.
Amendment of, views as to whether desirable, and as to working of rules, 19841, 19843, 23781, 23800, 31442, 31723, 31884, 31891, 32065, 32068, 32206, 36017.
Discussion with men, practice in this respect and views as to whether desirable, 20065, 21280, 21921, 23588, 32065, 32071, 32209, 35332, 36017, 36636.
Distances, consultation of men as to, 34510, 35279, 35312, 35332.
Lancashire, discussion before introduction in, 30366.
Gibbing of corks, Special Rule as to, 23734.
Introduction of, method of, 31908, 31913.
Letter from Secretary of State, 31917.
Observance and enforcement of, 21284, 22619, 23643, 31442, 31723, 31891, 32419, 32876, 36638.
Person setting, and person responsible for, &c., rules as to, 21992, 24926, 24931, 32202, 32420, 35286, 35330.
Supply of timber, Rules as to, and as to withdrawal of man if place is dangerous and supply of timber is insufficient, 22620, 24926, 24928, 24933, 30067, 32618, 32887, 36014, 36017, 36198, 37354, 37378.
Wages not increased in proportion to increased work demanded by Special Rules, 32206.
Withdrawal of timber, rules as to, 24018, 32850.
Sprags:
Old props, sprags made out of, 27156.
Regulations as to spragging, 34500.
Supply of, by owners, suggestion as to, 27078.
Steel bars, suggestions as to, 25029, 25286.
Supply of timber:
Adequacy of, views on this point, 25377 (*par.* 1), 25392, 29948, 30064, 32068, 32540, 32818, 35286, 37129, 37280.
Additional supply sent in before inspector's visit, 31852, 31939, 32171, 33204, 33405.
Withdrawal of men if supply is inadequate, 20059, 22619, 32618, 32844, 37280, 37380.
Length of timber supplied, 22611.
Lids and caps, 25392, 26883, 27126, 29745, 29943, 30064, 30068, 30319, 30331, 30345, 30351A, 30374, 30388, 30390.
Point to which timber should be brought, and method of bringing timber into mine, 21086, 26732, 26736, 27155, 29743, 32887, 36014, 36198.
Height of roads in relation to, 30074.
Responsibility for, 24530, 24533, 30256, 37354, 37378.
Withdrawal of men if supply is defective, 20059, 22619, 32618, 32844, 37280, 37380.
Systematic timbering, views as to whether desirable, 19621 (*par.* 8), 20140, 20771 (*par.* 6), 20849, 23297, 23781, 23882, 24053, 30405, 30411, 30413 (*par.* 7), 30451, 30521, 30847, 32528, 33847, 33972, 34099, 34264, 34321, 34413, 34467, 34497, 34724, 34892, 35098, 35142, 35147, 35180, 35192, 35252, 35277, 35312, 35356, 35450, 36968, 37106, 37111, 37211, 37309, 37363.
Definition of systematic timbering, 37309.
Systems of timbering, 24678, 25029, 25286, 25377 (*par.* 1), 25724 (*par.* 3), 25740, 27072, 27104, 27160, 27167, 35446, 35599, 35719, 35724, 35849.
Duplicate timbering as at Courrières, suggestion as to, 30319, 30330, 30332, 30344, 30366, 30374, 30378.
"Tipping" system, effect of on efficiency of timbering, 26702, 26755, 26788, 26794, 26979.
Wages question in relation to timbering, 20137, 21845, 21996, 22129, 22135, 22221, 22225, 22254, 22537, 22540, 22544, 23470, 23609, 23644, 23713, 23761, 23776, 27495, 30093, 32065, 32070, 32074, 32623, 32844, 34103, 34192, 34327, 34432, 34893, 34938, 35128, 35139, 35174, 35238, 35254, 35741, 35743, 37311, 37313, 37320, 37330, 37357, 37381.
Withdrawal of men if place is insufficiently timbered, 20059, 22619, 32618, 32844, 37280, 37380.

Timbering—*cont.*
Withdrawal of timber, 23801, 23809, 23813, 24008, 24101, 24325, 24330, 24415, 24465, 24472, 24486, 24536, 24541, 24553, 24556, 24559, 24564, 24633, 24659, 24668, 24682, 24694, 24760, 24824, 24832, 25361, 25398, 25403, 32065, 32850, 33760.
Number of accidents from, 24760, 24832.

Timsbury Explosion, Coroner's inquest, Trade Union represented by counsel at, 32638.

Tirpentwys Colliery, Pontypool, accident caused by defective winding rope, 34716, 34789, 34806, 34817, 34819.

Trains of Men (underground trains):
Accidents to, 30967, 30972, 30981.
Compulsion as to use of not practised, 30973.
Gradients, 30969.
Precautions taken, 30971.

Trams, *see Wagons.*

Transvaal:
Commission on Safety Catches, report of, on accidents caused by overwinding, 28235.
Engine-winders' certificates of competency, 26608, 27713 (*par.* 1), 27720, 27804, 28025, 28112.
Examination, outline of, 27724.

Travelling Ways, *see title* Haulage Accidents and Haulage Roads, *sub-heading* Prevention.

Tredegar, accident in engine-house, 28428, 28590, 28595.

Trimsavara, accident caused by defective coupling of wagons, 31238.

Trolley-man, calling deputy away from other work to remove obstructions, &c., 24438, 24455, 24527, 24717.

Truck Act, provisions of, in relation to firing, 19820, 20693, 29953, 34989, 34996, 35002, 35637, 36483, 36488.

Under-Manager:
Appointment by manager having control of several mines, objections to, 33559.
Certificates, examination for:
Character of, 32885.
Local examinations advocated, 32446.
Marks for practical knowledge, 36054, 36094, 36185.
Qualifications of candidate—definition of "practical experience," 32129, 33659, 36059.
Viva-voce examinations, 32449.
Duties of, effect on, of decline of contractor system, 33371, 33413.
Status of, 24434, 24439.

Underground Communications, rule as to in Indian Mines Act, 33574.

Underground Trains, *see title* Trains.

United Engine-Keepers Mutual Protection Association, Scotland, *see title* Enginemen (Winding), *sub-heading* United Engine-Keepers, &c.

Unskilled Men, employment of, 20157, 20216A (*par.* 19), 20395, 20885, 20894, 21114, 21258, 25117, 25780, 27191 (*par.* 2), 27230, 30306, 30940, 31323, 32567, 32789, 33433, 34601, 34922, 35338, 35884, 36821, 37131.
Accidents in relation to, 25780, 30941, 31040, 31323, 31327, 33049, 33051, 33224, 33396, 35339, 35344, 36828, 36866.
Act of Parliament: Coal Mines Regulation Act, General Rules, 20889, 20893, 24946, 25299, 25301, 25305.
Age limit after which man should not be allowed to begin work in mines, 33227, 33439
Attitude of men as to employment of, 27454, 27527.
Bill proposed by Miners' Federation, clause as to, in, 21170.
Boys, employment of, *see* Boys.
Census placed before Eight Hours' Committee, 20886.
Certificate of competency as a preventive, views as to, 27307, 27444, 27449, 27511 (*par.* 4), 27526, 27586, 27605.
Charter-master system in relation to, 36822.
Classes from which drawn, 36831.
Competency of miners, views as to, 27612, 27707.
Contractors, employment by, 23716.

Unskilled Men—*cont.*
Drawers or loaders, employment of unskilled men as, by colliers, 33229, 33396.
Consent of manager necessary, 33242.
Friendly society statistics, as to, 33051.
Ironstone Mines, *see that title.*
Leasing of mine by owner, probable introduction of unskilled labour in event of, 36866.
Number of unskilled men that may work under one skilled man, 20893, 24956, 25300.
Shale Mines, 22849.
Working alone, prohibition, 24946, 25299, 25305, 27134, 27527.

Ventilation:
Act of Parliament regulating: Coal Mines Regulation Act, General Rule 1 as to ventilation, views as to and as to whether clearer definition of adequate ventilation is possible or desirable, 22304, 24876, 25030, 25094, 25187, 25223, 25243, 26427, 26467, 26637, 26811, 26890, 27191 (*par.* 5), 27240, 27401, 27511 (*par.* 7), 27555, 27678, 33389, 33992, 34095, 34924, 35016.
Adequacy of ventilation, condition of mines as to, 21650, 21957, 22942, 22955, 23132, 23146, 23236, 25189, 25225, 25244, 31021, 31072, 31081, 31084, 31196, 32947, 33117, 36880, 36888, 36982, 36991, 36998, 37020, 37026.
Black damp and gob fires, 21652, 21864, 21945, 21954, 21960, 22298, 23136, 32948, 36880, 36882, 36884, 36887, 36895, 36897, 36998, 37020.
Health of miners, effect of black damp on, 21948, 23138.
Complaints as to, 25230, 25294.
Dilution of gas if found in small quantities, 25460, 25605.
Examination, measurement, record, &c., 19621 (*par.* 13), 22295, 22298, 25030, 25075, 25611, 26658 (*par.* 8), 26685, 26810, 26825, 26860, 26888, 26933, 31090.
(*See also sub-heading* Safety Lamps.)
Fan system, 25229, 28729.
Inspection of mines by men in relation to, 21228, 25237.
Ironstone mines, *see that title.*
Method of working mines in relation to, 37142.
Plan or diagram of, exhibition at surface advocated, 30413 (*par.* 12), 30471.
Responsibility for, and duties of officials in relation to, &c., 24876, 25030, 25061, 25243, 25256, 25260, 25544, 26812, 27385, 31090.
Safety lamps, indications of gas furnished by, 25099, 25185, 25222, 25230, 26434, 26478, 26637, 26826, 26935, 27402, 31021, 34923.
Definition of a cap, 27415.
Oil used and type of lamp, effect of, 24888, 24893, 24914, 25091, 26352 (*par.* 2), 26426, 26431, 26467, 26478, 26549, 27411, 27414, 34923, 35016.
Ordinary workmen should not be allowed to test for gas, 19751.
Uncertainty as to point at which cap of gas becomes dangerous, 34924, 35016.
Withdrawal of men, signal for, 26549, 26687, 27043, 27407, 27555, 27679, 33117, 33998, 34050, 34924, 35016.
Shale Mines, *see that title.*
Stopping of, practice as to in Black Country, 36889.
Sudden accumulation of gas, 25640
Westphalian Mines, standard in, 34005
White damp (carbon monoxide), 22305.
Withdrawal of men, if ventilation is defective, 26549, 26687, 27043, 27407, 27555, 27679, 33117, 33998, 34050, 34924, 35016.

Wages:
Accidents, number of, in relation to: effect of piece-work or day-wage systems, &c., 20137, 20853, 21844, 22135, 22225, 22254, 22260, 22264, 22279, 22282, 22285, 23714, 27491, 27495. 35741, 36356, 36410, 36741, 36797. (*See also title* Timbering, *sub-heading* Wages).
Firemen or deputies', 20049, 20825, 20927, 21655, 21816, 21864, 21868, 21870, 21967, 22242, 22353, 22365, 22960, 23275, 23280, 23,458, 23,460. 23509, 23518, 23702, 24119, 24671, 24673, 24676, 24712, 24748, 24754, 25572, 25631, 30314, 33362, 35895, 37373.
Method of payment, Lanarkshire, 21337.
Minimum wages, 36407.
Safety-lamp mines, wages in, 19831, 21177, 21189, 22474, 23405, 36991, 37121.

Digitized by Google

Wages—*cont.*
Timbering, wages question in relation to, *see title* Timbering, *sub-heading* Wages.
Under officials, wages of, 35895.

Wagons:
Balance wheel, 29793, 29888.
Couples and shackles, 31226, 31238, 31298, 35289.
Guards or handles on, 27092, 27135.
Loading, 19621 (*par.* 10), 19741, 20069, 20604, 35110, 35157.
Painting with luminous paint, suggestion as to, 36037.
Position of driver or haulier, 20151, 35593.
Repair of, 35111.
Riding on, 27658, 30915, 30966, 31311, 31347, 35588.
Runaways, prevention, 19732, 20145, 20216A (*pars.* 12 *and* 13), 20334, 20337, 20341, 20758, 20768, 20771 (*par.* 7), 20886, 20870, 21256, 21257, 21687, 22490, 22494, 22577, 22968, 22971, 23830, 23840, 23928, 23935, 24068, 25016, 25346, 25351, 29787, 30125, 30264, 30913, 31231, 31241, 31300.
Clips, illustrations of, 23830, 23835, 23932.
Jigs and lockers, 30170.
Scotches, 29787, 29889, 30169.
Trailer and devil, 30123, 30912.
Size of wagons, 29802.
Type of wagons, 19621 (*par.* 10), 19741, 20070, 20216A (*par.* 18), 20392.
(*See also title* Haulage.)

Wales:
North Wales: Witnesses giving evidence as to—Mr. Hughes, Mr. Thomas and Mr. Watson. (*For separate indices to their evidence, see Index II.*)
South Wales: Witnesses giving evidence as to—*see titles* South Wales and Monmouthshire.

Wallingford Colliery, Midlothian, engine-winders' dispute, employment of unskilled men during, 27713 (*par.* 1), 27742, 27873, 27912.

Water for drinking purposes, 22502, 22852, 22857, 22982, 23104, 23123, 23127.

Water Supply in relation to provision of baths, 35905.

Watering in Mines:
Compulsory, views as to, 26352 (*par.* 2).
Extent to which dust can be cleared away by, 26352 (*par.* 2).
Haulage roads, watering, views as to, 33054.
New South Wales, *see that title.*
Zones watered, 26352 (*par.* 2)

West Lothian Coal Miners' Association: Witness representing—Mr. J. Wilson. (*For separate index to his evidence, see Index II.*)

Western Valley Colliery, accident from fall of roof and sides, 34900, 34912.

Westphalian Mines, standard of ventilation in, 34005.

Whitehaven Collieries:
Haulage accident at, 36025.
Inspection of mines by men, report as to gas, alleged not to have been sent to inspector, 36117.
Station beyond which men must not pass until examination has been made, breach of rules as to 36129.

Wigan Coal and Iron Company's Works, Training of engine-winders at, 25953, 26006, 26218.

Withdrawal of Men:
In event of suspected danger, suggestion as to powers to inspector, 32379, 32701.
Timbering, insufficient, withdrawal in event of, 20059, 22619, 32618. 32844, 37280, 37380.
(*See also title* Ventilation, *sub-heading* Withdrawal.)

William Pit:
Dust in, 36136.
Explosion in, 36144.
Shot-firing, question as to, 36141.

Winding Enginemen, *see title* Enginemen (Winding Enginemen).

Wingate Colliery Explosion, rescue work at, 35486.

Women:
Employment of, 22650, 22655, 34827.
Hours of work, 34828.
Sanitary conveniences, 22654.

Worcestershire, East: Witness giving evidence for—Mr. Mansell. (*For separate index to his evidence, see Index II.*)

Yorkshire: Witnesses giving evidence as to—Mr. Guest, Mr. Pickering and Mr. Smith. (*For separate indices to their evidence, see Index II.*)

Yorkshire Miners' Association:
Number of members, 31993.
Witnesses giving evidence for, 31365, 31991.

Digitized by Google

INDEX II. (The Evidence of each Witness Indexed Separately).

ADAMSON, Mr. WILLIAM, Assistant Secretary, Fife and Kinross Miners' Association. (*See questions* 23227—23518.)

Accidents :
- Coal-cutting machinery, number of accidents probably increased by, 23502.
- Haulage accidents, prevention, compulsion as to advocated, 23332.
- Investigation under Fatal Accidents Enquiry (Scotland) Act :
  - Adequacy of, views as to, 23339, 23415.
  - Second enquiry, right of demanding, 23341, 23415.

Ankylostomiasis :
- Conditions in Fifeshire favourable to propagation of, question as to, 23489.
- Sanitary condition of mines, 23491.
- Sanitary conveniences, question as to, 23496.

Bill promoted by Miners' Federation, clause as to investigation of accidents, second enquiry, 23341.

Brown, Mr., or Mr. Wilson, evidence of, reference to, 23384.

Coal-cutting Machinery :
- Accidents, number of, probably increased by use of, 23502.
- Increased use of, in Fife, 23300.
- Timbering system in relation to, 23299, 23306, 23313.

Deep Mines, coal supplies of the future in Fife will probably be drawn from, 23234.

Discipline :
- Character of Fife miners as to, 23283, 23286.
- Trade Union officials, encouragement by, 23294, 23347.

Dust in mines, increase of, by use of coal-cutting machinery, 23507.

Fines :
- Agreement between men and officials as to, 23498.
- Dismissal as alternative, 23499.
- Objections to, and suggestions as to abolition of, 23295, 23499.

Firemen, *see title* Inspection of Mines by Mines Officials.

Foreigners :
- Discipline, 23286.
- English language, knowledge of, 23286.
- Number employed in Fife, 23284.

Haulage Accidents, prevention, compulsion as to advocated, 23332.

Inspection of Mines by Men :
- Object of this inspection, 23383.
- Owners and managers :
  - Attitude of, possible effect on man making adverse report, 23271, 23389.
  - Interests of, protection of, views as to, 23398.
- Qualifications of men making inspection :
  - Disputes between owners and men : Inspection by agent of Miners' Union in event of, 23393.
  - Extension to include men who have been practical working miners, advocated, 23267, 23382, 23454.

Inspection of Mines by Mines Officials :
- Dismissal of fireman by manager, objections to, and suggestion as to Government control, 23366.

ADAMSON, Mr.—*cont.*

Inspection of Mines by Mines Officials—*cont.*
- Dismissal of fireman by manager—*cont.*
  - Report, adverse, might possibly lead to dismissal, 23512.
  - Responsibility of manager in this event, views as to, 23372.
- Districts, size of, decrease advocated, 23323, 23331, 23468.
- Duties other than inspection performed by firemen, and views as to limitation, 23321, 23324, 23326, 23515, 23518.
- Timbering, supervision by, advocated, 23323.
- Importance of firemen, 23282, 23367.
- Qualifications of firemen, class of men appointed, desirability of certificate, &c., 23241, 23273, 23278, 23361, 23458, 23515.
- Wages of firemen as compared with colliers, 23275, 23280, 23458, 23460, 23509, 23518.

Inspectors, Home Office :
- Adequacy of inspection by, views on this point, and as to what constitutes adequate inspection, 23245, 23248, 23354.
- Number of times that Witness has seen inspectors inspecting, 23246.
- Assistant surveyor, assistant manager or chief engineer, appointment as Government inspectors undesirable, 23424.
- Districts, size of, and suggestion as to decrease, 23261.
- Number of inspections desirable, 23251, 23353, 23359.
- Number of inspectors, increase advocated, 23249, 23255, 23261, 23464.
- Number proposed, 23264, 23356.
- Surprise visits, 23254.
- Working miners, men who have had experience as, appointments as additional inspectors advocated, 23256, 23419, 23424, 23465.

Managers :
- Efficiency, increased, demanded by recent mining developments in Fife, 23238, 23344.

Managers' Certificate of Competency :
- Number of practical miners holding, 23422, 23440.
- Qualifications of candidates, 23449.

Prosecutions :
- Advantages of, 23291, 23295.
- Expenses of defence only paid by Union when man is supposed to be wrongly charged, 23292.
- Number of, 23289.

Qualifications of Witness, 23227, 23243, 23343.

Rescue Apparatus, importance of provision of in mines subject to spontaneous fires, 23478.

Safety Lamps :
- Charge for, 23410.
- Compulsory introduction, right of inspector to insist on certain conditions, advocated, 23336, 23403.
- Objections to, not raised by men, 23404, 23413.
- Types of, testing and scheduling by Home Office advocated, 23484.
- Wages, extra, paid to men where safety lamps are used, 23405.

Sanitary Condition of Fifeshire mines, 23491.
- Sanitary conveniences, question as to, 23496.

Spontaneous Combustion :
- Accidents, number caused by, 23474.
- Destruction to coal by, 23475.

Digitized by Google

ADAMSON, Mr.—*cont.*
Spontaneous Combustion—*cont.*
Extent of, in Fife, 23335, 23473.
Rescue apparatus, importance of provision in mines subject to, 23478.

Timbering :
Coal-cutting machinery, system of timbering suggested where used, 23299, 23306, 23313.
Person setting—men themselves, 23297, 23309, 23467.
Special Rules, 23299, 23308.
Supervision of, 23298, 23323, 23468.
Systematic timbering advocated, 23297.
Wages, piece-work, effect of, on, 23470.

Ventilation : Amount of gas in Fife collieries, 23236.

Wages, piece-work, effect of, on efficiency of timbering, 23470.

BRAITHWAITE, Mr. J., Cleveland Miners' and Quarrymen's Association. (*See questions* 29539—29657.)

Accidents :
Inspection of mines by men after, 29651.

Chargemen, duties and qualifications of, 29574.

Deputies :
Adequate inspection, impossibility of, owing to present size of districts, 29544, 29552, 29562, 29568, 29597, 29614.
Increase in number of deputies preferable to reduction in size of districts, 29616.
Size of districts should be left to managers, 29621.
Appointment of :
Examination for, advocated, 29542, 29563.
Qualification of candidates, 29542.
Efficiency or otherwise of men appointed as deputies or assistants, 29544, 29550, 29561, 29571.
Two skilled men working together, 29571.
Method of inspection, 29597, 29599.
Responsibility of, 29545.
Timbering, *see that title.*

Drilling Machine, person in charge of, 29574.

Inspection of Mines by Men :
Accidents, fatal, inspection after, 29651.
Extent to which practised, 29590.
Frequency of question as to inspection before lapse of month in event of any dangerous occurrence, 29656.
Qualification of men for making inspection—employment in same mine, &c., 29628, 29639.
Reports not affected by fear of reprisals on part of owners ; defects complained of soon remedied, 29591, 29639.
Time occupied in, 29625.
Value of, 29626, 29649.

Inspection of Mines by Mines Officials :
Before men begin work, adequacy of inspection, 29567.
(*See also title* Deputies.)

Inspectors, Home Office :
Number of inspections desirable, 29588.
Working miners, appointment as assistant inspectors advocated, 29589, 29619.

Method of working Ironstone Mines, 29579.

Qualifications of Witness, 29539, 29595, 29630.

Shot-firing :
Chargeman or driller, duties and qualifications of, 29574.
Examination of place after shots are put in, 29610.
Person firing shots, duties and qualifications of, 29574, 29586.

Stanghow :
Adequate inspection by deputy, impossibility of, owing to size of district, and appointment of unskilled assistants, 29543, 29558, 29598, 29614.

Stephens, Mr., and Mr. Toyn, evidence of, references to, 29542, 29568, 29619.

BRAITHWAITE, Mr.—*cont.*
Timbering :
Accidents to roof and sides, danger of, 29564.
Deputies, work of, in relation to :
Inspection, 29612.
Responsibility, excessive, when unskilled assistants are appointed, 29546, 29553.

BROWN, Mr. JAMES, President of the Ayrshire Miners' Association. (*See questions* 22928—23226.)

Accidents :
Haulage accidents, *see that title.*
Two men should work together in isolated positions or at night as precaution in case of accident, 22973, 23060.

Baths and facilities for changing clothes at pit-head, provision desirable, 23149, 23186.
Attitude of miners as to, 23150, 23201.
Charge for use, views as to, 23206.
Houses occupied by miners in relation to this necessity, 23153, 23186.
Number required for one pit, 23209.
Shower-baths, 23212.

Black Damp, 23136 :
Health of miners, effect of on, 23138.

Explosion at Annbank Colliery, 22959.

Explosives :
Consultation of workmen before introduction of new explosives advocated, 22977, 23077, 23169, 23182.

Explosives Order as to introduction of new explosives, 23079.

Fines :
Abolition advocated : prosecution preferable, 23180.
Extent to which inflicted, 23175.
Objection of men to, 23177.

Haulage Accidents, prevention of, compulsion as to advocated, 22966, 22970 :
Chains, 22968.
Cost of appliances not prohibitive, 22971.
Runaway points, 22968.

Houses, single-roomed, occupied by miners :
Double houses for men with large families, attempt of employers to provide, 23196, 23200.
Improvement in houses now being built—all two-roomed, 23161, 23187.
Local authorities, medical officers of health, &c., attitude on this question, 23186, 23197.
Number of in Ayrshire, 23153.
Period at which built, 23157.
Size of rooms, 23192.

Inspection of Mines by Mines Officials :
Discharge of firemen should not rest with manager, 23030 :
Arbitration, 23043.
Responsibility of manager in this event, 23048.
Importance of firemen, 22963.
Number of firemen employed in pits, 23014.
Qualifications, class of man appointed, and desirability of certificate of competency, 22950, 22961.
Wages, amount of, 22960.

Inspectors, Home Office :
Accidents, inspection after, 22947.
Adequacy of inspection, views on this point, and as to what constitutes adequate inspection, 22943, 22997, 23026.
Number of times that Witness has seen an inspector inspecting, 22934.
Time that would be occupied in making adequate inspection, 23002.
Area that would have to be covered in adequate inspection, 23003.
Number of inspections, increase advocated, 22943, 22949, 22986, 23022.
Compulsion as to number, advocated, 22995.
Number of inspectors, increase advocated, 22949, 22985.
Surprise visits, 22947.

Digitized by Google

BROWN, Mr. J.—*cont.*
Managers :
Adequacy and efficiency of views as to, 23115, 23214.
Discharge of firemen should not rest with manager, 23030.
Arbitration, 23043.
Responsibility of manager in this event, 23048.
Discharge of manager should rest with owner, 23031.
Explosives, knowledge of, 23091, 23119.

Managers' Certificate of Competency :
Adequacy of examination, 23118, 23214.
Qualifications required for candidates for examination, 23221.

Qualifications of Witness, 22928, 22999.

Safety Lamps, extent to which used in Ayrshire, 22957, 23167.

Shot-firing :
Introduction of new explosives, 22977, 23077, 23169, 23182.

Ventilation, character of Ayrshire collieries as to, 22942, 22955, 23132, 23146.
Black damp, 23136, 23138.

Water for drinking, provision advocated, 22982, 23104, 23123.
Cost of, question as to, 23106.
Points to which water might be taken, 23108, 23112, 23127.

BROWN, Mr. ROBERT, Secretary of the Scottish Miners' Federation. (*See questions* 22040—22374.)

Accidents :
Falls of roof and sides, number of, 22138.
Haulage accidents, 22142.
Shaft accidents, *see that title.*
Wages: piece-work, effect of, on number of accidents, 22255, 22282.

America, baths and facilities for changing clothes, provision in, 22312.

Ankylostomiasis, prevention of: Discussion by Conciliation Board, as to baths and facilities for changing clothes, 22314.

Baths and facilities for changing clothes at pit-head, provision advocated, 22310.
Charge for, views as to, 22317.

Bill proposed by Miners' Federation: number of inspectors required under, 22270.

Coal Mines Regulation Act, Section 50, manager's responsibility under, 22333.

Discipline :
Character of Scottish mines as to, 22050, 22154.
Trade Union officials, encouragement by, 22126, 22249.
(*See also title* Fines and Prosecution.)

Employers' Liability Act, responsibility of managers under, 22333.

Enginemen, *see title* Shafts.

Fines :
Advantages or disadvantages as compared with prosecution, 22250.
Extent to which fining is practised, 22245.
Method of payment, 22248.
Wrongly inflicted, question as to, 22246.

Foreign Workmen, employment of, in Scotland:
Efficiency and discipline, 22322.
Source from which efficient miners are drawn, 22342.
Extent of (number employed), 22318, 22348.
Language, difficulties as to, 22328.
Manner of introduction, 22321.
Offences with which charged before Sheriff, 22347.

Haulage Accidents, prevention, compulsion as to, advocated, 22142.

BROWN, Mr. R.—*cont.*
Inspection of Mines by Men :
Amount of work involved, 22177.
Extent to which practised, 22105, 22177.
Owners and managers, attitude towards, possible effect on men making adverse report, 22180, 22291.
Qualifications of men, extension to include men "who have been" practical miners, advocated, 22103.

Inspection of Mines by Mines Officials :
Adequacy of inspection, views on this point, 22112, 22189.
(*See also sub-heading* Qualifications.)
Dismissal of fireman by manager, objections to, and suggestions as to control by Government, 22205, 22291, 22203, 22115, 22355, 22365.
Reports, accuracy of, effect of present system on, 22117, 22291, 22303, 22334.
Instance of, 22295, 22298.
Responsibility of manager for appointment and efficiency of firemen in this event, 22205, 22208, 22332.
Districts, size of, reduction advocated, 22112, 22189, 22192, 22341.
Duties other than inspection performed by, and suggestions as to limitation, 22243, 22341, 22371.
Timbering, supervision of, views as to, 22127, 22373.
Importance of firemen, 22108.
Number of, increase advocated, 22342.
Qualifications of firemen, class of men appointed, and desirability of certificate of competency, 22107, 22183, 22197, 22206, 22240, 22268, 22297, 22350.
Loss of certificate, views as to, 22369.
Wages :
Comparison with colliers' and suggestion as to increase, 22242, 22353.
Contribution from Home Office in event of control over dismissal, views as to, 22365.

Inspectors, Home Office :
Adequacy of inspection by, views on this point, and as to what constitutes adequate inspection, 22062, 22064, 22071, 22079, 22085, 22100, 22155.
One man should examine one pit, 22160.
Time that would be occupied in adequate inspection, 22158, 22162.
Districts, size of, decrease advocated, 22271.
Number of inspections desirable, 22074.
Number of inspectors, increase advocated, 22061, 22073, 22167.
Number required, 22074, 22087, 22270.
Working miners, men who have had experience as, appointment advocated, 22090, 22097, 22170, 22273, 22278.

Maclaren, Mr., evidence of, reference to, 22177; 22339, 22341.

Managers :
Dismissal of, views as to, 22368.
Dismissal of fireman, powers as to, *see title* Inspection of Mines by Mines Officials, *sub-heading* Dismissal of Fireman.
Qualifications: suggestions as to experience underground, 22094, 22173.

Manager's Certificate of Competency, qualifications of candidates, suggestions as to, 22094.

Metalliferous Mines, baths and facilities for changing clothes in, 22315.

Prosecutions :
Advantages and disadvantages as compared with fining, 22250.
Expenses, payment by Union not practised except under certain circumstances, 22056.

Qualifications of Witness, 22040, 22063, 22151.

Ronaldson, Mr., evidence of, reference to, 22053.

Shafts :
Cage, number of men in, 22146.
Enginemen (winding):
Competency of, views as to, and as to desirability of certificates, 22144.

Digitized by Google

BROWN, Mr. R.—*cont.*
Shafts—*cont.*
Engine men (winding)—*cont.*
Two at each engine while men are being raised or lowered, advocated, 22145, 22150, 22235.
Emergency arising from illness:
Instance of, 22339.
Mechanical appliance for stopping engine in event of, 22149.

Shot-firing, smoke arising from powder, complaints as to, 22302.

Special Rules, discussion with men, suggestions as to, 22121.

Timbering:
Persons setting, special appointment, views as to, 22127, 22218, 22252.
Wages, readjustment in this event, views as to, 22129, 22221.
Supervision by firemen, views as to, 22127, 22373.
Wages, piecework, effect of, on efficiency of timbering, 22135, 22225, 22254.

Ventilation:
Adequate, no standard of, 22304.
Black damp, 22298.
Defective, not reported by fireman, instance of, 22295, 22298.
White damp (carbon monoxide), 22305.

Wages:
Firemen's, 22242, 22353, 22365.
Piecework:
Abolition advocated, 22135, 22225, 22254.
Attitude of miners on this point, 22140, 22260, 22280.
Accidents, number of, under piecework and day-work systems compared, 22255, 22282.
Amount of money earned under piecework and day-work systems compared, 22264, 22279, 22285.
Timbering by special men, readjustment of colliers' wages in event of, views as to, 22129, 22221.

CHARLTON, Mr. W. B., Secretary, Durham County Colliery Enginemen's and Boiler-Minder's Mutual Aid Association. (*See questions* 25819—26142.)

Bill promoted by National Federation of Enginemen's and Boilermen's Associations, for tests for persons in charge of engines and boilers, 25827, 25938.
Report on, of Select Committee on Steam Engines and Boilers (Persons in Charge) Bill, 25829.

Coal Mines Regulation Act, 1887, General Rules as to men in charge of engines, 25831.

Committee, Select, on Steam Engines and Boilers (Persons in Charge) Bill, report of, against Bill promoted by National Federation, 25829.

Cumberland Enginemen's Friendly and Protection Association, Rule as to training of enginemen, 25952.

Durham County Enginemen's Association:
Number of members, **25992.**
Training and qualification of enginemen, regulations as to, 25819 (*par.* 3), 25835, 25836.
Instances of enginemen not holding this certificate, 25989.
Number of men trained, 25837.
Witness representative of, 25820.

Engineer, duties of, 25911.

Enginemen or Boilermen going alone down pit when otherwise empty, objections to, 25819 (*par.* 7), 25880, 25886*a*, 25980, 26060.

Engine-Winders:
Age limit, 26119.
Old age, absence of any limit as to, and views as to whether desirable, 26120.

CHARLTON, Mr. W. B.—*cont.*
Engine-Winders—*cont.*
Competency of, 25988.
Death or sudden illness while at work, 26131.
Substitute in cases of illness, 25875, 26048.
Hours of work and suggestion as to reduction, 25819 (*par.* 6), 25873, 25908, 25977, 26045.
Relieving man failing to appear, engineman continues work, 25918, 26048.
Wood, Sir Lindsay, Speech on in 1897, 25819 (*par.* 6), 25872, 25971.
Importance of engine-winder, number of lives in charge of, &c., 25819 (*par.* 6), 25971.
Medical examination, question as to, 26130.
Number of enginemen, 25916.
Training and qualifications:
Bill promoted by Engineers' Association, *see title* Bill.
Cumberland Enginemen's Friendly and Protection Association, Rule as to, 25952.
Durham Enginemen's Association, regulations as to, 25819 (*par.* 3), 25835, 25836, 25847, 25848, 25944, 25957, 25963, 25989, 26024, 26100.
Effect, probable, on, of decision by Government to undertake examination and certification, 25950, 25958, 26001, 26033, 26105.
Method of training described, 26003, 26011.
Nature of certificate and examination, 25963.
Responsibility of engine-winder for accidents caused by apprentice, 25997, 26039.
Selection or rejection of men to be trained, right of, views as to, 25835, 25953, 25993, 26002, 26031.
Text of Rule as to, 25948.
Enginemen's, Boilermen's and Firemen's Amalgamated Association of Great Britain, Rules as to, 25952.
Government, examination and certification of men by, advocated, 25819 (*par.* 1), 25827, 25837, 25840, 25843, 25849, 25928, 25949, 25956, 25989, 26001, 26033.
Preliminary examination as to fitness, 25935.
Teaching should not be forced on men unwilling to undertake it, 26033, 26115.
Training, possible decision of Government to undertake, 26105.
St. Helen's Association of Colliery Enginemen, Rules as to, 25952, 26042.
Wigan, Bolton and District Colliery: Enginemen's Mutual Protection Association Rules, 25952.
Wigan Coal and Iron Company's Collieries:
Difficulty at, in 1895, statement by witness as to selection of men for training, 25953.
System of training adopted at, 26006.

Haulage Accidents, prevention of, suggestions as to, 25819 *et seq.*

National Federation of Enginemen's and Boilermen's Associations of Great Britain, Witness representative of, 25821, 25825.
(*See also title* Bill.)

National Federation of Enginemen's Protective Associations Conferences:
Responsibility of enginemen for mistakes made by apprentices, statement as to, 26040.
Selection of persons to be trained as enginemen, statement as to, 26010.

Qualifications of Witness, 25820, 25928, 25951.

St. Helen's Association of Colliery Enginemen, Rule as to training of enginemen, 25952, 26042.

Shaft Accidents:
Bebside Colliery, Northumberland, 25819 (*par.* 5), 25881, 26077.
Boldon Colliery, Durham, 25819 (*par.* 4), 25974. 26085.
Engine-winders, *see that title.*
Hummerbeck Colliery, 25819 (*pars.* 2 *and* 4), 25862, 25990.

Prevention of, suggestions as to, 25819 (*par.* 1 *et seq*).
Brakes, 26089, 26095.
Cage: number of men riding in, 26133.
Keeps under cages, provision advocated, 25819 (*par.* 4), 25852, 25869, 25900, 26014.
Extent to which used, 25855.
Man in charge of, absence of at certain times, objection to, 25853, 25856, 25864, 25902, 25972, 26018, 26020, 26093.
Control of keeps by engineman, question as to, 26087.
Power to avert accident in event of sudden lightening or increasing weight of cage, question as to, 26089, 26095.
Mid shaft landings, keeps in, 26073.
Accidents to, 26077.
Automatic, 26075.
Danger of, question as to, 26085.
Extent to which used, 26083.
Signals to engineman, 26081.
Landings, number of, in Durham Collieries 26014, 26071.
Keeps in mid shaft landings, *see sub-heading* Keeps.
Men in charge of, 26016, 26076.
Overwinding, apparatus for prevention of, 26136.
Compulsion, as to use of, advocated, 26139.
Signalling away from shaft-bottom:
Dangerous practice as to, and suggestion for prevention of, 25819 (*par.* 5), 25881.

Special Rules, Durham:
Banksmen, Rule as to, 25867, 25906.
Conversion into General Rule advocated, 25870, 25908.
Enginemen, Special Rules as to, 25831, 25911, 25966, 25995.

CLARK, Mr. JAMES, Secretary, Durham Deputies' Mutual Aid Association. (*See questions* 24393—24762.)

Coal Mines Regulation Act, Sec. 42, authority of Inspector of Mines under, 24411, 24458.

Depth of mines in which Witness is employed, 24738.

Durham Deputies' Mutual Aid Association:
Evidence of Witness, representative of, 24507.
Number of members, 24396.
Secession from Miners' Association, 24505.

Escape Shaft:
Knowledge of, by workmen, question as to, 24735, 24741.
Number of day holes and drifts, 24736.

Inspection of Mines by Mines Officials:
Accidents to deputies, average number of, 24662, 24697.
Timbering, number owing to, 24659, 24697, 24760.
Dismissal of deputy by managers, objection to, unless for justifiable causes, 24592:
Appeal to County Court, 24604, 24608, 24743.
Substitution of appeal to inspector, advocated, 24610.
Districts, size of:
Appeal to inspectors of mines as to, advocated, when complaints are disregarded by management, 24409, 24512, 24591, 24610.
Decrease necessary in some instances, 24409, 24453, 24509, 24646, 24651, 24696, 24730.
Duties of deputies, 24420, 24515, 24530, 24700:
Explanation of duties by manager on appointment, question as to, 24655.
Other duties than inspection performed by, 24532, 24588.

CLARK, Mr. J.—*cont.*
Inspection of Mines by Mines Officials—*cont.*

Houses and coal, free to deputies, 24675.
Importance of deputies, 24618, 24703.
Number of deputies in Durham, 24760.
Qualification of deputies, class of men appointed, &c., and views as to certificate of competency, 24499, 24616, 24634, 24658, 24677, 24705.
Number of deputies holding certificates, 24500.
Responsibility of deputies, 24718, 24723.
Wages of deputies, 24671, 24712:
Back-bye wages, 24673.
Comparison with hewers', 24676, 24748, 24754.

Inspectors, Home Office:
Arbitration between deputies and managers, suggestions as to, 24409, 24512, 24591, 24610.
Authority of, under Sec. 42 of Coal Mines Regulation Act, 24411, 24458.

Manager and Under-Manager, status of, 24433, 24439.

Qualifications of Witness, 24393, 24398, 24417.

Safety Lamps, not used in colliery where Witness is employed, 24740.

Shifts:
Number of, worked by hewers, 24543.
Time of commencement and finish, 24548.

Shot-firing:
Accidents arising from, number of, 24576.
Between shifts, Witness knows of no colliery where practised, 24569.
Person firing shots—deputy with a competent man and a licensed shot-firer, 24421, 24571.
Abolition of practice of shot-firing by deputy during day-time, and appointment of special shot-firer advocated, 24400, 24406, 24421, 24429, 24508, 24574, 24633.
Other duties that might be performed by special shot-firer, 24578.

Timbering:
Longwall workings, timbering in, 24687.
Persons setting, in face (deputies), 24533.
Responsibility of deputies for, 24489.
Stoop-and-room workings, 24678.
Supply of, duties of deputies as to, 24530, 24533.
Withdrawal of:
Between shifts advocated, 24472, 24486, 24541, 24553, 24668, 24682, 24696.
By deputy, during day-time, objections to, and suggestions as to appointment of special men, 24415, 24465, 24472, 24486, 24536, 24556, 24633, 24668, 24694.
Accidents to deputies under present system, 24538, 24659, 24697, 24760.
Number of men that would require to be appointed, 24566.
Time that would be occupied in drawing timber, 24559, 24564.
Circumstances under which system is withdrawn by shifters at night, 24495.
Danger of withdrawal, and views that in some cases it should be omitted, 24416.
Juds, drawing of, 24487.
Manager and under-manager, attitude of, on this question, 24474.
Time occupied in withdrawal, 24559.

Trolleyway Man, calling away deputy from other work to remove obstructions, practice as to, 24438. 24455, 24717.
Responsibility for removal of obstructions advocated, 24527.

COULTHARD, Mr. S., Permanent Secretary Northumberland Mutual Aid Association. (*See questions* 24763—24863.)

Depth of Seghill Colliery, 24773.

Inspection of Mines by Mines Officials :
Accidents to deputies, number of, 24832.
Dismissal of deputy by manager, appeal to Home Office Inspector advocated in event of, 24793, 24841, 24860.
Responsibility of manager in relation to, question as to, 24844.
Districts, size of, decrease advocated in some instances, 24779, 24782, 24800, 24838.
Duties of deputies, 24781, 24790 :
Other than inspection, objections to, 24782, 24838, 24849, 24856.
Calling away of deputy from inspection to remove obstructions, 24784, 24806, 24850.
Refusal of deputy to go, probable result of, 24810.
Responsibility should be transferred to Management in this event, 24791.
Shot-firing, *see that title.*
Timbering, *see that title.*
Importance of deputy, 24790.
Qualifications of deputies, class of men appointed, and views as to certificate of competency, 24815, 24821.
Number of miners and deputies holding certificates, 24820.

Inspector of Mines, Home Office :
Arbitrator between owners and deputies, advocated as, 24793, 24841, 24860.

Method of Working, Seghill Colliery, 24775.

Qualification of Witness, 24763, 24777, 24859.

Shot-firing :
Extent of, 24795.
Person firing shot—deputy, 24795, 24798.
Special men, appointment for :
Extent to which practised in Northumberland, 24796.
Desirability of, views as to, 24801 :
Other duties that might be performed by specially appointed shot-firer, 24802.

Timbering :
Accidents, number of, 24832.
Person setting—deputies usually, 24822.
Withdrawal of :
Accidents from, number of, 24832.
By deputies, 24824, 24832.
Between shifts, advocated, 24828, 24833.
Special men, appointments for, in some collieries in Northumberland, 24824, 24832.

Trolleymen calling deputy away from his work to remove obstructions, &c., 24784, 24791, 24806, 24850.

DAVIES, Mr. H., Secretary, South Wales and Monmouthshire Mining Education Board, and Director of Mining Instruction for Glamorganshire County Council, and Secretary of the Mining Education Board. (*See questions* 26658—27055.)

Abertysswg colliery explosion, evidence as to defective ventilation, 27049.

Accidents :
Causes of, circular as to, issued by Mr. Davies to Colliery Examiners' Association, 26856, 26942.

Book : "Colliery Accidents, Causes and Prevention of," by Mr. Davies, 26659.

Coal Mines Regulation Act, adequacy of, question as to, 26816.

Discipline, defective, accidents caused by, question as to, 26817.

Glamorganshire County Council, System of Mining Instruction, 26658 (*par.* 1 *et seq.*):
Authority to visit mines cannot be given by County Council, 26920.
Certificates, 26658 (*par.* 1), 26842.

DAVIES, Mr. H.—*cont.*
Glamorganshire County Council, &c.—*cont.*
Continuation schools and evening classes, mining courses in, 26658 (*pars.* 1, 2 and 3):
Age of boys attending, 26904.
Attendances, 26658 (*par.* 6).
Method of teaching, 26908.
Practical demonstrations in mine, 26898, 26902, 27036.
Number of classes, 26899.
Grant from Government, 27038.
Lectures, 26658 (*par.* 4), 26821, 27037.
Owners and managers, attitude towards, 26769, 26824, 26840, 26892, 26958.
Primary schools, instruction in, 26658 (*par.* 1 *et seq.*), 26884, 26892 :
Practical instruction at mine, extent of, 26885, 26892, 27033.
Syllabus, 5th and 6th standards, mining subjects in, 27037.
Scholarships, 26658 (*par.* 5).
Teachers, preference in promotion to those capable of giving instruction in mining, 27037.
Tours for mining students, 26658 (*par.* 5), 26843.

Glamorganshire Federation Lodges, lectures and notices at pitheads as to prevention of accidents, 26658 (*par.* 4), 26823.

Haulage :
Colliers taking place of hauliers, prevention of accidents to, suggestion as to, 26658 (*par.* 10), 26705.
Gangways, provision, views as to, 26691.
Inspection of mines, hauliers assisting firemen in, 26825, 26959, 26974.
Prohibition of haulage on main roads and engine planes at beginning and end of shift advocated, 26658 (*par.* 9), 26691, 26861.
Special travelling road, provision of, views as to, 26691.
"Tipping" of hauliers by colliers, objection to this system, 26658 (*par.* 10), 26694, 26755, 26788, 26979.
Wages of hauliers, 26708.
Work of hauliers, 26974.

Hours of Work, South Wales mines, 26995.

Inspection of Mines by Men, value of, especially if Report is presented to Federation lodges, 26828, 26835.

Inspection of Mines by Mines Officials :
Adequacy of, views of Witness on this point, and as to what constitutes adequate inspection, 26658 (*par.* 7), 26661, 26702, 26825.
Appointment of firemen, objection to present method, 26677.
Districts, size of, reduction advocated, 26671, 26825, 26959.
Duties other than inspection performed by, objections to this system, 26665, 26667.
Hauliers assisting firemen in inspection, 26825, 26959.
Hours of work of firemen, reduction advocated, 26658 (*par.* 7), 26661, 26670, 26781, 26856.
Owners and managers, attitude of on this point, reduction of hours in some collieries, 26783.
Qualifications of firemen, class of men appointed, desirability of certificate of competency, 26658 (*par.* 7), 26673, 26786, 26859.
Safety lamps to be used by firemen when inspecting for gas, suggestion as to, 26687.
Ventilation, record and measurement of air current by firemen, views as to, 26860.

Inspectors, Home Office :
Adequacy of inspection by, views on this point, and cases proving need of increased supervision, 26558 (*par.* 13), 26710, 26732, 26734, 26736, 26799, 26802.
Appointment of, amendment of present system advocated, 26658 (*par.* 12), 26710.
Districts, size of, reduction advocated, 26733.
Length of time required for making an inspection, 26830.
Number of inspections yearly and number desirable, 26734, 26741, 26801.
Number of inspectors, increase advocated, 26658 (*par.* 13), 26734, 26740, 26832.
Responsibility of managers should not be affected by, 26658 (*par.* 13), 26805.

Davies, Mr. H.—*cont.*

Inspectors, Home Office—*cont.*
Welsh language, knowledge of, desirable for inspectors in South Wales, 26658 (*par.* 13), 26732, 26875.
Conference illustrating this necessity, 26875, 27008, 27018, 27021.
Working miners, appointment of men having had experience as, views as to, 26832.

Managers' Certificate of Competency, examination for:
Board of examiners, suggestions as to, 26658 (*par.* 11).
Mining engineers taking articled pupils should be excluded from Board, 26863, 27001.
Local knowledge, importance of and suggestion as to local examinations, 26865, 26871, 26992, 27025.
Notice should be given to candidates some time before examination, 26713.
Uniform standard advocated, and one general examination for whole country, 26658 (*par.* 11), 26865, 26997, 27024.

Owners and Managers:
Glamorgan County Council system of instruction to miners, attitude of owners towards, *see title* Glamorgan County Council System, &c.
Prevention of accidents, attitude as regards, 26817.

Prevention of Corruption Act, application of to prevention of "tipping" of hauliers by colliers, 26699.

Qualifications of Witness, 26658 (*par.* 1), 26659, 26764, 26837, 26843, 26855, 26920.

Rescue Work and Appliances:
Ambulance appliances, keeping at colliery advocated, 26849.
Ambulance classes, attendances at, in South Wales, number of men competent to give first aid, &c., 26849.
Rescue brigade, conference as to inauguration of, 26854.

Safety Lamps, indications of gas furnished by, *see title* Ventilation.

Schools in mining districts, instruction of children in mining subjects advocated, 26658 (*par.* 1):
Compulsion, views as to, 27039.
Glamorgan County Council System, *see title* Glamorgan County Council.

Timbering:
Diagrams showing good and bad systems, suggestions as to, 26880.
Distance travelled by boy to secure timber, proving necessity for increased supervision, 26732, 26736, 26880.
Lids, preparation, suggestion as to, 26883.
"Tipping" system, objections to and effect of on efficiency of timbering, 26702, 26755, 26788, 26794, 26979.

Ventilation:
Act of Parliament: Coal Mines Regulation Act, General Rules:
Adequate ventilation, clearer definition advocated, and establishment of a standard of ventilation, 26890.
Measurement of air, amendment of regulations as to advocated, 26811.
Measurement and record of air-current, of amount of gas, by fireman, suggestion as to 26658 (*par.* 8), 26685, 26810, 26860, 26888, 26810, 26933.
Curve showing percentage of fire-damp, suggestion as to, 26825.
Responsibility of manager, continuance advocated, 26812.
Safety lamps, indications of gas furnished by, type of lamp advocated, 26687, 26826, 26935.
Withdrawal of men, indications of necessity for, 27043.

ENGLISH, Mr. JOSEPH, President, Northumberland Miners' Mutual Confident Association. (*See questions* 24864—25376.)

Accidents:
Falls of roof and sides:
Coal-cutting machinery, danger increased by use of; remedy suggested, 24965, 24977, 24982.
Number of, in 1905, 24984, 25249.
Working alone in lonely places, objection to, owing to impossibility of communication in case of accidents, 25355.
Haulage Accidents, *see that title.*
Shaft Accidents, *see that title.*

Brusher, work performed by, in Northumberland, 25118.

Coal-cutting Machinery:
Accidents from falls of roof and sides, number of, alleged increase by use of, and suggestion as to stoppage of machinery periodically for examination, 24965, 25141, 25248, 25253, 25272.
Advantages of, and advisability of increased use of, 25139.
Danger caused by sparks from, 24964, 25153, 25245.
Dust, increase of, by use of, questions as to, 24965.
Method of working, 24977, 24980, 25272.
Number of machines in use in Northumberland, 24970, 25267.
Output, effect on, 25254.

Compensation for Accidents, practice as to, 24985.

Conveyers, method of working, 25284.

Electricity:
Coal-cutting Machinery, *see that title.*
Rules, 25143.

France, steel bars, use of, in timbering, 25029, 25286.

Haulage Accidents:
Gradient, steep, probable effect of, 25344.
Instances of, 25209, 25341, 25355.
Methods of haulage, 25319.
Number of, 25318.
Prevention of:
Chains for prevention of runaways, 25351.
Compulsory use, views as to, 25352.
Gangways by side of haulage roads advocated, 25009.
Prohibition of men from travelling along road when traffic is in motion, 25171, 25217.
Refuge holes, retention advocated, and views as to distance apart, 25210.
Rubbish, clearing away, 25214.
Separate travelling roads, views as to, 25177, 25209.
Switches, 25017.
Trailers or devils, 25016, 25346.
Width of roads, 25174, 25211, 25323.

Inspection of Mines by Men:
Act of Parliament: Coal Mines Regulation Act, General Rule 38, views as to adequacy of, 24940, 25289, 25291, 25293.
Extent to which practised in Northumberland, 25137.
Officials to accompany men on inspection, compulsory appointment by management advocated, 24940, 25131, 25289, 25293.
Owners, attitude towards, possible effect on reports, &c., 25295.
Qualifications of men appointed, 25290:
Amendment of rule to enable men who are or *have been* practical miners to be appointed, views as to, 25291.
Value of, especially as regards ventilation, 25237.

Inspection of Mines by Mines Officials:
Act of Parliament: General Rule 4, amendment advocated, 24882.
Districts, size of, too large for adequate inspection, 25308.
Duties of deputy, 25308, 25311, 25314:
Calling away of deputy to perform other duties than inspection, question as to, 25315.
Report books, duties in relation to, 25078.
Omission of second inspection when fore and back shifts are worked as one continuous shift, prohibition advocated, 24882.

ENGLISH, Mr. J.—*cont.*
Inspection of Mines by Mines Officials—*cont.*
Qualifications of deputy:
Ambulance certificate advocated, 24938, 25110, 25115.
Certificate of competency, views as to whether desirable, 25112.

Inspectors, Home Office, reluctance of men to make complaints to, as to condition of mine, 25099, 25230, 25295.
Anonymous letters, question as to, 25239.
Communication with Home Office Inspectors through checkweigher or through General Secretary, question as to, 25297.
Reprisals on part of management, views as to possibility of, 25100, 25237.

Lancashire, Special Rule as to ventilation, application of similar rule to Northumberland advocated, 25260.

Method of working, Northumberland mines, 25263.

Northumberland Miners' Mutual Confident Association, number of members, object of, and extent to which Witness is representative of, 24865, 24868, 24871.

Qualifications of Witness, 24864, 24871, 24977, 25203, 25270.

Report Books, regulations as to extent of observance of, 25078.

Rescue Work and Appliances:
Act of Parliament: Coal Mines Regulation Act, General Rule 34, amendment advocated, 24935.
Appliances, keeping in deputy's chest advocated, 24935, 25103, 25368.
Certificate for ambulance should be held by deputy, 24938, 25110, 25115.
Classes, number of, 25115.

Safety Lamps:
Act of Parliament: Coal Mines Regulation Act, General Rule 9, amendment advocated, 24888, 24916.
Foul air sufficient to injure health of men, indications of, not furnished by some modern lamps, 24888, 25091.
Type of lamp advocated, 24893, 24903, 24914.

Shaft Accidents:
Act of Parliament: Coal Mines Regulation Act, Sec. 16, sub-section 1, breach of, 24991.
Cages, safety catches or detaching hooks, use of, advocated, 25019.
Engine-men:
Certificate of competency for, views as to, 25005.
Medical examination of, suggestion as to, 25004, 25156.
Winding-gear, provision of, in both fore and back shafts, advocated, 24986, 24991.
Complaints as to non-provision in back shafts have not been made to inspector, 24994, 25000.
Wooden guides, use of, in Northumberland, 25024.

Shot-firing, undertaken by deputy, 25308.

Timbering:
Accidents from falls of roof and sides, danger increased by use of coal-cutting machinery, and suggestion as to remedy, 25150, 25249, 25272.
Act of Parliament: Coal Mines Regulation Act, General Rules as to timbering, 24918, 24928.
Compulsory, views as to, 25206.
Distance from face, suggestion as to, and as to fixed distances, 25024, 25178, 25198.
Person setting, suggestion as to, and as to responsibility of deputy, 24918, 24926, 24931, 25195, 25196.
Special Rules 46 and 92 as to, 24926, 24931, 24933.
Steel bars on each side of barrow-way with end notched into coal, advocated, 25029, 25286.
Unskilled men working alone at timbering, prohibition advocated, 24946, 25119, 25123, 25221.
Accident showing necessity for prohibition, 25221.
Withdrawal of timber, appointment of special men for, in Northumberland, 25361.

ENGLISH, Mr. J.—*cont.*
Unskilled Workmen, employment of:
Act of Parliament: Coal Mines Regulation Act, General Rule 39, 24946, 25299.
Misinterpretation of, 25301, 25305.
Number of unskilled men who may work under one man, 24956, 25300.
Prohibition of such workmen from working singly, extension of, advocated, 24946, 25117, 25219.
Qualification required for man taking charge of a place, 25299.

Ventilation:
Act of Parliament: Coal Mines Regulation Act, General Rule 1, as to ventilation:
Adequacy of, but defective observance of, 25030, 25075, 25094, 25187, 25190, 25223, 25243.
Complaint to inspector as to defective ventilation, 25230, 25294.
Responsibility for adequate ventilation, *see sub-heading* Responsibility, 24876.
Amount of gas in mines, 25189, 25225, 25244.
Fan system, 25229.
Inspection of mines by men, importance of, with regard to, 25237.
Responsibility of overman for, advocated, 24876, 25030, 25032, 25243, 25256:
Joint responsibility with manager, 25035, 25061, 25262.
Special Rule as to, advocated, 25260.
Safety lamps, modern, indication of foul air not always indicated by, 24888, 25091, 25185, 25222.
Complaints as to, question as to, 25099, 25230, 25239, 25295.
Special Rule as to duties of overman, 25258.

EVANS, Mr. J. H., Monmouthshire and South Wales Colliery Examiners' Association. (*See questions* 25724—25818.)

Accidents from falls of roof and sides, number of, 25772.

Brattice Men, duties of, 25790, 25815.

Deputies, *see title* Inspection of Mines by Mines Officials.

Discipline, improvement in, but accidents still caused by laxity, 25724 (*pars.* 1 *and* 2).
Instruction and encouragement of workmen in discipline advocated, 25724 (*par.* 2).

Explosives:
Purchase from owners only, advocated, 25724 (*par.* 5), 25768, 25801.
Charge for explosives in this event, 25805.
Storage of explosives in mines contrary to regulations, 25811.
(*See also title* Shot-firing.)

Hours of Work, 25769:
Three shifts, 25769, 25772.

Inspection of Mines by Men:
Cost of, borne by the men, 25746.
State contribution advocated, 25746, 25763.
Extent to which practised, 25724 (*par.* 4), 25744, 25798.
Owners' attitude towards, danger of reprisals, &c., 25751, 25763.
Payment of men, inadequacy of, 25749, 25763.
Qualification of men making inspection, employment in same mines, 25757.
Special rule as to, advocated, 25745.
Value of 25724 (*par.* 4), 25800.

Inspection of Mines by Mines Officials:
Brattice Men, employment of, 25790, 25815.
Definition of "deputy," 25783.
Districts, size of, reduction advocated, 25726, 25730, 25742.
Duties of deputies, examiners, &c.:
Abolition of deputies advocated, 25724A, 25737, 25783, 25789, 25818.
Reports of deputies, 25818.

EVANS, Mr. J. H.—*cont.*
Inspection of Mines by Mines Officials—*cont.*
Hours of work of mine examiners, reduction advocated, 25724 (*par.* 2), 25737, 25769, 25786:
Three shifts, practice as to, 25772, 25779.
Number of fireman, 25785.
Number of inspections desirable, 25769.
Substitutes in case of illness, 25787, 25794.

Medical Examination of Men before employment, views as to, 25781.

Monmouthshire and South Wales Colliery Examiners' Association, evidence of Witness representative of, 25724A, 25735.

Powell, Mr., evidence of, reference to, 25724A, 25734.

Qualifications, 25724A.

Shot-firing:
Abolition in dusty and fiery mines advocated, 25767.
Between shifts only, advocated, 25724 (*par.* 5), 25764.
Special men, appointment for, advocated, 25724 (*par.* 5)
(*See also title* Explosives.

Timbering:
Accidents from falls of roof and sides, number of, 25773.
Reduction by system of three shifts, 25775.
Method of: propping to be done immediately after roof is exposed, 25724 (*par.* 3), 25740.
Supervision, keener, suggestion as to, 25724 (*par.* 3), 25741, 25772.

Unskilled Labour:
Accidents caused by, 25780.
Qualification as a working miner, proof of, suggestion as to, 25780.

GILMOUR, Mr., Secretary and Agent of the Lanarkshire Miners' Association. (*See questions* 21207—21592.)

Accidents:
Falls of roof and sides, number of, in relation to timbering systems, 21283, 21502, 21547.
Haulage, *see that title.*
Investigation into:
Adequacy of enquiries under Fatal Accidents Act, 21586.
Examination of Witnesses on behalf of Workmen, provision for, &c., Fatal Accidents Enquiry (Scotland) Act, 21586.
Second enquiry, right of demand for, clause in Bill provided by Miners' Federation, 21584.
Shaft accidents, *see that title.*

Ankylostomiasis:
Foreign workmen, not having worked previously in mines, probably free from disease, 21537.
Sanitary conveniences, provision advocated, 21524.
Absence of provision in Scottish mines, 21536.

Baths and facilities for changing clothes at pit-head, provision advocated, 21514, 21550.
Houses, one-roomed, occupied by miners, necessity for this arrangement increased by, 21556.
Travelling in wet clothes under present system, 21550.

Bill Promoted by Miners' Federation, clauses in:
Accidents, investigation into, clauses as to, 21584.
Engineers, certificated, 21484.
Inspection of mines by men, 21430, 21434.
Inspectors (Home Office), increased number of, 21328.
Number of inspections yearly, 21397.

Checkweighers, inspection of mines on behalf of men by, views as to, 21424.

Coal Mines Regulation Act, 1887, Section 39, as to appointment of inspectors, 21369.

Cornishmen, employment in Scotland, question as to, 21540.

GILMOUR, Mr.—*cont.*
Discipline:
Character of Scotch mines as to, 21297.
Fines, *see that title.*
Prosecutions, *see that title.*

Fines:
Advantages or disadvantages of, as compared with prosecution, 21498.
Extent to which practised, 21299.
Offences for which inflicted, 21300.

Enginemen, *see title* Shaft Accidents.

Foreign Workmen, employment of:
Ankylostomiasis in relation to, 21537.
Contractors, employment by, 21335.
Disciplne and general influence in mines, 21449.
Managers not always cognisant of, 21269, 21332.
Manner in which introduced, 21329.
Names assumed, 21262.
Number employed, 21258, 21273.
Reduction of, or total abolition in some mines, 21460.
Objections to, 21275, 21459.
Trades Unions, membership of, 21454.
Wages, 21337, 21456.

France, inspection of mines by men in, cost defrayed by Government, 21541.

Qualifications of Witness, 21207.

Haulage Accidents:
Number of, 21254.
Prevention of, suggestions as to, 21256.
Blocks or runaway points, 21257.
Chains, 21256.

Houses, one-roomed, occupied by miners, 21556.

Inspection of Mines by Men:
Appointment by men of itinerant inspectors, who are or have been practical working miners, suggestions as to, 21220, 21409.
Checkweighers, appointment as, views as to, 21424.
Payment by Home Office advocated, 21541.
Cost of, borne by men themselves, 21224, 21402.
Extent to which practised, 21224, 21399.
Object of this inspection, 21412.
Owners and Managers:
Attitude towards, possible effect on men making adverse report, 21220, 21306, 21313, 21398, 21412.
Protection of owner's interests, 21429.
Qualifications of men making inspection:
Employment of men from another mine, 21415.
Limitation to men at present working in mines, 21420.
(*See also sub-heading* Appointment.)
Reports, 21225, 21310, 21314, 21434.
Value of, 21231.

Inspection of Mines by Mines Officials:
Act of Parliament: Coal Mines Regulation Act, 1887, as to, 21240, 21243.
Adequacy of inspection, views on this point, 21242, 21437.
Appointment of firemen by managers, objections to and suggestions as to appointment by and responsibility to Government, 21356, 21364.
Districts, size of, reduction advocated, 21242, 21444.
Duties, other than inspection, 21243, 21245, 21320, 21445, 21581.
Importance of firemen, 21234.
Qualifications, class of men appointed, &c., and views as to certificates for firemen, 21237, 21241, 21319, 21356, 21370, 21439, 21579, 21582.
Coal-getters, promotion to post of firemen, frequency of, 21447.

Inspectors, Home Office:
Act of Parliament: Coal Mines Regulation Act, 1887, Section 39 as to appointment of, 21369.
Accidents, fatal, inspection after, 21216.
Adequacy of inspection, views on this point, 21210, 21213, 21386.
Assistant inspectors, additional advocated, 21210, 21325, 21326.
Working miners, appointment as, advocated, 21210, 21218, 21232, 21371.

GILMOUR, Mr.—*cont.*
Inspectors, Home Office—*cont.*
Complaints to, 21215, 21378.
Districts, size of, decrease by subdivision advocated, 21322.
Number of inspectors, increase advocated, 21321, 21592.
Number of inspections by, desirable, 21388, 21397, 21404, 21405.
Managers, responsibility of, possible effect on, 21393.
Qualifications, class of men appointed, 21590.
Men who have previously worked at the face, 21381.

McLaren, Mr., evidence of reference to, 21387.

Prosecution of Men :
Advantages or disadvantages as compared with fining, 21498.
Decision as to rests with Procurator-fiscal in Scotland, 21495.
Expenses of defence, payment by Trades Union, decision of Lanarkshire Miners' Association, with regard to, 21301.
Offence punished by, 21300.

Ronaldson, Mr., evidence of, reference to, 21387, 21402, 21437, 21449

Safety Lamps, use of in Lanarkshire, 21235.

Sanitary Conveniences : provision advocated, 21524.
Absence of provision in Scottish mines, 21536.

Shaft Accident :
Enginemen :
Competency of, views as to and as to whether certificate is desirable, 21286, 21295, 21341, 21481, 21572, 21577.
Restriction in employment of, owing to action of Trade Unions, questions as to, 21351.
"Tramp" or unskilled enginemen, employment of, 21292, 21481, 21572.
Number of accidents, small, 21350.

Special Rules :
Advertisement of proposed rules to give opportunity to men of making objections, views as to, 21479, 21567.
Arbitration, 21568.
Discussion with men :
Desirability of, 21280, 21463, 21475.
Not practised in Lanarkshire, 21279.
Ignorance of men as to, and question as to instruction by Trades Union officials, 21469.
Suggestion by workmen, right of advocated, 21570.

Timbering :
Accidents in relation to, 21283, 21502, 21547.
Firemen, duties of, as regards timbering, 21245, 21250.
Special men, employment of, advocated, 21501, 21547.
Special Rules :
Accidents not appreciably reduced by, 21283.
Consultation of workmen before introduction of, desirability of, 21280.
Non-observance of, 21284.

Unskilled Labour, employment of, extent of in Lanarkshire, 21258.

Ventilation, defective, reports on by men inspecting on behalf of miners, 21228.

Wages, method of payment, double-shifting in Lanarkshire, 21337.

Weir, Mr., evidence of, reference to, 21584.

GRIFFITHS, Mr. W., South Wales Colliery Officials' Association. (*See questions* 27191—27510.)

Accidents :
Falls of roof and side, irregular attendance of men causing, 27191 (*par.* 2), 27227, 27256, 27391, 27421, 27498.
Places where accidents are most frequent, 27358.

GRIFFITHS, Mr. W.—*cont.*
Accidents—*cont.*
Investigation : Adequacy of present system, 27191 (*par.* 4), 27238.
Prevention of, general suggestions as to, 27191 (*par.* 2).

Boys :
Prohibition from working underground until after passing examination in Coal Mines Regulations advocated, 27255.
Schools, *see that title.*

Coal Mines Regulation Act :
Knowledge of should be made a condition of employment, 27191 (*par.* 6), 27247.
School examinations, inclusion in, 27191 (*par.* 6), 27247, 27250.

Haulage Roads, duties of overman as regards repair of, 27385.

Inspection of Mines by Mines Officials :
Districts of firemen, size of, 27197.
Hours of work of firemen, time occupied in inspection, &c., 27472.
Overman, *see that title.*

Manager's Certificate of Competency :
Colliery Officials' Association, number of members holding, 27480.
Overmen, number holding, 27482.

Method of Working Mines—Longwall, 27493.

Overman :
Districts, division of mine into, 27332, 27338.
Number of men and number of working places in district under charge of witness, 27429.
Duties of, and views of Witness that they are not excessive, 27200, 27313, 27383, 27434, 27475, 27479 :
Night overman and day overman, duties identical, 27328.
Special Rules 42 and 43, as to, 27330.
Under-manager's duties performed by overman, during his absence, 27329.
Employment of men by, 27459.
Firemen, number of working with, 27334.
Hours of work, time occupied in inspection, &c., 27315, 27389, 27475.
Meal times not specified, 27323.
Number of districts under care of Witness, 27341.
Number of overmen, 27335, 27339.
Wages, 27485.

Qualifications of Witness, 27192, 27289, 27295, 27470, 27482.

Rescue Work, uniform system impracticable, 27191 (*par.* 3), 27238.

Safety Lamps :
Examination and testing of, 27364, 27372, 27425.
Oil burnt in, 27411.
Colza oil not used, 27414.
Same lamp given to same man if possible, 27378.
Type advocated—double gauzes, 27191 (*par.* 1), 27210.
Single gauzes most frequently used, 27216.

Schools :
Coal Mines Regulation Act, as subject for examinations advocated, 27191 (*par.* 6), 27250.

Shot-firing :
Acts, Orders, &c., adequacy of, views as to, 27191 (*par.* 2).
Between shifts, practice as to, 27291.
Charging shot, special official for advocated, 27191 (*par.* 2), 27221, 27272.
Drilling holes undertaken by collier, 27274.
In the coal, not practised, 27278.
Interval before men should be allowed to visit place where shot has been fired, views as to, 27290.
Notice to manager and permission from him before shots are fired in roads, views as to, 27282, 27285.
Number of shots fired simultaneously, and interval between firing, 27292.

Digitized by Google

GRIFFITHS, Mr. W.—*cont.*
South Wales Colliery Officials' Association:
Manager's certificate of competency, number of members holding, 27480.
Number of members, 27296.
Witness representing, 27297.

Special Rules:
Adequacy of present system of introduction of, views as to, 27191 (*par.* 6), 27241.
Knowledge of by workmen, importance of, 27247.
Overmen's duties, Special Rules 42 and 43 as to, 27330.
Simplification advocated, 27191 (*par.* 6), 27243.
Supply of copies to men advocated, 27242.

Timbering:
Accidents from fall of roof and sides:
Attendance of men irregular, effect of on number of accidents, 27191 (*par.* 2), 27227, 27256, 27391, 27421, 27498.
Places where accidents are most frequent, 27358.
Person setting:
Collier in his working place, 27265, 27299. 27489.
Better knowledge of timbering by collier advocated, 27302.
Timberman repairing his own road, in the face, 27263, 27270.
Supervision by overman, 27203, 27299, 27309, 27383.
Testing efficiency of long-standing timbering, 27354.
Wages: piece-work, possible effect of on efficiency of timbering, 27495.

Unskilled Labour, employment of:
Attitude of workmen as to, 27454.
Precaution against, suggestions as to, and as to a certificate, 27191 (*par.* 2), 27230, 27255, 27307, 27444.
Present system arises from scarcity of labour, 27449.

Ventilation:
Act of Parliament: Coal Mines Regulation Act, General Rule 1, adequacy of, 27240.
Adequate ventilation, fixed standard of, impracticable, 27191 (*par.* 5), 27240, 27401.
Overman's duties in relation to, 27385.
Safety lamps, indications of gas furnished by, 27402.
Definition of a cap, 27415.
Oil, 27411.
Withdrawal of men, practice as to, 27407.

Wages:
Overmen's, 27485.
Piece-work, payment of colliers by, 27491, 27495.

GUEST, Mr. JOHN, Agent, Yorkshire Miners' Association. (*See questions* 31365—31990.)

Accidents:
Falls of roof and sides, number of, probable reduction if examination were made with candle, 31804.
Haulage accidents, 31462, 31805.
Inspection by Home Office inspectors after, 31373, 31547.
Investigation into:
Coroners' inquests:
Representation of workmen at, 31505, 31515, 31854.
Second inquiry under Sec. 45:
Advantages of, and suggestions as to right to demand, 31513, 31573.
Extent to which power is used, 31527, 31528.
Permanent Board, question as to, 31522.
Refusal of application for, question as to, 31574.
Representation of workmen at, advocated, 31858.
Reversal of verdict of coroner's jury, 31520.
Shaft accidents, 31479, 31487.

Airways, return, use of, as travelling roads, views as to, 31741.

GUEST, Mr. J.—*cont.*
Ambulance, *see title* Rescue Work.

Bill considered by Miners' Conference, clause as to number of inspectors, 31539.

Checkweighers' appointment to make inspection on behalf of workmen advocated, 31397, 31401, 31556, 31677.

Coal Mines Regulation Act, 1887:
Accidents, investigation into:
Section 45 as to second inquiry, 31513.
Text of Sub-section 2, 31522.
Section 48, Sub-section 8, as to coroners' inquests, 31505.

Committee on Electricity Rules, 31904.

Depth of and fiery nature of Yorkshire mines, 31787.

Discipline and carefulness:
Character of men as to, 31969.
Trade Unions, encouragement by, 31974.

Electricity Rules, new, manner of drawing up, 31904.

Engine Planes: Manholes, increased number of, advocated, 31569.

Engine-winders, certificate of competency for, views as to, 31478, 31746, 31762.

Fines: Advantages of prosecutions as compared with fining, 31430, 31436, 31559, 31701, 31957.
Attitude of men as regards fines, 31706.
Option of payment, 31704.
Trade Unions, recovery of money by; general attitude towards fining, &c., 31709, 31960.

Haulage Roads:
Accidents:
Light, insufficient, causing, 31805.
Number of, 31462.
Dimensions of, increase advocated, 31457, 31465, 31565.
Use of return airways as travelling roads when haulage roads are too narrow, views as to, 31741.
Manholes:
Number of, increase advocated, 31458, 31569.
Rubbish or any accumulation, freedom from, 31468, 31562, 31976.
Whitewashing advocated, 31458.
Rubbish or any obstruction, freedom from, 31468, 31562, 31976.
Scotland, Special Rule, 31474.
Separate travelling roads, provision of, views as to, 31455, 31565, 31742.
South Wales, Special Rule in, 31976.

Hemsworth Colliery, men employed as winding enginemen during dispute, 31762.

Inspection of Mines by Men:
Abolition of, views as to whether desirable in event of appointment of additional Home Office inspectors, 31411, 31666.
Cost of, method of defraying, 31406, 31415, 31549.
Extent to which practised in Yorkshire, 31412, 31553, 31847.
Notice to management and consequent preparation previous to inspection, 31849.
Number of pits under same firm, 31554.
Owners' interests, protection of, 31952.
Qualifications of men making inspection, extension advocated, 31416, 31667, 31676, 31949.
Checkweighers' appointment advocated, 31397, 31401, 31556, 31677.
Value of this inspection, 31848.

Inspection of Mines by Mines Officials:
Districts, size of, decrease desirable, 31420, 31425, 31687, 31690, 31789.
Duties other than inspection performed by firemen making adequate inspection impossible, 31423.
Efficiency of firemen, views as to, 31819.
Gates and roadways, special inspection of, advocated, 31446, 31476, 31969.

Digitized by Google

QUEST, Mr. J.—*cont.*
Inspection of Mines by Mines Officials—*cont.*
Importance of firemen as regards safety of mines, 31824.
Qualification of firemen, advantages of certificates of competency, &c., 31819.
Time at which inspection should be made, 31790.

Inspectors, Home Office:
Accidents, fatal, inspection after, and attendance at inquests, time occupied in, 31373, 31547.
Adequate inspection by, impossible under present conditions, 31373, 31547, 31841.
Appointment of, procedure as to, 31660.
Districts, division of, advocated, suggestions as to distribution of duties, &c., 31579, 31591.
Number of inspections desirable yearly, 31377.
Number of inspectors, increase advocated, and appointment of working miners as sub-inspectors, 31373, 31380, 31385, 31535, 31585, 31600, 31839:
Abolition of inspection on behalf of men, views as to, in event of this increase, 31411, 31666.
Bill considered at Miners' Conference, number named in, 31539.
Districts, division of, in this event, views as to, 31383, 31541, 31591.
Duties of sub-inspectors, 31636.
Eligibility of sub-inspectors for appointment as chief or assistant inspectors, 31924.
Existing number of inspectors in Yorkshire, 31537, 31585, 31600.
Qualifications of sub-inspectors, views as to, and as to desirability of certificate, 31394, 31629.
Relations between chief and sub-inspectors, 31643, 31654.
Responsibility of managers and officials in relation to this suggestion, 31622, 31846.
Salaries of sub-inspectors, 31390.
Term of appointment of sub-inspectors, 31393.
Preparations, special, before inspection, 31852, 31939.
Residence of inspectors, place of, 31544.
Responsibility, extent desirable, 31612.
Surprise visits, rarity of, 31841, 31851.
Travelling, amount of time spent in, 31543.
Value of this inspection, 31839.

Lancashire, Special Rule as to airways, 31447.

Managers:
Certificate of competency, advantages of, 31832.
Responsibility of, 31604, 31876.

Number of miners employed in Yorkshire, 31536, 31587.

Prosecutions:
Advantages of, as compared with fining, *see title* Fines.
Number of, 31435, 31959.

Qualifications of Witness, 31365, 31532, 31561, 31573.

Rescue Work and Appliances:
Compulsory provision of appliances and employment near station of men qualified in ambulance work advocated, 31490.
Cost of, defraying by owners advocated, 31778.
Telephonic communication with surface advocated, 31863.
Underground provision of appliances and of ambulance carriage advocated, 31492, 31771, 31860.

Safety Lamps:
Compulsory introduction of, when gas has been found, views as to, 31497, 31503, 31981.
Examination of roof and sides, use of safety lamp in, 31800, 31984.
Objections to, and desirability of withdrawal of, if gas has not been observed for certain period, 31780, 31800, 31982.

Scotland: Haulage roads, Special Rule as to, 31474.

Shafts:
Cages:
Gates and bars to, advocated, 31487.
Engine-winders, efficiency of, views as to, and as to desirability of certificate of competency, 31478, 31746, 31762.

QUEST, Mr. J.—*cont.*
Shot-firing:
Battery, shot-firing with in Yorkshire, 31812.
Explosive and detonator both in possession of men stemming their own shots, 31816.
Extent of, in Yorkshire, 31811.
Fiery mines, shot-firing in, 31812, 31814.
Stemming done by men themselves, 31814.

South Wales. Special Rules as to haulage, 31976.

Special Rules, introduction of:
Advertisement of rules by Home Office to give men an opportunity of raising objections, views as to, 31720.
Discussion between men and owners advocated, 31440, 31716, 31870.
Electricity rules, manner of drawing up, 31904.
Objection to rules introduced by owners, right of Trade Unions as to, 31866.
Timbering rules, difficulty in enforcing, 31442, 31723, 31884, 31891.

Telephonic Communication between districts and surface advocated, 31863.

Timbering:
Special Rules:
Ambiguity of, and difficulty in enforcement of, 31442, 31723, 31891.
Introduction of:
Attitude, probable, of men if they had been consulted, 31884.
Letter from Secretary of State, 31917.
Method of introduction, 31908, 31913.
Supply, additional, of timber and brattices sent down before inspection of mines, 31852, 31939.

Walkey, Mr., evidence of, references to, 31413, 31700.

HANCOCK, Mr. J., Agent and Financial Secretary, Nottinghamshire Miners' Association. (*See questions* 20216A—20770.)

Accidents:
Cause, chief, of fatal accidents: haulage and falls of roof, 20756.
Investigation into:
Coroners' inquests:
Adequacy of, 20216A (*par.* 21).
Post-mortems, notice to relatives, suggestions as to, 20216A (*par.* 21), 20399.
Reports on workmen's inspections of mines, use of, as evidence, 20216A (*par.* 6), 20258, 20599, 20623.
Second enquiry under Section 45, demand for, suggestions as to, 20216A (*par.* 22), 20413, 20454.
Number of, in Nottingham, 20601.
(*See also titles* Haulage Accidents, *and* Shaft Accidents.)

Ambulance, *see title* Rescue Work.

Boys, employment with wagons, danger of haulage accidents, 20343.

Coal Mines Regulation Act, 1887:
Prosecution is sole form of punishment provided for in, 20734.

Dirt, filling wastes with, advocated: dirt not to be brought to surface unless necessary, 20216A (*par.* 17), 20388.

Discipline, *see titles* Fines and Prosecutions.

Enginemen:
Haulage men, *see title* Haulage Accidents.
Shaft enginemen, *see title* Shaft Accidents, *sub-heading* Over-winding.

Evidence of Witness, extent to which representative of Nottingham and Miners' Federation, 20713.

Explosions:
Number of, in Nottingham collieries, 20600, 20602.

Explosives:
Person having charge of, *see title* Shot-firing, *sub-heading* Person Firing Shot.
Purchase of, by miners from owners, advocated, 20584.

HANCOCK, Mr. J.—*cont.*
Fines:
Act of Parliament: Coal Mines Regulation Act, no provisions as to fining in, 20733.
Advantages of fining and of prosecution compared, 20611, 20742.
Amount of, 20611:
Fixing, by manager, 20676, 20696.
Reduction, instances of, 20676, 20696.
Truck Act in relation to, 20693.
Extent to which inflicted in Nottingham collieries, 20700.
Evidence of Witness as to, given only with reference to Nottingham, 20713.
Manager fining for breach of Act, question as to possibility of, 20736.
Objections of men to, particularly as to agreement between owners and men as to scale of fines, 20216A (*par.* 9), 20305, 20438, 20553, 20664, 20726.
Offences for which suitable, 20728, 20742.
Payment, method of, 20687.
Posting on pit-bank, 20674.
Report of offence by firemen or other official, 20669.
Truck Act in relation to, 20693.

Firemen, *see title* Inspection of Mines by Mine Officials.

Haulage Accidents, precautions against, suggestions as to, 20216A (*par.* 12), 20324:
Blocks, self-acting, or other mechanical appliances for arresting runaways, 20337, 20768.
Boys, inexperienced, employment with wagons, objection to, 20343.
Chains, suggestions, 20216A (*par.* 13), 20341, 20758.
Character of roadways, 20216A (*par.* 12), 20334.
Drags or daggers or devils, 20216A (*par.* 13), 20334.
Enginemen, limitation of duties advocated, 20216A (*par.* 13), 20349.
Manholes and refuges, whitewashing, 20216A (*par.* 12), 20330.
Responsibility, division of, objections to, 20216A (*par.* 13), 20349.
Rubbish, clearing away, advocated, 20327.
Separate travelling roads advocated, 20216A (*par.* 12), 20324, 20579.
Widening of roads, 20216A (*par.* 12).

Inspection of Mines by Men:
Co-workers, possible attitude towards men making inspection, 20216A (*par.* 5), 20267.
Cost of, borne by the men themselves, 20216A (*par.* 4.)
Extent to which power is used, 20216A (*pars.* 4 and 7), 20261, 20612, 20616, 20632.
Indifference of men generally, 20284.
Necessity for, decreased, owing to improved management of mines, 20216A (*par.* 6), 20258.
Number of men that would be required to make adequate inspection, 20230.
Object of, as compared with Government Inspection, 20590.
Owners' attitude towards, views of men as to, and as to possible adverse result to men making unfavourable report, 20216A (*par.* 5), 20261, 20263, 20612.
Qualification of men for making such inspections, 20216A (*par.* 6), 20271.
Mining engineers disqualified, 20596.
Reports, use of, at Coroner's inquests, 20216A (*par.* 6), 20258, 20599, 20623.
Responsibility of manager, decrease by these inspections, views of workmen as to, 20216A (*par.* 5), 20256, 20483.
Value of this inspection, views on this point, 20216A (*par.* 6), 20271.

Inspection of Mines by Mines Officials:
Adequacy of, views on this point, 20216A (*par.* 8), 20287, 20302, 20531.
Manager of mine, duties of, in cases of inadequate inspection, 20290.
Means of ascertaining whether inspection is adequate, question as to, 20751, 20754.
Secretary or Agent of Miners' Union, possible action in event of inadequate inspection, question as to, 20291.
Districts, size of, reduction advocated, 20528.
Duties of firemen, 20747.
Limitation to inspection advocated, 20748.

HANCOCK, Mr. J.—*cont.*
Inspection of Mines by Mines Officials—*cont.*
Hours of work of firemen, 20753.
Importance of firemen as regards safety of mine, 20744.
Qualifications of firemen, 20216A (*par.* 8), 20302, 20746.
Reports, 20652.
System of inspection, 20750.

Inspectors of Mines (Home Office Inspectors):
Adequacy of inspection by, views as to, and as to what constitutes adequate inspection, 20216A (*pars.* 1-3), 20220, 20255, 20465, 20494.
Assistant inspectors, increase in number of, views as to:
Present class, question as to, 20243.
Working miners, appointments as additional inspectors, *see sub-heading* Working Miners.
Districts, size of, reduction advocated, 20216A (*par.* 2), 20244.
Number of inspections yearly desirable, 20216A (*par.* 1), 20220, 20464, 20471, 20499, 20646, 20657.
Responsibility of manager, question as to effect of more frequent inspections on, 20478.
Number of inspectors, increase advocated, 20216A (*par.* 1), 20223, 20234, 20243.
(*See also sub-heading* Working Miners.)
Object of inspection by, 20462, 20493, 20591.
Orders given by, during inspection, 20656.
Report not left at collieries, 20654.
Surprise visits, position as to, 20661.
System of inspection, 20654, 20658.
Working miners holding a certificate, appointment as additional inspectors advocated, 20216A (*par.* 2), 20248, 20502, 20591, 20636.
Bi-annual inspection by, questions as to, 20476.
Number required, 20253.
Salaries, 20241.

Lancashire: Haulage, Special Rule as to trailer or devil, 20336.

Manager:
Fines, amount usually fixed by, 20676.
Fining by inspector for breach of Act, question as to possibility of, 20736.

Miners' Nystagmus, effect on, of use of safety lamps, 20418, 20451.

Prosecutions:
Act of Parliament: Coal Mines Regulation Act, 1887, sole form of punishment provided under, 20733.
Advantage of, as compared with fining, 20611, 20742.
Extent to which inflicted in Nottingham collieries, 20700.
Offences which should be punished by, 20729.

Qualifications of Witness, 20217, 20714.

Rescue Work, management of officials and men in training for, advocated, 20216A (*par.* 20).

Richards, Mr., evidence of, reference to, 20462.

Safety Lamps:
Compulsory introduction of, objections to, and to unnecessary increase in use of, 20216A (*par.* 22), 20418.
Locked lamps, provision advocated, 20216A (*par.* 22).
Miners' Nystagmus possibly reduced by use of, 20418, 20451.
Testing advocated, 20216A (*par.* 22).

Shaft Accidents:
Cages, safety catches for holding, views as to, 20216A (*par.* 16), 20380.
Overwinding:
Detaching hooks and other appliances advocated, 20216A (*par.* 16), 20380.
Arrester, article on, in "Iron and Coal Trades Review," 20384.
Enginemen, competency of, views as to, and as to whether certificate of competency is desirable, 20216A (*par.* 15), 20374.

Digitized by Google

HANCOCK, Mr. J.—*cont.*
Shot-firing:
Between shifts, views as to, 20216A (*par.* 13), 20372.
Inspection of gates by shot-firer, 20216A (*par.* 8), 20288.
Miss-fire shots:
Interval before men should approach place, 20370.
Recovery of, 20216A (*par.* 14).
Person firing shot and carrying explosive, 20216A (*par.* 14), 20366, 20582.
Single individual not to carry explosive and fire shot, views as to this suggestion, 20366.

Special Rules:
Act of Parliament, procedure under, in introduction of Rules, 20556.
Arbitration, 20558, 20570, 20575.
Breaches of, sources of information as to, 20619, 20627, 20669.
Discussion between owners or managers and men before introduction of, advocated, 20216A (*par.* 10), 20313, 20555, 20561, 20702, 20716.
Embodiment of certain Special Rules in General Rules, suggestion as to, 20216A (*par.* 11), 20317.
Suggestion by workmen, views as to, 20721.
Veto by workmen, right of, undesirable, 20565, 20570, 20712.

Timbering:
Accidents, number of, has not been reduced, apparently, by Special Rules, 20723.
Inspection of, by an official, question whether desirable, 20397.
Unskilled men, timbering by, views as to, 20396.

Truck Act, fines in relation to, 20693.

Unskilled Labour, employment of, 20216A (*par.* 19), 20395.

Wagons:
Loading, 20604.
Type advocated, 20216A (*par.* 18), 20392.

HARRIS, Mr. W., Agent, South Wales Miners' Federation. (*See questions* 34865—35070.)

Abertysswg Explosion: point as to ventilation left undecided by coroner's inquest, 34924, 34926.

Accidents:
Falls of roof and sides, 34900, 34912.
Investigation:
Coroner's inquests, constitution of jury, 34926.
Second inquiry under Sec. 45 advocated, 34926.

Airways, Return, use of, as travelling roads, advocated, 34917.

Discipline, importance of, 35050.
(*See also title* Fines.)

Fines:
Advantages of fining and of prosecution compared, 34884, 34935, 34987.
Decision as to fining or prosecution should not rest with manager, 34884, 34934, 34995, 35055.
Offences suitable for punishment by fining or prosecution respectively, 34884, 35012, 35062.

Glamorganshire County Council, arrangements for technical instruction to miners, 35036.

Haulage Roads, width advocated, 34915.

Inspection of Mines by Men:
Extent to which practised, 34868.
Owners, reprisals by, possibility of: difficulty in getting men to make this inspection, &c., 34869, 34940, 34959, 35041.
Instance of compulsory alteration of report, and of apology, 34869, 34941, 35039, 35041.
Period during which Witness has made this inspection without suffering in consequence, 35063.
Payment of men for making inspection, amount of, 35047.

HARRIS, Mr. W.—*cont.*
Inspection of Mines by Mines Officials:
Appointment of firemen should rest with manager, 34984.
Districts, size of, decrease advocated, 34882.
Qualifications of firemen; desirability of practical experience and of certificate of competency, 34874, 34927, 34963, 35025.
Instance of appointment of man having no practical experience, 34878.
Safety lamp carried by fireman, type of lamp, oil, &c., 34923, 35016.

Inspectors, Home Office:
Adequacy of inspection, views on this point, 34866.
Districts, size of, reduction advocated, 34865.

McLaren Explosion, point as to ventilation left undecided by coroner's inquest, 34924, 34926.

Manager, fining by inspector undesirable, 35008.

Monmouthshire County Council technical classes, instruction to miners in, 35029.

Overman or Foreman, qualifications, class of man appointed, &c., 35020.

Qualification of Witness, 35063.

Safety Lamps, indication of gas afforded by, effect on of oil used, 34923, 35016.

Schools and Classes: Instruction to miners, 35028.
Teachers, 35032.

Shafts: Machinery and gearing; more frequent examination of winding-rope advocated, 34925.

Thomas, Mr., evidence of, reference to, 34893.

Timbering:
Accidents from falls occurring when timber has been knocked out by official, instance of, 34900, 34912.
Distances, 34905, 34909.
Person setting: greater discretion to miner himself advocated, 34893, 34937.
Systematic, advocated, 34892.
Wages question in relation to, 34893, 34938.

Truck Act, provision of as to fines, 34989, 34996, 35002.

Unskilled Men, employment of, extent and danger of, 34922.

Ventilation:
Point at which cap of gas becomes dangerous, uncertainty as to, 34924, 35016.
Safety lamps used in testing for gas, suggestion as to type and oil, 34923, 35016.

Western Valleys Colliery, fall of roof where timbering had been knocked out by official, 34900, 34912.

Winstone, Mr., evidence of, reference to, 34925.

HOPKINS, Mr. W., Agent, Monmouthshire and South Wales Enginemen's Association. (*See questions* 28397—28735.)

Aberavon, Engineer in charge of ventilating fan, prosecution of, 28729.

Act of Parliament, General and Special Rules:
Copies of Special Rules, supply of, to men, amendment of Section 57, Sub-section 2, as to, advocated, 28457.
Engine-winder, Rule 24, as to, amendment of, advocated, 28435, 28451, 28641.
Prevention is the object of suggested amendments, 28622.

Bedlinog, over-winding accident at, 28629.

Boilers, *see title* Engines and Boilers.

Clydach Vale, accident in engine-house, 28429, 28583.

Engine-house:
Ingress and egress, provision of two ways advocated, 28426, 28582.
Accident owing to lack of such provision, 28428, 28583, 28590.
Signal by telephone or other means between banksman and engine-winders, advocated, 28409.

Digitized by Google

HOPKINS, Mr. W.—*cont.*
Engineers and Enginemen, other than engine-winders:
Certificate for, advocated, 28599.
Hours of work:
Eight-hours shift advocated, 28458, 28681, 28728.
In certain collieries in South Wales and Monmouthshire, 28461, 28729.
Engines and Boilers:
Cleaning, more frequent, advocated, 28560, 28566.
Explosions:
Board of Trade enquiry after, 28574.
Number of, Witness has no statistics, 28568.
Inspection, increased, and appointment of Government inspectors advocated, 28411, 28557, 28561, 28669:
Factory Act Regulations as to inspection, 28416,
Special Rule in force in certain districts, 28561, 28663.
Other engines than winding engines enumerated, 28601.
Protectors in front of water-gauge glasses, advocated, 28421, 28580.
Injury to man resulting from absence of, 28425.
(*See also title* Shafts.)
Engine-winders:
Age and qualifications, General Rule 24 as to amendment advocated to make it apply to case where one man only is riding, 28435.
Collieries in which managers take advantage of present wording of rule, information as to, promised, 28451.
Appointment of:
Dispute between managers and miners, as to, 28499, 28505, 28511, 28619.
Accident, supposed to have resulted from, 28537, 28625, 28716.
Preference frequently shown to man from another colliery, 28662.
Responsibility of manager, extent of, 28521, 28616, 28641, 28653, 28656, 28659, 28727.
Certificate for:
Advantages of, 28715.
Strikes or lock-out, possibility of appointment of incompetent men in event of, under present system, 28724.
Training of engine-winders:
Decision as to men to be trained should rest with Union and not with manager, 28491, 28495, 28705.
Managers have right to use engine for purposes of teaching when engine-winder is not there, 28707.
Capacity of managers to teach, 28711.
Membership of Union, question whether a condition of training, 28490, 28495, 28499, 28506.
School for, attitude of Union, as to, 28506.
Hours of work, excessive: suggestions as to eight-hours day, 28458, 28480, 28683, 28729:
Accidents, percentage of, under eight hours and other system, Witness has no statistics as to, 28470, 28487
Arrangement as to, in certain collieries in South Wales and Monmouthshire, 28461, 28466, 28470.
Agreement as to eight-hours day, where 300 tons of coal are wound, 28478, 28689.
Increased strain with modern speed and engines, 28734.
Less coal wound in districts where longer hours are worked, 28471, 28486.
Responsibility of winders: prosecution in event of mistakes, 28648.
Defence by Union, circumstances under which undertaken, 28650.
Factory Act, examination of boilers under, 28416.
General Rule 24, as to appointment and qualifications of engine-winder:
Amendment advocated, 28435, 28451.
Responsibility of manager, extent of, under, 28641.

HOPKINS, Mr. W.—*cont.*
Gray, Mr., evidence of, reference to, 28499, 28512.
Hours of Work:
Coal hewers, South Wales, 28466.
Engineers, *see that title.*
Engine-winders, *see that title.*
Lancashire: Special Rule 91, as to examination of boilers, 28561.
Qualifications of Witness, 28397, 28731.
Rowarth, Mr., evidence of, reference to, 28404, 28458.
Shafts:
Amount of coal raised daily, 28734.
Engine-house, *see that title.*
Engine-winder, *see that title.*
Overwinding:
Brakes, steam and foot, provision advocated, 28404.
Detaching hooks or visors, provision advocated, 28406.
Number of accidents from, in South Wales, 28408.
South Wales Colliery Enginemen's, &c., Association, Membership, 28398, 28402.
Special Rules:
Boilers, examination of, Special Rules as to, 28561, 28663.
Copy of, supply of, to men whether applied for or not, advocated, 28457, 28607, 28612.
Tredegar, accident to pipes leading to engine-house, 28428, 28590.
Ventilating Fan: Hours of work of engineman, reduction advocated, 28728.

HUGHES, Mr. EDWARD, Secretary, North Wales Miners' Association. (*See questions* 37184—37387.)
Accidents:
Falls of roof and sides, number of, 37211, 37216.
Fatal accidents, 37317, 37327.
Safety lamps, introduction of, probable effect of on, 37235.
Inspection by Home Office inspector after, 37259.
Investigation:
Board or Court of Inquiry, constitution of, advocated, 37236, 37252.
Cost of, how to be defrayed, 37244.
Coroners' Courts:
Adequacy of, views as to, 37344.
Juries, ignorance of technical matters, 37237.
Representation of men at, 37345.
Section 45, powers of Secretary of State to direct inquiry under, 37238, 37249.
Fines:
Advantages of prosecution as compared with fining, 37192, 37296.
Attitude of men as to, 37194, 37296.
Extent to which inflicted, 37296.
Return of fines to men, 37196.
Haulage Roads:
Separate travelling roads, provision advocated, 37340.
Travelling on, prohibition while wagons are in motion, 37220, 37331.
Width of: space on same side as manholes for men to travel along advocated, 37220, 37335.
Inspection of Mines by Mines Officials:
Districts, size of, reduction advocated in some instances, 37191, 37286.
Decision as to size should rest with Home Office inspector, 37293.
Duties other than inspection performed by firemen, 37288.
Number of inspections and extent of examination, views as to, 37294.
Qualifications of firemen, class of men appointed, desirability of examination and certification, &c., 37370.
Time at which inspection takes place, 37348.
Wages of firemen, 37373.

Digitized by Google

HUGHES, Mr. E.—*cont.*
Inspectors, Home Office:
Accidents, inspection after, 37259.
Adequate inspection, views as to what constitutes, 37273.
Districts, size of, 37256.
Number of inspections, 37185, 37261.
Number of inspectors, increase advocated, 37185.
Residence, place of, travelling entailed by, 37259.
Working miners, appointment of, as additional inspectors, advocated, 37188, 37264.
To be eligible for higher grades, 37190.
Manager's Certificate of Competency, working miners holding, 37267.
Safety Lamps:
Accidents from falls of roof and sides, number of in relation to use of safety lamps, 37235.
Extent of use of, 37342, 37348.
Introduction wherever gas has been found, views as to, 37228, 37343.
Special Rules, introduction of, consultation of men before, advocated, 37207, 37298.
Timbering:
Miles of road without timbering, 37212.
Person setting, 37303, 37355.
Greater freedom to, advocated, 37311, 37330.
Supply of:
Deficiency in, withdrawal of men in consequence of, 37280, 37380.
Payment of wages in similar instances advocated, 37381.
Special Rules 53A and 111 as to, 37354, 37378.
Systematic timbering, 37211, 37309, 37363.
Wages question in relation to, 37311, 37313, 37320, 37330, 37357, 37381.
Wages:
Firemen's, as compared with colliers', 37373.
Timbering, wages question in relation to, 37311, 37313, 37320, 37330, 37357.

HUGHES, Mr. T., North Wales Miners' Association. (*See questions* 27056—27190.)
Haulage:
Accidents arising from low roofs, and suggestions as to handles on wagons, 27092, 27135, 27181.
Ripping to increase height, 27135, 27182.
Inspectors, Home Office:
Wales, North, inspectors appointed for, should be Welshmen, speak Welsh and live in Wales, 27064, 27100, 27103.
District, size of, 27098.
Method of Working, Bersham Colliery—longwall, 27106, 27161.
Packing, defects in present system, and suggestions for improvements, 27082, 27130, 27140, 27186.
Qualifications of Witness, 27056, 27104, 27119.
Special Rules:
Discussion by men before introduction of, advocated, 27070, 27120.
Timbering:
Lids, making and setting by men themselves, views as to, 27126.
Propping: Suggestion as to two props underneath and bar at top, 27072, 27104, 27160.
Spragging: Supply of sprags by owner, and, special payment to men for making sprags, suggestion as to, 27078.
Old props, sprags made out of, under present system, 27156.
Supply of, point to which timber is brought, 27155.
System at present employed, Bersham Colliery, 27167.

JENKINS, Mr. H., Agent, East Glamorgan District, South Wales Miners' Federation. (*See questions* 35267—35371).
Fines:
Advantages of prosecution as compared with fining, and suggestion as to abolition of fining, 35272, 35291.
Attitude of miners as to, 35293.

JENKINS, Mr. H.—*cont.*
Haulage: Double coupling, suggestion as to, 35289.
Inspection of Mines by Men: Reprisals by owners, possibility of, and difficulty of getting men to make inspection, 35273.
Inspectors, Home Office:
Number of inspections desirable yearly, 35300, 35307.
Number of additional assistant inspectors desirable, 35300.
Working miners holding certificates of competency, appointment as additional inspectors advocated, 35274, 35297.
Manager's Certificate of Competency, working miners holding in South Wales, 35276.
Qualifications of Witness, 35269.
Small Coal, deposit of, in gob or waste, objection to, 35365.
Payment for small coal if sent out, question as to, 35366.
Timbering:
Distances, varying in each district, to be decided by manager after consultation with workmen, suggestions as to, 35278, 35312, 35332.
Arbitration in event of disagreement, 35322, 35333.
Responsibility of manager in event of accident, 35325.
Person setting: greater discretion to miners advocated, 35326, 35358.
Responsibility of manager in event of accident if timber set by miner has been knocked out by deputy, 35361.
Special Rules 50 and 67, South Wales District, 35330.
Continuation until new rules are in force, advocated, 35334.
Supply of:
General Rule 22 as to, amendment advocated, and supply of timber sufficient to meet emergencies, 35286.
Special Rules 10 and 11 as to, 35286.
Systematic timbering advocated, 35277, 35312, 35356.
Unskilled Men, employment of alone, 35338.
Accident resulting from, 35339.
Inquest, inadequacy of, 35344.
Proof of experience should be required before engagement, 35343, 35354.

JOHNSON, Mr. J., M.P., Durham Miners' Association. (*See questions* 35915—35969).
Engine-Winders:
Certificate of competency:
Bill for, 35920.
Strike or other emergency, winding by uncertificated men in event of, question as to, 35929.
Efficiency of, 35923.
Inspection by Mines Officials: Qualifications desirable for deputy, views as to, 35933.
Manager's Certificate of Competency:
Ambulance work, qualification in, desirability of, 35946.
Board of examination to be appointed by all Boards in the kingdom, views as to this suggestion, 35951.
Variations in standard in different districts: Scheme for uniformity, 35948.
Officials, qualification in Ambulance work desirable, 35946.
Shafts:
Overwinding, visor for prevention of, 35943.
Safety catches for cages, 35941.
Shot-firing:
Danger of permitted explosives, 35937.
Person firing shots, certificate of competency for, views as to whether desirable, 35935.
Wilson, Mr., evidence of, references to, 35917, 35933, 35946.

JONES, Mr. T., General Secretary, South Wales Winding Engineers' Association. (*See questions* 28736—28848.)

Clydach Vale, accident proving necessity for two ways of ingress and egress in engine-houses, 28801.

Engine-houses :
Ingress and egress, two ways of, advocated, 28746, 28800.
Accidents resulting from lack of such provision, 28801.
Sanitary condition of, improvement of, and provision of sanitary conveniences, advocated, 28740, 28791.
Signal by telephone or other means between banksman and engine-house, provision advocated, 28774, 28787.

Engine-Winders, hours of work :
Reduction advocated : agreement with, evidence of Mr. Hopkins as to, &c., 28749, 28783, 28823.
South Wales engine-winders, hours worked by, 28781.

Engines :
Brakes, indicators, &c., *see title* Shafts.
Separators, provision advocated, 28760.

General Rule 30 as to indicators, amendment advocated, 28771.

Hopkins, Mr., evidence of, references to, 28749, 28801.

Llynpia, shaft accident at, 28835.

Qualifications of Witness, 28736.

Rowarth, Mr., evidence of, reference to, 28823.

Shafts :
Indicators, provision advocated, 28771, 28784.
Overwinding : brakes for prevention of, provision advocated, 28754, 28818, 28823, 28828.
Accidents owing to inadequate brakes, questions as to, 28833, 28835, 28845.
Act of Parliament relating to, 28755.

KELLY, Mr. MICHAEL, Member of Executive Committee of Lanarkshire Miners' Union. (*See questions* 22375—22666.)

America : Baths and change of clothes at pit-head, question as to provision in, 22635.

Ankylostomiasis :
Rats, possible spread by, in event of outbreak, 22503.
Sanitary conveniences, *see that title.*

Baths and facilities for change of clothes at pit-head, advocated, 22640
America, question as to provision in, 22636.
Houses, imperfect sanitation in, necessity increased by, 22641.

Cadzow Colliery, inexperienced man appointed as fireman, 22402.

Explosives Order, provisions as to detonators, 22552, 22659, 22661.

Firemen, *see title* Inspection of Mines by Mines Officials.

Haulage Accidents :
Account of serious accident in Earnock Colliery, 22489.
Prevention of, 22490.
Chains, 22490, 22577.
Compulsion advocated, 22494.
Runaway points, 22494, 22577.

Houses occupied by miners, imperfect sanitation, 22641.

Inspection of Mines by Men :
Cost of : guarantees of payment by Miners' Union, 22461.
Extent of in Lanarkshire, 22457.
Lanarkshire Miners' Union, action as to, 22456.
Owners' and managers' attitude towards, possible effect on men making adverse report, 22525, 22533.
Qualifications of men making inspections ; employment in same mine, views as to, 22523, 22529.
Report to Executive Committee, 22462.
Witness, inspection by, 22513, 22519.

KELLY, Mr. M.—*cont.*
Inspection of Mines by Mines Officials :
Appointment of firemen by managers, objections to, 22405, 22600.
Districts, varying in size of, decrease necessary in some cases, 22389, 22591, 22596.
Duties other than inspection performed by firemen, 22391.
Limitation advocated, 22399.
Shot-firing, duties as to, 22431, 22444.
Importance of firemen, 22410.
Number of firemen, increase advocated, 22592, 22596.
Qualification of firemen, class of man appointed, &c., 22401, 22578, 22597.
Instances of appointment after three months' experience, 22401, 22565.
Training of men for post of firemen, 22406.

Inspectors, Home Office :
Accidents, inspection after, 22427.
Adequacy of inspection, views as to : Witness has never seen inspector making inspection, 22412.
Number of increase advocated, 22428.

Managers' Certificate of Competency, miners holding, 22616.

Qualifications of Witness, 22375, 22386, 22417, 22507, 22616.

Rats in Mines, 22503.

Safety Lamps :
Charge to men for use of, 22472, 22480.
Dispute as to introduction of, 22466, 22475.
Wages, extra, payment when safety lamps are used, 22474.

Sanitary Conveniences, provision of, necessity for, 22497, 22621 :
Absence of provision, 22503, 22648.
Houses occupied by miners, defective sanitation in, 22641.
Women working at pit-head, provision for, question as to, 22654.

Shot-firing :
Acts, Orders, Regulations, &c., 22429, 22659, 22661.
Accidents, 22444, 22556, 22585.
Between shifts, practice as to, and views as to desirability of, 22545, 22547, 22568.
Detonators, served out to miners by firemen, 22441, 22548, 22554, 22588, 22656.
Explosives Order, contravention of, 22552, 22659, 22661.
Inspectors and managers, cognisance of this practice, 22657, 22659.
Electricity, shot-firing by, 22443, 22448, 22556.
Extent to which practised, 22437.
Notice to manager and permission from him before shots are fired in haulage roads, advocated, 22568, 22569.
Permitted explosives, 22595.
Person firing shot, 22431, 22449, 22554.
Method described, 22444, 22583.
Safety-lamp mines, shot-firing in, 22545, 22547.
Stemming shot and boring hole, 22438, 22570, 22573.

Temperature of Lanarkshire Mines, 22621.

Timbering :
Acts and Rules, 22619, 22620.
Length of timber supplied, frequently too long, 22611.
Person setting : special appointment, practice as to, and desirability of, 22536, 22604, 22608, 22619.
Wages, readjustment of, in event of, views as to, 22540.
Special rules not enforced, 22619.
Wages, Piecework, effect of on efficiency of timbering, 22537, 22544.
Withdrawal of men if timbering is inadequate, 22620.

Water for drinking, provision of, necessity for, 22502.

Women, employment of, at pit-bank, 22650 :
Objections to, 22655.
Sanitary conveniences, provision of, question as to, 22654.

Digitized by Google

LATHAM, Mr. W., Secretary, Shropshire Miners' Association. (*See questions* 32954—33442).

Accidents :
Face, large proportion of accidents at, 33331, 33399.
Falls of roof and sides, 33331, 33336, 33399 :
Complaints as to condition of roof not made, owing to fear of dismissal, 33340.
Securing of place after, extent desirable and extent practised, 33342.
Winding should be suspended until timber has been set, 33046.
Inspection by Home Office Inspector after, 32962, 32986, 32992, 33092, 33320.
Change in scene of accident, prohibition of, until after this inspection, 33085, 33201, 33330, 33405.
Investigation :
Coroners' inquests :
Adequacy of, views as to, 33176.
Constitution of, 33093, 33141, 33151, 33179.
Object, chief, of, 33136.
Second inquiry under Sec. 45, views as to, 33141, 33174.
Shaft accidents arising from two-deck cages, 33062, 33414.
Unskilled labour, accidents caused by, 33049, 33396.
Friendly society statistics as to, 33051.

Age Limit for beginning work at pit, suggestion as to, 33227, 33439.

Ankylostomiasis, prevention of, steps taken in Shropshire for, 33115.

Bill promoted by Miners' Federation, consideration of by Shropshire miners, 32957.

Boys :
Age limit for employment in pits and at surface, 33273.
Hours of work, amendment of law as to, advocated, 33279.
Meal-times, Special Rule as to required, 33026.
Proportion becoming miners, 33260.
Schools, training of boys in, in mining matters, advocated, 33266.

Coal Mines Regulation Act, 1887 :
Section 35 as to leaving scene of accident undisturbed until after inspection, 33202.
Section 48 as to coroner's inquests, 33152.
Section 7 as to meal-times for boys, 33027.

Contractors :
Decline of this system, and its effect on efficiency of timbering, 33371, 33413,
Special Rules for guidance of, 33366.

Dust, effect of, on health of men, 33059.

Fines :
Advantages of prosecution as compared with fining, 33022, 33253.
Attitude of men as to, 33249.
Choice between fines and dismissal, 33250.
Extent to which fining is practised, 33247.

Haulage : Watering in relation to horse haulage, 33054.

Inspection of Mines on behalf of Men :
Extent to which practised, 33007, 33009, 33294.
Owners or managers, reprisals by, in event of adverse report, possibility of, 33008.

Inspection of Mines by Mines Officials :
Districts, size of, 33018.
Duties of firemen, other than inspection, abolition advocated, 33017, 33388.
Increase of duties owing to decline of contractor system, 33371.
Importance of firemen, 33352.
Qualifications of firemen, class of men appointed under present system, and suggestions as to certificate of competency, 33350.
Wages of firemen, reduction in recent years, 33362.

Inspectors, Home Office :
Accidents, fatal, inspection after, 32962, 32986, 32992, 33085, 33092, 33320, 33330.

LATHAM, Mr. W.—*cont.*
Inspectors, Home Office—*cont.*
Adequacy of inspection by, views on this point, and as to what constitutes adequate inspection, 32962, 33309, 33316.
Complaints, anonymous, to: reprisals of owners, 33010.
Districts, size of, 32969, 33091 :
Division of districts and apportionment of work, suggestions as to, 32977, 32981, 33306, 33308.
Number of inspections by, and number desirable, 32962, 32967, 33312.
Number of inspectors desirable, 32969, 33298, 33306, 33323.
Preparations made at mine before inspector's visit, 33317, 33324.
Qualifications, certificates, &c., 33300.
Travelling, time spent in, reduction desirable, 33006.
Working miners, appointment as sub-inspectors advocated, 32983, 33299.

Manager's Certificate of Competency, Examination for :
Fiery mines, knowledge of, advocated, 33115.
Local examinations, views as to, 33107, 33112.
Uniform system of examination, views as to, 33107, 33111.

Qualifications of Witness, 32954, 33264, 33296.

Sanitary Conveniences, provision of, unnecessary, 33116.

Schools, training of boys in, in matters concerning mining, advocated, 33266.

Shaft :
Cage :
Persons riding on two decks, prohibition advocated, 33062, 33414.
Safety catches and detaching-hooks, 33073, 33083, 33213.
Winding-rope, care of, re-capping, &c., 33218.

Shot-firing, withdrawal of men during, for avoidance of noxious fumes, advocated, 33119.

Special Rules, introduction of, discussion before, 33025, 33041.
Shropshire Rules proving necessity for, 33025.

Staffordshire District :
Boys becoming miners, number of, 33260.
Size of, and of mines, average number of men employed, 33256, 33284.

Stallmen, unskilled men appointed as, 33049, 33433.

Temperature, excessively high, withdrawal of men in event of, advocated, 33119.

Timbering :
Accidents from fall of roof and sides, setting of timber after, 33046.
Contractor system, decline of, effect of on efficiency of timbering, 33371, 33413.
Persons setting and supervising, 33049, 33433.
Supply, defective, accidents caused by: timber sent down before scene of accident is inspected, 33204, 33405.
Systematic timbering advocated, 33044.

Unskilled Labour, employment of, in mines, objections to, 33049, 33224, 33396, 33433.
Employment and payment of unskilled men as drawers, &c., by colliers, 33229.
Consent of manager necessary, 33242.

Ventilation :
Adequate amount of, desirability of clearer definition of General Rule 1 as to, &c., 33117, 33119, 33389.
Withdrawal of men in event of inadequate ventilation, 33117, 33119, 33389.

Watering in Mines, suggestion as to, where horse haulage is used, 33054.

LOVETT, Mr. L., Secretary, Leicestershire Miners' Association. (*See questions* 36917—37183.)

Accidents :
Falls of roof and sides, number of accidents from, 37021, 37029.
Less numerous when candles are used than in safety lamp mines, 37125.
Timbering more important than use of safety lamps as a preventive, 37129.

Digitized by Google

LOVETT, Mr. L.—*cont.*
Accidents—*cont.*
Investigation:
Coroners' Inquest:
Juries, constitution of, 37154, 37168.
Men's representatives, right to appear and ask questions advocated, 37154.
Delay caused by necessity of getting appointment in writing by majority of men, 37166.
Second Enquiry under Sec. 45, possibility of, 37166.

Ankylostomiasis: provision of sanitary conveniences advocated, 37177.

Baths and facilities for washing, provision of, views as to, 37000.

Electricity Rules, introduction of, 36946, 36956.

Explosives in Coal Mines Order, 1896, retention of words: "in such quantities as to be indicative of danger" advocated, 36981.

Fines:
Advantages of fines and prosecution compared, 36927, 37088.
Attitude of Miners' Association as to, 36934, 37025, 37048.
Defence of men by Association in event of unjust fining, possibility of, 37061.
Dismissal, possibility of, if man refuses to be fined, 37060.
Manager, fining by inspector for breach of rules, views as to whether desirable, 37094.
Offences punishable by fining, 36928, 37030, 37043, 37056, 37069.
Posting up of notices of fines, 37032, 37043, 37051.
Procedure in fining, 37043.
Scale of, none agreed to, 37042.

Houses of Miners:
Baths, change of clothes, &c., facilities for, 37001.
Class of house, ownership, &c., 37003.

Inspection of Mines by Men:
Appointment: payment by Government of men making this inspection advocated, 36921.
Extent to which practised, 37022.
Owners, reprisals by, possibility of, 37023.

Inspection by Mines Officials:
Districts, size of, 37149.
Hour at which inspection is made, 37012, 37136.
Qualifications of deputies, age, &c., 37151.
Two shifts working consecutively, inspection between, advocated, 36926, 37014.

Inspectors, Home Office:
Number of inspections desirable, 36918.
Number of inspectors, increase advocated, 36918.
Working miners, appointment as additional inspectors advocated, 36921.
Should be eligible for higher grades if able to pass engineering examination, 36925.

Managers: fining by inspectors, views as to whether desirable, 37094.

Manager's Certificate of Competency, Examination for:
Board, constitution advocated, 37170.
Uniform papers and standard advocated, 37172.

Qualifications of Witness, 36917, 37123.

Safety Lamps:
Accidents from falls of roof and sides more likely to happen when safety lamps are used, 37125.
Extent to which used, 36991, 37020.
General Rule 8, as to, adequacy of, 36994.
Testing station, Governmental, views as to whether desirable, 36995.
Wages in safety-lamp mines, 36991, 37121.

Sanitary Conveniences, provision of, in roadways advocated, 37177.
Special Rule and compulsory use of, views as to whether desirable, 37178, 37182.

Shot-firing:
Between shifts not advocated, 37152.
Danger non-existent in naked-light mines, 37049.

LOVETT, Mr. L.—*cont.*
Shot-Firing—*cont.*
Offences in which might be punished by fining, 37030, 37048.
Person firing shots, 37150, 37152.

Smoking, prohibition, 37032, 37051.

Special Rules:
Introduction of:
Consultation of men: inadequate under present conditions, 36935, 36957.
Board consisting of inspectors, managers, workmen and workmen's representatives advocated, 36944.
Uniform application, rules for, question as to method of introduction, 36945.
Notices, posting up, 37032, 37043, 37051.
Number to be observed by stallmen, underground workmen and boys, 37066.
Punishment of breaches of, *see title* Fines.

Stallmen: Qualifications desirable, 37116, 37129.
Timbering, advanced, right to set, advocated, 36968.

Timbering:
Difficulty with Home Office inspector as to, 36968, 36978, 37106.
Distances, 36973.
Person setting, 36968, 37116, 37129.
Supply of, importance of, 37129.
Systematic timbering, views as to, 36968, 37106, 37111.

Unskilled Men, employment in mines, 37131.

Ventilation:
Adequacy of in Witness's district, 36998, 37020, 37026.
No explosions due to gas during last 10 years, 36982, 36991.
Method of working in relation to, 37142.

McPHEE, Mr. RICHARD, Manager at Bothwell Park Colliery, near Glasgow. (*See questions* 22863A—22910.)

Foreigners, employment of:
Accidents, number of, in relation to, 22863A, 22871, 22876.
Efficiency and discipline, 22863A, 22865, 22873, 22906.
English language, knowledge of, 22886, 22899, 22902.
Isolation, extent to which practised, 22904.
Manner of introduction, 22863A, 22868.
Number of foreigners at Bothwell Park Colliery, 22863A, 22887.
Period of work in this country, 22882.
Races represented, 22863A, 22890.
Reading and writing their own language, question as to, 22872, 22898.
Special Rules, translation, posting up and circulation of, 22863, 22871, 22889, 22897.
Wages, 22863A, 22869.

Qualifications of Witness, 22863A, 22864.

MANSELL, Mr. T., Secretary, South Staffordshire and East Worcestershire Miners' Association. (*See questions*, 36574—36916.)

Accidents:
Charter-master system, number of accidents under, 36661, 36720, 36784, 36825.
Unskilled labour, employment of, in relation to, 36828, 36866.
Wages system in relation to, 36741, 36797.

Ankylostomiasis:
Occurrence improbable in South Staffordshire District, 36655.
Temperature of mines in relation to, 36875.

Baths and facilities for drying clothes, provision at collieries unnecessary in Black Country, 36844.

Black Damp:
Extent to which prevalent in Black Country, 36882, 36887, 36897.
Gob fires, effect of black damp on, 36889, 36895.
Testing of roof, difficulty of, owing to, 36897.

Digitized by Google

MANSELL, Mr. T.—*cont.*
Boys:
Commencement of work at mine: class of work &c., 36833.
Schools: training of boys in, in mining subjects not practised in Black Country, 36835.

Butty System, *see* Charter-master System.

Charter-master System:
Accidents, number of, under, 36661, 36720, 36784, 36825.
Description of systems, 36657, 36672, 36866, 36870.
Proportion of mines worked under each system, 36908.
Extent to which practised, 36707, 36795, 36851.
Period that system will probably continue, 36855.
Inspection, increased, probable reduction of evils of this system in event of, 36870.
Inspection of mines on behalf of men, employment of men from other collieries for, probable objection of charter-masters to, 36738.
Man appointed by to overlook men virtually manager of mine, 36667, 36679, 36709, 36816.
Qualifications, defective, 36681.
Qualifications of charter-master: type of man, suggestions as to certificate of competency, &c., 36671, 36674, 36756, 36906.
Appointment of such men as working-class inspectors undesirable, 36762, 36768, 36771.
Size of collieries in relation to, 36906.
Timber purchase of, varying custom, as to, 36715.
Unskilled men, employment of, 36822.

Checkweighers, not employed in Black Country, 36739.

Classes for men in mining subjects, 36839.

Coal Mines Act, breaches of regulations of, 36683.

Haulage, mechanical: increased use advocated as less dangerous than horse haulage, 36647, 36706.

Houses of Miners:
Baths and drying of clothes, facilities for in, 36844.
Character of, and private ownership, 36844.
Distance from pit, 36845.

Inspection of Mines by Men:
Abolition possible in event of increase in number of Home Office inspectors, 36596, 36695.
Appointment of two men in a district to give whole time to this inspection, 36602.
Cost of to be borne by men themselves, 36604.
Not practised in Black Country, 36589, 36596, 36695; 36700, 36735.
Owners, reprisals by, possibility of, 36597, 36698, 36735.
Qualifications of men making this inspection, extension of to include men employed at other collieries, views as to, 36738.

Inspection of Mines by Mines Officials:
Charter-master system, in relation to, 36667, 36679, 36709, 36816.
Districts, size of, 36612.
Duties of firemen, limitation advocated, 36618.
Qualifications of fireman, class of man appointed, desirability of certificate of competency, &c., 36608, 36613, 36615.

Inspectors, Home Office:
Adequacy of, views as to, and as to what constitutes adequate inspection, 36587, 36591, 36748, 36763, 36774, 36804.
Number of inspections, increase advocated, 36591, 36646, 36691, 36694.
Number of inspectors, increase advocated, 36578, 36594, 36694, 36719.
Working miners, appointment as additional inspectors, views as to, 36590, 36594, 36748, 36807.

Managers:
Adequacy of as regards personal efficiency; difficulty arising from number of pits under control of one man, 36669, 36678, 36753.

Manager's Certificate of Competency: examination system, adequacy of, 36653

MANSELL, Mr. T.—*cont.*
Qualifications of Witness, 36574, 36665, 36701.

Safety Lamps:
Increased use of advocated, 36650.
Introduction when necessary, 36651.

Special Rules: introduction of, working of present system, and views as to desirability of consulting men, 36621, 36624.

Staffordshire, accidents in, statistics as to, 36661, 36720, 36784.

Temperature and Depth of Mines in relation to ankylostomiasis, 36875.

Thickness of Seam and consequent dangerous nature of mines in Black Country, 36636, 36728, 36789, 36897.
Knowledge necessary for man working in, 36811.
Nature of roof in thick seams, 36813.

Timbering:
Accidents from falls of roof and sides, number of in Staffordshire, 36661, 36720, 36784.
Charter-master system in relation to, 36662, 36686, 36715.
Importance of, in thick seams, 36686, 36732.
Inspection, increased, would increase efficiency of, 36643.
Person setting and supervising, 36645, 36684, 36729.
Special Rules, 36636, 36638.

Unskilled Labour, employment of:
Accidents, number of in relation to, 36828.
Classes from which men are drawn, 36831.
Extent of, in Staffordshire, 36821.
Charter-master system, increase by, 36822, 36866.

Ventilation:
Adequate, difficulty as to high standard of, 36888.
Gob fires and black damp, 36880, 36884, 36888, 36897.
Stopping of, practice as to, in Black Country, 36889.

Wages, system of, effect of on number of accidents, 36741, 36797.

MARRIOTT, Mr. WALTER, Derbyshire Miners' Association. (*See questions* 23777—24145.)

Accidents:
Falls of roof and sides, 23901.
Haulage, *see that title.*
Shaft accidents, *see that title.*

Baths and facilities for changing clothes at pit-head, provision advocated, 24130.
Cabin for drying clothes of men employed in sinking, 24137.
Houses of miners in relation to this necessity, 24134, 24143.

Contractors, wages paid by, 24119.

Derbyshire Miners' Association, objects of, number of members, rules, &c., 23778.

Haulage Accidents, prevention of, suggestions as to, 23820:
Accidents in 1905 and 1906 arising from narrowness of roads, 24063.
Chains, 24070.
Clips, 23830, 23928, 24070.
Illustrations, 23835, 23932.
Drags on back stays, 23840.
Compulsion as to, advocated, 23842.
Distance between roads in endless rope haulage system, 23835, 23919.
Report to inspector not always made in cases of minor accidents, 24061.
Rubbish accumulation, 23821, 23908, 23917, 23991, 24059.
Trailers, 23935, 24068.
Width of roads, 23820, 23908, 23921, 23991, 24062.

Houses occupied by miners, 24134:
Witness knows no instance of single-roomed houses, 24143.

Digitized by Google

MARRIOTT, Mr. W.—*cont.*
Inspection of Mines by Mines Officials:
Continuous work of firemen, question as to, 24129.
Importance of firemen, 24098.
Qualifications of firemen, desirability of certificate of competency, 23874, 24097, 24109.
Wages of firemen as compared with coal-getters, 24119.
Inspectors, Home Office:
Adequacy of number of inspections: number of times that Witness has seen inspector inspecting, 24047.
Cages, number of men riding in, fixing by inspectors advocated, 23866, 23964, 23970, 23975, 24038.
Responsibility of manager in this event, 24042.
Timbering of gateways and roadways, distances to be specified by, views as to whether desirable, 23784, 23792, 23882, 24049.
Metalliferous Mines, facilities for washing and drying clothes provided for men in, 24140.
Qualifications of Witness, 23777, 23972, 24045.
Shaft Accidents, prevention, views as to, 23845.
Automatic arrangement to prevent man starting engine wrong way, question as to, 24085.
Cages:
Accidents (men falling out), number of, 23953, 24078.
Baulks to prevent cage going down into sump, 24079.
Gates to, advocated, 23845, 23940, 24019, 24072.
Jumping out would be impossible, 24072, 24085.
Number of men riding in:
Decision should not rest with inspectors, 23866, 23965, 23976, 24038.
Limitation advocated, 24092.
Maximum, present, 23965, 23979.
Overwinding:
Automatic arrangement for slackening speed, 23851.
Props in head-gear to prevent cage falling down shaft after, 23847, 24082.
Speed of winding, limitation advocated, 23855, 23956, 23998, 24021, 24088.
Expert evidence should be taken on this point, 23856.
Timbering:
Accidents from falls of roof and sides:
Number of, in Derbyshire, 23901.
Report of, not always made, 23903.
Contractors, system of, 23989.
Distances in gateways and roadways, fixing by manager after consultation with inspector, advocated, 23783, 23792, 23795, 23882, 24049.
Inadequacy of, as at present practised, 24117.
Responsibility for, 24113.
Special Rules:
Adequacy of as regards working face, 23799.
Application to roadways and gateways advocated, 23781, 23800, 23882.
Systematic timbering of gateways and roadways advocated, 23781, 23882, 24053.
Withdrawal of timber:
Discretion to stallman as to, suggestions as to, 23801, 24008, 24101.
Gablock and chain, use of, 23809, 23813.
Special Rule as to, non-existent, 24018.

MORGAN, Mr. DAVID WATTS, Agent, Rhondda Valley District, South Wales Miners' Federation. *(See questions* 30413-31031.*)*

Accidents:
Falls of roof and sides, 30451, 30521, 30537, 30540.
Airways, Return, use of, as travelling roads advocated, 30614, 30784, 30799.
Coal Mines Regulation Act, Section 59, as to appointment of inspectors, 30697.
Discipline, improvement in, would result from limitation of duties of officials, 30413 (*par.* 4), 30437.
Electric Re-lighting Apparatus for safety lamps 30638, 30641.

MORGAN, Mr. D. W.—*cont.*
Engine Planes:
Men and boys travelling on, during working shift, prohibition advocated, 30413 (*par.* 8), 30459, 30496, 30614, 30784, 30799.
Rubbish accumulations, 30796, 30800, 30802.
Engine-winder, certificate of competency for, views as to whether desirable, 30691, 30695.
Explosives:
Shot-firing, *see that title.*
Supply of, by owners advocated, 30413 (*par.* 10).
Fines:
Abolition advocated, 30442, 30704.
Advantages of prosecution as compared with fining, 30413 (*par.* 5), 30439, 30704, 30720, 30863.
Extent to which inflicted, 30861.
Owners, infliction of fines on, by inspectors, witness knows no instance of, 30879.
Germany: Apparatus for re-lighting lamps, 30633.
Haulage Roads:
Men and boys travelling on, during working shift, objections to, 30413 (*par.* 8), 30459, 30496, 30784, 30799.
Rubbish accumulations, 30796, 30800, 30802.
Width of, increase advocated, 10413 (*par.* 8), 30456, 30612, 30795.
Hours of Work, Rhondda Valley, 30556: [redacted]
Lewis Merthyr and Cambrian Collieries, 30557.
Inspection of Mines by Men:
Abolition, possibility of, if working miners were appointed as additional Home Office Inspectors, 30429, 30701.
Appointment of men to make this inspection, 30413 (*par.* 1)
Closing of parts of mine during, possibility of, 30890.
Cost of, attitude of Miners' Federation as to defraying, 30413 (*par.* 2), 30611.
Extent to which practised, 30413 (*par.* 2), 30428, 30575, 30889.
Preparations made by officials, 30891.
Reports, effect on, of fear of reprisals, 30578, 30612.
Instance of man asked to inspect mine again after adverse report, 30579, 30599, 30608.
Value of, views as to, 30576.
Inspection of Mines by Mines Officials:
Adequate inspection impossible under existing conditions, 30413 (*par.* 3), 30432, 30529, 30570, 30811.
Assistance to firemen by master hauliers, objection to, 30545.
Attitude of firemen towards owners and towards workmen, 30669, 30831.
Districts, size of, reduction advocated, 30413 (*par.* 3), 30432, 30474, 30529, 30543.
Duties, hours of work of firemen, and suggestions as to limitation of duties to inspection, 30437, 30475, 30534, 30549, 30557, 30857.
Lewis Merthyr Collieries, arrangement as to, 30557.
Number of firemen, increase in, less desirable than decrease in size of districts, 30543.
Qualifications: certificate of competency, views as to whether desirable, 30690, 30695.
Inspectors, Home Office:
Adequate inspection impossible under existing conditions, 30413 (*par.* 1), 30570, 30811.
Attitude of, towards employers and workmen, 30669, 30831.
Chief inspector, appointment advocated, 30415, 30418.
Complaints to, reluctance of miners to make, 30821.
Districts, size of, reduction advocated, 30415, 30808.
Efficiency of inspectors, 30653, 30896.
Name of inspector, 30650.
Number of inspections, and number advocated, 30701, 30813, 30893.
Preparations before inspection, 30891.

Digitized by Google

MORGAN, Mr. D. W.—*cont.*
Inspectors, Home Office—*cont.*
Number of inspectors, and increase advocated, 30413 (*par.* 1), 30414, 30807.
Power of Secretary of State to appoint additional inspectors, 30697.
Qualifications: certificate of competency, views as to whether desirable, 30690, 30695.
Surprise inspections, desirability of, 30891.
Working miners, appointment as sub-inspectors advocated, 30417, 30419, 30429, 30574, 30658, 30676, 30817.
Appointment, authority for, 30420, 30675
Number required, 30425.
Qualifications, 30678, 30688, 30897.
Reasons why men desire inspectors of this type, 30821, 30827.
Salaries, 30423.
Status, 30659.

Lamps, *see* Safety Lamps.

Plan or Diagram showing ventilation, roads, doors &c., suggestion as to, 30413 (*par.* 12), 30471.

Prosecution:
Advantages of, as compared with fining, 30413 (*par.* 5), 30439, 30704, 30720, 30863.
Owners, prosecution of, views as to, 30878.
Procedure in, 30708.

Qualifications of Witness, 30413A, 30433, 30609.

Rescue Work:
Appliances for descending mine after accident or explosion, provision advocated, 30413 (*par.* 11), 30468.
Pneumataphors, inadequate provision of, 30469.

Safety Lamps:
Accidents arising from men opening lamps, 30507.
Compulsory provision and right to inspectors to compel use of, advocated, 30413 (*par.* 9), 30460.
Distribution of, each man to have the same lamp allotted to him, 30628, 30876.
Keys, suggestion as to, 30624, 30865.
Oil supplied free by owners, 30873.
Re-lighting, 30413 (*par.* 8), 30617, 30632, 30635.
Screw locks, abolition advocated, 30413 (*par.* 9), 30461, 30507.
Type, standardised, advocated, 30413 (*par.* 9), 30732.

Schools, Elementary, in mining districts, instruction of boys in Special Rules at, advocated, 30413 (*par.* 6), 30885.
Glamorgan County Council Evening Classes, 30887.
Proportion of boys becoming miners, 30883.

Shot-firing:
Accidents, number of, 30465.
Between shifts, 30773.
Drilling, charging and stemming, 30744, 30767, 30770, 30781.
Electricity, firing by, 30776.
Explosive used, 30775.
Notice to under-manager, 30765.
Person firing shot, 30762, 30770.
Appointment of special shot-firer advocated, 30413 (*par.* 10), 30462.
Detonator and explosive, care of, 30777.

Special Rules:
Carrying out of, difficulty of, owing to defective framing, 30447.
Copies of, supply to men, 30413 (*par.* 6).
Introduction of:
Advertisement of proposed Rules by Home Office, views as to this suggestion, 30727.
Arbitration, 30723.
Consultation between men's representative and manager advocated, 30413 (*par.* 6), 30443, 30721, 30907.
Communication between men and Home Office as to, possibility of, 30446.
Objections to, right of men as to, 30898.
Veto, right of, 30447, 30726.
Object, chief, of, 30903.
Roadways, freedom from rubbish, Special Rules as to, 30800, 30802.
Schools, elementary, instruction of boys in, suggestions as to, 30413 (*par.* 6), 30883.

MORGAN, Mr. D. W.—*cont.*
Timbering:
Distances usually determined by manager, 30516.
Person setting and person supervising, 30477, 30510.
Payment, 30495, 30510, 30521, 30843, 30853.
Permission from official before miner can set extra timber, abolition of this regulation advocated, 30413 (*par.* 7), 30453, 30481, 30513, 30521, 30834, 30850.
Accident arising from necessity for obtaining permission, 30486.
Dispute arising from officials knocking out timber, 30853.
Roadways, more effective timbering of, advocated, 30451.
Systematic timbering advocated, 30413 (*par.* 7), 30451, 30521, 30847.

Ventilation, plan or diagram of, exhibition at surface advocated, 30413 (*par.* 12), 30471.
(*See also title* Airways.)

MORGAN, Mr. JOHN DANIEL, Agent, Anthracite District, South Wales Miners' Federation. (*Questions* 30910—31031.)

Accidents:
Haulage accidents, 30944, 31018.
Roof and sides, falls of, less probable where naked lights are used for inspection, 31014.
Trains, underground, accidents to, 30967, 30972, 30981.
(*See also title* Explosions.)

Airways, Return, use of, as travelling roads, advocated, 30943, 30945, 30985.
Gas not found in return airways, 30986.

Explosions:
Coegnant Explosion, 30921, 30923, 30941.
Danger, chief source of, 31019.
Gas in waste, explosion resulting from, 30996, 31023, 31025.
Naked lights, occurrence where used, 31006.
Occurrence of, where gas has not been observed, 31008.

Haulage:
Accidents, 30944, 31018.
Separate travelling roads advocated, 30933.
Width of road, sufficient to allow men to walk along-side, advocated, 30914.

Inspection of Mines by Mines Officials:
Qualifications of deputy, class of man appointed, etc., 30919, 30953, 30983.
Accident caused by incompetent deputy, 30921.
Eyesight, testing advocated, 30953, 30984.

Morgan, Mr. D. W., evidence of, references to, 30910. 30914, 30919, 30958.

Rubbish, disposal of, underground, suggestion as to, 30996, 31024.

Safety Lamps:
Accidents from falls of roof more probable with safety lamps than with naked lights, 31015.
Coegnant Mine, safety lamps advocated by inspector, but not introduced, 30927, 30936.
Explosion, 30923.
Compulsory introduction wherever gas has been found, advocated, 30957, 30992, 31003.
Powers of, to inspector, advocated, 30939.
Extent of use of, 30990.
Haulage accidents in relation to, 31018.
Light from, as compared with light from naked lamps, 31012.
Ventilation in safety-lamp mines, 31021.

Shafts: Doors to cages, advocated, 30918.

Timbering:
Distances, 30958.
Person setting, greater freedom to, advocated, 30960.
Wages question in relation to, 30962.

Trains, Underground:
Accidents to, 30967, 30972, 30981.
Gradients, 30969.
Precautions taken to prevent accidents, 30971.
Riding is not compulsory, 30973.

Digitized by Google

MORGAN, Mr. J. D.—*cont.*
Unskilled Labour, employment of, extent of, 30940.
Coegnant, instances of, at, 30941.

Ventilation, attention paid to, in safety-lamp mines, 31021.

Wagons:
Riding on, prohibition, 30915, 30966.
Runaways, prevention, 30912,

MORGAN, Mr. WILLIAM EVAN, Agent, Glamorgan Western District, South Wales Miners' Federation. *(See questions* 31032—31364.)

Accidents:
Haulage accidents, number of, 31243, 31252, 31261.
Investigation into:
Coroners' inquests: Power of coroner to order prosecution or second inquiry, desirability of, 31132, 31152.
Second inquiry under Section 45, adequacy of provision for, if enforced, 31155.
Plans, inaccurate, accidents caused by, 31051, 31054, 31107, 31118, 31123, 31130, 31203, 31221, 31224, 31350.
Unskilled labour, employment of, resulting in accidents, 31040, 31323.

Caradog Vale Colliery, accident at, owing to defective plans, 31054, 31118, 31123, 31130, 31152.
Report on, by Sir D. Brynmor Jones, 31224.

Checkweighers, appointment of, for inspection of mines on behalf of men, suggestion as to, 31032, 31213.

Contractors, employment of unskilled men by, possibility of, 31330.

Cwm Gelly Colliery, defective ventilation at, 31081, 31084.

Elba Colliery disaster, prosecution of manager, failure of, 31140, 31152.

Electrical Signalling, suggestion as to, 31343.

Engagement of men, regulations as to, 31329.

Engine Planes:
Dimensions and number of manholes, increase advocated, 31249, 31343.
Signalling, improved methods advocated, 31343.

Glenavon, accident at, owing to defective plans, 31055, 31108.

Haulage Roads:
Dimensions of, increase advocated, 31250, 31307, 31343.
Endless chain haulage, comparative safety of, 31259.
Manholes:
Number of, increase advocated, 31249, 31291.
Present regulations as to distances, 31257.
Whitewashing advocated, 31293.
Separate travelling roads and prohibition of travelling on haulage roads when setts are running, 31276.
Signalling on, improvement in advocated, 31343.

Inspection of Mines by Men:
Abolition advocated in event of appointment of additional Home Office inspectors, 31213.
Checkweighers, appointment of, to make this inspection, advocated, 31032, 31213.
Owners or managers, reprisals on part of, fear of men as to, 31032, 31215.

Inspection of Mines by Mines Officials: Qualifications of firemen, instances of appointment of men unable to write, 31171.

Inspectors, Home Office, number of, increase advocated, 31076, 31165.
Abolition of inspection on behalf of men advocated in event of this increase, 31213.
Working miners, appointment as additional inspectors advocated, 31169.

Managers:
Certificate, cancellation of, advocated, on conviction of carelessness, 31136, 31152.

MORGAN, Mr. W. E.—*cont.*
Managers—*cont.*
Prosecution of, instances of failure of:
Caradog Vale case, 31130.
Elba Colliery case, 31140.

Manholes, *see* Haulage Roads.

Morgan, Mr. D. W., evidence of, references to, 31032, 31132, 31165, 31169.

Pencoed Colliery, haulage accident at, 31240.

Plans defective, accidents caused by, and by working beyond boundaries; independent survey periodically advocated, 31051, 31054, 31107, 31118, 31123, 31130, 31203, 31221, 31224, 31350.

Safety Lamps, use of, objections to, when "bells or "pans" are numerous, 31097, 31101.

Signalling, mode of, improvement advocated, 31343.

Timbering, use of cogs, suggestion as to, 31247.

Trimsavan, accident at, 31238.

Unskilled Labour, employment of, as a cause of accidents, 31040, 31327.
Proportion of unskilled men employed, 31323.

Ventilation, adequate, General Rule 1 as to, neglect of in some shallow mines and suggestion as to periodical analysis of air, 31072, 31090, 31196.
Instances of neglect, 31081, 31084.

Wagons:
Accidents, number of, 31243.
Couples and shackles, examination and periodical annealing, suggestions as to, 31226, 31298.
Accidents proving necessity for, 31238.
Distinction between couples and shackles, 31298.
Riding on:
Danger of, 31311.
Practice as to, 31347.
Runaways, prevention, 31231, 31241.

MUIR, Mr. PETER, Secretary and Agent of Ayrshire Miners' Union. (*See questions* 21593—22039.)

Baths and facilities for changing clothes at pit-head, provision advocated, 21978, 22026.
Charge for, views as to, 22016, 22038.
Houses, single-roomed necessity for this arrangement increased by, 21979, 22030.
Travelling to and from work, necessity increased by, 22027.

Black Damp, *see title* Ventilation.

Discipline:
Character of Scottish mines as to, 21596, 21709.
Caution to men in event of breaches of, 21719.
Strictness of, complaints of miners as to, 21604, 21986.
Trade Unions, attitude of as to, 21603, 21702, 21900.
(*See also titles* Fines and Discipline.)

Disputes between sections of men and employers, action of Trade Union secretary in event of, 21691.

Fines:
Advantages or disadvantages of, as compared with prosecution, 21608, 21714.
Preference of men for prosecution, 21893.
Amount of, fixed by manager, 21878, 21880.
Dismissal as alternative to refusal to pay fine, 21885.
Extent to which inflicted, 21608, 21877, 21892.
Manager, infliction of fine on for breach of Rules, Witness knows of no instance of, 21897.
Method of payment, 21882.

Foreign Workmen, employment of, 21850.
Discipline, 21855.
Efficiency, views as to, 21683, 21854, 21970.
Nationalities represented, 21671.
Number of, in Ayrshire, 21671.
Objectionable only when men do not understand language or are unskilled, 21676.

Digitized by Google

MUIR, Mr. P.—*cont.*
Haulage Accidents :
Extent of mechanical haulage in Ayrshire, 21685.
Number of, 21686.
Prevention, 21687, 21856.
Chains, 21687.

Houses, one-roomed, occupied by miners, 21979, 22030.
Date at which built, 21979.
Division of, question as to, 22031.
Lodger taken in these houses, 22034.

Inspection of Mines by Men :
Amount of work involved, 21937.
Appointment by men of itinerant inspectors who are or have been practical working miners, suggestions as to, 21633, 21637, 21766, 21777, 21783, 21917, 22006.
Extent to which practised, 21633, 21772, 21909, 21934.
Official of mine accompanying men, 22024.
Owners and managers :
Attitude towards, possible effect on men making adverse report, &c., 21633, 21910, 21936, 21939.
Instance showing, 21634, 21767.
Protection of owners' interests, 21783.
Qualifications of men making inspection :
Employment in same mine, views as to, 21767, 22006, 22019.
Not essential under present law, 22011.
Engineers disqualified, 21780.
Trade Unions, attitude towards, 21910.

Inspection of Mines by Mines Officials :
Adequacy of, views on this point, 21640, 21789.
Appointment of firemen by manager, objection to, 21654, 21941.
Case proving, 22000.
Dismissal of fireman, appeal against advocated, 22000.
Districts, size of, reduction advocated, 21639, 21790, 21800.
Duties of firemen :
Other than inspection, 21646, 22003.
Timbering, supervision, views as to, 21665.
Importance of firemen, 21649.
Duties less onerous in Ayrshire than in other districts, 21864.
Qualifications of firemen, class of men appointed, and desirability of certificate, 21654, 21665, 21790, 21808, 21858, 21872, 21940.
Proportion of unsuitable appointments, 21791, 21796.
Wages of firemen, 21655, 21816, 21967.
Comparison with colliers, 21870.
Less onerous character of duties in Ayrshire mines, possible effect of on wages, 21864, 21868.

Inspectors, Home Office :
Adequacy of inspections by, views on this point, 21612, 21752, 21929.
Assistant inspectors, additional, appointment advocated, 21617, 21928.
Number required, 21629, 21757.
Residence should be near collieries, 21628.
Districts, size of, 21760.
Reduction advocated, 21928.
Number of chief inspectors, 21759.
Number of inspections desirable, 21727, 21745.
Object of inspection by, 21725.
Residence, places of, travelling entailed, &c., 21619, 21923.
Railway facilities, 21926.

Managers :
Prosecution of :
Number of, 21896.
Punishment would always be by, not by fining, 21897.
Salaries, 21969.

Prosecutions :
Advantages of fining and of prosecution compared, 21608, 21714, 21893.
Expenses of defence, payment by Trade Unions, circumstances determining, 21597, 21696, 21904.
Fines inflicted by Court not paid by Trade Unions, 21698, 21907.
Number of, 21895.

MUIR, Mr. P.—*cont.*
Qualifications of Witness, 21593, 21604, 21690.

Ronaldson, Mr., evidence of, reference to, 21596, 21855

Safety Lamps, extent to which used in Ayrshire, 21864.

Shot-firing :
Extent to which practised in Ayrshire, 21865.
Person firing shot, 21866.

Special Rules :
Advertisement of, to give opportunity to men of expressing objections, views as to, 21831, 22014.
Complaints from miners as to enforcement of, 21987, 21992.
Discussion with men not practised in Ayrshire, desirability of such discussion, 21659, 21826, 21919, 22014.

Timbering :
Person setting, men themselves, in Ayrshire, 21662, 21834.
Special men, appointment of, views as to, 21663, 21839, 21996.
Wages, possible effect on, 21845.
Special Rules :
Complaints of miners as to, 21992.
Consultation of men before introduction of, not practised, 21921.
Supervision of, views as to, 21665, 21996.
Wages, piecework, possible effect on, 21996.

Ventilation :
Amount, of explosive gas in Ayrshire collieries 21650.
Black damp in Ayrshire collieries, 21652, 21864, 21945, 21960.
Difficulty of dealing with, 21954.
Health of men, effect of on, 21948.
Case of bad ventilation in which analysis of air had not been made and bottled for production in Court, 21957.

Wages :
Firemen's, 21655, 21816, 21864, 21868, 21967.
Comparison with colliers, 21870.
Piecework, drawbacks of, and suggestion as to day wages, 21844, 21996.

PICKERING, Mr. W. H., H.M. Inspector of Mines, Yorkshire and Lincoln District. (*See questions* 33443—34059.)

Accidents :
Falls of roof and sides :
Coal-cutting machinery, use of, in relation to, 33975.
Number of, 33756, 33770, 33971.
Inspection after, by Home Office inspectors :
Importance of, and difficulties as to, in some districts, 33600.
Leaving scene of accident undisturbed until inspection, 34054.
Investigation :
Coroners' inquests :
Adequacy of, views on this point, 33605, 33821.
Juries, constitution of, 33823.
Notices, inconvenience of present arrangement as to, 33602.
Viewing of bodies, delay caused by, and desirability of abolition, 33603.
Workmen's inspection of mines, reports of, use of at, 33804.
Second inquiry under Section 45, more frequent use of, advocated, 33609.
Cases requiring, 33611, 33823.
Improper refusal of, witness knows of no instance of, 33614.
Initiation by Secretary of State, views as to, 33612.

Agent or managing director, appointment of managers and under-managers by, 33579.

Ankylostomiasis, existence of in India, question as to, 34042.

Baths, facilities for, at pit-head, desirability of, and extent of provision in Yorkshire, 34023.

Checkweighers, inspection of mines by, on behalf of men, views as to whether desirable, 33747.

Digitized by Google

PICKERING, Mr. W. H.—*cont.*

Coal-cutting Machinery, use of, effect of, on number of falls of roof and sides, 33975.

Commission, Royal, on Coal Supplies, difficulty experienced by in obtaining records and information, 33483.

Discipline:
Manager, qualities of, importance of, in relation to, 33558.
Punishment by prosecution, more effective than by fining, 33765.

Factory Act, procedure of, application of, to introduction of Special Rules, views as to, 33592, 33693, 33965.

Fines, advantage of prosecution as compared with: decrease in practice of fining advocated, 33716, 33769.

General Rules, inclusion in, of many of existing Special Rules advocated, 33589.

Homes of Miners, baths and washing arrangements in, 34025.
Model village in Yorkshire; bath-rooms provided, 34032.
One-room houses, question as to, 34028.

Indian Mines:
Ankylostomiasis, existence of, 34042.
Managers, regulations as to, 33572, 33754, 33873.
Sanitary arrangements, 34040.
Underground communications, 33574.

Inspection of Mines by Men:
Extent to which practised, and desirability of increase, 33548, 33802, 33809, 33939, 33991.
Object of this inspection, 33738.
Owners, reprisals by, improbable, and men not affected by fear of, 33551, 33740, 33990.
Qualifications of men for making this inspection, extension of, views as to, 33745, 33984.
Reports:
Copies of, should be forwarded to Home Office inspector whether danger is reported or no, 33549, 33555.
Coroners' inquests, use of at, views as to, 33804.
Responsibility of managers would not be affected by more frequent inspection, 33941.
Value of this inspection, 33549, 33737, 33937, 33991.

Inspection of Mines by Mines Officials:
Districts, size of, reduction desirable in some instances, 33541, 33725, 33846.
Duties of firemen, limitation to inspection advocated, 33730, 33733.
Hours of inspection, Special Rule 13 (Yorkshire), amendment advocated, 33522.
Importance of firemen and manager compared, 33926.
Number of and intervals between inspections, views as to, 33523, 33533, 33829.
Qualifications of firemen, desirability of practical experience, certificate of competency, &c., 33659, 33925:
Responsibility of manager for appointment of competent men, 33931.
Reports of inspection, 33526, 33529, 33535:
Availability for men of next shift advocated, 33536.
Shifts following without interval, consideration as separate shifts advocated, 33525, 33528.

Inspectors, Home Office:
Adequacy of present inspection, views on this point and on what constitute adequate inspection, 33489, 33498, 33629, 33792, 33947, 33950.
Assistant inspectors, additional, appointment advocated, 33453, 33459, 33468.
Qualifications: Certificate of competency, class of men, &c., views as to, 33471, 33500, 33507.
Salaries, 33473.
Working miners, appointment as, views as to, 33510.
Authority of, extent of, 33812, 33889, 33896.
Control of management, powers as to not always adequate, 33889.
Chief inspector of a district, appointment of, views as to, 33464.

PICKERING, Mr. W. H.—*cont.*

Inspector's Home Office—*cont.*
Clerical work, relief from advocated, 33455, 33676, 33946.
Deputy-chief inspectors, appointment advocated, 33465.
Number, 33469.
Qualifications of and value of work that would be done by, 33636.
Districts:
Re-arrangement advocated, 33460, 33898, 33946.
Size of, York and Lincoln, 33446.
Duties of, 33812.
Manager's responsibility, possible effect on, of increased inspection, 33489.
Nomination of, 33511.
Number of inspections desirable, views as to, 33796, 33792, 33942.
Number of inspectors, and number advocated, 33445, 33446, 33469, 33792.
Object, chief, of this inspection, 33629.
Qualifications, certificate, class of men, &c., views as to, 33500, 33519, 33629, 33635, 33645, 33655, 33668, 33784, 33786, 33810, 33915.
Reports of, value of, but decrease in number of is desirable, 33484.
Salaries, 33473:
Increase desirable if best class of man is to be obtained, 33475, 33673.
Surprise visits, occasional, 34052.
Telephonic communication, suggestion as to, 33901.
Travelling, reduction of time spent in, under scheme advocated by Witness, 33900.
Working miners, appointment as, views as to, 33510.

McLaren Explosion, Inspector's advice as to safety lamps disregarded previously to, 33906.

Managers:
Act of Parliament, Rules, &c., incorporation in, of rules as to managers in Indian Mines Act advocated, 33572.
Appointment of manager, under-manager and officials by agent or managing director of groups of mines, 33579.
Authority of:
Control by Home Office Inspectors, extent of, 33817, 33889, 33903.
Limitation of power by owner or agent, 33570.
Certificate of Competency. *see sub-heading* Manager's Certificate of Competency.
Duties of, sometimes excessive; number of mines under control of one manager, 33559, 33570, 33753, 33852.
Importance of managers, 33558, 33798.
Prosecution of, possibility of, and circumstances justifying, 33818, 33893, 33902.
Qualifications of class of men appointed, &c., 33616, 33618, 33914.
(*See also title* Manager's Certificate of Competency.)

Manager's Certificate of Competency, examinations for:
Adequacy of present system, views on this point, 33615.
Board of Examination, constitution of, suggestions as to, 33615, 33619, 33621, 33863, 33881.
Local examination, suggestion as to, and as to centres for, 33626, 33866:
Examiners should be appointed by Central Board, 33880.
Marks, system advocated, 33872.
Uniform standard advocated, 33624, 33866, 33868, 33879.

Mines Department of Home Office, constitution of, advocated, 33477,33585, 33669.
Head official, 33671.

Output, increase in, and probable future increase, 33771.

Qualification of Witness, 33443, 33627, 33653.

Safety Lamps, compulsory introduction of, extent of power of inspector as to, 33818, 33889, 33902.

Sanitary Conveniences, provision of, views as to, 34038.

Scotland, miners' houses in, 34028.

PICKERING, Mr. W. H.—*cont.*
Special Rules :
Inspection of mine by mines officials, Special Rule 13 (Yorkshire and Lincoln) as to, 33522.
Introduction of :
Arbitration, views as to, 33590, 33690.
Board for each district, constitution of suggestions as to, 33584, 33683, 33716, 33860, 33959, 33967, 34057.
Discussion between owners and men, views as to, 33709, 33723, 33782, 33956.
Factory Act procedure, application of to, views as to, 33592, 33693, 33965.
Miners, proposal by, views as to, 33962.
New mines should automatically fall under rules of district to which they belong, 33587.
Owners, proposal of rules by, and advertisement by Home Office, to give opportunities for objections, 33703, 33961, 33964.
Revision of rules advocated, and inclusion of many existing rules in General Rules, 33589, 33680.

Timbering :
Extent desirable, 33848, 33973.
Inspection, stricter, advocated, 33758, 33781.
Person setting and person supervising, 33759. 33781, 33982.
Systematic timbering advocated, 33847, 33972.
Coal-cutting machinery, use of, in relation to, 33975.
Withdrawal of, carelessness in, as a cause of accidents, 33760.

Under-Manager :
Appointment of, by manager having control of several mines, 33559.
Qualification as regards practical experience, 33659.

Underground Communications, regulations as to, in Indian Mines Act, 33574.

Ventilation :
Adequate ventilation, clearer definition, views as to, 33992, 34045.
Withdrawal of men in event of defective ventilation, 33998, 34050.

Westphalian Mines, standard of ventilation in, 34005

POWELL, Mr. JOHN REES, General Secretary of the Monmouthshire and South Wales Colliery Examiners' Association. (*See questions* 25377—25723.)

Ambulance, *see title* Rescue Work.

Boys, employment in pit, 25594.
Hours of work, 25595, 25666.
Instructions to butty to accompany young lads to pit bottom, practice as to, 25669, 25680.
Loitering about main roads at commencement of shift, 25377 (*par.* 9), 25515, 25682.
Number of boys employed, 25677.
Work in which chiefly engaged, 25681.

Coal Mines Regulation Act, General Rule 4 as to inspection of mine by mines officials, amendment advocated, 25377 (*pars.* 4 *and* 5).

Deputy, definition of, 25380, 25720.

Discipline :
Boys loitering about main road at commencement of shift, 25377 (*par.* 9), 25515, 25682.
Instruction and encouragement of men and boys in, 25377 (*pars.* 7 *and* 8), 25514.
Schools in mining villages, special instruction of boys in, views as to, 25712.

Dust, prevention and removal of, practice as to, 25539.

Examiner and Fireman, definitions of, 25380, 25720.
(*See also title* Inspection of Mines by Mines Officials)

Foreign Workmen, employment of, question as to, 25694.

Haulage Roads, rubbish on, clearing away, 25537, 25569.

POWELL, Mr. J. R.—*cont.*
Hours of Work (shifts), 25421, 25437, 25524, 25582, 25595, 25636, 25666, 25672.
Reduction advocated, 25377 (*par.* 2), 25409, 25603, 25622.
Repairing shift, 25437.
(*See also title* Inspection of Mines by Mines Officials, *sub-heading* Hours of Work.)

Inspection of Mines by Mines Officials :
Districts, size of, number and width of working places, 25612, 25649 :
Complaints as to size, reception of, 25558.
Decrease advocated in some instances, 25554, 25644.
Duties of colliery examiner :
Definition of examiner, firemen and deputy, 25380, 25720.
Other than inspection, 25526, 25544.
Calling away from inspection for, 25446, 25468, 25549.
Limitation and reduction of duties, advocated, 25377 (*par.* 2), 25543, 25547.
Relieving examiner or deputy to make third examination, suggestion as to, 25452, 25455.
Hours of work of colliery examiners, 25405, 25407, 25449, 25457, 25467, 25524, 25551, 25613, 25635.
Adequacy of, for inspection, 25407.
Reduction advocated, 25377 (*par.* 2), 25409, 25622.
Times of inspection, 25457, 25469, 25635.
Importance of colliery examiners, 25704.
Man to accompany colliery examiner when mine is otherwise empty, suggestion as to, 25377 (*pars.* 4 and 5).
Number of colliery examiners, 25412.
Number of inspections desirable, 25377 (*par.* 4), 25445, 25535, 25560.
Qualifications of colliery examiners, class of man selected, desirability of certificate, &c., 25377 (*par.* 5), 25477, 25628.
Age of colliery examiners, 25629.
Record of second inspection, suggestion as to, 25445, 25562.
Safety lamps used by colliery examiners, suggestions as to, 25377 (*par.* 4), 25441, 25534.
Systems of examination, 25457, 25647.
Wages of colliery examiners, 25572 :
Comparison with colliers', 25631.

Method of Working in mines where Witness is employed, 25646 :
Ripping, extent of, 25662.

Monmouthshire and South Wales Colliery Examiners' Association :
Evidence of Witness representative of, 25527.
Nature of the Association, 25379.

Qualification of Witness, 25378.

Rescue Work and Appliances :
Apparatus to be kept at every colliery, in firemen's chest or at lamp station, suggestion as to, 25377 (*pars.* 10 and 11), 25521, 25564.
Station, central, advocated, 25377 (*par.* 10), 25521.
Training of men in, advocated, 25377 (*pars.* 10 *and* 11).

Schools, Elementary, in mining districts, instruction of boys in, in matters concerning safety in mining, advocated, 25712.

Shot-firing, 25416 ;
Between shifts advocated, 25377 (*par.* 3), 25417, 25422, 25425.
Permission from manager, 25431.
Time for, 25421, 25432.

Special Rules :
Advertisement of, by Home Office to give men opportunity of objecting, views as to, 25492, 25708, 25710.
Amendment of Monmouthshire and Forest of Dean Special Rules, suggestion as to, 25377 (*pars.* 4 *and* 5).
Discussion by Board representing all classes working in mines, suggestion as to, 25377 (*par.* 6), 25485, 25702.
Suggestion of rule by owners, veto by Board, question as to, 25490, 25495, 25499.

POWELL, Mr. J. R.—*cont.*
Special Rules—*cont.*
Supply of copies to men, 25377 (*par.* 7), 25506.
Prizes and certificates for workmen for knowledge of, suggestion as to, 25377 (*par.* 7), 25508.

Timbering:
Act of Parliament: Coal Mines Regulation Act, General Rules, 25377 (*par.* 1), 25388.
Duties and responsibilities of firemen in relation to, 25377 (*par.* 2), 25544, 25547.
Lids, supply of, advocated, 25392.
Method of setting, advocated, 25377 (*par.* 1).
Supply of, suggestion as to, 25377 (*par.* 1), 25392.
Withdrawal of:
Method advocated, 25398.
Special men, appointment of, for, views as to, 25403.

Ventilation:
Duties of colliery examiners in relation to, 25544.
Dilution of gas when found in small quantities, 25460, 25605.
Report on all gas found in mine, 25611.
Sudden accumulation of gas, 25640.

RICHARDS, Mr. THOMAS, M.P., General Secretary, South Wales Miners' Federation. (*See questions* 19621—20216.)

Abertysswg Explosion:
Enquiry under Section 45, demand for, 19802, 19805.

Accidents: Investigation:
Coroners' inquests:
Inadequacy of, views as to, 19621 (*par.* 15), 19783, 19976, 20210.
Second enquiry under Section 45 of Coal Mines Regulation Act, desirability of, 19621 (*par.* 15), 19781, 19799, 19976, 20079, 20211.
Cases proving necessity for, 19801.
Constitution of court, method of procedure, &c., 19978.
Home Office, powers of, as to, insufficiently used, 20081.
Suspension of manager's certificate, powers as to, advocated, 19789, 20214.

Ankylostomiasis:
Sanitary conveniences, provision of, views as to, 19794.
South Wales and Monmouthshire, no cases in, 19621 (*par.* 16).

Baths, provision at pit-head, views as to, 20181.

Checkweighers:
Danger underground, information as to, given by, 20192.
Attitude of owners or managers as to this or other actions as men's representative, 20198.
Inspection of mines by, on behalf of men, views as to whether desirable, 19903, 20040.
Qualifications: former regulation as to employment in same mine, 20111.
Shelters erected for, in Welsh collieries, 20187.

Coal Mines Regulation Act, 1887:
Section 16, Sub-section (*b*), as to sinking of shaft, amendment of, views as to, 20176.
Section 49:
General Rules 16 and 24, as to haulage, 19725.
General Rule 38, amendment of, suggestion as to, 19621 (*par.* 2), 19671, 20106.
General Rule 39, as to employment of experienced workmen at the face, 20160.

Commission, Royal, 1886:
Permanent investigation department advocated, 19749.
Safety lamps, consideration of, 19749, 20078.

Deputies, *see title* Inspection of Mines by Mines Officials.

Discipline:
Fines, *see that title.*
Suspension for breaches of, not advocated, 19821.

RICHARDS, Mr. T., M.P.—*cont.*
Dust:
Screening-plant, dust from, prevention from going down downcast shaft:
Provision for, extent of, 19621 (*par.* 10).
Removal of screens to distance from shafts, 19745, 20072.

Elba Explosion, Coroner's inquest, 19787.

Experiments, suggestions as to:
Dust, 19621 (*par.* 10).
Rescue work and appliances, 19776, 19778.

Explosions:
Carelessness on part of men causing: measures taken to instruct men, 19969.
Safety of men in event of, measures taken to secure, 19974.
(*See also titles* of Explosions.)

Fines:
Advantages of fining and prosecution compared, 19621 (*par.* 5), 19693, 19817, 19820, 19924, 20021, 20026.
Discipline, effect on, 20023.
Disposal of, method of, 19825.
Extent to which inflicted and class of offence punished by, 20019, 20025.
Measures taken to secure justice, 19919.
Truck Act in relation to, 19920.

Firemen, *see title* Inspection of Mines by Mines Officials.

Foreign Workmen, employment of:
Objection to, 20165.
Welsh mines, question as to, 20163.

France:
Fines, disposal of, 19826.
Inspection of mines by men, cost defrayed by Treasury, 19892.

Genwen Explosion:
Coroner's inquest, prosecution of manager subsequently to, &c., 19787, 20097.

Haulage Accidents:
Act of Parliament referring to haulage: General Rules 16 and 24, 19725, 19737.
Electric haulage, effect of, on number of accidents, 20067.
Number of accidents, 20150.
Position of driver, 20151.
Prevention of:
Chains, provision, 20145.
Inspection of shackles and of drawbars of trams, 19732, 20067, 20141.
Rubbish accumulations, freedom of roadways and manholes from, 19621 (*par.* 9), 19712, 19721, 19725.
Separate travelling roads advocated, 19621 (*par.* 9), 19711, 19715, 19959, 19962, 20066.
Widening of roads, views as to, 19621 (*par.* 9), 19711, 20149.
South Wales, system in, 20143, 20146.
Spragging, position of driver in relation to, 20152.

Home Secretary:
Attention given to mining industry by, views as to, 20184.
Special Rules, framing by, suggestions as to, 19621 (*par.* 7), 19700, 19931.

Inspection of Mines by Men:
Amount of work entailed, views as to, and as to increase in number of men making inspections, 19894.
Cost of, borne by the men themselves, 19686, 19891.
Extent to which power is exercised, 19621 (*par.* 2), 19680, 19686, 19884, 20014.
Owners and managers:
Attitude towards, 19676, 19680, 19984, 19900, 19907, 20016.
Protection of rights of, 19906.
Qualifications of men making inspection, 19621 (*par.* 2), 19671, 19675, 19899, 20040, 20106.

Inspection of Mines by Mines Officials:
Adequacy of, views on this point, and as to what constitutes adequate inspection, 19621 (*par.* 4), 19752, 19910, 19917, 20007, 20027, 20052, 20116, 20121, 20125.

Digitized by Google

RICHARDS, Mr. T., M.P.—*cont.*
Inspection of Mines by Mines Officials—*cont.*
Districts, size of, 20116, 20208.
Duties of deputy or fireman:
Distinct from duties of overman, 20201.
Other than inspection, 19621 (*par.* 4), 19688, 19752, 19917, 20027, 20052.
Gas, testing for, and report on presence of, 19621 (*par.* 13), 19752.
Hours of work, 20209.
Importance of firemen, 19752, 20134.
Qualifications of, class of men appointed, &c., 19621 (*par.* 3), 19687, 19911, 20001, 20044, 20131, 20134.
Certificate of competency, views as to, 19621 (*par.* 3), 19687, 19753, 19911, 19917.
Wages of firemen as compared with miners, 20049.

Inspectors of Mines (Home Office Inspectors):
Adequacy of inspections, views on this point, and as to what constitutes adequate inspection, 19621 (*par.* 1), 19847, 19996, 20082, 20084, 20091.
Appointment, method of, objections to, 19645.
Assistant inspectors, additional, advocated, and suggestions as to appointment of working miners, 19621 (*par.* 1), 19630, 19635, 19639, 19643, 19645, 19659, 19814, 19863, 19995, 20204.
Salary, 19663.
Authority to order cessation of dangerous practices, views as to, 20206.
Districts, size of, suggestion as to sub-division, 19631, 19642, 19987.
Number of inspections desirable, 19849, 20091.
Number of inspectors, inadequacy of, 19621 (*par.* 1), 19629, 19642, 19882, 19986, 20089.
Qualifications of, 19860.
Surprise visits, desirability of, 20103.

Managers:
Appointment of, to control of more than one colliery, 20010.
Certificate of competency:
Number of certificates granted annually, 19874.
Qualifications of candidates for, number of working miners holding certificate, &c., 19869, 20001, 20044.
Suspension of certificates, views as to, 19789, 20214.

Midland District, size of, 19991.

Minister of Mines and special department for mining, views as to, 20185.

Monmouthshire District, size of, 19989.

Overman, duties of, 20034, 20039.

Prosecutions, advantages of, as compared with fines, 19694, 19820, 19924, 20021, 20026.

Rescue Work and Appliances:
Inspection advocated, 19775.
Keeping in readiness near face, advocated, 19621 (*par.* 14), 19769, 20172.
Provision by men where not provided by owners, 20173.
Increased attention to provision advocated, 19963.
Stretchers, use of, 20174.
Training men in use of, 19777, 19780.

Safety Lamps:
Act of Parliament: Coal Mines Regulation Act, 1887, General Rule 8, amendment of, views as to, 19621 (*par.* 12), 19836.
Compulsory introduction of, views as to, 19621 (*par.* 12), 19761, 19828.
Extent to which used, 19832.
Falls of roof and sides in relation to use of, 19829.
Naked lights, use of, in same ventilating district with safety lamps, prohibition advocated, 19761.
Objections to, on part of owners and men, 19828, 19832.
Oils, selection by manager, objections to, and suggestions as to a standard, 19621 (*par.* 11), 19749, 20077.
Types used, selection by manager, objections to, and suggestions as to a standard, 19621 (*par.* 11), 19749, 19755, 20075.
Testing of types, 19748.

RICHARDS, Mr. T., M.P.—*cont.*
Safety Lamps—*cont.*
Ventilation: indications of gas furnished by safety lamps: ordinary miners should not test for gas, 19751.
Wages, decrease in power of earning, resulting from use of safety lamps, 19831.

Sanitary Condition of Mines:
Ankylostomiasis:
Sanitary conveniences, provision, views as to, 19794.
South Wales and Monmouthshire, no cases in, 19621 (*par.* 16.)
Baths, provision at pit-head, views as to, 20181.
General condition, 19838, 20181.
South Wales, 19621 (*par.* 16), 19794, 20180.

Shafts, distance from one another, regulation as to, 20176.

Southern District: sub-division advocated. 19631.

Special Rules:
Advice to men as to importance of obeying, 20056.
Arbitration, objections to, 19930.
Copies of, supply to workmen, necessity for, 19621 (*par.* 6), 19698, 19927, 20054.
Discussion between owners and miners before introduction of, views as to, 19621 (*par.* 7), 19701, 19708, 19929.
Inspection, necessity for, would be lessened if rules were properly observed, 20059.
Introduction of, suggestions as to, 19929.
Preparation by Secretary of State and Parliamentary sanction, suggestions as to, 19621 (*par.* 7), 19700, 19931.
(*See also sub-heading* Discussion.)
Suggestion by miners, absence of any right as to, 19948, 19950.

Timbering:
Accidents in relation to:
Carelessness of men, decrease in number of accidents caused by, 19844.
Cause, chief, of, 19845.
Systematic timbering, probable reduction of number of accidents by, 19621 (*par.* 8), 19703, 20140.
Discussion as to, between managers and miners after consultation with Home Office, advocated, 19704, 19708, 20065.
General Rule, difficulty of formulating, owing to varying conditions, 19707.
Special men for, views as to, 20136.
Special Rules as to roof timbering, strengthening of, views as to, 19843.
Spragging, General and Special Rules as to, views as to, 19841, 20060, 20063.
Supply insufficient, of timber to men, effect of rule as to withdrawal of men in case of, 20059.
Systematic timbering advocated, 19621 (*par.* 8), 19703, 20140.
Wages: payment for piece work, effect of on efficiency of timbering, 20137.

Unskilled Workmen, employment of, 20157.

Ventilation:
Report by fireman when gas is present, advocated, 19621 (*par.* 13).
(*See also title* Safety Lamps, *sub-heading* Ventilation.)

Wages:
Firemen and colliers, wages compared, 20049.
Piece-work, effect of, on efficiency of timbering, 20137.

Wagons:
Dust from, prevention of, views as to:
Loading, 19621 (*par.* 10), 19741, 20069.
Type of wagon advocated, 19621 (*par.* 10), 19741, 20070.
Haulage, *see that title.*

ROACH, Mr. MICHAEL, Agent, Monmouth Western Valleys District, South Wales Miners' Federation. (*See questions* 35071—35266.)

Accidents:
Falls of roof and sides, number of, 35099.
Comparison of haulage roads and headings, as to, 35121, 35130, 35232, 35247.

Digitized by Google

ROACH, Mr. M.—*cont.*
Accidents—*cont.*
Haulage accidents, number of, 35100, 35135, 35145.
Inspection of mine after by men's representatives advocated, 35106.

Airways, Return, use of, as travelling roads advocated, 35100, 35151.
Ventilation would be improved by, 35156.

Baths, and drying of clothes, provision for, advocated, 35200.

Fines, advantages of prosecution as compared with, and suggestion as to abolition of fining, 35095.

Harris, Mr., evidence of, reference to, 35098.

Haulage Roads:
Accidents:
Fall of roof and sides, 35121, 35130, 35232, 35247.
Haulage, 35100, 35135, 35145.
Cleaning, greater attention to, advocated, 35137.
Separate travelling roads advocated, 35155.
Signals, separate code, advocated, 35101.
Suspension of haulage while men are travelling advocated, 35100.
Width of, increase of, views as to, 35100, 35137, 35150, 35154.
Accident proving necessity for increase, 35145.

Inspection of Mines by Men:
Frequency with which this examination should take place, 35082.
Owners, reprisals by, fear of, and its effect on reports, 35085.
Instance of unfavourable report received in proper spirit, 35085.

Inspection of Mines by Officials:
Appointment of firemen should not rest with manager, 35088, 35212.
Districts, size of, decrease advocated, 35087.
Hours of work of firemen, reduction advocated, 35092.
Qualifications of firemen, class of man appointed, desirability of certificate of competency, &c., 35092, 35113, 35212, 35227.

Inspectors, Home Office:
Districts, division advocated, 35073.
Number of, increase advocated, appointment of working miners as additional assistant inspectors advocated, 35073, 35076.
Certification, 35079.
Salaries, 35073.

Morgan, Mr. W., evidence of, reference to, 35097.

Qualifications of Witness, 35071, 35186.

Rescue Work and Appliances: Increased ambulance provision advocated, 35201.
Case proving necessity for, 35204.

Safety Lamps, compulsory introduction where gas has been found, advocated, 35105.

Signals, separate code when haulage engine is bringing coal from two separate districts, advocated, 35101.

Special Rules, introduction: Consultation between owners and men advocated, 35097.

Telephonic Communication between every district in a mine and surface advocated, 35208.

Timbering:
Accidents from falls of roof, 35121, 35125, 35147.
Distances, 35142, 35180, 35192.
Person setting:
Greater discretion to men as to putting up timber advocated, 35125, 35172, 35233, 35254, 35258.
Most suitable person, appointment of special person, &c., views as to, 35258, 35260, 35262.
Systematic timbering advocated, 35098, 35142, 35147, 35252.
Wages question in relation to, 35128, 35139, 35174, 35238, 35254.

Wagons:
Loading, 35110, 35157.
Repair of, 3511

ROBERTSON, Mr. D. A. W., General Manager, Metropolitan Coal Company of Sydney, Chairman of the Board for appointing Examiners in New South Wales. (*See questions* 26352—26657.)

Australia:
Manager's certificate of competency:
Metalliferous mines, certificate for, 26632.
New South Wales, *see that title.*

Canada:
Fernie explosion, damp zone traversed by, 26352 (*par.* 2), 26416, 26449, 26458.
Manager's certificate of competency, question as to, 26629.

Delevingne, Mr., evidence of, reference to, 26352 (*par.* 1).

Dust, inflammability of, 26352 (*par.* 2).

Haulage Accidents, prevention of, views as to:
Gangways, 26422.
New South Wales, prevention in, 26419, 26492.
Separate travelling roads, 26352 (*par.* 2), 26419, 26492, 26494.
Width of roads, increase of, 26493.

Inspection of Mines by mines officials, safety lamps used in, suggestions as to, and as to oil to be burnt in, 26352 (*par.* 2), 26426, 26431, 26467, 26478, 26549, 26637.

Manager's Certificate of Competency:
Metalliferous mines, absence of special certificate for, 26631.
New South Wales, *see that title.*
New Zealand, separate examination for, question as to, 26627.
Qualifications of candidates:
Medical examination of candidates not required, 26598.
Recognition of experience in English mines in New South Wales, and request for same recognition in England of experience in New South Wales, *see title* New South Wales, *sub-heading* Manager's Certificate of Competency—Recognition, &c.

New South Wales:
Area of mines, 26442, 26556.
Baths and other facilities for washing at pit-head, impossible owing to shortage of water, 26635.
Coal Mines Act, provisions as to engine-winders, 26585, 26592, 26594, 26600.
Coal production of the Commonwealth practically confined to, 26531.
Development of coal production, 26623.
Depth of mines, 26445.
Engine-winders:
Certificate of competency required for, objections to, 26585, 26592, 26600.
Metalliferous mines, engine-drivers' requirements, difference in 26605,
Transvaal, practice as to, in, 26608.
Medical examination, periodical, not practised, 26594.
Desirability of, 26596.
Fines:
Offences punished by, 26576, 26578.
Objections to fining, 26579.
Haulage accidents, prevention of, 26419, 26492.
Kembla explosion:
Cause of, uncertainty as to, 26451.
Course traversed by, and point of arrest—damp or watered zone apparently traversed, 26352 (*par.* 2), 26397, 26438, 26446, 26458, 26566.
Naturally or artificially damp zone, question as to, 26447, 26462.
Dust analysis, 26352 (*par.* 2), 26413.
Electric coal-cutters, use of, question as to, 26454.
Inspection and report by Witness after explosion, 26417.
Manager's certificate of competency, examination for:
Ambulance examination, 26517.
Board of examination, 26524.
Electricity, examination in, 26522.
Good managers who could not have passed the examination, question as to, 26601.
Machinery, knowledge of, inclusion in, 26522, 26523.

Digitized by Google

ROBERTSON, Mr. D. A. W.—*cont.*
New South Wales—*cont.*
Manager's certificate of competency, &c.—*cont.*
Number of examinations and places at which held, 26525.
Number of men gaining certificates more than equal to demand, 26624.
Oral examination, practical knowledge of mining required in, 26521.
Qualifications required of candidates, 26373, 26378.
Experience in British or foreign mines, acceptance of, question as to, 26369, 26508.
Evidence of such experience, regulations as to, 26375, 26380, 26509, 26612.
Other States of Commonwealth, experience in, not always accepted, 26378, 26385.
Exclusion of candidates from other places not practised, 26533.
Mining engineer, apprenticeship to, as alternative to equivalent period of employment in mine, 26499, 26619.
Surveying, experience in, as equivalent for experience in mines, question as to, 26500.
Technical college and classes, certificates from, not accepted as equivalent to experience in a mine, 26505.
Recognition, mutual, of English certificates, and New South Wales certificates, suggestions as to, 26352 (*par.* 1), 26358, 26389, 26584:
Character of examinations, 26359, 26366, 26393.
Correspondence with English Government as to, in 1903, 26352 (*par.* 1), 26365.
Notification of any cancellation of certificates advocated, 26542.
Other States of Commonwealth not included in this suggestion, 26393, 26628.
Present position as to, 26370, 26376, 26622.
Registration of certificates, 26536.
Method of working mines, 26444.
Mines Inspection Act of 1901, application to metalliferous mines, 26588.
Engine-winders, qualifications under, 26605.
Output in coal mines:
Largest output in New South Wales, question as to, 26554.
Metropolitan Coal Company, Ltd., 26552.
Prosecutions of men for breaches of discipline, 26570.
Admonition for minor offences, 26574.
Prosecution of officials or manager for neglect of duty, practice as to, 26581.
Court of enquiry and cancelling of certificate in case of serious offences, 26583.
Record of such prosecutions, 26582.
Report of Department of Mines for 1906, 26395.
Safety lamps, *see that title.*
Shot-firing:
In coal, not practised, 26559.
Watering in neighbourhood of a shot, 26352 (*par.* 2), 26559.
Special Rules, nature of and number of, 26626.
Ventilation:
Adequate ventilation, rule as to and definition of, 26547.
Black damp, 26640.
Carbonic oxide given off naturally from coal, 26640.
Amount with which men may work in safety, 26643, 26646.
Analysis, 26645, 26654.
Effect of, on health, 26659.
Character of mines as to, amount of gas, &c., 26442, 26546, 26648.
Safety lamps in relation to, *see title* Safety Lamps.
Watering in mines:
Compulsory, not advocated, 26352 (*par.* 2).
Danger and difficulty of, 26562.
Nature of roof in relation to, 26564.
ROBERTSON, Mr. D. A. W.—*cont.*
New South Wales—*cont.*
Watering in mines—*cont.*
Experience of Witness as to, 26496.
Extent of, 26557.
Thorough watering impracticable, 26563.
Systems of, 26558.
New Zealand:
Coal production in, 26531.
Manager's certificate of competency, examination for, question as to, 26627.
Qualifications of Witness, 26352 (*par.* 1), 26353, 26393, 26425.
Safety Lamps:
Compulsory use of, views as to, 26352 (*par.* 2).
Oil to be burnt in, for detection of gas (colza oil not sufficiently sensitive), 26352 (*par.* 2), 26426, 26431, 26467, 26549.
Experiments and tests, 26478, 26637.
Measuring cap, 26434.
Mixture of kerosene and colza oil, 26550.
(*See also title* Ventilation.)
Shot-firing:
Watering in neighbourhood of a shot, 26352 (*par.* 2), 26559.
Transvaal:
Engine-winders' certificate of competency, regulation as to, 26608.
Ventilation:
Adequate ventilation, standard of, advocated, 26427, 26637.
New South Wales, *see that title.*
Safety lamps, indications of gas furnished by, *see title* Safety Lamps, *sub-heading* Oil to be burnt in.
Watering in Mines:
Compulsory, not advocated, 26352 (*par.* 2).
Experience of Witness as to, 26496.
Extent to which dust can be removed or prevented, 26352 (*par.* 2).
Zones, Watered:
Explosions, failure to arrest, *see title* Canada, *sub-heading* Fernie Explosion, and *title* New South Wales, *sub-heading* Kembla Explosion.
Length required, 26352 (*par.* 2).

ROWARTH, Mr. S. W., General Secretary of the Derbyshire and Nottinghamshire Enginemen's and Firemen's Union. (*See questions* 28117—28396.)

Acts of Parliament and General Rules, Amendment of, as regards engine-winding regulations, views as to whether desirable, 28167, 28178, 28304.
(*See also title* General Rules.)
Bills, Parliamentary:
Steam Engines (Persons in Charge) Bill, 28124.
Amended Bill, 28160, 28391.
Committee, Select, of 1901:
Certificate for engine-winders, evidence and report as to, 28157, 28164, 28239, 28393.
Derbyshire and Nottinghamshire Enginemen's and Firemen's Union, membership, 28119, 28125.
Eastwood Collieries, accident at, owing to absence of partition between engines, 28203.
Engine-house:
Additional man, presence of, views as to whether desirable, 28153, 28353, 28357.
Admission to, of any person except engine winder, prohibition, 28136, 28138.
Partition between engines, necessity for, 28201.
Sanitary conveniences in, provision advocated, 28139, 28200.
Signal from bankman to engine-house, provision advocated, 28182, 28267.
Two or more engines in one house, objections to, 28366, 28371.
Engine-winders:
Absence from engine-room, prohibition, 28139, 28185, 28360.
Dismissal for absence, 28139.

Digitized by Google

ROWARTH, Mr. S. W.—*cont.*
Engine-winders—*cont.*
Accident or illness, possibility of, 28351.
Comparison with collier, as regards health, 28149.
Instance of, question as to, 28354.
Certificate of competency:
Advantages of, 28157, 28229, 28293.
Emergencies, powers to Home Secretary as to appointment of men as winders in event of, views as to, 28246, 28296.
Strikes and lock-outs in relation to this suggestion, 28298, 28303.
Training of men:
Decision as to men to be trained should rest with Union, not with manager, 28241, 28373, 28383, 28388.
Membership of Union, condition as to, 28377.
School for, attitude of Witness as to, 28384, 28390.
Duties of:
Other than winding, objections to this system, 28136, 28185, 28207, 28211, 28270, 28360.
Accidents resulting, 28216.
Injured men waiting to be drawn up shaft, instances of, 28275.
Supervision of other engines, necessitating absence from engine-room, 28185, 28206.
Hours of work excessive: suggestion as to an eight-hours day, &c., 28126.
Accidents resulting from, question as to number of, 28145, 28150.
Arrangements as to hours in certain collieries, 28129, 28328, 28342.
Greatest strain occurs at end of shift, 28129, 28222, 28318.
Increased strain under modern conditions, 28331.
Number of men wound, 28330, 28346.
Responsible nature of work of, 28346.

General Rules as to engine-winding, suggestions as to amendment of:
Brakes, Rule 30 as to, 28176.
Detaching-hooks and speed of winding, Rule 26 as to, 28171.
Engine-winders, Rule 24 as to, 28167, 28185, 28360.
Safety catches, rule as to, advocated, 28247.
Signalling, Rule 25 as to, 28182.

Germany, engine-winders in:
Number of men wound, 28357.
Two engine-winders present when men are being wound, 28153, 28358.

Qualifications of Witness, 28117, 28123.

Scotland, Engine-winders in, hours of work, 28345.

Shafts:
Engine-house, *see that title.*
Engine-winders, *see that title.*
Number of men riding in cage, 28346.
Overwinding, prevention:
Brakes, foot and steam, provision advocated, 28176, 28281.
Detaching hooks or visors, 28169, 28173, 28256.
Patents, 28259.
Rope:
Examination and testing, 28290.
Winding on friction-wheel, question as to, 28283.
Safety catches for cages, provision advocated, 28247.

Transvaal, Commission on Safety Catches, Report of on Overwinding Accidents, 28235.

SEWELL, Mr. W., Derbyshire Miners' Association. (*See questions* 24146—24392.)

Baths and change of clothes at pit-head, Witness has not considered this suggestion, 24376.

Coal Mines Regulation Act. 1887, powers of inspector under, 24269, 24272.

SEWELL, Mr. W.—*cont.*
Inspection of Mines by Mines Officials:
Adequacy of, views on this point, 24334.
Arbitration between deputy and manager, views as to, 24267.
Districts, size of, 24327, 24335.
Duties of deputies, 24327, 24331, 24391.
Hours of work of deputies, 24336.

Inspectors, Home Office:
Arbitration between deputy and manager, views as to, 24267, 24272.
Cage, number of persons riding in, decisions as to, advocated, 24224, 24255, 24347.

Qualifications of Witness, 24146.

Sanitary Conveniences, provision in Derbyshire Mines unnecessary, 24380.

Shaft Accidents:
Cages:
Accidents from men falling off, Witness knows no instance of, 24340.
Coal, placing on cage, method of, 24216.
Father and sons all riding in one cage, no measures taken to prevent, 24390.
Loading of men should be all at one time when there are two or three decks, 24281.
Number of men riding in, limitation advocated, 24223, 24352, 24385:
Board to decide number, advocated, 24256.
Discretion of inspector as to, views as to, 24224, 24255, 24347.
Increase in number under present condition, impression of men as to, 24278.
Length of time occupied in taking men up and down, probable effect on, 24243, 24252, 24350, 24372.
Safety catches for holding cages, advocated, 24284, 24289, 24316.
Number of shaft accidents:
Increase probable, impression of men as to, 24171.
Rarity of, 24244.
Permanent stop, 24341.
Signals, number of, 24177, 24206.
Speed of winding, 24249.
Decrease advocated, 24348.
Working of more than one seam in one shaft, danger of, and desirability of prohibition, 24171, 24337:
Accidents, recent, arising from, 24174, 24202, 24339.
Drift bringing men to one level advocated, 24192, 24215, 24293.
Cost of, question as to, 24200, 24294, 24314.
Instance of, 24201.
Length of time that would be occupied in getting men to working place, 24311.
Falls from insets, Witness knows of no cases of, 24207, 24214.

Stallmen:
Definition, 24320.
Number of stallmen, 24160, 24167, 24320.
Size of stall: number of men working, 24159, 24168, 24318.
Timbering, *see that title.*

Timbering:
Persons setting and withdrawing: stallmen, 24160, 24164, 24167, 24170.
Responsibility of stallmen, 24164, 24170, 24323, 24330.
Supervision by deputy, 24326, 24331.

SHARP, ANDREW, Secretary, Cumberland Miners' Association. (*See questions* 35970—36205.)

Accidents:
Explosion in William Pit, 36144.
Inspection of scene of, by men's representatives, 36052.
Investigation:
Coroner's inquests: adjournment advocated to give relatives or fellow workmen time to collect particulars as to cause, &c., 36050.

Digitized by Google

SHARP, Mr. A.—*cont.*
Accidents—*cont.*
Investigation—*cont.*
Non-fatal accidents, statement or evidence not obtained in cases of: Report of manager to inspector should be accessible to men, 35998, 36002, 36005, 36174.
Number of, in Cumberland, 36153.

Checkweighers, appointment to make inspection on behalf of men, views as to this suggestion, 35978.

Dust in William Pit, precautions, and method of dealing with, 36136, 36140.

Explosion in William Pit, 36144.

Haulage Roads and Travelling Ways:
Accidents, 36025.
Distance to working faces, 36032.
Lights on bogies discontinued, 36036.
Man-holes, provision, 36028.
Painting of bogies with illuminating paint, suggestion as to, 36037.
Special travelling road advocated, 36028.

Inspection of Mines by Men:
Extent to which practised, 35974.
Owners, indirect reprisals by, possibility of, 35974, 36071, 36107:
Report, protest by manager against, 36108.
Qualifications, extension of, views as to, and as to appointment of checkweighers for this inspection, 35978, 36074, 36110.
Report, method of dealing with, 35976:
Copy of report to be sent to inspector, if it states existence or apprehension of danger, 36111.
Breach of this rule, instance of, 36117.
Value of this inspection—remedy of defects resulting, 36072.

Inspection of Mines by Mines Officials:
Adequate inspection impossible under present conditions, 35984.
Districts, size of, reduction advocated, 35984, 36076, 36155.
Present size, 36077, 36081, 36083.
Specification of size, difficulty of framing general rule for, 36155.
Consultation between manager and men, advocated, 36155, 36166.
Duties of deputies, 36078, 36081.
Period elapsing between inspection and entrance of men, breach of rule as to, 36083.
Qualifications of deputy, class of men appointed, desirability of certificate of competency, &c., 36133, 36184.
Local Boards of examination advocated, 36134.
Time spent in inspection, 36082, 36086, 36093.
Two deputies to go together for part of inspection, 35990.

Inspectors, Home Office:
Adequacy of, views on this point, 36061.
Assistant inspectors:
Metalliferous mines, 36062.
Residence, place of, 36122.
Visitation of places if required without orders from district inspector advocated, 36064.
Residence, place of, 36122.
Working miners, appointment as additional inspectors advocated, 36064:
Certification, views as to, 36065, 36068.
Duties of, 36067, 36068.

Manager's Certificate of Competency:
Local examinations, views as to, 36106.
Second-class certificates, more marks for practical experience advocated, 36054, 36094, 36185.
Uniform system advocated, 36104.
Varying standard in different districts, 36054, 36100.

Method of Working: Longwall, 36084.

Prosecution, reform of present system advocated, 36173.

Qualifications, 35970, 36054.

Safety Lamps:
Extent to which used, 36038.
Stations beyond which men must not pass until examination has been made, 36127.

SHARP, Mr. A.—*cont.*
Shaft Accidents, frequency of, in Cumberland, 36153.

Shot-firing:
Boring holes in solid, danger of, and question as to practice of, 36141, 36152.
Extent to which practised, 36039.
Person firing shots, responsibility for charging advocated, 36045.

Special Rules:
Introduction of, consultation of men before, 36013, 36022.
Timbering Rules, amendment advocated, 36017.

Station beyond which men must not pass until after examination has been made, 36127.
Breach of this rule, 36129.

Timbering:
Person setting, 36008, 36076, 36079.
Supply of, amendment of Special Rule 116 as to, advocated, 36014, 36198.
Case under Employer's Liability Act as to supply of timber, 36015.

Under-Manager, importance of practical knowledge, and suggestion as to increased number of marks for practical experience in second-class certificates, 36054, 36094, 36185.
Period of practical experience desirable, 36059.

Whitehaven Collieries:
Haulage accident at, 36025.
Inspection on behalf of men, rumour that report as to gas and fire-damp was not sent on to inspector, 36117.
Station beyond which men must not pass until after examination, breach of rule as to, 36129.

William Pit:
Dust in, question as to remedial measures, 36136.
Explosion in, 36144.
Shot-firing, question as to, 36141.

SHIRKIE, Mr. ROBERT, Agent and Secretary, United Engine-Keepers' Mutual Protective Association of Scotland. (*See questions* 27713—28116.)

Accidents:
Investigation into, under Fatal Accidents Inquiry (Scotland) Acts:
Adequacy of, views of witness on this point and as to desirability of closer investigation, 27755, 27775, 27959.
First inquiry under Act of 1906 (Houldsworth case), 27759, 27765, 27968.
Jury:
Address to, 27967.
Cause of accident, onus of dealing with rests upon, 27969.
Technical knowledge, frequently inadequate, 27972.
Witnesses, calling, regulations as to, 27961, 27963.
Shaft accidents, *see that title.*

Bill for certificates for engine-winders, views as to, 27713 (*par.* 1), 27832.
Uncertificated men, employment as engine-winders in certain events, provision for, questions whether desirable, 27882, 27974, 27980, 27989.

Coal Mines Regulation Act, provisions of as regards engine-winders, 27713 (*par.* 4).
Amendment of, summary of recommendations as to, 27713 (*par.* 4), 27784.
Non-observance of in Scotland, 27752.

Engine House:
Explosives, storage in, objection to, 27786 *and note.*
Other engines placed in same room with winding machinery, danger resulting, 27713 (*par.* 2), 27751.
Sanitary conveniences, provision advocated. 27794.

Engineers:
Responsibility of, for machinery, 28063.
Training of engine-winders by, question as to possibility of, 28065.

Digitized by Google

SHIRKIE, Mr. R.—*cont.*
Engine-winders:
Certificates for, *see sub-heading* Training.
Competency of, views of Witness on this point, 27713 (*par.* 1), 27735, 27749, 27820, 27926.
Dismissal of incompetent men, question as to, 27737.
Number of men who could pass Transvaal examination, question as to, 27814.
Death while on duty, instance of, 28116.
Duties other than winding performed by, 27713 (*par.* 4), 27783.
Night duties, 27887, 28076.
Examination of machinery: objections to present Report system, and instances of dismissal for making adverse Reports, 27993, 27997, 28000, 28007, 28039.
Hours of work and suggestions as to reduction, 27713 (*pars.* 1 *and* 3), 27730, 27779, 27780, 27785, 27897, 27943, 28013.
Maximum, advocated, 27734.
Number of pits working 8 hours day, 27944.
System of 24 hour continuously at week ends, 27713 (*par.* 3), 27730, 27733.
Medical examination, provided, advocated, 28114.
Number of, adequacy of, for Scotland, 27914.
Packing, defective supply of to, 27995, 28006.
Responsibility:
Accidents, responsibility for, 27935.
Greatest responsibility occurs towards end of shift, 27713 (*par.* 3).
Signal bells, number of, 27950.
Strain on enginemen:
Night and day work compared, 27889, 28076.
Increase in, 27945.
Size of engine in relation to, 27901.
Summary of recommendations as regards enginemen, 27713 (*par.* 4).
Training:
Certificate of competency, suggestions as to, 27713 (*par.* 1), 27723, 27784, 27811, 27931, 28018, 28033, 28073, 28085.
Emergencies, provision for in this event, questions as to, 27882, 27974, 27980, 27989.
Limitation of number of engine-men is not aimed at in this suggestion, 27915.
Service certificate, 28087.
Trade dispute, employment of incompetent men during, 27749.
Use of engines for teaching men, attitude of Engine-Keepers' Association as to, 27919.
Engineers, competency of, to train engine-winders, views as to, 28065.
Managers, power of, to teach engine-winders, 27861, 27866, 27879, 27985, 27987, 28015, 28010, 28075.
Transvaal, certificate required in, *see title* Transvaal.
United Engine-Keepers' Mutual Protective Association, rules as to teaching engine-winders, 27835, 28061.
Exclusion of men not members of the Association, 27837, 27840, 27864, 27872, 28018.
Method of training, 27869.
Payment of engine-winders for teaching, 27841.
Selection or rejection of men to be trained, right of, views as to, 27836, 27841, 27984.
Wages, 27938, 28093.
Comparison with hewers' wages, 27943.
Fluctuations in, 28006.
Wallyford Colliery, Midlothian engine-winder's dispute with manager, employment of unskilled men during, 27713 (*par.* 1), 27742, 27873, 27912.
Working at the face, number of engine-winders, 27907, 27941.

Firemen, certificate of competency advocated for, 27713 (*par.* 4), 27784.

Manager's Certificate of Competency:
Association of Colliery Managers, attitude of, as regards men training for, 27904.

SHIRKIE, Mr. R.—*cont.*
Manager's Certificate of Competency—*cont.*
Service certificates, 28088.
Working miners holding, 27906.

Qualifications of Witness, 27713 (*par.* 1), 27714, 27720, 27729.

Sanitary Conveniences, provision advocated, 27794.

Shaft Accidents:
Brownrigg, accident at, Jury's rider at Coroner's inquest, 27713 (*par.* 1), 27739.
Certificates for engine-men, accident proving necessity for, 27713 (*par.* 1), 27739, 27931.
Duties other than winding, performance of by engine-winder causing accidents, 27713 (*par.* 2), 27751, 27754, 27783.
Examination of engines and machinery, manner in which carried out, 27991, 27997.
Hours of work, excessive, causing accidents, 27713 (*par.* 3), 27759, 27770, 27779.
Houldsworth inquiry, 27759, 27765, 27968.
Landing places, number of, 27948.
Number of, 27713 (*par.* 3), 27777, 27824.
Overwinding accidents:
Apparatus for preventing, 27953.
Compulsory use of, views as to, 27781, 27958.
Number of, in 1906, 27824.
Swinhill Colliery, 27931.
Time at which greater number of accidents happen, 27895.

Transvaal, certificate for engine-men in, 27713 (*par.* 1), 27720, 27804, 28025.
Examination, outline of, 27724.
Emergency, cases of, question as to, 28112.

United Engine-Keepers' Mutual Protective Association for Scotland:
Action of, in case of men dismissed for reporting defective machinery, 28040.
Classes of employment included in, 27715.
Health certificates, 28057.
Number of members, 27713 (*par.* 1), 27715, 27717, 28084.
Training of engine-winders, Rules as to and system of, 27835, 28061:
Exclusion of men not members of the Association, 27837, 27840, 27864, 27872, 28018.
Method of teaching, 27869.
Object of, 27915, 27920.
Payment for training, 27841.
Selection or rejection of men for training, 27836, 27841, 27924, 27984.
Use of engines for training men, question as to attitude of Association as to, in event of introduction of certificates, 27919.
Witness representative of, 27713 (*par.* 1), 27786.

Wallyford Colliery, Midlothian, Engine-winders' dispute with Manager, employment of unskilled men during, 27713 (*par.* 1), 27742, 27873, 27912.

SMITH, Mr. HERBERT, Agent, Yorkshire Miners' Association. (*See questions* 31991—32327.)

Accidents:
Falls of roof and sides in gate roads, 32063.
Haulage, 32095.
Investigation:
Coroner's inquests:
Inspectors, Home Office, intimation to, and power of to attend and cross-examine, 32238.
Representation of Trade Unions at, advocated, 32120, 32230.
Shaft accidents, 32079.
Shot-firing, 32267, 32269.

Airways, return, use of, as travelling roads, advocated, 32100.

Allerton Byewater Colliery, haulage accident at, 32095.

Allerton Silkstone Colliery, shot-firing accident at, 32269.

Altofts Colliery, explosion at, probable cause of, 32278.

Digitized by Google

SMITH, Mr. H.—*cont.*
Barrow, shaft accident at, 32079.

Checkweigher:
Inspection of mines by, on behalf of men, instance of prohibition, and views as to desirability of such inspection, 32014, 32159, 32313.

Coal-cutting Machinery:
Extent to which used in Yorkshire, 32246.
Objection to, and suggestions for improvements, 32107, 32252, 32274.
Shot-firing where machinery is used, 32257, 32280.
Timbering, where machinery is used, 32108.

Dust:
Coal-cutting machinery, amount produced by, 32252.
Explosions, extent to which caused by, 32277.
Health of men, effect of on, 32101.

Electrical Machines, sparks falling into goaf, danger from, 32275.

Engine Planes: Separate travelling roads advocated, 32092.

Glass Houghton, shaft accident at, 32079.

Goaf Fires, danger of, where small coal is put into goaf, 32113, 32225, 32272.

Haulage Roads:
Dimensions, increase advocated, 32103.
Airways, return, use of advocated, where haulage roads are too narrow, 32100.
Dust on, effect of, on health of men, 32101.
Manholes, position of, 32092.
Separate travelling roads advocated, 32092, 32102.

Hemsworth Collieries, inspection on behalf of men, complaints made in report, 32023, 32031, 32313.

Inspection of Mines by Men:
Extent to which practised, 32007.
Manager or under-manager, men usually accompanied by, 32012.
Notice to manager and consequent preparations, 32011, 32170.
Owners or managers, reprisals in event of adverse report, instance of and views of men as to, 32023, 32031, 32167, 32313.
Qualifications of men for making this inspection:
Checkweighers' eligibility advocated; instance of prohibition of checkweigher from making inspection, 32014, 32036, 32159, 32313.
Working miners, 32167:
Limitation of, to their own working place, effect of, 32322.

Inspection of Mines by Mines Officials:
Adequate inspection impossible under present conditions, 32049, 32175, 32292.
Definition of "deputy" and "fireman," 32039.
Districts, size of, decrease advocated, 32052, 32175, 32293.
Present size, and size desirable, 32177, 32182.
Duties other than inspection performed by deputy, 32053, 32188, 32299.
Efficiency of deputies, 32303.
Hours of work of deputies, 32298.
Importance of deputies, 32036.
Qualifications—desirability of certificate, &c., 32304, 32307.
Time at which inspection is made, 32048, 32287.

Inspectors, Home Office:
Adequate inspection impossible under present conditions, 31994.
Efficiency of, 31996.
Number of inspectors, increase advocated, and appointment of working miners as sub-inspectors, 31999, 32003.
Existing number, 31997.
Qualifications:
Certificate of competency, desirability of, 32004, 32309.
"Practical experience," interpretation of, 32129.
Residence, place of, time spent in travelling, &c., 32001.

SMITH, Mr. H.—*cont.*
Manager's Certificate of Competency: Qualifications of candidates, interpretation of "practical experience," 32129.

Orgreaves, shaft accident at, 32079.

Prosecution of manager for defective supply of timber, advocated, 32174.

Qualifications of Witness, 31991, 32014.

Safety Lamps: Extent to which used in Yorkshire, 32244.

Shafts: Accidents caused by stopping cages to collect men at various seams, 32079.

Shot-firing:
Coal-cutting machinery, shot-firing where used, 32257.
Detonators and explosive not both in possession of same man, 32264.
Explosives used, 32261.
Notice to manager and permission from him before shots are fired, defective observance of this rule, 32280.
Number of shots fired, daily report of, 32285.
Person firing shots:
Certificate of competency, desirability of, 32269.
Incompetent persons, instances of, 32267.
Stemming, 32262.

Small Coal, putting into goaf, objections to, 32113, 32225, 32272.

Special Rules:
Introduction of: discussion between owners and men desirable, 32077.
Timbering, *see that title.*

Timbering:
Coal-cutting machinery, timbering in relation to, 32108.
Gate Roads, 32059
Person setting, 32058.
Special man, appointment advocated, 32065, 32108, 32192.
Special Rules:
Defects in new rules, and suggestions for amendment, 32065, 32068, 32206.
Introduction of, no discussion between men and owners previously to, 32065, 32071, 32209.
Strike in Yorkshire owing to, 32072.
Wages, no increase in corresponding to increase in work, 32065, 32070, 32074, 32206.
Yorkshire, Special Rules in, 32202.
Supply of:
Additional supply sent in before inspection takes place, 32171.
Defective, entailing loss of time and wages to men, 32068.
Withdrawal of, 32065.

Under-Manager: Certificate of competency for, and proper interpretation of "practical experience" advocated, 32129.

Yorkshire Miners' Association, number of members, 31993.

STEPHENS, Mr. W., Treasurer, Cleveland Miners' and Quarrymen's Association. (*See questions* 29280—29538.)

Accidents:
Fillers, small number of accidents to, 29476.
Inspection after, 29505, 29507.
Number of, 29357.
Pillars, taking out, danger of accidents in, 29357, 29468.
Definition of "creep," 29477

Blasting, *see* Shot-firing.

Chargeman, duties and qualifications of, 29325, 29461 29522, 29533.

Coal Mines, conditions in, comparison with ironstone mines, 29493, 29534.

Digitized by Google

STEPHENS, Mr. W.—*cont.*
Deputies :
Appointment of :
Examination for, advocated, 29281, 29295, 29378, 29417.
Qualifications of candidates, 29385.
Efficiency of deputies and assistant-deputies at present appointed, comments on, 29285, 29354, 29417.
Charge of mine as long as men remain in it, appointment of competent man only for, advocated, 29291, 29299, 29440.
Accident when inexperienced man was left in charge, 29442.
Duties of, 29428, 29432, 29470, 29532, 29533.
Timbering, *see that title.*

Drilling Machines :
Kinds used, 29336.
Persons in charge of, 29316, 29516.

Fillers :
Accidents to, small number of, 29476.
Unskilled men, employment of, as, 29460, 29470, 29475, 29486, 29515, 29526.
Work done by, 29483.

General Rule 39 as to unskilled men, 29488, 29515, 29526.

Inspection of Mines by Deputies, 29308, 29428, 29532.

Inspection of Mines by Men :
Reports, possible effect on, of fear of reprisals on part of owners, 29345, 29499.
Value of, 29343, 29498.

Inspectors, Home Office :
Accidents, inspection after, 29505, 29507.
Adequate inspection, impossibility of, with present size of district and number of inspectors, 29340, 29418, 29511.
Method of inspection, 29418.
Notification to, of anything wrong in mines, 29510.
Number of inspections desirable, 29356.
Surprise visits, 29506.
Working miners, appointment as additional assistant-inspectors, advocated, 29340, 29425, 29502.

Method of Working Mines, 29515, 29533.

Overman and Back Overman, duties of, 29440.

Qualifications of Witness, 29280, 29490.

Shot-firing :
Chargeman, duties and qualifications of, 29325, 29461, 29522, 29533.
Drilling machines, 29316, 29336, 29516.
Method described, 29522.
Person firing, 29316, 29330.

Special Rules :
Deputies, Special Rule 33 as to, 29440.
Drilling machines, Special Rule 65 as to, 29325, 29339.
Timbering, *see that title.*

Timbering :
Accidents from falls of roof and sides, 29367, 29396, 29415, 29447.
Nature of tops in relation to, 29312.
Deputies, duties of, in relation to, 29472.
Qualifications required, 29303, 29312.
Time spent in timbering, 29432.
Training for, 29304, 29313.
Two skilled workers should go together; practice of sending one skilled and one unskilled man in some mines, 29294, 29305, 29309, 29354, 29427, 29435.
Efficiency of, comments on, 29373.
Method of, 29366, 29397.
Iron baulks between last pair of timbers, not desirable, 29398.
Slipping lypes, 29451.
Solid work not requiring timbering, 29450.
Special Rule as to distance, exemption of Cleveland ironstone mines from, 29361, 29392, 29411, 29446, 29455.
Systematic timbering unnecessary in Cleveland district, 29364, 29397, 29413, 29453.
Top, nature of, in relation to, 29368.

STEPHENS, Mr. W.—*cont.*
Toyn, Mr., evidence of, references to, 29280, 29291, 29294, 29312, 29316, 29339, 29354, 29356, 29385, 29442, 29460, 29497, 29512.

Unskilled Men, employment of, 29460, 29470, 29475, 29515, 29526.
(*See also title* Timbering, *sub-heading* Deputies.)

THOMAS, Mr. EVAN, Agent, Rhymney Valley District, South Wales Miners' Federation. (*See questions* 34060—34697.)

Abertysswg Explosion, *see title* McLaren Explosion.

Accidents :
Delay in removal of injured men, 34188.
Instance of, and suggestion as to removal by return airway, 34121.
Increased ambulance provision advocated, 34188.
Falls of roof and sides :
Number of, 34259.
Occurrence when men are working, 34341.
Prevention of, *see title* Timbering.
Unexpected occurrence, 34506.
Haulage roads, accidents in :
Chief cause of, 34261.
Number of, Rhymney Valley, 34111.
Investigation :
Coroner's inquests :
Adequacy of, views on this point, 34140, 34292, 34546, 34594.
McLaren Explosion, *see that title.*
Men's representatives, power to attend and to ask questions advocated, and curtailment of coroner's right of veto, 33549, 34142, 34177.
Object, chief, of, 34357.
Power of, possible effect, or of increased use of Section 45, 34173.
Qualifications desirable for coroners in mining districts, 34138, 34289.
Reports of inspection on behalf of men, use of at, 34355.
Second inquiry under Section 45, increased use of advocated, 34172, 34294, 34359.
Compulsion on Home Office to institute this inquiry if demanded by men advocated, 34149, 34620.
Necessity for this inquiry proved by the McLaren explosion, 34553.
Shaft accident (winding rope), New Tredegar, 34455.

Acts of Parliament and Special Rules :
Defective comprehension of by men and sometimes by officials, 34532.
Schools in mining districts, instruction in, in mining subjects, advocated, 34531.

Age for starting work at coal face, 34522.

Airways, Return, use of as travelling roads advocated, 34116, 34435.
Llanhilleth Colliery, Monmouthshire, practice at, 34117, 34335, 34438.
Ventilation would be improved by, 34333, 34445.

Baths, change of clothes, &c., facilities for at pit-head advocated, 34535.

Boys :
Age for commencing work at coal face in Wales, 34522.
Meals and rest, interval for, legislative provision for boys working underground advocated, 34511.
Proportion becoming miners in mining districts, 34529.
(*See also title* Schools.)

Discipline :
Extent to which maintained, 34240.
Fines or other methods of maintaining, *see title* Fines.

Explosives Order, Sub-section B of Clause 4 as to care of detonators, 34166.

Fines :
Abolition of, or decreased practice of fining, 34092, 34238, 34409.

Digitized by Google

THOMAS, Mr. E.—*cont.*
Fines—*cont.*
Advantages of prosecution as compared with fining, 34092, 34238.
Lists of, posted at top of pit, not a sufficient deterrent, 34093.
Offences which should be punished by prosecution, 34409.

Haulage Roads:
Accidents, number of, 34111.
Footpath by side of road for use of hauliers advocated, 34126.
Gangways as travelling ways, views as to, 34127.
Separate travelling road, and use of return airways as advocated, 34116, 34435.
Width of headings, 34126.

Homes of Miners, inadequate provision for baths and washing in, 34538.

Inspection of Mines by Men:
Abolition of, or partial discontinuance, possible in event of appointment of working-class inspectors under Home Office, 34207, 34354.
Cost of borne by men themselves, 34080, 34214.
Government aid or contributions from owners, views as to, 34082.
Extent to which practised, 34077, 34085, 34220, 34356.
Owners, reprisals by, possibility of: difficulty in obtaining men to make inspection, &c., 34077, 34084, 34348, 34381, 34385.
Payment to men making this inspection, rate of, 34381.
Reports, use of, at coroner's inquests, 34355.

Inspection of Mines by Mines Officials:
Adequate inspection impossible under present conditions, 34340, 34403.
Districts of firemen, reduction in size advocated, 34088, 34226, 34340.
Duties other than inspection performed by firemen, 34088, 34090, 34233.
Hours of work of firemen, 34088, 34390, 34226.
Qualifications of firemen and suitability for appointment as additional Home Office inspectors, 34371.

Inspectors, Home Office:
Adequacy of inspection by, views on this point, and as to what constitutes adequate inspection, 34064.
Number of inspections by, 34066.
Number of inspectors, increase advocated, 34064.
Qualifications desirable for various classes of inspectors, views as to, 34365, 34519.
Salaries of working-class inspectors, views as to, 34073.
Working miners, appointment as additional inspectors advocated, 34072, 34207, 34354, 34362.

McLaren Explosion:
Inspection by men after, under Rule 38, 34655.
Inspector had called attention to defective condition of mine, but men had not been withdrawn, 34574, 34618.
Investigation:
Coroner's inquest, extent of inquiry at, and desirability of second inquiry under Section 45, 34151, 34553, 34585, 34593, 34613, 34660:
Adequacy of investigation and verdict, views as to, 34585, 34613, 34621.
Letter from Home Office in reply to demand for second inquiry, 34618, 34681.
Publicity would be given by second inquiry, 34666, 34668, 34681.
Report by Mr. Martin and others to Home Office, 34615, 34617, 34618, 34661, 34668, 34672.
(*See also sub-heading* Ventilation.)
Prosecution not entered upon after, 34592, 34618, 34628, 34664.
Ventilation:
Condition as to shortly before explosion, 34576, 34661, 34679.
Conflicting opinions of experts on this point and as to withdrawal of men, 34595, 34613, 34616, 34623, 34661, 34665.

THOMAS, Mr. E.—*cont.*
McLaren Explosion—*cont.*
Ventilation—*cont.*
Discovery of gas during inspection after explosion, 34557, 34618, 34635.
Report of to men, but not to inspector, 34645, 34657.
Fan, ventilating, 34582, 34682.

Managers, qualifications of, importance of practical experience, &c., 34519.

New Tredegar, accident to winding-rope at, 34129, 4282, 34455.

Qualifications of Witness, 34060, 34226, 34552.

Rescue Work: increased ambulance provision advocated, 34188.

Rhymney, shot-firing accident at, 34304.

Safety Lamps, compulsory introduction after appearance of gas advocated, 34135.

Schools, Elementary, in colliery districts: instruction of boys in, in mining matters, advocated, 34528.

Shafts: achinery and Gearing:
Annealing of chains, Witness has had no experience of, 34206.
Examination of winding ropes, guides, &c., 34129, 34134, 34272, 34452:
Continuous shifts, examination in event of, 34276.

Shifts:
Double, not worked in Witness's district, 34276.
Hours of work in Welsh mines, 34395.
Firemen's, 34390.

Shot-firing:
Between shifts, 34154, 34458:
Anthracite district, South Wales, probable effect of in, 34464.
Charge, weight of, 34153, 34297.
Explosives:
Case of explosives and detonator, 34158, 34159, 34300, 34317.
Supply, free, by owners, advocated, 34158, 34310.
Notice to and permission from superior official before shot is fired in main haulage road, advocated, 34297.
Person firing shot, special appointment advocated, 34158.

Special Rules, introduction of:
Discussion between men and owners in preliminary stages, views as to, 34096.
Statement by a Commissioner, 34254.
Suggestion by men or men's Union, views as to, 34097.

Spragging, regulations as to, 34500.

Timbering:
Extent to which practised and extent desirable, 34192, 34499.
Person setting: suggestion as to greater discretion to miner himself, 34102, 34199, 34255, 34268, 34319, 34427, 34484.
Permission necessary before certain kinds of timber are put up, 34197.
Systematic timbering (fixed distances, &c.) advocated, 34099, 34264, 34321, 34413, 34416, 34467, 34497.
Committee of employers and men might decide distances, 34510.
Wages question in relation to, 34103, 34192, 34327, 34432.

Unskilled Labour, employment of, 34601.

Ventilation, defective, introduction of safety lamps in event of, 34135.

TOYN, JOSEPH, Agent and President, Cleveland Miners' and Quarrymen's Association. (*See questions* 28857—29279.)

Accidents:
Number of, in Cleveland ironstone mines, 28877, 28900, 28946.
Pillars, taking out, danger of accidents from, 29226.
Shot-firing, 28885, 29189.
(*See also* Timbering.)

Digitized by Google

TOYN, Mr. J.—*cont.*
Blasting, *see* Shot-firing.

Chargemen, duties and qualifications of, 29011, 29161.

Cleveland Miners' and Quarrymen's Association, membership, 29055.

Coal Mines and Ironstone Mines, difference in, 28913, 28984.
Experience in coal mines, extent to which valuable in ironstone mines, 29208.

Coroners' Inquests:
Accident in mine when assistant-deputy had been left in charge, inquest after, 28927, 28932, 29132.
Reports on inspection of mines by men, use of, at, 29277.

Depth of ironstone mines, 29227.

Deputies:
Appointment of:
Examination for, advocated, 28861, 29022, 29024, 29030, 29111, 29117, 29137.
Qualifications of candidates, 29214, 29219.
Efficiency or otherwise of men at present appointed as deputies or assistant-deputies, comments on, 28868, 28924, 28942, 28992, 29013, 29018, 29021, 29023, 29031, 29109, 29121.
Number of incompetent deputies, 29125.
Number of mines in which incompetent deputies are appointed, 29014.
Specific instances of mines in which incompetent men are appointed, questions as to, 29048, 29151.
Unskilled men sent as assistants in timbering, *see title* Timbering, *sub-heading* Deputies.
Method of appointment, 29017, 29119.
Charge of mine as long as men remain in it, appointment of competent deputy only for, advocated, 28923, 28927.
Accident when inexperienced man was left in charge, instance of, 28926, 28927, 29132.
Number of deputies in Cleveland district, 29124.
Responsibility of, 28867, 29221.
Timbering, duties as to, *see title* Timbering.

Drilling Machines, men in charge of, 28950.

Dust, no difficulty from, in Cleveland mines, 29201.

Eston, "Greenhorns" employed at, 28892.

Evidence of Witness refers only to ironstone mines, and to underground accidents, 28858, 28878, 28883, 28891, 28893, 28895.

Fillers:
Accidents, fatal, to, small number of, 29011.
Qualifications of, employment of unskilled men, &c., 28965, 29004.

General Rules:
Timbering, General Rule 21 as to, 29067.
Unskilled men working alone, General Rule 39 as to, 28997.

Health of Men in ironstone working, 29192, 29198.

Inspection of Mines by Men:
Cost of, defrayed by Miners' Association, 29238, 29271.
Encouragement by Miners' Association, 29272.
Extent to which practised in ironstone mines, 28945, 29238.
Frequency with which made, 29267.
Qualifications of men for making inspection, 29239, 29274.
Reports, 29244, 29264, 29269, 29277, 29279.
Value of this inspection, 29244.

Inspectors, Home Office:
Adequate inspection impossible with present size of districts and number of inspectors, 28968, 29256, 29259.
Cost of inspection, in event of appointment of additional inspectors, 29261.
Number of inspections advocated yearly, 29169, 29250.
Number of inspectors and number required, 28975, 29256.

TOYN, Mr. J.—*cont.*
Inspectors, Home Office—*cont.*
Qualifications desirable for chief inspectors, 29184.
Time occupied in making an inspection, 29258.
Working miners, appointment of, as additional inspectors, advocated, 28970, 29171, 29234, 29246.
Manager's certificate of competency might be held by, 29234.
Number required, 28975, 29256.
Salary, amount of, views as to, 28974.

Manager's Certificate of Competency, miners holding, 29234.

Method of Working ironstone mines in Cleveland district, 28941, 28988, 29223, 29226.

Miners' Nystagmus, no difficulty experienced with, 29200.

Number of ironstone mines, and number of men employed in Cleveland district, 29060, 29250, 29254.

Overman:
Absence of, deputy responsible in event of, 28867.
Back overman, duties and qualifications of, 28869, 28872.

Qualifications of Witness, 28857, 28878, 28891, 29055, 29203.

Shot-firing in ironstone mines:
Accidents, 28985, 29189.
Amount of powder used, 28948, 28985.
Chargeman, duties and qualifications of, 28951.
Efficiency, comments on, 28959.
Drilling machines, persons in charge of, qualifications and efficiency of, 28950.
Extent of, 28948.
Health of men, effect of, on, 29192.
Method of, 29190.
Persons firing shots, suggestions as to, 28950.

Special Rules, ironstone mines:
Deputies, Special Rules as to, 28861, 28927, 28936, 28940.
Drilling machines, Rule 65 as to, 28950.
Timbering, Special Rule as to, 28867, 29070.

Timbering:
Accidents from falls of roof and sides, number of, 28866, 28899, 28941, 28943, 29060.
Nature of tops and backs in relation to, 29216.
Working places, accidents most frequent in, 29081.
Deputies, duties of, in relation to, 28866, 28871, 28916, 29071.
Qualification required for setting timber, 28914.
Training of man for setting timber, 28906.
Two skilled workers should go together; practice of sending one skilled and one unskilled man in certain mines, 28902, 29021, 29023, 29035, 29054, 29066, 29091.
Efficiency with which roads are timbered, 29082.
Examination of working places, 29071, 29075.
General and Special Rules as to, 28867, 29068.
Adequacy of, if carried out, 29075.
System of, 29079, 29229.

Unskilled Men, employment of, 28892, 28897.
(*See also title* Timbering, *sub-heading* Deputies.)

Ventilation:
Accidents from, rarity of; adequacy of ventilation, &c., 28947, 28988, 29197.
Deputies, duties and qualifications of, in relation to, 28861, 28875.

Water in ironstone mines, 29202.

TWIST, Mr. HENRY, Agent, Lancashire and Cheshire Miners' Federation. (*See questions* 29658—30315.)

Accidents:
Enquiry into coroners' inquests:
Juries, composition of, and visitation of scene of accidents by, 29808, 30127.
Falls of roof and sides, number of, and suggestions as to prevention of, 29317, 29971.

Digitized by Google

WIST, Mr. H.—*cont.*
Airways, Return, use of, as travelling roads, 29976.

Bamfurlong Collieries, speed of winding in, 29849.

Bill for increase of number of inspectors (amended Mines Bill for Inspectors), 30144.

Fines:
Advantages of fining and prosecution compared, 29731, 29825, 29956.
Date of introduction of fining, 29952.
Decision of manager as to, 29957.
Number of fines at present inflicted, 29833.
Offences for which inflicted, 29951, 30179, 30183.
Truck Act in relation to, 29952.

Firemen, *see title* Inspection of Mines by Mines Officials.

Fogg's Colliery, accident at, 29855, 29892, 30108.

Germany, speed of winding in, 29774.

Haulage Roads:
Gradient, Lancashire mines, 29792, 30264.
Manholes, increased number advocated, 29781, 29888, 29938.
Runaway tubs, appliances for prevention of, *see title* Wagons.
Separate travelling ways advocated, 29775, 29974, 30225.
Use of return airways as, views as to, 30117.
Width of, 29779, 29974, 30272.
(*See also title* Wagons.)

Inspection of Mines by Men:
Appointment of men for inspection, views as to, 29688, 30021.
Continuance of, in event of increase in numbers of Government inspectors, advocated, 30161.
Cost of:
Amount of, 29684.
Defraying by Government advocated, 29684, 29688, 29908, 30304.
Qualification of men for making inspection, extension of, views as to, 29680, 29907, 30020, 30184, 30202, 30251, 30301.
Reports, effect on, of fear of reprisals, 29685.

Inspection of Mines by Mines Officials:
Adequate inspection impossible under existing conditions, 29691.
Attitude of men as to taking posts as firemen, 30054, 30314.
Districts, size of, reduction advocated, 29721, 29820, 29925, 29932, 30192, 30242.
Decision as to size should be left to manager, 30059, 30196.
Duties of firemen other than inspection and suggestion as to limitation, 30243.
Number of inspections, increase in, would probably result in decrease in accidents from falls of roof and sides, 29820.
Qualifications of firemen, efficiency or otherwise of men appointed, desirability of certificate, &c., 29691, 29711, 29921, 29962, 30036, 30187, 30207, 30237.
Complaints to inspectors as to appointment of inefficient men, question as to, 30212.
Instance of unsatisfactory appointments, 29692.
Proportion of inefficient firemen, 29707, 30036.
Wages of firemen as compared with coal hewers, 30314.

Inspectors, Home Office:
Adequate inspection impossible under existing conditions, 29661, 29960.
Assistant inspectors, qualifications and efficiency, 30163.
Attitude of inspectors towards owners and workmen, 29960.
Complaints and reports to, from workmen, 29958, 30214.
Districts, size of, reduction advocated, 29669, 29983, 30146.
Number of inspections desirable, 29662, 29677.
Number of inspectors, increase advocated, 29661, 29669, 29980, 30008, 30143.

TWIST, Mr. H.—*cont.*
Inspectors, Home Office—*cont.*
Working miners, appointment as sub-inspectors advocated, 29666, 29984, 30149, 30292:
Appointment of men, authority for, views as to, 29986, 30004, 30311.
Qualifications of men for appointment: certificate, &c., 29673, 29988, 30009, 30151, 30162, 30311.
Payment by Government, 29987.
Restriction of use to which information obtained should be put, 30003, 30014.
Salaries, 29672.

Managers:
Appointment of men after long interval away from mining work, improbability of, 30248.
Duties of, under, Sec. 21; interpretation of daily "supervision" in Lancashire, 30232.
Number of managers and suggestion as to one manager for each winding shaft, 29727, 29934, 30220, 30234.

Method of Working in Lancashire and Cheshire district, 29925.

Prosecutions:
Advantages of, as compared with fining, 29731, 29825, 29956.
Number of, 29826.

Qualifications of Witness, Association represented, &c., 29658, 30017, 30047, 30051, 30141, 30177, 30181, 30206, 30225, 30312.

Safety Lamps:
Compulsory use of, advocated, 29806, 30227.
Defects in lighting capacity, owing to bad oil or insufficient cleaning, 29750, 29874, 29887, 30103, 30280, 30284.
Instances of, question as to, 30107.
Payment by men for use of lamps and oil, 30281.

Shafts:
Cage:
Gates, non-provision, accident owing to, 29756, 29757, 29904.
Freedom from loose material, 29758.
Men should be wound against men—not against material, 29758, 30166.
Over-winding: detaching hooks or visors advocated, 29753, 29837:
Bertram's visor, 29753.
Ormerod's patent, 29840.
Safety catches, accidents caused by, 30108.
Speed of winding, and suggestions as to reduction, 29772, 29847, 29855, 29864, 29890, 29892, 30115, 30165, 30262.

Special Rules, introduction of:
Discussion between men's representatives, managers and inspectors advocated, 29811, 30131, 30198.
Decision in event of disagreement, 30133.
Proposal of rules, views as to:
By Home Office, 30134.
By men, 30140.
By owners, 30138, 30198.

Timbering:
General Rule 22 as to, 30065.
Person setting and person superintending, 29962, 30066, 30081, 30087, 30093.
Roads, height of, insufficient for timber to be taken along in some instances, 30074.
Special Rules, Lancashire, 30067.
Supply, defects in, 29743, 30064:
Distance from face to which timber is brought, 29743.
Lids and caps, 29745, 29943, 30064, 30068.
Responsibility for, 30256.
Sleepers, use of, 29948.
Systematic, advocated, 29737.

Unskilled Men, employment of, 30306.

Wagons:
Runaways, prevention, 29787, 30264:
Axle catches, 30125.
Balance wheels, 29793, 29888.
Jigs and lockers, 30170.
Scotches, 29787, 29889, 30169.
"Trailer" and "Devil." Special Rule as to, 30123.
Size of, 29802.

WARING, Mr. RICHARD, Lancashire and Cheshire Miners' Federation. (*See questions* 30316—30412.)

Accidents :
Investigation into :
Coroner's juries, composition of, 30355.
Second enquiry under Sec. 45 less desirable than coroner's inquest with jury of experts, 30362.
Falls of roof and sides, 30319, 30333, 30387, 30403.

Boxes, supply of, defective, 30353.

Courrieres, timbering system at, adoption of similar system in England advocated, 30319, 30330.

Hours of Work, reduction of, possible effect of, on timbering, 30351A.

Method of working, 30395.

Packing Goaf and taking down ripping, arrangement with contractor as to, 30395, 30407.

Qualifications of Witness, 30316, 30343, 30348, 30393.

Timbering :
Contract for packing roof down, not including timbering, 30407.
Duplicate timbering (two props and a bar) advocated, 30319, 30330, 30332, 30344, 30366, 30374, 30378.
Person setting and person supervising, 30349, 30407.
Ripping in road-head, system of timbering in event of, 30400.
Roads leading to faces, absence of any regulation as to timbering, 30341.
Special Rules, Lancashire, introduction in 1902, 30366.
Supply of :
Lids and caps, defective supply of, suggestions as to improvement, 30319, 30331, 30345, 30351A, 30374, 30388.
Accident arising from defective supply, 30390.
Systematic timbering advocated, 30342, 30405. 30411.

Twist, Mr., evidence of, references to, 30316, 30330, 30373.

WATSON, Mr. T., Agent, Lancashire, Cheshire and North Wales Enginemen's and Boilermen's Federation. (*See questions* 26143—26351.)

Bills for Amendment of Mines Act, clauses in, as to reduction of hours of work of engine-winders, 26329.

Boys, hours of work, 26299.

Coal Mines Regulation Act, absence of any restriction as to hours of work in, 26143 (*par.* 2), 26144.

Committee, Select, of 1901 :
Certificates for engine-winders, evidence of Witness as to, 26167, 26206.
Competency of engine-winders, evidence as to, 26312.

Durham, hours of work in, 26170.

Engine-winders :
Competency of, 26312, 26314, 26325.
Death while in charge of engine, 26153.
Number of instances, 26153.
Hours of work, excessive, suggestions as to reduction, 26143 (*par.* 2 *et seq*), 26170, 26253, 26293, 26321, 26328.
Accidents caused by long hours, 26143 (*par.* 7), 26144, 26147, 26152.
Agents, views of, as to desirability of reduction, 26333.
Cleaning engines, time and amount of work entailed, 26278, 26281.
Effect on coal-cutting generally in event of reduction, 26347.
Maximum in Lancashire, 26178.
Meals, time allowed for, 26282.

WATSON, Mr. T.—*cont.*
Engine-winders—*cont.*
Hours of work—*cont.*
Night-duty and day-duty, question as to, difference as regards amount of work, 26185.
Proportion of men working ten hours, twelve hours and fourteen hours' shift, 26348.
Responsibility, greatest, towards end of shift, 26152, 26171, 26191, 26262.
Strike for reduction of hours, threatened in 1899, 26170, 26283.
System in Lancashire entailing work for 24 hours at a stretch once a fortnight, 26147, 26151, 26161, 26170, 26180, 26280.
Trade Unions, views of, on this point, 26329.
Importance of engine-winder, number of lives in his charge, 26170, 26315.
Mechanical apparatus, use of, increased responsibility resulting from, 26270.
Number of, 26209, 26301, 26324.
Adequacy to fill all vacancies, 26212, 26229, 26250, 26303.
Owners and managers, relations with, generally good, 26274.
Strikes :
Caused by appointment of some particular man by management, question as to, 26274.
In 1889, as to teaching of men put on by owners, 26272.
In 1899, strike as to hours of work threatened, 26170, 26283.
Training and qualifications of enginemen :
Government examination or certificate advocated, 26167, 26206, 26226, 26232, 26268, 26336.
Competent men should receive service certificates on introduction of system, 26307.
Exemptions, provision for, question as to, 26245.
Inspectors, Home Office, attitude of, on this point, 26310, 26313, 26326.
Trade Unions, attitude on this point, 26330.
Payment for training, regulations as to, in some unions, 26234.
Selection or rejection of men for training, right of, claimed by engine-winders, 26215, 26346.
Modification of this claim in event of Government certification, views as to, 26226, 26232.
Prevention of training of an adequate number of men, Witness knows no instance of, 26250.
Strike in 1889 as to teaching of men put on by owners, 26272.
Trade Union Regulations as to, 26212, 26218.

Hours of Work in Lancashire, 26253, 26293.
Engine-winders, *see that title, sub-heading* Hours of Work.

Lancashire, Cheshire and North Wales Enginemen's and Boilermen's Federation :
Number of members, 26143 (*par.* 1), 26277.

Lancashire Engine-winders, *see title* Engine-winders.

National Federation of Enginemen's, Boilermen's and Protective Association :
Number of members, 26143 (*par.* 1), 26324.
Witness representative of, 26143 (*par.* 1).

North Staffordshire, hours of work in, 26170.

Qualifications of Witness, 26143 (*par.* 1).

St. Helen's Association of Colliery Enginemen, Regulations as to training, 26213.

Shaft Accidents :
Ashton-under-Lyne, accident caused by long hours, 26144.
Engine-winders, *see that title.*
Prevention of :
Brakes, 26163.
Detaching hooks, failure to work, instance of, 26152.

Shaft Accidents—*cont.*
Prevention of—*cont.*
Keeps, use of, views as to, 26162.
Bottom, keeps at, in charge of bottom-man, 26166.
Midshaft, keeps in, danger of, and accident arising from, 26163, 26165.
Mechanical appliances, improvement in, 26196.
Responsibility of engine-winder, effect of, on, 26270.
Overwinding, appliances for prevention of, 26196, 26198.
Compulsory use of, advocated, 26322.
Signalling away by men themselves, danger of, 26164.
St. Helen's, accident at, 26163.
Skelmersdale, accident at, 26147, 26161.
Westleigh, accident at, 26152.

South Yorkshire, hours of work in, 26170.

Staffordshire, hours of work in, 26170.

West Yorkshire, hours of work in, 26170.

Wigan Association of Engine-winders, Regulation as to training of men, 26218.

WEBB, Mr. WILLIAM, Secretary and Agent of Stirlingshire Miners' Association. (*See questions* 23519—23776.)

Accidents:
Falls of roof and sides, number of, and probable effect of piece-work in increasing, 23588, 23609, 23644, 23714.
Haulage, *see that title.*

Ankylostomiasis, spread of, by Cornish miners coming to Scotland, improbability of, 23758.

Baths and facilities for changing clothes at pit-head, provision advocated, 23750.

Cornwall:
Baths and facilities for drying clothes, 23750.
Number of Cornish miners going to Scotland. 23755.

Contractors:
System described, 23721, 23730.
Unskilled men, employment by, 23716.

Discipline:
Character of Stirlingshire mines as to, 23710.
Trade Union officials, encouragement by, 23584, 23711, 23733, 23735.

Fines, extent to which inflicted, 23708.

Haulage Accidents, prevention of, 23602:
Manholes, 23603.
Whitewashing advocated, 23605.
Width of roads, and necessity for separate travelling roads, 23603.

Inspection of Mines by Mines Officials:
Adequacy of inspection, views on this point, 23566, 23572, 23692.
Age of firemen, limitation advocated, 23694.
Appointment or dismissal of firemen by manager, objections to, possible effect on accuracy of reports, &c., 23547, 23635, 23743.
Complaint has not been made by Witness to inspector on this point, 23744.
Instances of adverse report leading to resignation or dismissal of fireman, 23549, 23559, 23620.
Possibility of producing man to whom this happened, 23628.
Districts, size of, variations in, decrease necessary in some instances, 23566, 23572.
Facility with which firemen's places are filled up when vacant, 23581.
Qualifications of firemen, class of men appointed and desirability of certificate, &c., 23548, 23559, 23564, 23635, 23694.
Trade Unions, firemen usually members of, 23704.
Wages of firemen, 23702.

WEBB, Mr. W.—*cont.*
Inspectors, Home Office:
Accidents, inspection after, 23532, 23681.
Adequacy of inspection, views on this point, 23528, 23676.
Number of times Witness has seen inspectors inspecting, 23681.
Complaints, attention to, 23534, 23741.
Districts, size of, decrease advocated in some instances, 23683.
Number of, increase advocated, 23543, 23676, 23691, 23684, 23740.
Residence, place of, travelling entailed by, 23689.
Working miners, men having had experience as, appointment advocated, 23543.

Prosecutions:
Expenses of defence not paid by miner's union unless assured that man is innocent, 23585, 23590.
Extent to which practised, 23707.

Qualifications of Witness, 23519, 23664, 23748.

Special Rules:
Advertisement of New Rules before acceptance by Home Office to give men opportunity of stating objections, advocated, 23663.
Discussion with men:
Advisibility of, 23583, 23588, 23643, 23652, 23673.
Not practised as far as Witness knows, 23582, 23665.
Observance by miners, 23592, 23643.
Veto on suggested rules, right of men as to, views as to whether desirable, 23653.

Timbering:
Contract between management and men, alterations advocated, 23773.
Person setting and supervising: appointment of special men, views as to, 23608, 23610, 23644, 23647, 23761.
Wages, readjustment, consideration of, necessary in this event, 23776.
Special Rules:
Observance of, 23643.
Severity of rule as to gibbing of corks, 23734.
Wages, piece-work, effect of, on efficiency of timbering, 23609, 23644, 23713, 23761.
Day wage advocated, 23714.

Unskilled Labour, employment by contractors, 23716.

Wages:
Piece-work, effect of, and views as to whether abolition is desirable, 23609, 23644, 23713.
Contractors, attitude of, 23716.
Miners, attitude of, 23727.
Tonnage scale is paid on the assumption that management does the timbering, 23762.

WEIR, Mr. JOHN, Secretary, Fife and Kinross Miners' Association. (*See questions* 20771—21206.)

Accidents:
Cause, chief, of, 20851, 20861.
Falls of roof and sides, *see title* Timbering, *sub-heading* Accidents.
Investigation into:
Coroner's inquests, adequacy of, 20771 (*par.* 10).
Second enquiry, demand for, views as to, 20771 (*par.* 10), 21180.
Bill proposed by Miners' Federation, clause referring to, 21182.
Manager's right to demand, if censured at inquest, views as to, 21187.

Ankylostomiasis:
Foreign workmen, employment of, in relation to, 20771 (*par.* 11), 21137.
No immediate danger of in Fife, 21138.
Sanitation, improved, necessity for, 20771 (*par.* 11).
Sanitary conveniences, introduction of, views as to, 21136.

Baths:
Colliery village, erection in, 21148.
Pit-head, provision at, and facilities for changing clothes advocated, 21143.

WEIR, Mr. J.—*cont.*
Belgium :
Baths, provision in, 21144.
Cages, gates or bars for, 20771 (*par.* 8).

Bill promoted by Miners' Federation, 20777.
Accidents, investigation into, clause as to second enquiry, 21182.
Inspectors, suggestions as to, 21031.
Home Office inspectors, additional, 20784, 20902, 20977, 21019, 21157, 21164, 21167,
Inspectors, suggestion as to :
Home Office inspectors, additional assistant, 20784, 20902, 20977, 21157.
Men, inspection on behalf of, appointment of itinerant inspectors, who are or have been practical working miners, suggestion, 21031, 21042, 21164.
Period of appointment, 21167.
Timbering, suggestions as to, 21086.
Unskilled workmen, clause as to, 21170.

Coal Mines Regulation Act, 1887, Sec. 49, General Rule as to employment of unskilled workmen, 20889.

Committees :
Engine-drivers' certificates, Select Committee to consider Bill for, 21105.
Eight Hours Committee, statistics as to unskilled workmen in Fife placed before, 20885.

Discipline :
Appointment of better class of under-officials advocated, 20771 (*par.* 4).
Character of Scotch miners as to, 21132.
Inspection of mines by Home Office officials, effect of discipline on extent necessary, 21192.

Enginemen, *see title* Shafts, *sub-heading* Overwinding Accidents.

Foreign Workmen, employment of, 21114, 21124.
Ankylostomiasis, possible introduction by, 20771 (*par.* 11), 21137.
Special Rules, translation of, question as to, 21129.

France :
Inspectors :
Appointment of, method of, 20787.
Engineers, inspection by, objections to, after Courrières disaster, 21010.
Number of, and number in proportion to persons employed, 20786.

Hancock, Mr., evidence of, reference to, 21078.

Haulage Accidents :
Number of, in Fife, 20953.
Prevention of, suggestions as to, 20771 (*par.* 7), 20861.
Bogies, 20771 (*par.* 7).
Chain braes, 20771 (*par.* 7).
Chains, 20866.
Character of roads, suggestions as to, 20771 (*par.* 7), 20950.
Endless rope haulage, 20958.
Manholes, 20862, 20864, 21098.
Responsibility in event of runaways, 21100.
Rubbish, clearing away, 21091, 21098.
Runaway points or slips on main haulage roads, 20870.
Separate travelling roads, 20862, 20948.
Wheel braes, accidents caused by, 20771 (*par.* 7), 20953.
Widening of haulage roads, 20771 (*par.* 7), 20862, 21089.

Inspection of Mines by Men :
Amount of work involved, 20815.
Bill promoted by Miners' Federation, proposals in, as to appointment of itinerant inspectors by miners themselves, 21025, 21031, 21164, 21167.
Cost of, borne by men themselves, 20771 (*par.* 2), 21041.
Miners' Union, cost defrayed by, in Scotland, if application is made, 20814.
Extent to which power is exercised in Scotland, 20771 (*par.* 2), 20802, 20909.
Date of last inspection, 20915.
Number of men required to make such inspection, 20817.

WEIR, Mr. J.—*cont.*
Inspection of Mines by Men—*cont.*
Owners and managers :
Attitude of, and possible effect on men making adverse report, 20771 (*par.* 2), 20803, 20910, 21035, 21044.
Protection of owners' interests, 21019, 21031, 21164.
Qualification of men making such inspections, 20803.
Disqualification of men after making one inspection, as no longer working miners, 20807.
Engineers' disqualification, 20811, 21019.
Proposals as to, in Bill promoted by Miners' Federation, 21031, 21164.
Value of this inspection, views as to, 20803, 20910, 21197, 21203.
Instances showing, 20916.

Inspection of Mines by Mines Officials :
Act of Parliament: Coal Mines Regulation Act, 1887, Special Rules 35 to 38 as to firemen's duties and roadmen's duties, 21054, 21060.
Adequacy of, views on this point, 20771 (*par.* 3), 20829, 21048.
Method of detecting inadequate inspection, 20834.
Appointment of firemen by manager, objections to, 20824, 20925.
Districts, size of, reduction advocated, 20829, 20832, 20838.
Duties, other than inspection, performed by firemen, 20844, 20936.
Hours of work, 20840.
Importance of firemen, 20819.
Qualifications of firemen, class of man appointed, and views as to whether certificate of competency is desirable, 20771 (*par.* 3), 20818, 20924, 20935.
System of inspection, 20829.
Wages of firemen as compared with miners, 20825, 20927.

Inspectors of Mines (Home Office Inspectors):
Adequacy of inspection, views on this point, 20771 (*par.* 1), 20780, 20794, 20973.
Time required for adequate inspection, 20905.
Assistant inspectors, additional, appointment of working miners holding a certain certificate advocated, 20771 (*par.* 1), 20783, 20799, 20897, 20900, 20922, 20986, 21031, 21042, 21157, 21161, 21192, 21197.
Appointment by workmen advocated, 20787.
Firemen or deputies, appointment as, views as to, 20999.
Number required, 20784, 20786, 20977.
Payment by Government advocated, 20788.
Districts, size of, 20898.
Reduction necessary, 20899.
Number of chief inspectors, 20779, 20897.
Increase not advocated, 21160.
Number of inspections desirable, 20782, 20907, 20979, 21013, 21192, 21200.
Surprise visits, 20796.

Managers, responsibility of, possible effect on, of increased inspection of mines, 21013.

Prosecutions, advantages of, as compared with fining, 20771 (*par.* 4).

Qualifications of Witness, 20771A.

Railway Engine-drivers, examination of, question as to, 21150.

Ronaldson, Mr., evidence of, reference to, 21041, 21132, 21189.

Safety Lamps :
Compulsory introduction of, views as to, 20771 (*par.* 9), 21179.
Objections of men to, 21189.
Wages, effect on, 21177, 21189.

Sanitation, improved, necessity for, and views as to provision of sanitary conveniences, 20771 (*par.* 11), 21136.

Shafts, Accidents in :
Cages :
Gates or bars for, advocated, 20771 (*par.* 8).
Number of men riding in, 20871.

Overwinding accidents:
Enginemen:
Competency of, views as to, and as to whether certificate is desirable, 20877, 20880, 21105, 21107, 21150.
Duties other than winding performed by, 20882, 20965, 21101.
Hours of work, 20875, 20961.
Special Rules as to duties, 21102.
Strain on nerves owing to increased output, 20872.
Sudden illness, precautions against, advocated, 20879.
Two enginemen, employment of, 20969.
Number of overwinding accidents, 20962.

Special Rules:
Application to all new mines subsequently opened in a district advocated, 20771 (*par.* 5).
Discussion between men's representative and manager or owner advocated, 20771 (*par.* 5).
Foreign languages, translation into, question as to, 21129.

Timbering:
Accidents, number of:
Midland District, as compared with Northumberland, Durham and Newcastle Districts, 21082.
Special Rules, reduction of accidents has not been effected 20849.
Act of Parliament: Coal Mines Regulation Act, 1887, Special Rule 22, amendment suggested, 21086.
Bill promoted by Miners' Federation, suggestion contained in, 21086.
Person setting, appointment of special men, views as to whether desirable, 20771 (*par.* 6), 20849, 20856, 20941, 21068, 21073.
Supervision of, 20771 (*par.* 6), 20849, 20856, 20942.
Supply of: person taking timber to working place, 21086.
Systematic timbering, advantages of, and views as to enforcement of, 20771 (*par.* 6), 20849.

Unskilled Workmen, employment of, 20885, 21114.
Act of Parliament: Coal Mines Regulation Act, 1887, General Rule as to Timbering, 20889.
Breaches of, 20890.
Misinterpretation of, 20893.
Bill promoted by Miners' Federation, clause as to, 21170.
Boys working with their fathers or others, practice as to, 20894.
Number employed in Fife District, 20885.

Wages:
Fireman's, as compared with collier's, 20928.
Piecework, 20853.
Safety lamps, use of, effect of, on, 21177, 21189.

WHITEFIELD, Mr. W., Secretary, Bristol Miners' Association. (*See questions* 36206—36573.)

Accidents:
Competitive system in relation to, and suggestions as to nationalisation of mines as a remedy, 36354, 36405, 36417.
Falls of roof and sides, number of would probably decrease in event of increased inspection and decreased hours of work, 36568.
Hours of work in relation to, 36513, 36542, 36568.
Greater number of accidents happening in earlier hours of shift, 36514.
Investigation: Coroner's inquests:
Men's representatives, right to give evidence advocated, 36362.
Inspection on behalf of men, men making, right of to appear at inquest advocated, 36229.
Wages question in relation to, 36356, 36410.

Ankylostomiasis:
Bristol coal mines, danger of in, 36366.
Sanitary conveniences, provision of, views as to, 36367.
Temperature of mines in relation to, and suggestion as to better ventilation, 36366.

WHITEFIELD, Mr. W.—*cont.*
Baths and facilities for drying clothes, provision advocated, 36369, 36498, 36545, 36561:
Compulsory use of baths advocated, 36499.
Tramway companies, objection to use of cars by colliers, 36546.

Belgium: Miners' clothing, regulations as to drying at mine and as to clean clothing, 36501.

Coal Mines Regulation Act:
Sec. 42 as to report by inspector of danger or threatened danger, 36464.
Amendment advocated, 36466.
Sec. 50 as to responsibility of owner, agent or manager for punishment of men for breaches of discipline, 36479.

Discipline:
Enforcement, method of, *see title* Fines.
Importance of, and condition of mines as to, 36475.
Responsibility of owner, agent or manager for enforcement of, 36479.

Fines:
Advantages of prosecution as compared with fining, and suggestion as to abolition of fining, 36350, 36394, 36436, 36479, 36535, 36570.
Attitude of men as to, 36353.
Decision as to fining or prosecution should not rest with owner, 36395.
Employment of men again after prosecution, 36439.
Managers, fining by inspectors, views as to whether desirable, 36556.
Truck Act in relation to fining, 36483, 36488.

Forest of Dean Miners, views of as to eight hours' limit, 36503.

Hours of Work: reduction of advocated as probable means of decreasing number of accidents, 36373, 36405, 36414, 36422, 36503, 36513, 36542, 36568.
Number of hewers, probable effect of reduction on, 36419, 36427.
Output, possible effect on, 36418.
Period of shift during which accidents most frequently happen, 36514.

Homes of miners, distance from pit, 36369.

Inspection of Mines by Men:
Coroner's inquests, right of men who have made this inspection to appear at, advocated, 36229.
Cost of, should be borne by men themselves if they have appointment of men making inspection, 36233.
Extent to which practised, 36524.
Officials, reprisals by, possibility of, 36558.
Owners or managers, reprisals by, possibility of, 36347, 36459, 36527, .
Qualifications of men making inspection, 36225.
Report entered in book, 36525.

Inspection of Mines by Mines Officials:
Adequate inspection, difficulty of under existing conditions, 36344.
Districts, size of:
Decision as to should rest with Home Office inspector, 36343.
Reduction advocated in some instances, 36344, 36442, 36463, 36466.
Qualifications of firemen, class of men appointed: desirability of examination and certificate of competency, &c., 36337, 36385, 36440, 36530.

Inspectors, Home Office:
Adequacy of inspection by, views on this point and as to what constitutes adequate inspection, 36211, 36519.
Districts, size of, 36520.
Number of inspections, increase desirable, 36211, 36221.
Number of inspectors, increase, views as to whether desirable, 36216.
Qualifications of present inspectors, 36522.
Report of danger or threatened danger and compulsory powers over owner as to remedy, 36464.
Working miners, appointment as advocated, after examination or with certificate, 36216, 36376, 36443, 36521.
Employment and payment by Government, advocated, 36381.

WHITEFIELD, Mr. W.—*cont.*
Managers:
Fines, powers to inspector to inflict, views as to whether desirable, 36556.
Prosecution by inspector, rarity of, 36554.

Manager's Certificate of Competency, number of working miners holding, 36393.

Nationalisation of mines advocated, 36354, 36506.

Prosecution:
Advantages of as compared with fines, *see title* Fines.
Trade Unions, attitude of, and practice as to defending members, 36552.

Qualifications of Witness, 36206.

Safety Lamps, introduction of wherever necessary, 36360.

Sanitary Conveniences, provision of, views as to whether desirable, 36367.

Truck Act, provisions of in relation to fining, 36483, 36488.

Wages:
Accidents in relation to system of day or piece wages, 36356, 36410.
Proportion of men paid under each system, 36356.
Amount of, 36407.

Wilson, Mr. J., evidence of, reference to, 36460.

WHITEHOUSE, Mr. SAMUEL HENRY, Secretary, Somersetshire Miners' Association. (*See questions* 32328—32953.)

Accidents:
Falls of roof and sides, number of, 32537.
Inspection after:
Home Office inspection, 32436. 32835.
Leaving of scene exactly as accident occurred until after this inspection, 32837.
Relatives of miners, inspection by representatives of, suggestion as to, 32436, 32561.
Investigation:
Coroners' inquests:
Juries, selection, 32442.
Representatives of miners and of relatives, suggestions as to, and as to abolition of coroner's right of exclusion, 32436, 32558, 32638, 32824.
Second inquiry under Section 45, adequacy of, 32635, 32824, 32938.

Baths and Wash-houses, provision of, views as to whether desirable, 32926, 32950.

Black-Damp, question as to, 32948.

Bristol and Somerset District:
Timbering, Rule 83 as to, 32420.

Camerton Explosion: Coroner's inquest, representation of Trade Union at, 32638.

Checkweighers:
Extent to which employed, 32496.
Inspection of mines by, on behalf of men, advocated 32497.

Coal Mines Regulation Act:
Section 38 as to inspection by men, amendment advocated, 32385.
Section 42, as to withdrawal of men and as to dangerous practices, amendment advocated, 32378, 32380, 32701.

Dangerous Practices, application for an injunction in event of, powers of inspector as to, 32701, 32704.

Discipline, encouragement by Trade Unions, 32922.

Engineers: Training of apprentices, action of Trade Union as to, 32908.

Explosions, number of, in Somerset district, 32543.

Fiery Mines:
Inspectors, special experience and certificate for fiery districts advocated, 32344, 32552.
Somerset mines, fiery character of, 32542.

WHITEHOUSE, Mr. S. H.—*cont.*
Fines:
Advantage of, as compared with prosecution (suggestion as to abolition of fining), 32409, 32508, 32563, 32784, 32892, 32901.
Attitude of workmen and of Trade Unions as to, 32506, 32893.
Offences for which imposed, 32507.
St. Helen's Association of Colliery Enginemen: fining of men for teaching engine-driving except to certain persons, 32908.

Firemen, *see title* Inspection of Mines by Mines Officials.

Haulage Accidents, prevention of, suggestions as to:
Qualifications of person manipulating appliances, 32427.
Separate travelling roads or gangway advocated, 32422.

Homes of Miners:
Baths, washing facilities, &c., 32930.
Distance from pit mouth, 32950.

Inspection of Mines by Men:
Cost of, borne by men themselves, 32400.
Extent to which practised, 32395, 32487.
Object, chief, of, 32641.
Owners and managers, reprisals by, in event of unfavourable report, possibility of, 32392, 32488, 32644.
Character note system in relation to, 32492.
Trade Union, support by, of men unjustly kept out of employment, 32493.
Owners' interests, protection of, 32918.
Qualifications of man appointed to make inspection, views as to, 32385, 32497, 32914.

Inspection of Mines by Mines Officials:
Adequate inspection, rarely possible under present conditions, 32544.
Districts of firemen, size of, 32416, 32418, 32545, 32551.
Duties other than inspection performed by firemen, 32417, 32545, 32548, 32724, 32745, 32767.
Efficiency of firemen, views as to, and as to appointment of undesirable men, and desirability of certificate of competency, 32401, 32404, 32545, 32729, 32741, 32769, 32775, 32881, 32885.
Local examinations, views as to, 32401, 32405, 32446, 32552.
Previous experience, qualifying candidate for examination, 32406.
Importance of firemen as regards safety of mines, 32882.
Number of inspections desirable, 32416, 32421, 32725.

Inspectors, Home Office:
Accidents, inspection after, 32436, 32835.
Adequacy of inspection by, views on this point, 32353, 32458, 32474.
Complaints as to inadequacy, suggestions as to method of dealing with, 32372, 32390.
Assistant inspectors or sub-inspectors, appointment not advocated, 32357.
Complaints, anonymous, to, 32645.
Danger, suspension of work and withdrawal of men in event of, suggestions as to, 32379, 32701.
Districts, size of, and suggestions as to division, 32347, 32350, 32354, 32369, 32451, 32465.
Duties, clerical, 32456.
Abolition advocated, 32464.
Number, actual, of inspections by, and number desirable, 32347, 32352, 32452, 32457, 32464, 32473.
Number of inspectors, increase advocated, 32347, 32349, 32359, 32464, 32473.
Qualifications of: suggestions as to appointment, examinations, &c., 32332, 32345, 32369, 32651, 32666, 32671.
Previous experience of candidates, views as to, 32337, 32341, 32360, 32476, 32649, 32657.
Re-examination every ten years advocated, 32365, 32684.
Reports of, 32464, 32466.
Residence, place of, 32453.
Retiring allowance, 32368, 32686.
Salaries, 32362.

WHITEHOUSE, Mr. S. H.—*cont.*
Inspectors, Home Office—*cont.*
Term of appointment, views as to, 32365, 32684.
Working miners, appointment as inspectors, views as to, 32337, 32360, 32362, 32649.
Manager:
Appointment rests with owner, but certificate is necessary, 32877.
Certificate of competency, suggestions as to:
Fiery mines, special certificate for, views as to, 32552.
Local *viva voce* examinations, 32446, 32449.
Fines, punishment by, no provision for, 32895.
Miners' Federation of Great Britain, views of, as to owner's right to propose Special Rules, 32862.
North Staffordshire: Special Rule as to timbering, draft of, 32850.
Number of pits in Somerset, 32738.
Qualifications of Witness, 32328, 32682, 32740, 32839, 32911.
Safety Lamps:
Compulsory use of, views as to, 32428.
Extent to which used, 32429, 32541.
Government testing station advocated, 32820.
Types of, views as to, and as to faultiness of existing types, 32428.
Choice of type should be left to management, 32435.
Sanitary Conveniences, provision of, unnecessary in Witness's district, 32938.
Special Rules, introduction of:
Codification of rules in Western district, miners' suggestions not accepted, 32513, 32601, 32805, 32843, 32859.
Discussion by Joint Committee of owners' and men's representatives, advocated, 32412. 32513, 32601, 32812, 32863, 32870.
Home Office, suggestion of rules by, views as to, 32865.
Men, proposal by, 32866.
Owners, suggestion by, views as to, 32812, 32861.
Timbering:
Distances, General Rule 22 as to, 32420.
Person setting and supervising, 32414, 32421, 32530, 32817.
More frequent inspection advocated, 32421.
Special Rules:
Bristol and Somerset district, 32420, 32618, 32887.
Difficulty in carrying out some rules, 32876.
Local conditions, consideration of, and strict enforcement of rules advocated, 32419.
Supply of timber, 32540, 32818, 32887.
Withdrawal of men if supply is insufficient, effect of, upon wages, 32618, 32844, 32850.
Systematic timbering differing in different districts, advocated, 32528.
Timsbury Explosion: Inquest, representation of Trades Union at, 32638.
Under-Manager, certificate for: local and *viva voce* examination advocated, 32446, 32449.
Character of present examination, 32885.
Unskilled Labour, employment of, in mines, 32567, 32789.
Ventilation, adequacy of, views as to, 32947.
Withdrawal of Men:
Inspectors of mines, powers to, to withdraw men in event of danger, views as to, 32379, 32701.
Timbering, inadequate, withdrawal of men in event of, 32618, 32844, 32850.

WILLIAMS, Mr. JOHN, South Wales Colliery Officials' Association. (*See questions* 27511—27712.)
Abercynon Colliery, haulage accident at, 27711.
Accidents: Falls of roof and sides:
Attendance, irregular, frequency with which caused by, 27511 (*par.* 3), 27531, 27581.
Prosecution for wilful neglect of duty, existing law as to, 27582.
Indications that fall is probable, 27702.

WILLIAMS, Mr. J.—*cont.*
America, Certificates for coal-getters in, 27608.
Boys:
Examination, compulsory, in provisions of Coal Mines Regulation Act, before working underground, advocated, 27549.
Special Rules, instruction as to in schools, advocated, 27511 (*par* 5).
Coal Mines Regulation Act:
Amendment of by increased powers to officials advocated, 27511 (*par.* 6).
Instruction in schools as to provisions of, advocated, 27549.
Discharge or prosecution of men for wilful misconduct, suggestion as to, 27627.
Discipline, increased powers to officials for enforcement of, advocated, 27511 (*par.* 6), 27550, 27627.
Explosives, purchase of, by men from owners advocated, 27511 (*par.* 2).
Firemen, *see title* Inspection of Mines by Mines Officials.
Griffiths, Mr., evidence of, reference to, 27517.
Haulage:
Abercynon Collieries, accident at, 27711.
Age at which men should be allowed to drive, 27619, 27622.
Certification of hauliers, views as to, 27588, 27616.
Manholes, use of, neglect of by men, and suggestion as to power of compulsion to officials, 27511 (*par.* 4), 27535, 27550. 27626, 27667, 27691, 27705, 27709.
Special Rule 244, strengthening of, advocated, 27554.
Riding on journeys, prosecution for, law as to, 27658.
Widening roads, views as to, 27711.
Inspection of Mines by Mines Officials:
Age of firemen, limit advocated, 27599.
Importance of firemen, 27600.
Qualification of firemen, class of man appointed and views as to certificates of competency, 27592, 27602.
Overmen:
Night Overman, number of men employed under, 27674.
Number employed, 27676.
Prosecution of Men:
Extent to which practised, and views as to whether desirable, 27662, 27667.
Qualifications of Witness, 27512, 27673.
Safety Lamps:
Type of: Double gauzes not advocated, 27511 (*par.* 1), 27517.
Unlocking, Special Rule 188 as to, extension of prohibition to shot-firer advocated, 27541.
Schools in mining districts, instruction in Coal Mines Regulation Act and Special Rules advocated, 27511 (*par.* 5), 27549.
Shot-Firing:
Charging, special officials for, advocated, 27511 (*par.* 2), 27522.
Safety lamps, unlocking by shot-firer, prohibition advocated, 27541.
South Wales Colliery Officials' Association:
Number of officials belonging to, 27512.
Witness representative of, 27512, 27513.
Special Rules:
Simplification advocated, 27511 (*par.* 5), 27539.
Supply of, to men, 27541.
Unskilled Labour, employment of:
Attitude of men on this question, 27527.
Competency of present miners, 27612, 27707.
Precautions against, suggestions as to, and as to certificates, 27511 (*par.* 4), 27526, 27586, 27605.
Special Rule 232, as to unskilled men working alone, 27527.

WILLIAMS, Mr. J.—*cont.*
Ventilation :
Act of Parliament: Coal Mines Regulation Act, General Rule 1., adequacy of, views as to, and as to difficulty of fixing standard of ventilation, 27511 (*par.* 7), 27555, 27678.
Safety lamps, indications of gas furnished by, time for withdrawal of men, &c., 27555, 27679.

WILSON, Mr. JOHN, M.P., Secretary, Durham Miners' Association. (*See questions* 35372—35914.)

Accidents :
Falls of roof and sides, number of, 35417.
Bain, Mr., Report on, 35450.
Haulage accidents, *see title* Haulage Roads.
Inspection after :
By Home Office Inspector, 35701.
By men, 35473, 35596.
Investigation :
Coroner's inquests :
Adequacy of, views on this point, 35460, 35569, 35871.
Jury, constitution of, 35464, 35474.
Men's representatives, power to attend and ask questions, and curtailment of coroner's right of veto advocated, 35460, 35481, 35569, 35873.
Object of, 35467, 35474.
Second inquiry under Section 45, adequacy of provision for, 35478.
Legislation, preventive, difficulty of, 35675, 35742.

Acts of Parliament and Special Rules, knowledge of by boys and men, desirability of, 35809.

Airways, Return, instruction of men as to, advocated, 35774.

Altofts Explosion, Coroner's inquest: certificate demanded from men's representatives before admission, 35876.

Ankylostomiasis, no case of in Durham, 35486.

Bain, Mr., evidence of, reference to, 35400, 35424, 35432, 35685, 35818.

Banksman, employment of, 35863.

Baths and facilities for washing, 35536, 35581, 35902.
Cornwall, 35538, 35581.
Water supply in relation to, 35905.

Bill for compulsory certificates for engine-winders, 35858.

Boys :
Proportion becoming miners, 35799.
Schools, training in mining matters in, advocated, 35802.
Work done by before admission to coal face, 35810.

"Caviling" system in Durham by which man gains knowledge of whole mine, 35772.

Checkweighmen, appointment for inspection of mines on behalf of men, views as to, 35755.

Coal Mines Regulation Act, Section 48, Clause 8, as to men's representatives at coroner's inquests, possible interpretation of, 35873.

Dust, increased attention to, advocated, 35672.

Engine-Winders :
Certificate of competency for, views as to whether desirable, 35857.
Duties should be confined to winding as long as engine is working, 35860.
Efficiency of, 35855.

Escape Shaft, instruction of men as to, advocated, 35774.

Fines :
Advantages of prosecution as compared with fining, 35419, 35551, 35636, 35738, 35829.
Attitude of men as to fining, 35420, 35424, 35737, 35826.
Refusal to submit to fining, 35523.
Trade Unions, attitude of, and extent of power to protect men, 35549.

WILSON, Mr. J., M.P.—*cont.*
Fines—*cont.*
Decision as to fining or prosecution, 35587.
Extent to which practised in Durham, 35420, 35431, 35522, 35683 :
Mr. Bain's evidence as to, 35818.
Home Office, attitude of, as to maintenance of discipline, 35545.
Offences suitable for punishment by fining, or by prosecution, respectively, 35555.
Truck Act, regulations of, as to, 35637.

Foreigners, employment of, danger of, 35885.

Germany, salaries of working-class inspectors in, 35386.

Haulage Roads and Travelling Ways :
Accidents, 35525.
Endless-rope haulage, danger of, 35451, 35534.
Gangway, separate, danger of, 35452.
Man-holes, necessity for, if separate travelling road is provided, views as to, 35731.
Position of hauliers when tram is in motion, 35593.
Riding on "gun," 35588.
Separate travelling way and haulage roads, 35451, 35528, 35731.
Width of (space between rails and side of road), 35533.

Houses, Miners' :
Baths, provision in, views as to, 35539, 35582.
Instance of provision, 35902.
Distances from pit-head, 35910.

Inspection of Mines by Men :
Appointment of two men to make periodical examination for a district, views as to, 35767.
Cost of borne by the men themselves, 35513.
Extent to which practised, 35400, 35511, 35750.
Official accompanying men, 35597.
Owners, reprisals by, or objection to this inspection, no instance of in Durham, 35514, 35596, 35751.
Qualification of men making this inspection, extension of views as to, 35405, 35754, 35759, 35766.

Inspection of Mines by Mines Officials :
Adequate inspection impossible under present conditions, 35409, 35417, 35605, 35703.
Before shift, time of this inspection, 35781, 35787.
Districts, size of, reduction advocated, and closer inspection of roof and sides, 35409, 35417, 35518, 35605, 35703, 35746.
Duties of deputies, 35408, 35412, 35417, 35515, 35605, 35839.
Hours of work of deputies, 35836.
Importance of, 35834.
Master shifter, inspection of roof and sides by, possibility of, 35606.
Number of deputies in a colliery, 35784.
Qualifications of deputies, class of men appointed desirability of certificates of competency, &c., 35408, 35830, 35837, 35901.
Time that would be occupied in adequate inspection, 35781.
Wages of deputies, 35895.

Inspectors, Home Office :
Accidents, inspection after, 35701.
Adequate inspection, views as to, and as to what constitutes adequacy, 35377, 35502, 35702, 35714, 35778.
Clerical work, 35700.
Districts, decrease in size of, views as to whether desirable, 35491, 35494, 35698.
Managerial responsibility would not be affected by increased inspection, 35495, 35632, 35704.
Number of inspections desirable, 35375.
Number of inspectors and suggestion as to increase, 35373, 35381, 35491, 35686.
Residence, place of, and time occupied in travelling, 35689.
Salaries of working-class inspectors, views as to, 35386, 35508.
Working miners holding certificates of competency, appointment as additional inspectors, advocated, 35382, 35387, 35389, 35492, 35501, 35509, 35608, 35813.
Duties to be undertaken by this class, 35608.
Length of practical experience, 35396.
Number of miners holding certificates, 35388, 35630, 35706, 35816.

Digitized by Google

WILSON, Mr. J., M.P.—*cont.*
Manager, prosecution of, for failure to prosecute men, 35650.

Manager's Certificate of Competency:
Adequacy of system, views as to, 35484.
Working miners holding, 35388, 35630, 35706, 35816.

Method of Working Mines, Durham district, 35792.
Creep in long-wall as compared with pillar and stall workings, 35793.

Officials:
Ambulance certificate, holding by, desirability of, 35486, 35541.

Pickering, Mr., evidence of, references to, 35633, 35704.

Prosecution:
Advantages of as compared with fines, *see title* Fines.
Manager, prosecution of, for failure to prosecute men, 35650.
Number of, in Durham, 35423, 35427.

Rescue Work and Appliances:
Training of men in, advocated, and compulsory ambulance certificates for officials, 35486, 35541.

Safety Lamps:
Extent to which used in Durham, 35458.
Type of, 35459.

Schools, Durham County Council, instruction in mining subjects in, 35802.

Shot-firing:
Charge, weight of, decision as to should be left to man firing shot, 35671.
Notice to manager and permission from him before shot is fired in main haulage road, views as to, 35670, 35673.
Person firing (deputy), 35516.

Special Rules:
Introduction of:
Advertisement of rule by Home Office to give opportunity to men to state objections, views as to, 35665.
Discussion between owner and men advocated, 35436, 35526, 35660.
Durham, procedure as to in, 35437, 35525.
Suggestion:
Men, suggestion by, views as to, 35444.
Owners, suggestion by, views as to, 35661.
Observance of certain rules, possible effect of, on facilities for getting coal, 35587.

Timbering:
Accidents from falls of roof and sides, number of, 35417.
Mr. Bain's Report on, 35450.
Durham, system in, 35446, 35599, 35724, 35849.
Inspection, closer, advocated, 35746.
Person setting: deputy or men themselves, systems compared, 35446, 35517, 35599, 35720, 35849.
Systematic timbering, views as to, 35450.
Variations in systems in different districts, 35719.
Thin seams and thick seams, danger compared, 35450.
Wages question in relation to, 35741.
Day wages possibly advisable, 35743.

Truck Act, regulations as to fining, 35637.

Unskilled Men, employment of, 35882, 35884.

Wages:
Day wages, possible effect of. on number of accidents, 35741.
Under-officials, wages of, as compared with wages of men at face, 35895.

Water Supply in relation to baths in miners' houses, 35905.

Wingate Colliery Explosion, rescue work at, 35486.

WILSON, Mr. JOHN, Agent, Scottish Shale Miners' and West Lothian Coal Miners' Associations. (*See questions* 22668—22863.)

Qualifications of Witness, 22668, 22858.

Shale Mines, Scotland:
Accidents:
Haulage, *see that sub-heading.*
Investigation into under Accidents Enquiry Act, 22764.
Procurator-Fiscal, private practice as a lawyer, objections to, 22852.
Report, verbatim, supply of copy of, free, to relatives, advocated, 22852.
Ambulance wagons, desirability of provision, case proving, 22863.
Baths and facilities for changing clothes, desirability of provision, 22861.
Evidence of Witness is given with reference to 22812, 22857.
Explosions of gas in shale mines, number of, 22676.
Gradient of shale mines, 22726.
Haulage accidents, number of, and suggestions for prevention of, 22683, 22739.
Jack, use of, 22739.
Runaway points on strong iron tree, 22689, 22739.
Ingleston, fatal accident from miss-fire shot at, 22823.
Inspection of mines by men:
Compulsory use of powers, advocated, 22843, 22855.
Independent practical workmen advocated for making inspection, 22843.
Owners and managers, attitude towards, 22845.
Inspection of mines by mines officials:
Appointment by employer, objections to, and suggestion as to appointment and dismissal by Government inspector and payment by employer, 22845.
Qualifications of firemen: certificate of competency advocated, 22847.
Inspectors, Home Office, number of, increase advocated, 22843.
Manager's certificate of competency:
Fees, abolition advocated, 22849.
Qualifications of candidates: "Five years' personal experience," loose interpretation of, 22849.
Safety lamps, use of in, Witness knows of no instance of, 22675.
Sanitation, improvement advocated, provision of sanitary conveniences, 22852.
Shaft accidents:
Act of Parliament: Coal Mines Regulation Act, General Rule 20 as to casing, lining, or otherwise securing shafts, 22791.
Breaking of winding ropes, 22701.
Examination and renewal of winding ropes, 22700, 22702.
Cages, bars advocated, 22848.
Examination of shaft, perfunctory character of, and suggestions as to amendment, 22697, 22790, 22792.
Overwinding, compulsory preventive measures advocated, 22849.
Special Rule 48 as to examination of machinery, ropes, &c., amendment advocated, 22792.
Shot-firing in, 22671, 22741:
Act of Parliament: Coal Mines Regulation Act, application also to shale mines, 22742.
Miss-fire shots:
Accidents arising from, 22823.
Period that should elapse before men should revisit spot, 22677, 22680, 22743, 22822.
Number of shots to be fired simultaneously, views as to, 22751, 22755, 22815.
Person firing shots, 22674, 22678.
Powder used chiefly, 22731.
Strum or fuse, shots fired by, 22679, 22751.
Time at which shots are fired, 22682, 22818.
Special Rules, endorsement by Joint Committee representing employers and men, advocated, 22848.
Timbering:
Accidents from falls of roof and sides, 22705, 22768.

WILSON, Mr. J.—*cont.*
Slate Mines, Scotland—*cont.*
Timbering—*cont.*
Act of Parliament: Coal Mines Regulation Act, General Rule 21, amendment advocated, 22768.
Inspection of roof and sides, inadequacy of, 22705, 22728, 22769.
Perfunctory nature of present timbering, 22712.
Special Rules, 22714, 22842.
Supply of timber, person bringing timber to working face, &c., 22721, 22832.
Compulsion on owner and manager to supply timber at working face advocated, 22693, 22772.
Wages, readjustment in this event, views as to, 22786.
Lengths of timber, 22693, 22774, 22828.
Position to which timber is usually brought by management under present system, 22772.
Systematic timbering (crowns and rances every 3 feet in travelling roads), advocated, 22705, 22756, 22833.
Uniformity of seams in relation to, 22828.
Unskilled men working alone, General Rule 39 as to, loose interpretation of, 22849.
Ventilation:
Act of Parliament: Coal Mines Regulation Act, General Rule 1:
Adequate ventilation, clearer definition advocated, 22731, 22736, 22835.
Examination of air-currents, 22808.
Defect, chief, in, 22835.
Measuring of air-current, 22733, 22804, 22808, 22839.
Frequency of, 22810, 22814.
Water for drinking, provision advocated, 22852, 22857.

WINSTONE, Mr. JAMES, Agent, Eastern Valleys District, South Wales Miners' Federation. (*See questions* 34698—34864.)

Accidents:
Falls of roof and sides, proving necessity for closer inspection, 34728.
Haulage, 34711, 34787.
Investigation: Coroner's inquests, presence of men's representatives at desirable, and abolition of coroner's right of veto, 34737.

Airways, Return, use of by men on withdrawal from mine advocated, 34774, 34787.
Ventilation would be improved by, 34778

Boys: Interval for meals, 34824, 34832.

Engine-Winders, certificate of competency, desirability of, 34852.

Explosives Order, amendment of as regards care of explosive and detonator advocated, 34745.

Haulage Road:
Accidents proving necessity for separate pathway for hauliers, 34711, 34787.
Separate pathway for hauliers advocated, 34708, 34764.
Space required, 34768.
Separate travelling road, views as to, 34781.
Signals, position of on, 34708.
Width advocated, 34769.

WINSTONE, Mr. J.—*cont.*
Hours of Work:
Firemen, 34707, 34759.
Women employed at surface, 34828.

Inspection of Mine by Mines Officials:
Adequate inspection, views as to, and as to: Desirability of inspecting the top, 34701.
Accident proving, 34728.
Duties of firemen, limitation to examination advocated, 34707.
Hours of work of firemen, reduction advocated, 34707, 34759.
Importance of firemen, 34835.
Qualifications of firemen: desirability of practical knowledge and of certificate of competency, 34838.

McLaren Explosion, reference to, evidence of Mr. Thomas as to, 34699.

Meals, intervals for, 34798, 34824, 34832.

Shafts:
Accidents proving necessity for examination of winding ropes, 34716, 34789, 34806, 34817, 34819.
Machinery and gearing:
Annealing of chains, suggestion as to, 34810.
Examination of winding ropes, &c., 34715, 34789, 34795, 34816, 34818.
Meals, no arrangement as to interval in winding for, 34798, 34824.

Shot-firing:
Between shifts, 34854.
Explosives:
Care of explosives and detonator, 34742.
Supply of, free of charge, advocated, 34742.
In coal, practice as to, 34857.
Person firing shots, 34742:
Qualifications, desirability of certificate of competency, &c., 34847.

Thomas, Mr., evidence of, reference to, 34698, 34742, 34757, 34774.

Timbering:
Accidents proving necessity for closer inspection, 34728.
Systematic timbering, desirability of, 34724.

Tirpentwys Colliery, Pentypool, accident at, caused by defective winding rope, 34716, 34789, 34806, 34817, 34819.

Women, employment and hours of work, 34827, 34828.

YORKSIN, Mr. WILLIAM, Polish Miner, Bothwell Park Colliery, near Glasgow. (*See questions* 22911—22927.)

Foreigners, Employment of:
America and Canada, foreigners passing on to from Scotland, 22927.
Compensation, payment to, 22927.
Conscription, avoidance of, 22927.
English language, knowledge of, 22927.
Germany, Polish miners going to, 22916, 22920.
Liking for the country, question as to, 22923.
Period of work in Scottish mines, 22911, 22927.
Previous experience, 22912, 22922.
Wages, amount of:
Adequacy of, views as to, 22924.
Exorbitant demands alleged, 22927.
Wife and family, 22927.

Qualifications of Witness, 22911.
